ESSAY ON MISSIONS TO THE EAST.

(Continued from p. 8.)

THE wreckers in Cornwall have, perhaps, heard over and over again, the plain paradox, that "in those not in a state of grace good works are abominable, while to those in a state of grace there are no abominable works." Perhaps a tract, selecting a few moral principles from one of the Shastres, might, by its different style of instruction, attract their attention, and the charm of novelty conduce to improve their manners. Doubtless there are many persons in this enlightened country, who will be surprised by some of the revolting features exhibited in a little piece of provincial history. The account is extracted from a letter written by a clergyman of Penzance, in Cornwall.

The dangers of the coast, from St Michael's Mount to the Lizard, are too well known to need description; many vessels, especially foreigners from the East and West Indies, South America, and other parts, frequently in the winter, at night, make the light-house on St. Agnes, in Scilly, and that on the Laneships, at the Land's-end, as their first landfall. If a strong gale from the S. W. set in, they find it impossible to weather the Lizard,

the southernmost point of land in Great Britain; they fall down deeper into the Bay, and become embayed, or are more frequently driven with a violence that nothing can surpass, on the coast between the Mount and the Lizard, and often dashed to atoms in a moment. At other times, through the concurrence of some favourable circumstances, they are thrown up into places where the greater part of the cargo might be saved. Natural depravity, and the custom of centuries, have inspired the inhabitants of the coast with a rapacity for plundering those wrecks, and the name of 'Wreckers' applies therefore to vast numbers, who look for the season of booty. When the news of a wreck flies along the coast, thousands of these people are collected near the fatal spot, armed with pick-axes, hatchets, crow-bars, and ropes, not for helping the sufferers, but for breaking up and carrying off all they can. The moment the vessel touches the shore, she is considered as fair plunder, and men, women, and children are working on her to break her up night and day. The hardships they, especially the women, endure, are incredible.

Should a vessel be laden with wine or spirits, she brings them certain death; the raze and fighting to stave in the casks and bear away the spoil in kebles and all kind of vessels, is brutal and shocking; to drunkenness and fighting succeed fatigue, sleep, cold, wet, suffocation, and death! *Once last winter a wreck happened on a Sunday; they had every thing*

ready, and sallied forth not until the clock had struck twelve at midnight, all checks of conscience being then removed. Five hundred little children in a parish are brought up in this way, and, encouraged by precept and example to pursue this horrid system.

The practices of these wreckers having by one severe instance awakened the attention of the Bishop of St. David, he lately exhorted his clergy to preach every where against it. To this method may be added, with as great effect, the persuasion of those who will visit their cottages. The wreckers seldom or never reap profit by these nefarious labours; for they are found at the end of the year nearly the same as at the beginning. It appears, for the credit of the country, that these are confined to a few western parishes, and that even there no deeds of personal inhumanity towards the unhappy sufferers have been permitted in modern times, even by the plunderers themselves. To prevent these depredations, the neighbouring gentry generally exert themselves, to wipe off this disgrace from the country; but hitherto, although they have been partially successful, many instances of plunder continue to take place under cover of darkness, and amidst that confusion which a ship driven on shore by a violent tempest must inevitably occasion. Inheriting from their ancestors an opinion that they have a right to such spoils as the ocean may place within their reach, many among the more enlightened inhabitants secure whatever they can seize, without any remorse; and conclude without any hesitation, that nothing but justice, supported by power and sanctioned by law, can wrench it from their hands. While these principles continue to predominate, the plundering of wrecks may be expected to remain; and, consequently, nothing short of moral and intellectual light in universal diffusion can accomplish its entire suppression.

It would fill a separate publication to notice all the domestic stains and deformities in manners, partly local and partly national, which the Quixotic philanthropist, who makes a tour of the world to find subjects for correction, is careful to overlook, neither searching into the cause, nor attempting to apply a remedy. A few prominent blemishes of this sort have been incidentally sketched (Vol. VIII, p. 430); others meet us, and obstruct the way, as we traverse a measureless field for observation; because the leading subject does

not touch such obliquities on a single point, but has many bearings, which, as by new paths, bring us into contact with these regretted traces, that the system of public instruction is imperfect—the sense of religious obligation in many branches of the community weak.

A recent scene in a Christian temple, acted on a Sunday morning before a Protestant congregation, by a competitor for the office of parish clerk, while the curate abetted him in the profanation of the day and place, exhibited the worst kind of sacrilege. Yet a public luncheon in church time by the intrusive clerk and his party, who had stormed the desk, joined to a second stratagem, after regaling on bread and cheese and ale, that of shaving and dressing in the responsive seat, to secure possession of it, excited very little either of censure or indignation, except on the part of his excluded rival. Yes, this interlude was acted in a church in London. Would a Turk so profane a mosque?

As a relief from the feelings, excited by this odious specimen of the spirit of irreligion, shall we make a transition to Ireland, and examine the structure of polished society there; not judging of it by the graceful finish of the Corinthian capitals, but by the solidity of the base, and lower courses of the walls, the strength and uprightness of the supports, and the harmony of the parts? Do not different portions of this Christian and civilized country present the extremes of refinement and barbarism? Are there not large masses of the population who appear to be in a state of interminable war with the possessors of property, and the ministers of law? The revolt in many of the disaffected peasantry is indeed confined to the heart, and does not shew itself in the raised arm; it is less general, less open, and less manly than a servile war; it is a sly hostility which often temporizes with its victims, and which delights in ferocious revenge when it can find them unguarded. In some districts assassination is so common as to excite no surprise; in others, murders so hideous are

perpetrated, that the inhabitants, accustomed to witness great enormities, display at once the painful expression, and impassioned eloquence of horror, grief, and shame. Indeed, when these disgusting instances of frightful barbarity occur, the discontent which had lurked in the bosoms of the poorest and worst provided tenants of the cabin, is overcome by a zeal for the honour of outraged humanity; and if the lawless monsters, who thus disgrace the name and character of Irishmen, can be taken and convicted, thousands of their own class will witness their execution without murmuring at the restored reign of peace and order. The mere rebel will disavow the assassin.

The specimens of ferocious malignity alluded to, are too brutal in their features to be detailed: it will be enough to indicate where narratives of the facts may be seen. The concerted murder of a woman by four men, is recorded with all the shocking circumstances of piecemeal mutilation which aggravated the crime, in the *Limerick Advertiser*, about the middle of last August. The instigation to the horrible vengeance which the civilized barbarians took, was a surmise, that the immolated woman had given information of an illicit distillery.

A robbery near Ballinlough, with accompaniments of wanton cruelty which would disgrace the wildest savages, is related in the *Athlone Herald*, Jan. inst. In the district of Strabane, said to have been hitherto peaceable, and where lately the houses of the opulent were protected even by a latch, a late number of the *Belfast Commercial Chronicle* announces that a series of robberies and murders have been committed, and one is eminently appalling: "In Monterlony, a man was murdered, his wife's arm shattered by a ball, and the old parent of the house, of the name of M'Gurck, roasted, to procure a confession where his property was concealed."

The atrocious mid-day murder of Edward Browne, Esq. of Castlemoyle, has thrown the whole county of Galway into consternation. While passing near Horse-leap in a gig, accompanied by his friend Mr. Nolan, about three in the afternoon of Jan. 13, this inestimable young man received a shot from a gun, levelled by an assassin behind a wall, which caused his immediate death.

What is the cause that a disposition to intense cruelty should be so prevalent? Some defect in the system of religious and moral instruction; or rather, something worse than a defect, some positive plant of pernicious instruction, which, instead of correcting and elevating, vitiates and depraves; some latent inculcation of infernal maxims and principles; some perverse distortion of doctrine, which inflames discontent from political causes; and in case of apprehended injury, or even obstruction in an illegal act, stimulates to the brutal study of revenge, and makes a fertile invention the engineer of barbarity.

Surely it would be a more judicious and profitable pursuit for Christian benevolence, to endeavour to rectify gross obliquities in members of the same nation; and to overcome habits of violence and outrage, which almost amount to war on the species, since both the perpetrators and the victims are neighbours and countrymen: rather than to expend so many diverted streams of treasure, which, reckoned as an annual interest, are equal to many millions of principal, in building, repairing, enlarging, and keeping at play a system of human machinery for converting remote nations to the profession of a nominal Christianity. Though this ostentatious sacrifice of uncharitable profusion is superfluous to the individuals and families who subscribe the parts, the aggregate is not superfluous to the nation; and the unnatural diversion of it, is the fertile cause of much distress among every class of artists and labourers, tradesmen, and manufacturers. It ought to be recollected, that if the sum actually remitted in foreign exchanges, for which no compensation is returned, be multiplied by the successive circles of the community through which it would pass in domestic commerce, the measure of depletion, languor, and helpless proa-

tration caused in the country as a body by its abstraction, may be ten times that of the total sum remitted. And yet the conductors of Missionary establishments are not satisfied with the present ratio of contribution from their subscribers. The nineteenth report of the Church Missionary Society closes with the following exhortation. Theirs is the text: ours is the commentary within crotchets.

Missionary zeal, in our pious fathers, would shew itself in breathing forth fervent prayers, with David :

Our souls wait for the Lord, more than they that watch for the morning. But the sun is risen in full splendour. It throws light on all the dark places of the earth, and shews them to us full of the habitations of cruelty. [A neglected subject for the labours of philanthropy in some countries of enlightened Europe, whence missions proceed.] It has ripened the harvest and shews the field to the labourer. And what is the extent of that field? Here is a call for Christian charity which was never heard before! We have found, in some measure, the level of domestic charities. It may be doubted whether the application of any very considerable addition of funds to these charities would be really beneficial. [*A shocking instance of hardness of heart; the tavern at which this sentiment was delivered was for the moment a habitation of cruelty.*] But the charity of Christian missions is co-extensive with the heathen world! Let us offer, then, as we have never yet offered. Let us meet the openings of Divine Providence. Let us give ourselves to this labour, and great will be our reward. [*“He looked for judgment, but behold oppression; for righteousness, but behold a cry.”* They insistently say: “it may be doubted, whether the application of any very considerable addition of funds to these charities would be really beneficial.” But their exhortation, if it operate at all, will not merely divert and intercept new contributions to domestic charities, but dry up the springs of benevolence which support them: for old subscribers die, and what the missionary committee call an addition of funds may not compensate for the original support discontinued. And which school, hospital, dispensary, or other institution for social relief, would they shut up? Is it the Blind School; or the Deaf and Dumb Asylum; the London or the Middlesex Hospital?]

Could they be traced to their source, the inhuman excesses in

West Britain would probably found to originate, in part, fr sanguinary maxims of internic war with the holders of proper secretly taught and cherished some few families, and transmitt as a reversion of hereditary venge from father to son, to executed without any regard the individuals personally attacked and with a stern resolution not be conciliated by beneficence. Under this view, while the transactions which each local neighbourhood witnesses with pain, a horrid, they convey no national imputation. But they loudly call for some better-planned, and better-sustained efforts, than have yet been tried, for improving the moral and social condition of poorly provided, ill-instructed, and desperate race of rustic labourers.

The *Dublin Evening Post*, Jan. 18, contains some judicious and plain-spoken reflections, touching the state of society in the disturbed districts. The desire not to lose sight of the only relation which the facts and the commentary are connected with the subject of this essay, by being drawn into a political disquisition, will prevent me from borrowing more than a part of the commentary.

“There are three ways of regarding these melancholy occurrences: the one is a sort of political confederacy in crime spreading throughout the kingdom in every direction; the other, as mere disconnected and solitary symptoms of state of society, overstocked with population, and ill-instructed in their relative duties; the third, as mere robbery and murders, having no source deeper than the depravity of the individual concerned in their perpetration.

“Perhaps it will be found that each of these causes is at work. The robbery of arms that have prevailed within the last three or four months, particularly in the south of Ireland; the disturbed spirit which has broken out in the centre of the kingdom, and to counteract which associations have been entered into by the gentry, show, we will not say a communion or correspondence between the parties, but certainly a predisposing tendency to a state which cannot be con-

templated without dismay. With regard to the atrocities that have been committed in the north and west, and particularly the murder of Mr. Browne, the laws, we hope, will be found sufficient to detect and punish the perpetrators. But we cannot too forcibly impress on the gentry in every part of Ireland, the necessity of associating, and the paramount necessity of remaining on their estates. It may be an unpleasant duty; but it is a duty that must be performed if they would preserve their property."

How defective is the system of public instruction, under which so many examples are found of men professing Christianity, who combine in one individual the rebel, the robber, and the assassin! Let us neither blame any particular church or sect, nor ascribe this complication of social crime to mere ignorance. We have lately seen in a provincial district of England, a demagogue who calls himself a Protestant dissenter, and who has obtained a license to officiate as a minister of the Gospel, abusing that liberty to preach sedition and assassination. In London there are chapels dedicated to infidelity, which are kept open under the same license. In another division of enlightened Europe, there are traces of deep depravity tutored to strike by misapplied erudition, and rushing from an ambush to take the life of a neighbour in the costume of a scholar, and the attitude of a friend. Yes in degenerate, philosophizing Germany, that infernal principle of waging private war by the aid of perfidy, is propounded in the tone of calm contemplation; and graduates in the Universities, taking "assassination" for the theme, compose incentives for the future, and apologies for the past. A comparison of all these cases prove, that mere ignorance does not make a criminal on principle, and that the aberrations of human learning sometimes fortify the resolves of a depraved heart.

We cannot transport to the east the books of the west, and leave the principles behind. Infidelity,

with the inveterate habit of never recanting demonstrated error, will travel thither in the company of Christianity.

I have hitherto but ascended the steps, and walked in the porch of the missionary Temple; or, to speak without a figure, have confined myself to those points for inquiry and discussion, which ought to be thoroughly considered before any modern church or sect of Christians embarks in a missionary undertaking to convert the heathen inhabitants of remote countries. The authors of the plans for making proselytes, now in a course of experiment, appear to have decided on making the serious attempt without going through this prelude. Of the several considerations that have been urged, the certainty that some of the conflicting sects must be in error, and the possibility that the particular sect most active in the design may hold, and consequently teach, tenets fundamentally wrong, is enough to arrest the steps of the conscientious missionary. Shall a man compass sea and land to propagate an awful mistake? To suffer weeds to grow among the wheat is one thing; to plant weeds instead of the bread of life is another. But this—the duty of pausing to assay, by the test of Scripture, the truth of the doctrines, which the respective missionary Societies have begun to disseminate in the name of the Gospel—is but one of the dependent parts of this grand and comprehensive subject, which as it respects both what ought, and what ought not to be done, is of universal interest. That the bearing of the Introduction may be the better apprehended, I here recapitulate the principal points which have occupied the previous parts of the Essay. On the subjects of these propositions, much latitude of opinion has prevailed; some of them involve difficult problems in theology and moral philosophy, of which satisfactory solutions are

rather to be desired than expected; even the reader who has not seen the explanations which accompanied them, will conclude, that on such subjects, definite propositions can only be framed by way of hypothesis. For brevity's sake, the substance is given, and not the words of each passage.

QUESTIONS, PROPOSITIONS, AND COROLLARIES, ALREADY STATED.

1. The Heathens who are not favoured with the light of the Gospel, are not on that account out of the pale of the divine clemency.—*Vol. VIII. p. 420.*

2. It is not incumbent on modern Christians to go into Pagan countries to preach the Gospel to the inhabitants. The original commission given to the Apostles was accompanied with the power of working miracles. Can modern sectarians, with their distracting varieties of creeds and abjurations, systems and antipathy to systems, suppose that they have this commission?—*P. 421.—And see Corollary 11.*

3. The various forms of Heathen religion may be better for the nations living under them than a corrupted Christianity.—*ib.*

4. Calvinism a dangerous doctrine to be propounded among the bulk of mankind.—*P. 423.*

5. The condition of virtuous Pagans, as far as the Scripture reveals the grounds on which they will be judged, is comparatively safe.—*P. 427.*

6. What different religions have in common is good.—*P. 428.*

7. A belief in the Deity as a moral governor necessary to social morality.—*P. 429.*

8. Fallacy of a system of morality founded on a balance of interests.—*P. 430.*

9. All men will be judged on one common principle.—*P. 431.*

10. The solicitude of the Pharisees to make proselytes reprehended by Christ.—*P. 532.*

11. Christian sects should revise their systems of belief or non-belief, before each proposes its own creed and form of worship to Pagan minds as the vehicle of true Christianity.—*ib.*

12.—The argument that "all men will be judged on one common principle."—opened in *p. 431.*—resumed. *P. 533.*

13. What are the cardinal points of Christianity?—*P. 534.*

14. Redemption does not extinguish the responsibility of men as accountable agents, but transfers it to Christ.—*P. 535.*

15. All the successive dispensations agree as to the ground of acceptance.—*ib.*

16. The spirit of the fourth dispensation considered.—*Vol. IX. p. 1.*

17. What is the merit of faith?—*P. 3.*

18. An Infidel in a Christian country cannot put himself into the place of an unenlightened Heathen.—*ib.*

19. Redemption is universal.—*ib.*

20. The question, "Why has revelation left some points obscure?" hypothetically answered.—*P. 6.*

21. A definition of faith from St. Paul, which seems to include a pious theist, whether he be a Christian, or want the light of revelation.—*P. 7.*

22. That there is some deficiency in applying the doctrine of redemption in Christian countries, so as to avoid undermining the sanction of responsibility to a Divine judge,—is inferred from large masses of the population being found deliberately pursuing the routine of crime to which their local situation exposes them.—*P. 8.*

23.—Further proofs in support of the same inference.—*P. 105.*

24. The flagrant cases of moral evil in his own country, or in contiguous nations having the same boasted degree of light, are overlooked by the missionary. *P. 106.*

The first conclusion, that I found upon all these preliminaries, is, that it is not an incumbent duty, in the present circumstances of the Christian church, for any nation or congregation, society, or individual, to institute missions to Pagan countries for propagating Christianity among them: see above, 2. and 10. Till I could come to conclusion, I carefully abstained from entertaining any objection to the attempt on political grounds. The question thus far has been viewed only in its religious and moral bearings; and the result will permit the consistent Christian, as well as the loyal patriot, to look to temporal effects, in weighing the expediency of persevering in the attempt to convert the natives of India.

Could the missionary know that he was carrying in his hand a lamp which would light the natives of distant and benighted regions to immortal happiness, there could be but one opinion as to his line of duty: but then one volunteer would do more than a thousand hired recruits at present do, and

the Societies who move the existing establishments of mere human machinery would do less. The missionary believing himself inspired to the undertaking, and deeming that the time was come when Divine Providence had willed that the Gospel should be preached and received among the nations destitute of it, would not be stopped by geographical lines which a government courier would pass; his means would be less worldly, his course more enterprising, and his success decisive, or his failure noble.

I propose to finish this Essay, by touching on, rather than discussing the following topics.

MAIN BRANCHES OF THE INQUIRY.

1. On the notion that the empire of India has been transferred to Britain, as a means, in the hand of Providence, of propagating the Gospel there.

2. On the modes of missionary exertion.

3. The apparent success of missionary labours is comparatively small; and the quantity of real success, if estimated by the cases of apostacy and deception which have occurred in converts whose baptism and entry on the ministry were much celebrated, is a fraction of the apparent sum reduced to evanescence by a large divisor.

4. On the futility of the notion, that converting the Hindoos to the same religion as

that of the governing state, will attach them more to the British people and government.

5. On the sphere and effects of education, as confined to a course of civil instruction.

6. Degrees in education are secular advantages which, transferred to one country at the expense of another, alter the relations of power. No assignable measure of proficiency in human art or science, is necessary to salvation.

7. *Desiderata* in the Christian world, which ought to precede missionary efforts, including:

I. A return to Catholic unity, or at least a closer approximation to it. On the public utility of priests.

II. On the construction of a General Creed. On a National Church; what modifications tend to make one the bond of patriotism.

III. On the Toleration of Christian sects. Baneful effects of independent pastors being dependent on their congregations.

IV. On the Toleration of Infidel works. Reasonable limits to toleration.

8. On the probable effect on the Indian population, if the missionary efforts divest them of respect for their national religion without converting them to Christianity.

(*To be continued*)

To the Editor of the Asiatic Journal.

SIR ;—Happening to open your number of last November, I was struck with a passage at page 439, in which Gulchin informs us, that he once, after a long march with the Mahrattah army, caught “ a chance view of that great chief “ Maha Raj Sindiah stripped of “ his finery, and seated on his bare

“ haunches, cooking his own “ breakfast; and many British “ officers during the Peninsula “ war learned to do the same !”

Now, Sir, this scene intimates a species of hardship and privation, which I did not look to suffer in India. I am a young cadet, and anxious to learn my duty. There

can be no intrinsic meanness, as Gulchin observes, in actions useful and necessary; but I cannot comprehend the utility or necessity of breakfasting in public, divested not only of regimental finery, but of one's lower garments. Although the great chief Maha Raj Sindiah did it seems cook his breakfast in this costume, and though many of our officers have learned the same, still I must hesitate, at least during this severe weather, to imitate those illustrious examples.

It is suggested to me by an experienced Indian officer, that Gulchin may be mistaken in what he saw; he had but a chance view: he saw not the great chief face to face; he saw indeed that the

haunches were bare, and such a circumstance might prompt him to pull off his shoes and retire from the awful presence. Some bush perhaps intervened, and prevented Gulchin from attaining an accurate view of the posture and the motions of Sindiah. The Maha Raj was not making tea and toast; he was at his devotions: the Hindoos are regular in their devotions. No man should disturb the religious. It was well that Gulchin satisfied himself with his chance view. Gulchin should recollect his own occupation of *Gulchinee*. He plucks his rose alike in winter and in spring, and must make due allowance for the wants and necessities of others.

TALEB AL ILM.

To the Editor of the Asiatic Journal.

SIR:—It is well known that the want of a regiment of cavalry at the Cape, when the Caffres first made their incursions on the exposed settlements, occasioned whole districts to be abandoned to the marauders. This was one of the fruits of the excessive reduction of the army into which his majesty's ministers suffered themselves to be goaded by the *save-all*s of Opposition. Ask these statesmen of resource-husbanding memory, what smelling-bottle will revive languishing trade? They answer, retrenchment. What bond will secure peace? Retrenchment. What spear repel war? Retrenchment. And accordingly, when, as directors of the energies of Britain, they had to fight the late Emperor of France, it was not by "intrenching," but "retrenching," that they expected to save England, and recover Hanover. But to return to the system of making the *minimum* the *maximum*, in adjusting the peace establishment for the army, so as to have just men enough in a garrison to mount the ordinary guard. Such exact economy is any thing but

cheap, for its provision is never adequate to the uncertain future. It is like a goose laying her eggs in a tomtit's nest. I recollect a story of a gentleman who turned his own architect, and applied the same principle of nice adaptation in building a villa. He constructed a dining-room, in which never more than sixteen were to sit down to dinner. He allowed extra strength in the floor for one footman to wait, and for a servant-maid to come in gently with the dishes. He had tried the strains of all the timbers, and knew exactly what a lath would bear. But one day, unfortunately, whether he had not allowed enough for the weight of the knives and forks,—or whether the turkey at one end, did not form a proper equilibrium with the baron of beef at the other,—or whether the salts were too full,—as the first course was removing, the floor gave way, and the company were precipitated into a breakfast parlour. Thus some casual strain unprovided for, perhaps too much copper in the pockets of the footman, made the bill for repairs exceed the cost of the building.

QUIZ.

To the Editor of the Asiatic Journal.

SIR :—As the East-Indies comprises a part of the world, wherein discoveries of the highest antiquities may reasonably be expected, and some of them to my own knowledge surpass those hitherto observed in other countries, I cannot but consider it as a matter of surprize that they should have passed for so long a period without attracting a more general spirit of enquiry than they appear to have done. The subjects to which I allude are, there is reason to think, the most ancient and indisputable memorials of an unknown civilized people of any that can be produced in any country; and they contradict in a most eminent degree some of our generally received opinions relative to the invention of fire-arms and gunpowder, and demonstrate clearly that they are utterly without foundation.

We have evidence of this in the enormous species of cannon which have been found in many parts of India, and known to the Europeans resident there for a long period of time, without attracting any other attention, than a vague, and uninteresting degree of surprize. I have seen some of these cannon myself; and I must exclude from the above remark the penetrating mind of Lord Cornwallis, who examined them with minute attention, caused their dimensions to be taken, and sent to the presidency of Fort St. George, where the weights of the guns were calculated, and the weight of iron shot to suit each calibre was also determined; those dimensions I believe I am now in possession of, but where to lay my hands upon them at this moment I have not a knowledge. The principal dimensions of the largest I remember well. The calibre was perfectly cylindrical, and was twenty-nine inches and nine-tenths in

diameter. It was twenty feet in length, and its thickness at breech and muzzle were the same, and to the best of my recollection about eight or nine inches in thickness. It was constructed of hammered iron of a most perfect nature, not liable to ozidation; for notwithstanding its extreme antiquity, no rust appeared upon any part of it, excepting an immaterial quantity, occasioned by some dirt or moisture, which had deposited on the bottom of the interior part of the calibre. An iron shot for this gun would weigh in round numbers 3758 pounds. The whole gun is made of wrought iron bars, so admirably finished, that no mark of the hammer can be distinguished. Some of the bars are formed into circles, and others straight: but to afford a more perfect idea of its construction, let it be conceived, that to form the first layer of bars, a cylindrical cask had been made, with the staves so accurately adjusted to each other as entirely to exclude air: these when so placed were circumscribed with hoops, these again with straight bars, and so in succession, until the cask or gun had been finished, the last layer being of the circular bars. The ends of these straight bars, have been welded together to form the breech, and the circular ones united with them very accurately to complete it, and the thickness of the breech appeared not materially thicker than other parts of the gun, and not at all fortified like the modern cannon; which shows, however, that although the people who constructed the guns had certainly a knowledge of gunpowder, they were unacquainted with its exact mode of action. The vent was about three fourths of an inch in diameter, and rather larger at the exterior surface than at the interior one; it had no trunnions, but at certain distances on each of

its upper sides were angular masses of iron admirably welded into the exterior surface of the piece ; there were circular apertures, through which it appeared large iron bolts had been inserted, by which the gun had been slung in chains, doubtless on some powerful gin or triangle ; its effect therefore must have been more tremendous in apprehension than in reality and to move it from place to place on service is altogether out of the question. This gun was something larger, I remember, than those directed to be measured by Lord Cornwallis. They are found widely disseminated in the forts of the peninsula ; and at some extremely remote period they have certainly been general.

Another of them was made of a mixture of copper and iron ; an alloy we are now unacquainted with. It was twelve feet long, twelve inches in diameter of the calibre, and certainly had been cast, which evinces most clearly that the art of metallurgy must have been carried to a higher degree of knowledge than what has been attained by the moderns. This gun I fired with a whole barrel of gunpowder of sixty pounds, charged with a stone shot and that wedged up with iron wedges and filled nearly to the muzzle with clay and pieces of granite rock. This was done with the intention of bursting the piece, but no impression whatever was made by the discharge. With extreme difficulty I separated part of the ornaments, and found them constituted of the metals above-mentioned. Its strength appeared nearly equal to resisting any power, and such an alloy in modern warfare would be of value inestimable. This gun appeared by the vent to have been much used. There was another gun at the same place of eight inches calibre, and to the best of my recollection forty feet in length, elegantly ornamented. This was of iron, and there were also many

of smaller calibre, some so low as one-pounders. Most of them were neatly constructed, and the ornaments thereon were finished in a masterly style of execution.

As many subjects of antiquity have lately been introduced into England as objects of curiosity, and also some modern artillery, said to be remarkable on account of their peculiar construction, or memorable from the victories obtained where they were captured, it is, I think, to be regretted that one of these extraordinary cannon has not been brought to this country. It would be a subject of deep speculation, and some information of an useful nature might be derived from the quality of the iron. The gun and the mortar in the Park might severally be fired from one of these pieces as a charge ; and they would by no means overload it.

We are gravely told, it will be recollected by all, that gunpowder was invented in the 14th century by a man, I believe a monk, named Bartholomew Swartz. Every examination in India proves that the Asiatics were acquainted with gunpowder, cannon, and small arms, long before we possessed any account whatever of them ; in fact, the origin of gunpowder and fire-arms of all kinds is so ancient amongst this people, that, notwithstanding the genuine antiquity of some of their records, they have none of the period of their invention ; all they know of the cannon consists in ridiculous tales, that these enormous ones were made by the gods when warring upon earth against each other.

It is highly probable, I think it will be allowed, that few if any of the strange accounts given of the gods of the ancients have arisen without some foundation, either from the acts of remarkable individuals or from the practices of distant nations. The story of Vulcan and the cyclops probably originated from the immense forges

which must have been used in the fabrication of this enormous species of ordnance. There is evidence I think sufficient to conclude that the nations about Egypt, Syria, Greece, &c. have had earlier communication with India than we have any recorded accounts of; some of these might in their travels or voyages to Hindustan have noticed these astonishing forges at work; and this would have been circumstance sufficient to have created the fabulous accounts we have been amused with of the mode in which the thunder and lightning of Jupiter was fabricated.

A greater degree of probability is given to this idea by an annual festival still held on the southern peninsula of India, at which the children of the smith cast parade the streets of towns and villages with drums and music of different kinds: but the principal performer is a boy with a hideous wooden mask, with one eye only in the midst of the forehead, glazed with a plate of talc; others have two eyes, and these are most general, but I have seen them with one, and the others are probably a deviation from ancient custom by the caprice of modern inventors. Such masks are admirably adapted to prevent the effect of heat on the face, and it is certain such immense masses

of iron at a welding heat could not be approached without some contrivance of this nature. The boy beats with a small and large piece of heavy sonorous wood, and the strokes, which convey a sort of musical sound, exactly resemble the noise made by smiths, so familiar to every one, with the sledge and hand hammer. It is not improbable but this subject may meet with farther elucidation by the opportunity now offered of acquiring a more intimate acquaintance with the records of the Hindoos. The stores of these are doubtless immense, and amongst the rude ore of superstition some unknown and invaluable metal may be detected by accurate analysis and the ingenuity of modern assays.

I believe some notices of these guns have appeared in several works already published, but they have extended to a little more than a mention of their existence.* It is hoped, therefore, these loose recollections may induce some of our countrymen to institute a more minute inquiry into subjects so curious in themselves, and so important in a view of inventions directed to the specimens of the highest known antiquity.—Z.

VINDICATION OF THE DESATIR.

THE following letter, by the learned and venerable Mulla Firoz, the translator of the *Desatir*, was published in the *Bombay Courier* of July 3, 1819, as an answer to the attack made both upon the Original and the Translator by a Calcutta critic.—See *Asiatic Journal*, vol. VIII. p. 355. Notwithstanding the writer, from being unacquainted with the English language, labours under a great disadvantage in handling his weapons, yet the ground upon which he stands appears to intercept at the very base the arrows of verbal criticism which were launched at him; so that he has to descend from an eminence in order to collect and examine them. Having met his antagonist as a graduate

versed in ancient dialects, Mulla Firoz might have been satisfied with repelling his objections. He has traced them to their source, and at once appealing to Ancient History as a witness, and invoking Classical Learning as a judge, he has shewn that the words and terminations of the Pehlevi, illiberally and blindly impugned as an invented jargon, have recorded parallels in languages of high antiquity which have ceased to be spoken; and he has adduced familiar proofs of similar traces of kindred features, disguised by slight but singular changes in living tongues and modern dialects. In fine, by seizing the weapons of the verbal pedant, and handling them in the light, to discover

whether they had point, or edge, or temper, or polish, he is able to exhibit them as harmless curiosities fit for a museum.

The illiberality of the critical assailant consists, not in questioning the authenticity and high antiquity claimed for the *Desatir* by the Parsees, who receive the book as a revelation, but in the not ambiguous insinuations plentifully scattered against the simplicity and integrity of the translator.

Mr. Editor : I am perfectly sensible as to what must be the general sentiments in consequence of my long silence at the charges preferred to the world against me in the *Calcutta Government Gazette* of Jan. 14 last, on account of the *Desatir* ; but if the candid reader will please to consider the following statement, he will no doubt be satisfied that the publication of my defence against that attack has been procrastinated solely through occurrences over which I could have had no controul.

In the first place it is a well known fact (and it is a circumstance which I have now to particularly lament) that I am totally ignorant of the English language ; from which cause it will be easily perceived that numerous obstacles, which are often insurmountable, must have opposed my endeavours in a contest of this sort, even though I were aided by the assistance of the most respectable English talent and learning. I am also far advanced in the evening of life, with an habitually delicate constitution, which is frequently not in tone for discussions that grieve and distress, instead of yielding the solace which alone can comfort and soothe far advanced declining life ; but when I state that I have not been able to obtain the assistance of the only individual on whose learning and talents I could have most relied, from a pressure of important business of his own, and collaterally to these circumstances, frequent returns of indisposition have taken place, independently of many unexpected private incidents involving the necessity of religious observances, I feel assured that candour will acquit me of the charge that I would willingly shrink from the duty I owe to the public and to myself. In the same confidence, therefore, with which I have made this appeal to the public, I respectfully submit to their candour what I trust will not only silence the uncharitable voices of public accusers and literary scolds, but be

perfectly satisfactory to every unprejudiced mind to which the subject is interesting.

It was my intention to publish literally the whole of the critique alluded to, and to collate it verbatim, opposed (piece meal) by my own reply ; but some of my friends having considered that too voluminous a measure, and that a more summary one would suffice, I determined upon adopting the less troublesome mode of quoting a few of the most important of the critic's discoveries, and treating them as they merit.

The exordium by which the critique is ushered into notice is such a one as might be expected from a scholar and a virtuoso in eastern lore ; and as his first comment is upon the word *Desatir*, which is the name of my book, and which he says ought to be *Dusateer*, an Arabic word, and the plural of *Dustoor*, I shall first settle that part of his doubts on my way to the rest. By this contrivance, it will be observed, he endeavours to prove that my work, the *Desatir*, is a modern one, presuming that it must have been written long posterior to the Mahomedan conquests of Persia ; a proposition which on the first blush carries much seeming plausibility about it, but which upon an analytical survey falls flat to the ground, where I shall soon prostrate it, after having first settled the word *Dustoor*, which I grant him is the singular, having *Dusateer* for its Arabic plural.

The word *Dustoor*, which is purely Persian, has a variety of meanings according to its application ; for example, *Dustoor* means "vizier, vakeel, secretary." *Dustoor* also means, "the state of being permitted to an audience of a high personage."—"The president of a committee ;" "the foreman of a jury ;" even "the faithful performance of a promise" is called *Dustoor* ; with a variety of other meanings, not one of which has the slightest analogy or resemblance to a book. The Persian plurals are *Dustoorha*, which is the dual, and *Dustooran*. Our critic confines the word to mean "regulations." It was about the year of the Hejira 30, corresponding with the year of the Christian *Æra* 652, when the Mahomedan power was first established in Persia by Omar Kitub ; and if from that memorable epoch we only cast our eyes back upon that well defined field of retrospect lying

between that conquest and the commencement of the reign of the great Cyrus, we shall find the Persian empire to have been full of every species of human refinement. Can this critic suppose there were no poets to celebrate the magnificence and mighty achievements of a Cyrus, a Cambyzes, a Darius, a Croesus, or a Xerxes? Had Persia no language capable of giving utterance to the fancy of the patriot muse by which to record the deeds of her heroes? Can we suppose that the terror of Athens, during the alternate administrations of the refined, the designing, but prudent Themistocles, and the great, the just, and wise Aristides, could have ruled over an empire with a splendour that awed and dazzled the world with an imperfect language? and that monarch, too, a descendant of a long race of the most polished and illustrious of kings? Can we be so full of folly as to suppose the oldest nation on earth in civilization and refinement to have been beholden to the language of barbarians who conquered it, from 1500 to 2000 years after it had been the theme of the respective admiration of Herodotus, Xenophon, Cornelius Nepos, Strabo, Plutarch, and others of equal celebrity and veracity?

It would have been unnecessary to have recourse to the foregoing remarks to prove the perfection of the Persian language long anterior to its acquaintance with the Arabic, were it not intended by the Bengal critic to reduce the former to a dependence on the latter as the source whence it has been supplied with many useful words; which, if admitted, would enable him to impugn the authenticity of the *Desatir*, by reducing its antiquity to a period posterior to the Mahomedan conquest. His sapience would then the more easily have it in its power to question the high authority of Sir William Jones in his interpretation of the Dabistan, which it appears he (the critic) has ventured to do under the wing of Mr. Richardson, upon the occasion of his disputing the authenticity of M. Anquetil's *Zend Avista*.

"The number of Arabic words," says the author of that very large dictionary, "found both in his Zend and Pehlevi dialects, furnish one strong presumption of their modern date, no Arabic word having been introduced into the Persian before the seventh century."

Here I feel myself called upon to advocate my cause in a strain that gives me considerable reluctance, having no alternative left me but to publicly declare, not only against Mr. Richardson's opinion in this instance, but also against his competency to decide upon the subject; and this I do, whatever may be my private opinion upon the writings of the shrewd and learned Anquetil. There is scarcely a native Persian scholar, even of the middling class of this day, who would not feel pain on examining any leaf throughout Mr. Richardson's immensely large dictionary; wherefore, as one source of objection, I insist upon it that the Arabic words alluded to are Persian derivatives: but, as an assistant proof of this, I shall quote an authority which may be thought not very lightly of by even some of Mr. Richardson's most sanguine admirers.

I refer the reader to a book entitled, *Mémoires de la Perse, par Sylvestre De Sacy, de l'Académie des Inscriptions et Belles Lettres*.

This learned antiquary, in his essay on Medals, in p. 171 of the above work, gives the following description of a medal of the reign of Shahpoor, who it is well known was the son of and successor to Ardashir Babagan, that reigned 500 years before the Mahomedan conquest. The author's own words are here quoted upon introducing the subject of the medal in question thus.

"La Médaille par laquelle je commencerai est une Médaille de Sapor, elle est placée sous le No. 3 de la planche VI. J'en ai fait graver la légende du côté de la tête séparément sous le No. 4, planche VII. Voici de quelle manière je lis cette légende."

Here the inscription is in the Hebrew characters, but in the following Pehlevian words, *viz*.

"Mazdeizne beh Schahpauhr Malcan Malca Iran Minotchetri men iezden."

"C'est à dire, l'adorateur d'Ormuzd l'excellent Sapor, Roi des Rois de l'Iran germe céleste (ou ce qui est la même chose) de la race céleste des dieux."

In this inscription in the Pehlevi language, consisting of only nine words, that were written 500 years before the Mahomedan conquest of Persia, we find two words that have been adopted into the Arabic: "Malca" signifies "king,"

as does the same word in Arabic, differing only from the Pehlvi by the substitution for the finite *a* or aliph, by the letter *k*, thus: "malk" instead of "malca." "Bin," in Pehlvi, means "from," and has the same meaning in Arabic. I shall also quote a few other Pehlvi and Persian words that have been adopted into the Arabic, and then shew that even the Koran is indebted to the Persian and other languages for many words it contains: for example, *Khookba*, in Pehlvi, means, "star," and *khookub* is the same in Arabic. *Shumseeah*, in Pehlvi, means the "sun," and *shumse* is the same in Arabic. *Thiana*, in Pehlvi, means "mud;" *thian*, in Arabic, is the same. In Pehlvi, *teena* means a "fig." *teen*, in Arabic, is the same.

I have a book in my possession called "Thuffseera'i Midjma'ul Bahrein," by Abdul Rahmaun Bing Abedukkur al Centee al Sha-faa-ee; in which there is a selection of upwards of 100 words taken from the Koran that are Persian, Hebrew, Coptic, &c. I shall instance a few of the Persian which may be found in it. In the Koran the word "Isthubruk" means coarse cloth; in the Persian it is called "isthubr." The Persian word "than-noore" (an oven), is the same in the Koran. "Deenar" (a coin), in Persian, is the same. In the Koran, "caphoor," or "camphor," in Persian it is caphoor. "Mushk" is Persian, for "musk;" in the Koran it is "mesk."

All those authorities totally differ from the opinion of my learned opponent, although, under the sanction of Mr. Richardson, who says no Arabic words were to be found in the Zend and Pehlvi dialects prior to the Mahomedan conquest. It is plain from this assertion, that his (Mr. R.'s) knowledge of ancient history must have been very limited indeed; while the same reasoning, in my opinion, calls our critic's judgment, even as a contriver, into question; for how easily may not one conceive the possibility that the Arabic might have borrowed from those dialects as well as the contrary, independent of the proofs before us that such has been the case. It has been, I believe, the custom of all nations to commemorate or register particular events in those languages which they held to be of the highest antiquity and classical celebrity, there

can therefore be no difficulty with respect to the estimation in which the Pehlvi was held by the court of Shahpoor 500 years before the Mahomedan conquest; subsequent to which latter period, my learned adversary declares the Arabic must have been adopted in the dialects of Persia. But here I submit to the candid reader, whether he has ever heard of an English, French, or any word of any modern language being adopted into the Latin, the Greek, or the Hebrew?

The learned Sir William Jones was of opinion that Iraun or Persia was the country from which all the nations of the earth derived their origin; it being, according to him, the place whence people migrated in all directions, and in which migration they of course carried their language along with them. He supposes that the language of the first Persian empire was the mother of the Sungskrut, and consequently of the Zend and Parsi, as well as of Greek, Latin, and Gothic. He goes further to say the inhabitants of Britain first came from Armenia, and that the Goths or Scythians first came from Persia.—Vide *Asiatic Researches*, pp. 64, 65; and *Flowers of Persian Literature*, pp. 46, 47.—That the ancient Hindoos copied their form of worship from the Persians, we are assured in *Maurice's Antiquities*, where it is particularly mentioned in pages 195, 196, corroborating the opinion of Sir William Jones; for if one nation adopted the religion of another, can there be a doubt of its adoption of part of its language also? And now, candid reader, upon this subject may I not with every confidence ask this fair and plain question: Is it not more probable, that the Arabians have borrowed all those words which they have, that are to be found in Persian, from the Persian, than that the Persian is indebted to the Arabic, as the source from which they are derived.

To oppose such authorities as those just stated, and they borne out too, not only by the creed of our forefathers, but many other strong and presumptive existing proofs, would be little better than questioning the truth of fact, which the following instances will place it beyond the power of the most ardent lover of quibble to rebut. Here I shall only refer to a few cases, in which two languages

are so strictly alike, both in sound and meaning, that the most superficial observer must perceive their affinity, and then it will require but little sagacity to separate the parent from the offspring. Out of at least 1000 words that I could easily instance, I shall merely take a few as they present themselves; and first let us take *budh*, which in Persian means "wicked or bad;" *burader* is "brother" in every sense; *bandé*, a "slave," one that is bound; *butè* is a "butt" for shooting at—*quere* whence comes the French *but*. The Persian comparative of the adjective *good*, viz. *bether* is precisely our English word "better;" *bil*, in Persian, a "pickaxe" with a hooked point, English "bill," or "billhook." *Pader*, "father;" Latin, *pater*; *peri*, "fairy;" *peer*, in Persian, a title of honor, meaning "senior," or "old, wise, learned," or "man of quality;" *4okhter*, "daughter;" *der*, a "gate," or "door;" *shekher*, "sugar."

There can be no difficulty in perceiving which of those languages is the exotic, though in the trafficking of words, or passing them from one language to another, they may lose much of their sound, and not unfrequently some of their syllables: thus, *tatten* is "tin;" *umbellicum* "bellico;" *cadavered*, "davered;" *potatoes*, "tatoes;" *withdrawing room*, "drawing room." The "Copts," a sect of Christians so called from Jacob al Bardai, an apostle of the Eutychians, and were called "Jacobites," again "Cobites," and now "Copts;" where then lies the wonder that the numerous words quoted by the Bengal critic should be corruptions of the pure language in the *Desatir* to which they bear a similarity?

Even in the *Dabistan*, the author admits the *Desatir* to have been revealed from heaven to Mahabad, and that its language was a heavenly one (as *mauce Zebun*) and totally unknown in this lower world. Sir William Jones, however, is made to misinterpret that part of the work which relates to the *Desatir*, because Mr. Richardson could see no farther back into Persian history than the time of Omar Kitub; which ruthless fanatic had all the literature of the empire collected and used as culinary fuel for the kitchen of his immense household, which

it is said, it suppld during several months. From such a destruction of literature by that conquering barbarian it cannot be surprising that the old language was soon forgotten, or at least, that without the means of cultivating it, it must in due course of time have become corrupt; but while it is only reasonable that we should assent to this fact, can we refuse belief to one as plain and reasonable, namely, "that many books must have escaped the general destruction?" And as any one well acquainted with the history of the Mahomedan power may form a tolerably accurate idea of the dreadful penalty which must have awaited the slightest disobedience of that species of sovereign will, it will be seen with what caution the holders of those contraband sacred relics must have acted, lest they should be discovered even during a succession of reigns which lasted for ages, and whose general creed had established the Koran as containing all the knowledge that man ought to possess, deeming it blasphemy and profanation to read or study any other book.

This important event is touched upon with that sort of levity by the Bengal critic, which I am sorry to have observed upon an occasion so lamentable to all lovers of learning and worshippers of truth; it, however, marks a consciousness, upon his part, that it is a position of much weightier moment against his host of subjunctives than perhaps any other he has chosen. A person dealing generally upon doubts, has always a number of chances against him, for every proposition of his being dependent upon condition, he scarcely nine times out of ten wins his game.

It is mentioned in numerous writings that a book had been revealed to Mahabad, containing every species of knowledge, and written in a heavenly language. This seems not to have been denied; and if it had, there could be no other proof given against the fact than the bare denial that such an event had happened. In such a case, however, one unsupported affirmation would, of course, be as good as another; but, as many respectable authorities, of different and very distant dates, speak of the circumstance, every idea counter to the admission of the fact must

fall—"as well, and with equal plausibility, might I presume to question the Christian revelations."

That the 5th Sassan died about nine years before the conquest by Omar—I grant it; but if any one will tell me that he was not holy, learned, and inspired of God, our conversation must cease: for upon the same principle that I would not oppose the belief which ascribes divine agency to either the Mosaic, the Christian, or the Hindoo legislators, I must in equity claim for the prophet, whose benign laws I respect as the religion of my forefathers, that he was also inspired by God. This matter settled, can any one suppose the inspired Sassan could not have foreseen the change that was shortly to take place? and as, by the same power of seeing into futurity, he must have been well aware of the consequences that would ensue, his solicitude for the preservation of the revealed laws from the polluted hands of the approaching despoilers caused him to translate the (Osmanee Zeebun) into a language which should be more intelligible to his followers. Vide page 184 *Desatir*, Commentary to No. 21.

The critic being aware of this reasonable conclusion, yet wishing to have a more colourable pretext for calling the sacred circumstance into question, says, that Moshun, who wrote the *Dabistan*, informs us, that several learned Parsies came from Iran in the reign of Jehanger and Shah Jehan, and that they wrote books, one of which must be the *Desatir*. This potential assertion, which, however, amounts to a mere supposition, would reduce the antiquity of the *Desatir* to about 200 years. There are now five of those books in Bombay, two of which are in the hands of Mahomed Ally Khan Shoosteree, who had them of his friend, the late Abdul Letief Khan Shoosteree, the latter having found them in Bengal. I myself have copies of the five in my possession, and here follow their titles, and the names of their respective authors

The Cheman by Berham Ferhad. Khis-tal by Mohbed Husen. Zeere Dhust of Shahr by Mohbed Seeroosh. Jamch Kar Koosroo by Khudha Jewee. Zeader rooh by Mohbed Khooshee. In those books every line is mixed with Arabic, a proof that none of their authors could have

written the *Desatir*, a single particle of Arabic not being to be found throughout its contents; which is an irrefragable proof that the sacred volume was written long previous to the corruption that followed the conquest, through the mixture of the two languages. Yet my learned opponent will have it that the *Desatir* ought to be called *Dusateer*, in compliment to a spurious Arabic plural which the lexicographers of that language have thought proper to tack to a word they purloined from the Persian.

And now as my learned opponent has placed us upon the subject of the *perishable*, as Mohsun is styled, I refer the reader to his (my opponent's) averment, in which he denies what is stated in the preface to the *Desatir*, namely, that "the author of the *Dabistan* frequently mentions the *Desatir*, and indeed adopts it for his guide in the account he gives in it of the religious dynasties of Mahabad and his successors." He says, "Mohsun, in fact, does not refer to the *Desatir* as his authority, but relates what the Parsis are understood to believe and to profess," and adds it is probable that he (Mohsun) never saw the *Desatir*.

From this assertion, it is certain that my learned opponent can either not have read the *Dabistan*, or if he have, he must have forgotten what he has read; to prove which, I refer him to page 130 and line 15, when he will find the *Desatir* particularly mentioned.

That the Mahabadian, or Hasham faith existed in the time of Khusrōo Parvez, who was cotemporary with the Emperor Heraclius, we are assured in the *Shah Nameh*, written 800 years ago, by Ferdhowsee the poet, in the reign of Sultan Mahamet H'guznavi, as particularly appears by a letter from the former monarch to the latter, in which he (Khusrōo) declares he is not ashamed to profess the faith of Hasham, conceiving it the most reasonable and pure of all faiths. For the existence of this letter, see page 69 of the *Dabistan*. In the Persian dictionary, called *Boorhuaneh Kaateh*, the *Desatir* is mentioned and explained, as well as the four prophets Abad, Jyrafam, Shah Keluve, and Yasan, all of whom (according to our chronology) preceded Adam or Gilsha.

In remarking upon my statement in the

preface to the *Desatir*, that its language is neither the Zend, the Pehlevi, nor the Deri, he asks, "What book then can the work have been translated from?" forgetting (or at least wishing to forget) that any other book had been in-being, lest there should be reasonable grounds for admitting the probability that one in the Mahabadian (or language from which the *Desatir* has been translated) could have existed at the time; but as I conceive I have established sufficient *data* in favour of the authenticity of the *Desatir*, and in refutation of every attempt of the critic toward its impugment, I shall in future claim it as a right to refer to the authority of that book, in answer to some of the rest of his queries; this last question, therefore, namely, "It does not appear upon what authority the Persian translation was made by the 5th Sassan, who has made a commentary in which some difficulties of the original text is expounded, is explained in the book of the Prophet Jamshid, page 96 of the *Desatir*;" also see the latter part of commentary upon the 48th text of that Prophet, and commentary in page 184; also latter part of Commentary to text 21.*

The critic has evinced his claim to the highest rank as a grammarian, it being plain that a misplaced letter, sign, or stop of the most insignificant description, could not have escaped his notice; but with all the deference that such a qualification deserves, I submit whether he can possibly arraign the grammatical construction of a language which he knows nothing at all about? Again, can no language have existed excepting those which form the stock of his acquirements? Much has been said about terminations of words and distortions of syllables, through changing and wilfully misplacing letters with a view to deceive. Yet as much am I averse to the task of hunting, or of being hunted like a verb, through all the numbers, persons, moods, and tenses of a language that has been dead for ages, through royal condemnation, and of which it is probable there is now neither grammar nor dictionary extant; I also cannot help thinking but it would have saved much trouble, were I sure that my antagonist had ever ventured so far north as

Edinburgh, for there his ear would have soon become familiarized to a language, every word of which should differ in sound from the same word and meaning in English; what would he say to "gae awa mon," instead of "go away man?"—Here you have kirk in one place, and and eglesch in another, for church. How would he not stare, on perusing either of those late favourite publications called the "Antiquary," "Gny Mannering," or "Rob Roy." Nothing, in fact, short of the supposition that Psalmanazar must have (in a freak) taken a trip from Formosa to the Highlands, could account for such a strange imitation of the English language. This we should suppose would explain the extraordinary manner in which the favourite bards Allen Ramsay and Burns have been inspired. "Wha wadna be in love," &c. in "Moggee Lawder," would put him, our critic, out of all patience. In fact, those instances form but a trifle compared to the myriads of terms and tones, which even at the threshold of his door would have declared the inconsistency of his censures upon the languages of abroad [foreign countries and ancient times]. But, to treat this subject more gravely, I shall (in reply to my opponent's remarks upon strange imitations of words in the *Desatir*, which he says have been thrown in without system or rule) shew upon a very high authority, that he is not warranted in questioning the legitimacy and authenticity of those words in the *Desatir*, which he has discovered to be not precisely conformable to his very refined and delicate notions of rule and system; witness the decisions of Pope Urbanus VIII, in general conclave, assembled A. D. 1625, upon the occasion of collating the copies of the Septuagint, and of the New Testament, in the original Greek, for the purpose of authenticating and correcting an Arabic translation of some antiquity as a text, which at the time of publication was accompanied with the Latin vulgate version.†

"Invenies etiam in hac editione Arabica nonnulla grammaticæ præceptionibus non ita conformia, sive etiam difformia: ut genus masculinum pro fœmineo: singu-

* In the latter part of the commentary to No. 39, in page 96, instead of Limrani read Simrani.

† This was done at the request of the Archbishop of Syria, and of the Patriarch of the Copts in Egypt.—See Carpzovii Critica Sacra,—Ehrt, Asiatic Journ.

larem numerum pro plurali, atq. hunc pro duali : casus rectos obliquis, et contra ; in verbis etiam *Raphum* (vt vocant), pro *Nasbo* et *Gezmo*, et é converso, præterea additas literas ad defectum vocalium supplendum, et alia eiusdem generis : cuius rei causum fuisse opiniamur simpliciore, Christianorum loquendi vsum, qui peculiarem propemodum Arabicæ linguæ dialectum sibi vendicavit. Atqui non solum in hac lingua, verum et in Latina, et Greca. et Hebraica, non raro exactiores loquendi regulas prophetæ, apostoli ac veteres patres neglexerunt. Non enim divinorum verborum amplitudinem intra angustos grammaticaliū præceptorum terminos voluit Spiritus Sanctus coarctari : quinimo sacra ac cœlestia mysteria, absque inanibus humanæ eloquentiæ elegantique ornamentis planioribus ac facilioribus verbis nobis proposuit, ne humanæ virtutis aut industriæ, sed divinæ potentiz ac sapientiæ, magnum et admirabile salutis nostræ opus, ac totius mundi ad Christi fidem conversio tribueretur : et ne hominum sed Dei solius esset omnis honor et gloria.

TRANSLATION.

In this Arabic edition too will be found some things not so conformable to the strict rules of grammar, but rather discordant from them ; for example, the masculine gender substituted for the feminine ; the singular number for the plural, and this last for the dual ; the nominative for the oblique case, and conversely ; in words, too, *Refu* رفع

as it is called, occurs for *Nesb* نصب, and *Jezm* جزم, and the contrary ;

besides letters added, to supply the deficiency of vowels and the like. All that originated, we imagine, in a more simple mode of speaking on the part of the Christians, who employed a dialect of the Arabic tongue almost peculiar to themselves. Nor was it in this language exclusively, but in the Latin, Greek, and Hebrew, the Prophets, Apostles, and the ancient Fathers of the Church frequently disregarded the more exact rules of speech. For the Holy Spirit was unwilling that the extent and fullness of divine words should be confined within the narrow limits of grammatical precepts. Nay, it rather proposed to us in more plain and easy terms, sacred and heavenly mysteries, unadorned with the empty display of human eloquence and elegance ; that the great and admirable work of our salvation, and the conversion of the whole world to Christianity, might be attributed not to human influence and means, but to its true cause, the divine power and wisdom ; and

consequently that all the honour and glory might redound to God alone !!!

As to the observation respecting the variance existing between the account given by Sir John Malcolm in his history of Persia, and that in my preface to the *Desatir*, regarding the manner in which I originally came by the book, I declare it probable that I may not have been thoroughly minute with the gallant and learned general : the fact is, " my father and I were at Isphahan together," and whether I told Sir John that I had found the book myself, or that my father had found it, or that we had found it together, I cannot now recollect ; but this surely can be of no consequence.

Finally, the existence of the *Desatir* having been substantiated, by the mention made of it in many ancient as well as modern authors, I conceive that nothing can honestly impugn the pretensions of my publication, as to its being the identical work, except the production of another well authenticated different book of the same name. Upon such an event, I shall cheerfully return the 8000 rupees (not 14,000, as mentioned by the critic) which I have cleared by the work, after 15 years anxious and unremitting endeavours to render it intelligible, for the satisfaction of modern literary inquiry and curiosity.

I remain, Mr. Editor,

Your very humble servant,

MULLA FIROZ BIN KAUS.

Bombay, June 30, 1819.

The leading article of the *Bombay Courier*, in which the foregoing letter appeared, contains the following explanation on the part of the translator.

Some discussions have lately appeared in the Calcutta newspapers regarding the authenticity of the *Desatir*. In one of them, the India Gazette of the 7th June last, it is contended that the public have a right to know, from the translator and publisher, whether the original is or not a fabrication ; and the translator of the *Desatir* is emphatically called upon to support or deny the authenticity of that work.

The translator of the *Desatir* desires us to state, that he has always regarded the duty of a mere translator to be to translate his task faithfully ; but that the examina-

tion of the authenticity and merits of literary works belongs to critics and historians, to writers of much higher pretensions than the drudge of a translator. His exclusive and humble task is to transmute the sense and meaning of a work from one language into another, and there it ends. This the translator has done in

the best way that circumstances permitted, and he undertook for nothing more.

The translator of the *Desatir* having given this perhaps unnecessary explanation, will not consider himself as bound to enter into any discussions on the subject, they being altogether out of his province.

NAUTICAL NOTICES.

No. I.

Ports of Viziadroog and Zyghur.

Marine Department.—Lieutenant Dominicite, of the Honourable Company's Marine, having been employed on a survey of the ports in the Southern Concan, the Right Hon. the Governor in Council has been pleased to direct, that the following extract of that officer's report, relating to the ports of Viziadroog and Zyghur, be published for general information.

Extract of a Letter from Lieut. B. Dominicite to the Superintendent of the Marine, dated 9th June 1819.

VIZIADROOG.

Bay—Is nearly two miles in breadth, and one and three-quarters deep; has regular soundings over a muddy bottom, of from eight and a quarter fathoms in the centre to five fathoms near the shore. It is perfectly clear of all dangers, and the shore may be approached to within 300 feet in any part of it, except just off the south point, where lies a small reef of rocks stretching out one-eighth of a mile to the N. W. of it; this bay is only capable of affording shelter to vessels against a north-westerly wind.

River—Is about half a mile broad, the entrance is to the eastward of the fort, the first reach runs about S. S. E. $2\frac{1}{2}$ miles. There is no bar to this river; the soundings in the entrance are from $\frac{1}{3}$ sand and mud towards the forside, to 3 and $3\frac{1}{2}$ fathoms mud in the centre, and $3\frac{1}{2}$ fathoms towards the opposite shore; when the fort is brought to bear to the northward of west, the water deepens to 4 and $4\frac{1}{2}$ fathoms mud and clay, until past the landing-place and grainary, when it gradually deepens to $4\frac{1}{2}$, 5, and $5\frac{1}{2}$ fathoms stiff clay. These soundings continue with but little variation as far up as the wet dock along the western shore, whilst in the centre is 4 fathoms mud; and towards the opposite side 3 and $3\frac{1}{2}$ fathoms sand and mud.

Just off the dock the water shoals to 2 fathoms mud, from the mud having been allowed to collect for some years; and about half a mile to the E. S. Eastward, or farther up, on the same side, lies a small ledge of sand, with only $2\frac{1}{2}$ fathoms on it: but this may easily be avoided by taking the centre or the other side of the river, where the water is deeper, there being $\frac{1}{6}$ fathoms mud.

The second reach is of the same breadth, and runs nearly S. E. by E. $1\frac{1}{2}$ miles, with regular soundings from 4 to 6 fathoms mud, with here and there small islands, with good channels for small vessels.

This river is said to be navigable about 25 miles up, for small vessels of from about 150 to 200 tons, where they may lie afloat at low water spring tides. About 17 miles from the entrance there are some considerable villages.

This river is perfectly sheltered from all winds. Vessels of from 6 to 700 tons burthen may anchor at pleasure in any part of it, from the landing-place up to the dock on the western side. The water is at all times perfectly smooth, and the shore so bold that vessels can lie within 150 or 200 feet of the bank. Here they may load, unload, and repair and dock their vessels, with equally as much ease and safety as at Bombay.

Dock.—The wet dock (if I may be allowed to give it that name) is situated on the west side of the river, distant about 2 miles from the landing-place. It is not seen from any part of the fort, being just shut in with the second point of the river on the same side; it is of an irregular shape, 355 feet in length; and its greatest breadth is 257 feet. The north and west sides are built up with masonry, and in very good condition; the other sides are partly cut out of the rocks. The gateway is 37 feet wide at the top, but falls in on either side to 23 feet in the lower part. On the S. E. corner is a small passage or drain, cut and built up with stone, for the water to pass; but to this, as to the gateway, there are no gates. On the N. W. corner there is a small flight of steps leading into the dock. It is built upon a slope; the inner part is

about 4 feet higher than the other part near the gateway. In its present state, it is dry at low water spring tides. From this dock having been neglected for many years, a considerable quantity of mud and sand has collected, both inside and at the entrance, which I should think might be easily removed, and with but a trifling expense: was this to be effected, and gates fixed, it might be found very serviceable hereafter. At present there are four vessels (gallwats) lying in the dock; one of them, called the admiral's vessel, measures 156 feet over all, by 33 feet beam, and is about 430 tons.

On the north side of the dock is a small yard, or wharf, where there is a mast-house, now out of repair, and some other smaller buildings.

The village or town of Viziadroog is situated on a piece of table-land immediately to the southward of the narrow nook of sand, and is rather more elevated above the level of the sea than the highest part of the fort; there are also several villages in the vallies, leading down to the western bank of the river; this piece of table-land is perfectly covered with trees.

There is plenty of good fresh water, fire-wood, and fishes to be had here; it seems, though, to have been much neglected by the former government, as it is a place of but little trade. There is a beautiful valley close to the dock, with a large village and a small creek leading up to it.

Though the water at the entrance of the river, unfortunately, is rather too shallow, yet this place may be considered, perhaps, next to Bombay on the coast; and has one very great advantage over most ports, particularly rivers, that it has no bar. Entire strangers, if they have but a chart and proper directions, may with safety run their vessels into the river, even in the most boisterous weather. However to make Viziadroog conspicuous, and more easily known at a good distance in the offing, in the event of its ever becoming a place of any consequence, it might be considered advisable to erect a light-house; and the two most eligible places appear to be, either upon the hill in the fort, on which the flag-staff is now fixed, or on the south point of the bay; the former is about 90 feet, the latter about 170 feet, above the level of the sea. This would serve as an excellent mark by day, as well as a good guide by night to strangers.

I should imagine that vessels of an easy draught of water might with safety frequent this port during the S. W. monsoon, as there would be but little difficulty in getting out, by embracing the favourable opportunities, and during the rains the ebb runs from $2\frac{1}{2}$ to $3\frac{1}{2}$ knots per hour in the river, and there is an out-

set in the bay of about a knot an hour, which would assist vessels very considerably in working out of this bay.

The soundings are put down at low water springs.

High water full and change at the Bunder, 10h. 15' A. M., at the Dock 10h. 17' A. M.; perpendicular rise 8 and 9 feet, in the neaps about 5 feet. Strength of the tides on the springs $1\frac{1}{2}$ miles per hour, in the neaps $\frac{1}{4}$. The tide is scarcely perceptible in the bay during the N. E. monsoon; but in the rains the rise is much greater, sometimes 12 feet, and the ebb tides are stronger.

ZYGHUR.

Bay—Is formed by Boira point to the northward, and Pagoda point to the southward, distant from each other nearly 5 miles, and is about $2\frac{1}{2}$ miles deep. The soundings are from $7\frac{1}{2}$ to 6 fathoms in the centre, to 3 fathoms close to the shore, and with the exception of a small reef of rocks lying $\frac{1}{2}$ of a mile off the north point, on which the sea breaks, it is perfectly safe, the bottom being mostly fine sand and mud. In the bay are several large villages.

At Pagoda point there is a banyan village, and a large pagoda, which is seen at a good distance in the offing when to the northward. From the fort leading to this pagoda is a road of flagstones shaded by trees on either side.

River.—The entrance of the river is about $\frac{1}{2}$ of a mile broad from shore to shore; but off Vigighur point is a large sand-bank partly dry at low water, extending rather more than 2-3ds of the way over, and leaving a channel of about a quarter of a mile broad. In this channel, and round the sand, till past Vigighur point, the soundings are as follows, viz. at the entrance the least water is $3\frac{1}{2}$ fathoms sand, which deepens on the Zyghur side to 10 and 12 fathoms sand and mud, and gradually shoals on the bank of Vigighur side to 3 and $2\frac{1}{2}$ fathoms hard sand; after which there are regular soundings of from 6 to 9 fathoms mud in the elbow, or bight, that the river forms. When Vigighur fort is brought to bear N. $\frac{1}{2}$ E. a vessel is clear to the eastward of this sand; inside of this low point the depth of water is from 4 to $4\frac{1}{2}$ fathoms mud. The river runs nearly east, and is nearly half a mile broad, having from 4 to 6 fathoms mud, and perfectly free from dangers for about 3 miles up (which was as far as I had time to examine).

This river, I am informed, is navigable for several miles up; has a large town situated on its south side, about 13 miles from the fort, and is equally as large and safe as Viziadroog river.

On entering the river, it is necessary to keep a midchannel till Zyghur fort bears about west, as the water is not so deep,

and the bottom is hard sand off the north and N. E. sides of the fort point. After the fort is made to bear to the northward of west, a vessel should haul in towards the right hand shore, where there is a very good anchorage; or she may round the sand, and anchor any where to the eastward of the point, perfectly sheltered, and in good holding ground.

The tides are stronger here than at Viziadroog. In the springs, the ebb runs about 2½ per hour (in the neaps 1½ per hour during the dry season); they are also sensibly felt in the bay until past the middle and north points.

The soundings are put down in the plan for low water springs. High water full and change 10h. 45' A. M. Perpendicular rise, 8 feet in the springs, and 5 feet in the neaps.

There is no town at Zyghur, but on both sides of the river there are several straggling villages. There is plenty of good water in the upper fort, and in some of the villages close by; but in the lower fort, and near the usual landing-place, the water is rather brackish.

Zyghur may be easily known at a great distance in the offing by Boira Hill, which has a white pagoda upon it, and cannot be easily mistaken.

This river is equally as safe and commodious as that of Viziadroog, only a little more caution is requisite on entering it. At the entrance of both, the water is generally quite smooth during the S.W. monsoon; and inside, vessels of almost any draught of water may lie completely sheltered at all seasons of the year.

No. II.

Navigation of the Red Sea.

A person well acquainted with the navigation of the Red Sea, desires us to

mention, as a warning to all captains of vessels trading in that quarter, that it is extremely dangerous to carry a press of top-sails in the upper part of the Red Sea, from Cosseir upwards, as frequent gusts of wind are often met with, which blow suddenly from a directly opposite quarter to that which they have been before sailing with. From a neglect of this precaution one ship was lost, and another near sharing the same fate this season.—*Bombay Courier*, July 10.

No. III.

Governor Petrie's Shoal?—Should the existence of a shoal in the place indicated be confirmed, perhaps navigators may distinguish it by the name of the ship making the discovery, unless the name of her captain be thought more appropriate.

Extract from the Log of the Governor Petrie.

Lat. obser. at noon, 18 deg. 36 min.

Long. per sun and moon, very good sights, 71 deg. 30 min.

Sounded ground, 50 fathoms.

Saturday, 31st July 1819.

At 2 deg. 30 min. passed over a patch of discoloured water, lying in a N. E. and S. W. direction, about a quarter of a mile in length, and half a cable's length in breadth; hauled out to the westward, and hove the lead, and had 16 fathoms water, hard bottom. Two round patches also appeared in this discoloured water, of a redish colour, apparently very shoal water. Kept our course again; after getting into clear water, hove the lead and had 45 fathoms. From this time steered E. by N. 72 miles, and made Kenery, bearing E. by N. ½ N.; distance about 10 miles.—*Bombay Cour.* Aug. 4.

DISTRICT OF KUMAON,

DESCRIBED IN A

CIRCUIT OF PLEASURE FROM ALMORAH.

THIS portion of our Asiatic possessions grows in interest every day; at least, it does so in the view of the British public in India. The result of the Nepaul war has given even to the private traveller, moving under the auspices of the Company, unprecedented facilities for exploring the territory at the foot of Himalyah. The notes of a recent excursion in the district of Kumaon are conveyed in the following letter.

“Almorah, April 4.

“The last from me announced our intended trip through the district, of which you shall have a short account, to give some idea of the pleasures of marching in the hills. Our party, consisting of five gentlemen and one lady, started on the evening of March 5, for Bumsahghaut, about eight miles from Almorah, in a north westerly direction, leading through the civil station of Hawulbaugh; from which the remainder of our journey, of three miles, was strikingly beautiful, as it pas-

sed along the banks of a very rocky stream, the Cosillah, between abrupt and picturesque hills wooded with firs. About the end of this march we crossed the river; and as the road was generally good, the day was, as you may suppose, most agreeably spent, and the evening escaped in cheerful gaiety.

Next morning, breakfast being dispatched, we commenced our task, which we found a little more difficult than the preceding, from the irregularity of the path, of width scarce sufficient for the feet of the horses; still however we rode, until about half-way my steed lost his balance, and fell with me over a ledge seven or eight feet high, by which he was severely lamed, but I fortunately got up unhurt. This accident induced more caution, and I sent the poor brute back to his stable, as I was provided with another of worse appearance but better worth. The way now led through a narrow but well cultivated valley, called by the Europeans Glen Sootrah, on account of its beauty, and from having been first seen in 1817. We arrived at our ground at 2 o'clock, not at all oppressed by the heat, but a little annoyed by the badness of the road. The tents were pitched near a small village, with a large native house, denominated Soobahkote, not much more than ten miles in advance, though fully equal to fifteen in the plains. The day was spent as usual, but in the morning we found that so many of the khussahs or hill porters had deserted during the night, it was impossible to move without leaving more than we could spare behind us. A halt was therefore called, and the time was patiently spent by fishing in a neighbouring brook; but the animals seemed to have the sagacity of their countrymen and avoided all apprehension, not giving us even the satisfaction of a few nibbles.

On the 8th, we resumed our march, which winded through a continuation of the valley, blooming with verdure, and richly perfumed by the wild fruit-trees in high blossom; they were chiefly apple, pear, cherry, apricot, and walnut trees, almost producing the effect and impression of an artificial orchard, watered by a sweet purling stream, which murmured in its meander through these shady groves, clear as crystal. There only seemed to be wanting the melody of birds to make the scene altogether enchanting; not a winged animal however was to be seen or heard, nor a sound of any kind, but the distant noise of the water running over its pebbly bed. In the recesses of the hills, wherever sufficient space could be procured, there were groupes of shaded hamlets, half concealed by trees of richest foliage. These are chiefly occupied by Joas-seys or Brahmins of the highest cast, who held free lands under the Guorkahs, and

have received similar grants from the British government. It was by their intrigues and invitation about twenty-five years ago, that the Nepaulese first undertook their conquest, and established themselves in this quarter; so that the provision made for them was an act of gratitude on the part of the conquerors; but the policy of it may be much doubted, for they have by far too great an influence over the minds of the people, from their religious ascendancy, and the public support they have received. They are constantly meeting in bodies and holding private assemblies, the object and nature of which it would be difficult to ascertain, as the utmost secrecy is observed, and the parties invariably dissolved on the slightest interruption. This last march was about nine miles, very interesting, though by no means grand, as the hills were comparatively low and of easy ascent.

On the 9th, two miles from camp, we crossed a neck of land connecting two ridges by a ghaat, the descent from which was at the commencement so direct as to be cut in steps; it was not however long, and the road for five miles continued with an easy slope to the bed of the Goamutty river, very rapid, but forded without difficulty in the dry season. A small sangha, or bridge of planks on piers, has been made for the convenience of foot passengers, but not of sufficient strength to bear cattle. Three miles farther, along a level plain, brought us to Bhagaisor, a religious place, situated in an angle formed by the junction of the Goamutty and Saardah or Soorjoo, after which the former stream drops its name, and the united current flows to the eastward with considerable rapidity. We passed the latter river by a sangha, similar to that already described, and encamped on a little flat on the opposite bank, after a march of ten miles. Bhagaisor is a small consecrated village of dirty appearance, but gains importance from several temples of Chinese fashion, to which periodical visits are paid by the natives from some distance around. It has also become famous as an established mart for mercantile intercourse with the lowlanders, who at the annual fairs send up agents to barter for hill produce. The inhabitants of Bootan, which is the tract of country immediately contiguous to the Himalyah mountains, are constantly moving backward and forward with merchandize, carried by large flocks of goats and sheep loaded in the manner of bullocks, with small double bags, each weighing from five to ten seers, according to the power of the animal. They are generally stout hardy men, of Chinese countenance, clothed in blanket dresses, and braving every extreme but heat, which so completely

overpowers and relaxes their energies, that during the hot months they seldom attempt an exposure to it.

After seeing the place, there was indeed nothing to induce our stay; but we were prevented from moving by the desertion of the Kusseahs, who took advantage of the dark night to elude the vigilance of the sentries under whom they were placed, as soon as they had finished their meals. The population of the country is so very thin, that the desertion even of a few is of serious consequence, particularly to troops, as the difficulty of procuring substitutes is so great; and it seems to be reckoned of such little importance, that punishment is seldom awarded for the offence, which gives the greater inducement to repeat it. The honesty of these animals I may call them (for they scarcely appear to have the faculties and feelings of men), is however unimpeachable, for though every thing be left entirely at their mercy, a theft is never committed. They play curious tricks at times, for if a Kusseah is travelling alone and finds his burthen oppressive, without the slightest compunction he relieves himself of part by throwing it down the hill; yet if taxed with the offence, though aware that punishment awaits his confession, he does it most frankly. Thus far had we proceeded, when we found that our party was too large, and carriage could not be procured to accommodate all, but by dividing, that we might all be supplied: it was therefore resolved that Major—— and I should go in advance.

We accordingly started in company, leaving four of our party behind. At the beginning there was a gentle rise, when we got to the top of a narrow ridge, along which we completed the march of ten miles to the village of Kandah. The road was excellent, and the scenery truly beautiful, through luxuriant forests all the way, of oak and fir alternately, with occasional peeps of the distant country and snowy mountains, wherever an opening occurred. Next morning our route lay still along the ridge for eight miles, when we descended by a good path amongst jungle and fir trees, crossed a stream, and stopped at the end of nine miles and a half, to breakfast, near the village of Kumseary.

Having rested for a couple of hours, we renewed our progress, at first by a very dreary ascent along a rocky brook for three miles; then found a pleasant and cheerful descent for three more; and latterly had to ascend to our tents, pitched about a quarter of a mile from the Tombahkan or copper mines, which are rented from the government by a silversmith of Almorah at 1,200 rupees per annum; the lease is renewed every year

by being put up to public auction. The mines are not much larger than a wolf's earth, and worked by boys, who are relieved once a day; they are not dug horizontally, but have a considerable depression from the mouth, as the natives suppose that the slope downwards gives greater facility to the access of air: this may be greatly doubted, as the direction of the gallery must be guided by that of the stratum. The ore is extremely poor, and found in a bed of saponaceous stone of a milky colour. The method of extracting is by trituration and fusion, the latter being done by means of bellows quickly moved; and the fuel is wood. The copper being purified, is immediately coined and circulated in pice, three to an anna.

This neighbourhood is much infested by tigers, who take advantage of the cover of the thick jungles all round. It was reported that two days before our arrival the head man of a village had been carried off, while at work in his fields; and in confirmation of the circumstance, the villagers said his body had been found, and burnt with all due solemnity. The march was about ten miles, and from the eminence on which we encamped, we had a fine view of the Himalyah and surrounding country.

On the 12th, we had a steep descent for three miles, through a dreary wilderness, and an equally bad ascent for the same distance; the remainder of the way was easy and pleasant, but, from the badness of the roads, the journey was rather fatiguing, though not above nine miles. We halted at Gungouly, a large village in ruins, bearing marks of former consequence, from temples and traces of extensive cultivation now lying waste. All these districts are said to have suffered severely from the Goorkah oppression, by which they were so grievously assessed, that wives and children were taken as part of the revenue, and the men, when no further resources remained to satisfy the tyrants, obliged to fly their country to save their lives, the last forfeiture in case of deficiency of kishit. To such an extent did these imperious monsters carry the system of enslaving their subjects, that the freedom of children was only rated at five to ten rupees each; when a sufficient number were collected, they were sent under a guard to those fairs in the plains which are held for the purpose of hill trade, and there sold with the same ceremony as so many head of cattle.

Near Gungouly there is a temple, surrounded by very luxuriant larches from 100 to 130 feet in height, and 10 to 15 feet in circumference; being the first we met with, their appearance was particularly striking. Our next march consisted

of three descents with intermediate levels, but scarcely sufficient to take breath. The first descent was almost by steps, and occupied 50 minutes, the second 20 minutes, and the last 30; when we reached the banks of the Ram Gunga, a very deep and impetuous river, whose channel is narrowly confined by high rocks on either side, we encamped after a march of nine miles, having crossed the river by an old sangha bridge of Chinese form, 109 feet broad, made by two strong abutment piers, from which massy timbers project in five rows, with five timbers in each row, corresponding on both sides. The first or lower tier is five feet out of the masonry, the second ten feet beyond it, and the rest 10 feet beyond each other, until, by verging towards the centre, they come within 20 feet, when long beams are laid to rest on them, making the whole complete and secure with a sort of railing. The idea is simple and ingenious, where it is impossible to construct a pier in the river on account of its rapidity, and the violence with which rocks and stones are hurled down its channel. The fabric is entirely dependent on its abutments, which are of such size and weight, as to be calculated to keep the levers considerably beyond equipoise; it has a very gay and airy appearance, with the idea of perfect strength and safety; that is, of course, when well constructed: the one however just described is in decay, and may be said to require the entire renewal of the timbers.

From the Ram Gunga we had a very hard climb for five miles to a ghaut, which brought us on table land, highly cultivated, though not extensive, called the valley of Shore, which is the name of the purgunnah around. At the end of six miles we halted for a few hours, to breakfast in a small grove of larches; with a rivulet running past the door of the tent, on whose banks were abundance of fruit-trees, wild lilies, daisies, strawberries, and raspberries. After our repast, we travelled along a gentle rise for three miles, when we reached a commanding eminence, the view from which on all sides was most bewitching. Three miles and a half from us was the post of Pettorah, situated in the centre of an extensive valley, richly cultivated, on a low hill, warmly covered with velvet turf, beyond which were lofty mountains as far as the eye could reach; some completely embosomed in forest, others bleak and barren, with features the most rugged and harsh, opposed to each other in such a way as if art fully intended to make the contrast more forcible and impressive. This scene was a treat that might almost induce one to undertake the circuit of the world, for it was indeed a full and striking representation of the sublime. The

delight it occasioned was a sunshine to the mind; and had our journey been 50 miles that day, we could have gone almost without a murmur; and so much were we enamoured with the beauties of nature, that we actually sighed for want of words to express our admiration and delight. The fort of Pettorah stands on the middle of a low range about 1000 feet above the streams below; there are slated lines for half of the 2d Nusseree battalion, and two bungalows for officers; also the ruins of a small Goorkah fortification, ordered to be demolished, as a new fort is to be constructed on a spur of the hill in the vicinity of the cantonments. Pettorah is nearly east from Almorah, perhaps a little north.

On the evening of the 15th, we left the delightful spot which still occupied our thoughts, and marched seven miles to Jakporan, a small and dirty hovel; the road was good, and journey interesting, from the great variety of trees and shrubs in flower; amongst which we frequently saw the *Hastingonia*, named after his Lordship. Before we moved on the 16th, we had breakfast, and a tough job to perform after it, first by descending to the Ram Gunga, and ascending from it. The descent was in many places steeper than we had ever found, and altogether continued nearly five miles. We crossed the river, three feet deep and 50 yards broad, at the small village of Ramaisor, just above its junction with the Saardah or Soorjoo, which also brings down a large volume of water, and retains its tide after the conflux. The latter stream (about 30 yards broad, and very rapid), we passed by a temporary sangha of very bad construction; weak, and unsteady, from the slightest weight. We sat down for a while to rest our wearied limbs, and to give our followers time to cook; as the high hill we had to climb stared us in the face, and almost seemed to say, "I will work you well;" so it did, for we were upwards of an hour in reaching its summit, and well inclined to go no farther. There were at least five miles more, which however we got over easily, the path being generally level and good. The scenery was so much like what has been already described, that it were needless to say more than calling it beautiful.

Our route, on the 17th, afforded little subject for description; it was easy, and occasionally varied by slight rises and falls; the latter part was indeed picturesque for three miles. After we had passed through a thick plantation of larches, we suddenly got a view of Lohoo Ghaut and its vicinity, much resembling the English landscape, for the hills are uniformly covered with turf, interspersed with patches of cultivation, and gradually shelving towards each other, leaving heights and

960/ 21- 3.51 60.

hollows, as if artificially sloped. The post of Lodoo Ghaut appears in the distance on a pretty little flat, with a rivulet in front, on the opposite side of which is a high hill, well clothed with larches and pines. The cantonment is for half of the 2d Nusseree bat., and there are two very neat flat-roofed houses lately built with good taste. Here one might almost suppose, from the features of the country, that he was in the land of Christians. There is a mulberry tree a few miles from this, that deserves, from its size, to be mentioned, the trunk of which is one solid mass, measures 33 feet in circumference, and yields very fine fruit. If it were ascertained how much these trees annually grow, it would be curious to calculate the age of this from its bulk.

I have omitted noticing the game occasionally seen during our travels; some kinds of which are peculiar to the climate. Black and grey partridges were in abundance, and pheasants were not at all rare; of the latter there were several sorts, but the most common greatly resembled in body the dunghill fowl, with a smaller head and a small tuft of feathers on it. The plumage of all of them is very shabby; they are however a very delicate bird, of high game flavour. At Lohoo Ghaut, in the winter time, woodcocks are frequently shot of the same description as those in Britain; it is here a bird of migration, for it disappears on the approach of the hot weather. Blackbirds are in all the groves, just like those at home; but they have no musical powers, at least they have never been heard to sing. The male is jet black, with yellow beak, and the female of a sparrow grey. There are various species of deer on all the hills that afford cover; but the musk deer does not seem to inhabit this quarter, though I have seen and killed them to the westward of the Alikundrah river.

On the evening of the 18th, we again set out, and on the way inspected the new Fort of Pettorah, three miles distant. It consists of a rampart with loop-holes crowning the summit of a peak commanding the neighbouring heights, and the declivity on all sides is very abrupt. There were numerous villages on this route, but chiefly deserted, as the inhabitants retire to the plains on account of the cold from January till April. Tygers occasion great alarm in this district, and frequently intercept the unwary traveller. We encamped at Kumlake, distant altogether 10 miles. Next day we travelled, by a good road, through thick forests, along a high range; breakfasted at five miles, and found our tents at the end of 11½, immediately below a small temple surrounded by larches called Dee, from which the descent was long, steep, and difficult.

We finished our journey on the 20th, by marching 27½ miles, to Almorah; this we divided by two halts to breakfast and tiff. The greater part of the way was wild and romantic, much infested by tygers, and scarcely the vestige of a habitation. It was along a ridge, with frequent rises and falls, till we reached Bindany Daby, a high hill with a small temple five miles from the end. From this there is a good view of Almorah immediately across a deep dell, through the centre of which flows the Sowl, a considerable rivulet, crossed by a ford; the ascent and descent are both great, but the path is very good.

The day after our arrival at Almorah there was considerable alarm in the town from a leopard, which was found in a house, having gorged itself by devouring a goat the previous night. When disturbed by the landlord in the morning, it quitted the quarters, dashed through the streets, and took on a fresh birth in a small shanty house, where I had the satisfaction of perforating his head with a musket-shot, and for my trouble was rewarded with the possession of the skin.

Our excursion may well be supposed to have given every satisfaction, and amply repaid us for all the difficulties and troubles we met; the only unpleasant circumstance that for a moment occupied our attention, was the mark of gradual depopulation so strongly impressed on the general face of the country, and measures have not yet been adopted to remedy the evil, or to restore it to its pristine state.

The following may suffice to give an idea of the prevailing abuses, which cause utter depression. Kumaon is divided into purnunnahs, in each of which there are Kameens or head men, from whom the revenue is received, and who are acknowledged to have entire control; as they are held responsible for the conduct of the people, and seized when offences are committed, until the culprit is discovered. Thus they have become lords of the land, and reckon their inferiors as subjects, over whom they rule with despot sway, and who frequently submit with ignominious servility. The inhabitants are naturally such a timid race that fear makes them endure patiently the greatest oppression; though not void of natural abilities, and particularly cunning, yet they seldom have spirit to use and exert them. It is well ascertained that the Kameens, by their influence, deprive the poor wretches of 12 annas in every rupee that they have earned even by hard labour. To see the food they are obliged to eat with content, one would almost envy the "beasts of the field."

CURSORY REMARKS ON BOARD THE FRIENDSHIP.

EXTRACT, No. VI.

(Continued from Vol. IX. p. 40.)

ON the morning of the 14th of May, we again saw land; it was called Howe's Island. We passed within a few miles of it; it seemed well wooded. Turtle abound here; also many species of fine fish. A high rock near it, called Ball's Pyramid, makes this land very conspicuous. On the eighth day, after leaving Port Jackson, we made Norfolk Island; passing between it and Phillips' Island, which is not above a league distant. Prior to this, our boat had been sent on shore with the second mate. As the ship lay-to, drifting slowly through the channel, we had a fine view of the island: as we opened the valleys, many parts appeared under cultivation; fine streams of water were running down the rocks; the deep fall which terminates one large stream gives name to Cascade Bay. We saw a number of pigs upon Phillips' Island, which are the only inhabitants, unless when occasional visitors from the main island* come to take them away, which is attended with no small trouble, so wild are these animals; they feed upon nutritive roots. About noon the boat returned, with the commandant of the station, Capt. Braben. A pleasant meeting took place between him and my husband; they had been shipmates in the Cornwallis. He dined with us, and gave orders for 20 pigs to be sent on board, with a proportion of Indian corn. We received while here upwards of fifty

hogs, averaging in weight about 200 pounds each. This supply afforded our seamen a fresh meal three times a week until we arrived at Malacca: an equal weight of salt or maize was given in exchange. Several persons intreated to be taken on board from this place, having been emancipated; but their wishes were not acceded to for the reasons given above. While laying-to, off Cascade Bay, some fine fish were caught. Towards five in the evening, our little business at this place being settled, we proceeded on our voyage. Next morning Mount Pitt, the part of the island which remained last in sight, was hid from our view by clouds.

For several days in succession we were favoured with the finest weather. On the morning of the 24th of May, the boy at the mast-head called out, "Land ahead!" It proved to be a small elevated rock, with a few stunted trees; many tropical birds were about it. As it was not marked in any of our charts, the captain called it *Ephraim's Island*, after the boy who first saw it. To encourage vigilance, it was a standing rule on board, that the first discoverer of any new island, rock, or shoal, should have his name given to it. The latitude of this rock was found to be, 22° 40' south, and longitude 172° 30' east. We were now but a short distance from the Friendly and Feju Islands, so celebrated in Capt. Cook's Voyages. Next day the officers had good sights of the distance of the sun and moon, which made our longitude,

* Norfolk Island.

at 12 o'clock' 173° 54' east.
 Adding the longitude of }
 Dublin } 6 6 west.

 the antipodes of that city

Several jokes were interchanged about this circumstance. The carpenter, who was from the metropolis of Ireland, doing some little jobs upon the quarter deck, having listened to the conversation, quickly asked, "Where did they say Dublin was?" He was told, in reply, "Directly under the ship's bottom." Then said he, "I will send a token to my old sister," and fetching up a curious marked sixpence, he threw it over the side of the ship, exclaiming, "If old Judith sees this, she will know that Pat is not far off!" He was then apprised, that, although it was just noon with us, it was at the same instant exactly 12 o'clock at night in Dublin. He answered, "It matters not, for the sixpence, when it falls, will jingle upon the stones, and as the lamps shew a good light in Dublin, they can see to pick it up." We were amused by his apparent simplicity, while we gave him credit for knowing better.

Soon after this we came in sight of the islands, called the Hebrides, in the vicinity of New Caledonia. In passing Annotam, Enomango, and Aurora, we saw much smoke from fires; but had no intercourse with the inhabitants of those islands, the weather being very bad, with heavy squalls of wind and rain. Advancing on our passage to the 11th degree of south latitude, my husband was anxious to observe an island before dark, which had been discovered upon his former voyage in the Cornwallis, and named after that ship; but the exact situation could not then be ascertained. From the distance the ship had gone, it was supposed we had passed it soon after sun-set. The wind being fierce, the sea rough, and the night intensely dark, the ship was reduced under a low sail, and a good look-out kept, to give, if possible, timely notice of danger. The navigation of this unknown sea was so uncertain, that the ship proceeded only when it cleared up a little; as often as the squalls were seen coming, she was hove-to. This was alternately done through the slow hours of this trying night. About four o'clock in the morning, just as an obscure squall cleared away, rocks and breakers were discovered close under the lee of the ship. All now was consternation; but, by the kind interposition of Providence, we were, at a moment of apparent destruction, preserved from collision with the rock. My husband is naturally gifted with presence of mind and coolness in the

hour of danger. In this critical situation the helm and sails were properly managed, and, by the Almighty's goodness, we were saved from shipwreck. I never can forget that night, when, looking out of the quarter gallery, I saw the furious waves dashing against the rocks with an awful noise, making all white with foam. The ship appeared to be nearly amongst the breakers; my feelings at the moment cannot be described. Meanwhile a great clamour and bustle continued upon deck; but as I saw the vessel gradually leave this white water at a distance, my mind felt a great relief, and my melting heart was impressed with gratitude to God for our preservation. When daylight appeared, it was discovered that this was a dangerous reef of rocks lying off the same island which they had been looking out for during the night. The captain had every confidence in the mates; they were steady, sober, and good seamen: but, as neither of them had been the voyage before, his anxiety was doubled whenever the ship was by contrary winds and counter currents driven out of the known track. This afternoon we passed the island Edgecombe, about four leagues on our right; and saw, on the left, another large mountainous island, called Egmount or St. Cruz.

Continuing our course, about two in the morning, the mate of the watch reported that he saw, at a great distance, indications of an explosion, the same as if a ship had been blown up with gunpowder. As there are some low small islands in this track, the captain judged it proper to lay the ship to until day-light. On changing watch, at four in the morning, another vast illumination took place, a great distance to the west of us, tinging the clouds in that quarter. It was not known what could cause these phenomena, until the captain, in looking over his old journal, observed there was an island, called the Volcano, which he passed without seeing any smoke or signs of eruption. He now conjectured that the subterranean fire had again burst out. At day-light the black dense smoke was seen towering on high from the top of the island; as we approached all eyes were employed in observing this wonder in nature. The wind being light and favourable, it was decided that we should pass near it; and accordingly, at 10 at night, the ship, by computation, was about one league distant. Explosions took place as we approached, with discharges of burning fragments into the air. The last eruption was followed by a longer interval than usual, and vivid admiration had begun to be succeeded by a feeling of tranquillity, when, about 11 o'clock, the greatest horror and consternation seized

every person on board. On a sudden the vessel laboured as if she had been amongst surf created by rocks, shaking in every part; and almost at the same instant, a tremendous eruption, accompanied with a correspondent noise, filled the air with fire, which cast such a light around, that all, looking to the moment when the ascending combustibles must fall, conceived our destruction was at hand. Most providentially for us, the wind blew the fiery fragments in the opposite direction; had it been otherwise, our vessel might have been consumed. After this awful explosion, the streams of liquid fire descended the sides of the hill, and as they came in contact with the water, produced a hissing noise and a dense smoke, which curled from the bottom of the mountain. When our consternation had ceased, no time was lost in getting away from this scene of horror. The past had such an effect on all on board, as to banish sleep from every eye; the seamen stood continually gazing at the scene, when not called off to their duty. By two in the morning we were at a respectful distance. Meanwhile many small eruptions intervened. None occurred comparably to that which we had witnessed when nearest, until four in the morning, when another great explosion appeared, if possible, more terrible. The ship shook all over in the most violent manner, as if the land at the bottom of the ocean had been heaved by an earthquake; then followed the tremendous explosion, with the rush of liquid flames down the sides of the mountain as before. But our senses were now more collected, and being four leagues off, time and space allowed us to observe it. At day-light we had still the island Emont in sight. As the volcanic isle lies only about 10 or 12 leagues to the north of the above, in latitude 10 degrees south, and 166 degrees east longitude, it was supposed that it could not be above 10 or 12 miles in circumference; but from the great quantities of lava thrown out, it may be expected to increase in size. It appeared broad at the base, tapering upward like an inverted funnel, ragged at the top or edge of the crater.

In the afternoon we passed two small low islands on our right, named the Brothers; also one on our left, covered with cocoanut trees. It was not thought probable that any inhabitants would be found on such a small spot, apparently not exceeding three miles in extent; but adverting to the possibility that there might be some, a boat was sent ashore to procure some cocoa-nuts, with strict orders that, if any natives were seen, not to land, but to return directly to the ship, which lay to about a mile off. When the boat drew near the shore, we observed a num-

ber of natives amongst the trees skirting a part of the island, hidden from the sight of our people in the boat. We counted upwards of 30 of these naked savages; they were all armed with long spears, and what we took for bows and arrows. They frequently ran out of sight among the trees, and came to view again in a cunning manner. The captain now was very apprehensive that we should lose some of our men; the only signal agreed upon for ordering their prompt return to the ship was hoisting our ensign, and at that time the ship's situation prevented them from seeing it. We observed the boat to lie a-back of the surf, and naturally concluded that they had seen the natives, and of course would not land. We saw one of the islanders separate from the rest and approach the boat; he was unarmed, but had something in his hand which he held up, beckoning our people to the land; he then put down what he held in his hand, and retired amongst the trees, where we saw him join the others, who were still in ambush concealed from the boat's crew. Then two natives likewise unarmed approached the boat with some cocoa-nuts, which they held up; on this the boat appeared to pull up towards them. We were all very uneasy at observing this, as our party could not see the signal commanding their return. Presently all the savages left their ambush, and ran towards the boat. Luckily a gun had been got ready, and was now fired; the report of which drew the attention of the natives to the ship, while it gave notice to our people, who fortunately had not landed. The firing, however, did not intimidate the savages, for they came close to the surf, brandishing their spears, and discharged their arrows at the boat, which happily did no mischief; whereupon, to let them know our superiority, a gun was shot and fired amongst the trees over their heads. As soon as this was done, they turned suddenly round to look at the trees, amongst which the shot had done some execution, and instantly retired from the beach. When the boat returned, Mr. Henderson, who went in command of her, said, the natives appeared black and small in stature, having woolly heads like Africans; that they did not see more than two natives until the gun was fired, then, he said, they were seen coming from amongst the bushes, making a wild noise, and letting fly arrows at the boat. One man among them was painted red, as if by ochre. Thus ended our transient intercourse with these perfidious people; and happy were all that no disaster had occurred. From the hostility of the inhabitants, and some coral rocks in the vicinity, this was named Danger Island.

Having but little wind, our progress was slow; we were still in sight of the volcano. Saw to the south of us this afternoon Swallow Island, named by Capt. Carteret, who sailed in those seas in the year 1767; it appeared pretty high land, but too distant for accurate observation. Capt. Carteret found much hostility from the natives about these parts. The weather now was very hot and sultry; the mercury sometimes standing as high as ninety degrees. We had much thunder, lightning, and rain; and several water-spouts passed near the ship. To us this phenomenon had the appearance of a long narrow smoky pillar let down from the clouds to the surface of the water, creating a white foam where the suction takes place, whirling round in a furious manner, but the vortex thus formed seems but a few yards in circuit. Even to be involved in this is reckoned fatal to boats and small vessels; and the discharge of the column of water very dangerous to large ships, should it break upon their decks. The water first ascends to fill the cylinder. If a gun be fired near a water-spout, the vacuum caused by the explosion will disperse it. Several of our guns were made ready for this service, but were not needed.

Prior to leaving Port Jackson, Governor Hunter requested my husband, if he passed near Stewart's Islands, to ascertain whether they were inhabited, saying, that he was at too great a distance when he first discovered and named them in 1791 to make any observation; hence, as they lay in the ship's track, they were looked out for. On Thursday, the 5th of June, we saw and approached them; they appeared to be a small cluster of low islands. Three were counted from the deck, and five from the mast-head. We observed one more elevated than the rest, which was named *Mount Hunter*, in honour of the first discoverer. We saw much smoke from different parts, and several canoes passing from one isle to another; about noon a number of canoes came toward the ship, each carrying from five to eight persons; these were unarmed, and came close to the ship, staring at the masts and hull, with the greatest surprise and wonder. They appeared stout muscular men, of sun-burnt complexion, having some sort of cloth round their waist; their hair was tied in a bunch behind. Signs were made to draw them close alongside, and little articles held out for them to accept; but for a considerable time they took no notice of these overtures; at length, a tall, fine looking old man, with a white beard, stood up in one of the canoes, and began talking very loud, often bending his body as if in the act of lifting something up; at the same

time pointing to the shore, inviting us, as we thought, to land. When he had done, some light things were dropped by the fishing-lines astern, which one canoe ventured to take; after which, several boats came round, to observe what was received. Presently a boat with five men paddled up to the main channel, and threw in two cocoa-nuts, and then paddled hastily away. At this stage, an accident happened, which put a stop to all farther intercourse. A canoe had hold of the line, to take something off, when the hook caught in the hand of the man who held the line; with a horrid yell he tore the hook out of the flesh, and all instantly quitted us; after which, no overture could induce them again to come near. Their canoes appeared about twenty-five feet long, with out riggers fixed to one side to balance them. Many natives were seen on shore. We were very sorry that they had left us with bad impressions, as we thought them to be a friendly good people. No doubt, were a communication established, ships might find many refreshments here, as abundance of cocoa-nut trees were seen from the *Friendship*. These islands lie in latitude 8° 12' south, and longitude about 163° east.

Next morning we saw Solomon's Island on our left. We soon after passed between that and Gower's Island, so named by Capt. Carteret. Gower's Island appeared small, and we soon lost sight of it, but Solomon's Island is of great extent, as we had it in view for three days, in which time the ship ran upwards of three hundred miles to the north-west; however there might be more islands than one, as several extensive openings were seen.

On the 9th of June, we deserted the straits of Bouganville on our left, but entered a new passage between Anson's and Bouganville Islands, which was found safe. While we were proceeding toward St. George's Channel, so named by Capt. Carteret, who first sailed through it in 1767, six canoes came from Bouganville Island towards the ship, with about eight or ten men in each; they came alongside with confidence, and appeared to know something of traffic; readily exchanging bows, arrows, and spears, shells, necklaces, and ornaments from their arms and legs, for handkerchiefs, empty bottles, &c. The Bouganville islanders are small in stature, very dark, with frizzled hair. We observed a number of people on shore. While all the ship's crew were busy in traffic at the gangway, the steward being in the cabin, heard a noise at the rudder-chains, and looking out, saw a native very busy, taking the fore-ock from the shackle; he had swam from one of the canoes, and would not desist when called to. The steward had a kettle of boiling

water in the cabin, which he took to the window, and with it threatened the fellow, who would not understand him; however, a little of the scalding water very soon made him desist, for he instantly jumped into the water, and kept at a respectful distance, swimming about until taken into a canoe. After laying to for about an hour, the ship stood on her course. No persuasion could induce any of these natives to enter the ship, although a number of boats were still coming off, and followed us until we came near Anson's Island, when they all returned. We saw many natives, in groups, upon Anson's Island; but no boats came off

from it; we supposed that they were not upon good terms with their neighbours. We found the weather very hot, but all the crew were in the best health; no doubt the fresh meals which the ship's stores furnished them, and plenty of water, greatly contributed thereto. This day my poor kangaroo fell down the hatchway and broke its back; I had hoped to take it safe to England. Its innocent pranks, playing about the cabin and steerage, were often a source of amusement to the officers, who felt its loss as much as I did.

MODE OF CATCHING ELEPHANTS IN THE DISTRICT OF COIMBATORE.

THE art of catching elephants is much the same in principle every where; but there is some variety in the mode of applying it. The natives, who follow it as a profession, must shape their devices to the local resources afforded by the country. The following narrative is given in

a letter, dated *Coimbatore, April 21, 1819*, by an eye-witness. This specimen affords one fact relating to the habits of the animal, which, in the opinion of the writer, is a contribution to the page of natural history.

Early in February last about 3000 peo-

ple were assembled at the place of rendezvous on the skirts of the jungle, and the haunts of the elephants being ascertained, a semi-circular line of people, provided with fire-arms, tom-toms, &c. and extending for several miles, was then formed round them, each end of the line reaching a chain of hills, the passes through which had been previously stopped and guarded by parties of matchlock-men. The object of this line was to drive the elephants towards a narrow gorge surrounded with steep hills, in which there was abundance of food and water for them for several days; this, however, was no easy task, as the elephants frequently attempted to force the lines and get off to the eastward; but the line gradually closed on them, and halting at night, kept up large fires to prevent their breaking through; and after 10 or 12 days' labour, at last succeeded in driving them into the intended place, where they were closely surrounded and kept in for several days. Meantime, at the debouché of this pass, several hundred people were busily employed digging a deep ditch, enclosing about a quarter of a mile of ground, leaving only the space of a few yards as an entrance untouched.

Two ditches were cut from the entrance, to a hill on one side and to a rock on the other, to prevent the elephants passing the enclosure; on the outside of the ditch a matting of branches about six feet high was placed to give it a formidable and impassible appearance, and green bushes and branches were also stuck about the entrance, to conceal the ditch, and to give it as much as possible an appearance of jungle. When all this was completed the people were removed from that place, and those at the other end commenced firing, shouting, and making as much noise as possible with drums and cholera horns, which so intimidated the elephants that they made the best of their way to the opposite end; and the people following close,

with the assistance of a few rockets drove them straight into the enclosure, when the remaining part was dug away, and the ditch completed; people were immediately posted round the outside of the ditch, armed with long spears and matchlocks, to repel any attempt the elephants might make to cross it.

Next day eight tame female elephants were introduced into the enclosure, the Mahouts couched close on their necks, and covered with dark cloths. The object of the tame ones was to separate one of the wild from the herd and mob him. When this was accomplished, four Kut Mahouts, whose profession is to catch elephants, crept between the legs of the tame ones, and having fastened strong ropes to the hind legs of the wild fellow, secured him to the nearest tree; but the Kut Mahouts then retire towards the ditch, and the tame elephants leaving the captive to his struggles, went after others.

In this way 23 elephants were captured in six days, without the parties engaged meeting with the slightest accident, to the great amusement of the spectators, who perched on trees overhanging the enclosure, witnessed the sport without sharing in the danger. The sagacity of the tame elephants; the address and courage of the Mahouts in approaching the wild ones; the anxious moments which passed from the cast of the first rope, until the last band was tied; the rage of the animals upon finding themselves entrapped, and their astonishing exertions to get free, afford altogether a scene of no ordinary novelty and interest.

One of the elephants calved in the enclosure; the young one was sufficiently strong to run about with its mother the first day. And to naturalists it may be satisfactory to know that the young elephant sucks with the mouth, and not with the proboscis, as is generally supposed.

A SPECTATOR.

VARIETIES.

ATTACHMENTS OF THE NATIVE TROOPS TO THEIR OFFICERS.

History records many examples of the attachment and implicit obedience of the native troops of British India to their officers. As an illustration of these admirable traits, the following anecdote may vie with the most striking. Although the names of the parties are not given, there is a guarantee for its authenticity, in the official identity of which this expression cannot divest the individuals alluded to as

performers or witnesses in this singular train of incidents.

While the late Colonel —, an officer of high distinction, was on his way to Egypt, with dispatches to Gen. Sir R. Abercromby, by the way of Bussorah, he met there an officer in command of a small detachment of Madras Cavalry, who was then an inmate with Mr. —, the British resident, until he had an opportunity of embarking for Madras. The Madras officer had the mortification to hear the Colonel rail much at the idea of

Native Troops having been sent to Egypt with Gen. Baird, saying: "Give them the best officers the Madras army can afford, they will never stand before the troops they will meet in Egypt; nor will they ever follow their officers into any situation of danger." The Resident listened with great attention, and never having seen any thing of the Native Troops, appeared to give perfect credit to what he heard, as did the Captain of the ship which brought the Colonel up the Persian Gulph. Arguing, it was thought by the officer commanding, that this small party of troopers, would not be sufficient to establish that character at Bussora, which he heard so unjustly aspersed, and therefore meditated some act that would be more impressive than the eloquence of the finest speaker.

He soon after proposed a ride along the banks of the Euphrates, on which the resident's garden-house stood, which was readily agreed to by a worthy doctor of the Madras establishment, who having been present, was equally hurt at hearing the gallant troops so ill spoken of, to which they both belonged. The Captain of the vessel, at his own request, made one of the party. A Naick and eight troopers, and two orderly boys, attended as a guard, which at that time was necessary at Bussora, as parties of plundering Arabs, were very troublesome in the vicinity. After the excursion had commenced the doctor asked the military officer if no steps could be taken to convince the sailor, who was riding a short distance in the rear, that what he had heard alleged, was ill founded. The officer replied it might immediately be done; and instantly gave the word to form a single rank to the front, placing the Naick in the centre, and the orderly boys on each flank, while the doctor also took his post on one flank. The Naick received his orders to follow the officer, within a horse's length, wherever he went, and no further caution was given to any man of the party. The officer then wheeled them to the left, from the river, and took them away four or five hundred yards, leaving the sailor on the bank, as a spectator of the cavalry manœuvres about to take place, and as a point of view for the officer to charge upon. After having trotted them up and down two or three times and wheeled them to the right about, he commenced a charge back toward the Captain; and when within about ten yards of the river, over which was a high bank, instead of the word, "halt" being pronounced, as must have been expected by the little party, the second "Forwards!" was given; and so well obeyed, that the horse of the Naick, with his rider, came immediately on the back of the officer, as he and his horse had

just reached the stream, into which they were descending, and every man of the party, with the exception of one little orderly boy, took the leap, at the same instant, without a moment's hesitation. To describe the astonishment of the sailor, would have been utterly impossible, at seeing his companion and guard so suddenly disappear below the stream, and from which, to use his own words, he never expected to see a soul rise again. The officer however, who knew his men to be good swimmers, and that there was a sand-bank about two hundred yards down the river, to which the stream must carry them, trusted that no accident was likely to happen, any further than the loss of the turbans of the men and their pistols, which occurred. As soon as the officer had seen all his men safely landed on the sand-bank, he returned to the Captain and asked him if he had heard Colonel ——'s sentiments regarding the native troops, to which he said he had, and lost no time in making the best of his way to the Resident to tell him what he had seen, but which surprise had almost deprived him of the power of doing. So much pleased, however, was the Resident when he had learnt what had happened, that he came with open arms to meet his guest, and to congratulate him on having done more by one act to convince the incredulous, and to inform the prejudiced, than could have been effected by all the arguments eloquence could adduce, or all the verbal statements experience could detail.

A WALKING BABEL.

He who desires to pass for a profound scholar by exhibiting a string of alphabets in exotic and strange languages, may be classed in the pompous list of *men of letters*; he who studies languages and construes them only by the aid of dictionaries is a mere vocabulist; and he who presumes to translate the writings of the ancients with no other qualifications than common place knowledge is an impostor! Any marvellous relations of this sort are caught with avidity among the *minims* of literature, and when emptied out to the public in the form of biographical memoirs, seldom fail to be magnified, to the no small excitement of the lovers of wonder; such prodigious relations exhibit to our view literary monstrosities, rather than men under the influence of progressive knowledge and improved intellect.

Among the persons most celebrated for their extraordinary acquisitions in the literature of the east is ranked *James Bonaventura Hepburn*, who died at Venice about the year 1620—he was born in East Lothian in Scotland, and is said to have been acquainted with the following alphabets, viz. Babelonian, Hieroglyphic,

phic, Apollonic, Egyptian, Cusscean, Virgilian, Etruscan, Saracenic, Assyrian, Armenian, Syro-Armenian, Illyrian, Sabæan, Ethiopic, Phœnician, French, German, Gothic, Getic, Scythian, Massagetic, Mercurial-Egyptic, Isiac-Egyptic, Greek, Ionic, Æolic, Attic, Doric, Latino-greek, Coptic, Jacobite, Servian, Irish, Scottish, Syriac, Maronite, Chaldaic, Palestine, Canaanian, Persian, African, Arabic, Judæan, Turkish, Rabbinical, Hebræo-Arabic, Syro-hebræic, Mystic, Seraphic, Supercelestial, Angelic, Enochian, Punic, Hebrew, Samaritan, Mosaic, Judæo-samaritan, Idumean, Halorabbinic, Brachman, Adamean, Solomonian, and Noachean; to which was added that of the Hottentots in the cattle's language, which was never changed at the confusion at Babel, using "*Moath*" for kine, and "*Baa*" for sheep; which *lingua*, says the account, the people un-

derstand without any interpreter! The portrait of this linguist is said to be found in the Vatican.

The above catalogue of languages is given as the writer found it. The nomenclature is deformed with many improprieties; and the names, even where they are correct, present a palpable specimen of illogical arrangement. The cognate dialects are detached from the parent tongue, and scattered in disorder, perhaps to imitate the dispersion of languages. Some of the terms include other articles which swell the list; and some are different names for one and the same channel of mental intercourse. The absurdity of denominating any system of vocabularies, "Seraphic," and "Supercelestial," "Adamean," and "Noachean," exposes the imprudence of such empty pretension to deserved ridicule.

FURTHER ACCOUNT OF THE NILGEMIS,

OR

HIGHLANDS OF PAUTODIMAİK.

THE mountainous region situate between Coimbatore and Malabar was visited by a party in January 1819; and the description inserted in the *Asiatic Journal*, vol. VIII. p. 235, was founded on the notes taken in that tour. The climate at that season was described as delightful, particularly to such as sought a temporary transition to a temperate atmosphere inclining to coldness. But the most enthusiastic admirers of this enchanting spot scarcely expected, that during the torrid reign of an Indian May, a situation could be found, not more than 350 miles from Madras, where the thermometer in the morning stands at the agreeable temperature of 58. The *Madras Gov. Gazette* of May 22, communicates some additional notices respecting this inviting region.

On the 10th May 1819 (the date of our last letter), the thermometer at 6 o'clock in the morning, stood at 58, in the evening at 64, and never rises higher

than 71 or 72 in the middle of the day, yet the season was considered as unusually warm, in consequence of the want of rain. To us, who in the hot month of May pant for breath in this warm latitude, nothing can convey a more favorable idea of the climate than these simple facts. Mr. Lachenant, a French gentleman whose life has been devoted to the study of nature and her productions, and who lately visited this favored spot, from Pondicherry, is of opinion that the soil and climate are admirably adapted for the culture of every species of grain and fruit, European and Asiatic. This gentleman found the gooseberry bushes loaded with fruit, the honeysuckle and rose in full flower, and had already discovered 50 new species of plants. The advantages offered by this climate, to those who labour under disorders incident to warm countries, must be remarkably favourable to the restoration of health. On a relaxed and debilitated constitution, the tonic power of the temperature prevalent in this elevated spot must produce the most beneficial effects.

S I N E N S I A N A.

(From the *Indo-Chinese Gleaner*, No. VI.)

TRAITS OF THE PUBLIC ADMINISTRATION,
Founded on Notices in the *Peking Gazette*,
Jan. 20.

It appears that considerable vigilance is exercised in China for the recovery of sums due to the government, from local magistrates who collect the duties. Several have been broken and thrown into prison, on account of defalcation and embezzlement of the public money.

Vol. IX. T

The minister Tung-kaou was still unwell, and solicited permission to remain at home a longer period, promising that when he should recover he would put his forehead in the mire at the palace gate, and in that posture give thanks to his sacred Majesty, for his great indulgence to him.

A new appointment, like that of the Keun-min Foo at Macao, has taken place at Teen-tsin. A difficulty arose respecting the seamen, who were taken from the southern provinces to man the ships at Teen-tsin. What was to be done with their families was the difficulty. The governor of Peking represented, that to remove the families to the north was troublesome, and they moreover were unaccustomed to the cold. It is therefore ordered, that the men serve for three years; after which time, if the native seamen of the north have made adequate progress in naval tactics, and if these men choose to return to their families, they will then be permitted to do so.

As is usual in so large an empire, the harvest last year was bad in various parts, and the people unable to pay the usual duties. It was particularly the case in the south-west province of Yun-nan.

Kidnapping.

In Yun-nan a large party of kidnappers have been apprehended. They had stolen and were carrying off upwards of a hundred women and female children. His majesty has ordered immediate death, by strangling, to be inflicted on four of the leading offenders.

The salt merchants of Shan-tung are much embarrassed; and to extricate them from their difficulties, the government has given them money.

Military Etiquette, &c.

The emperor has taken serious umbrage at the neglect, or want of respectability, into which the army is falling, and blames severely the presumption of the civil officers. He has heard that a local magistrate will presume to walk shoulder to shoulder with a general in the army. The probable consequence of this, he apprehends, will be very serious to the safety of the empire, if not put a stop to. He has therefore ordered a new edition of the laws respecting ceremony and etiquette, and requires that it be rigorously attended to and duly enforced. It has been found that the officers of the army have employed too many of the soldiers as attendants for private purposes, and that civil officers have retained about them a crowd of inferior officers; respecting both of which cases, old regulations are revived, and new ones adopted.

A Tartar general of the first rank is allowed ten men to attend on him for public

service, but none for private purposes: other officers in proportion. No men are to be perpetually attached to an officer, but to be orderlies for the day in rotation.

His majesty has ordered the army in Manchow Tartary to be duly exercised, in order to be reviewed by him next year, when he visits that region.

The Hookah—Tobacco.

The extensive use of tobacco, and the introduction of the hookah into China, even to his majesty's residence at Jehu, has called forth from him a general order to forbid the culture of tobacco, which is prepared for the hookah in every province of China. The province of Kan-suh, on the north-west corner of China, produces the best; and the article being profitable to the farmer, has been much cultivated there. Those agriculturists are ordered to desist from planting any more, and the venders of it to seek for some other mode of obtaining a livelihood.

Tobacco being a mere luxury, and not a necessary of life, is the reason of the above order.

Punishment—Torture—Criminal Jurisdiction.

Some individuals have been put to a slow ignominious death, viz. cut to pieces, on account of the rebellion of 1813; and also for the murder of senior relatives.

It is complained, that the criminal cases from Sze-chuen province, have of late been unusually numerous. One case of adultery caused the husband to be murdered, and the woman's mother to hang herself. The board of criminal cases has objected to the decisions of the local government, and his majesty has ordered the case to be retried by Tseang, the late viceroy of Canton, and requires the full application of torture to procure the truth of so heinous a crime.

Two cases have occurred of people dying under torture unjustly inflicted. One in China, by a Che-heen magistrate: and one in Tartary, by the keepers of his majesty's forests. It was found that somebody cut down wood and carried it off by stealth. Some venders of fuel were suspected, seized and tortured, till a confession was extorted; they were then carried before a magistrate and found innocent; but two men died of the tortures inflicted previously to being tried!

The persecution and seizure of persons connected with associations still continues.

Form of recanting Christianity.

A case has also been noticed of a Tartar noble family of the imperial kindred, the members of which comprised some per-

sons who had received the Portuguese or European religion. His majesty says they have all recanted long ago, and trodden on the cross, and further inquiry is unnecessary; but orders that the images and crosses which they had not previously destroyed, be forthwith burnt.

Discovery of a murder in Keang-nan.

In the 14th year of Kea-king, the district of San-yang, in the province of Keang-nan, was inundated; in consequence of which the Emperor ordered the money in the public treasury to be paid out for the relief of the suffering people. Wang-shin-han, the magistrate of the district of San-yang, embezzled, however, the money allotted from the treasury, and applied it to his own use, without distributing it among the people. The Viceroy of Keang-nan dispatched a newly created *Tsin-sze*, named Lee-yü-chang, himself a magistrate of a district, to go thither and examine this affair. Wang-shin-han, being afraid, and revolving the matter in his mind, entreated the *Tsin-sze*, that he would on no account publish the matter, and offered to give him 10,000 taels of gold. Lee-yü-chang, however, was a well-informed and upright man, and was not to be moved by his unrighteous pelf: he positively resolved to report the true state of the case to the viceroy. In this dilemma, Wang-shin-han bribed three of the servants of Lee-yü-chang, offering them 2,000 taels of silver, if they would poison their master and stop his mouth; making out a story, that he himself in a fit of frenzy had committed suicide.

When this foul action was committed, they placed his lifeless corpse in a fine coffin, and sent it back to his own home to be buried. The wife of the deceased, suspecting that all was not right, and reflecting that her husband, generally a hale man, was not likely in a fit of phrenzy to put an end to himself, opened the box

containing his apparel which had been sent back, and found a spot of blood on his clothes, and one long garment in particular with traces of blood on the inside; whereupon her uncle opened the coffin, and perceiving blood in the eyes, nose, mouth, and ears of the corpse, concluded that the deceased had died of poison: he instantly took the widow, and hastened to Peking to lay the circumstances before the board of punishments. The board lost no time in apprehending the three servants who had administered the poison, and who on strict examination confessed the whole truth. The emperor, greatly enraged, ordered the viceroy of Keang-Nan to be banished to a distant country, and all the mandarins of the district of San-yang to be beheaded. The whole family of Wang-shin-han, without a single exception, were beheaded at one time; and one of his sons, then about three years of age, was placed in prison at the command of the emperor, who intends at the age of sixteen to behead him also. With respect to the deceased Lee-yü-chang, the emperor himself composed an elegy of 30 verses, to celebrate his virtues: and directed that it should be engraven on a stone tablet, and placed before his grave, to signify to all that it was 10,000 times more glorious to die possessing integrity than to live as a covetous villain. The three servants who poisoned him were at the emperor's orders cut into small pieces before the grave of the deceased, and their hearts taken out and offered up as an appeasing sacrifice. The widow was elevated to the rank of a lady; and her uncle, who pleaded her cause, was also rewarded by promotion; and as he had himself no children, the mandarin of the district was ordered to choose out from among his clan a suitable person to be adopted as his son, to carry down the line of his posterity, and to inherit his honors.

POETRY.

Solution of the Persian Enigma, page 44.

[A note from a correspondent, with a Persian signature, informs us, that one evening early in the month, in the course of reading some articles in the last number of the *Asiatic Journal* in a private company, a young lady requested an Oriental scholar, who was present, to translate to her the words of the *Persian Enigma*; and that a few days afterwards she produced the following lines, which exhibit a free paraphrase of the ideas in the original enigma, while they convey the solution.]

Born with our birth; from earliest years
Tracing our pilgrimage of tears,

And hovering o'er each gradual stage
Which leads us to the lap of age;—
Still urging on his certain pace,
"Till in the tomb must end the race
Of all those elements combined
Which wring the heart and rack the mind;
Stern, pitiless, undying cold,
And senseless as the stone which—rolled
Above the grave of friendship—lies,
And hides its relics from our eyes;—
Hostile to every living thing
In the heart's anguish triumphing,

Exulting in his ceaseless strife !
 A monster haunts the path of life !
 He is no denizen of earth ;
 Disdaining all of mortal birth,
 More savage than the worst of men
 Who slay but foes, he preys on them ;
 He extirpates not at a blow,
 His course is cruel, sure, but slow ;
 And day by day, and year by year,
 He urges on his path of fear.
 Compassion, love, or sympathy,
 Ne'er beamed from his remorseless eye ;
 Does Youth smile on him ? Beauty raise
 To him her soft and pleading gaze ?
 He waves his fateful wand :—Youth dies,
 Like day upon the twilight skies,
 And Beauty, in her proudest hour,
 Though sheltered in love's fairy bower,
 Fades, by his eye-beam glared upon,
 Like rose leaves withering in the sun !
 The day is fresh, when morning flings
 The pearl dew from her rosy wings ;
 And life is bright, when first it throws
 Its splendour o'er this scene of woes ;
 But mark ! amid its softest shades,
 Stealing from out its sweetest glades,
 He comes ! the monster glides along,
 And hushes Pleasure's careless song,
 And chills the melody that floats
 From Hope's soft lute, in syren notes,
 Whilst the heart sinks beneath his power,
 And withers like a blighted flower.
 The fresh pure bloom of dawning youth
 Is cankered by his venom tooth ;
 Proud manhood in his hour of prime,
 And mental glory, half divine,
 Beaming from his inspired eye
 The light of native majesty ;
 He knows the demon mocks controul !
 Th' iron enters in his soul ;
 And valour bows his plumed brow—
 Monster ! his only conquerer thou !
 When age, with all its gathering ills,
 Palsies the hand, the bosom chills,
 And would alone most keenly try
 The strength of frail mortality ;
 Then—then—the demon aims his blow,
 Tramples upon a fallen foe ;
 What Time respected, tears away,
 And rushes on his helpless prey ;
 As wolves upon a battle plain,
 In darkness riot on the slain.
 There are, who in the desert space,
 Have converse held with many a race,
 Who seem scarce moulded by the hand,
 Which all this fair creation planned :—
 But say, 'mid fields of polar snows,
 Where Reason's light so faintly flows,
 And e'en the form of dwarfish span
 Scarce forms the link from brute to man ;
 'Mid swarthy hills of Afric's sand,
 'Mid forests by the whirlwind fanned ;
 Where shall we monster, savage, find,
 Who lives to torture human kind ?
 To blight the lovely, quell the bold,
 The good in his foul grasp to hold ;
 To mar creations, beauteous plan,
 And banquet on the heart of man !

Yet such is he, the fiend who dwells
 In Nature's yet unfathom'd cells ;
 Who floats on ev'ry breath we draw,
 Who bends the mightiest to his law,
 Crushes the meanest to the earth,
 Bows down the proud of haughtiest birth ;
 Drives fiercely in his scythe-arm'd car,
 Like hero of a northern war,
 Armed with a scourge of scorpion stings,
 O'er the anointed heads of kings.
 Yet sometimes does the demon trace
 His progress thro' a lovelier race.
 Has Youth e'er wove a roscate bower ?
 Has Hope e'er twined one cherish'd flower ?
 His hand has torn the bloomy wreath,
 The bower has faded by his breath :
 Sunk down as by magician's wand,
 And vanished like a sea of sand.
 Though fair, and fresh, and flourishing,
 The plant of life appears to spring ;
 When Hope expands its buds around,
 And it grows firmly in the ground ;
 When o'er it pleasure's Zephyr breathes
 The aspect's trail is on the leaves ;
 The venom'd serpent gnaws the root,
 Or blights its early promised fruit !
 Now, Son of Man ! know'st thou this
 form,

In anguish nursed, of trespass born ?
 From Sin first sprung and nourished still
 By th' inveterate force of ill.

Search thine own heart—does nothing
 tell

The name of this same master spell,
 Which, like the locust, passes o'er
 Life's fairest scene and gayest shore ?
 Search thine own heart, does nothing
 there

Inform thee ?—write the monster, *Care*.

CLARA MARIA H.

LINES,

*By an Officer in India to his Friend at
 Oxford.*

In this sad place, this solitary spot,
 Where drills eternal aggravate my lot .
 Where varied hours a change of sorrows
 bring,

Where flies by day, by night mosquitoes
 sting ;

Forlorn and sad, can I poetics try,
 Or waft a sentiment without a sigh ?
 Yet, yet I write ; no sorrows can subdue
 Respect for Merton, or regard for you.

Ye sacred pinnacles ! ye tower's sublime !
 Ye verdant meadows of a happier clime !
 Where oft, in hours of study or of sport,
 We sipped of Helicon or swigged of port !
 Whilst Isis gather'd, as she rolled along,
 The catch convivial or the minstrel's
 song,

Can distance weaken, or can time efface
 The sweet remembrance of that hallowed
 place ?

Regretted field! where, impotent to awe,
The wigs of proctors, or the voice of law—
Thy sons are free, and, conscious of their
ease,
Roam where they will, and study when
they please.

Nursed in thy bowers, what luxury repaid
The five years' abstinence of Eton's shade!
A host of fashion and a flood of wine—
Dogs, horses, all that riches could assign :
Yet, Mem'ry cease, nor labour to destroy
Thy present calm by retrospects of joy.
Ye visions fly, ye scenes of bliss retire,
Nor poison life with impotent desire.
No, be it mine thro' many a boisterous year
To brave the storms of subaltern career ;
To wake each morn, and hasten to fulfil
The rapid duties of mechanic drill ;
To square the shoulders, and adjust the

heel,
And teach the sable warrior true to
wheel ;

At vesper feasts to counterfeit the laugh,
And praise the pointless humour of the
staff ;

Or feign the look of interest, to suit
The long long stories of the wars of Coote.
Yes! be it mine, by sternest fortune driv-
ven,

To starve from month to month on fifty-
seven :

Whilst weekly posts in quick succession
shew

The claims of Brunton, or of Hope and Co.
Vain hope! the wayward passion of the
soul,

What hints can check, what censures can
controul ?

Oft in the ranks, when memory pour-
trays

The many pleasures of our college days,
And wraps the mind in dreams of former
joy,

Instinctive motions every limb employ ;
And often, too, when destined to pursue
The mystic limits of the square review,
I scorn the frown and censure yet to
come,

Nor heed the cadence of the unceasing
drum.

At dinner, too, no efforts can engage
My fixed attention to the tales of age :
When, true to time and place, and when
and who—

'The dull historian's full of eighty-two.
The line adjusted, and the ranks array'd,
Lull their grave audience with a cannonade.
Still sad to me the hours appear to creep,
Who cannot listen, and who must not
sleep.

Thou know'st with what fond extacy I
sped,

Charmed with the beauties of the martial
red ;

While Fancy brought from out her fairy
loom

The classic coronet of laurel bloom ;
And Hope, as oft she chose her softest lay,
Soothed the long distance of my wat'ry way.

How oft have I refused, when urged to
wear

The grave redundancy of legal hair ;
How oft, well pleased, have plotted to
escape

'The robe of linen and the band of crape :—
" No ! be it mine," I cried, " to charm
the fair

With arts of dress, and elegance of air ;
To reign the fav'rite of a fav'rite set,
Known by the brilliance of the epaulette!
Let others triumph in the wordy war,
Storm in the desk, or thunder at the bar ;
Like Thomson, mould the passions at his
will,

Like Erskine argue, or declaim like Hill.
Be mine the softer eloquence, that draws
From belles of taste the letter of ap-
plause.

But, ah! how far from all that fancy
planned,

The sombre dullness of the barren land ;
No flirts, no belles, no gallantry is here,
No sighs that swell the soul, no smiles
that cheer ;

No dances here disturb the sweets of life :
No music, but the music of the life.

But still from morn to morn the bugle
shrill,

Wakes the sad soldier to repeated drill ;
To solid squares, and marches to review,
And columns close, and columns open too.
And when the moon shoots forth her

silver beam,
Dundas supplies the everlasting theme.

Parades and drills throughout the dinner
reign,

With all the trappings of an army train.
If from the night-couch too I steal a look,

Still glides the genius of that mystic book ;
Embodied tactics through the chamber
pass,

Ghosts under arms, and spirits of Dundas.
Yet, ere I wandered from the abbey gloom,
Concurring presages foretold my doom ;
Sunk was the sun, and showery the day,
And dark the clouds sailed o'er the turrets
grey ;

Prophetic murmurs floated on the breeze,
Breathed of dark fate, and uttered its
decrees.

Warn, then, each son of science to dismiss
The idle dreams of visionary bliss ;

Tell him the boast of military grace,
The cap of plumage, and the coat of lace,
Claim no precedence o'er the dark attire
Where dwell no belles of fashion to
admire.

Tell him that here successive seasons yield
Griefs of the fort, or troubles of the field ;
Or, sad and sorrowful, the exile strays,
Consigned to drills and destined to field-
days ;

Or placed where woods immeasurably
spread,

Distil the death-dew o'er the soldier's
head.

Housed in a tent, or cradled on the soil,
Each morn awakes him to repeated toil.

DEBATE AT THE EAST-INDIA HOUSE.

East-India House, Dec. 22.

A quarterly general court of proprietors of East-India stock was this day held at the Company's house, in Leadenhall-street, for the purpose of declaring a dividend on the Company's capital stock for the half year commencing the 5th July last, and ending the 5th of January next.

Some routine business having been disposed of,

The *Chairman* (C. Marjoribanks, Esq.) moved, "That this court do agree to the resolution of the court of directors, recommending that a dividend of $5\frac{1}{2}$ per cent. be declared on the Company's capital stock for the half year commencing on the 5th day of July last, and ending on the 5th day of January next."

The *Deputy Chairman* (G. A. Robinson, Esq.) seconded the motion.

Mr. *Hume* wished to ask a question of considerable importance. Exchequer bills were at present at a discount; last month they fell to a discount of 14s., but those who held them had a right, if they had payments to make at the Treasury, to send them in at par. Now, it was reported, that the court of directors, in paying a large amount of duties to the exchequer, did not send in the exchequer bills (which must have been received at par), as they ought to have done, but sold them out at a discount, and paid the duties in cash. He was desirous of knowing whether those exchequer bills had been paid into the Treasury, or whether they had been sold at a loss, and cash advanced to the amount of the duties?

The *Deputy Chairman* answered, that no exchequer bills had been sold for the purpose of paying duties. The duties had been paid in cash, which the Company had in hand, and no exchequer bills were sold at a loss, or at all, to meet the amount of any duties.—(*Hear, hear!*)

The motion was then agreed to.

MR. WILKINSON'S CLAIM.

The *Chairman* stated, that the court was made special for the purpose of submitting to the proprietors, for their confirmation, the resolution of the general court of the 22d September last, approving a resolution of the court of directors, of the 14th July last, granting to Mr. James Wilkinson, under the circumstances therein stated, the sum of 75,000 sicca rupees, at 2s. the current rupee, with interest thereon at 6 per cent. per annum, from the 11th Oct. 1816, to the day when payment shall be made. He then moved, "That the said resolution be confirmed."

The *Deputy Chairman* seconded the motion, which was agreed to *nem. con.*

GRANT TO SIR G. H. BARLOW.

The *Chairman* stated, that the court was further made special, for the purpose of laying before the proprietors for their approbation, a resolution of the court of directors of the 10th ult., granting to Sir George Hilario Barlow, Bart. G. C. B., a pension of £1,500 per annum, on the grounds therein stated.

The report required by the by-law, cap. 6, sec. 19, and the resolution of the court of directors, founded thereon, were then read.

The *Chairman* said, in calling the attention of the proprietors to the resolution of the court of directors, he had but a very few observations to offer. The subject was by no means new; it had been most extensively discussed in a very crowded court of proprietors, when the measure met with a general concurrence. It had, however, been interrupted in its progress, from a deviation in point of form. He lamented this exceedingly, and the more so as he felt some degree of blame attached to himself, with reference to that informality; but whether that blame be great or small, he must throw himself on the indulgent consideration of the court.

—(*Hear, hear!*)—This neglect, or rather oversight, which he trusted the proprietors would excuse, had occasioned far more anxiety to the individual, whose merits they were called upon to reward, than he otherwise would have felt. As this gentleman's case had been before the public for so considerable a period, he hoped that the proprietors would now do justice to those merits, and bear in mind especially, that from the commencement of this question to the period when the resolution could be confirmed, this gentleman, who had served the Company long and faithfully, would have suffered an anxiety of nearly twelve month's duration. He regretted, and no man could regret it more sincerely, that any part of his own conduct should have aggravated, however unintentionally, the uneasiness, inconvenience, and distress, which this individual had suffered by the protraction.

—(*Hear, hear!*)—Having proceeded so far, he might be permitted to observe, that in the situation he filled, with numerous parliamentary enactments, and a large code of by-laws to consult, it appeared to him extraordinary that mistakes did not occur more frequently. He had no further remark to offer, except to state his conviction that the individual in question was fairly and honourably entitled to the pension proposed. He should therefore move, that "This court do approve of the resolution of the court of

directors of the 10th ult., granting to Sir G. H. Barlow, Bart. G. C. B., a pension of £1500 per ann., to commence from the 21st of May 1818, subject to the confirmation of another general court."

The *Deputy Chairman* seconded the motion.

Mr. *Hume* rose to speak on a point of order. The oversight which had caused the delay on a late occasion, ought to make the gentlemen behind the bar cautious in their future proceedings, for nothing was of more importance to great public bodies than to have their proceedings carried on regularly. He felt no wish, at a former court, to postpone the proceedings in this case, if, consistently with his duty, he could have avoided it. He believed the great majority of the proprietors were in favour of Sir G. Barlow's claim, but he was sure every man of sense must desire, that whatever was done should be done regularly and legally. In the present instance he would shew that they were not proceeding regularly, and, most assuredly, regularity ought to be attended to. It was stated in the advertisement, that in conformity with the by-law, cap. 6, sec. 19, the directors had ordered *all* the documents connected with the case to be laid before the proprietors, in order to shew the grounds on which their resolution was founded. But this was not the fact. The words of the by-law were, "that the court of directors shall state, in the form of a report, the grounds on which they recommended any grant above the amount of £200 per annum, which shall be signed by such directors as approved of the same; and the documents on which they formed their opinion shall be open to the inspection of the proprietors, from the day on which public notice shall be given of the proposed grant." Now, he conceived that this by-law had not been complied with. In the resolution of the court of directors of the 10th November, two reasons were stated for recommending the grant of a pension to Sir G. Barlow; the first was, his many and faithful services, and the important situations he had filled; the second was, the very moderate fortune possessed by Sir G. Barlow, to support the rank in society in which he had been placed by the honours conferred upon him by his Majesty. At the conclusion of the resolution, where the grounds on which it was passed were referred to, the following sentence would be found: "the existence of those grounds," namely, the faithful services and moderate fortune of Sir G. Barlow, "is evidenced and more fully detailed in the collection of papers hereto annexed, which constitute the documents upon which the foregoing resolution has been formed." He could find no such documents. He begged the gentle-

men behind the bar to send for them, and lay them regularly before the proprietors. The by-law did not give the directors a right to withhold a single document; it was completely imperative: so that any individual of the court, acting on the spirit and letter of the by-law, might insist on its being fully carried into effect, and demand the production of *all* documents. If it were not so, what would become of various checks which had been wisely provided for the security of the Company's funds? With respect to the first ground, "the long and faithful services of Sir G. Barlow," the terms of the by-law were complied with; but this was not the case with reference to the second ground. No document had been laid before the proprietors, to shew the "moderate fortune" possessed by Sir G. Barlow; indeed, he found at the end of this collection of papers, a statement of a very curious nature. It was not official, it was not signed by the secretary, nor by any other individual. It set forth, "the court have not thought it necessary, from feelings of delicacy, in which they trust the proprietors at large will share, to add to the foregoing documents any detail of the fortune of Sir George Barlow, but pledge themselves to the proprietors, from evidence they have before them, that the means possessed by Sir George Barlow are very inadequate to support the rank which his public services, and the high situations he has filled in India, have caused to be conferred on him." He had no doubt whatever but the directors were fully convinced of the verity of this statement; but if they refused to produce this evidence, what became of their by-law, which declared that the proprietors were to be satisfied? He would put it to the Company's law-officers to say whether, in point of law, they could proceed to the consideration of this question, until the documents were laid before the proprietors to the fullest extent? The report of the committee of by-laws, presented on the 23d of June last, expressly entered into an explanation of what should be deemed documents under this by-law; and, fortified by that explanation, he was prepared to contend that it was not in the power of the court of directors, nor in the power of the general court, to proceed, until *all* the documents were produced. However willing gentlemen might be to grant this pension at the present moment, he was convinced that if they proceeded, the grant would be nugatory. He wished their learned counsel would inform them whether, in his opinion, they could legally proceed.

The *Chairman* observed, Mr. Serjeant Bosanquet was at that moment occupied elsewhere. He stated that the court of directors were fully agreed as to the pro-

priety of not exposing any paper which detailed the fortune of Sir G. Barlow; and they put it to the feelings of the proprietors, whether a disclosure of a nature so delicate was absolutely necessary. If, however, the court of proprietors should desire to know the exact quantum of Sir G. Barlow's fortune, the documents should be laid before them.

Mr. *R. Jackson* said, they now came at last to the plain legal proposition. They had to consider, not what feeling or sympathy would counsel them to do, but what the law directed them to do; and in his opinion, that man was least of all the friend of Sir G. Barlow, who would call on the court to do an act which, if he had any conception of the law, was directly opposed to it. He conceived it was necessary for him and others, who looked upon this proceeding as irregular, to shelter themselves a little from that sort of observation which was sometimes thrown out on occasions of this kind, when it seemed to be supposed that opposition arose from feelings of a personal nature, instead of being the offspring of an honest sense of public duty: he disclaimed any such motive; if the thing were legally and properly done, though he did not altogether approve of the phraseology of the resolution, he was ready to concede it. He was concerned that his learned friend (Mr. Serjeant Bosanquet) was not present; but if the proposition which he meant to submit to the court were agreed to, sufficient time would be allowed, not only to take his learned friend's opinion on the question, but also to procure the opinions of other eminent legal characters. A moment's reflection would shew the great force and validity of the observations which had fallen from his hon. friend (Mr. Hume), behind whom he was happy to see the parent of this very by-law (Mr. Howorth), to whose zeal and ability, as chairman of the committee of by-laws, they all owed so much. That gentleman could best state the reasons which led the committee to adopt this law. It was, he admitted, a new law, but it was not the less obligatory on that account. The committee had special reasons for altering the old law as they had done; they had acted in furtherance of the design of the legislature itself, which had seen the necessity of placing restrictions on the expenditure of the Company's funds. The legislature had conferred on them the high and distinguished honour of making that court an essential branch of the Company's constitution, without whose consent no resolution granting more than a certain sum of money could be valid. In the act of the 33d of the king, the legislature stated its reason for placing restrictions on grants of this nature. The reason was, that the cash of

the Company might be properly protected; and to effect this object, it was enacted that no grant of more than £200 per annum should be made, unless it was submitted to and approved by two general courts. The by-law, which was founded on this provision, became binding, unless it could be shewn that it was in some way or other at variance with the law of the land; but if it were not so, then it was as much law as the act of parliament itself. The by-law (cap. 6, sec. 19) ordained, "That every resolution of the court of directors for granting a pension of above £200 per annum shall be laid before two general courts, summoned specially for that purpose, and that the documents on which such resolution may have been formed shall be open to the inspection of the proprietors, from the day on which public notice has been given of the proposed grant." If, therefore, the documents had in this case been exposed to the view of the proprietors, the by-law was complied with, and his hon. friend's objections were unfounded; but if they had not been so exposed, then the world could not, in his opinion, extricate them from the predicament in which they were placed by this irregularity. That the directors intended, or at least saw the necessity, of laying all the documents before the proprietors, there could be no doubt, from the manner in which the resolution was drawn up; but from a mistaken feeling of delicacy, they had not done so, and they had in consequence placed themselves in a situation of great difficulty. The grounds on which the grant was recommended, were, "the long and faithful services of Sir G. Barlow, the high situations he has filled, including that of governor-general, and the very moderate fortune possessed by him, to support the rank in society in which he has been placed by the honours conferred on him by his Majesty." And the court of directors went on to tell them, that "the existence of these grounds is evidenced and more fully detailed in the collection of papers herewith annexed, which constitute the document upon which the foregoing resolution has been formed." Every person who read this passage would expect to see amongst this collection of papers some documents illustrative of the "moderate fortune" of Sir G. Barlow; but instead of that, he would find a paper, without signature, without date, the plain and obvious meaning of which was, "for God's sake, ask no question!" The way in which the delicacy of the proprietors was invoked, might be very flattering to their feelings; but this question could not be decided by an appeal to their sympathies; the plain proposition was, whether the court of directors had acted legally or not? Instead,

however, of having the necessary documents, relative to the fortune of Sir G. Barlow, regularly laid before them, they found a paper appended to the resolution, which (without their knowing in what shape or manner it became a part of the documents left open for their inspection) briefly informed the proprietors, that, from motives of delicacy and good feeling, it was deemed advisable to withhold all information with respect to one of the grounds on which the grant was recommended. "The court," said this paper, "have not thought it necessary, from feelings of delicacy, in which they trust the proprietors at large will share, to add to the foregoing documents any detail of the fortune of Sir G. Barlow; but they pledge themselves to the proprietors, from evidence they have before them, that the means possessed by Sir G. Barlow are very inadequate to support the rank in society which his public services, and the high situations which he held in India, have caused to be conferred on him."—From this he conceived the directors entertained an opinion, that, provided this general court affected, as it always would be, when its generosity, its sympathy, its delicacy, were appealed to, when all those invocations were made use of, which never failed to reach, and reaching to win the hearts of an English audience, bowed to the appeal made to its feelings, and waved the production of documents, that then the proceeding received all the sanction that was necessary. This very circumstance, however, proved the wisdom of the law which was framed to enable them to guard against the current of their passions, to shield themselves from the operation of those feelings, which were certainly worthy of their nature, but which required some check, in order to prevent their excessive indulgence. Those, therefore, who stood in the situation in which he was placed, invidious as it might be considered by some, were performing a sacred duty, and should be praised, not censured, for the part they took; because, unless some gentleman stood up and pointed out the error of this proceeding, the court would be led to act in a manner contrary to the law. The Directors seemed to think that they had nothing to do but to ask the proprietors whether they would call for the documents alluded to in the appended paper or not. "If you will have them," observed they, "you will say aye, if not, you will say nay;" and they had already told the proprietors how creditable it would be to their feelings to decide in the negative. The feelings that were appealed to were, he admitted, most creditable, and he could assure the gentlemen that he was not destitute of them himself; but the question was, Could the proprietors,

however willing they might be, dispense with an established law? Certainly they could not. Was it the law, that the documents on which a resolution in form of a report was founded, must be laid before the court? No man could deny that this was the law. Besides, there was another law, which provided that "no bye-law should be altered, repealed, or suspended, without the approbation of two general courts, specially summoned for that purpose." They could not, then, get to their generous purpose, on the present occasion, without virtually suspending the bye-law, cap. 6, sec. 19; and the law which he had just quoted effectually guarded against so hasty a proceeding. He recollected, some few years back, that a deviation from one of their most useful laws was attempted. It was proposed that they should lend a million of money to government, without interest, to the end of the charter. For his own part, being a plain man, who knew that they had not half-a-crown to bless themselves with, after all their civil and military expences were paid, he conceived they were arriving at a predicament which would assuredly ruin the Company. The warm-hearted gentleman who then filled the chair, said, "It is true we have no money, but we can go into the money-market." When he (Mr. Jackson) took an objection, in point of form, the hon. director, in the same spirit, asked, "Cannot those who made the law, suspend it? Cannot the creator, that formed it, revoke or suspend it at pleasure?" He (Mr. Jackson) said, "If that were the case, there was no use in forming laws, since that which was intended for their protection could be dispensed with at will. He could not wage war with numbers, but he could protest against the proceeding." The chairman, however, put the question, and the proposition was carried by acclamation. But, in a cooler moment, it came to be considered whether that which had been done under the influence of a tide of feeling was either legal or wise? Legal opinions were solicited from the crown lawyers, and from three other eminent counsel. The crown lawyers, feeling that the question was intimately connected with the crown, declined giving their opinions. The other three counsel, if he were not much mistaken, gave it as their opinion, that the court had not complied with the By-Law, and that they possessed no power to suspend or alter it in a summary manner; and that therefore, if those proceedings were pursued farther, it would be at the peril of the directors. He argued, in the same manner, that if the court of proprietors were willing to do without the documents connected with this case, still they could not go on, since it would be against

the letter of an imperative law ; and they would risk the loss of that which they aimed at by forcing it forward prematurely. Being convinced that this was the correct legal view of the subject, he should move, as an amendment,

“That all the words be left out after the word *that*, and the following be inserted : ‘It being enjoined by the by-law (cap. 6, sec. 19) that in all cases of granting pensions exceeding £200 per annum, ‘a report should be laid before the proprietors, stating the grounds upon which such grant is recommended, and that the documents upon which such resolution may have been formed shall be open to the inspection of the proprietors, from the day on which public notice has been given of the proposed grant.’ And whereas the resolution of the court of directors proposed for the adoption of this court, recommending a pension of £1500 per annum to Sir George Barlow, assigns as one especial ground for the same ‘the very moderate fortune possessed by Sir Geo. Barlow to support the rank in society in which he has been placed by the honors conferred upon him by his majesty,’ and also contains the following words, viz. ‘the existence of those grounds is evidenced and more fully detailed in the collection of papers hereunto annexed, which constitute the documents upon which the foregoing resolution has been formed.’ And whereas there is not in the said collection of papers any such document as is so alleged to be annexed to the said papers, and as is required by the said law, it is therefore expedient that the consideration of the said resolution be now adjourned.”

Mr. Lowndes willingly seconded the amendment, by which, if carried, the consideration of the resolution would be adjourned, and time would be afforded to know whether they were proceeding legally ; but, in doing so, he begged leave to observe, that he did not approve of their prying minutely into the private affairs of gentlemen whose claims to remuneration happened to brought before them. He thought, on these occasions, it was their duty to put great confidence in the statements made by the court of directors—and therefore, in seconding the amendment, he did not adopt that course, because he was unacquainted with the private reason which led the directors to believe that Sir G. Barlow's fortune was inadequate to the due support of his rank. As the court of directors appeared to be unanimous on this occasion, it was but fair to suppose that Sir George Barlow had made out a clear and decisive case.

The *Deputy Chairman* (G. A. Robinson, Esq.) said he felt all the disadvantage of opposing himself to an honorable and learned proprietor who dealt so much in words, being perfectly conscious of his in-

ability to extend what he had to say to any considerable length. The learned proprietor had dissented to the motion as a *lawyer*—against him, in that capacity, he could not dare to enter the list ; he should therefore make his appeal to the proprietors, and he hoped it would be a successful one, as a *man* ;—(*hear, hear*)—he should contend, that it was not by any means incumbent on the court of directors to produce any document to the court of proprietors which was *not a document on their records*.—The grounds upon which the court of directors had formed their opinion of the extent of Sir Geo. Barlow's fortune, and upon which they came to a deliberate judgment, were two *private* letters, addressed by Sir George Barlow to an hon. member of the court, to the contents of which letters the court gave their entire confidence. It might have happened that their opinions had been formed, not on private letters, but on oral evidence ; in that case, he could wish to know what documents could be appended to those papers.—(*Hear, hear.*)

To the extent of their possessing documentary evidence, meaning that which had been placed on their records, that evidence had been placed before them ; and, he conceived, by so doing, the court of directors had complied with the spirit and the letter of the by-law. This was only the opinion of an humble individual, who might be mistaken in his conception of the by-law. It would be for gentlemen more competent to answer the legal part of the question to discuss the point ; for his own part, he conceived himself to have offered sufficient reason for the proprietors to confide in the opinion of the court of directors, *twenty-two* of whom had pledged themselves that the statement of Sir Geo. Barlow's inadequacy of fortune to support the dignity granted to him by his majesty, was perfectly true ; and he would venture to say that a *twenty-third* was of the same opinion, although his name was not affixed to the report. Under these circumstances, he hoped the court of proprietors would not be induced to adjourn the question before them on the amendment of the learned proprietor, but proceed to the proposition of the hon. chairman. Notwithstanding the hint which had been thrown out, that, if they proceeded, it might involve the personal responsibility of the directors, he, for his own part, must declare that he was ready and willing to take his full share of that responsibility.—(*Hear, hear.*)

Mr. *Elphinstone* said, he believed the fortune of Sir G. Barlow was very much restricted ; indeed he had learned the fact from the best authority. He had not signed the resolution, because he did not approve of the way in which it was worded. He thought, on reading it over, that if they left out all that fol-

lowed after the mention of Sir George Barlow's "long services," every objection would be obviated, and they might proceed to vote the pension on that ground.—(*Hear, hear.*)

Mr. *Pattison* said, the notice of the court having been attracted to the number of signatures appended to the statement, he thought it right to declare that his name was not among them. But he must at the same time state, that he had not, on any occasion, endeavoured to throw the smallest opposition in the way of the grant; and this he begged farther to observe would be his practice, whatever line the court was pleased to adopt. With respect to the legal objection, he had stated in the court of directors that he did not like to lay before the proprietors papers of a delicate and confidential nature. He thought the better mode would have been to declare that a letter had been received from Sir G. Barlow, which was the only document in their possession, and that they cordially agreed to the truth of every word in that letter. This was his proposition, and if it had been agreed to, would perhaps have saved them some trouble. He thought it a pity, if a legal doubt existed, that it should not be at once cleared up; by acting differently there would be a divided court, whereas unanimity might be obtained if a legal opinion were given. If they assisted Sir G. Barlow at all, let it be in a legal manner.—(*Hear, hear!*) By that means the period of his anxiety would be really shortened; since, if they proceeded illegally, they would be obliged to undo all that they had done.

The *Chairman* said, the hon. director who had just sat down must recollect, that the letter he alluded to was not a document in the possession of the court of directors, but a communication from Sir G. Barlow to a member of the court, who, at the period when it was written, filled the chair.

Mr. *Bebb* deemed the letter in question to be a *private letter, written to him, at his particular request*, in order that he might be enabled to state to the court of directors what Sir G. Barlow's fortune was. That letter was read *as part of a speech* in the court of directors. If the proprietors called for it, he conceived that he might be permitted to give it up; but, if they did not, he had no doubt, in his own mind, that the by-law was complied with.

Mr. *Impey* said, if the court of directors were in possession of *bona fide* documents, they were certainly bound to produce them; but this private letter was not such a document as the by-law contemplated. As the matter now stood, it appeared to be an oral communication, drawn from the knowledge which an

hon. director had derived from this private letter. If they called for it, the hon. director might refuse it; or he might not be able to produce it, in consequence of its being destroyed. How, then, were they to get at it? The question was, "Is Sir G. Barlow's fortune so small that he cannot live as he ought to live, considering his high rank and the honours conferred on him?" If the court of proprietors demanded more documents to convince them of this, they must be produced; but if they agree that the directors came to a just and correct decision, he conceived they would be perfectly safe in voting for the motion.

Mr. *Gahagan* said, when he saw the learned gent. (Mr. Jackson) taking up the case in so strong and pointed a manner, as one of the profession he felt great diffidence in dissenting from his opinion. After, however, reading the papers which he held in his hand, he was compelled to dissent from the opinion which he had given on the provisions of the by-law, as applicable to this case. On a former occasion, when that by-law was under discussion, it appeared to him (and he said it without meaning any disparagement to the committee which was the parent of it) to have a most mischievous tendency, and for this reason: might not a case arise, where the directors came to a resolution to grant a pension, on real *bona fide* documents, and yet of so delicate a nature, in every point of view—even in a public point of view, leaving the individual out of the question—that it would be highly improper to submit those documents to general inspection? According to this law, if any hon. proprietor discovered that a document, even of the most peculiarly delicate nature, had come under the cognizance of the directors, he might prevent the court from agreeing to the resolution of the executive body, until, contrary perhaps to the general feeling of the proprietors, that document was produced: therefore, he conceived the law had a mischievous tendency. In the present instance, if it had not been for what the hon. director (Mr. Bebb) had said, the proprietors would not have known that the court of directors had this letter before them; for the paper that had been so much referred to did not state that there were any documents. It merely said, "the court have not thought it necessary to add any specific detail of the fortune of Sir G. Barlow, but they pledge themselves, from evidence before them, that his means are inadequate to support his rank."—*Non constat* that the evidence here spoken of was documentary evidence. It might have been parole evidence, received by the hon. director from Sir George Barlow, to whose word he had given credence with honourable candour and confidence. The

resolution set forth "the long and faithful services, and the inadequate fortune" of Sir G. Barlow, as the grounds for granting this pension. The report said, "the existence of these grounds is detailed in the papers hereunto annexed." And so it was, as far as the documents in the possession of the directors extended. The first ground was clearly shewn; and, with respect to the second, they had no document to produce, since the letter which had been alluded to was not an authentic record. The records of the Company afforded complete evidence of Sir G. Barlow's "long and faithful services;" but, with respect to the other ground, "that his fortune was inadequate to support his rank," no evidence existed. Could they, he would ask, compel a gentleman to give up a private communication? It was impossible the learned gent. could push his argument so far as that. The by-law could not exact so very rigid an interpretation. It ordained, that a resolution, in the form of a report, should be submitted to the court, and that the documents on which such resolution was formed should be left open for the inspection of the proprietors." Now the documents on which the directors had come to this resolution were laid on the table. They might have a variety of grounds for recommending a pension; but did it follow that they must adduce documentary evidence in support of each of these grounds? He would contend that the law was complied with, if documents were produced to substantiate one sufficient ground. Here the "long and faithful services" of the individual formed a sufficient ground. Of that, documentary evidence was given, and this was enough to bring the resolution fully within the letter and spirit of the by-law. It was begging the question, it was throwing away words, to ask for documents respecting the second ground, when they had been informed by the hon. chairman and the hon. director below him (Mr. Bebb) that none such existed on record.

Mr. *Rigby* said, if it were usual to conduct the affairs of a great public body, like the East India Company, on principles of feeling and delicacy, those who were present would, he was convinced, readily agree, that no objection of the nature of that which was then before the court ought to have been made. But feeling and delicacy, however estimable and honourable, were only flowers of the mind, and could not enter into the grave deliberations of those who governed nations and conducted stupendous affairs. They should, on all occasions, look to the great and established principles of law; and when once they deviated from those principles, they would lose that respect which they should be most anxious to

maintain and to extend. This appeared to be a claim on the part of the friends of, he dared to say, a very meritorious and respectable individual, to increase his private fortune, whether great or small. No subject could come before them more likely to awaken their feelings than one which respected the private affairs of an individual. He admired the maxim, "*bis dat qui cito dat*;" but he did not think it would be prudent to overlook their established laws, in their haste to afford relief. If they made a grant, he wished it to be made legally and liberally, in a manner worthy of their greatness, and calculated to render it more acceptable to the individual on whom their bounty was bestowed. The question here was not between the friends and the opponents of this pension: it was to be considered as a matter of precedent, to be quoted hereafter, however vitally important to the interests of the Company, whether aye or no, their by-laws were to be dispensed with, or a suspicion sent abroad that they were dispensed with? He paid every respect to a document signed by so many directors, but they could not be too cautious in their proceedings. When they looked to the body by whom the affairs of the Company were controlled, when they recollected that the eyes of the British public were fixed on the conduct of the Company, they ought to act so as to prevent that conduct from being quoted against them on another day. The question was, had the directors laid a substantial case before that court? Had they dispensed with the production of that evidence to which they had directly alluded? It was urged as a successful argument, that the evidence might have been *purloined*, and therefore that it was unnecessary to state it. But it could not be forgotten that a letter was admitted to have been read. To meet this circumstance, gentlemen talked of a private letter to a public officer, on the public business of the Company; a letter, too, which was the basis and groundwork of the opinion stated by the directors, which must always have great weight with the proprietors. For his own part, he very much doubted whether private letters to public officers, on the public affairs of the Company, did not immediately become the property of the Company, and not that of those private individuals. As it appeared that an opinion had been formed on evidence not before the court, he should give his hearty assent to the motion for adjournment.

Mr. *Howarth* said, an hon. proprietor (Mr. Gahagan) having charged the committee of by-laws with being the parent of a mischievous law, he would presently state to him what mischiefs it was intended to produce. But he would, in

the first place, ask him, why the ardour of his eloquence slept when the by-law was brought forward? Why did he not then object to it? Why did he select this particular occasion to abuse a by-law that had received the unanimous sanction of the court?—(*Hear, hear!*) It was not a very pleasant situation to be a member of the committee of by-laws. It was a court of inquisition, and many of their acts went to restrain some power exercised by the court of directors. He knew not, however, why they should be blamed, when the proprietors uniformly concurred in their opinion. The first mischief intended by this by-law was, to protect the funds of the Company from being improperly dissipated. The second contemplated mischief was, to arm the directors, who were particularly situated with respect to application for favours, with a power that would render them less frequent. Being elected by the proprietors, they could not always refuse, with a good grace, to assist a friend who had uniformly served them. Now, when an application was made to them, they might say "I am ready to promote your object, but the ordeal you must go through is this: I cannot support your claim without stating it to the Proprietors at large, without affording them an opportunity of forming their judgment, whether you deserve to be assisted or not."—(*Hear, hear!*) He should now proceed, with great diffidence, to express his sense of the situation in which the court at present stood. If the Court of Directors had been content with the first assertion, and recommended the pension on the ground of "long and faithful services," he conscientiously believed there was not a member in the court who would not have agreed to it. If they had agreed to confine the resolution to the first ground, no farther documents would have been required but those before the Court. But, as they had gone farther, and stated another reason for the grant, it was necessary that they should produce the documents by which it was supported. He would give his vote for the proposition, when it came regularly before the court, which was not the case at present. The executive body thought proper to make an assertion, "that the moderate fortune of Sir George Barlow was inadequate to support his rank and dignity;" they had stated that evidence of this fact was to be found in the collection of papers annexed to the report; but it did happen that there was not a single document on that subject before the directors themselves.—(*Hear, hear.*) They had, it appeared, come to a resolution of great importance, without being *bond fide* in possession of those documents by which they could be enabled to proceed regularly.

This was evident on the face of the proceedings. So sensible were the directors of their lapse on that occasion, that they had thought proper to tack to the documents a paper, abounding in every species of informality, which called on the Proprietors to decide by their feelings. Every man must feel the invidiousness of demanding from Sir G. Barlow an account of every sixpence he possessed in the world; but the directors themselves had occasioned this. They put themselves in the power of the Proprietors, and then, to remove all difficulty, they solicit them to violate a by-law. The court of directors pledged themselves to the truth of their assertion with respect to Sir G. Barlow's property, and yet they declared that they had no documents to support that assertion. Under all the circumstances of the case, the by-law was not complied with; and if they now proceeded, it would form a precedent hereafter which might and would lead to mischief. He therefore agreed with those who were in favour of an adjournment, on the ground that the opinion of their law-officer ought to be taken, to inform the proprietors whether the resolution could in this shape be legally passed. Sir G. Barlow's friends were present, and if the question were pushed to a division would undoubtedly prevail; but those who counselled such a proceeding would be liable to the stigma, that they had not consulted the law officer of the Company as they ought to have done.

Mr. Gahagan, in explanation, said, he did not mean to impute any mischievous intention to the committee of by-laws. Measures which were adopted with the best intention had been often found practically mischievous; a fact which their parliamentary history abundantly proved.

Mr. Impey wished to suggest something that would put an end to that want of unanimity which he was sorry to see prevail in the court. It must be pleasant to the friends of Sir G. Barlow to observe, that with respect to his merit there was no dissentient voice, that all admitted him to have been a good and meritorious servant. The question in dispute was, whether the by-law had been properly complied with or not. It was, he conceived, important, before the business was decided, that the opinion of their law officers should be taken; but that circumstance need not interfere with the present proceeding. The first stage of the grant might be gone through, and the opinion could be taken before the subject were again brought under the consideration of the court. If, then, the proceeding were deemed legal, so much time would have been saved; if,

however, it were considered irregular, they must commence *de novo*.

Mr. Lowndes said, after the speech of the hon. chairman of the committee, who best knew the intent and meaning of his own law, they could not fly in the face of an entire body in order to favour an individual.

Mr. R. Jackson was of opinion, that the course proposed by his learned friend who had just sat down could not be legally adopted, in order to set at rest, for the present, all the objections that had been urged. Would they be justified in acting illegally once, under the promise that they would not be called on to act illegally a second time? For his own part, he would not do any thing now that would pledge him to a particular line of conduct hereafter. If Sir G. Barlow were a man of fortune, he certainly would not vote for this grant; but if, having filled great offices; if, having enjoyed the most elevated situations, he still continued virtuously poor, then his vote was much at the service of Sir G. Barlow. But as no means were afforded him by which he could judge of that fortune, would he not disparage the dead and disgrace the living if he did not take some notice of the circumstance. As an Englishman, he would concede the motion; but still it appeared to him to be necessary that the friends of Sir G. Barlow should prove to the court that he was poor, and needed this assistance. He was sorry to use the word "poor," but the nature of the application rendered it unavoidable. If a case of that sort were made out, he would provide liberally and bountifully for the man who had filled the situation of Governor-gen. of Bengal, but he would take care that he did it legally. The hon. Deputy Chairman had used expressions which, if he (Mr. Jackson) were not a little accustomed to them, would have created some degree of pain. The hon. deputy had observed how much he dealt in words. Certain it was, however, that he meant to deal in facts; and if in endeavouring to do so he had used more words than the hon. deputy, he hoped that hon. gentleman would impute something to habit, something to zeal; in short, that he would attribute his manner to any thing rather than to a wish to mislead a brother proprietor from the true light in which this question should be viewed. The hon. deputy asked, "suppose the case rested on oral evidence, what then could have been done?" He would answer, that if Sir G. Barlow appeared in the court of directors, and stated that his fortune was so and so, and that such declaration was afterwards notified to the court of proprietors, that proceeding would be sufficient for every purpose. It would be an oral transaction, which, of course, would

be minuted among the proceedings of the court of directors. But, as the matter now stood, it came to this, that no document existed on the subject; although they were told "that the existence of those grounds (one of which was Sir G. Barlow's moderate fortune) is evidenced and more fully detailed in the collection of papers hereunto annexed, which constitute the documents upon which the foregoing resolution has been formed." He did not want to know, from any feeling of idle curiosity, the exact extent of Sir G. Barlow's fortune. As he had said, in another place, he would not give sixpence to look over the rental of every man in the country. But it was right that they should be made acquainted with the ground on which this recommendation proceeded, for on that they were to exercise their best judgment. On a former occasion, an hon. proprietor (Mr. Morris) had, in the name of Sir G. Barlow, disclaimed the grant of a pension on any other ground except the transcendent merits of that individual. The court of directors, and that hon. proprietor, were therefore at variance, because the former assigned as a reason for voting this pension, not merely the merits of Sir George Barlow, but the paucity of his fortune. Yet, while they did this, they, one and all, got up, and declared that there were no documents on which this ground of recommendation was founded. What did Sir G. Barlow say, in the letter addressed by him to the Court of Directors, and which had been laid before the proprietors? "The situation (said he, in terms) in which I now find myself, after devoting my life to the service of the East-India Company, and the disappointment of the expectations of distinguished honours and rewards which were held out to me, are known," (to whom? asked Mr. Jackson) "to the hon. court of directors unless it be with respect to the exact amount of my private fortune, and that also is detailed in a letter," (addressed to whom? again demanded Mr. Jackson) "to a gentleman, who at the time was chairman of the East-India Company." To him, it appeared, a full disclosure was made. He was very much mistaken if there were one man in the court who did not think, painful as the feeling was, that the course now pursued was calculated to engender doubt; those who were unwilling to remove that doubt, though they might be the advocates of Sir G. Barlow's fortune, were the enemies of his character. An impression, he believed, was known to prevail, that Sir G. Barlow was not in such reduced circumstances as they had been given to understand, and that impression would be still further strengthened by the mysterious manner in

which his friends were conducting this business. He meant not to say that such an impression was supported on solid grounds; but he, for one, never would assent to this proposition until he was satisfied of its propriety and justice, in the way which the by-law and the act of parliament intended he should be satisfied. Suppose, however, that they should prematurely agree to this resolution; did it follow that the president of the board of control, who would be called on to attest under his signature the truth and validity of the proposition; did it follow, he asked, that he would be satisfied, because the general court, from motives of delicacy, concurred in it? Would it be enough for him to know that the directors gave their word as to the correctness of the recommendation, and that the proprietors took it; and then, passing by all law, that which the legislature had enacted as well as their own by-law, they proceeded to vote away a large sum of money? Was it safe for Sir G. Barlow that they should go on in this manner? Was it creditable to his public fame that they should hasten the grant in this precipitate way? Did his friends recollect that even after it had passed the board of control, it had to go through another ordeal? Within a certain period after it was agreed to, it must be formally laid before parliament. Had they forgotten that it was necessary to lay before parliament an account of all grants of this nature? Did they well consider the feelings which parliament entertained with respect to the Company? Above all things, had it not entered their minds that there were some members of parliament who could not suffer the matter to pass in silence without flying from their duty? Was it, then, safe to provoke a parliamentary inquiry; for before parliament the question must ultimately come, if those in whose presence they were acting this day, chose to institute it. Let Sir G. Barlow's friends weigh all these circumstances, let them well consider how far it was right or prudent to run such evident risk. Some hon. proprietors objected to the adjournment on account of the delay; but surely it was better to wait a little, and by that delay to insure the validity of their proceedings. Besides, the delay need not be for any considerable period. Suppose Sir G. Barlow, observing the situation in which the court stood, was pleased to-morrow to state to the chairs, "Gentlemen, the aggregate of my fortune is so much, and I leave the rest to yourselves." Such a notification would be sufficient with respect to the question of fortune, leaving the other point, the merits of his administration, to be afterwards gone into; for he (Mr. Jackson) claimed for himself the

right of discussing that subject. If any gentleman imagined that his conduct was influenced by a desire to wound the dignity of Sir G. Barlow, or that it arose from a wish to prevent him from receiving a boon which would enable him to spend the close of his life in honourable affluence, he did him a serious injustice. His object was, to take care that nothing was done irregularly. He thought the executive body ought to proceed cautiously on this occasion, since it was not the first time they had made a mistake similar to that which he now endeavoured to guard against. It was not long since this question was before under consideration, and it was then found necessary, in consequence of non-compliance with the same by-law, cap. 6, sec. 19, to begin *de novo*. The hon. deputy chairman had then the candour to say that, on reflection, he believed he was wrong in his view of the law. This shewed that hon. directors were not more infallible than he was himself, let the present question of law turn out as it might.

The *Deputy Chairman* said, he was perfectly satisfied that, in the former instance to which the learned gentleman had alluded, he was wrong; and he stated his opinion to that effect. Not having on that occasion heard the opinion of their learned counsel on the subject, he had taken a mistaken view of the question. He believed, however, that in this instance the view he had taken of the point was quite correct, and therefore the learned gentleman could not expect him to depart hastily from his opinion.

Mr. *Wilson* said, he was sorry this question had been met by so much special pleading. He placed perfect confidence in what had fallen from the gentlemen behind the bar; and in a case like this, where their liberality was appealed to, he conceived it was more handsome to meet the question like men, than to argue it as lawyers. The resolution to which the directors had come, on the oral communication of Mr. Bebb, brought it, in his opinion, completely within the terms of the by-law, and rendered the call for documents futile. He conceived they might now proceed, perfectly free from incurring the censure of acting illegally. He regretted that Sir G. Barlow's fortune was mentioned at all; his long and faithful services afforded sufficient ground for the recommendation.

An hon. *Proprietor* observed, that the progress of this grant had been before retarded because the by-law had not been complied with. That was not now the case. He would maintain that it was in this instance fully complied with, and he hoped they would at once proceed with a vote, the object of which was to grant relief to one of the Company's best and

most faithful servants. If he could read and understand words rightly, the resolution was strictly within the letter of the law. They were told, that with respect to Sir G. Barlow's fortune there were no documents on record; but the directors had stated that they were satisfied of the incompetence of his income to support the rank and dignity he held in society. As to any private paper, there was no compulsory enactment which rendered it necessary to lay such a document before any one. He was exceedingly sorry to find that any member of the court of directors, to whom they entrusted the management of their affairs with such entire confidence, should feel it necessary to account for his conduct before the proprietors. It was sufficient for the proprietors to know that a majority of the directors approved of any measure, being well convinced that every gentleman amongst them acted according to the dictates of his unbiassed judgment.

Mr. *Grant* said, he had listened with a great deal of attention to the arguments advanced against the present proceedings. Those arguments were intended to shew, that they could not, conformably with the provision of the by-law, legally proceed to vote this grant. He never was less satisfied with the conduct of any argument than he was with that which he had witnessed this day, in the attempt to prove that the court was called on to act irregularly. He hoped that those gentlemen from whose opinions he dissented would not suppose that he meant any thing disrespectful when he stated his dissent. When an objection on a point of form was taken at a previous court, he admitted the validity of the objection, and was content to begin over again. This circumstance shewed that he was anxious to proceed regularly; but with respect to the proceedings of the present day, he was not less convinced that they were within the spirit and meaning of the by-law, than he was of the informality which was pointed out at the former court. It was said, and said truly, that the vote might have passed on the other general ground, "the long and faithful services of the individual." He agreed in the correctness of that proposition, and he also coincided in opinion with those who thought that the private letter, relative to the "moderate fortune" of Sir G. Barlow, was not, in any just sense, a document that ought to be produced, since it was not on record. If gentlemen were prepared to maintain that the court of directors were not authorised to form a resolution except on written documents, they had taken an erroneous view of the subject; yet such appeared to be the *gist* of their argument: they seemed to suppose that the court of directors could not

proceed, unless documents were submitted to them which must afterwards appear on the records of the Company. When such documents existed it was right that they should be forthcoming; but surely gentlemen could not expect a director to go the length of stating that he had derived a certain knowledge of the circumstances of an individual, unless such knowledge was obtained through the medium of a document forming a part of the Company's records, and therefore proper to be laid before them; yet it seemed that they wished to push their argument to that extent. It appeared most clearly to him, that if no mention had been made of Sir George Barlow's fortune they might have proceeded to consider and vote the resolution; because, independent of fortune, a sufficient ground was laid, which was supported by documentary evidence. If it had been brought forward on the ground of "long and faithful services," that would have been quite sufficient; and any other reason which might have been superadded, might, with perfect propriety, be considered as surplusage. Supposing that no documents were produced in support of a particular ground of recommendation (other grounds being decidedly established), he did not think this circumstance rendered the proceeding illegal. If reasons of sufficient weight operated on the minds of the directors for introducing additional matter, and if any given ground of recommendation were properly supported, he conceived that the by-law was complied with. That they might have various reasons for agreeing in a recommendation highly favourable to the individual, but unsupported by documents, was very true; but was it to be said, because they did not bring all these circumstances forward, or, having brought them forward, because they did not adduce documents, that therefore a good and sufficient ground must go for nothing? Another point of argument was, that neither the feelings of the general court, nor of the court of directors, should be hinted at on such an occasion. Certainly those feelings ought not to be made the ground of any proceeding; but if, in addition to a sufficient ground, those feelings could be enlisted in favour of a claimant, he was at a loss to see what objection could be fairly urged against them. It had been suggested by his learned friend (Mr. Impey), that the resolution might be suffered to pass one stage, subject to any opinion which their law officer might give, between the present and the next general court, as to the legality of the proceeding. If it were found illegal, the transaction of the present day would amount to nothing; if legal, one stage would be concluded, and

they could the sooner go on to the other. This proposition he conceived to be perfectly reasonable. The learned gentleman (Mr. Jackson) had conducted the whole argument on this decided assumption, that the thing was altogether illegal; but that was the point at issue, that was the circumstance which had occasioned this diversity of opinion. For his own part, he saw nothing in the letter or spirit of the by-law which commanded them to desist. If one stage could be concluded, it would be so much the better. The opinion of counsel might afterwards be taken and laid before the proprietors when the question was again brought before them.

An *Hon. Proprietor* said, he had come to the conclusion, that they were proceeding correctly on legal grounds. It appeared that the court of directors were compelled, from the day on which public notice of a pension of more than 200*l.* was given, to submit to the inspection of the proprietors such documents as were connected with their resolution. Now, in this case they had done all that lay in their power to comply with that by-law. With respect to the fortune of Sir G. Barlow, they had only *parole* testimony; the testimony of the hon. director, who had received a private and confidential letter; and, unless they placed that gentleman at the door of the court to answer every proprietor who pleased to ask him questions which he had already answered in the court of directors, how were they to procure that information on which so much stress had been laid? Here he wished to observe, that he claimed from the learned gentlemen (Mr. Jackson) that tribute to independence of character, and to disinterestedness in giving his vote, which he cheerfully conceded to him in return. The learned gentleman seemed to assume that this motion was only supported by the personal friends of Sir G. Barlow, to whom he especially appealed. He begged leave to tell the learned advocate, that he knew not Sir G. Barlow; but he knew a good deal of the affairs and politics of India; and he was ready to come to this vote (indeed, if the sum were much greater, he would agree to it), because, the services of Sir G. Barlow appeared to him to have been highly honourable to himself and beneficial to the Company.—(*Hear, hear!*) He was perfectly ready to meet the learned gentleman (certainly with unequal powers, but with a perfect conviction of the justice of his cause) on the broad ground of the public claims which Sir G. Barlow had on the Company. He hoped they would not grant till they came to a vote; and he wished the learned gentleman could be induced to withdraw his amendment, which was, in fact, an evasion of the question.

Asiatic Journ.—No. 50.

Mr. *Hume* said, the hon. gentlemen who filled the chairs had stated, in their speeches, that there were no documents before the court of directors relative to the fortune of Sir G. Barlow. When they said this, they must have entirely forgotten themselves; for he held in his hand a letter, dated the 21st of May, 1818, and addressed by Sir G. Barlow to the court of directors. Sir G. Barlow there stated, that "the exact amount of his fortune had been detailed to the late chairman, at his request." He, therefore, contended, that, in common justice and fairness, that detailed statement should be laid before the court. This was the more necessary, because the directors must have alluded to some document of this kind, when they said, "the existence of these grounds" (one of these being smallness of fortune) "is evidenced and more fully detailed in the collection of papers hereunto annexed." If they did not produce this document, it would be a complete deviation from the by-law.

The *Chairman*—I did not assert that there were no documents. My position was, that there were no documents relative to Sir G. Barlow's fortune on the records of the Company.

The *Deputy Chairman*.—I stated expressly that there was a private letter to a former chairman, which I conceived was not that kind of document the directors were bound to produce, as it had not found its way among their records.

Mr. *Hume* observed, that one ground of the recommendation rested on the vague assertion of inadequacy of fortune. Different men took very different views of that subject. Some considered £10,000 a year a moderate fortune, while others looked upon £5000 to be an ample provision. With respect to the merits and services of Sir G. Barlow, documents were adduced in order as far as possible, to do away any doubts on these points, and was it then too much to ask, since they had combined his moderate fortune with his length of service, that evidence should be given of that also.

Mr. *Grant* said, the hon. proprietor proceeded, as he often did, on a perfect misconception of the matter. The directors never said there were no documents. How could they, when the letter of Sir G. Barlow to the court had been laid before the proprietors? The private letter, to a former chairman, which was not on record, was the matter in question. The public letter stated plainly enough that Sir G. Barlow's fortune was small. But, not satisfied with that declaration, the hon. proprietor would fain have the private letter, addressed to Mr. Bebb, which the hon. director, in his great solicitude to have the business fully explained, procured from Sir G. Barlow. Was it the

wish of the court of proprietors that it should be laid before them?—(*Hear, hear!*) It was in the outset offered, but the court did not call for it. (*Hear, hear!*) The hon. gentlemen who opposed the resolution adhered tenaciously to their opinions, which they stated, as if they spoke the sense of the whole of the proprietors. But the court would not be turned round on every occasion, when they strove by introducing opinions, unsupported by argument or evidence, to divert it from a legal and regular proceeding.

Mr. Hume—I say the law calls for this document, and without it the court cannot legally proceed.

The Deputy Chairman—On the other hand, the opinion of myself, and of very many other gentlemen is, that the law has been complied with. I will not, therefore, defer to the opinion of the hon. proprietor, but to the opinion of the court.

Mr. Bebb said, he had, in the few words addressed by him to the proprietors, in the early part of the debate, expressed his willingness to lay the letter of Sir G. Barlow before the court, it could not therefore be supposed that any desire of concealment existed. Indeed, through the whole of the business, the court of directors had followed that course which was strictly proper and official. If the proprietors wished the letter to be laid before them, or to be read as part of his speech, he was ready to do either; but he would not be dictated to by any individual, however respectable his character, or however great his talent might be.—(*Hear, hear!*)

Mr. Howorth rose to a point of form only. Here was a paper, unsigned and unauthenticated, as according to the by-law it ought to have been, and yet the court of directors asked them to act on it. If they over-did the by-law, on their own heads be it; but certainly it was not complied with.

The Chairman then put the question, "That the original words stand part of the question," which was carried in, the affirmative almost unanimously.

The Chairman then put the main question, "to agree with the resolution of the court of directors for granting a pension of £1500 per annum to Sir G. H. Barlow, from the 21st of May 1818."

Mr. Hume said, he had from the first reserved to himself the right of discussing the question, whether the services of Sir G. Barlow did or did not deserve this reward? That question was now before the court; and notwithstanding what had been stated by some hon. gentlemen, who said that there was not an individual amongst the proprietors who differed with respect to the merits of Sir G. Barlow, he could not help declaring that he was far from viewing many of his proceedings

in a very favourable light. He was now, after a lapse of five or six years, brought suddenly before the public; and he felt, looking to all the circumstances, that he could not conscientiously concur in the proceeding. They were called on, contrary to the rules and regulations of the service, to grant a pension to a civil servant; he would therefore ask what those services were? The ordinary service of an individual, connected with the civil department, could not entitle him to a pension. The question then was, did Sir G. Barlow, by any extraordinary service, deserve such a mark of approbation? For the purpose of ascertaining this, it would be but justice to the Company to bring the whole tenor of his conduct, from his first entering the service at Bengal to the last moment when he was recalled, including his conduct while he was at the head of affairs at Madras, in regular review before them, that they might properly estimate his services. The duty of going into such a detail, painful as it was, was in a great measure saved him, by the reports which had been drawn up at different times relative to the proceedings of Sir G. Barlow, and which were signed by nine or ten of the oldest and most respectable directors. They had there fully expressed their opinion of Sir G. Barlow, and they were now called on in this public manner to explain why they had altered that opinion. No Englishman was ever placed at the head of a government abroad, whose conduct excited more animadversion in this country than that of Sir G. Barlow, and he concurred entirely in the opinion that had been entertained, both within and without the India house, that, whatever Sir G. Barlow's intentions might have been (and he was willing to give him credit for good intentions) the results of his administration were far from prosperous. He regretted extremely that he was not present, when, at a former court, three hon. proprietors* spoke in favour of this grant, and in praise of Sir G. Barlow. They had spoken of all his proceedings, in the highest strain of eulogy; and yet the conduct of that gentleman had been over and over again condemned by the court of directors. There was scarcely a single act of his government that had not been censured by the company. He perceived, very clearly, what would be the fate of this motion: but, however adverse the feelings of the gentlemen might be towards the course he was pursuing, he had a duty to perform, and that duty he would strictly fulfil. Conformably with his sentiments on the subject, it was proper that he should examine the character of the

* Messrs. Morris, J. Chalmers, and Gahagan.

services which Sir George Barlow had rendered the Company in India, in order that the proprietors might decide how far they entitled him to reward and approbation. If he passed over the proceedings of Sir George Barlow, military and civil, without observation, he would be virtually casting a stigma on the Company's service. He would not state any thing from himself; he would not appeal to those who were injured by Sir George Barlow's conduct; but he would refer to documents, signed by eight or ten of the oldest and most respectable directors. He would quote what they had placed on record; what they had promulgated, not in the warmth of debate, or the heat of argument, but what had fallen from their pens, after due consideration, and was, in a cool and deliberate manner, submitted to the public. If, after the statement subscribed by them, gentlemen could assert, that the whole of Sir G. Barlow's conduct was praise-worthy, and that all parties were favourable to his claim, they would pay but little respect to the opinion of those who had maturely considered, and gravely decided on his merits. He was willing to concede to Sir G. Barlow all the credit which his conduct in Bengal might be supposed to entitle him to: but was it too much to say, when an individual, who had at one time conducted himself well, and, at a subsequent period, badly, presented himself before them for reward—was it, he wished to know, too much to require, under such circumstances, that the good and the bad should be reviewed together, and contrasted with each other? The common outcry, the common charge against Sir George Barlow, with respect to his proceedings in the military department—the history of the meeting and rebellion which occurred amongst the troops—he would bury in oblivion. There were, however, other parts of his conduct to which he was constrained to refer. It was a disagreeable task; but, it should be recollected, if any thing unpleasant were elicited, that he was not to blame. The blame was solely attributable to those zealous friends who brought forward Sir G. Barlow as an immaculate personage, as a being without fault. Had they not heard from a learned gentleman (Mr. Gahagan) that India owed all its blessings and all its prosperity to the code and regulations which Sir G. Barlow had introduced? When this was boldly stated, he felt himself bound to declare, that the code and regulations, the adoption of which, it seemed, ought to insure Sir G. Barlow a statue of gold, were in part absolutely repealed, and almost entirely subverted. Those, therefore, who advocated his cause, ought to have adverted to any thing rather than that. The learned gentleman who had eulogized the code,

had brought Sir G. Barlow to his departure from Bengal, but he had scarcely said a word about his conduct at Madras. He (Mr. Hume) believed, that, while he was in Bengal, Sir G. Barlow acted according to the best of his judgment; but the moment he landed at Madras, a most extraordinary change took place in his conduct. It seemed as if a total alteration had been suddenly effected in his habits and disposition. There was scarcely one of the residents, civil or military, with whom he was not at variance. From various causes they became irritated: several of them suffered severe injury; and the establishment was, of course, considerably prejudiced. It was in this point of view that he looked at the conduct of Sir G. Barlow, and these grounds of censure ought not to be lost sight of by the proprietors. He wished that those who applauded him for the fortitude, resolution, and manly decision he displayed at Madras, had stated all the facts of the case. It would then perhaps have appeared, that their praise were somewhat overstrained. The conduct of Sir G. Barlow, on that occasion, was like that of a man, who, having set fire to his house, afterwards exerted himself to extinguish the flames. But, if the conduct of such a man were cited, would any reasonable individual lavish their praises on the latter act? Certainly not. They would be more inclined to consider and to censure the former. His conduct, in the case of Mr. Sherson, which had occupied that court for two or three days, was most objectionable; but it was only a specimen of similar proceedings. He held in his hand a list of charges against Sir G. Barlow, for partial and oppressive conduct, signed by some gentlemen who were now behind the bar, and he never recollected to have seen a list laid before the public which contained so many and such serious charges. They referred, in the first place, to his interference with the military and civil department, in a manner that created jealousy and disunion. On these points he meant not to expatiate, because Sir G. Barlow was invested with a legal power over those departments. Those who signed the paper, however, seemed to have had proof positive that he misconducted himself; and he (Mr. Hume) had no doubt, when certain hon. directors censured his conduct, that they were satisfied what they did was correct. They spoke of him, as "forgetting the high situation of governor-general, in which he was placed, and acting contrary to the interests of the Company." He believed that ignorance of human nature led Sir G. Barlow to act as he had done in many cases: a position which his conduct to Mr. Sherson, Mr. Smith, and Mr. Maitland, illustrated in a very striking

manuer. The learned proprietor (Mr. Gahagan) might say, that there was a difference of opinion in the court of directors, with respect to the conduct of Sir G. Barlow. He would meet him on that point. He would call on him to weigh the opinions on each side, and he would soon see on which they preponderated. There was, however, in human nature, so strong a desire to throw a veil over past misfortunes, that few would be found willing to enter into such a detailed examination. He believed, at the time some of the directors censured the conduct of Sir G. Barlow, they acted justly and conscientiously; they, in discharge of their duty, did that which distressed them considerably, and which, at the present period, they did not, perhaps, wish to have repeated. But, when the resolution was introduced with so much enology on the individual, when he was described as the most perfect of beings, it was more than human nature could bear, and it became necessary to refer to past proceedings. He called on those three hon. gentlemen, to whom he had before alluded, to select an individual of the purest fame, who had never been tainted by the breath of calumny, and to declare whether they could speak more highly of him than they had done of Sir G. Barlow? They should have entered into a comparative view of his conduct, and said, "here he acted well, and here he acted ill," instead of bestowing indiscriminate praise and panegyric on the whole of his conduct. He was willing to attribute the evil acts done by Sir G. Barlow (and no man could say that many of them were not evil, whatever his intention might be) to want of judgment, and not to any improper design. But, let them have arisen from whatsoever source they might, they must be taken into the account, when his merits were brought under consideration. He would pass over the whole detail of irritated feelings which his conduct occasioned in the civil department, as well as his proceedings with respect to the military department, and confine himself alone to the third and last subject of charge, his interference with the courts of justice. They were the courts of our sovereign king, to which every person might apply for redress, and yet he thought proper to interfere with them. (Mr. Gahagan here inquired whether the hon. proprietor had any proof? Mr. Hume answered, that he had proof. He was then proceeding to read a protest entered into by certain directors, on the 6th of August, 1811, against permitting Sir G. Barlow to remain in India, in which the "multiplied errors of his administration" were spoken of—when he was interrupted by

An Hon. Proprietor, who observed, that

it would perhaps be necessary to read a great many documents in answer to those referred to by Mr. Hume, and thus the court would be detained all night.

Mr. Hume said, it would be unjust to Sir G. Barlow, if the hon. proprietor, or any other gentleman, wished to adduce any thing in favour of him, to suffer the lateness of the hour to interfere with their intention. But, on the other hand, if the hon. proprietor had become weary of the discussion, it was in his power to withdraw. There seemed to be a strange disposition in the minds of some gentlemen to get rid of this question as speedily as possible. But if hon. proprietors proceeded in this manner, and interrupted him, he would be under the necessity of reading the whole of the documents, instead of contenting himself with extracts. There was no alternative. He begged to tell the hon. proprietor, that they were not met to decide by clamour, but to consider whether the arguments advanced by the friends of Sir G. Barlow were sufficient to justify the grant. He now, once for all, declared that he cherished no ill feeling towards Sir G. Barlow, who had never injured him or any of his friends; he acted solely from a sense of the duty he owed to their Indian establishments. When the hand of injustice was raised in India, that court was the tribunal before which the circumstances ought to be exposed; and, on the present occasion, he felt that he was exerting his voice in favour of those who had been oppressed by the measures of Sir G. Barlow. The conduct of those who administered the government of India ought always to be strictly scrutinized; especially as the distance of the situation was the cause of placing more power in the hands of those who were sent out there, than they were accustomed to see exercised in England. At the period to which he referred, namely, the 6th of August, 1811, a division on a proposition for the recall of Sir G. Barlow took place in the court of directors, and he was allowed to remain in India by a majority of two. In the protest, which was drawn up in consequence, the dissentients spoke of Sir G. Barlow's "arbitrary conduct in the civil and military departments, which had led to a state of irritation." This might appear to be a general assertion, but it was undoubtedly founded on particular facts: facts which he defied any man to controvert. He had examined the documents in which those facts were contained, and he could decidedly state, that not a single conclusion which had been drawn from them was in any degree overstretched. In a letter addressed to the court of directors, on the 5th of Feb. 1810, it was acknowledged that, "placed in the circumstances in which Sir George Barlow

then stood, he was totally unfit for his situation."

Mr. *Pattison* wished to say a few words, with reference to the line of conduct the hon. proprietor was pursuing, which, he conceived, was likely to subject the court to great inconvenience.—The hon. proprietor was proceeding to enter into a detailed statement of the conduct of Sir G. Barlow; but, he thought, when they were met to give comfort and satisfaction to the last days of a public man, however he might, in his (Mr. *Pattison's*) opinion, and in the opinion of others, have erred in judgment, it was extremely hard upon those, who, at a former period, felt strongly with respect to his conduct, to have expressions recalled to their minds, which they were anxious and desirous, if possible, to forget.—(*Hear, hear!*)—He really thought the hon. proprietor was travelling in a very invidious course, a course which must lead to an inextricable labyrinth of statements and assertions on each side. Even if the conduct of Sir G. Barlow, when he was at the head of the Madras government, were brought forward, much diversity of opinion would be found to exist on that point. It was, however, acknowledged on all hands, that he was a most estimable servant, when he administered the government of the Company in Bengal.—Here there was an unimpeachable ground for agreeing to the grant. There were certainly strong doubts whether his conduct in Madras was beneficial to the Company; but this praise was conceded to him by all, that, when the direful mischief broke out, which threatened the destruction of their Indian possessions, Sir George Barlow behaved like a hero.—(*Hear, hear!*)—He would not stop to inquire, whether the proceedings of Sir George Barlow occasioned the disturbance at Madras. He would look to his early life, passed in the service of the Company in Bengal, and he would also recollect, that his days, which had been devoted to their interest, were now drawing to a close. Were not these circumstances sufficient to authorize this vote?—(*Here the hon. director appeared to be much affected.*)—The court would excuse the tremulousness of his voice, which was caused by the deep interest he felt in the question.—(*Hear, hear!*)—When it was stated, in one part of the report, that the fortune of Sir G. Barlow was small, and, in another, that he had served the Company long and faithfully, he thought the hon. proprietor had taken a very unfriendly course, when he adverted to circumstances which had better be buried in oblivion.—(*Hear, hear.*)—He begged for himself (although he would not disavow a single word he had ever written or uttered with respect to Sir G. Barlow) that

the hon. proprietor would spare him the pain of hearing those sentiments repeated which, at a former period, he had deemed it necessary to place on record.—(*Hear, hear!*)

Mr. *Hume* said, he felt that he was placed in a very disagreeable situation; but that should not deter him from performing his duty. When gentlemen challenged his statements, and called for facts, he could adopt no other course but the one he had taken. If he had been treated otherwise, he would have confined himself to a very few points, which would have been sufficient to shew that his opposition to the vote was well founded, and that the unqualified praise which had been lavished on Sir G. Barlow was not deserved. He was driven to pursue the line of conduct which he had adopted, by the friends of Sir G. Barlow, who disputed the truth of what he had advanced. Having entered his protest against the general sweeping approbation which some gentlemen bestowed on Sir G. Barlow's conduct, he was quite disposed to dispense with an investigation of his proceedings, while he filled the situation of governor-general of India. He would now call the attention of the court to Sir G. Barlow's interference with the courts of justice. The public letter of the court of directors, in 1807, called on Sir G. Barlow, in the most especial manner, to watch over and guard the public purse in India from fraudulent claims that were daily made on it, by pretended creditors of the nabob of the Carnatic. The directors exhorted him to exert all the means in his power to detect forgeries; which, they stated, had risen to an enormously large amount. Here it was that he most severely censured Sir G. Barlow, who, instead of acting as the court of directors had commanded him, thought fit, in an unlucky hour, to protect the very persons who were suspected. An individual, who was charged, on the oath of two persons, with forgery, and who ought to have taken his trial before a jury, was, by the power of Sir G. Barlow, dismissed out of custody. This, he thought, was an act of over-authority, and an undue interference with the law of the land. He next had to state, that when a jury had ultimately found this individual guilty of forging a bond on the Company, Sir G. Barlow threw the shield of power over him, and screened him from merited punishment, by procuring a pardon. The jury who had found this man guilty were marked out for vengeance. They were punished as far as Sir G. Barlow's power extended, for daring to do their duty. One individual, older in the service than Sir G. Barlow, was removed, because he endeavoured to save the funds of the Company from peculation. He complained particu-

larly of the proceeding of Sir G. Barlow in removing Mr. Maitland from his situation, and thus punishing an honest jurymen.—The very week the pardon of the king arrived in India, a pardon which was to save from punishment one who had been found guilty of forgery, the individual put an end to his existence. He had stated that he could cover the whole of his forgeries; but the very week in which his pardon arrived, conscious that his misdeeds must be discovered, he destroyed himself, knowing that he was unable to meet the proof which must rise in judgment against him. All this might have been done without Sir G. Barlow's meaning it, but it was impossible for him not to know the strong feeling which his conduct excited; and a knowledge of that feeling should have induced him to pursue a different line of conduct. He would not make any remarks on the conduct of the principal law officer, on the occasion to which he had alluded, as he was now dead; but, supposing Sir G. Barlow to have been misled by the misrepresentations of persons, under the influence of whose opinions he acted, still he could not hold him free from blame; he must still consider him as having been guilty of actions which left some degree of stain on his character. In no one instance that he knew of, looking to his conduct as it was connected with the civil and military departments, and with the courts of justice, had he done any thing that fairly entitled him to the vote now recommended, which went to confer on him a pension of £1,500 a year. Under all the circumstances, such a grant was entirely too much. He was recalled by the court of directors from an absolute feeling which was generally entertained by individuals, both before and behind the bar, a feeling which the governor-general (Lord Minto) also cherished, that it was not safe or proper to leave him in India. They had a right, in discussing this question, not only to consider the intentions of Sir George Barlow in his different acts, but also the general effect of his conduct on the welfare of the Company. In his opinion, a pension of £1,500 a year was a great deal too much, for he was by no means satisfied that Sir G. Barlow was that poor man he was represented to be. When he was at Bognor, eighteen months ago, he was informed that Sir G. Barlow had purchased an estate there, the mere keeping up of which would require £3,000 per annum. There was, at that time, no talk of a pension, and if, when he was burdened with a large family, he could make so extensive a purchase, he was led very much to doubt Sir G. Barlow's poverty. They were reminded, in the resolution, of the honours that had been conferred on Sir G. Barlow by

his Majesty, and this was urged as a reason for voting the pension. He, however, protested against the doctrine, that because his Majesty was pleased to confer honours on individuals who had been in their service, they were therefore, to burden the funds of the Company with enormous pensions, to enable them to support those honours with becoming dignity. As he could not, on the whole, discover any good grounds for making the grant proposed, he should undoubtedly vote against the resolution.

Mr. *Rigby* said, if warmth of feeling had carried the friends of Sir G. Barlow too far in expressing their admiration of his conduct, it could not be denied, that those who opposed the motion were no less ardent and vehement in their censure. If Sir G. Barlow had performed long and faithful public services, he conceived they might fairly come to the resolution proposed by the court of directors, because it was admitted, that whatever error he might have been guilty of, his head, and not his heart, was to blame.—(*Hear, hear!*) He thought it would be as well to pass over in silence those acts of Sir G. Barlow which appeared censurable, since, as had been candidly stated by an hon. director (Mr. Pattison), whose observations had made a considerable impression on the court, the recital of those circumstances could only be productive of pain.

Mr. *Edmonston* said, he had an opportunity of personally knowing the sentiments which Lord Minto entertained with respect to Sir G. Barlow. He well knew that his lordship had the highest opinion of his talents and integrity.—(*Hear, hear!*) No man could speak in more exalted terms of another than Lord Minto did of Sir G. Barlow in his (Mr. Edmonston's) hearing. He expected that Sir G. Barlow would have received the highest honours from his sovereign, and he was the bearer of a letter to Sir George on that very subject.—(*Hear, hear!*)

Mr. *Gahagan* expressed his surprise, that the hon. proprietor (Mr. Hume), who was a member of another assembly, distinguished for the regularity of its proceedings, should have acted so perfectly out of order, as to allude, on the present occasion, to what took place in the course of a former debate. If the hon. proprietor had been in court when, some time since, he raised his feeble voice in support of Sir G. Barlow, he would have found that he had stated the opinions of others with respect to that particular code to which the hon. proprietor had alluded, and which he well knew was about to be revised. He had stated the opinions of Marquis Cornwallis and Marquis Wellesley, who, in speaking of Sir G. Barlow referred to that code,

and expressed their admiration of its salutary tendency. He had not panegyricised it, but he had quoted the sentiments of those who had done so, after having the best opportunity of considering its effects; and, though time might render it necessary to amend it, still that circumstance did not detract from the merit of him by whom it was originally projected. The hon. proprietor had taken a curious course of argument to-day, and notwithstanding the feeling and eloquent appeal of the hon. director, who had entreated him to avoid the statement of sentiments which, though he did not disavow, it was painful for him to hear, he proceeded to state every unfavourable circumstance he could think of, without once turning to the bright side of the picture. The course of argument pursued by the hon. proprietor would bring them to this:—"Never select for consideration that period of a man's life, during which his services have been meritorious and worthy of gratitude. No, look only to such and such a time, when, from particular circumstances, worthy and well-intentioned people were induced to censure him." Could any thing be more unjust than such a proposition? If such an argument were successful, what would become of the proposition for raising a statue to the memory of Warren Hastings? Might it not be said, "We will not vote a statue to his memory, great as were his talents, and incorruptible as was his integrity, because there are periods of his life (shame to the history of this country) when directors, nobles, senators, were leagued against him; when even that great man, Mr. Burke himself, denominated him "a spider of hell!" Surely they would not at this time of day adopt such a principle: they would rather erect his statue, and declare that, "notwithstanding all our former opinions, we have just reason to be satisfied with the conduct of Warren Hastings; and, taking him for all in all, we must signalize his merits with a statue!" One of the fatalities connected with the administration of the Indian government, was, that every one who governed well, with perhaps the exception of Lord Cornwallis, was subjected to some species of persecution. This was the case with Marquis Wellesley, one of the greatest men that ever went out to India. Even he did not escape. Was there not a chattering man of the name of Paul, who called on the house of commons to impeach him? But who now thought of Paul or his ridiculous charges? Still, however, the proceeding must have been painful to the noble Marquis's feelings, when, day after day, the table of the house of commons was covered with papers relative to his administration. Again, let them con-

sider the case of Lord Melville, to whom India was more indebted than to any other man he knew. Was not he impeached, and formally brought to trial? He doubted not that the honourable directors who censured the conduct of Sir G. Barlow, conceived that they were doing their duty at the time. But the hon. proprietor who mentioned the circumstance, should have said, in fairness, that though seven or eight gentlemen disapproved of his conduct, the majority of the court of directors were opposed to them in opinion, and conceived that Sir G. Barlow had acted well.—(*Hear, hear!*)—He would admit, if protection had been held out to malefactors, or if Mr. Maitland's dismissal originated in an improper feeling, such conduct would have been exceedingly reprehensible. But nothing of the kind was proved. With respect to the case of Mr. Sherson, it appeared to him that that individual had behaved very improperly. He had never entertained but one opinion with reference to Mr. Sherson's case, and he would now openly state, that in his mind, Mr. Sherson's conduct fully deserved the treatment which he had experienced. The hon. proprietor had spoken of Sir G. Barlow's interference with the courts of justice. But what proof had he given of the truth of so serious an assertion? On what ground did he rest his statement? Had any representation been made in which Sir G. Barlow was charged with this illegal interference? Did the courts themselves complain? Did the chief justice at Madras, or any of the other judges, raise their voice against Sir G. Barlow? No complaint of the kind had ever been made; and yet, if they credited the statement of the hon. proprietor, it would seem that a conspiracy existed to retard the progress of justice; nay more, that Sir G. Barlow so clogged its wheels, as to prevent the chariot of justice from moving in its ordinary course! With respect to his removal of certain individuals, it was not done with any base or sinister view. The military rebellion, that odious rebellion which he had put down, excited so much clamour and irritation in the minds of some of the Company's civil servants, that Sir G. Barlow felt it necessary to send them away, in order to shew how decidedly he disapproved of their conduct. Mr. Oliver was removed after the conviction of Rao Redy Mow, the individual to whom the hon. proprietor had alluded. That removal, however, did not take place, because Mr. Oliver was one of those who brought the culprit in guilty, but because his conduct in other respects was displeasing to Sir G. Barlow. He mentioned Mr. Oliver (who was a most moral and honourable man, and a particular friend of his), because he was the first individual that pre-

sented himself to his mind. Sir G. Barlow, perceiving that clamour and irritation were predominant, sent away certain individuals, whose conduct he conceived was calculated to keep that clamour and that irritation alive. But no man who fairly investigated the subject, could come to the conclusion that he removed them from the presidency because they had found Rao Redy Mow guilty. The hon. proprietor next asserted, that Sir G. Barlow procured a pardon for this convicted felon. This too was erroneous: the court procured the pardon. Sir G. Barlow had nothing to do with it. The chief justice of the court, thinking that the verdict was against evidence, recommended the individual to mercy. It was entirely an act of the court itself, and Sir G. Barlow was as completely clear of it as the hon. proprietor who made the accusation. With respect to Sir G. Barlow's conduct when at the head of the Madras government, with respect to his alleged but unproved interference with the courts of justice, with respect to the course he was represented to have pursued towards the civil and military departments; did these points, he would ask, detract from the overwhelming mass of acknowledged service, on which they were called to agree to the proposition then before the court? It was not on account of his conduct while at Madras, but for his distinguished general services, that they were asked to reward him. He would repeat what had already been said by an hon. proprietor, that Lord Minto entertained a very high

opinion of Sir G. Barlow; and if he had altered that opinion, it only shewed that he was inconsistent with himself, and held different opinions at different periods. He had spoken warmly on this occasion, because he felt most strongly the merits of Sir G. Barlow, than whom he believed the East India Company never had a more zealous or honourable servant.—(Hear, hear!)

Mr. R. Jackson said, that he would, at a future court, propound a question to the gentlemen behind the bar, which he would now state, in order that they might be prepared to answer it. He would ask of them whether they would indulge himself, or any other of the proprietors, with some idea, some account, that would enable him to guess at the aggregate amount of Sir G. Barlow's fortune? If this were refused to him, he would shape his conduct accordingly when the grant came again under consideration.

The Chairman—I can only answer the question by stating, that if the court of proprietors call for the document which has been so much referred to, it shall be forthcoming.—(Hear, hear!)

Mr. Lomendrs suggested that an account of the fortune of Sir G. Barlow might be submitted to two or three gentlemen in whom they could confide, but objected to such a statement being laid before the whole court.

The motion was then put, and carried almost unanimously. The court immediately adjourned to the 12th of January.

MADRAS COLLEGE.

RESULT OF THE FIRST GENERAL EXAMINATION FOR THE YEAR 1819.

To the Rt. Hon. Hugh Elliot, Governor in Council, &c. &c. &c.

Rt.hon. Sir:—We have the honor to submit the result of the first examination for the year 1819, of the junior civil servants attached to the College of Fort St. George.

The following is the order in which the students have been classed by us, with reference to their relative proficiency in the languages which they have respectively studied.

TELOOGOO.

- 1st Class. Mr. Morris,
Hooper,
Robertson.
2d Class. Mr. Brown,
Fetherstone,
Clarke,
Fullerton,
Gosling,
Bruce.

- 3d Class. Mr. McLeane,
Huddleston,
Horsely,
Grant,
Davison,
Blair.

TAMIL.

- 1st Class. Mr. Robertson,
Huddleston,
Elliott.
2d Class. Mr. Gordon,
Hooper,
Lewin.

- 3d Class. Mr. Bruce,
Clementson,
Bushby.

HINDOOSTANEE.

- 1st Class. Mr. Morris,
2d Class. Mr. Browne,
Thompson.
3d Class. Mr. Blair,
Bushby.

PERSIAN.

1st Class. Mr. Fullerton,
Gordon.2d Class. Mr. Horsely,
Davison.

MAHRATTA.

Mr. Elliot,
Thompson.

CARNATAKA.

Mr. Fetherstone.

MALAYALIM.

Mr. Clarke.

SANSKRIT.

Mr. McLeane.

3. The following classification has been framed in conformity with the orders conveyed to us by government, under date 12th Aug. last, and is intended to exhibit the gradations of general merit.

	When attached to the College.
1st Class. Mr. Morris ..	26 Aug. 1818
2d Class. Mr. Robertson	9 July 1817
Elliot ...	13 Aug. do.
Hooper	9 July do.
Hudleston..	10 do. do.
Thompson	13 May 1818
Fullerton ..	25 Feb. do.
3d Class. Mr. Fetherstone	5 Aug. 1818
Clarke	23 Sept. do.
Gordon....	25 Feb. do.
Gosling....	21 April 1819
Lewin	26 Jan. do.
Browne ...	13 Aug. 1817
McLeane ..	24 June 1818
Bruce	15 April do.
Horsely	do. do.
Grant	22 July 1817
Blair.....	9 Sept. 1818
Clementson	22 July 1817
Davison	do. do.
Bushby....	9 do. do.

4. In preparing this latter classification, we have experienced difficulties which are likely to recur at every subsequent examination, and which are of such a nature as to render us doubtful of the justness of the arrangement which we have thus submitted. Abilities of the highest order, united with industry, will ever claim the first rank in such a classification. But it is very difficult to decide, whether the preference should be given to splendid results, produced perhaps with but little exertion, by talents of this description, or to the just pretensions of persevering industry, exerted by more humble talents, under great and various disadvantages. The adjustment of claims of this nature, with reference also to other circumstances of conduct, renders it no easy task to assign to each individual his appropriate rank in a scale of general merit, regulated by no defined rules, and the result is arbitrary and un-

satisfactory. Examiners in different languages, with the most scrupulous impartiality of intention, may even reasonably doubt their own means of forming a just comparison between the merits of the students they have examined, and those belonging to a separate class. But when the comparison is extended beyond relative proficiency in study, to circumstances of which, from the nature of the institution, we can possess only a partial knowledge, we feel that we may err in our judgment, to the prejudice of individuals, without producing any public benefit. We are therefore desirous to omit this classification in future.

5. We had occasion, at the last general examination, to make very favourable mention of Mr. Morris, the rapidity of whose progress we stated to be unrivalled on the records of the institution. This gentleman is now distinguished, no less by the extent than the rapidity of his acquirements, for he may be said to possess a complete knowledge both of Teloo-goo and Hindoostanee. His translations into these languages are particularly remarkable for the great propriety with which the terms used have been selected, and the uncommon success with which the native idiom has been adopted. In the short period of about ten months, since he joined the college, Mr. Morris has most satisfactorily established his claim to its highest honours; and accordingly we recommend, that as he has attained an eminent proficiency in two languages, is in the receipt of the highest college allowances, and passed a satisfactory examination in the regulations, the honorary reward of 1000 pagodas be granted to him, on his promotion from the college. We perform a satisfactory part of our duty in bearing testimony to the exemplary conduct of Mr. Morris, while under our superintendence, and in stating our opinion that he is highly qualified for employment in public service.

6. Mr. Robertson, Mr. Elliot, and Mr. Hooper are justly entitled to our commendation. The studies of these gentlemen were interrupted by severe indisposition, which obliged Mr. Robertson and Mr. Hooper to proceed to sea for the recovery of their health, whence they have only recently rejoined the college. Notwithstanding this disadvantage, Mr. Robertson ranks first in Tamil, of which language he has attained a very superior knowledge; and he stands third in the Teloo-goo class. In Tamil, Mr. Elliott is next to Mr. Robertson, and his acquirements in Mahratta are highly respectable; and although Mr. Hooper is considerably below both of these gentlemen in Tamil, yet in Teloo-goo he ranks above Mr. Robertson, and possesses an excellent knowledge of that language.

7. Mr. Robertson and Mr. Elliot, from their superior knowledge of two languages, are eligible to employment in the public service: but the former gentleman has so nearly attained that high standard of proficiency which establishes a claim to the highest honours of the institution, that we should regret his quitting the college, without making good his claim to what is so nearly within his reach.

8. Mr. Hooper's knowledge of Tamel (his second language) is not quite sufficient to allow of our recommending his promotion from the institution; he has, however, intitled himself to our recommendation for the highest of the college allowances.

9. Mr. Hudleston's knowledge of the Tamel language is of a high order, but he is not yet able to transact public business in Teloo goo.

10. Mr. Thompson has acquired a sufficient knowledge both of Hindoostanee and Mahratta to qualify him for the transaction of business in these two languages, and is consequently entitled to the highest of the college allowances, and to our recommendation that he may be promoted to employment in the public service, for which we consider him well qualified.

11. Mr. Fullerton possesses a tolerably fair knowledge both of Teloo goo and Persian; but his progress during the late term, in the study of either of these languages, has not been considerable.

12. We have great pleasure in recommending to the favourable notice of the Right Hon. the Governor in Council, Mr. Fetherstone, Mr. Clarke, and Mr. Gordon; the two former gentlemen in Teloo goo, and the latter in Tamel, continue to deserve public commendation. Mr. Fetherstone has also commenced the study of the Camataca, Mr. Clarke that of the Malayalim, and Mr. Gordon that of the Persiau, and in these second languages the progress of each is satisfactory.

13. The wonderfully rapid progress of Mr. Gosling in Teloo goo, has raised him above many of the students who had previously joined the institution. In the short space of about six weeks, this gentleman has not only acquired a complete knowledge of the grammar of that language, but translates tales of moderate difficulty, understands common questions, and, even in reply, speaks short sentences with great grammatical propriety, and a pronunciation peculiarly excellent. We recommend that the first increase of allowance be granted to this gentleman.

14. Mr. Lewin, on the 6th April last, made good his claim to the first increase of allowance. His progress in Tamel, though not quite so rapid as that of Mr. Gosling in Teloo goo, has been meritorious; and we consider this gentleman to deserve public approbation.

15. We are satisfied with the result of Mr. Browne's examination in Teloo goo. But he declined examination in Mahratta, which is the second language selected by him for study. He was examined at his own request in Hindoostanee, with which he is acquainted sufficiently to transact public business. Mr. Browne solicited our permission to relinquish the study of Mahratta for that of Hindoostanee, but transitions of this nature being prohibited by the fundamental rules of the institution, we have, after mature consideration, been obliged to apprise him that we cannot comply with his request.

16. Mr. Morris, Mr. Elliot, Mr. Thompson, and Mr. Browne were examined in the judicial regulations, and shewed a general knowledge of the principles of the code. Mr. Robertson was unfortunately prevented by an accident from attending at this examination.

17. Mr. Mc Leane in Teloo goo and Sanscrit, and Mr. Bryce in Teloo goo, passed very creditable examinations.

18. Mr. Blair obtained the first increase of allowance on the 27th March last, and with Mr. Horsely and Mr. R. Grant, continues to advance slowly in the study of Teloo goo; but Mr. Davison has made little if any progress in that language, since the last examination. Mr. Horsely and Mr. Davison have commenced the study of the Persian, and Mr. Blair that of the Hindoostanee language.

19. Mr. Clementson, on the 6th April last, established his claim to the first increase of allowance. We enclose a medical certificate under which this gentleman was, on the present occasion, excused from examination.

20. Since Mr. Graham obtained the first increase of allowance at the close of the last term, he has suffered much from violent attacks of illness; yet, with the most commendable zeal, has availed himself of every interval of health to prosecute his studies. Anticipating the possibility of his being unable to attend the general examination, he some time previously applied for a special one, and we have much satisfaction in stating that he has not only advanced materially in the study of Teloo goo, but that in Hindoostanee also his progress has been very satisfactory. We enclose a certificate from a medical officer, which will account for his absence on the present occasion, and we regret to observe that his application to study is stated to have brought on a return of his former illness.

21. We are happy to be enabled to state, that there are only three instances in which any considerable debt has been incurred by the students; and that the conduct of the gentlemen in question in other respects has been such, as to induce us to believe that it will be sufficient

to intimate to them our expectation that it will not be increased.

22. We consider the general result of the examination to be creditable to the talents, assiduity, and general good conduct of the junior branch of the service under our superintendence; but it remains for us to discharge a most unpleasant duty, in bringing to the notice of government the opposite and unsatisfactory result of Mr. Bushby's examination. In our report of 20th December last, we stated that this gentleman had by no means shewn a proper sense of the encouragement afforded to him by the government, in granting to him the first increase of allowance; and we added, that unless he should speedily redeem the time that he had lost, we should be con-

strained to take into consideration the expediency of recommending that this encouragement should be withdrawn where it did not produce the effect intended. We are now reluctantly obliged to submit this recommendation in the case of Mr. Bushby: and we are of opinion that the future promotion of this gentleman in the service essentially depends on his being removed from the presidency, and placed on the lowest of the college allowances, under some officer in one of the Southern or Tamel districts, until he shall pass a satisfactory examination.

(Signed.) E. C. GREENWAY.

J. M'KERRELL.

A. D. CAMPBELL.

LITERARY AND PHILOSOPHICAL INTELLIGENCE.

MADRAS LITERARY SOCIETY.

The meeting on Monday, July 12, was less numerous than usual, owing to the wetness of the evening; at the same time the Society exhibits as a body a satisfactory progress, both in the accession of members, the production of literary and scientific works, and the enrichment of the Museum. The Hon. Sir George Cooper presided.

Two papers presented by B. Babington, Esq. were read; the one giving a very interesting account of some ancient stone structures, found in various parts of Southern India, and some called Hindoo Cairns, or *Kodei-kulla*, accompanied with drawings of various earthen vessels, and iron instruments taken from these repositories; the other pointing out some distinctive characters relative to the Indian Guana, and which would shew that this animal bears closer resemblance to the *Laurea Dracula* than to the Guana described by naturalists.

A communication from Dr. Wallich of Calcutta, describing a very elegant parasitic, termed *Ornithidium imbricatum*, was received through Sir G. Cooper; together with a copper plate, and impression of the plant, exhibiting an admirable specimen of the progress already made in the art of engraving among the natives of Calcutta.

A specimen of the *Ostracion quadricornis*, cast on shore near the mouth of the Gundipoor River in Canara; and a specimen of the Manis found in one of the mines of Fort St. George, were presented to the Society; the former by the Hon. T. Harris, collector of Canara; and the latter, by the secretary, Dr. P. Scott.

A brief report was submitted by the managing Committee, stating that an extensive collection of minerals, arranged according to Professor Jameson's system, have been purchased since the last meeting; and that some valuable additions have lately been made to the library.

Dr. Wallich, superintendent of the Botanical Garden at Calcutta; Capt. Lockett, secretary and examiner of the College of Fort William; and Mons. Hugot, were on this occasion, placed on the list of honorary members; and the following gentlemen were elected ordinary members:—John Goldie, R. Peter, James Munro, John De Fries, Geo. Lys, Esqrs. Colin Rogers, M.D., Lieut. Col. Prendergast.

ANTIQUITIES AT BILSAH.

A letter from the British camp at Bilsah gives the following interesting description of a great curiosity found in the neighbourhood of the camp:

"Near our camp," says the writer, "there is a great curiosity, which was found out by accident after we had been here some time. It is a large solid dome, enclosed by a most extraordinary stone fence, with four gateways, which are carved in the most beautiful manner you can imagine; it must be very ancient indeed, as no artist of the present age could execute such sculpture. The gates are supported by four figures, which are imitatively done, bending seemingly under the weight of their boards, and their countenances expressing pain. The statues support numerous other figures of naked women, and devices of all kinds, such as Roman cars drawn by horses, with men on them, elephants, &c. An in-

mense concourse of people are represented going in procession to an exact model of the temple, or whatever it has been meant for. The natives say nothing of its origin or use, except that it was built by the devil. They assert likewise that there was a spring, in which if any person bathed they were turned into stone, which accounts for the numerous figures of men and women. The figures are superior to any thing I have elsewhere seen in India. Bilsah is a large town, and has an extensive stone fort adjoining. Near the town is another curiosity, which we often go to see. Some Brahmins have taken advantage of the bend of a small river to erect a temple, with a ghaut running into the water. By constantly throwing ottah and other food from the steps, they have collected an amazing number of the largest fish I ever saw. They are so tame as to come close to you; so much so, that you might take them out: if you throw in food, the water is darkened by them. They are held sacred, and never molested."—*Calcutta Paper*.

Observations made at Porebunder since the 17th of June, regarding the Earthquake.

It is necessary to state, that these notes of the subsequent phenomena were communicated in a letter to a literary friend in India. This will account for the familiar style of the remarks and the local allusions.

June 18.—Thermometer at 2 P. M. 90 degrees; wind light, at S. W.; large electric clouds approaching from all quarters; vegetation much advanced. Neither shock nor tremors in the earth; but in the person, a giddy and slight sickish or faint feel, with pains in the knees, and an inclination to lay down on the earth rather than sit or stand, and cannot apply myself to any thing. These feelings appear to be general.

19th.—Thermometer at 2 P. M. 90 degrees; cloudy; wind light, S. W. by S. A tremor in the earth at midnight, but of too short a duration to allow of quitting the bed. The same unpleasant personal feelings all day and night as on the 18th; feel relieved by laying down, particularly on the earth.

20th.—Thermometer at 2 P. M. 90 degrees; wind S. W. A sensible tremor at noon; repeated at 50 minutes afterwards. The same disagreeable feel as on the 18th.

21st.—Thermometer at 2 P. M. 90 degrees; slight breeze at S. W. by S. Felt a continued tremor of the earth at midnight while in bed; removed bed, and slept in the open air, lest other shocks should bring down a shaken house.

22d.—Thermometer at 2 P. M. 88 degrees; wind west. Weather changed to a gloomy, cloudy appearance, with indications of rain. Less tremor of the earth, but a consciousness that I am rather in a long rocking motion than standing firm: when I walk, I do not think I go straight. The same unpleasant sensation as on the 18th, though in less degree; from this and the change in the weather, entertain hopes that the tremors are ceasing, and that we shall soon be quit of our alarms and unpleasant feelings.

23.—Thermometer at 2 P. M. 82 degrees; wind S. S. W. Our first rains set strongly in at 12 last night, with the change of the moon; there were then tremors in the earth, but to-day our personal disagreeable sensations have abated, and we trust and hope, that with the change of season, all physical effects of the earthquake are leaving us for ever.

24th.—Thermometer at 2 P. M. 82 degrees; wind high, S. S. W. Rough moonsoon weather; much rain. Notwithstanding our hopes of yesterday, we were again alarmed last night, between 12 and 1 o'clock, not by a tremor but by a shock, which awakening us, caused us to jump out of our beds and run into the open air, where we remained an hour. The shock lasted about two seconds. Immediately after it, observed a long narrow black cloud, running west and east, or quite the reverse way to which I am accustomed to see a line of clouds extend; it appeared stationary for half an hour, during which period there were constant tremors in the earth. Some houses in the town were thrown down. Our knees ached for half an hour after the shock; but, on the whole, we are much relieved from the disagreeable sensations of lassitude, giddiness, and faintishness, which we have constantly experienced since the great shock of the 16th. I attribute the sickish feel to the rocking motion which we were constantly subject to. We were confident that the earth was in a long rocking or rolling motion, though we could not observe it.

25th.—Thermometer at 2 P. M. 82 degrees; wind light, at S. S. W. No rain. There was neither shock nor tremor last night. I never experienced so charming a star-light night. I was up at 12, expecting a shock, and found the heavens so clear, and the stars so numerous and so bright, that I was inclined to imagine the earthquake had swept the atmosphere of all its impurities. At present we are quite free from our late unpleasant feelings, and as the springs will be over to-day, so do I trust will all future shocks and tremors of the earth. At 2 P. M. heard, at a considerable distance, in an easterly direction, about eight distinct sounds, like the discharge of can-

non. I expect to hear of the bursting of one or more volcanoes in that direction. This being the end of the springs, though I know not that they influence earthquakes, yet I think it probable they do, and hence imagine, that the disorder in the bowels of the earth, arriving with the springs at a crisis, will cease with the discharge it has found for its foul air, and that now, you, Mr. Editor, as well as ourselves, will be left at rest, and hear no more of earthquakes.

But a remark or two before I bid adieu. Certainly, the commencement of the late phenomenon had no connection with the springs, neither has that of a fever in the human frame, yet its crisis is always affected, and frequently determined by them. I allude to the effect of the springs on fevers, beneath the tropic in particular, where the sameness of the atmosphere causes them to act with greater influence on all physical matter, than beneath more variable latitudes. The late phenomenon has brought to my recollection, my having observed to an officer of the marine, about the beginning of March last, that "there was a cloud in the N.E. which appeared uncommonly charged with electric fluid." Its direction was nearly opposite to the one from which I heard the sound that preceded the great shock of the 16th. I have observed, that previous to the approach of the S.W. monsoon, the electric clouds first appear in the N.E., on the opposite direction to that of the monsoon. Earthquakes are said almost always to be preceded by great droughts, but not so with that of the 16th. It was preceded by the usual hot season, but not by any uncommon drought. You will recollect, Sir, that in 1812 we had an uncommon drought in this country, so that many thousand of the inhabitants died for the want of food, and the cattle for grass, but it was not followed by an earthquake! I have observed that the tremors and shocks have invariably been most constant and strong at 10 A.M.; at noon, and at midnight. There has been no occurrence worthy of observation since the 25th, and as this is now the 30th, my conjecture of the former date has been so far correct, that the principal effects of the earthquake did subside with the springs. The sensations felt since the 25th have been so slight, that were it not for their being somewhat generally acknowledged, they might be taken for the effects of the imagination.

I now, Sir, bid you adieu, with the assurance, that we have experienced the truth of the admirable Blair's assertion, that this world is a region of danger, in which "perfect safety is possessed by no man."

CHARLES WM. ELWOOD,

Porebunder, June 30, 1819.

ST. PETERSBURGH.—IMPERIAL ACADEMY OF SCIENCES.

In an extraordinary supplement to the *St. Petersburg Gazette*, Professor Frœhn has published a Report upon the addition of near 500 MSS. in Oriental languages to the literary treasures of the Imperial Academy. The following is the Introduction to the Report.

St. Petersburg, Nov. 30.—The literary collection of the Imperial Academy of Sciences at St. Petersburg has been enriched this summer, with a treasure which deserves particular mention in the annals of the Academy, not only on account of its novelty and value, but also of its importance, and the great influence which it may have in future on the cultivation of a department of science which has long been neglected in Russia.

A collection of near five hundred Persian, Arabic, and Turkish MSS. has been added at once to the treasures already possessed by the Asiatic Museum of the Academy. They were collected in Syria, Mesopotamia, and Persia, by a person versed in those languages, namely, M. Rousseau, formerly the Consul General of France at Aleppo, and since at Bagdad, and taken to France; where they were immediately purchased for Russia before any competition arose from other countries. His Majesty the Emperor has now made a present of them to the Academy of Sciences. Such a collection deserved to be acquired for Russia, and the first learned institution of the empire may be proud of having this treasure confided to its care. Its Asiatic Museum, which was already distinguished by its fine collection of Chinese, Japanese, Mantchou, Mongol, Kalmuck, and Tungusian writings, as well as of Oriental coins and antiquities, has by this sudden and great addition of Mussulman MSS., gained in utility as much as it has acquired an higher rank among similar collections in foreign countries. For this new collection contains, in each of the three languages, and in almost every science, a number of the most distinguished and classical works of Islamism, which it would be in vain to look for in the whole continent of the Russian empire, in the libraries of the most learned Mollahi, among its Mahometan inhabitants.

REVIVAL OF COMMERCE IN EGYPT.

A mercantile letter from Trieste, come overland, acquaints us with the result of the Egyptian Pasha's first adventure of commercial speculation, by way of the Red sea, from Bengal to Suez, and across the desert to Cairo and Alexandria. It announces the Pasha's intention of restoring the ancient canal of the Ptolemies,

so as to have a water communication between the Arabian Gulf and the Mediterranean, and of his determination to favor the intercourse between these seas and the countries on their borders, by every possible means.—*Madras Courier*.

VINDICATION OF BELZONI.

The paper cited below says: "We have received the following communication from a traveller in Egypt, which, as defending Mr. Belzoni against statements made in the *Calcutta Journal*, we deem proper to admit into our columns."

"We are at present shut up against the plague which is raging at Cairo with considerable violence; the deaths amounting to from 100 to 150 per day. I have tried through one of the plague doctors, to introduce the Indian system of large doses of calomel, but in the few cases tried it has not answered, the patient having died. Calomel taken with large doses of opium seems likely to succeed better, but has not yet been fairly tried. I see the Editor of the *Calcutta Journal* is amusing you with a series of fictions, for so all his remarks on Egypt, as far as they have been given, must be termed. The last Quarterly, which gives a correct account of Belzoni, will convince the Indian world how little the Editor's biography is to be relied upon, and his fine apostrophe to Joseph Pharaoh, and all the generations of Israel, on seeing Yusuph's Hall, may convince him of his ignorance, since in every book of travels it may be seen that the said hall was built by the minister of Saladin called Yusuph, and therefore is a Saracenic work, of which the many Cufic inscriptions on the sides of the room bear sufficient evidence. In his review of Mr. Belzoni's letter, who happily is still alive, he has made 38 grossly incorrect, I was going to say, false assertions, and shews a pitiful jealousy in attempting to take away from the merits of a man, of whose discoveries he has shewn himself so ignorant. The white statue which the *Calcutta* critic so boldly asserts to be nothing more than one of the usual guards placed before the temple of Priapus, which are large broken *colossi*, was on the contrary, a small and beautiful statue, almost entire, dug up from 30 feet, or nearly that, below the surface, and is now in the possession of Mr. Salt. There were always 14 kings' tombs known to the public, instead of the limited number noticed by the *Calcutta* Editor; and in addition to these, Mr. Belzoni discovered six or seven more (one may not be a king's tomb), one of which is the finest remain of antiquity known; and he did also discover in it an alabaster sarcophagus (notwithstanding the sneers of the *Calcutta* commentator) now on its

way home, which also belongs to Mr. Salt. Mr. Belzoni did also open, for the first time, the temple of Ipsambole, which was closed and covered with sand, excepting a portion of the heads of two *colossi* in front, though the Editor of the *Calcutta Journal* is bold enough in India to assert the contrary; and the proof of it is, that Mr. Salt finished the excavation this year as far as to the feet of one of the *colossi*, in company with Mr. Bankes, who pointed out precisely the line of the sand when he visited it, which occupied at least 30 feet above the door. In fact, if Mr. Belzoni were but here, to reply to the unhandsome attack made upon him, the public would be at once convinced that such a forger of romances is little fit for the task which he has so pompously announced."

The *Gazette de France* contains a general notice of the valuable discoveries made in Africa by Signor Belzoni, the celebrated Italian traveller, and thus concludes:—"It is painful for us to announce that the London Museum alone profits by his discoveries."—*Bombay Cour.* July 10.

PROJECTED JOURNEY TO TOMBUCTOO.

A negotiation is at present pending between the Emperor of Morocco and a foreign power, which has engaged an English gentleman to open a communication, on a grand commercial scale, with Tombuctoo and Sudan. This gentleman is to proceed through Fas to Tafililt, where he is to have letters of protection and hospitality from the Emperor of Morocco to the Arabian Sheiks of Sahara and Bledel Jereed, and letters of credit to the company of Fas merchants established at Tombuctoo.

The journey is to be commenced from the Imperial Palace at Tafililt, on heiries. Four of these animals are to be purchased expressly for the journey, and each is to carry 40 pounds weight of rice and other provisions, besides the riders, who are to be Sheiks of Sahara, each of whom is to receive, on arrival at Tombuctoo, 1000 dollars, or an equivalent in gold-dust. The gentleman who has undertaken this journey, speaks with confidence of its success, and he calculates to perform it in 15 days actual travelling. He purposes to remain at the Imperial Palace of Tafililt 15 days, to accustom himself to the rough motion of the heirie.

It is proposed to travel from Tafililt to Tatta in three days, and there sojourn three days; then travel three days to East Tayrasa, and sojourn three days; then to Taudeny in three days, and sojourn three days; then three days to the well of Arawan, and sojourn three days; then complete the journey in three days more to Tombuctoo.

This journey will be commenced in February next, and will end in March. During the residence of the chief of the expedition at Tombuctoo, in the summer and autumn, one of the Sheiks, on a heirie, is to be dispatched to Houssa, Wanjara, and Darbeida, on the coast of the Red Sea; another is to be dispatched southward to Benin and New Calabar; a third will proceed through the heart of Africa to Sofala, on the eastern coast, opposite the island of Madagascar, from whence he will return to the head-quarters at Tombuctoo. The Sheik who undertakes this last journey has engaged to perform it in three months, to and from Sofala to Tombuctoo, and to collect every information necessary during his progress. The fourth heirie will remain at Tombuctoo, ready to undertake any desultory journey that may offer, whilst the chief of the expedition will remain at Tombuctoo to negotiate with the King and others, as an opportunity may offer. The travellers will receive the necessary instructions how to collect geographical and commercial knowledge, and then return to the chief of the expedition at Tombuctoo who will accompany them back to Tafilit.

The expedition is connected with a plan to land afterwards 300 men at a spot at Sahara, eligible for a colony, where the commercial communication will be immediately opened with Tombuctoo and Sudan.

The English gentleman speaks with the utmost confidence of success, to which his general knowledge of the natives and language will not a little contribute.

EMIGRATION OF BIRDS.

Ireland, Jan. 5.—A few days ago was shot, near the entrance of Kilkenny harbour, a large sea-fowl, having through its neck an arrow, such as those described by Capt. Cook to be used by the natives of the islands of the Pacific Ocean. The shaft of the arrow, which is about eight inches long, is of a kind of wood resembling bone, and is rudely bearded with iron. The beard and shaft shot is at least four inches through the neck; and the flesh round the shaft is not only healed, but perfectly hard and callous.

HINDOSTANEE LECTURES IN LONDON.

Second Report.

It cannot be too extensively known to persons going out to India, that there are gratuitous lectures under the patronage of the Company. The first report by Professor Gilchrist, dated 31st August last (*Asiatic Journal*, vol. VII. p. 468), traced the progress made by his voluntary pupils

in the first term of the lectures, which closed with the preceding month of May. A second report, addressed to the hon. the Court of Directors by the learned professor, enumerates and classes the individuals who attended the second term. From the nature of the institution, there is a constant succession of new students. Now as some of these can snatch but a few hours from other pursuits, the degrees of comparative proficiency is not a proper measure either of the disposition or the ability to learn; and therefore, while the individuals, whose progress is positively great, deserve all the distinction which they acquire, the others ought for the present to be exempted from any imputation either on their talents or power of application. The report, which our limits compel us to abridge, states:

"Since the 1st of June there has been no intermission of my regular and successive course of lectures three days in the week, which have been very assiduously attended by the following gentlemen, during shorter and longer periods, as best suited their own convenience." The respective results are here stated.

Civil Service.

No. 1. Mr. Dyce.—Attendance interrupted by studies in the country, but proficiency in pronunciation and grammar very satisfactory, with considerable progress as Hindoostanee colloquist, and great ardour for Oriental languages; has commenced the Persian character, and displays an acuteness of comprehension favourable to literary pursuits; nothing but perseverance and discrimination is now wanting to render him an ornament to the civil service.

2. Mr. Elphinstone.—Anxious to learn, and possessed of respectable abilities in other matters, but since entering on the present course for acquiring one of the eastern tongues, his studies have been interrupted.

3. Mr. Frazer.—Made the best use of the short attendance in his power, at the class, and seemed very anxious to acquire a correct pronunciation.

4. Mr. Ravenshaw.—Proficiency great in every respect, including a knowledge of the Persian character, with zeal, talents, attention, and perseverance adequate for the accomplishment of every scientific object.

5. Mr. Lamb.—Very desirous of learning the Hindoostanee; but after two or three days attendance, was obliged to visit the continent, and proposed to renew his studies with me on his return, previous to departing for India.

6. Mr. Brown.—Both able and willing to become a proficient Orientalist, with a commendable predilection for the Hindoostanee in the Persian character, in which time only is wanting to make him a good scholar.

7. Mr. Jackson.—Similar to No. 6, with an evident reliab and genius well calculated for philological lucubrations and science in general; attendance interrupted from bad health.

8. Mr. Jackson.—Went, after one day's lecture, to his relatives at a distance from town, and will probably renew his studies before the vacation expires.

9. Mr. Bannerman.—Just commenced attendance, with a commendable solicitude to benefit during his collegiate vacation by the Hindoostanee Lectures.

Cadets.

No. 10 Mr. Cotton, 10 Mr. Grant*, 11 Mr. Minchin, 12 Mr. Stuart, 13 Mr. Westley, 14 Mr. Gould, 15 Mr. Laurence, 16 Mr. Milne, 17 Mr. Brown, 18 Mr. Wood, 19 Mr. Ure, 20 Mr. Beddingfield, 21 Mr. G. Carmichael Smyth, 22 Mr. Macan, 23 Mr. Macan, 24 Mr. Kinsey, 25 Mr. Manning, 26 Mr. Sturt.—The attendance of those gentlemen was often so limited, interrupted, and periodically suspended by various unavoidable occurrences connected with their domestic affairs and other necessary studies, or premature departure for India, that it was not possible for them in general to make much progress in Hindoostanee, though the majority certainly imbibed a taste for that language and acquired a practical idea of its pronunciation, which would naturally be improved by most of them on the outward voyage, from my constant injunctions in favour of social study, and on the importance of a colloquial facility in the military dialect of Hindoostan. My hopes of Messrs. Minchin, Westley, Wood, Carmichael Smyth, Manning, and Sturt's ultimate success as linguists, are great; nor shall I yet despair of any one among the rest, as the whole were supplied with the requisite elementary books, and they uniformly promised to study hard on board ship.

No. 27 Mr. Hennel, 28 Mr. Goldney, 29 Mr. Lewis, 30 Mr. Birrel, 31 Mr. Shearer, 32 Mr. Thwaites, 33 Mr. Gray, 34 Mr. Johnson, 35 Mr. Ludlow, 36 Mr.

Perks, 37 Mr. Montmorency, 38 Mr. Wade, 39 Mr. Litchfield, 40 Mr. Wiggins, 41 Mr. Powell.—This division is entitled to my unconditional praise, in consequence of the zeal and capacity generally evinced to assist to excel each other as Hindoostanee students, while with me; and for their cheerful resolution to prosecute their social labours before arrival in India to the utmost of their power. To some of these gentlemen (27, 28, 29, 31, and 35), I granted certificates of comparatively great progress, on application for them; stating in those documents, however, that much would depend upon their own exertions at sea, to confirm my testimony in their favour as Hindoostanee scholars: and it is but justice also to state that Messrs. Birrell, Gray, Johnson, Perks, Montmorency and Wade's talents and assiduity inspire me with sanguine hopes of their ultimate proficiency in that language.

No. 42 Mr. Maclay, 43 Mr. Brodie, 44 Mr. Brodie.—The attendance of this subdivision has been more protracted and constant than the rest; they have consequently made considerable progress in the Hindoostanee, printed in the Persian character; besides, their knowledge of its pronunciation and grammatical rules is very creditable, a remark applicable also to Nos. 33, 35, and 36, though their studies were of a shorter duration, and in case of 33, much interrupted by severe illness.

Assistant Surgeons.

No. 45 Mr. G. B. Jones, 46 Mr. J. Fortnam, 47 Mr. W. Bannister, 48 Mr. J. F. Royle, 49 Mr. Shuter, 50 Mr. Forsyth, 51 Mr. Paterson, 52 Mr. Drever, 53 Mr. J. Kilman, 54 Mr. J. Rumbold, 55 Mr. Walker, 56 Mr. Graham Stuart, 57 Mr. Child, 58 Mr. Harrison, 59 Mr. Graham, 60 Mr. Jackson, 61 Mr. Lindsay, 62 Mr. J. Stewart, 63 Mr. Johnstone, 64 Mr. Malcom, 65 Mr. Downey, 66 Mr. Sully, 67 Mr. Hyne, 68 Mr. Shearman, 69 Mr. Davenport, 70 Mr. Arden.—The great majority of these medical gentlemen have obtained much facility in the grammar and pronunciation of the Hindoostanee tongue, from their steady conduct and persevering diligence as students during the several courses of lectures which they attended, for a shorter or longer period, according to individual circumstances. Mr. Walker, whose studies embraced part of the first and second terms, had actually become able to converse fluently on common subjects, with those natives of India whom he occasionally met in this country; and previous to embarkation, he began to read Hindoostanee in the Persian character: I am therefore confident that this gentleman will yet do himself and me great credit in every

* This gentleman's attendance was limited to three or four lectures, which both he and myself regretted very much, as on his side there existed a species of hereditary ardour and facility in the acquisition of languages, which must speedily have rendered so zealous a pupil a capital Hindoostanee scholar; he nevertheless gained enough to make him yet an eminent Orientalist, by assiduous application on the voyage, and after his arrival in the east, where I believe he will ere long distinguish himself in whatever he may aim to excel in. Mr. Grant's name was omitted in the *Official Report* by some oversight, for which I cannot now account.—J. B. G.

branch of Oriental literature. Mr. Hyne is a rare instance of the most rapid improvement in the Hindoostanee, having in one month only mastered the pronunciation, grammar, and Persian character, so as to join the most advanced class in two or three weeks after admission, and without any previous acquaintance with the language. His ability and readiness to assist his fellow-students have been so highly useful, in the way of example and precept, that many of my pupils have benefited much from his spontaneous and able instructions. Of Mr. Walker and Mr. Hyne it may be safely asserted, that they will both prove ornaments and acquisitions to any establishment or society in the east, and to any department of the service, from their learning, abilities, acuteness, and suavity of manners. Next to those gentlemen I am justified in classing 48, 56, 57, 59, 51, 52; and if the remainder had been long enough with me, or continued to exert themselves as they are doing at present, with two or three exceptions, all would have deserved honourable notice in this report. Since 66 delivered his admission card, I have neither seen nor heard of him; but whether his absence proceeds from illness, or more important avocations than a knowledge of Hindoostanee to a medical man, I am unable to determine.

The Reverend

No. 71 Mr. Cox. — Attended only two lectures, when obliged to embark; but from his classical accomplishments, I presume this gentleman will make a good use of his Hindoostanee books, during the passage to India.

No. 72 Mr. Perone, 73 Mr. Morris. — Are attached to the Church Missionary Society, and have profited so much from a few weeks' study, that having acquired the popular key to Oriental tongues, supposing them to cultivate this attainment in their way to India, there is no doubt of their afterwards becoming speedily conversant in any other eastern dialect which may be found necessary, in the course of those Christian duties they have undertaken faithfully to perform among the heathen nations of Hindoostan, who yet know little more of either our religion or language, but the name.

Free Merchants.

No. 74 Mr. Haddow. — Ranks next to Messrs. Walker and Hyne as an expert Hindoostanee scholar, and possesses a literary spirit equal to any mental enterprise.

No. 75 Mr. Hamilton. — Has acquired the pronunciation and grammar to a creditable degree, which his own predilection and time may mature to very great proficiency as a Hindoostanee linguist.

Some of the above gentlemen having
Asiatic Journ.—No. 50.

commenced their studies under me before they were actually nominated as cadets, &c., it is possible enough that they are not yet appointed; and instances may occur where the ultimate disappointment of previous expectations will better account for the insertion of a few names unknown to the honourable court, than I can.

As the numerical arrangement has been adopted merely for the facility of marking the successive admissions individually at the Hindoostanee Lectures, and for future reference in a document like this, number alone does not indicate relative proficiency: I have therefore been more particular in the discrimination of superior merit, than otherwise would have been requisite in similar statements from a better organized institution.

Some of my best pupils had the advantage of attending, during the alternate days, upon the seasonable and valuable instructions of Mr. Carmichael Smith, formerly a Bengal civil servant, but who, wishing to promote the study and dissemination of Hindoostanee, very disinterestedly devoted his leisure hours, from a respectable public office, to the laudable cultivation of this most important branch of Oriental literature.

Until leisure can be found for consultation on this subject, and that no time may be lost in the exercise of my voluntary labours, I am now ready to extend the sphere of their utility to the utmost, by daily lectures in any central room in the city which the honourable court may provide for me; and I shall gladly leave the business of personal remuneration, and deliberate organization of the lectureship, to the convenience and pleasure of your honourable court, when longer experience shall enable you to decide on the merits of positive performances, instead of any confident promises, or sanguine hopes, expressed on my side as the Hindoostanee Professor, in this stage of the proposition. I have already had the pleasure to superintend the elementary studies in Oriental literature of one hundred and sixty-five scholars, in the short space of twelve months; whence my credit would have been infinitely greater, if numbers of young cadets, well educated and very intelligent, had not been induced to leave England prematurely, to secure priority of rank in India.

15, *Arlington Street*,
31st December 1819.

FACTITIOUS GUM—AND SUGAR.

We hardly know whether we ought to congratulate society on the following curious discovery, if the experiments of other chemists should confirm the results stated to the full extent of the original

VOL. IX. Z

report. For notwithstanding what chemists say, we believe, that as they cannot detect the *miasmata* which distinguish an atmosphere freighted with the seeds of pestilence from a stream or volume of salubrious air, so neither can they arrest many specific essences on which the medical properties of plants and their various products depend; and which, from their extreme volatility and tenuity, are intangible by analysis. Hence many extracts from different substances, which they proclaim to be the same in quality, produce different effects on the human constitution.

The number of the *Annales de Chimie*, for October 1819 (lately arrived in London), contains a very curious paper by M. Henri Braconnot, on the results obtained by the action of sulphuric acid (oil of vitriol) on ligneous fibre (wood). The first product is gum, very similar to gum arabic. This substance, by boiling with diluted sulphuric acid, is converted into a peculiar, hitherto unknown acid and sugar; the latter bearing a very large proportion to the former, and constituting almost the whole of the new products. The action of potash on the gum produces another substance, which M. Braconnot has named *artificial ulmin*, from its resemblance to the vegetable principle so called, and which is obtained from the spontaneous exudations of the elm. But though the new acid and the ulmin are objects of great interest to the chymist, they will hardly be so to the general reader. To return, therefore, to the sugar. This, when well purified, is brilliantly white, and highly crystalline, and in flavour, and all other respects, equal to the finest produce of the cane. The subject of M. Braconnot's experiments were the rags of hempen cloth, and the quantity of sugar obtained exceeded in weight that of the rags employed. This extraordinary fact is thus mentioned by the author:—"This conversion of wood into sugar will doubtless appear remarkable, and when persons, little conversant in chymical speculations, are told that a pound of linen rags may be converted, as I have proved, into more than a pound of sugar, they will regard the operation as ridiculous, and laugh at it; it is not the less true, notwithstanding."—*Ann. de Ch.* vol. xii. p. 183.

ATMOSPHERICAL NOTICES.

London.—Variations in the Thermometer, in Barton-street.

Morn. Degrees.	Noon.
Jan. 2—20 Thaw, and slight rain	37
Jan. 3—32	
Jan. 4—24	
Jan. 5—16 Hoar frost	
Jan. 6—27 Fair and foggy—thaw	37
Jan. 7—33 Thaw, froze at 12 o'clock	38
Jan. 8—25 A few flakes of snow—eager N.E. wind	
Jan. 9—22	Ditto Ditto
Jan. 10—21	
Jan. 11—24 Snow, Thaw, S.W. wind,	34
Jan. 12—26 Snow, - N.E. wind.	

Canterbury.—The cold in the night of Jan. 14 was more intense than has yet been observed during the frost, the thermometer in this city standing, at seven on Saturday morning, at four degrees only above 0—28 degrees below the freezing point. No degree of cold more severe than this has been experienced in this country since Jan. 24 and 25, 1795, when the mercury, both in this city and at Maidstone, sunk to two deg. below 0.

In the course of Saturday, Jan. 15, the thermometer gradually rose to 16 above 0, and at eight on Sunday morning stood at 28 above 0, between which and the freezing point, 32, it has since ranged, notwithstanding the wind has been southerly, and a partial thaw has taken place.

St. Petersburg.—By letters from St. Petersburg of 28th Dec., it appears that an extraordinary degree of cold was experienced on that day, the thermometer ranging between 27 and 30 degrees of frost, by the scale of Raumur, equalling from 61 to 67½ degrees below the freezing point of Fahrenheit.

COMBINATION OF UNUSUAL PHENOMENA.

Christiania in Norway.—On the 7th Jan. the barometer rose to the extraordinary height of 29 inches, 16 lines, which has not taken place here for a great number of years. The sea was eight feet lower on that day than it has been for the last 20 years. Professor Hansteen, who measured its height, made also some experiments as to the intensity of the magnetic force, and found the needle in such agitation, that he could obtain no fixed result from his experiments.

Travels in the North of Germany, describing the present State of the Social and Political Institutions, the Agriculture, Manufactures, Commerce, Education, Arts, and Manners, in that Country. By Thomas Hodgskin, Esq. In 2 vols. 8vo. £1. 4s.

Mémoires pour servir à l'Histoire de la Vie Privée, du Retour, et du Règne de Napoleon en 1815. Par M. Fleury de Chaboulon, Ex-Secrétaire de l'Empereur Napoleon. En deux tomes, 8vo. £1. 4s.

Memoirs of the Protector Oliver Cromwell, and of his Sons, Richard and Henry, illustrated by Original Letters, and other Family Papers. By Oliver Cromwell, Esq. a descendant of the family. With portraits from original pictures. 4to. £3. 3s.

An Historical Account of Inventions and Discoveries. In 2 vols. 8vo. £1. 4s.

Travels in Italy, Greece, and the Ionian Islands, in a Series of Letters, descriptive of Manners, Scenery, and the Fine Arts. By H. W. Williams, Esq.; with engravings from original drawings. 2 vols. 8vo.

The Poetical Works of Walter Scott, Esq. Twelve vols. foolscap 8vo. £3. 12s.

Observations, Anecdotes, and Characters of Books and Men. By the Rev. Joseph Spence. With Notes by the late Edmund Malone, Esq. 8vo. 8s. 6d.

Anecdotes, Observations, and Characters of Books and Men, collected from the Conversation of Mr. Pope, and other eminent persons of his time. By the Rev. Joseph Spence. Now first published from the original papers; with Notes, and a Life of the Author. By S. W. Singer. 8vo. 14s.

A Dictionary of the English Language. By Samuel Johnson, LL.D. Abridged from the Rev. H. J. Todd's corrected and enlarged quarto edition. By Alexander Chalmers, F.S.A., 8vo. 15s.

The Cyclopædia of Commerce, comprising a Code of Commercial Law, Practice, Customs, and Information. The commercial department conducted by Samuel Clarke, Esq., and the legal department by John Williams, Esq. of the Inner Temple. 4to. £2. 10s.

Facts and Observations on Liver Complaints, demonstrating the numerous and extensive disorders which arise in the system from this source; enjoining a successful mode of treatment; illustrated by cases, and addressed equally to the invalid as to those of the profession. The fourth edition materially enlarged. By John Faithorn, M.D. 8vo. 9s.

The Jacobite Relics of Scotland; being the Songs, Airs, and Legends of the Adherents of the House of Stuart, collected and illustrated. By James Hogg. 8vo. 12s.

Letters written during a Ten Years' Residence at the Court of Tripoli. Third edition. 2 vols. 8vo. £1. 8s.

Travels in Africa from Modern Writers, with Remarks and Observations, exhibiting a connected view of the geography and present state of that quarter of the globe. By the Rev. W. Bingley, M.A., F.L.S. 12mo. 6s. 6d.

Voyage to Corea and the Island of Loo Choo. By Capt. Basil Hall, R.N. A new edition with plates. 12mo. 7s. 6d.

Lectures on Scripture Duties. By W. Bengo Collyer, D.D., F.A.S., &c. &c. 8vo. 14s.

The Annual Biography and Obituary for the year 1820. 8vo. 15s.

A Treatise on the Operations for the formation of an Artificial Pupil. By G. J. Guthrie. 8vo. 7s. 6d.

Dialogues of Entomology, in which the forms and habits of Insects are familiarly explained. With twenty-five engravings. 1 vol. Coloured plates, 18s.; plain, 12s.

The Percy Anecdotes. Part I. and II. 2s. 6d. each.

Character essential to Success in Life, addressed to those who are approaching Manhood. By Isaac Taylor. 12mo. 5s.

The Bridal of Triermain, and Harold the Dauntless. Two Poems by Walter Scott, Esq. 8vo. 10s. 6d.

Germany, and the Revolution; by Professor Gœrres. Translated from the original German, by J. Black. 8vo. 10s. 6d.

Petrarch and Laura. By Madame de Genlis. Translated from the French. 2 vols. 12mo. 10s. 6d.

Sermons on the unerring Doctrine of the Established Church, that Christ Jesus is God and Lord; and on the intermediate State of the Soul after Death. By the Hon. and Rev. E. I. Turnour, A. M. 3 vols. 8vo. £1. 7s.

Medico-Chirurgical Transactions. Vol. 10, part II. 7s. 6d.

Sermons, Doctrinal and Practical; preached in King Street, Brompton, Quebec, and Fitzroy Chapels. By the Rev. T. F. Dibdin. 8vo. 12s.

Poems descriptive of Rural Life and Scenery. By John Clare, a Northamptonshire Peasant. 12mo. 5s. 6d.

Edinburgh Review. No. 64. 6s.

Memoirs of Miss G——, late of Heathcote Street, Mecklenburgh Square, illustrative of the nature and effects of Christian principles. 12mo. 3s.

Quarterly Review. No. 44. 6s.

Tales of Fancy, by Miss Burney. 3 vols. 12mo. £1. 4s.

Iceland; or the Journal of a Residence in that Island, during the years 1814 and 1815. By Ebenezer Henderson. Illustrated with a map and engravings. Second edition. 8vo. 16s.

Oriental Harping, a desultory Poem, in two parts. By John Lavvson, Missionary at Calcutta. 12mo. 7s.

A Compendious History of the Jews; peculiarly calculated for the use of

schools and young persons. By J. Bigland. 12mo. 4s. 6d.

A Treatise on Adulterations of Food, and Culinary Poisons. By Frederic Accum. 12mo. 9s.

IN THE PRESS.

Narrative of the late Political and Military Events in British India, under the Administration of the Marquess of Hastings. By H. T. Princep, Esq., of the Honourable East India Company's Civil Service, Bengal. With Maps, Plans, and Views, 4to.

A Geographical, Statistical, and Historical Description of Hindostan, and the adjacent Country. By Walter Hamilton, Esq. With Maps, 2 vols. 4to.

History of British India. By James Mill, Esq., second edition, 6 vols. 8vo.

Life and Adventures of Antar. By Ter-rick Hamilton, Esq. A new Edition, in 4 vols. cr. 8vo.

. Vols. 2, 3, and 4, (*never before published*) will be sold separately.

The Life of the Right Honourable R. B. Sheridan. By Thomas Moore, Esq. 4to.

The Works of the Right Honourable R. B. Sheridan, now first collected and edited by Thomas Moore, Esq. 4 vols. 8vo.

History of the Crusades, by Charles Mills, Esq. 2 vols. 8vo.

The History of the late War in Spain. By Robert Southey, Esq., 3 vols. 4to.

The Principles of Political Economy considered, with a View to their Practical Application. By T. R. Malthus, A. M. 8vo.

The History of Parga; containing an Account of the Vicissitudes of that part of Greece during the French Revolution: supported by authentic Documents. Translated from the Italian MS. of Hugo Foscolo. 8vo.

Memoir of the Early Campaigns of the Duke of Wellington, in Portugal and Spain. By an Officer employed in his Army. 8vo.

MISSIONARY INTELLIGENCE.

MADRAS.

The following is the *remarkable case* alluded to in vol. VIII. p. 595. From the obscure terms of that preparatory announcement, which is literally in the words of the Nineteenth Report of the Church Missionary Society, where it occurs in a note upon a note, p. 163, the reader might expect a more flagrant case of deception than the full disclosure of the particulars proves it to be.

Account of a Gooroo, or Spiritual Guide at Madras.

The first notice of him occurs in a letter from the Rev. M. Thompson, dated Jan. 1816.

"The most interesting thing that has occurred of late in our infant mission is the case of the Gooroo, of whom Mr. Rhenius will doubtless give you full information. This man seems to be increasing rapidly in desire for Christian knowledge, and in respect and affection towards the missionaries. But we must wait; and the Lord will make manifest the councils of the heart, so that we shall not greatly err.

Of this man, therefore, the committee spoke in the seventeenth report (p. 449) in guarded terms; and the result has proved the necessity of such precaution. There was ground, however, for reasonable confidence in his profession; from the concurrent testimony of various natives,

it appeared, that he was precisely what he alleged himself to be. "He is a Bram-hin, from the Malabar Coast; who travels about the country, with about forty followers, who proclaim abroad his name and reputation, and collect offerings for him, the surplus of which he distributes again in charity to others. He is a person of such sanctity and influence, in the eyes of the natives, that on his crying aloud a certain word, signifying that rice or other gifts should be brought to him, his followers echo it around, with the demand, "Bring;" and instantly all classes of persons, to the very lowest and poorest, present, each according to his ability, his offering of the required commodity."

Account of this man's intercourse with the Missionaries by Mr. Rhenius.

Nov. 6, 1815.—A Gooroo, or Spiritual Guide, called on us; attended by four servants, and one or two of his disciples. He made the usual native compliments, though with greater simplicity. He soon entered on religious topics; in which I took an opportunity to state to him the condition of man by nature, the necessity of salvation, and the manner in which God himself has provided it. He seemed to be fully convinced of the truth of these things. They were all very attentive. At last, I asked what he had to say to all this. He replied, "What shall I say? You speak the Word of God and of Truth." He ex-

pressed his desire to come again, in order to converse on such subjects; with which, of course, I heartily complied.

If we had not already so many proofs of the hypocrisy of the natives, we might exult on this occasion; but we have justly become very diffident, and must look for proofs of the sincerity of this man.

I could not but point out to him, the great responsibility which lies on him as a Teacher. If, while he acknowledges the truth, he delude the people by vain and superstitious instructions, how great would be the judgment which he would bring on himself! But, if he step forward and teach the truth, how great would be his happiness! All this he readily admitted.

Jan. 19, 1816.—I was explaining to a number of select School Boys the Twenty-fourth Chapter of St. Matthew, when the Gooroo entered, and attended until I had finished. Then going into my study, he expressed his earnest desire to have seen me again long before; but their festival-days and other things had prevented him. "However," said he, "I have made good use of the book (a Tamil Testament) which you presented me with; learning from it, more and more, the truth." He urgently requested leave to keep up the acquaintance, and to be informed on several points; saying, "I wish that we should be more and more united, and be in one place." One of his disciples requested a Tamil New Testament; and expressed his great desire, in the presence of his master, to learn the truth, and to come to me for that end. The Gooroo called himself and his disciples, my disciples.

A great deal of the national religious pride seems to have abated in this man. He professes to feel himself inferior: and strongly declares the necessity under which he lies of being taught. Our house, I understand, is the first European house which he ever entered; as they count our habitations unclean; and are obliged to purify themselves by water, if they enter one; but he did not do so, I hear, after he had visited me before.

March 15.—I visited the Gooroo, by appointment, in his habitation at Vepery, and was received by him in a very friendly manner. About twenty-five persons assembled. The conversation soon turned on religion. I read to them the Second chapter of the Acts of the Apostles, attending it with explanations and application. The Gooroo expressed his pleasure; and, as a token of respect, placed a large garland of flowers round my neck, and one round each wrist; and did the same to the Catechist and the Reader, who were with me. All this he did in the midst of the Heathen, his disciples, and attended by many expressions of his joy.

May 24, 1816.—The Gooroo sent a let-

ter a few weeks ago, desiring me to fix a day for his visiting me, when he would converse with me on a few important points. On the day appointed he came, and told me that he is going to propose to Government, to establish him as Pitshabadi; an office to which he had a right by birth, he being the grandson of the late Pitshabadi, who died about 90 years ago, so suddenly that he was unable to appoint his successor. This title properly means, Chief of the Money and tribute paid by the Lingatars.

He proposes, in case Government appoint him, to assign to Government three parts of the whole income of that dignity, which would now be about one lack of Pagodas (or 100,000 Pag.) annually: the fourth part, about 25,000 Pagados, he would keep himself for purposes of charity. Of this fourth part, he would give half for the establishment of our Christian Institutions.

Having informed myself of the nature of the collection, which I found to consist chiefly of taxes which that sect had annually to pay to their head, and of fines which he charged them for transgressions of their Heathenish customs, I doubted whether Government would accept any thing at all; and whether, if accepted, it would not be detrimental to the cause of the Gospel; and communicated my doubts and views to him.

June 4.—The Gooroo visited me to-day, as he now does every week. When we are together, we in general take a portion of Scripture for our discourse, to which he listens with attention.

I asked him when he obtained the first impressions of the truth. He answered, "About thirty-five years ago, I was at Negapatam, where a Dutch minister," probably meaning the Rev. Mr. Gericke, "talked with me on this truth, and I often went to hear him. When the other people heard it, they murmured against me, and despised me, saying: 'Why this apostasy? why this erring from the right way?' To which I replied, 'It is not erring from the right way. I will only take hold on the one true God. It is like as if somebody places ten vessels of water before the sun, and looks into them: there will appear to him to be ten suns; but, looking upward, he beholds but one.' That minister told me also, that, in a short time, I would know Christianity better—that it will shine forth every where, and that I myself would become a confessor of it. After that, about twenty or twenty-five years ago, I went to Sadiskiri, where a celebrated monk received me, and taught me wisdom and to know the Most High; and encouraged me to lead an austere life. He also affirmed, that the true Vedam will spread every where. From that time I left off eating and drinking, by

degrees, and made my prayer to the Most High. But my disciples, priests, and other people entreated me not to do so; since their sect would be diminished and changed, and endeavoured to make me eat again. However, for a long time, I lived only on water, and sometimes milk; but for these ten or twelve years, I have taken my food again as usual."

We touched on the subject of dying; on which, with apparently great confidence, he observed: "What is this dying! We never die. Like as persons in this world leave one house and enter another, so we shall leave only this body and enter another house. In the manner in which this body came, it will go again; but that other will remain for ever. What therefore is dying!" Seeing the confidence in which he spake, I solemnly asked him, "But do you then really believe in the Lord Jesus Christ, as your Saviour?" To which he replied: "If I had not faith, could I thus speak about dying?"

June 10.—In a conversation with the Gooroo, I enquired something more respecting the celebrated monk, whom he mentioned as having taught him wisdom, and to know the Most High; and as living entirely abstracted from this world, and without idolatry, daily fixing his eyes on the sun, and contemplating on the one True God. I asked him whether he thought that what this man had told him was right. He said that he found no difference between what he had told him and our Bible. "Had he a New Testament?"—"No."

I perceived, from the whole, that all this wisdom consisted merely in the knowledge, that there is ONE God only, and not many Gods; and I took an opportunity to state to him distinctly, that though the Holy Scriptures teach that doctrine as a fixed truth, yet that this was not the greatest concern which the Lord himself and His servants have with the souls of men. For, that there is one God, has been known by all nations, and every where there have been persons who felt a contempt of idolatry, and were convinced that there is but one God; but that the chief concern is, how to become friends of that God. This it is especially, which we preach to the people—that they may receive Christ, the Eternal Son of God, as their Saviour. These glad tidings were and are not to be found out by ourselves: they must be revealed to us, and sent to us; and therefore they are called a mystery. He seemed fully to agree with this; and heard, with apparent satisfaction, the reading of the last part of the first chapter to the Colossians.

We had also a long conversation on the superstition of the heathen. He observed that yesterday was full moon, on

which day they fast; but that he had not observed it this time, but eaten as usual. One of his disciples mentioned this difference to him; to whom he said, that all things must be shaken off, and that he and all should become Christians.

June 14.—The Gooroo attended my New Testament Lecture, which I have on Fridays, with the highest class of the school boys. Last Friday he did the same.

In my conversation with him, he told me, with much feeling, that rumours had now spread very fast among the people about what he is doing. "Most of them," he said, "like it; but some murmur against it. These are bad men; and may be very likely to spread false reports concerning me. If you, therefore, hear any ill of me, please to speak freely with me on the point, when I will inform you of the truth." It appears that, by these very discussions and rumours, his own mind acquires more freedom and boldness to appear openly; and I trust that, by the mercy of the Lord, it will be no long time before he shakes off also what is heathenish in form. He condemns their worship and superstitious, in very strong terms; and repeats his great desire for my being one with him—his teacher, his brother, his friend. "For these ten or twelve years," said he, "it has been my prayer to God, that He would send a person with whom I might be thus united, for the good of my soul. I believe that my prayer is now fulfilled in you."

June 24.—The Gooroo informed me of the answer which he had received from government to his proposal. They will have nothing to do with it. I partly expected that; and, for various reasons, am glad at this refusal. He asked me what he should do; and repeatedly assured me that he will do nothing without me. I asked what he intended to do. He replied, "I think that you and I should take journeys, assemble the people," meaning those of his own sect, "examine their cases, and thus take the opportunity of making the truth known to them." I observed, that, of course, I would have nothing to do with their heathen customs; and begged him to give me his present intentions and designs in writing.

June 27.—The Gooroo brought me today his memorandums of what he intended to do. But his statements were so different from what I expected, that they gave a check to my good opinion of him. I trembled. This letter was full of veneration to his heathenish sect, and void of proper expressions about his faith in the gospel. I gathered some hope, however, from the consideration, that, not being able to write himself, but being obliged

to dictate his letters to his heathen attendants, he might probably think it a necessary precaution to write as he did.—I requested him to come the next day; when, after more consideration, I would tell him my mind on the subject.

June 28, 1816.—The Gooroo came attended only by his son; and, soon after our usual salutations, began to inform me of the doubts, which he thought his letter of yesterday might have conveyed to me. The reason which he alleged for writing as he did, was indeed that which I had anticipated. He then delivered to me another paper, which, as he himself saith at the close of it, he has secretly dictated to his son. The contents appertain chiefly to the affair of his office, as Pitshabadi; but he confesseth therein, by the way, that, comparing their Shasters with the Word of Truth, they appear but as stories, and he firmly hopes that this truth will prevail over all.

As I wished to have nothing to do with his money, which would consist chiefly, if not wholly, of payments for their idolatrous rites, and which of course would cease with their becoming Christians, I thought it right to put some definite questions to him: as,

1. Whether his chief intentions, in all this, were to introduce the knowledge of the truth amongst his deluded people? He answered, "Yes."

2. Whether he himself acknowledged in his heart, that those rites and modes of worship of his sect were wickedness before God, who made heaven and earth? He said, "Yes."

3. Whether he really had found comfort in the Gospel of Jesus Christ, and acknowledged him to be the Lord and Saviour of his soul? He said, "Yes."

By putting these questions, he felt the doubts which I had entertained concerning him; and, suspecting that they had been partly occasioned by his letter, he adverted to it with a smile, saying that these things were no more questions with him.

After a few other topics, I urged him entirely to abandon the money-business, to attend now chiefly to the saving of his soul, and to the making of the truth known amongst his disciples: for which end he should endeavour to assemble his people in every place, and explain to them the nature of what they had served hitherto; after which I would lay open to them the way of salvation, and then leave them their choice. With what mind he received this, I cannot confidently say, His features did not alter; and he seemed to be willing.

We then separated; and, with a few encouraging observations, I earnestly entreated him to consider the matter before God.

July 12.—In another visit from the Gooroo, I again pressed him to abandon the scheme of collecting the money from his people; and to secure his own estates, but to relinquish all the rest. To this he professed his assent; and then asked me what I thought that he should now do. I told him, that I could not but wish him to come forward, and openly to declare his belief in the Saviour of sinners, and to become a Christian teacher to his people. He gave no definitive answer; but intimated his consent in general, and then we parted.

I was surprised to hear from him to-day, that he is already 85 years of age; as his appearance, with the exception of his grey hairs, does not indicate more than 50 years.

Aug. 20.—The Gooroo, whom I have not seen for several weeks, visited me again. His absence had again awakened doubts respecting him. He said that he could not come, on account of business at a little distance from Madras, relative to dissentious among his disciples, which he had to adjust. He still continues his expressions of becoming "one soul and body" with me, because I teach the way of truth and salvation. He said that nearly all his people have been made acquainted therewith. When he passes through the streets, the people will say, "There he goes, again, to the European minister." I asked him, "Do you still read, or have read to you the Word of God?" "Certainly," said he: "how can I be without it?" I asked further: "Have you thought on what I told you in our last conversation?" He answered, "Yes: I cannot forget your words, which struck into my heart. Though I be absent from you, my mind is with you."

Before he will receive Christianity openly, according to what I collect from him, he wishes to go to Combagona, one of his convents, to settle a matter there; one of the people there pretending the adjoining lands to be his. He earnestly wishes me to attend him on this journey, to help him to judge his people, and to give them instructions. I asked whether, in the places on the road, he had assemblies of his people? He said, "Yes." I added, that, if I were to travel with him, I would make it my chief business to preach the Gospel to the people assembled. He perfectly agrees with it, and wishes it. I told him to settle his mind on the subject, and to let me know. He then left me.

By this conversation, I have been again a little encouraged in my fears concerning this man. Very remarkable indeed would it be, if we should travel together, to set the word of salvation before the vast number of his people, whom he hitherto suffered to lie in ignorance. I have often

exhorted him to become a true Gooroo to them : he need not change his office, but its object ; and how great his responsibility will be, if, knowing the truth, he should leave his people in ignorance ! Perhaps, by the mercy of the Lord, he has not forgotten that, and wishes to do what he can.

Sept. 4.—The Gooroo visited me to-day. Among other things, I requested him for some information respecting their baptism ; or, as it should rather be called, their consecration. After giving me this account, he added : “ But, since I have received the consecration of wisdom, I do not perform this consecration of ours myself ; but I order another to do it in my presence.” On which I said, “ But can you quietly suffer these things, which you acknowledge to have no just foundation, and to be utterly vain ? Whether you perform it yourself, or it be done by your command or permission, it depends always on you.” He replied : “ It is the general custom of the world. I sit silently contemplating within me, and care for my own soul.” I answered, “ But will you then leave the people in ignorance, because it is the custom ? If they perish in their ignorance, their blood will be required from you.” To support which I read to him, Ezek. iii. 17, &c. to all which he gave freely his consent. “ But,” he added, “ if I now leave off all these things, the people will say, ‘ He is become a fool ! let him go ;’ and they will take away all my means of support.” I asked, “ Shall we then fear men more than God ; or honour men more than God ?” And, taking up his own words, that he cared for his own soul, I asked what he meant by that ; and pressed closely on him to tell me plainly, whether he really believed in the Lord Jesus Christ as his redeemer ?” He took different rounds, declining a direct answer, and always professing to stay himself on God. Perhaps I was too inquisitive. The man appeared rather mysterious. I am satisfied however that he knows, at least, what the truth is. On former occasions, when I questioned him on such points, from which he understood my suspicions, he used to say, smiling, “ You don’t know me yet ; bye and bye you will.” He discovered to-day more fear of man. He is going again for eight days to a neighbouring place, and promised to see me again after his return.

By a Member of the Committee.

Meanwhile, adverting to this singular case, a member of the corresponding committee wrote as follows. *Sept. 1816* :

“ I cannot divest my mind of suspicions of the Gooroo’s objects, and of his sincerity ; but if Mr. Rhenius should fail in his endeavours to make a proselyte of him, the Society at home, and all who

read the journal, will see that they have no mean difficulties to overcome ; and that here Satau’s kingdom is not only founded on ignorance, but upheld by dissimulation and cunning. It will equally manifest to those who argue on the prejudices of the natives as insurmountable, that they can hear and talk on these things, and even put on the appearance of Christian humility ; and that now, as of old, it is the love of the world alone that blinds them to their spiritual interests. Those who talk of native prejudices, have themselves prejudged the question ; they have neither tried to decrease them, nor have they enquired how they may be decreased. Should our suspicions of the Gooroo be confirmed, this cannot injure the great cause in which we are engaged. That is in the hand of the Most High.”

Mr. Rhenius’s Account resumed.

Nov. 29.—The Gooroo, whom I had not seen for a long time, visited me again. I asked him what he now thought to do. He replied, “ I will go to Rasi :” which is a place where pilgrims assemble ; “ Here, in Madras there is nothing for me to do ; here is much wickedness.” “ For that very reason,” I replied, “ there is much for you to do, if you have at all any of the power of divine truth within you ;” and then enlarged on the vanity of all such projects ; telling him what I would do if I were in his stead. I myself felt joy during the conversation ; he also seemed to be moved ; I felt much for him. I still think him not to be a mere hypocrite. That he had a worldly object in view, in associating himself with me, I doubt not ; yet I feel persuaded, that, if he had succeeded, it was his intention to avail himself of his success, in professing Christianity with greater ease. His plan failed ; and he now wavers, fearing man more than the Lord.

Feb. 13, 1817.—The Gooroo was here. I urged him again to shew the evidence of his true faith by openly renouncing heathenism. It is singular, he knows that I have not, nor will do any thing in respect of his money-matters, yet he continues to express his most sanguine wish for becoming united with me. He has renewed his efforts to obtain the establishment of his office. I felt more and more, that his anxiety for obtaining an office which rests on idolatry, and must cease when idolatry ceases, cannot be reconciled with his profession of adhering to the gospel ; and I accordingly expressed these sentiments still more strongly to him :

When speaking of the Saviour, he said, “ I seek his grace, daily think on him, and pray to him.”

At the close of our conversation, see-

ing the difficulties with which he has to combat, I felt myself inclined to pray with him. He had no objection. We then knelt down, and I prayed the Lord Jesus for him in particular, and for the whole body of the heathen; may this poor man be brought nigh to him.

Feb. 24.—I had to-day a conversation with a native Christian, who frequently attends the Gooroo. He had no doubt but that the intentions of the Gooroo are to become a Christian; several years ago he had already left off many of their foolish ceremonies; but, since his acquaintance with me, he has done this still more.

After he left me on the 13th he went to some of his acquaintance, who immediately addressed him, "You have been again with the padre (a priest), who blasphemous our gods." The Gooroo replied, "What gods? Bramha!—Vishnoo—Siva!—these are no gods. 'They were Lords in the world.'" "If you say so," they replied, "then our sect will be extinguished."

By another Member of the Committee.

March, 1817.—"Of the Gooroo, I am sorry to say, our hopes are nearly all gone. The story which he tells, of his being the regular and lawful descendant of the late Chief of the Pandarams, may be very true; and it may be true also, that the person who seems now to bear the sway at Combaconum, which has been considered as a sort of head-quarters of the sect, is an usurper; with this we have nothing to do. But, alas! there appears very great reason to fear, that his chief aim, in pretending to attach himself to Mr. Rhenius, was only, through Mr. Rhenius's friends, to dispossess the usurper, and to get the whole power into his own hands. He seems to have been acting a deep part, for a mere worldly and ambitious purpose; and has carried himself, certainly, with a very great measure of the cunning and dexterous address of the natives of India. He is still about Mr. Rhenius occasionally; but the pretence of being firmly a Christian appears almost utterly gone. Artifices and disappointments of this sort we must be prepared for; and not be greatly mortified or discouraged when they occur."

TANJORE.

Previous to the 23d Feb. 1818, the Lutheran ordination was conferred, at Tanjore, on three of their oldest catechists, Pakiyaden, Wiswasanaden, and Nulalambi. The death of the late Wedunazagam and Santianaden had rendered this measure necessary, and Mr. Kolhoff prays that they might be allowed salaries. The late Santianaden had been zealous in propagating the Gospel of Christ in the

Tinnevely district; and, in his advanced age, he endeavoured, as far as possible, to be useful in the Tanjore mission. Wiswasanaden was stationed at Cumbagom; and the other two had been sent to the Christians at Shevavonga, Madura, and Ramanad. Nianaparagasam and Adeykalani had faithfully assisted Mr. Pohle and himself at Tanjore; and Abraham had been useful in the discharge of his duty, in the congregations of the Tinnevelly district.

The Report observes, that the ordination of the Native Catechists by no means supersedes the necessity of Missionaries from Europe, the natives being to be considered as useful instruments in the hands of such as can direct them, and nothing more.

CALCUTTA.

HINDOO DEISTS.

June.—The Motheistical doctrine of religion, so readily reconciles itself to every mind capable of reflection, and the puerility of the contrary system is so apparent to those who have the courage and independence to think for themselves, that the number of Hindoos who openly profess the Vedantic doctrines increases in a very rapid progression amongst that class, especially whom birth, education, and station in life, as well as intellectual endowments entitle to the term respectable. With the slavish system of idolatry, such a host of prejudices inimical to the best interests of society at once vanish, that the philanthropist cannot but partake of the pleasure with which we note the occurrences that indicate its approaching overthrow. Amongst these the most obvious, perhaps, is the frequency with which the professors of the purer doctrine meet together, with the view of promoting free discussion, as the readiest means of strengthening themselves in the maintenance of what they have come to consider as truth. We have heard of another of these meetings, held at Kidderpore, on Sunday, the 30th May, at the house of Motu Chundru, a near relation of the Rajah of Burdwan, and a divan in the Salt department. This gentleman having closely studied the Vedantic system, and investigated the arguments advanced against it, has warmly embraced its doctrines, and to manifest the sincerity of his opinions, invited a number of his friends to an Unitarian meeting, similar to those we have already had occasion to describe; but, from the rank and character of the convoker, more numerous attended than usual, by Hindoos of the first respectability and learning. The following translation may serve as a specimen both of the poetry composed for this

occasion, and of the opinions professed by the audience.

See Time's destroying hand efface
Each form that vision's power can trace,
Think you then human sight extends,
To Him on whom e'en Time depends ?
That soul if no one can pourtray,
Which animates our mortal clay,
Say how can human eye embrace,
The Mind that fills all Nature's space ?
Indian Gaz.

LONDON.

British and Foreign Bible Society.

Works completed during the Year.—

—The Arabic Psalter, from the version printed at Mount Lebanon, 3000 copies. —The Hindoostanee New Testament, by Martyn, 5000 copies. —The Malay New Testament, in the Roman character, 10,000 copies. —The Ancient and Modern Greek Testament, in parallel columns, 8000 copies. —The completion of the Syriac gospels, and Acts of the Apostles, printed under the direction of the late highly respected Dr. Buchanan. —The Turkish New Testament, at Paris, 5000 copies. The Arabic Psalter and the Hindoostanee New Testament, above mentioned, have been stereotyped at the expense of the Church Missionary Society. The Malay Bible, in Roman character, 5000 copies. —The Malay Bible, in the Arabic character, 5000 copies ; and 5000 extra Testaments, for the Netherlands Bible Society, in addition to those printing by that Society. —A new translation

of the Testament into modern Greek, by an Archimandrite of Constantinople. —The Syriac Old Testament, 4000 copies, quarto, to accompany the New Testament, before printed. —Of the Arabic Bible, noticed in the last report, only the Psalter above mentioned, has yet been printed ; that being the only book, printed at Mount Lebanon, which the Society has yet been able to procure ; and it having been considered desirable to follow the version used in that country, for such books as have been printed, supplying the deficiency by a careful collation of the MSS. in this country. —Turkish Bible. Through the indefatigable attention of Professor Kieffer, the editor, aided by the advice of Baron Sylvestre de Sacy, the New Testament has been completed at Paris ; and preparations are making to accomplish the printing of the whole Bible, under the same superintendence, with all practicable despatch.

Your committee cannot advert to the different Oriental works, either printed or in a course of preparation, without being reminded of the obligations which the Society owes to the Rev. Mr. Lee, Professor of Arabic in the University of Cambridge, for his services in this department. It is hoped that his exertions, together with those of Dr. Macbride, Arabic Reader in the University of Oxford, will tend to diffuse a taste for Oriental studies, and thereby promote, essentially, the Society's object in the east.

ASIATIC INTELLIGENCE.

THE fall of Copal Droog has been already intimated in private letters, and also by a division-order of Gen. Pritzler. Below will be found the official accounts of the operations of the siege, in which it is stated that the rebel leader, Vccrappa, was captured with the fort.

INDIA—BRITISH TERRITORY.

Political—Official.

General Orders by his Exc. the most noble the Governor-gen. in Council.—Fort William, 3d July 1819.

The most noble the Governor-gen. in Council, considering it inexpedient that fortresses of such peculiar importance as Agra and Asseerghur should be left to the chance command of the officer who may happen to be at the head of any battalion temporarily stationed in them, is pleased to resolve, that those fortresses be henceforth constituted permanent government commands, with the same scale of

staff salary, viz. rupees 500 per mensem, as granted for the command of Allahabad.

MILITARY AND POLITICAL APPOINTMENTS.

July 3.—Lieut. col. D. McLeod, C. B. 11th N.I. to be commandant of the fortress of Agra.

Capt. John Canning, 27th N. I. to be political agent at Aurrungabad, under the resident at Hyderabad.

Capt. H. Maxwell, 22d N.I. to command the guard attached to the resident for the states of Bundelcund.

OPERATIONS OF THE ARMY.

Official—published in India.

SIEGE OF COPAL DROOG.

Fort William, 12th June 1819.—In directing the publication of the following documents for general information, His Exc. the Governor-gen. in Council is pleased to express his high approbation of the activity, vigour, skill, and judgment, displayed by Brig-gen. Pritzler, and of the

gallantry and animated spirit of the force under his command.—The Brig.gen. has noticed those officers who had the enviable opportunity of particularly distinguishing themselves; and the applause which he justly bestows has the entire concurrence of the Governor-gen. in council.—His Exc. also laments the loss of that promising young officer, Ens. Elliott, of the Rifle Corps, for whose early death, in the commencement of his career, the only consolation that his friends can receive, must be, that he fell with honour, devoted to the service of his country.

By command of his Exc. the most noble the Governor-gen. in council.

C. T. METCALFE, Sec. to the Govt.

Copy of two despatches from Brig.gen. Pritzler, reporting the arrival of his force at Copal, the occupation of the Pettah, and the commencement of operations against the fort.—Transmitted by the resident at Hyderabad, 14th May.

Head Quarters Field Division, Camp near Alwundie, 7th May, 1819.

To Henry Russell, Esq. Resident at Hyderabad.

SIR:—I have the honour to acquaint you that the division under my command as per margin,* entered the territories of his highness the Subadar of the Dukun, this morning, and encamped at this place.—I have, &c.

(Signed) T. PRITZLER, Brig.gen.

True copy, (Signed) H. RUSSELL.

Head Quarters Field Division, Camp before Copal Droog, 9th May 1819.

To Henry Russell, Esq. British Resident.

SIR:—I have the honour to acquaint you, that I encamped before Copal Droog yesterday, and employed the morning in reconnoitering the fort. In the evening I moved down with the intention of carrying the Pettah and establishing a post for a mortar battery; but I was met by a man who said he was a brother to Veerappa, and that the fort should be given up. I therefore halted, and directed eight companies to proceed to take possession of it; but on arrival at the gate they were refused admittance by the garrison, and returned, accompanied by the man who came out to meet us.—Seeing that there was no prospect of getting possession of the fort as was proposed, I

* H. M. 22d lt. drag. 3 troops; detachment of 1st N. C. 4 troops; flank bat. 6 companies; rifle corps, 8 ditto; 2d bat. 4th regt. 5 ditto; 2 bat. 12th regt. 10 ditto; 2d bat. pioneers, 3 ditto.

Detachment of Artillery Ordnance.

Iron guns, 18 pounders, 4; howitzers, heavy five and half inches, 2; ditto, light five and half ditto, 2; brass guns, 18-pounders, 2; ditto, 6 ditto, attached to H. M. 22d lt. drag. 2; brass mortars, 8 inches, 3, ditto, five and half ditto, 1; Donab auxiliary horse, 100.

established a body of troops in the Pettah, and occupied the position for the mortar battery, which was armed during the night with nine mortars and two howitzers; a brigade of brass 12's, and a brigade of 6 prs. was also got into the pettah, which, with the mortars, opened their fire between two and three o'clock this morning. Preparations are now making for the formation of a breaching battery, which I am inclined to think the wall will not long withstand. Mahomed Edroos Khan arrived last night, and was joined by his troops this morning, which I propose to detach against Bhauder Bunda, a hill fort dependant on Copal Droog, whilst we are carrying on the siege of the latter place.—I have, &c.

(Signed) T. PRITZLER, Brig. gen.

Copy of a letter from Brig.gen. Pritzler, describing the progress of his operations against the fort of Copal. Transmitted by the resident at Hyderabad, 16th May.

Camp before Copal Droog, 11th May, 1819.

To Henry Russell, Esq. British Resident.

SIR:—On reference to the subject of my letter of the 9th instant, I have the honor to acquaint you that yesterday morning a breaching battery of two 18-pounders was opened upon the wall of the lower fort; in the evening a third 18-pounder was got into the battery, and I have every reason to hope that the breach will be practicable by sun-set this evening.

I have, &c.

(Signed) T. PRITZLER, Brig.gen.

Copies of two dispatches, from Brig.gen. Pritzler, reporting the surrender of the lower fort of Copal, the successful escalade of the upper works and the capture of Veerappa, the rebel leader. Resident Russell observes:

"I am sure that the promptitude and vigor with which this service has been executed will obtain for Brig.gen. Pritzler, and the gallant troops under his command, the high honor of his Lordship's approbation.—The plan of the attack seems to have been framed with equal prudence and decision, and the formidable obstacles which opposed the advance of the troops, served only to excite their ardor and perseverance. The capture of Veerappa's person will put a total and immediate stop to the rebellion."

Camp before Copal Droog, 12th May, 1819.

To Henry Russell, Esq. British Resident.

SIR:—After closing my letter of yesterday, I went down to the batteries, with

a view to ascertain that the breach was practicable, and that every necessary arrangement had been made for storming the lower fort, which I had directed to place at daylight this morning, when two men came into request cowl, which was granted to them on their giving up the two principal gates, and which were occupied by our troops immediately. Veerappa who with about five hundred men, retired into the upper fort, has sent a letter to Mahomed Idroos Khan, and if he does not immediately accept the terms which had in consequence been offered to him, I shall prosecute the siege.

I have, &c.

(Signed) T. PRITZLER, Brig.gen.

Camp before Copal Droog, 14th May, 1819.

To Henry Russell, Esq. British Resident.

Sir:—On reference to the subject of my letter of 12th inst., I do myself the honor to acquaint you, that all negotiations ceased with the enemy about ten o'clock yesterday morning, and perceiving that nothing but a very strong and decided measure would prevent a long and protracted siege, I determined to carry as many of the lower works by escalade, as could be accomplished, for which purpose the troops specified in the margin,* were placed in the batteries, and at 12 o'clock they moved out under the fire of all our guns and mortars, commanded by Lieut. col. Fraser, 12th N.I. in two divisions, the first or left attack under the command of Capt. Tew, H. M. 34th reg., and the 2d or right attack under the command of Capt. Cuppedge, H.M. 53d reg. These columns were conducted, the first by Lieut. Grant, and the second by Lieut. Oliphant of the engineers, and Capt. Smithwaite commanded the pioneers, who carried the ladders. The left attack moved on without much opposition, till it arrived at the first gate, which was, however, blown open by a galloper gun of H.M. 22d L. D. under the command of Lieut. Gregory, to whom much praise is due for having carried it through a heavy fire, and up a road apparently impracticable for any wheel carriages. The right attack formed the wall they were to escalade, very high, which rendered the operation slow and tedious. I therefore detached Capt. Jones of H. M. 69th reg. with the reserve to follow up the left attack, and the whole of the three parties formed a junction at the second gateway; from which they pushed the enemy, who disputed every inch of ground through two gates to the very summit of the hill, where

they begged for quarter.—Such a service could not be performed without some loss; and when I reflect upon the strength of the enemy's works, and the power they had of throwing down stones, I am astonished that it was so trifling, having only six killed and 51 wounded, and which can only be accounted for by the spirited manner in which the officers and men did their duty; but I have to lament the loss of a very promising young officer, Ensign Elliot of the rifle corps, who fell when exerting himself to the utmost near the second gateway. I have also to lament the loss of the service of Capt. Dun, Assist.qr.mast.gen. and Lieut. Pringle Taylor, severely wounded, the former employed to explain my orders to the left attack, and the latter who happened accidentally to be on the spot was permitted to advance with it; both these officers as well as Lieut. Silver of H. M. 53d reg. were wounded, when shewing an example of the most determined bravery to the troops. A squadron of H. M. 25th Lt. Drag. under the command of Capt. Mills, was so placed as to cut off the enemy's retreat in the event of their attempting one, but the attacks were too spirited to give him time to think of it before they were driven up the hill.—Where every officer and soldier employed did their duty to the utmost, it is difficult to point out those who most distinguished themselves; but I feel much indebted to Lieut. Grant of the Engineers, for the very judicious situation in which he placed the batteries, planned the attacks and conducted one of them, and he was ably assisted by Ens. Oliphant.—To Maj. Cleveland of the artillery much praise is due for the judgment which he shewed in so well directing the fire from the batteries, and the officers and men of that corps, as well as the artillery troop of H. M. 22d L. D. are entitled to every credit for the admirable manner in which the guns were served, both before and during the attack: and the excellent practice which was made. Nothing could exceed the zeal shewed by Lieut.col. Fraser, Capts. Tew, Cuppedge, and Jones, commanding the different parties, and every thing that could be done by men was accomplished by the troops under their command.—To Capt. Smithwaite and the Pioneers I feel much indebted for their unwearied exertions, constantly exposed to a very heavy fire; and much praise is due to Dr. Trotter, and the medical officers generally, whose assistance was upon every occasion and in every situation so promptly afforded.—To the Assist. adj.gen., Lieut. Watson, and Assist.qr.mast.gen. Capt. O'Donnoghue, I feel much indebted for their great exertions, and the able assistance they afforded me, as well as to Capt. Dun, Assist.qr.mast.gen.,

* *Left attack.* 1 comp. and a half flank batt. 1 comp. rifle corps. 14th reg. N.I. 1 12th reg. N.I. *Right attack.* 1 and a half comp. flank batt. 1 rifle corps. 1 4th reg. N.I. 2 19th reg. N.I. *Reserve.* Capt. Jones, 1 comp. flank batt. 1 comp. rifle. 1 comp. 4th N.I.

and to my aide-de-camp, Lieut. Brown: of H. M. 25th L. D.—I enclose a return of killed and wounded, and ordnance captured.—I have, &c.

(Signed) T. PRITZLER, Brig.gen.

Return of Ordnance captured.

Iron guns.—One 11-pounder, unserviceable; four 12-pounders, one serviceable; one 9-pounder, four 6-pounders, one 4-pounder, two 3-pounders, two 2-pounders, all serviceable.—*Brass guns.* One 42-pounder, one 3-pounder, one 2-pounder, all serviceable.

DISTRIBUTION OF THE ARMY.

The Saugor field force, under Col. Dellar, arrived from Asseezghur at Hoshungbad, on the 3d May.

Early in July, arrived at Kurnaul, the 2d bat. 5th reg. and the 6th reg. cav.; the former commanded by Maj. Patton, the latter by Maj. Thompson.

REDUCTION OF BUDDYA.

The fort of Buddya, near Sultanpore Oude, has been reduced by Maj. Logie. One European officer, the Subadar major, and three privates killed. The enemy is said to have lost thirty-seven men.

Cal. Gov. Gaz. May 27.

RELATIONS WITH THE NATIVE POWERS.

Unofficial.

COURT OF HOLKAR.

A private letter, dated Indore, 15th May, announces the marriage of his highness the Mulhar Rao Holkar to Chanda Bye, and describes some interesting circumstances attending to it. The celebration of the marriage ceremony took place

on the 3d May, on which occasion the resident, with Sir John Malcolm, accompanied by a number of officers, were present, and made the customary presents to the Maharajah, to his mother Kysrera Bye, and to his two consorts Jejee Bye and Chanda Bye. From the durba, they accompanied the Maharajah in procession to the bride's mansion, where he retired to a separate apartment in which the marriage rites were performed. The bride being of Rajpoot extraction, and of a higher caste than the bridegroom, a peculiar ceremony was in consequence observed. In Hindoo marriages, it is the custom for the bridegroom to stand on one side of a suspended cloth, the bride being on the other side; upon the Brahmin's clapping his hands, the cloth is dropped, and the bride advancing to her husband, throws a garland over his neck; they are then constituted man and wife. But on this occasion, a sword was substituted in the place of the Maharajah, and the bride was formally married to the sword. The signification of this strange ceremony is said to be, that the sword of state prevails over the consideration of caste.—After the Maharajah had returned to the assembly, his young bride was brought in, veiled, in her bridal attire, and seated by his side. She was between nine and ten years of age, and very good looking and fair, of which she allowed the assembly to judge by uncovering her face without any affectation of reserve.—The new married couple went from the bride's house, seated on the same elephant, in procession round the city with great pomp and parade, and the ceremony was not terminated till midnight.—On the 7th, the Maharajah gave a marriage entertainment to the resident, Sir John Malcolm and suite, and this has been succeeded by a series of entertainments given daily to the various officers of government, the principal citizens, Brahmins, Marattas, Mussulmans, and respectable persons of other classes.

CALCUTTA.

CIVIL APPOINTMENTS.

June 11th.—Mr. G. Manwaring, register of the zillah court of Juanpore.—Mr. R. H. Scott, register of the zilla court of the 24-Pergunnahs.

June 25th.—Mr. E. Molony, register of the zilla court of Bardwaun.

July 2.—Mr. W. J. Turquand, register of the provincial court of appeal and court of circuit, division of Calcutta.—Mr. W. Wollen, assist. to the magistrate of Jessore.

July 16.—Mr. L. Keunedy, 1st dep. opium agent in Behar.

GENERAL MILITARY REGULATIONS.

Fort William, 3d July, 1819.—It having been brought under the notice of government, that inconvenience frequently occurs to the troops under the presidency, from the refusal of sheriffs and others to receive in exchange for articles purchased from them, the money in possession of the soldiery when not the local currency of the place; the most noble the Governor-gen in council, with a view to obviate future inconvenience of this nature, is pleased to direct that in all cases of detachments moving from one province to another, where a different currency prevails, the officer commanding shall receive from his men, the money brought by them from the province they have left, and apply to the nearest collector to exchange it for a corresponding amount in the currency of the district; that is to say, for one hundred (100) Calcutta sicca rupees carried by the soldiery from the lower to the western provinces of this presidency, they will be entitled to receive one hundred and four and a half (104½) rupees of the Benaras, Gurrackabad, or Luknow currency; these being all considered in the payment of the military, as of equal value with the Sonat rupee and vice versa, for one hundred of either of these rupees received in the western and brought into the lower provinces, the soldiery will be entitled to receive in exchange rupees ninety-five and eleven annas, Calcutta siccas.

MILITARY APPOINTMENTS AND PROMOTIONS.

June 19.—Extract of a letter from the hon. the court of directors, dated 5th Feb. 1819, in answer to a letter from Bengal.

2.—It having been certified to us, that Capt. F. A. Weston was detained in Switzerland, by serious illness, Feb. 1815 to July 1817, and it appearing that after the last mentioned date he proceeded to his duty with all practicable expedition; we are satisfied that his absence from India beyond the prescribed term of five years was occasioned by sickness, and the rt. hon. the board of commissioners for the affairs of India having concurred in this opinion, we direct you to re-admit Capt. Weston into the Company's service, agreeably to the provisions of the act 33d Geo. III. cap. 53. s. 170.

June 26.—Cadets J. Ludlow, D. Thompson, P. Brown, J. G. McGregor, J. Swetchnam, C. Haldane, G. N. Prole, W. S. Prole; to be ensigns.

1st. Rampoora Local Cavalry.—Edw. O'Brien, gent., to be Local Cornet; vice Pyke, deceased; date of rank 31st May, 1819.—Lieut. Evan Macleod, 18th reg. N.I., to be Fort-adjutant of Chunar; Capt. M. Thomas, 27th reg. N.I., to be

Fort-adjutant of Allahabad; Capt. Wm. Ball, 14th reg. N.I., to be Fort-adjutant of Agra; Lieut. Alexander Pope, 8th reg. light cav., to be adjutant of Native Invalids at Allahabad, and Paymaster of Native Pensioners, vice Burroughs, appointed a District-barrack-master.

Infantry.—*July 3.*—Brevet Col. and Sen. Lieut. col. G. Hanbury Pine, to be col. of a reg., from the 24th Jan. 1819; vice Crow, deceased. Sen. Maj. Dennis Harman Dalton, to be lieutenant-colonel; vice Baillie, retired with rank from the 9th Dec. 1818, vice Lumsden, retired. Maj. Watson Hunter, to be lieut. col.; vice Nicholl, retired with rank from the 14th Jan. 1819, vice Arnold, promoted. Maj. R. J. Lattert, to be lieut. col., with rank from the 24th Jan. 1819; vice Pine, promoted.

29th N.I.—Brev. maj. and Capt. J. Owen, to be maj.; Brev. capt. and Lieut. Patrick Martin Hay, to be capt. lieut.; from the 9th Dec. 1818, in succession to Dalton, promoted. Capt. lieut. P. M. Hay to be capt. of a company from Jan. 1, 1819.

29th N.I.—Capt. R. Clement Garuham, to be maj., from the 14th Jan. 1819, vice Hunter promoted. Supernumerary Capt. J. McGregor, is brought on the strength of the reg.

30th N.I.—Capt. T. Gilbert Alder, to be maj., from the 24th Jan. 1819, vice Latter, promoted. Supernumerary Capt. W. Mackie, is brought on the strength of the reg.

9th N.I.—Brev. Capt. and Lieut. J. Thomas, to be capt. lieut., from the 21st Oct. 1818, vice Oliver, promoted. Capt. Lieut. J. Thomas, to be capt. of a company, from the 1st Jan. 1819, the rank of capt. lieut. abolished. Capt. W. Swinton, 21st N.I., to be barrack master of the 4th, or Ghazepoor district, vice Paterson, deceased. Brev. Capt. T. F. Hutchinson, 5th N.I., to be Fort-adjutant of Delhi, in the room of Capt. Gowan, nominated a district barrack master. Lieut. J. J. Casement, 19th N.I., to the command of the dromedary corps, in the room of Lieut. J. W. Paton, nominated a district barrack master. Lieut. col. R. Francis, 4th N.I., transferred to the invalid pension establishment from the 1st instant. Surg. R. Lowe, 9th N.I., to officiate as superintending-surg. during the absence of superintending-surg. O'Neil, on leave beyond sea, on sick certificate. Surg. J. Sawers to be superintendent of the Insane Hospital at the Presidency, vice Robinson, deceased. Assist. surg. J. Mellis, M.D. to be surg. vice M'Nabb, retired with rank, from 21st May 1819, vice Balfour, deceased. Ensigns J. Scott,* J. Stiles, S. Boileau, to be lieuts.; date 1st Jan. 1819. Capt. Llewellyn Conroy, 12th

* In a subsequent order "Smith" is altered to "Scott," as an erratum.

N.I., has been permitted by the hon. the Court of Directors to return to his duty on this establishment, without prejudice to his rank.

July 7.—Cadets of inf. and Assist. surgeons Mr. G. Glasgow and Mr. G. Carey, are admitted. Cadet P. Stewart, in the med. dep., to be ensign.

July 10.—Lieut. R. Bruce, 1st N.I., has been permitted by the hon. the Court of Directors, to return to his duty without prejudice to his rank.

July 17.—Lieut. col. R. Morrell, from the Cawnpore provincial bat., to command the Moorshedabad provincial bat. Lieut. S. P. C. Humfrays, 18th N.I., to be sub-assist. com. gen., vice Hunter, deceased. Cadets J. D. Dyke, cav.; J. W. Dunbar, N. Lewis, J. George, H. C. Williams, E. Poole, inf.; to be severally cornet and ensigns. Local Cornet W. O'Brien, of Sneyd's frontier horse, is transferred to the Chumparum light inf. batt.

July 17.—Capt. C. H. Campbell, artillery, to officiate as assist. sec. in the mil. depart.

FURLONGHS.

June 26.—Capt. J. Anderson, 27th N. I., to Europe. Maj. G. Becher, assist. com. gen., extended six months.

July 10.—Capt. Buckley, 18th N.I., to Europe. Lieut. E. Walker, 22d N.I., to sea for six months.

LOCAL AND PROVINCIAL.

Particulars of the late indisposition of the Governor General.—The medical bulletin (last number p. 70) does not specify the nature of the transient illness which occasioned so much anxious inquiry in the community respecting the health of the noble Marquis. Towards the end of the litany (at a period of the service when the congregation had been long kneeling) his lordship suddenly fainted away, when the Marchioness and the Aides-de-camp immediately flew to his aid. His Exc. was not ill more than two or three minutes; meanwhile the bishop loudly called for medical aid, and this call was repeated by many voices. His lordship was not desirous to quit the cathedral; but when he did so, he drew the arm of the Marchioness under his own, and walked down the aisle without any assistance whatever. All the aides-de-camp, except one or two, returned into church, after attending his Exc. to his carriage. About half an hour after his lordship had retired, a paper signed by Dr. McWhiter, stating that his lordship was quite recovered, was brought into the cathedral, and handed round while the second psalm was singing. On the following day his Exc. was quite recovered, feeling only a little weakness from the effects of medi-

cine, and was attending as usual to his arduous public duties, which had not suffered the slightest interruption.

Amphion Club.—Early in 1819, a new musical society was established in Calcutta under the name of the *Amphion Club*. The number of members is limited to forty, each member to pay an entrance fee of twenty rupees, and a subscription of sixteen rupees per month, to be collected a month in advance. Each member to be entitled to an admission ticket on visitor's nights for all the ladies of his family, and he may be able to procure a visitor's ticket upon sending ten rupees with the application to the managing directors. The meetings are to take place at seven o'clock in the evening precisely, when the instrumental music will commence; at half past nine the directors are to stop the music, and the president for the evening is to take the chair at the supper table. He is not on that evening to be at liberty to hand any lady, but is to seat himself at the head of the table, and call for the glees and catches, as specified upon the card of arrangement. At half past eleven precisely, the president is to quit the chair, after which, on no account, is a cork to be drawn. It is also declared that no songs shall be called for, while the president is in the chair, by any one but himself. The following gentlemen have been requested to act as directors for the first quarter:—Maj. gen. J. S. Wood, James Young, Esq. Hon. C. R. Lindsay, Wm. Prinsep, Esq.

The meetings are to be held at Mrs. Hastie's assembly rooms.

Prevalence of Forgery.—The crime of forgery has lately become nearly as prevalent at Calcutta as in England, and this dangerous crime has been practiced much more successfully in our Indian capital than it ever was in that scene of all iniquity, London. The forgeries on the Bank of Bengal, however, are only of recent origin; but the following statement displays a degree of ingenuity and management entirely of native origin, which shews what an extensive degree of injury might have resulted from a combination of so much talent and roguery. We understand that the engraving of the notes was most admirably executed, and indeed that the notes were altogether so excellently imitated that it was with difficulty the cheat could be discovered.—*Madras Courier*.

“In our number of the 9th July, we announced to our readers, that a discovery had been made of the individuals concern-

ed in the late forgeries on the Bank of Bengal, &c. We are gratified in being now able to add, that the active and judicious measures of Mr. Barwell, the magistrate of the 24. Pergunnahs, have been successful in developing fully the proceedings of these gentry, and gaining possession of the implements with which they carried on their schemes. It appears from his investigations, that the association consisted of six natives, three of whom had directed their talents to the engraving part of their business; two others managed the copper-plate press, and the sixth, a podar, disposed of the forged notes at such rates as would ensure a speedy sale. Every thing was carried on systematically, and great care had been taken to avoid detection at the scene of operations (the residence of the above persons, a little to the eastward of Kalli Ghaut), as well as to deceive the eyes of the unwary by the fabricated notes. A forged impression of a lottery ticket was also found, as well as of the stamp-office seal, so that the firm appears to have contemplated carrying on business on a very large scale, and according to a regularly organized system. The copper-plates, seal, forged notes, &c. were found buried in various parts of the compound, within which the houses of the individuals were situated, on the 28th and 29th July.—All the six persons concerned have been apprehended, and are now in jail. One plate, from which Bengal Bank notes for 500 rupees were taken, was sent to the Bank of Bengal, the treasurer of which, we understand, immediately paid a reward of 500 rupees, to be distributed amongst those who discovered the offenders. Another plate, purporting to be of the Bank of Hindostan, for twenty-five rupees, was also sent to that establishment. Thus has been detected and crushed a complicated scheme of rognery, entirely of native origin and management, which might have occasioned the most serious injury and alarm to the public, had it continued for any time in activity without being brought to light; and the above statements sufficiently demonstrate, that the warmest thanks of the community are merited by the active magistrate, whose talents have been exerted in sifting the matter so thoroughly as he has done.”

—*Bengal Hurkaru.*

This is one of the happy effects of beginning to teach the natives how to rival the Europeans in the arts and sciences.—*London Editor.*

The late Earthquake.—The extent of the late terrene convulsion can only be estimated by collecting the names of the places at which it was felt, and comparing the distance of the stations.

Muttra, June 19.—We had a smart shock of earthquake here on the evening of the 16th, between 7 and 8 o'clock, which lasted, I should imagine, about 30 or 40 seconds.

Chunar and Mirzapore.—About eight o'clock in the evening of the 16th June, the shock of an earthquake was experienced at these places. At Chunar the motion was accompanied by a noise in the atmosphere, which resembled that occasioned by the rapid flight of birds.

Mynpooree, June 20.—On the evening of the 16th, we had a slight shock of an earthquake; the undulating motion continued little more than a minute, and seemed to come from the west. It was felt very nearly at the same time at Futteghur, and at one of my police chokées across the Jumna.

Jionpoor.—A strong shock of an earthquake was felt here on the night of the 16th June, at a quarter past eight o'clock; there were three distinct vibrations from west to east, with the usual accompaniments of rattling wall shades, swinging punkabs, and flapping doors. There are different opinions as to its duration, which appeared to me about 25 seconds; the intervals were very distinct. It was not accompanied by the rumbling noise I have usually heard on such occasions, and which I have hitherto imagined to be the earth's vibration. Both the noise and motion must be separate effects of some unknown cause. The rains have not yet commenced, and the weather has been unusually hot.

Saltanpore, Oude, June 17.—A severe and awful shock of an earthquake was felt at this station last night, at seventeen minutes past eight, which lasted some time, and occasioned very considerable alarm. The Bungalows actually rocked, particularly the mess one of the 1st bat. 19th regt., in which the officers were at dinner at the time, and the huts of the soldiers were a good deal damaged. The heat for the last two or three days has been excessive, and not a drop of rain has yet fallen.

Apprehensions of a Famine in the Upper Provinces.—All our accounts from the Upper Provinces of Bengal, of late, have had a melancholy tendency, inasmuch as they express the greatest anxieties in consequence of the long prevailing drought of an approaching famine. The very thought of a repetition of this awful visitation in the populous and generally fertile provinces of Bengal, is sufficient to harrow up the very soul with dread and apprehension. A little rain had fallen at some of the stations, but not in sufficient

quantities to relieve the general impression.

Jionpoor, July 29.—I send you a further account of the want of rain at this place. The poor people are selling their infants at such low prices as to make it evident, that their object is rather to preserve the lives of the children than to maintain themselves from the prices they obtain for them, they are sold at from 8 annas to 8 or 9 rupees each.

I am sorry to add, that this unseasonable weather has been very prejudicial to the health of the Europeans at Benares, and in the neighbourhood many persons have been very ill; and although their disorders have been removed, the debilitating effects of the weather prevent a restoration of strength and health.

In consequence of the high price of grain, petty thefts have increased nearly threefold. A few instances, more daring than the rest, lead me to dread the consequences of further scarcity; and indeed we have every prospect of a famine, if we should fail to have forty or fifty inches of rain in August and September.

The only rain that has fallen in July, is as follows:—July 1st, 0.62, July 21st, 0.501, July 25th, 0.625. On the 22d and 24th, we had light showers for about two or three minutes, the quantity so small as not to wet the rain gage. Total since the 23d of June, 5.176 inches.

Allahabad.—"Letters from the neighbourhood of Allahabad mention that a little rain had providentially fallen in that quarter, which it was hoped might save the country from the prospect of famine, with which it was before threatened. There still however appeared to be a great deficiency, and it was expected that from the neighbouring districts neither indigo nor cotton could be expected, the plants having been ruined by the long continuance of dry weather."

Storms.—On the 24th July, about seven o'clock in the evening, a violent storm of thunder, lightning, and rain, occurred at Serampore; the lightning struck the flag-staff, and shivered the mast from top to bottom, wrenched the iron clamp at the foot of the mast, and discharged itself into the ground around the puckah building, that was erected to fit the flag-staff into. This was a most fortunate event, as there were three or four gentlemen standing at and near the window of Colonel Meisellback's house, all of whom might have been struck had the lightning touched the corner of the house. It was accompanied, at the same moment, with the loudest explosion that can possibly be conceived, as if a hundred cannon had been fired at the same moment.

At Mynpooree.—The rains set in on the 6th June, with one of the severest

storms in my memory, trees were blown down and broken in two; and it was necessary to call in the servants to keep the glass doors from being blown open, although they were protected by vane-tians.

Fugitive Moghuls, Sept. 1.—A letter from a gentleman at one of the upper stations mentions the following curious circumstances; "A few days ago a number of poor Moghuls passed through this place, saying that they had been driven from house and home by the cruelty of Runjeet Singh's soldiers, who had plundered and burned their villages, and put 18,000, particularly women and children, to the most barbarous and cruel deaths. They also declared that they were on their way to the presidency, to represent their miserable plight to the British government, from which they hoped to obtain redress. To what credit this story may be entitled, I know not, but they were literally starving, and appeared most thankful for a little money, bread and victuals, which some European gentlemen gave them."

SUPREME COURT, June 30.

Frightful Aggression.—In the course of the trials for this day, Rammohun Dass and Luckee were put to the bar, charged with having unlawfully assaulted Jugodomba, the wife of the former, and maltreated her in a most shocking manner. The prisoners pleaded not guilty, and the trial proceeded.

Juggodomba, having been sworn, deposed that the prisoner Rammohun Dass was her husband; that Luckee was a woman whom he had in keeping; that about six weeks ago they entered the house where she was, together, when some words ensued between her and her husband respecting his conduct in keeping the other prisoner; that he beat her with his shoes, calling her bad names, after which he threw her down, tied her hands behind her head with her hair, and directed Luckee to hold her down and cover her mouth and face, so that she might not make a noise; that Luckee did so, and her husband having heated an iron ladle, applied it several times to her body, in a most cruel and horrible manner. She further deposed, that for the space of three days afterwards she was closely confined, suffering great agony from the brutal inflictions of her husband, without being allowed food, water, or any kind of assistance. At last, the woman in whose house they lodged supplied her with some water, and afterwards, on a pretence of answering the calls of nature, she effected her escape, and contrived to get to her brother's house in the Loll Bazar.

Several other witnesses were brought

forward, who confirmed the evidence already given in all its material points, and further stated, that the unfortunate sufferer was subsequently conveyed to the house of another brother in the Jaunbazar, who had the prisoners apprehended and committed for trial. She was then taken to the native hospital, the assistant at which establishment, described the shocking manner in which the lower part of her belly was burnt, and her present deplorable condition.

The prisoners, in their defence, gave a positive denial to all the facts advanced in the course of the prosecution with regard to the offence itself, after which Sir F. McNaghten addressed the Jury for some time, expressing his abhorrence of the crime that had been perpetrated, and the necessity for making an example when cases of such atrocity occurred; which in the present instance was so aggravated from the circumstance of the abominable and cruel deed having been committed by a husband on the person of his own wife.

The Jury immediately returned a verdict of guilty against both the prisoners.

During the whole of this trial, the feelings that were excited throughout the court may be more easily imagined than described, as the extremes of horror and commiseration were mingled, from the cries of the poor creature when she happened to be moved, and the evidence that detailed the causes of her agony.

Baugandee, May 23.

Boy killed by an Alligator.—About five o'clock in the afternoon of Tuesday the 20th instant, some of my servants came running into the room in the greatest alarm, saying that an alligator had just taken away a boy about 14 years of age, from one of the ghats near the house. Every body near the place were seen running to the ghaut, to which place I proceeded in company with a gentleman, as fast as possible, in the hopes of rendering some assistance. A little after we arrived at the river side, some one among the vast number of the natives collected, cried out that he could see it, and on looking down the river, at a short distance, we clearly saw the alligator with the boy in his mouth; shortly after which he disappeared, then rose again, and elevating himself with his head out of the water three or four feet, he still held the boy in his mouth by the hand, and tossed him from one side to the other in the air with the greatest violence and rage; then dashing him on the surface of the water, with the hope, as we supposed, of dislocating his bones, the more easily to gorge him. This he repeated several times, but nothing at the moment could be done. In the hope of saving the boy's life, every thing was thought of to recover

the body, and people were sent off for fishermen residing near the place; but above an hour expired before they came with boats and drag-lines. On their arrival we provided them with these, in the hope of obtaining the boy, and after dragging with the line up and down the river near the place where they were last seen, we succeeded in hooking up both boy and alligator. The latter however made his escape, but the body of the boy was secured, and though dreadfully mangled with the loss of head and shoulders, was brought on shore and delivered to the parents for burial. The boats were again sent out, and again caught the alligator; but in drawing him to the surface of the water to harpoon him, he broke the lines and got away a second time. It being then very late in the evening, nothing more could be done; but the fishermen requested to attend the next morning to make another attempt. The alligator, as far as we could judge, was about 12 or 13 feet long.

Commercial.

Calcutta, July 18.

Business has been very much at a stand during the week, and we have consequently few alterations of importance to notice.

Business has been very much at a stand during the week, and we have consequently few alterations of importance to notice. The market is still very bare of cotton, and there is little disposition shown to purchase at its present price. Rice has declined a little on last weeks prices. Opium has advanced 10 rupees. There is a considerable scarcity of many descriptions of piece goods, there has been nothing doing in these, and our quotations remain without alteration. Sugar has experienced a further decline of from four to eight annas.

Europe Goods.—There has been some inquiry after British staples, which have experienced a rise, but there is no disposition shewn on the part of holders to force sales at present rates. In the event of there being no fresh arrivals soon, confident expectations are entertained of an advance on many articles.

Freight to London.—This is extremely

difficult to be procured at present from the very limited quantity of light goods in the market. Freight is only to be had in small parcels, for which £7 to £8 is paid. For a full loading £7 would be readily accepted.

Aug. 4.—The quantity of cotton which can be shipped to Europe this season will not exceed 13,000 bags, being about one-eighth part of the ordinary supply; none will be forthcoming from Bombay this season. The natives have come many hundred miles from the interior to repurchase the cotton they had previously sold.

SHIPPING INTELLIGENCE.

The Feniscowles, Capt. Humble, after leaving the pilot on the 2d of June, met with nothing but most heavy gales, which experienced no abatement as she got to the southward. At last, in lat. 12° 54' N. and 90° E. she had her bowsprit carried away by pitching in a tremendously heavy sea, and was obliged to bear up for Coringa, in order to repair damages. She reached that place on the 19th ult. and expected to be able to quit it soon after in prosecution of her voyage. It is to be feared that her cargo has sustained some damage.

The letter which gives this report also mentions, that a French or Dutch ship, which left Calcutta about the same time with the Feniscowles, had been obliged to put into Coringa, in consequence of most serious injury sustained in the same gales. On referring to our shipping list, it appears probable that this vessel is the Danish ship Autoinette.

Arrivals.—July 4.—Sappho, Stewart, from London 23d Feb. and Madras 27th June. — Passengers for Madras, Mr. N. A. Wood, assist.surg.; Lieut. T. Welland, 1st batt. 12th reg. N.I.; Messrs. J. Miller, T. W. Hands, and J. Hart, cadets. For Bengal, Mrs. Cath. Bruce, Capt. R. R. Bruce, N.I.; Mr. P. Stewart, assist.surg.; Messrs. G. Gurey and W. Glasgow, cadets. ... 9, H. C. ship Streatham, Capt. Havviside, from England 1st March.—Passengers, Mrs. Ann Walker, Miss J. Walker, Miss S. Patton, and Miss C. Evans; Capt. E. H. Delafosse, R.N.; Mr. N. Lewis, cadet; Mr. E. Sandford, returning to India; Mr. W. Weight, free mariner; Lieut.col. M. Childers, Capt. J. Jenkins, Capt. T. Binny, Capt. W. Elliot; Lieut. E. J. Briscoe, Lieut. W. Clarke, Lieut. R. Archdall, Lieut. Hon. J. Law, Lieut. J. Allingham, Lieut. R. Hollingworth; Cornet K. Stewart; Assist. surg. H. Steele; Veterinary surg. G. Gross; and Reg. qr. mast. Henderson, 11th Light Drag. ... H. C. ship Atlas, Capt. C. O. Mayne, from England 1st March. — Passengers, Mrs. Frances Stewart; Mrs. Rotten;

Miss M. A. Blandell; Miss S. S. Blandell; Miss O. Hickman; Lieut. col. J. W. Sleigh, C. B.; Capt. W. Smyth; Capt. J. R. Rotten; Capt. W. Blandell; Capt. J. Moore, Lieut. A. Chabre; Lieut. G. A. Anson; Lieut. G. Williamson; Lieut. I. M. Cooper; Cornet Hon. H. D. Shore; Cornet A. W. Bishop; Cornet C. S. Malet; Cornet Partridge; Adj. G. Butcher; Paymaster, Nolan; Mr. J. Omady, surg.; Mr. J. Harcot, assist. ditto; and 279 men, 33 women, and 37 children, 11th Lt. Drag.; Mr. W. P. Okeden, writer; Mr. J. D. Dyke; Mr. H. C. Williams; Mr. E. E. Poole; Mr. J. George; Mr. J. W. Dunbar and Mr. E. Rushworth, cadets; Mr. H. Atkins and Mr. J. Cripps, pilot service.... Windermere, Williams, from Liverpool 24 Dec., Cork, and last from St. Helena 28 April.... 12, Bengal, Woodward, from Liverpool 3 March.... Aug. 4, H. M. ship Dauntless, from England.... 18, City of Edinburgh, Wiseman, from Gibraltar 8 March.... 19, Neptune, Law, from Liverpool 27 Feb.... 21, Layton, Morgan, from London 23 Dec. Cork, Ceylon, and Madras 17 July.

Departures.—July 7, Triumph, Street, for London.... 11, Flora, Balstan, to complete her lading for the Cape.... 15, Mary, Kneate, for Liverpool.

Statement of Ships in the River Hoogly on 1st. July 1819 :

	<i>Number of Vessels.</i>	<i>Tons.</i>

MARRIAGES.

June 29. At Meerut, Lieut. H. B. Armstrong, H.M. 14th foot, to Miss L. M. Meulk, daughter of the late Lieut. W. Meulk.... July 27. At Barrackpore, by special license, at the house of Capt. McLeod, engineers, G. J. Morris, Esq. civil service, to Miss C. Crauford.... Aug. 11. At St. John's cathedral, Capt. W. Deller, country service, to Mrs. J. Tapson, widow.... 14. Capt. W. Croker, H. M. 17th foot, to Miss E. Stokes.... 17. At Moorshedabad, Capt. Fuller, H. M. 59th, to Miss Finch.... 21. J. C. Burton Esq. to Miss E. C. Farquhar.... 23. Mr. W. M'Leod to Miss C. Hudson.

DEATHS.

Feb. 22.—At sea, D. Darling, Esq. civil surg. of Rajeshahye.... May 3, At Minto, on the Island of Banca, Mr. F. B. Frazer.... July 13, At Muttra, Capt. G. Barker, 12th N. I.... 20, G. Templer, Esq. commercial resident at Jungypore.... 25, Capt. S. Tovey, country service, aged 60.... In Mocha Roads, Capt. Dennis, commanding the Laura, who was unfortunately drowned immediately after that ship's arrival. On coming to an anchor, he proceeded in his gig towards the shore, for the purpose of gaining information regarding the state of the markets there, and as the boat was leaky, three buckets were taken in to keep her clear of water. On the way, however, the boat swamped, and the circumstance was discovered from the ship Isabella then lying there. A boat was sent from her to render assistance, when four of the crew were picked up, but the unfortunate commander had sunk to rise no more.

MADRAS.

Political—official.

Madras, Aug. 25, 1819.—The Commander-in-chief has much gratification in publishing a letter from Maj.gen. Sir Hy. Torrens, K.C.B. military secretary to his Royal Highness the Duke of York; and his Exc. has consequently directed a letter to be addressed to every officer who served under his personal command on the 21st Dec. 1817, and whose name was submitted to his Royal Highness, to receive the honorary distinction of a medal.

Copy of a letter from Maj.gen. Sir Hy. Torrens, K.C.B. Military Secretary, addressed to his Exc. Lieut.gen. Sir T. Hislop, Bart. and G.C.B. &c. dated Horse Guards, 15th Oct. 1818.

I have the Commander-in-chief's commands to acknowledge the receipt of your dispatch of the 7th Jan. last, addressed to the Adj.gen., transmitting a return of officers personally and particularly engaged in the battle of Mahidpoor, whom, under an idea of the continued existence of a system of granting medals of distinction, you consider worthy of bearing badges commemorating that glorious event.—I have his Royal Highness's commands to assure you, that he appreciates in the highest degree the bravery and discipline which so signally distinguished Sir J. Malcolm, and all the officers under your command in the battle of Mahidpoor, as well as the valour, ability, and promptitude, with which you directed their zeal in leading the troops to the accomplishment of a splendid achievement, which has mainly served to the overthrow of a confederacy that aimed at the subversion

of the British power in India; but it is incumbent upon his Royal Highness to acquaint you, that when the military order of the Bath was extended, H. M.'s government thought proper to decide, for reasons which it is unnecessary here to detail, that the system of granting medals of distinction should be abolished, and under these circumstances his Royal Highness is reluctantly compelled to explain the impossibility of his giving effect to the wishes you have expressed in regard to the officers whose names you have transmitted.—You will find, however, that the Order of the Bath, as far as its statutes and regulations could permit his Royal Highness and the President of the Board of Control to recommend the grant of it, has been conferred on the officers of the King's and the H. C.'s service, who have been principally distinguished under your command, and should the circumstance of your having recommended the grant of medals of distinction, have been made known to the army, his Royal Highness trusts you will give such explanation to the officers, who were under your command at Mahidpoor, as may convince them that this kind of distinction is withheld in compliance with general regulations, and not from any failure in the due appreciation of their distinguished conduct.—I have the honour to be, sir, your most obedient humble servant,

(Signed) H. TORRENS,

(Signed) B. R. HARRIS,
Asstt Adj.-Gen.'s Dept.

CIVIL APPOINTMENTS.

July 27.—Mr. J. Thomas, head assist. to the collector and magistrate of the Zillah of Tinnevely.

Aug. 10.—Mr. H. R. Oakes, commercial resident in the ceded districts.

LOCAL AND PROVINCIAL.

Trophies of Mahidpoor.—The following is extracted from the Government gazette.—Upon the 21st inst. a considerable part of the brass ordnance captured at Mahidpoor having arrived within the limits of the presidency, they were met by the Commander-in-chief opposite to St. George's church, and were conducted by his Exc. under the escort of a strong detachment of troops, consisting of cavalry and infantry, to the government-house, where they were received in front of the banqueting room by the right hon. the Governor. The same escort under the command of Col. Mulla, of H. M.'s 46th regt. conveyed them from thence within the ramparts of Fort. St. George.—His Exc. the Commander-in-chief, upon delivering over the charge of the guns and trophies, addressed the right hon. the Governor as follows:—

“I have the pleasure, sir, to inform you, that thirty-five pieces of brass ordnance, being a part of fifty-two of the same nature which were taken from the enemy at the battle of Mahidpoor, are at this inst. under an escort entering the limits of your garrison of Fort St. George.—I have, in consequence, the honour to request your permission to place them at your disposal, with the view that you may be pleased to cause them to be received and deposited therein.—It is, at the same time, gratifying to me to add, that these trophies were acquired through the valour and discipline of the troops of this presidency, of whom the 1st and 3d divisions of the army of the Deccan, by which the victory of Mahidpoor was achieved, were solely composed. The disposition directed to be made under your immediate authority in your capacity of Governor of Fort St. George, of the troops composing your body-guard with those of your garrison, to give eclat to their arrival from the field of battle into the British capital on the coast of Coromandel, will, I am confident, prove as flattering to the feelings of every individual of the army as to mine in particular.—For these distinguished marks of your consideration and attention towards the feelings of the army and my own, I beg leave to tender to you, sir, the unfeigned assurances of our united gratitude.”

To the above address the right hon. the Governor made the subjoined reply.

“The Thanks of the Court of Proprietors, of the Court of Directors, and of both Houses of Parliament having been conveyed by the highest authority in India to your Exc., and to the officers and men who were led to victory in central India under your personal command, it would ill become so humble an individual as myself, to attempt making any addition to such splendid and lasting testimonials of the triumphant achievements of yourself and your comrades in arms. All I can presume to offer are my sincere congratulations upon these undeniable proofs of the applause and gratitude of your country, and also upon the high military honours conferred by his Royal Highness the Prince Regent upon your Exc., and extended by selection and in gradation, to officers of different ranks upon this establishment. I cannot allude to the Madras troops without venturing to profit of the privilege I enjoy in virtue of my commission as Governor in Council, to express in your presence, and in that of the numerous and respectable body of officers here assembled, the deep sense entertained by the government of Fort St. George, of the merits of their most gallant army. It is perhaps, however, less the privilege of a government to dwell upon the successful results derived from the un-

daunted courage of troops in the field, than to point out their other valuable and important qualifications. What army has ever manifested greater perseverance in enduring fatigue, in submitting to privations, in surmounting all obstacles opposed to their progress by the inclemency of seasons or violence of the elements? In what army has the perfection of discipline been more conspicuous? Where have troops been more distinguished for their inviolable fidelity to their colours, or for attachment to their officers, to whom they look up with confidence and affection, as to their protectors and friends, and I may even add as to fathers? Your Exc. may be assured that to me this is the proudest hour of my government, when upon the threshold of the majestic edifice erected by the munificence of the East-India Company, in commemoration of the heroic deeds of former times, I receive from the Commander-in-chief of the Madras army, the brilliant trophies of the glorious and decisive victory of Mahidpoor."

Chalybeate Well at Bangalore.—The discovery of a spring of chalybeate mineral water at Bangalore, is a matter of congratulation to all who may be within the reach of that delightful station. The excellence of its climate has been long known, and invalids from Madras have been in the constant habit of resorting to Bangalore for change of air, and to avoid the heat of the land winds: now, if to the enjoyment of a mild and salubrious climate, be added to the medicinal advantages of the Cheltenham springs, we may expect that Bangalore will soon become a place of resort for many whose constitutions require that relief, which seems to be now attainable without a voyage to Europe. By the meritorious exertions of Major-Waugh, many European fruits have been brought to a great degree of perfection at Bangalore; and as his garden has been purchased by government, every part of India is likely to benefit by his skill and labours.

A Correspondent of the *Madras Gazette* has communicated a scientific analysis of the water, which is annexed.

Report of an Analysis of a Chalybeate Mineral Water, taken from a Well situated in the Cantonment of Bangalore.

One pint of 28,875 cubic inches contains, carbonate of lime, an exceeding small quantity; carbonate of iron, 7-10 of a grain; muriate of soda, two grains:

The carbonates of lime and iron are held in solution by a small quantity of carbonic acid.

It immediately occurred to me, that this water might with facility be rendered a very excellent substitute for the celebrated Cheltenham water, and be administered with every reasonable expectation of its possessing equal medicinal virtues. It may not be amiss, in the first place, to premise that the salts sold in England, and sent out to India, under the title of 'Cheltenham Chalybeate Aperient Salts,' are nothing more than direct preparations of sulphate of soda (Glauber Salt), and sulphate of magnesia (Epsom Salt), respectively. It is further absolutely impossible to prepare salts from these waters, which shall retain the carbonate of iron. To prepare the Bangalore water, add to one pint, the moment it is taken from the well, a quarter of an ounce of crystallized Epsom salt. The water should be drank at the well, and care taken that it be not shook, as the carbonic acid is liable to become expelled, and the iron precipitated from its solution. A fortnight, or three weeks course of this water, attending to the precautions enjoined at Cheltenham, would, I have little doubt, afford relief to numbers of valetudinarians, who having in vain ransacked the materia medica, would be compelled to confess at last, that here presides the Hygeian goddess.

Madras, 1st June 1819.

A. Z.

Wandering Cheta.—On the morning of the 26th April, an alarm pervaded a numerous portion of the native inhabitants of Negapatam, from the singular and unprecedented circumstance of a large sized cheta making its appearance in the pettah. The animal was supposed to have secreted itself during the night in a large garden north of the neighbouring river: from thence it made its way into the house of a respectable Brahmin, before reaching which we find it had mutilated and lacerated two men, rather severely, but not dangerously, probably from meeting with some opposition in his progress:—

—*Tremefacta novus per pectora Cunctis*

Insinuat Pavor.

"Amazement seizes all; the general cry Proclaims the Cheta justly doom'd to die!"

The readiest, as well as the safest method, was therefore quickly to be devised, how to dislodge this unwelcome stranger from the hut which he had taken possession of: one suggested unroofing a few tiles, and firing directly down upon him; but at this moment the report of a gun disturbed our visitor, who quitted imme-

diately his habitation, and had taken but a few paces, when his precipitation was impeded by a wound which he received on the thigh from a gentleman present; a few men then came forward with spears and dexterously put an end to him.

Still oft he's struck, and oft the clashing sound
Of spears is heard, and stones and sticks rebound.
Convinced at last of his expiring fate,
They drag about their foe in joyful state.

A person came the following day to claim the Cheta, and stated that he was travelling towards Rannad, and that the animal got loose by extricating himself from his tether.

Tiger Hunt.—A report was brought to two gentlemen who were encamped near the place, that a large royal tiger had been seen near the Lingomputty Tank; they immediately proceeded to the spot, and found many spear, bow, and matchlockmen collected to enjoy the sport: they were undecided in what manner to commence the attack; but a spear and a bowman went into the jungle, followed by two boys with a tontom and horn, who had no weapon of defence, but seemed to put entire confidence in the ability of these two persons to defend them with the spear and arrow alone against the attacks of this enormous brute. An arrow was let fly; immediately the tiger gave a loud roar, and came out of the jungle and rushed at a Ratchwar, who presented his spear, and firmly stood his ground!! The tiger felt the spear in his mouth, and not being accustomed to such a *pointed reception*, it snapt the spear in two and made again for the jungle. They turned it out a second time; and then the matchlockmen shewed their ability in using this weapon, to which they are so much attached in these kind of sports. A third time being hunted out, it made directly towards a man, who received the brute upon his spear, and brought it to the ground!!! A countryman there said that this tiger had been the terror of the neighbouring villages for the last twelve months.

Sir T. A. Strange, and the Native Inhabitants.—Sir T. A. Strange, formerly chief justice of Madras, received on retiring from office, an address from the native inhabitants; and another after his arrival in London. His answers to both, addressed to Venkatanarajah Braminy, late interpreter of the supreme court, have been published in the *Madras Courier*, at the request of the principal native inhabitants. Both the answers are dated on the same day. That to the last address follows.

I received a few weeks ago an address,
Asiatic Journ.—No. 50.

signed by M. V. Anna Samy Moodelliar, and others, Hindu natives of Madras, in number about five hundred. It is full of compliments upon my administration of justice, with hopes for my happiness on my late retirement from office, and on my return home. It has no date; but must, I think, have been prepared not till some months subsequent to my leaving India in 1816. I am much flattered by the remembrance and notice of me after my departure. The native population of Madras may believe, in return, that I often think of it with pleasure. How much I was attached to it, my conduct, during a period of eighteen years, must have proved. The address before me, indeed, acknowledges it; and in reflecting upon so long a service among them in the highest judicial office, I shall ever continue to feel grateful toward a people, inclined, as I uniformly found them, to appreciate in the kindest manner good and faithful intentions.—With this assurance, I beg leave to subscribe myself, affectionately theirs,

T. A. STRANGE,

Lord Chief Justice of Madras.

London, May 4, 1818.

Pieces of Plate.—H. M. 13th Lt. drag. came out in the H. C. ships the Windsor and the General Kyd. The detachment under maj. Doherty took the lead in voting the gratifying testimonial of desert announced in the following letter.

To Capt. Franklin, H. C. ship Windsor.

My dear sir:—I am requested to acquaint you that the officers of the 13th Lt. drag., who came from England in your ship, have resolved, to request your acceptance of a piece of plate, as a token of the respect we have for you, and as a testimony of your uniform kindness to us during the voyage.—Col. Boyce feeling the attention you paid to the reg., has begged to become one of the subscribers.

Believe me, my dear sir, your's very truly,

J. DOHERTY, Maj. 13th Lt. drag.

Madras, 26th June, 1819.

Capt Nairne of the H. C. ship General Kyd, has received a similar gratifying testimony from Col. Boyce and the other officers who came out in that ship. And directions have been sent home to Ruddle and Bridge to prepare both the pieces of plate.

The Weather.—June 24.—To the northward, about Mausaliapatam, they have had rain, attended by some severe thunder storms. The lightning struck a bungalow, in which were three gentlemen. The electric fluid struck through the thatch, appearing like a large ball of fire, which almost immediately burst, with the report and in the manner of a 14-inch shell. The bungalow was in flames in a moment, and was burnt to the ground, but fortunately no one was hurt.

VOL. IX. 2 C

SHIPPING INTELLIGENCE.

Arrivals.—July 14.—H. C. ship *Rose*, Cap. McTaggart, from England 4th April.

Departures.—July 22.—H. M. ship *Conway*, for England. — Passengers.—Surg. J. Foljambe; Capt. T. Swann, 2d batt. 18th regt. N. I.; Capt. E. Osborn, 1st batt. 2d regt. N. I.; Lieut. R. I. Marr, 2d batt. 3d regt. N. I. . . . Aug. 22d. *Surrey*, Aldham, for Calcutta. . . . 27th. H. C. ships *Carnatic*, Capt. Blanchard, and *Thomas Greville*, Capt. Manning, for Calcutta. . . . 29th. The *Seaforth*, for Liverpool.

BIRTHS.

May 10, at Jaulnah, Mrs. Archbold, wife of Qr.-mast. Archbold of the horse art. of a son. . . . 31, at Bangalore, the lady of Dr. Greig, H. M. 22d drag. of a daughter. . . . June 27, the lady of William Blair, Esq. dep. account. gen. of a daughter. . . . July 5, at Nagpore, the lady of Lieut. T. Crighton, 1st bat. 23th nat. reg. of a son. . . . 18, at New Town Cuddalore, Mrs. John Hendrick, of a son. . . . 20, at Wallajahbad, the lady of George Anderson, Esq. surg. of a son. . . . Aug. 16, the lady of A. Mackechnie, surg. H. M. 69th, of a son.

MARRIAGES.

M. 1st Ceylon reg. . . . July 16, at Persewauk, John Frederick Zscherpel, a conductor of ordnance Madras establishment, aged 52. . . . Same day, at Pulicat, of the cholera morbus, Mr. J. J. Engel, aged 69. . . . at Wallajahbad, Powell, infant son of Capt. C. S. Hopkins, royal Scots. . . . at Tellicherry, Mr. Joseph Lafrenais, aged 71. . . . at Mr. Cotton's house, Codabar, of the cholera morbus, Capt. W. Biss, 24th N. I. superintendent of tank repairs.

BOMBAY.

Political—Official.

Military post withdrawn.—July 2. A government order directs, that the detachment at Parneira be withdrawn, and that place be no longer occupied as a military post. The military buildings are to be transferred to the collector of the land revenue at Surat.

Financial Department.—July 13 was published a notification that no further cash will be received at the general treasury for bills on the government at Fort William.

CIVIL APPOINTMENTS.

June 26.—Mr. Henry Shee, 2d assist. to the collector in the northern Concan.—Mr. John Forbes, dep. collector of sea customs in the Concan.—Mr. William Gordon, assist. to the register and 2d assist. to the criminal judge in the northern Concan.

MILITARY AND POLITICAL.

June 30.—Capt. George Moore of His Majesty's 65th reg. to act as private secretary to rt. hon. the Gov. vice Nixon returned to Europe.

DISTINCTIONS WON AT CORYGAUM.

July 12, was published at the presidency,

Extract of a dispatch from the Hon. the Court of Directors, dated 6th Jan. 1819.—Para, 1st. We have perused with great interest your secret dispatch of the 22d Jan. and 4th Mar. 1818, giving cover to copies, of a letter from the hon. Mountstuart Elphinstone addressed to the marquis of Hastings, and dated Corygaum, the 4th of Jan., of the division orders issued by Brig. gen. Smith, dated Seroor the 7th of Jan. and of a dispatch from sir Thomas Hislop, to the marquis of Hastings, dated 22d Jan. and of a general order issued by that officer on the 21st Jan., we have also had under our consideration a letter from the marquis of Hastings to the secret Committee, dated 23d May, 1818, in these documents are detailed the particulars of the gallant and successful defence made by Capt. Francis F. Staunton, of the 1st reg. of N. I. of your establishment, at the head of 800 men against the Peishwa's force of 20,000 men, at Corygaum, on the 1st of Jan. 1818, an affair described by Sir Thomas Hislop as one of the most heroic and brilliant achievements ever recorded on the annals of the army.

2d. The heroic valour and enduring fortitude of this detachment entitle it to our admiration and applause. In testimony of the sense which we entertain of the services and gallantry of Capt. Staunton who commanded it, we have resolved to present him with a sword ornamented with a suitable inscription, and also with the sum of five hundred guineas; you will accordingly cause the said sum to be paid to him at the usual rate of exchange.

3d. The sword will be forwarded to you by an early opportunity for the purpose of its being presented in the name of the Company.

4th. These testimonies of our approbation we are the rather induced to afford to Capt. Staunton, because the rank of this officer did not allow of his being

included in that distribution of the honours of the military Order of the Bath, with which the Prince Regent has been graciously pleased to reward the meritorious services of the Company's officers; and in which we have reason to believe Capt. Staunton would have been included, had his rank rendered him eligible for that distinction.

5th. Our attention has also been pointedly directed by the Governor-gen. to the gallant conduct of the undermentioned officers, who appear to have survived these brilliant achievements at Corygaum, viz.

Lieut. J. Connellan, 2d bat. 1st regt. B. N. I.—Lieut. J. Jones, 10th regt. ditto.
—Lieut C. Swan-ton, 12th regt. Madras B. N. I.—Assist.surg. J. Wylie, Madras Establishment.

6th. We direct you to assure these officers of the high opinion which we entertain of their distinguished services, and you will cause to be conveyed in general orders, our thanks to the officers, non-commissioned and privates, Europeans and natives, who formed the detachment, for their gallant and meritorious conduct on this memorable occasion.

The general order of the presidency publishing the above, directs it to be read at the head of every corps on this establishment, and explained to the Sepoys of the native regts.; and the introduction observes:

The Governor in council will have much satisfaction in conveying to Capt. Staunton the sword presented to him by the hon. Court, when it shall have been received at Bombay; and in the mean time, has only to express his hope, that as that officer has lately been promoted to a majority in the grenadier regt. he may soon share in those honours of the military order of the Bath, which his want of rank appears to have been the only cause of having been hitherto withheld from him.

GENERAL MILITARY REGULATIONS.

Encouragements to acquire Hindoostanee and Mahratta.

May 31st was published by the presidency:

Extract of a letter from the Hon. Court of Directors, dated 14th October, 1818.

In reply to a paragraph announcing that the court's order abolishing the reward for proficiency in languages, had been carried into effect at Bombay.

PARA. 53d. With a view to affording encouragement to our officers to acquire an adequate knowledge of the Hindoos-

taanee language, which may be called the camp language, of India as well as the vernacular language of a large portion of its inhabitants, with a view also to the correct administration of justice in military courts, and to the safe custody and repair of regimental arms and stores; we in our military letter to Fort St. George, dated 4 Feb. 1818, (Paragraphs 275 & 83d) authorized the appointment of a quarter master and interpreter in each reg. of N.C. and in each batt. of N.I. for the same purposes as such appointments had been previously made and sanctioned in Bengal.

54th. We transmit a No. in the packet a copy of those paragraphs, with a view to the introduction of similar arrangements at your presidency.

Extract military letter to Fort St. George, dated 4th February, 1818.

In reply to letters from Madras requesting the Court's attention to communication from the Commander-in-chief, and the President of the Committee for examining students, stating the necessity of continuing the rewards for the attainment of native languages, and which had been authorized until the court's further orders should be received.

PARA. 275. We have maturely considered the observations of the Commander-in-chief and your own, respecting the advantages which the public service is likely to derive from a continuation of that encouragement to the study of the Hindoostanee and Persian languages, which was formerly held out to the officers of your presidency, but directed by us to be discontinued in our letter in this department of the 27th July 1814.

276th. We are of opinion after mature deliberation, that the best mode of combining the encouragement of a knowledge of those languages with other objects of public importance will be the adoption of the system which prevails in Bengal.

277th. We therefore authorize and direct you to appoint a subaltern officer in each batt. of N.I. to be interpreter of the Hindoostanee language to that bat., who is also to perform the duties of q. mt. of the bat. with the same staff salary as we, in our military letter of the 5th May 1815, fixed for the adjutants of Native battalion, that is,

Staff pay per month, Arcot rupees.	62
Moonshes and stationary	40
A horse	30

Total per month, Arcot rupees. . . 132

278th. It will be the duty of the interpreter and q. mast. to officiate as Interpreter of Hindoostanee, not only to all courts martial which may be held in the batt. to which he belongs, but to any other

court martial at which he may be directed to officiate, without any further charge or expense to the Company for such services, which as an interpreter he may at any time be called upon to perform.

279th. It will also be his duty to act as qr.mast. of his batt., and to perform all those duties which are usually performed by the qr.masts. of other corps in your army.

280th. We rely upon your care and vigilance that no officer be selected for the important situation of interpreter who is not fully qualified to perform all the duties of it, especially the serious and responsible duties of interpreter to courts martial.

281st. We take this opportunity to recall to your recollection our orders to Bombay as contained in our military letter to that government dated 17th Jan. 1810, copy of which was transmitted to you, as equally applicable to your presidency, with our military letter of the 23d January 1811:

"We are decidedly of opinion that no officer should be appointed to any staff situation whatever, unless he has previously acquired a knowledge of the Hindoostanee language, which is the vernacular language of Hindoostan, and more or less spoken and understood throughout the Deekan. The means of acquiring this language are now much facilitated, and it is so obviously both the duty and the interest of all our servants, at all the presidencies, to obtain a knowledge of it, that we desire you will hereafter consider a competent acquaintance with it, to be an indispensable qualification in every candidate for a staff appointment."

282d. With respect to your regs. of native cav., we direct that the qr.mast. of each reg. of native cav. perform also the duty of interpreter of Hindoostanee to his corps, with an allowance of 30 Arcot rupees a month for a moonshee.

283d. The commander in chief will take care that no officer be hereafter appointed to the situation of qr.mast. of cav., who is not duly qualified to act as interpreter also, and in the mean time the allowance of 30 rupees a month is only to be passed to qr.masts. of cav. as shall establish to the satisfaction of the commander in chief that they "are qualified to act as interpreter."

In pursuance of the hon. court's orders, the governor in council is pleased to direct that the designation of the officers at present holding the situation of linguist in the several batts. of N.I. and regs. of cav. be changed to that of interpreter, and that they be ordered to assume the duties of

qr.mast. as specified in the hon. court's dispatch, from the 1st. of June, the office being united with that of adj. in the instance of Lieut. Black, who is at present linguist to the 1st batt. 11th reg. of N.I.; but no adj. will hereafter be permitted to hold both situations.

As a knowledge of the Mahratta language by officers belonging to the native corps on this side of India would be attended with great advantage to the public service, the Governor in Council, in order to hold forth encouragement to them to acquire a knowledge of that language, as well as of the Hindoostanee, is pleased so far to modify the orders of the hon. court, as to substitute for the staff-pay of sixty-two (62) rupees fixed in their letter to Madras, the allowances now drawn under the government orders, of the 11th April, viz. (50) fifty rupees for interpreters in Hindoostanee, and eighty (80) rupees for interpreters in Hindoostanee and Mahratta.

The existing regulations that linguists shall be publicly examined as to their knowledge, by a committee assembled by order of the commander-in-chief, is to be enforced with the utmost exactness, and whenever the public service will admit, the candidates are to be examined at the presidency.

Widows of Officers in H.M. service.

July 12, was published by the presidency, extract of the hon. court's letter, dated 11th Nov. 1818.

4th. In consequence of a communication we have received from the War-Office, suggesting that in future no pensions may be paid to the widows of officers of his Majesty's service dying in India, unless they shall have obtained the royal authority for receiving the same, we desire that you will not in future authorize the payment of any such pension until such authority shall have been obtained, in conformity with this suggestion.

Pensions for Wounds.

Extract of the Hon. Court's Letter, dated 27th Nov. 1818.

Para. 2d. Our attention has lately been directed to the subject of the pensions granted to officers for wounds received in action, and we find it necessary to revise our orders on that head, in so far as respects the continuance of those pensions, in certain cases.

3d. In all those instances where the injury is of a permanent nature, as for example, where the party has actually lost an eye or a limb in action, or has suffered such permanent injury as may be equivalent to the loss of an eye or a limb, from a wound received in action, there can be no doubt of his being entitled to the pension for life, conformably with the spirit and letter of his Royal Highness the Prince Regent's regulations, bearing date the 20th June, 1812; but cases may occur where, though at the expiration of a year and a day after the wound has been received, the period at which those pensions commence, the individual may, to all appearance, have sustained an injury deemed equal to the loss of a limb, yet, by skilful medical treatment, and the efforts of a sound constitution, he may, in a few years, be restored to his pristine bodily strength.

4th. In instances of this kind, when we consider the liberal scale of allowances granted to the Company's officers, it is impossible for us to consent to continue the pensions, and we therefore direct, that in all cases of recovery, if within three years from the injury originally sustained, the pension shall be discontinued.

5th. In order that this resolution may be strictly attended to, and that a careful distinction may at the same time be made between such cases, and those of officers labouring under permanent injury from wounds received in action, and equivalent to the loss of an eye or a limb, we direct that every officer of our army receiving a pension for wounds shall be examined at the expiration of three years from the time of the wound being received, by two medical practitioners who shall certify upon honour the actual state of the wound and its remaining effects, to enable you to judge whether, in conformity with the instructions now conveyed to you, the party be justly entitled to a continuance of the pension, and we further direct that you will transmit to us regular reports of all such examinations.

6th. Applications having been made from some of our officers in this country for an increase of the pensions granted to them in proportion to the advanced rank they have received, conformably with a regulation adopted in his Majesty's service, we have to inform you that that regulation has been discontinued in his Majesty's service, as you will observe on perusal of the circular letters of the Secretary at War, dated 30th June and 25th August, 1817, of which we herewith transmit you copies.

7th. And being of opinion, that all the circumstances of our service duly considered, especially the advantages derived by the Company's officers from the liberal

allowances they receive in addition to their pay, the pensions granted, or to be granted to our officers under the regulation which accompanied our dispatch of the 20th March, 1815, are sufficient in amount, we do not think proper to accede to the recommendation contained in 257th and 258th paras.; of our letter of the 29th December, 1815, for an augmentation of those pensions.

Two circulars referred to in the 3d paragraph.

Circular, No. 362.—War-Office, 30th June, 1817.—The Prince Regent, having taken into consideration the rules under which pensions are granted to officers wounded in his Majesty's service, and especially the regulation promulgated by the second paragraph of the circular letter from this department, No. 287, His Royal Highness has been pleased to order that the pensions which may be granted to officers for wounds received subsequently to the 24th June, 1817, shall be confined to the rate attached to the rank which the officer held at the time when he was wounded, and shall not be augmented progressively according to the rank to which such officer may from time to time be promoted.

Circular, No. 373.—Referring to No. 362. His royal highness the Prince Regent having taken into his further consideration the regulation concerning pensions granted for wounds, has been pleased to order that from this date no such pension shall increase to any higher rate, in consequence of any future promotion of the officer by whom it is received.

Military Pay-office.

July 14.—The Governor in council directs that the military pay-office at the presidency, now vacated by the return to Europe of Mr. Sparrow, be transferred to the military branch of the service, and in future held by a military officer.—That field officers be eligible for this appointment.

MILITARY APPOINTMENTS AND PROMOTIONS.

June 12.—Assist.surg. J. MacNeill to be deputy medical storekeeper at the presidency, vice Harrison.

June 14.—Assist.surg. R. Martin, admitted; infantry Cadet D. L. Victor, to be ensign.

Promotions in consequence of the death of Lieut.col. E. Kenny:

Infantry.—Sen.Maj. W. D. Clelland to be lieut.col., vice Kenny, deceased.—Date of rank 2d June 1819.

First or Grenadier reg. N.I.—Sen. Capt. Francis F. Staunton to be major; Lieut. and Brev. capt. Rob. McFarlane to be capt. of a company, vice Cleiland promoted.—Same date.

June 30.—Capt. J. Kinnersley, to act as aide de camp to the right hon. the Governor.

July 2.—Lieut. J. Craig, 2d bat. 9th N.I. to act as adj. to the wing of that bat. while separated from the head-quarters of the corps, and doing duty at Warree.

6.—Division Order by Brig. gen. Smith, placing Assist. surg. Warner, 1st bat. 4th N.I., at the disposal of the hon. the commissioner in the Deccan, is confirmed.

8.—Mr. W. Spry to act as assist. surg. so long as his services may be required in the medical department at this presidency.

10.—Assist. surg. Henderson at the disposal of the commissioner in the Deccan.

14.—Capt. Jas. Morse, 7th N.I., to the command of Fort Victoria, vacated by the return to Europe of Capt. Wm. Moelison.—Capt. Isaac Kinneraly, 4th N.I., military paymaster at the presidency, on a salary of seven hundred rupees per mensem, in addition to the garrison pay and allowances of his rank. The appointment to have effect from the 1st August.

31.—Brev. capt. Adams, assistant to the revenue surveyer in Guzerat, is placed at the disposal of the commissioner in the Deccan.—Mr. J. McMorris, admitted an assist. surg. for this presidency.—Cavalry Cadet Fawcett, to be cornet; and Infantry Cadets S. D. Wilson, C. Johnson, D. Liddell, H. C. Teasdale, and E. Carthew, ensigns.

FURLOUGHS.

June 12.—Lieut. and Brev. capt. J. C. Chebley, 3d Madras L. C., to sea for six months.

July 2.—Capt. W. Morison, 1st bat. 9th N.I., to England for three years.

5.—Maj. J. Hull, Madras estab., to sea

for six months.—Lieut. E. Mason, 2d bat. 11th N.I., to sea for six months.

31.—Assist. surg. G. Gordon, to England for three years.

MARINE.

A letter from Port Louis, Mauritius, dated Sept. 1, received in London, says:—"The Liverpool frigate, Capt. F. A. Collier, C.B., sails to-morrow for Bombay, to take the command of the expedition fitted there. The ships to be employed are, besides the Liverpool, Eden, 26, Capt. Loch; Carron, 12, Capt. Furneaux; Curlew, 18, Capt. W. Walpole, four Company's cruisers, and 4,700 troops under Maj. gen. Sir Wm. Keir. They are to take and destroy all the forts and shipping possessed by the pirates in the Persian Gulf."

The Weather.—Extract of a letter from Kaira, July 24.—"The last post from Bombay was dated the 7th inst., so that we have 18 posts due. You must have had an immense fall of rain to the southward, which must have caused that delay of the post here. We had last night about 8 o'clock a great fall of rain accompanied with lightning and thunder; the lightning killed a dragoon of the 17th regt., and scorched two others that were with him. About half past ten there was a slight shock of an earthquake felt."

SHIPPING INTELLIGENCE.

Arrivals, Aug. 15.—H. C. ship York, Capt. Talbert, from the Downs 6th May.—Passengers: Messrs. Cooke, Jackson, Lumbeg, Slater, Outram, Harvey, and Pitcairn.... 21, H. C. ship Marquis Hastings, from England.

MARRIAGE.

June 7.—At St. Thomas's Church, Ens. Thos. Coleman, 56th regt., to Mrs. Sarah Donald, widow.

DEBATE AT THE EAST-INDIA HOUSE.

(Continued from page 160.)

East-India House, Jan. 12, 1820.

A general court of proprietors of East India stock was this day held by adjournment, at the Company's house in Leadenhall Street, for the purpose of considering a proposition for the erection of a monument in the court room to the memory of the late Right Hon. Warren Hastings.

The minutes of the court having been read—

The *Chairman* (Campbell Majoribanks, Esq.) stated, that the grant of 75,000 sicca rupees to Mr. James Wilkinson had received the approbation of the board of commissioners for managing the affairs of India.

The *Chairman*—I have now to acquaint the court that it is met by adjournment, in order to receive a proposition for erecting a statue to the memory of the late Right Hon. Warren Hastings in this room, agreeably to a resolution of

the court of directors of the 7th of July last, which shall be read.

Mr. *Hume* wished, before the regular business of the day was brought forward, to ask a question. At the last court a considerable portion of time had been occupied in discussing the legality of the proceedings relative to the grant to Sir G. H. Barlow. It was then stated, that the opinion of counsel would be taken on that point. He was now anxious to know whether such an opinion had been taken; and, if so, what that opinion was?

The *Chairman* said, he was not aware of the circumstance alluded to by the hon. proprietor. He knew of no promise made by any gentlemen behind the bar, to call for the opinion of counsel. The understanding was, that, if the court of proprietors desired the opinion of counsel, they might call for it, and that call would at once be complied with.

Mr. *Hume*—Then I am to understand that the court of directors will not take any opinion on the subject?

The *Chairman*—The court of directors have no doubt about it. If the hon. proprietor entertain a doubt, his remedy will be to call for a legal opinion through the medium of the court of proprietors.

Here the conversation terminated.

The clerk then read the following resolution:—

“At a court of directors, held on Wednesday, the 7th of July, 1819,

“It was resolved, that, as the last testimony of approbation of the long, zealous, and successful services of the late Right Hon. Warren Hastings, in maintaining, without diminution, the British possessions in India, against the combined efforts of Hindoo, Mahometan, and Mahratta enemies, it be recommended to the court of proprietors to place the statue of that distinguished individual amongst those of the statesmen and heroes, who have contributed in their several stations to the security of the British territories in India!”

The *Chairman* then rose, and introduced the subject to the court in the following brief, but comprehensive speech. He said, before he put the question, he felt himself desirous of offering a few words on so interesting a subject. The fame and character of a most eminent and faithful servant of the East India Company were now before the court. He had no hesitation in confiding them to the justice of the proprietors. Of this he was quite certain, that it would not be necessary for him to enter into any extended detail on the merits of Mr. Hastings' exemplary conduct in those high and arduous situations he was selected to fill. The extreme notoriety of his great reputation and invaluable ser-

vices relieved him from that duty. His actions are recorded among the signal exploits of the most eminent men; they are well known to the British, they are well known to the Indian public; and to none are they better known than to the proprietors of East India stock, who are perfectly capable of appreciating merits at once so variable and so estimable.—(*Hear, hear!*) The proprietors had always treated Mr. Hastings with respect, affection, and confidence, and he (the Chairman) was assured that they would not, at this time, deviate from that strong current of opinion which had at all other times run in favour of this exalted individual.—(*Hear! hear!*)

Having stated this, he should have been induced to have left the question on this ground to the good and generous feelings of the court; but he was unwilling to pass over, without some notice, the great length of Mr. Hastings's services. About seventy years ago he entered as a servant of the Company, and travelled, with the greatest exertion and high principled honour, through the whole circle of duties; from the lowest civil appointment to the very highest and most distinguished.—(*Hear! hear!*) Through the whole of the period he conducted all his transactions on the soundest and wisest policy, seizing all the changes and occurrences around him, and rendering them subservient to the best interests of the Company, until, by the dint and influence of merit alone, he rose to the exalted situation of Governor-General of Bengal. India was at that time in different circumstances, very different indeed from those in which she is now placed, and more particularly so towards the latter part of his administration. Europe was itself placed in very different circumstances. During the long period of his administration, he had not only to contend with the native enemies of the British power, in India, but he had likewise to combat with European enemies, who had established a footing in India, and were in actual possession of frontier stations. In addition to which, large fleets were opposed to fleets of greater force and number that were fitted out by hostile powers. In many instances the strength and skill of the naval combatants were so equally poised, that the triumph on either side was doubtful, and even where the British claimed a victory, the results were indecisive, and by no means effectually checked the progress of the enemy.

All these circumstances combined tended to render the situation of the governor-general a post of the greatest difficulty; but the hosts who opposed, and the dangers which threatened the Company's possessions on every side, did not dismay him; they merely served to draw forth

the resources of his mind, to call talents into action which have become the theme of general admiration, and will be recorded in the just and faithful pages of history. The difficulties he subdued, the virtues he displayed, and the possessions he secured, can never be forgotten by the Company, and must render his memory ever dear to the recollection of the court. *(Hear ! hear !)*

After Mr. Hastings had established the empire of the company; after he had performed the most inestimable services, by his enterprise and his genius; after he had enjoyed a full and uninterrupted confidence for a long series of years, how was he treated on his return to this country? What mark of honour did he receive? How were his great achievements rewarded? He was not even allowed to repose in dignified and unnoticed retirement; he was dragged forward to contend with public accusations; he was rewarded with twenty-two articles of impeachment on high crimes and misdemeanours.

It was not his (the *Chairman's*) wish or intention to enter into any examination of the conduct of parliament, on that occasion; he meant not to impugn its wisdom in instituting the proceedings which distressed and harassed the feelings of that great man; they were at an end; the feelings which excited them and that great man himself were now no more; but this he thought himself allowed to say, that those proceedings were contrary to the practice and spirit of the laws of this happy nation. Of this he was quite satisfied, that the acquittal of Mr. Hastings, on that extraordinary occasion, was the acquittal of the East India Company.—*(Hear ! hear !)* Of this he was equally well satisfied, that the condemnation of Mr. Hastings, on any one point, would have been considered as the condemnation of the East India Company.—*(Hear ! hear !)*

There was still one circumstance towards which he wished to draw the attention of the proprietors; it must be in all their recollections, that the last time the East India Company appeared before the British public, when they stood before the face of the British nation and called for a renewal of their charter, the court of directors thought it was their duty to bring forward the most eminent and intelligent men, connected with their service, to give evidence before the great national councils, to afford information to the nation at large, in what state the affairs of India stood, at that moment, whether moral, political or commercial; and this was done not from any narrow views of partial policy, but from considerations of paramount importance. Among those who were examined upon that occasion,

was that distinguished character Warren Hastings!—*(Hear ! hear !)*

He appeared before the bar of the House of Commons and at an advanced period of life, gave an evidence, so able, so perspicuous, so lucid and so conclusive, that, as he retired, the general impulse and feeling of the House, excited by the talents he had displayed, were manifested by loud and repeated cheers.—*(Hear ! hear !)*

Here, he should rest the case; he had no doubt but that the proposition of the court of directors for erecting a statue of Warren Hastings would that day receive the ardent support of the proprietors. Indeed it was his most sincere wish, for the honour of the East India Company and the credit of the general court that the proposition would meet with an unanimous vote.—*(Hear ! hear !)*

He was sure, if he could call up the departed to his aid; if he could command the presence of those heroes and statesmen, whose statues adorned the court, they would give their strenuous support to a proposition, which had for its object, the conferring an appropriate and well-merited honour on the memory of a faithful and long tried servant.—*(Hear ! hear !)*

The hon. *Chairman* concluded by moving, that this court do agree with the resolution.

The *Deputy Chairman* (G. A. Robinson, Esq.) said, in rising to second the motion, he should think it quite unnecessary to add any thing to the address the proprietors had just heard, at the present moment. He however felt himself disposed to offer some few observations to the court, arising out of this particular circumstance, that part of his life was spent in India, at a period when the government was placed in the hands of that able and intelligent man, Warren Hastings.—*(Hear ! hear !)* He had entertained a firm reliance that the proposition then before the court would have received the unanimous assent of the proprietors. He had reason, however, since he came into the court, to believe, that something, in the shape of an amendment, was intended to be moved on this occasion. Under these circumstances he would take the liberty of reserving himself for some future stage of the debate, when he would make such observations on any objections that might be urged against the proposition, as they seemed to demand.—*(Hear ! hear !)* He wished it, however, to be most clearly understood, that he never seconded a motion in that court, in the propriety of which his mind and disposition more entirely coincided.—*(Hear ! hear !)*

Mr. *S. Dixon* expressed a hope that the motion, with a slight alteration, would be carried unanimously. He conceived, that the word "last" ought to

be omitted in the resolution, or, that the syllable "ing," should be added to it. The words would then either be "a testimony" or "a lasting testimony." As the resolution was now worded, it might be supposed that the court had paid many testimonies to the merit of Warren Hastings.

Mr. *Hume* rose to protest against the present proceeding, as illegal, inasmuch as the court of directors had not complied with the by-law, which ordained that they should lay before the court of proprietors the grounds on which they came to this resolution.

On the proposition of Mr. *R. Jackson*, the following documents were read:—resolution of the court of directors of the 8th of May 1776, declaring that Warren Hastings, Esq. Governor-general of Bengal, and Richard Barlow, Esq. ought to be removed. Resolution of 29th of May 1782, and of 22d of Oct. 1782; the last of which declared that it was expedient to remove Warren Hastings from the situation of Governor-general. The proceedings of the court of proprietors, of the 25th of May 1814; on which occasion, a proposition for granting to Mr. Hastings the sum of £19,000, independent of the renewal of his pension, and another for the erection of his statue in the court-room, were negatived.

Mr. *R. Jackson*, after these documents had been read, proceeded to address the court. He opposed the resolution, because it held up Warren Hastings as a model for all future Governors-general, and he conceived that much of his public conduct was extremely reprehensible, a fact that was proved by the resolutions which had just been read. The learned gentleman then went into a detailed history of the conduct of Mr. Hastings, whom he censured as the author of the Rohillah War. He also blamed him for the proceedings in the case of Nundooma, whose conviction and execution he described to have been precipitate, if not illegal; and he concluded by drawing the attention of the court to the second Marhatta war, which had been entered into by the casting voice of Mr. Hastings, and was ultimately ensured by the court of directors as contrary to the honour and policy of the nation. He then moved as an amendment:

"That this court regrets that it cannot agree with the recommendation of the court of directors to place the statue of the late Right Hon. Warren Hastings among those statesmen and heroes whose figures adorn their court; because they think it highly impolitic, by so signal a distinction, to hold out to the imitation of future governors, a person who, according to the recorded sentiments of the court of directors, involved the country in

unnecessary, bloody, and expensive wars, and was guilty of oppression and wrong towards the native princes, so as to have induced that court to come to a resolution on the 8th of May 1776, and to another on the 22d of October 1782, for recalling the said Warren Hastings from the government of Bengal.

"And that this court would feel it inconsistent with that respect at all times due from this court towards the House of Commons, to confer an honour which necessarily implies the most distinguished merit, and great and general satisfaction upon a public servant, against whom that hon. house came, in the year 1782, to a resolution of severe reprobation, advising the directors to recall him from India; and whom at a subsequent period, the said house, namely, on the 25th of April 1787, did resolve, by a considerable majority, and after great and solemn debate on each separate charge, to impeach before the House of Lords for high crimes and misdemeanours.

"That this court are nevertheless duly sensible of the great merit which belonged to the said Warren Hastings, for having by his skill and address dissolved the most dangerous confederacy among the powers of India which ever threatened the British possessions, and by his activity, vigilance, and firmness, baffled the designs and operations of our European enemies, and thereby maintained and preserved the strength and authority of the East-India Company. That this court reflect with satisfaction, that they have endeavoured to show their sense of these services, by having presented to the said Warren Hastings, at different times, since his return to this country, upwards of £168,000 sterling, exclusive of all engagements for the payment of interest on any part of the same."

Mr. *Hume* seconded the amendment.

Mr. *Impey*, in a very eloquent speech, defended the conduct of Mr. Hastings. The whole of the charges, he observed, which the learned gentleman had uttered against him, were drawn from the base and libellous publications with which he had been at different times assailed, and which had, over and over again, been proved false and malicious.

Mr. *Hume* took the same line of argument as had been previously adopted by Mr. *R. Jackson*. He contended, that if the subject were fairly investigated; if all the documents were laid before them, it would be found that three times more censure than praise had been bestowed on Mr. Hastings by the Company.

The *Deputy Chairman* reviewed and defended the conduct of Mr. Hastings in the administration of the affairs of India. He had, in 1814, opposed the erection of a statue in honour of Mr. Hastings, be-

cause it was united with a pecuniary grant; but he now supported the proposition, as it was the last and only tribute they could pay to a great and eminent statesman.

Mr. C. Grant opposed the motion. (The hon. director read his sentiments from a written paper.) He could not agree to a resolution which went to sanction the whole of Mr. Hastings's conduct, moral and political, during his long administration.

Mr. Gahagan, in supporting the motion, observed, that the House of Commons, in 1815, had by rising, when Mr. Hastings retired from the bar, proved that

they entertained a more just opinion of his merits than their predecessors had done.

The amendment was then negatived, and the original motion was carried, four hands only being raised against it.

*** We have been obliged, in consequence of the length to which the debate of the 22d of Dec. extended, to present our readers with this brief sketch of the proceedings in the general court on the 12th of January. This interesting debate shall, however, be reported at length in our next number.

HOME INTELLIGENCE.

DEMISE OF THE DUKE OF KENT.

From the London Gazette, Tuesday, Jan. 25.—Whitehall, Jan. 24. Yesterday morning, at ten o'clock, departed this life, at Sidmouth after a short illness, his Royal Highness Edward Duke of Kent and Strathern, his Majesty's fourth son, to the great grief of all the Royal Family.

The demise of his Royal Highness the Duke of Kent is felt as a national loss by men of all parties. The active benevolence of his character, endeared him to the people, since it held a bright example of the zealous interest which powerful men ought to take in the welfare and happiness of the human race. His life was devoted to the service of the needy. He replied to every application that was made to him for the succour of the distressed—and he was indefatigable in his efforts to afford relief to the poor, in exerting his influence in favour of supplicants, and in promoting every plan favourable to charity, and to the maintenance of civil and religious freedom. The condescension with which he attended to every correspondent, subjected him to innumerable letters from strangers, and particularly from soldiers, to all which he never failed to return answers. A considerable part of every morning was devoted to the task of reading and answering these letters, and they only who had the high honour of his confidence can say what pains he took to procure situations for persons out of employment. In another number we shall set apart a small

space to finish this part of the subject. All ranks of society sympathise in this heavy affliction, with their Royal Highnesses the Duchess of Kent and Prince Leopold, whose striking coincidence of misfortune must awaken the tenderest feelings throughout the kingdom. This amiable and afflicted princess was throughout his illness indefatigable in her attentions upon her departed consort, and performed all the offices of his sick bed, with the most affectionate anxiety. She did not even take off her clothes for five successive nights, and all the medicines were administered by her own hands. These mournful duties, though they could not snatch their object from the grave, must at least have smoothed the passage to it; and the recollection of them will be among the strongest consolations of her widowed heart, when the lenient hand of time shall have soothed the keener pangs of sorrow.

His Royal Highness died at his residence at Sidmouth, to which place he had retired, with his amiable duchess and family, to have the benefit of the pure and mild air of Devonshire. The complaint which thus suddenly terminated his life was an inflammation of the lungs with a cough, attributed to a neglected cold which he caught from sitting in wet boots after a walk in the environs of Sidmouth, with Capt. Conroy.

In the morning of Thursday, Jan. 20, his Royal Highness was reported to be in imminent danger; but towards the middle of the day he rallied again in consequence of a little refreshing sleep which he had been enabled to obtain. Towards evening, all the alarming symptoms re-

turned again with increased vehemence, and continued so till towards Saturday morning, when a kindly remission of them took place. This, however, proved to be only that fatal relief which so commonly occurs before death ensues.

The Royal Duke bore his distressing illness, and the exhaustion of the excessive bleedings which failed to mitigate its severity, with the greatest composure and resignation. During the progress of it he would not take any thing but from the hands of his wife, for whom he was heard to pray in his last moments. He repeated continually, "I am quite prepared." The whole kingdom will feel the loss of this excellent prince. The attentions of the amiable wife, now no longer so, are above all praise. In her arms he breathed his last.

Prince Leopold, Capt. Conroy, and Generals Weatherall and Moore, were present to afford consolation and support to the Duchess under this agonizing bereavement.

On the morning of the 24th of Jan. an intimation of the melancholy event was brought to town by Gen. Moore, who arrived in London at half-past 8 o'clock, and drove to Carlton House in a chaise and four. Carlton House was closed on the demise of his illustrious brother being announced to the Regent. Gen. Moore then proceeded to York-House and Clarence House, and after imparting the family bereavement to the two royal brothers, travelled to Windsor to bear the melancholy tidings to the princess.

The following letter from Lord Sidmouth was dispatched to the Lord Mayor;—

Whitehall, Jan. 24.

My Lord,—It is with very great concern that I acquaint your Lordship with the death of his Royal Highness the Duke of Kent, which melancholy event happened on the 23d, at Sidmouth, after a few days illness, to the great grief of the Royal Family.

I have to request your Lordship will give directions usual on such occasions, for the tolling of the great bell of St. Paul's Cathedral.

(Signed) SIDMOUTH.

To the Rt. Hon. the Lord Mayor.

During the whole of this day, the Prince Regent kept himself secluded at Carlton House, receiving only visits of condolence from the Dukes of York and Clarence.—A number of the Cabinet Ministers, clerical dignitaries, public officers, and noblemen and gentlemen, received at court, called and left their names at Carlton House upon the melancholy occasion.

As a token of respect and regret for the late Duke of Kent, all the shops at Kensington, without an exception, were shut up as soon as the news arrived there. On the 25th, the Dukes of York and Clarence visited the Prince Regent at Carlton House, which, as on the preceding day, was thronged with inquirers offering condolence; amongst whom were the Persian ambassador and Mr. Morier, his secretary, with the other ambassadors and ministers, the Archbishop of Canterbury, Mr. Justice Park, Mr. Justice Best, and a great number of ladies.

Sidmouth, Jan. 25.—This morning, about eleven o'clock, we witnessed the melancholy sight of the departure of the Duchess of Kent. Her Royal Highness travelled with her brother, the Prince Leopold, in his post-chaise. The princesses and all the immediate attendants of her Royal Highness accompanied her in several carriages.

It is quite impossible to give an idea of the deep sensation the death of the duke has occasioned, and the interest attached to the duchess is very great, from her most wonderful exertion in the attendance she paid for thirteen days and nights to her royal consort.

We have not yet heard the arrangement for removing the remains of his royal highness; but the Prince Regent's orders are hourly expected, to whom it is feared it will be a great shock, from the distance of this place preventing early communication with London.

It is understood that the funeral will be private, like that of the late Duke of Gloucester.

Dec. 29.—A Court of Directors was held, when the undermentioned commanders took their final leave of the court, previous to departing for their respective destinations, viz.—

Captain T. F. Balderston, Asia, Capt. F. Creswell, Astell, and Capt. H. A. Drummond, Castle Huntly, for Bengal and China.

The following Captains were sworn into the command of their respective ships, viz.—

Captain M. Hamilton, Dunira, for Bombay and China; and Capt. A. H. Campbell, Duke of York, for Madras and China.

31.—Friday a Court of Directors was held, when the under-mentioned commanders took their final leave of the court, previous to departing for their respective destinations, viz.:—Capt. T. F. Balderston, of the Asia; Capt. F. Creswell, of the Astell; and Capt. H. A. Drummond, of the Castle Huntly, for Bengal and China. The following Cap-

tains were sworn into the command of their respective ships, viz.—Capt. M. Hamilton, of the *Dunira*, for Bombay and China; Capt. A. H. Campbell, of the *Duke of York*, for Madras and China.

Jan. 7.—A Court of Directors was held when John Fendall, Esq. was appointed a provisional member of council at Fort William, in Bengal. Capt. Samuel Lyde was sworn into the command of the ship *Dorsetshire*, consigned to St. Helena and China.

8.—The dispatches were closed at the East India House, and delivered to the Purser of the following ships, viz.:—

Asia, Capt. T. F. Balderston; Astell, Capt. F. Cresswell; and Castle Huntly, Capt. H. A. Drummond, for Bengal and China.

Passengers per Castle Huntly, for Bengal—Capt. and Mrs. Waters; Mrs. Hales; Mr. Sutherland; Messrs. Oldfield, Manning, Cary, Campbell, Landers, Hay, Thomson, Hay, and Cooke, Cadets.

Per Astell, for Bengal—Messrs. Shaw and Lindsay, Writers; Lieut.-Colonels Caldwell, C. B., and Keble; Capt. Eldridge; Mr. Assist.surg. Jacob and Lady; Miss Henrietta Halled; Messrs. Wilton, Angelo, Wedgwood, Mackintosh, Davies, Wade, Douglas and Clarkson, Cadets.

Per Asia, for Bengal—Messrs. Davidson, Cartwright, Gordon, Davidson, and Begbie, writers; Maj. Garnham, Lady and child; Capt. Hay and Lady; Lieut. Trist and Lady; Messrs. Page, Forster, Browne, and Phibbs, Cadets.

12.—A general Court of Proprietors was held “for the purpose of considering a proposition to be made agreeably to the notice tabled at the general court on the 22d of September last, to place in their court room a statue of the late Right hon. Warren Hastings;” and also for the purpose of taking into consideration, an unanimous resolution of the Court of Directors of this day’s date, recommending the Court of Proprietors to authorise the Court of Directors, to offer to his Majesty, to raise and maintain, at the expense of the Company, a corps of volunteer infantry, from amongst the persons in the Company’s employ; and if his Majesty shall accept such offer, then to authorise the Court of Directors to defray the expense of the corps so to be raised out of the funds of the Company; and if necessary, to apply for an Act of Parliament to sanction the approbation of a sufficient part thereof for the purpose.”—See the report of the proceedings in p. 198.

12.—A Court of Directors was held, when Capt. Thomas Sanders was sworn into the command of the ship *Orwell*, consigned to China direct.

19.—A Court of Directors was held, when Capt. F. Adams was sworn into the

command of the ship *Buckinghamshire*, consigned to China direct.

21.—A Court of Directors was held, when the under-mentioned ships were taken up for one voyage in the Company’s service, and thus stationed:—

Brothers, 425 tons; Gauden, 399; Asia, 458; Hyperion, 402; and Regret, 356—for Bombay direct.

Coromandel, 643 tons; new ship, 478; Waterloo, 416; Woodford, 544; Moira, 650; Brampton, 432; Lady Raffles, 647; new ship, 470; Lady Carrington, 596; Asia, 410; Timandra, 367; Providence, 678; James Sibbald, 667; Kirk Ella, 409; Richmond, 466; and Phoenix, 493—for Bengal direct.

22.—An overland dispatch from Bombay arrived at the East India House; but the political intelligence brought by that medium has not been suffered to transpire.

New Government of Madras.—The following will be the constitution of the Madras government on the arrival of Sir Thomas Munro.—Maj.gen. Sir Thomas Munro, governor; Lieut.gen. Sir Thomas Hislop, commander-in-chief, and second in council; John Hodgson, Esq. third in council; George Stratton, Esq. fourth in council; William Thackeray, Esq. is also appointed a provisional councillor.

Miscellanies.—Charles Milner Ricketts, Esq. late of the supreme council at Calcutta, has been returned to Parliament for the borough of Dartmouth.

Sir J. Newbold, chief justice of Madras, has renitted from India 500*l.* towards erecting the Wellington Pillar in Somersetshire, the foundation of which is to be laid early in the spring.

Richard Fraser Lewis, Esq. proceeds to Madras with the permission of the Court of Directors, to practise as a barrister in the supreme court of judicature at that presidency.

Mr. J. Minchin is also permitted to proceed to practise as an attorney in the same court.

The H. C. ship *Asia* has been long detained to carry out an important military dispatch for the arrangement of the Indian army.

Several persons apprehended at the Mauritius under charges of slave dealing, have arrived in this country, and are lodged, preparatory to commitment for trial, in Coldbath-fields prison.

Liverpool.—A new ship for the East India trade has just been launched at Liverpool, of 562 tons burthen.

An account of the East India vessels reported since the opening of the trade.

LONDON MARKETS.

Friday, Jan. 28, 1820.

Coffee.—The market remains in an unsettled state, and several parcels are offering for money at a considerable reduction: St. Domingo is stated to be sold at 128s. The public sale of Wednesday went at very irregular prices, several lots nearly supporting the previous currency, but the greater proportion went 2s. 3d. lower. At the India House—Mocha, very ordinary, 129s 6d. and 130s; Cheribon, light yellow, 136s, pale 126s.

Sugar.—The demand for Muscovades has continued steady during the week; the purchases are considerable; the prices fully 1s. per cwt. higher. The demand for Foreign Sugars continues very general, but has not led to any extensive transactions, on account of the very limited supply at market.

Cotton.—The market continues in an inactive state.

Tea.—There is an improvement in the prices of Tea. Hyssons and Bohea are quoted at higher prices.

BIRTHS, MARRIAGES, AND DEATHS,
HOME LIST.

BIRTHS.

- Jan. 7. At Forty Hill, Enfield, the lady of Capt. Lochner, of a daughter.
12. At Brighton, the Hon. Mrs. Sotheby, lady of Capt. Sotheby, of a son.
21. The lady of M. Gilmore, Esq., of Stamford Hill, of a son.

MARRIAGES.

- Dec. 17. At St. Andrew's Holborn, Capt. C. Poulton, of the Madras Inf., to Susanna Jane, eldest daughter of G. H. Lyeester, Esq., of White Place, near Maidenhead, Berkshire.
23. At Bellwood, A. Forbes Ramsay, Esq., surgeon, Hon. E. I. Company's service, Bengal establishment, to Isabella, fourth daughter, of the late J. Young, Esq., of Bellwood.
Jan. 6. At Leicester, Capt. J. Jackson, 3d reg. Bengal N. L., to Miss A. M. Gosset, of Great George Street, Westminster.

THE ASIATIC JOURNAL

FOR
MARCH, 1820.

ORIGINAL COMMUNICATIONS.

MEMOIR OF A PATRIOT KING.

THE mournful event which has called forth such a universal expression of surviving attachment, forms an era in the history of the four united nations, which we cannot pass over like a common domestic occurrence. The descent of the sceptre into new hands can scarcely happen in any country without having some influence on the hopes, the character, and the condition of the people. It is in the course of ordinary experience, taking the world at large, for one generation of subjects to live under successive reigns, and to remember striking parts in the lives of several monarchs which affected the destiny of the nation, and imprinted deep traces, and dropped reproducing seeds, of deterioration or improvement: but it is one of the distinctions of the past reign to have held its characteristic tenor over two complete generations of the people.

The life of a king engages the writer who undertakes such a subject, to traverse the two concentric circles of biography and history.

Asiatic Journ.—No. 51.

We leave to more qualified pens the arduous task of delineating the objects in both departments with unity of effect; of keeping independent paths of action distinct, without losing sight of their collateral relation; and of following divergent lines to their separate results without distraction. Our limits will not permit us to aspire to this elevated walk of composition; nor even to detail a plain series of concise annals. The reader has therefore only to expect in this *memoir* the dates of the more remarkable events in the public and domestic life of GEORGE III., which may be useful to keep alive some illustrious recollections, followed by a gleanings of anecdotes arranged under the qualities of which they are bright and refreshing examples; and a few original reflections on the temper and spirit of the memorable reign. Lastly, the following tables will be annexed.—
1. *The Reigning Family Register*; containing the births, marriages, and deaths, which have

VOL. IX.

2 E

occurred in the British branch of the House of Brunswick during the last sixty years.—2. *The accessions, abdications, dethronements, and deaths of contemporary European sovereigns.*—3. *Obituary of the Stuart family.*—4. *A recapitulation of the changes of ministry,* which will have been mentioned under the title of national memoranda.

We shall aim to keep the biographiana, consisting of domestic notices and traits of individual character, separate from these; and if the distinction is not always so complete but that the train of incidents may include passages which belong to both, we shall take as much only as a hasty sketch may slightly touch, and leave the rest to history. On a subject which has employed so many pens, it were idle to affect novelty in regard to the fundamental materials; events which have been long well known cannot be faithfully revived, if the new form given to the narrative extend beyond an attempt to select the important, to arrange the misplaced, and to proportion the space assigned to the parts by the scale for the whole. Where we already find an intelligent relation of facts concise enough for our purpose, we shall not seek to change the words, lest we should materially alter the representation of the things; but in sketches of character, and reflections on systems and policy, should we venture on any, the language will be our own, lest we should insensibly adopt the ideas of a faction, or the wishes of a foreigner.

Part I.—BIOGRAPHIANA.

George III., the grandson of George II., and the second child of Frederick Prince of Wales, and of Augusta, originally Princess of Saxe-Gotha, was born in Norfolk House, St James's Square, the 4th June 1738. His constitution from infancy was sound and

vigorous, and supported the healthy tenor of his life to a great age, notwithstanding it is a physical fact that his birth happened after a premature gestation of seven months. The education of a prince destined to reign, is too momentous a stage in the progress to manhood to be lightly passed over. The correct and elevated tone of manners, the responsive accordance to the obligations of rectitude, and the vivid impressions of piety, the cultivated talents for government, the assiduous application to its duties, the tenacious adherence to the principles of the constitution, and eminently to the fundamental laws fixed at the Revolution, which the man and the king ever displayed in the varied relations which he had to fill; are so many striking proofs that, in all essential points, the guardians of his education had neither been negligent, nor perniciously active; good habits had been formed, and right principles conveyed, or he had been suffered to learn them in the history of that system of freedom which denies even to superstition itself only the power to persecute.

It appears that Dr. Ayscough (afterwards Dean of Bristol) was one of the first persons to whom the grave responsibility was committed of instructing the infant prince. The following is an extract from a letter written by him to Dr. Doddridge, dated Gerrard-street, Feb. 16, 1744-5:—

“ Good Sir :— * * * I am obliged to you for your kind congratulations on the honour his Royal Highness has lately done me, in trusting me with the education of his children. I am truly sensible of the difficulties, as well as the advantages of the station I am placed in. * * * I thank God I have one great encouragement to quicken me in my duty, which is, the good disposition of the children intrusted to me : as an instance of it, I must tell you, that Prince George (to his honour and my shame) had learnt several pages in your little book of verses, without any directions from me; and I must say of all the children (for they are all

committed to my care) that they are as conformable, and as capable of receiving instruction, as any I ever yet met with. How unparlousable, then, I should be, both in the sight of God and man, if I neglected my part towards them: all that I can say is, that no care or diligence shall be wanting in me; and I beg the prayers of you, and every honest man, for the divine blessing on my endeavours. I am, good Sir, with great truth and regard, your affectionate friend and humble servant;

“FRANCIS AYSCOUGH.”

Respecting the subsequent course of education, many notices are to be found in the *Diary* of Mr. Bubb Dodington* (afterwards Lord Melcombe). To understand the following abstract from this *Diary*, we must recollect, that Frederick Prince of Wales is the father of Prince George, and Prince George is the excellent personage to be commemorated. Information from other sources in unison with the diary, will be occasionally interwoven in the narrative, but in terms pointing to the additional authority.

In 1749, when Mr. Dodington was made treasurer of the chambers, the Earl of Bute belonged to the household of the Prince of Wales, as did Lord North, who was thought of as governor to Prince George, but not appointed (*Diary*, p. 13). On the 20th of October 1749, writes Mr. Dodington, “We all went to Ouborn fair; Prince George in our coach.” On the 11th January 1750, “went to Leicester House to see *Jane Grey* acted by the Prince’s children.” (p. 31.)

“Prince Frederick of Wales was fond of instructing his children at a very early age to repeat moral speeches out of plays; and with this view, he desired Mrs. Devenish, whose first husband was

Mr. Rowe, the poet, to have a correct edition of Rowe’s works printed, which that lady accordingly did. The press was corrected, and the dedication written by Mr. Newton, afterwards Bishop of Bristol, whom Mrs. Devenish, on that occasion, introduced to the Prince and Princess of Wales.” *Life of Bishop Newton*, p. 27.

“The acting of plays appears to have been a favourite amusement of the royal children; for another author mentions the performance of *Cato* by them, when Prince George, being only 11 years old, spoke a prologue in praise of liberty. In 1750, Prince Frederick William was born on the 13th of May, and was baptised on the 17th of June; on which occasion Prince George was sponsor by command of George II. (*Diary*, p. 77). The same month, Prince George was made a Knight of the Garter, his proxy in the procession being Lord Inchiquin (p. 79). In September following Lord Bute kissed hands as Lord of the Bed Chamber to the Prince of Wales, Lord North remaining as servant to his Royal Highness.” (p. 84.)

On the 30th of March 1751, Frederick Prince of Wales died; and his son, Prince George, now in his thirteenth year, succeeded to the principality. At this era, his sub-governor was the Rev. Andrew Stone, afterwards under Secretary of State and treasurer to the Queen, and subsequently to that, Primate of Ireland. (P. 117, and other depositaries of *contemporary history*.) But amidst the cultivating attentions of professors in elegant literature, the Prince’s moral and religious character was almost wholly formed by the care and attentions of his excellent mother the Princess Dowager of Wales. (*Life and Anecdotes of Bishop Newton*, *passim*.)—It was part of her character to have a taste for domestic life, which made it her pleasure to be occupied in the duties of a

* Mr. Dodington was a gentleman of fortune in Devonshire, who carried a good reputation to court, but in making his way there forfeited it by flagrant tergiversations, which disgusted his former friends and party, and drew upon him the general reproach of being a political intriguer. In 1744 he came into office, under Mr. Pelham, as treasurer of the navy; but gave up that place, in 1746, to attach himself to Frederick Prince of Wales, and was made treasurer of the chambers to that prince.

mother. Her children passed much of their time in her company. Mr. Dodington was received most graciously by her Oct 4, 1751; at this time the young Prince of Wales, Prince Edward, and the Princess Augusta, were with their mother (p. 128). A similar circumstance is noticed, Dec. 21, 1751 (p. 130). The Prince of Wales's birth-day (24th May, Old Style) was kept at St. James's in 1752, with a great attendance of nobility (p. 145). The Prince (though by no means addicted to gaming) was fond of a sort of round game called Comet, at which he played with his mother, brother, sisters, and some nobility of the household. The Princess Dowager said, "she liked that the Prince should now and then amuse himself at small play, but that Princes should never play deep; both for the example, and because it did not become them to win great sums." (p. 160, 161). This excellent lady had great confidence in the good opinion entertained of her by the Prince, even at the early age of fourteen; but she seems to have judged his disposition and faculties without any of that vain partiality so often observable in parents.

When Dodington asked the Dowager Princess confidentially what was the Prince's real disposition. "You know him," she answered, "almost as well as I do. He is very honest; but I wish him to be a little more forward and less childish at his age." He was then approximating to fifteen; her Royal Highness however seems to have been rather dissatisfied with the Prince's instructors. She said, "she really did not know what they taught him; she feared not much: that Mr. Stone told her that when he talked to the Prince on the general frame and nature of the English government and constitution, he seemed to give a proper attention, and made pertinent remarks; that Stone was a sensible man, and capable of instructing in things as

well as in books; that Lord Harcourt and the Prince agreed very well, but she thought he could not learn much from his Lordship; that Mr. Scott was, in her opinion, a very proper preceptor; but as for the good Bishop (Hayter of Norwich), she supposed he was a mighty learned man, but he did not seem to her very proper to convey knowledge to children; he had not that clearness which she thought necessary: she did not very well comprehend him herself; his thoughts seemed to be too many for his words. That she did not observe the Prince to take very particularly to any body about him, but to his brother Edward; and she was very glad of it, for the young people of quality were so ill educated, and so very vicious, that they frightened her."—"That the Prince seemed to have a very tender regard for the memory of his father, and that she encouraged it as much as she could. That when they behaved wrong, or idly (as children will do), to any that belonged to the late Prince, she always asked them how they thought their father would have liked to see them behave so to any body that belonged to him, and whom he valued, and that they ought to have the more kindness for them, because they had lost their friend and protector, who was theirs also; and she said she found it made a proper impression on them." (Pp. 170 to 175).

About the end of 1752, the governor, Lord Harcourt, and the preceptor, Bishop Hayter, became highly dissatisfied with the sub-governors, Stone and Scott, alleging that they were perverting the mind of the Prince of Wales with Tory doctrines, and high prerogative notions, more suited to a despot of the Stuart family, than a successor of William III. To lodge and enforce this heavy complaint, Lord Harcourt demanded an audience of George II. in which he depicted his own views of the course of instruction through

which the heir apparent was passing; and inveighed against a plan for misleading the pupil, odious and full of mischief, had it been as represented, tendering the resignation of his office, unless the following, among other points, which he made a *sine quâ non* of his continuing in office, were granted; these were, that Mr. Stone, who to his other unconstitutional frailties added that of being a friend of Lord Bute, with Mr. Scott, whose character was vitiated by having been recommended by a descendant of Lord Bolingbroke; and Cresset, whose unfitness was more obvious, being described as a creature of the Princess Dowager of Wales, be dismissed from the establishment. Not being able to prevail on his majesty to pronounce the bidden fiat, Lord Harcourt and the Bishop of Norwich gave in their resignations together, on the 5th of December in this year.

In the spirit of the subsequent reign of the king, where are the traces of these unconstitutional principles, where the fruits of these Tory seeds said to be planted in the mind of the Prince? Faithful to the Bill of Rights, he maintained the safeguards to civil and religious liberty which political apostates would have undermined. During his life he never interposed his prerogative but as an ægis to the citadel of freedom. "The king," said Lord North, who knew him well, "would live on bread and water to save the constitution from injury. He would at any time suffer martyrdom for the laws of England." The Whigs have a convenient resource, for which stratagem is too noble a term, it is a subterfuge, a trick, to give the name of Tory to their political opponents who happen to be in office when they are excluded, to charge with arbitrary designs men who adhere to the principles of the revolution, and support the constitution which they would subvert. When a convivial party of plai-

tive Whigs toast the Revolution, it is in the temper of the maxim, upon which the man who had a coat turned twice, vindicated his consistency by saying: "One good turn deserves another." (*Original Reflections on the History of Parties in England.*) Shortly after those important offices were thus vacated, Lord Waldegrave was declared governor of the Prince, and the Bishop of Peterborough his preceptor.—(*Diary*, pp. 185, 186, 188.)—It had been insinuated that Mr. Stone and Mr. Scott were tainted with bad political principles; but the Princess said, "she knew nothing of the jacobitism, the arbitrary principles, the dangerous notions of those who were accused, or any such attempted to be instilled into the children—that she could not conceive what they meant—that the Bishop (of Norwich) indeed was teaching them logic, which, as she was told, was a very odd study for children of their age—that the last time the Bishop had been with her he complained of being disregarded, and begged her protection, shewing the great necessity of a preceptor's being always respected and supported; upon which she told him, that she always inculcated in the children to shew him great respect—and this, says she, not for love of you, my lord, but because it is fitting and necessary; for if they are suffered to want the respect that is due to one degree, they will proceed to want it to another; till at last it would come up to me, and I should then have taught them to disregard myself." The Princess thought, probably not altogether without reason, that there was a political object in these resignations, to drive her into supporting the cause of the sub-governors with a degree of warmth which might displease the King, and induce him to take the Prince entirely out of her hands; but she behaved with so much prudence on the occasion, that George II.

remained perfectly satisfied both with her and with the royal children. Other attempts were made to alarm the nation by anonymous letters sent to popular preachers, and also to generals in the army, expressing great concern and apprehension for the Prince's education from the character of his tutors, (p. 190 to 200). These endeavours produced little effect at the time; but they have nevertheless served as the basis of many false and frivolous insinuations against his late majesty's political principles from that period to the present. The Princess, shortly after the appointment of the Bishop of Peterborough, said that he gave great satisfaction; that he seemed to take great care and in a proper manner, and that the children took to him and seemed mightily pleased." As to Lord Waldegrave, she said "she was but little acquainted with him; but from all she saw she had a very good opinion of him; that he was very well bred, very complaisant, and attentive to his charge, and the children liked him extremely; but, says she, I look upon a governor as a sort of pageant, a man of quality for show, &c. I stick to the learning as the chief point. You know how backward they were when we were together, and I am sure you don't think them much improved since. It may be that it is not yet too late to acquire a competence, and that is what I am most solicitous about: and if this man by his manner should hit upon the means of giving them that, I shall be mightily pleased."—(pp. 211, 212.) The Bishop here spoken of was Dr. John Thomas, formerly a canon residentiary of St. Paul's, but raised to the see of Peterborough in 1747. He was translated in 1757 to Salisbury, and in 1761 to Winchester, where he died in 1781. The charge of jacobitism being afterwards publicly thrown out against Mr. Stone, he repelled it in a spirited manner, and prosecuted his accusers for defamation.

On this occasion (March 3, 1755,) the Princess conversing again with Mr. Dodington about the Prince's instructors, said, "that Stone had behaved very well to her and to the children," that he always spoke of the late Prince with great respect, and with great civility of all those whom he knew the Prince had a real value for; but that Lord Harcourt behaved very differently; that he not only behaved ill to her, but always spoke to the children of their father and his actions in so disrespectful a manner, as to send them to her almost ready to cry. That he did all he could to alienate them from her, insomuch that they themselves were sensible of it; and that George had mentioned to her once since Lord Harcourt's departure, that he was afraid he had not behaved to her sometimes so well as he ought, and wondered how he could be so misled: to which she answered no; but now and then not with quite so much complaisance as a gentleman should use to a lady. (pp. 219, 220.) The following little family scene shews the quiet domestic habits in which our late revered sovereign was brought up by his admirable mother. "Nov. 15, 1753, the Princess sent for me to attend her between eight and nine o'clock. I went to Leicester-house, expecting a small company and a little music, but found nobody but her royal highness. She made me draw a stool and sit by the fireside. Shortly after came in the Prince of Wales and Prince Edward, and then the Lady Augusta, all in an undress, and took their stools and sat round the fire with us. We continued talking of familiar occurrences till between ten and eleven, with the ease and unreservedness and unconstraint, as if one had dropped into a sister's house that had a family, to pass the evening." (p. 255)—The object which seems to have given the Princess the greatest anxiety was to instruct the future sovereign in a knowledge of the world, without

at the same time corrupting his morals : and here she seems to have felt considerable difficulty. She said, " she was highly sensible how necessary it was that the Prince should keep company with men (he was now seventeen), she well knew that women could not inform his mind; but even if it were in her power absolutely (which, of course, it was not, on account of the king's authority) to whom could she address him? What company could she wish him to keep? what friendships desire him to contract? Such was the universal profligacy, such the character and conduct of the young people of distinction, that she was really afraid to have them near her children."—Some months after this, viz. in August 1755, it was rumoured that King George II. intended the Prince his grandson to marry one of the Princesses of Brunswick. In a private conversation on this topic, the Princess Dowager of Wales said, " she thought the match premature; the Prince ought to mix with the world: the marriage would prevent it; he was shy and backward, the match would shut him up for ever with two or three friends of his, and as many of her's. That he was much averse to it himself, and that she disliked the alliance extremely; that the young woman was said to be handsome, and had all good qualities and abundance of wit, &c., but that if she took after her mother she would never do here. That the duke, her father, was indeed a worthy man; but the duchess was the most intriguing, meddling, satirical, sarcastical person in the world. That such a character would not do at all with George; it would not only hurt him in public, but make him uneasy in his private situation. That he was not a wild dissipated boy, but yet was good-natured and cheerful, with a serious cast upon the whole." (p. 356).

In the course of the following December, Mr. Dodington, after many intrigues and negotiations with different political parties, returned to his old office of treasurer of the navy, under the Duke of Newcastle, whom he had often ridiculed and vilified to the Princess. By conduct so despicable, he of course forfeited all the respect and esteem with which that illustrious lady had honoured him. " I waited upon the Princess," says he, " to acquaint her with what had passed; but her royal highness received me *very coolly*." (p. 379). Thus ended Mr. Dodington's intimacy at Leicester House; and he had subsequently few opportunities of observing closely the conduct and society of the Prince before he emerged from private life. Meanwhile, although the prejudices which George II. had entertained against the Princess Dowager had been partly obliterated, by acquiring a more intimate knowledge of her actions and character, yet the faint remains of adverse impressions tended to keep his grandson excluded from the splendours and allurements of a court.

On Saturday, the 25th of October 1760, King George II. died suddenly in an apoplectic fit, which seized him between seven and eight in the morning, at Kensington Palace. At this era his grandson and successor had entered his twenty-third year. In the first public act of the new sovereign, the good sense and modesty of his character were manifested, in the following address to the council:—

" The loss that I and the nation have sustained by the death of the king, my grandfather, would have been severely felt at any time; but coming at so critical a juncture and so unexpected, it is by many circumstances augmented, and the weight now falling on me much increased. I feel my own insufficiency to support it as I wish;

but animated by the tenderest affection for my native country, and depending upon the advice, experience, and abilities of your lordships, on the support of every honest man, I enter with cheerfulness into this arduous situation, and shall make it the business of my life to promote in every thing the glory and happiness of these kingdoms, to preserve and strengthen the constitution in both Church and State; and as I mount the throne in the midst of an expensive, but just and necessary war, I shall endeavour to prosecute it in a manner the most likely to bring on an honourable and lasting peace, in concert with my Allies."

By this speech we may understand what the first Lord Chatham meant, by complaining that there was behind the throne an influence greater than the throne itself. He had an interview with his Majesty immediately on his grandfather's death. When the secretary handed to the young king an address which he advised his Majesty to deliver at the first assembly of the Privy Council, the veteran statesman was cut short with an assurance that a proper speech for the occasion had been prepared already. The personal adviser of the King to exercise his own intelligence before he gave his sanction to a public act, which he could execute without the intervention of ministers, was then understood to be the Earl of Bute, and subsequent events confirmed the inference. The ambition shewn by every Whig administration to act when in power without control, would reduce the regal office to a non-entity, or at least make the sovereign a mere machine for affixing the sign manual to the acts of ministers. To this extreme have they pressed the maxim, that the King can do no act without responsible advisers. In urging this point, they have passed the bounds of the law and the constitution. The ministers are the organs of

the executive government to the public, not to themselves in communication with themselves. There are certain orders of government which magistrates and subjects are not bound to obey, unless they have the signature of a responsible minister; in respect to these, the alternative becoming a minister, is to have them framed under his own counsel, in conformity with his own system of policy, in perfect agreement with what he thinks right, or to resign. But let him go no farther. Where the constitution empowers the King to do any act without the intervention of a responsible minister, as in addressing the council, or the Parliament, do not let the servants whom the King may disapprove, or intend to dismiss, call upon the sovereign to declare who advised him not to take their advice. The true season for responsibility will begin when the new administration enter upon office; their signatures to public acts will shew who are the King's public advisers; and by allowing the personage, whose stake in the country, and interest in deciding rightly, is greater than theirs, to have a personal opinion and voice in conducting the affairs of the state, the due weight which the tenant of the throne ought to have in holding the balance between conflicting parties, will be preserved.

Many circumstances conspired to make the King highly popular at the commencement of his reign; particularly the remembrance that after so many natives of Holland and Germany had inherited the sceptre under the Act of Settlement, the people had now a sovereign who had been born and educated in England. In his first speech from the throne, containing many noble and patriotic passages, he touched this chord of common congratulation in a responsive key, with which we shall resume the subject in our next number.

(To be continued)

To the Editor of the Asiatic Journal.

SIR:—Having recently received from India four letters on the subject of East-India postage, three signed "*Veritas*," the other a "*Subscriber*," though evidently written by "*Veritas*," together with the notes and remarks of the Editors of the Madras Courier and Calcutta India Gazette on the irregularity and vexatious delay in the transmission of letters to India, I take the liberty of sending them to you for republication in the *Asiatic Journal*, a work that is highly estimated by the friends of persons resident in the East, for the valuable information it contains on subjects connected with India, and India affairs.

PARA. 2.—In answer to the query contained in the seventh paragraph of the letter of "*Veritas*,"* I have ascertained, on inquiry at the General Post-Office, Lombard Street, that nine hundred and seventy letters were received from Madras by the Hon. Company's ship "*Rose*," and five hundred and eighty-six letters from the same Presidency by the Hon. Company's Ship the "*Marquis of Wellington*."

PARA. 3.—I annex, in further illustration of the facts noticed by "*Veritas*," copies of the letters from the Deputy "Post-Master General" at Madras [see A.], applying to the local authority to select two of the Company's Ships as "*Packet-Mails*," and the other two as "*Ship-Letter-Mails*," together with copies of the advertisements that were published in the Madras Gazette in consequence, announcing to the public that the ships "*Rose*" and "*Marquis of Wellington*" had been selected to carry "*Ship-Letter-Mails*" to England.

The postage of the one thousand five hundred and fifty-six letters received by the above-named ships, at eight-pence per single letter,

amounts to £51. 17s. 4d. The postage of ditto, at the rate of 3s. 6d. per single letter, amounts to £272. 6s. Admitting that every letter received by the two East Indiamen above-mentioned were *only* single letters, the sum of two hundred and twenty pounds sterling has been illegally levied in England on India correspondence in this instance only, and in direct violation of a public advertisement issued from the Post-Office at Madras, with the sanction of the local government, under the signature of a public functionary: and which official notification Mr. Secretary Freeling was pleased, on a remonstrance being submitted to him of the surcharge, to designate an *error*, on the part of his Deputy in India.

PARA. 4.—From the annexed Extract of a Letter from Mr. Secretary Freeling, dated the 26th October 1816, and the public notice that was issued in consequence at the Madras Post-Office [see B.], it is to be inferred that Mr. Secretary Freeling had it in contemplation, by his prohibiting the postage of letters by "*Ship-Letter-Mails*" to be received in India, to charge all letters of that description that might arrive at the Post-Office in Lombard Street from the East-Indies, invariably with the rate of postage enacted for the conveyance of letters by "*Packet Mails*," viz. 3s. 6d., which illegal charge was actually levied in England on all *single letters* that were forwarded from Madras by the Hon. Company's ships "*Rose*," and "*Marquis of Wellington*," instead of eight-pence, as enacted by clause XVI of the Act of 55 Geo. III. cap. 153.

PARA. 5.—That "*Packet Mails*" (why or wherefore?) are to be encouraged in preference to "*Ship-Letter-Mails*," is evident from the Extract of a letter from Mr. Secretary Freeling, under date the 8th

April 1817 [See C.]. But taking a legal ground of opposition to this, persons who have occasion to write to their relations and friends in the East-Indies will observe, that it is only necessary to write the word *Ship Letter* in large letters on the *envelop*, which makes it obligatory on the Post-Office in Lombard Street to transmit such letters by "*Ship-Letter Mails*," instead of *Packet Mails*. The postage of a single letter by "*Packet Mails*" is 3s. 6d., and by "*Ship-Letter-Mails*" to India 1s. 2d.

PARA. 6.—I submit, for the information of those connected with the East-Indies, an Extract from a letter from Mr. Secretary Free-ling, dated 17th July 1817, [see D.] wherein he positively refused to comply with the request of his Deputy at Madras, that a stamp might be furnished for *Ship Letters*. Why a stamp was not sent out for "*Madras Ship Letters*" as well as for *Packet letters*, remains to be explained, and until an explanation is given, the inference in the 4th paragraph of this address rests unimpeached, and is strongly corroborated by the facts, regarding the postage that was illegally levied in 1818, on the Madras letters that were received in England by the Hon. Company's ships "*Rose*" and "*Marquis of Wellington*."—I am, Sir,

Yours, &c. A. CLERK.

East-India House, Nov. 30, 1819.

(A.)

To the Secretary to the Board of Trade.

Sir:—I have the honor to request that you will have the goodness, in compliance with the orders from the Hon. the Court of Directors under date 8th May 1816, to select one of the two Indiamen, mentioned in the margin,* as a King's Packet, and authorize the Commander of the other to carry a Ship-Letter Mail for England.

I have the honor to be, &c.

(C.)

General Post-Office, London, 8th April, 1817.

Para. 5.—Respecting Ship Letters for Great Britain, you will have found, by my letter of the 26th October 1816, that you have been in error in supposing that you had the power to receive any postage upon them. The Packet-Mails are to be encouraged, and the Ship-Letter Mails sent in the intervals of

* Minerva. Rose.

Packets, or when in fact it cannot be refused, that is, when the writers mark their letters for particular ships, not intended by you for Packet Mails.

(D.)

General Post Office, July 17th 1817.

My letter of the 26th October last explicitly told you, that under the new

Act you had no operation to perform with Ship Letters for England, although there is no objection to your causing such as you may collect to be properly packed and addressed to this Office; therefore there is no necessity to send you out a stamp for Madras Ship Letters.

EXTRACTS FROM THE INDIAN PRESS.

No. I.
MADRAS.

To the Editor of the Madras Courier.

SIR:

1. The delay in the arrival of vessels called "Packets," and the circuitous route they generally pursue, by touching at Madeira, the Cape, Isle of France, and Ceylon, have been frequently noticed by you, and you have frequently adverted to the distinction between "India Packet-Letters," and "India Ship-Letters."

2. The Hon. Company's ship Marquis of Wellington was dispatched from Madras in the month of January 1818, and an advertisement was issued by his Majesty's Deputy Post-Master General at Madras, declaring the Marquis of Wellington to be a "Ship Letter-Mail;" and under this faith, numerous letters were dispatched from the Madras Presidency: but on the arrival in Lombard Street of the letters forwarded by the Marquis of Wellington, the Madras stamp "Ship-Letter" was annulled by a Post-office cross, and the letters stamped *de novo*, "India Packet-Letter," and charged with a postage of three shillings and sixpence, instead of eight-pence each.

3. I submit a copy of a letter from Mr. Secretary Freeling, in reply to a representation made to him regarding the postage of the letters per the Marquis of Wellington.

"The Marquis of Wellington brought a packet-mail from Madras, by which conveyance the

letter alluded to by you arrived. The ship-letter stamp must have been put on the letter through some error at Madras, the Deputy Post-Master General of Calcutta having dispatched the Marquis of Wellington as a regular packet from India, pursuant to the discretion allowed him; and therefore all letters by that ship were liable to the packet-postage.

(Signed) "F. FREELING,
"Secretary."

4. The letters that were forwarded from Madras in February 1818, by the Hon. Company's ship *Rose*, in pursuance of a post-office advertisement issued at Madras, proclaiming that ship a "Ship-Letter Mail," were disposed of in the same extraordinary manner, on their arrival in England, as the letters per the Marquis of Wellington.—*See above, par. 2.*

5. By Clause XVIII. of the Act of Parliament, it is lawful for the Post-Master General to establish Post Offices, and appoint Deputy Post-Masters, in the United Kingdom, or in any of the Presidencies of the said United Company, and to remove and displace them at pleasure. Such being the case, Mr. Editor, was Mr. Secretary Freeling legally authorized to annul an act of his Deputy, who invited the Indian public, by an official advertisement, to send letters to Great Britain by a "Ship-Letter Mail, and on the arrival of those very letters in London, that were forwarded under such a guarantee, to designate the act of his Deputy an error, and to charge our friends

in the United Kingdom with a postage of three shillings and six-pence for each of those letters, instead of "eight-pence," as directed by the Act of Parliament.

Quere. Is not the Deputy Post-Master General at Madras allowed to exercise his discretion? Yes, and he did so, by making the Hon. Company's ships the Marquis of Wellington and the Rose "Ship-Letter Mails."

6. Was it, and is it within the competency of the Post-Master General in England, after the receipt of letters at Madras under one denomination, to alter that denomination, and call that a "Packet" in England which has been advertised at Madras a "Ship-Letter Mail."

7. Would not an action be maintainable in a court of justice, for the surcharges of two and ten-pence on each of the letters alluded to, that were sent from Madras by the Hon. Company's ships the Marquis of Wellington and the Rose?—Quere. How many letters were sent by those ships?

8. I take leave to send the envelop of a letter of July 1818, received by the Ajax free-trader, dubbed a packet, that you may notice the practice that obtains at the Post-Office in Lombard Street, in receiving a letter for the ship Ajax on the 1st August 1818, and stamping it "India-Ship-Letter," and marking the postage on it one shilling and two-pence, agreeably to clause 12 of the 55th Geo. III, cap. 153; and then, on 13th August following, re-stamping the said letter with the designation of "India Packet-Letter," and converting the charge for postage from one shilling and two-pence, to three shillings and six-pence, thus making the postage just treble.—Can this be legal?*

9. The grievances and incon-

veniences that are sustained under this Post-Office Act, are become intolerable: instead of having a free transmission of letters under a free trade, our Indian correspondence is hampered in every possible way.

10. Although Mr. Secretary Freeling will not authorize any disbursements for advertisements for "Ship-Letter Mails,"* I should imagine that you would not object to insert a memorandum of the probable departure for Great Britain of all vessels not employed as packets, and for all single letters sent from India to Great Britain by vessels not employed as packets, a postage of only eight-pence is leviable by the following clause of the Act of Parliament.

"XVI. And be it further enacted, that for the port and conveyance of all and every the letters and packets that shall be carried or conveyed by vessels *not employed as packets from the Cape of Good Hope, the Mauritius, and the East Indies to Great Britain*, there shall be charged and payable a sea postage of eight-pence for each single letter, and so on in proportion for packets."

11. I have the pleasure to send to you the Act of Parliament of the 55th Geo. III. cap. 153. The publication in your valuable paper of the seventh, twelfth, sixteenth, and forty-fifth clauses of the said Act, would be of great utility to your subscribers and the community, as the distinction between *India Ship-Letter* and *India-Packet-Letter* is therein correctly and fully defined; and the rate of postage leviable in the East-Indies and in Great Britain, on each description of letter, is also particularly specified.

The postage of a single letter from India to England by a

* This is literally the case: numbers of the letters by the Ajax are stamped and charged "Ship-Letter," then crossed out and "India Packet-Letter" substituted for it.—*Editor of Courier.*

* Three shillings and sixpence is the sum allowed for advertisements by "Packet-Mails." We will always give free notice of the probable departure of "Ship-Letter Mails."—*Editor.*

Packet-mail is three shillings and six-pence, payable in India, or on delivery in England.

The postage of a single letter by a Ship-letter-mail is eight-pence, payable only in England.

I remain, your obedient servant,

Madras, VERITAS.

March 15, 1819.

We have much pleasure in complying with the request of our valuable correspondent, by inserting the following clauses of the Post-Office Act.

VII. Enacts, that a mail shall be made up and dispatched to India *once in every month, as far as may be found practicable*, either by the vessels to be established and hired by the Postmaster General, under the authority of this act, or by a ship of war, or a ship in the service of the East India Company, or by a ship employed in the private trade to and from India.

XII. Enacts, that for the port and conveyance of all and every letters and packets that shall be carried or conveyed by vessels *not employed as packets*, from Great Britain to the Cape of Good Hope, the Mauritius, and the East Indies, there shall be charged and payable a sea postage of *one shilling and two-pence* a single letter, and so in proportion for packets : such postage to be paid on delivery of the letters.

XVI. Enacts, that for the port and conveyance of all and every letters and packets that shall be carried or conveyed by vessels *not employed as packets* from the Cape of Good Hope, the Mauritius, and the East Indies to Great Britain, there shall be charged and payable a sea postage of *eight-pence* for each single letter, and so in proportion for packets.—Vide XLV.

XLV. Enacts, that the rates of postage herein before-mentioned for the conveyance of letters and packets by the said packet-boats, ships, or vessels, from any port in Great Britain to any port in the East Indies, shall be received by the deputies of the Post-Master General, *upon their delivery in India*; and that the rates of postage for the conveyance of letters from any port or place in the East Indies to Great Britain shall be received, at the option of the parties sending the same, by the deputies of the Postmaster General, in India, upon forwarding the same, or upon their delivery in Great Britain or Ireland.—Vide XVI, XII.

In our columns of correspondence we have inserted an interesting exposition of the tricks practised in the Post-Office of Lombard Street, in regard to Indian correspondence. We have frequently raised our feeble voice against the vexatious system adopted under the new Act of Parliament, and hitherto with no avail; but we really think the grievances pointed in the letter of "*Veritas*," are of such a nature, that to obtain redress they only require to be made public. We shall forward copies of this letter to the Lords the Post-Masters General, and to the Bengal and English Editors.—*Madras Courier*, March 16, 1819.

No. II.

CALCUTTA.

India Gazette, April 5, 1819.—From the *Madras Courier* we have taken a letter signed "*Veritas*," complaining of some of the many inconveniences that have been experienced since the passing of the Post-Office Act. The Editor of the *Courier* mentions his intention to send copies of this letter to the Post-Masters General in England; but as the petitions sent from this country, respecting the mischiefs which the new system was likely to occasion, and which in practice have been abundantly verified, have not to our knowledge produced the least effect in England, we are apprehensive that the letter of *Veritas* will have very little weight with Mr. Freeling or his principals. The framers of the Post-Office Act must have determined on that measure without consulting any intelligent person acquainted with Indian affairs; and, certainly, without having any due regard either to the interests of the European residents in this country, or the interests of the British public: and we have been assured, by persons who have procured information on the subject from authentic sources, that the

increased revenue which has been derived since the establishment of the new tax on Indian correspondence has been trifling, when compared with the vexation, inconvenience and disappointment, which the measure has occasioned. The delay that has been experienced in transmitting letters from England to this country, has, in many instances, produced most serious mischief; and the carelessness with which the duties of the Indian department of the Post-Office have been conducted in England, is almost proverbial. To this we can bear testimony, for it has happened that our own letters have been brought to Calcutta in packets directed to Madras; in consequence of which, the letters have been taken thither on the ship that brought them to Calcutta: and we have been compelled to pay the postage over-land from Madras, in addition to the postage directed by the Act. This inconvenience, we have reason to believe, has not been confined to ourselves; and we think that the Post-Masters General in England ought to regulate their establishment in Lombard Street with sufficient strictness, to prevent mistakes of this description. We need scarcely observe, that if a letter containing bills of exchange should be addressed to a merchant in Calcutta, but sent in a packet directed to Madras, the delay that would unavoidably be occasioned before such letter could be received from Madras at Calcutta, might be productive of most ruinous consequences; for which, perhaps, the Post-Masters General might be responsible.

The facts detailed in the letter of *Veritas* call aloud for the interposition of authority, if the vexatious Act is not to be repealed; but we sincerely hope that the merchants of England, who are so deeply interested in the unclogged transmission of letters between India and the mother country,

will make a powerful and efficient effort to remove what must be considered an inseparable barrier to the freedom of trade. The machine of commerce should not be impeded or taxed by the caprice of Post-Masters General in England, or by the errors of their deputies in India. We recommend the letter of *Veritas* to the attentive perusal of our readers.

—
No. III.

To the Editor of the Madras Courier.

SIR:—A public notice was issued at the General Post-Office in London, on the 14th July 1818, stating, "that the Ship-Letter Office would dispatch letters for Madras under the regulations of the Acts of Parliament, by the Ajax free trader, to sail about the 20th July 1818." On the 7th August, the public notice was altered, and the said ship Ajax, "a Ship-Letter Mail," was converted into a "Packet Mail," and the letters that had been previously received and stamped "India Ship Letter," at the rate of 1s. 2d. per single letter, were re-stamped with the appellation of "India Packet Letter," and the rate of postage altered from 1s. 2d. to 3s. 6d.

2. As the Ship-Letter Office in Lombard-street publicly announced its intention to dispatch letters for Madras by the Ajax free-trader, under the regulations of Acts of Parliament, can you, Mr. Editor, inform your subscribers under what clause or clauses of the Act of Parliament the Post-Master General in England had authority to change the denomination of the ship conveyance,* as well as the rate of postage? In my humble opinion, if the transaction be not illegal, it is a breach of

* We apprehend the Postmaster-General of Lombard-street had a right to take up the Ajax as a "Packet Mail," under the 7th clause of the late Act of Parliament; but it was clearly illegal, and a breach of faith with the public, to receive letters for the Ajax as "Ship Letters," and afterwards re-stamp and new charge them. It was clearly a deception upon the public.—*Madras Editor.*

faith in regard to the public : and where was the necessity, admitting even its legality, of converting the Ajax free-trader into a "Packet Mail," on the 7th of August, when public notice had been previously issued from the General Post-Office, London, declaring his Majesty's ship Carron an "India Packet Mail" for the month of August. Here is the notice verbatim: "His Majesty's ship Carron for Packet Mails to the Cape and Calcutta, and also to Madras, to be forwarded from Calcutta by the first opportunity, will sail about the latter end of August." Why could not the Ajax have proceeded to India, as originally intended, as a "Ship Letter Mail?" and was it not an infraction of the Act of Parliament making the Ajax free-trader a "Packet Mail" for the month of August, after his Majesty's ship Carron* had been advertised a "Packet Mail" for that month; for the 7th clause of the Post-Office act explicitly declares that a "Packet Mail" shall be made up once only in every month. As the ship Ajax had to convey, and did convey, letters to Madras, of what utility was it to send letters for Madras by his Majesty's ship Carron, to be forwarded from Calcutta? It is declared in the preamble to the Post-Office Act, that "it was enacted for the extension and improvement of commerce and correspondence, and of his Majesty's revenue." *Que-re*, if any of the three objects it professes to embrace be materially benefitted? At any rate, the revenue that is collected under this Act does not commensurate with the inconveniences and disappointments the commerce and correspondence with the mother country is subjected to by the circuitous route of "Packet Mails," and the

delay in the sailing of his Majesty's ships with "Packet Mails" on board. Where is the "Packet Mail" that was forwarded by his Majesty's ship Carron? Seven months have elapsed since his Majesty's ship Carron was advertised at the General Post-Office, London, as a "Packet Mail" for India. The Thalia, Traveller, and other free traders, that sailed from England in September and October last, have reached Bombay and Calcutta,* and as the southerly wind is set in, it is not improbable that the December and January letters will reach Madras before those of August forwarded via Calcutta by his Majesty's ship Carron. So much for the boasted advantage of "Packet Mails."

A SUBSCRIBER.†

Madras, March 21, 1819.

No. IV.

MADRAS.

To the Editor of the Madras Courier.

Sir:—Facts are stubborn things.

The ship Providence sailed from England with "Packet Mails" for Madras on the 18th of October; the ship Blenheim from Gravesend with "Packet Mails" direct for Madras on the 30th November; and the ship "Langs" with "Ship Letter Mails" from the Downs on the 9th of December 1818.

The "Langs" arrived on Friday last, and brought upwards of 900 letters. The Blenheim packet is due, and it is reported that the packet Providence was at the Cape on the departure of the "Langs" in February, and was likely to remain there some time longer; so much for the wise and provident selection of vessels for the conveyance of "Packet Mails."

Letters have been received by the free trader, "Langs," that were put into the Post-Office in

* Clearly so. It is but fair, however, to mention that the Carron was kept for the September mails. The forwarding the Madras Packet to Bengal on the Carron, displays, to say the least of it, a carelessness of public convenience highly culpable.—*Madras Editor.*

* It appears, from subsequent information (See No. 6.), that the Carron did not reach Madras till the 1st of June.

† A notice in the *Answer to Correspondents* indicates that "A Subscriber" is the same with "Veritas."—*Edit. Asiatic Journ.*

Lombard Street, as far back as June 1818!!

It is in the recollection of many persons, that the Ajax free trader was taken up as a "Ship-Letter Mail" in July last, and subsequently made a "Packet Mail" in August. Some of the letters brought by the Ajax packet were received in July last at the Post-Office in Lombard Street as "Ship-Letters," and marked as such; but afterwards had the Post-Office "cross" affixed, and were re-stamped, and forwarded as "Packet-Letters."

The reason why the letters of June and July 1818, that have been received by the Langs, were detained at the Post-Office in Lombard Street, five and six months, we cannot solve. The inconsistency of forwarding some letters and detaining others, can only be explained by the Post-Office at home, which appears to regulate the transmission of Indian letters more according to its own whims and caprices, than in conformity to the act of Parliament.

VERITAS.

4th May, 1819.

The Ship Letters brought by the Langs amounted to nearly a thousand; but, thanks to our worthy Post-Master in Lombard Street, the whole of the correspondence of September and October, and part of November, has been entrusted to ships who are making a trading voyage between London and this port, touching at every intermediate place, and upon whose arrival we cannot calculate in any reasonable time. It is really shameful that such grievous imposition should continue to be practised upon the public!!

MORE GLARING TRICKS OF THE LOMBARD-STREET POST-OFFICE.

Many of the letters received by the Langs (which sailed in December) are stamped, bearing the General Post-Office marks of the months of June and July prece-

ding; whilst, with the same care, the original duplicates and triplicates of others have been put up by the Post-Office writers in the same bag!!

The gross ignorance and misconduct of these people cry aloud for a representation to the proper authorities. We call upon the merchants and others interested (and who is not interested?) in the subject, to convene a meeting in order to try the effect of one more petition or remonstrance, on the distressing grievances sustained by the Indian community under the new Post Office Act, or rather by the abuse of the Act, for we are satisfied it never was in the contemplation of Parliament, that the worst vessels should be selected for the conveyance of Indian correspondence.

But the carelessness of sending originals and duplicates by the same ship is really unpardonable. To a commercial people, to say nothing of private convenience, it is of the first importance that correspondence should be conducted with the greatest punctuality, vigilance, and care. It is by no means supposing an extreme case; when we say, that by the neglect of the Post-Office in sending originals and duplicates of letters by the same ship from England, a mercantile house of the first respectability of extensive dealings in this country, might be ruined in a single day by the loss or capture of that ship.

The Providence, our long and anxiously expected September packet, had been some time at the Cape Town, discharging cargo there, when the Langs sailed, and was not expected to follow within less than a fortnight afterwards!! It is stated that the Providence was not to touch any where between the Cape and this port.

Surely under the Post-Office Act the captain cannot be justified in remaining at the Cape for the dis-

posal of his cargo, or any other purpose of his private ends? We apprehend he is answerable for any detention of a vessel carrying a mail. By taking charge of the packets the vessel becomes public property, and nothing can justify her detention at a port for one hour after the time stipulated by Act of Parliament; at any rate it is clearly the duty of the Postmaster here to investigate the matter.

No. V.

CALCUTTA.

India Gazette, 17th May, 1819.

The Editor, after recapitulating some of the principal facts stated in No. IV, which had been communicated by a correspondent at Madras, makes the following observations upon the particular subjects of complaint.

We have not yet been able to ascertain whether any of the letters brought by the Langs to this Presidency were put into the General Post-Office in June; but if the statement of the Madras writer be correct, the evil calls loudly for a prompt and effectual remedy.

The Legislature, when it passed the Post-Office Act, cannot have contemplated the mischiefs that have been consequential to that measure; and although the petitions which were transmitted from this country to England have not produced any benefit, we are persuaded, that if the grievances which have been experienced since these petitions were framed shall be clearly authenticated and explained, a proper representation, through a regular medium, to the Court of Directors, or eventually to the Board of Controul, cannot fail to obtain an attentive consideration and substantial redress.

By the new enactment, we are compelled to transmit and receive our letters by certain channels of conveyance, and by NO OTHER; and we are made to pay a much greater rate of postage than formerly, for the transmittal of our correspondence: we are therefore surely entitled to have every practicable means adopted by the esta-

Asiatic Journ.—No. 51.

blishment in Lombard Street, and by its subordinate officers, to insure a constant and speedy intercourse between India and the mother country, and to have our letters delivered and forwarded with the least possible delay.

If letters put into the Post-Office in June were not dispatched until December; or if letters, marked for transmission by Ship Letter Mails, were afterwards forwarded in Packet Mails, for the mere purpose of enhancing the postage, we are fully persuaded, that the parties who have been guilty of this negligence and misconduct, should a proper complaint be preferred, will not escape suitable censure and punishment.

We are not vain enough to suppose, that these remarks will produce any effect in Lombard Street; but if the parties composing the European community, who daily suffer and individually complain of these inconveniences, will but step forward collectively, and frame a firm but respectful representation of their grievances, we are certain that they will be and must be redressed.

MADRAS.

ARRIVAL OF A POST-OFFICE
PACKET FROM ENGLAND, *via*
BENGAL AND TRINCOMALEE.

To the Editor of the Madras Courier.

SIR:

1. His Majesty's ship Carron arrived in Madras roads on the 1st of June, 1819, with Post-Office packets for the month of August 1818!!!

2. The letters have been distributed, but from the unusual length of time that has elapsed between the intervals of the departure of the Carron from England, and of her arrival at Madras (nearly a period of nine months), they possess little interest and less novelty.*

* We have heard from good authority, that letters have been received in the Madras packets by the Carron for persons in Calcutta!!!—*Madras Editor.*

3. This is another of the numerous instances of the vexatious delay in the arrival of letters by "Packet Mails," and for the conveyance of which an increased rate of postage is levied on the English in the East. It never could have been contemplated by the framers of the Post-Office Act, that letters by a "Packet" would have been upwards of nine months in reaching their destination; but it has happened, as was predicted, in a letter in the Courier of the 21st of March last (No. III.). The letters dated in December from England reached this presidency by the "Lange," a "Ship-Letter-Mail," a month before the letters dated in August, by the packet Carron.

4. It is grievous to observe, that the advertisement† published at the Post-Office in Lombard Street was not attended to, or the packet for Madras, forwarded by his Majesty's ship Carron, might have been transhipped on the arrival of that vessel at Saugor, to his Majesty's frigate Phæton, or in fact to any other ship bound to Madras; but they were not transhipped, although the Phæton sailed from Saugor the 27th of March, and reached Madras early in April, and sailed again with a packet-mail for England on the 16th of that month.

5. From this exposition of facts it is evident that the letters by the Carron might have reached Madras two months ago, if proper instructions had been issued by the Post-Master-Generals, in conformity to the London Post-Office advertisement, announcing to the public that the letters would be forwarded from Calcutta by the first opportunity: why they were not, remains to be explained.

6. It may be a question whe-

ther it is legal to exact the same rate of postage, whether the letters are four or nine months coming from England to India. In cases of such extraordinary delay, postage ought not to be levied in India, particularly as His Majesty's and the East India Company's ships convey packets free of expense to the Government: it is only to captains of Free Traders that the sum of £75 is given, and then only when these ships are constituted "Packets."

7. In former times, and prior to the enactment, levying a tax on the correspondence of our countrymen in India, the communications with England, if not more frequent, were more regular, and less vexatious; and in the event of delay in the arrival of ships, we submitted patiently to the disappointment, and were not subjected, as at present, to postage irregularly imposed at the General Post-Office in London; for instance, several letters that have been received at this presidency by the packets Cerberus, Liverpool frigate, Ajax, Blenheim, Providence, Carron frigate, &c. are charged 7s. for a single letter instead of 3s. 6d., and 10s. 6d. for a double letter instead of 7s. It is necessary to state, that the amount of postage to be levied on letters forwarded by "Packets" are invariably marked at the Post-Office in Lombard Street, and the Deputy postmasters in India are debited for the amount so marked, and possess no authority to redress grievances of surcharges, unless the letter or envelope be returned to the London Post-Office for the inspection of the Inspector.

8. If the "*Ajax*" free trader had been permitted to sail from England, under the original advertisement of the London Post-Office, dated the 14th July 1818, denominating that vessel a "Ship-Letter-Mail," and had not subsequently been made a "Packet-Mail" in August, the "Ship Let-

† Advertisement.—"His Majesty's ship Carron for "Packet Mails" to the Cape and Calcutta, and also to Madras, to be forwarded from Calcutta by the first opportunity, will sail about the latter end of August."

ters" that were put into the Post-Office in Lombard Street in June, July, and August 1818, might have been forwarded by the Ship "Ajax," and in that case the letters would have been received at Madras on the 19th of January last. The Ship Letters adverted to were ultimately forwarded by the free trader Langs, a "Ship-Letter-Mail" that sailed in December 1818 from England, and arrived in the Roads on the 29th of April 1819, thus making a difference of nearly four months in the arrival of those letters at Madras.

9. If there are packets on His Majesty's Ship Carron for Bombay, they may possibly arrive at that Presidency within twelve months from the date of that ship's departure from England!!

VERITAS.

Madras, 4th June, 1819.

No. VII.

CALCUTTA.

We have Bengal despatches

bringing down our news from that quarter to the 12th instant. [Aug.]

Every fresh arrival from Europe furnishes new proofs of the laxity and carelessness of the Post-Office writers at home, which are really distressing, both in a public and private point of view. By his Majesty's Ship Dauntless, despatched in March, packets were received at Calcutta containing English letters, bearing the London Post-Office mark for November and December!! These packets contained 5,500 letters, many of which were dated in November! Can any excuse be offered for such gross neglect when ships were daily sailing for Calcutta direct in January, February, and March.—*Madras Courier*, Aug. 31.

††† We have again to thank our correspondent, "VERITAS," for the masterly way in which he has brought the abuses of the India Post-Office Act before the public. He has left nothing for us to add on the subject. We promise him that his exposition of facts, as well in this as in former letters, shall reach those quarters from whence redress is always attainable.—*Madras Editor*.

To the Editor of the Asiatic Journal.

SIR:—More in conformity, perhaps, with the public taste than their own genius, our present race of popular poets seem to delight in a perpetual glitter. But whatever our critics, in their ignorance of oriental manners, and peculiar traits of character and language, have asserted to the contrary, the writers of the long classical age of true poetry in Persia despised such tinsel. Like the early Greek poets, they are perfect fatalists; and it is generally on some great man falling a seemingly untimely victim to his destiny, and to relieve the occasional tediousness of epic narrative, that Firdosí pours forth one of those appeals to the ordinances of fate, and instability of fortune, of which I took the opportunity of concluding my last

essay with two sublime examples. Yet of them his taste makes him also sparing; and whenever one makes its appearance, it is like an Eastern bride at her nuptial, or first exhibition of herself, set forth in all her native silks and brocades of Yizd and Hirat, and her fine linen and muslin of Tattah and Túz

توز and decorated with the virgin gold and gems of Nishanpúr and Badakhshan; and it ought to have the same intrinsic value and brilliant aspect whenever it comes in currency, whether it be stamped with the imposing name of a European or Asiatic classic: but while occasionally thus gorgeous in apparel, the Persian poets often warn us, that female charms are best adorned when unadorned!

Firdós is held in the same estimation in the East, as Homer is in the West; and his *Shanamah* is considered as much the origin of the modern Persian epic, as the *Iliad* was of the Greek. Sir William Jones justly observes: "there is a great resemblance between the works of those extraordinary men: both draw their images from nature herself, without catching them from reflection and painting, in the manner of modern poets, the likeness of a likeness; and both possessed in an eminent degree the rich and creative invention, which is the very soul of poetry;" and Sir William was a judge, well qualified by his peculiar oriental skill, and general learning and taste, to decide candidly on this subject; yet have his less-informed followers added: — "it were sacrilege to draw a comparison between the two poets." Now this is the downright cant of modern criticism, which arrogantly takes some work for its text, and, without looking into its author, rails against all science and polite literature but those of ancient and modern Europe; and, to speak the mildest of it, can originate only in its own ignorance: for in spite of the fancied inequality and disorder, for instance, of the *Shanamah*, the Persian scholar finds in it a continual varied and inexhaustible stream of beauties, which if he once dip into it, flows around his heart, and whirls him along from page to page, till he has read and treasured up the chief part of it in his memory.

An epic poem ought to have a moral; and, it has been asked, what is the moral of the *Shanamah*? Such a question could originate only in a misnomer; for it is not a single epic, but a series of epics, each of which has its moral, not coldly specified at the beginning or the end, like the country dauber, who puts upon his sign "this is the picture of a lion," but is left

by the author, like many other parts of it, to the imagination of his reader.

Pindar sublimely says, that a real poet, "like the eagle, soars by his natural strength, and leaves behind him the more ignoble birds, who seem to animate each other by their hoarse cries;" and thus has this scholastic and exclusive admiration of the Greek and Latin classics hampered us with a code of rules, to the prejudice of all other literature; and elevated among us for their day, a Blackmore, a Glover, and other later versifiers to the rank of English epic poets. But on reading *Arthur*, *Leonidas*, and our more modern English epics, or even the Persian epic of *یوسف و زلیخا*

of Jami, and other epics of his school, we soon feel that there could never have been any such beings, or any such events, as we are called upon to feel for and witness. While I take an interest in whatever appertains to man, I must at the same time feel no interest in whatever is not human: the good and bad deities of Homer and Virgil, the devils and angels of Dante and Tasso, the witches and Satan of Shakespeare and Milton, and the demons and parís of Firdósí and Nizamí, in whatever class those poets rank them, or whatever attributes they give them, I can comprehend and trouble myself about, only in a fancied connection with myself; and it is still more necessary, that Achilles and Hector, Eneas and Turnus, Macbeth and Adam, Rostam and Sohráb, whatever casual elevation they have, should think and act like human beings: and I can assure his readers, as far as respects Firdósí, neither his demons nor his heroes are ever much removed from human probability; for although, in order to excite our interest and attention to an epic poem, the events ought to rise above the ordinary level of human life,

and the passions of the actors be more frequently and violently stirred, yet to divest its hero of fear, pain, anxiety, and all the frailties and infirmities that identify him with ourselves, would be to render the story insignificant, and in some shape inconceivable. Extraordinary strength and undaunted courage, Firdósí's heroes excel in; and conformably with their primitive age, they are seldom in their passion under the controul of either reason or reflection: otherwise they are human beings.

In like manner with respect to the ornaments of poetry, a little glitter, and a little honey, may occasionally decorate and please; for nothing sets off the female head better than a small gold ring in the ear, or gives a more grateful relish to a dish of fragrant hyson, than a portion of cream and sugar; yet a poet must not be lavish of his gems or sweets, for a hungry clown returned from his plough, would stare to see his wife with a huge brass ring in her nose, and setting before him for his dinner a sneaker of her washerwoman's slslop, instead of his beans and bacon. Thus also in Bengal, seated on my *chabutrah*, or terrace, detached from my house, I have often on a clear evening during the rainy season, been enraptured with that prospect of the starry firmament, so sublimely detailed in one of Addison's Spectators, and have occasionally been vexed by having my view temporarily obstructed by a marsh-engendered meteor glaring across our grosser atmosphere, and diverting my sight from those great and lofty bodies, which seemed to pursue their twinkling and harmonious course in a serener region.

Firdósí is seldom pretty or bombastical, but in common displays as much classical taste, as high-minded resolution, and as noble and independent principles, as any of our western poets. Considering the despot he had to deal with, who could have acted with more

spirit, or have shown a more contemptuous indifference for wealth than he did, on being so injuriously and shabbily treated by Sultan Mahmud? And where an opportunity offers, his heroes, while treated with honour, are obedient and respectful subjects; but dealt with dishonourably, as Kai-kaous, in the episode of Rostam and Sohrab, did the former, he retorts upon his sovereign in the true spirit of chivalry, and tells him that his saddle is his throne, his casque his crown, and his battle-axe his sceptre; and that mounted on *Rakhsh*, his war-horse, he was independent of any country or king! Of his ready wit I gave an example in my essay of last June, when a mean conspiracy of the three court poets, Ansári, Asjadi, and Farrokhi, attempted to entrap him. As a poet, his rhymes are exact, his versification smooth and flowing, artless and unaffected, and of course exempt from that harsh form of construction, so common with Jamí, and the later tribe of Persian poets, and so necessary to the Greek, Latin, and modern European languages. His style is energetic and graceful, and occasionally grand and sublime, or pathetic and tender, as his subject requires of him; for, splendid in its imagery, rich in sentiment, sparkling in original conception, and abounding with good sense, his *Shanamah* is as full of natural and exquisite pictures of beauty and virtue, or of suffering and crime, as any poem in existence.

Some years back, having understood that sixty copies of the Calcutta printed edition of this work had been sent home, to be distributed among the Directors and their friends, and finding it was not then to be bought,—in the character of a Persian scholar, to whom such a present would be acceptable, and perhaps publicly useful, I had an application made to the late Mr. Davis, either to furnish me with one of his, or to get me the loan of a

correct copy from the library at the India-House, for that in noting examples for my Dictionary of the pure Persian Language, I had daily occasion to refer to it, and could by this time have completed a translation of the whole, and in so doing, have been rather assisted than retarded in my grand work ; but it was then I was, to my astonishment, made aware, that a stop had been put to Dr. Lumsden's edition, and an order lately issued for no more books to be sent from their library.

No Persian manuscripts have been more corrupted by ignorance and bold transcribers, than those of the Shahnamah. Of such as are in common to be found, I have three incomplete copies in my possession, and must trust to my own judgment in having collated and made the best of them. Of a poem consisting of sixty thousand couplets, and that your readers, Mr. Editor, may make an immediate reference, I can only offer a small portion in corroboration of the above assertions. The chief difficulty amidst such a diversity of subject is to make a choice, and

to the episode of رستم و سهراب

Rostam and Sohráb, I am induced to give a preference, chiefly from three respectable Persian scholars having made the same selection. Two, however, of them, though they have anticipated me in going to the press, are in fact posterior ; for my translation has lain by me upwards of twenty years, and like all my other translations, is as literal as the two languages will admit of, and in humble prose ; for Cowper truly observes, " that " a just translation in rhyme of " any ancient," and he might have added, oriental " poet, is impossible ;" and, though no man was more capable, he equally failed in attempting Homer into blank verse, as Ossian Macpherson had done before him, into measured prose, and Pope into rhyme. The last, it

has been observed, attempts to cover his fetters with flowers, for in such an attempt the happiest versifier puts himself into fetters ; yet he could not conceal them : occasionally he throws them off altogether, but then he ceases to be a translator of Homer, and justly incurs the censure of the great Grecian Bentley, " that his work " was a very pretty poem, but not " Homer !"

But in order to do justice to my author, it was necessary to get a correct copy of his work. The failure of one attempt I have already stated ; and any other is not so easy a task, as the Europe, Greek, and Latin scholar, with his Delphine and Valpy's editions of his classics, can believe ; for civilized Asia has at different ages suffered not only by the rude invasion of an Alexander from the West, the Saracenes from the South, and of the same hordes of barbarians, and that oftener, from the North, as completed the decline and downfall of the Roman Empire ; but within the last fifty years by a European invasion from the ocean, which in what light soever we consider it, as extending our commerce, and furnishing the Pagans with Christian missionaries, the learned natives of those once happy and enlightened regions look upon as having been more ruinous to their arts and literature, than all preceding barbarous attacks upon them : and I much fear that the histories of revived Asia will make a like unfavourable report of us.

On first possessing ourselves of British India, we continued for a time the native Princes in their governments, and the native men of business in the management of the revenue and commerce, and were content to look on, and pocket the profit : but as soon as we thought ourselves qualified, those princes were made cyphers of, or deposed ; and every office of dignity and profit occupied by

ourselves, and the class of *Bala adamees*, or native gentlemen, soon became extinct ; so that now, few of ourselves having a taste for the liberal and useful arts, and there being no native gentlemen to patronise and cultivate them, it astonished many individuals like myself, who during a residence of those twenty or thirty critical years that completed this wonderful revolution had philosophic coolness to look on and see how quietly every thing went to wreck, and how science and knowledge disappeared, like the light of the taper which we put an extinguisher on after getting into bed. Look at many of the Company's factories, and the old fort in Calcutta, which was finished in Queen Anne's reign, and which now they wish to remove, but are unable from their solidity to destroy them ; and look at the palace Lord Wellesley built, and the new fort, which no expense or pains can keep from already falling of themselves into ruins ; and look at the pattern muslins in the Board of Trade's office, which are numbered according to their fineness in the series of our alphabet ; and you will find the finer qualities A. B. C. D. and E. extinct ; that is, we have lost the art of fabricating them, and what was F. is now A. ; and it is the same with all the other arts. Moreover it is a great mistake to believe that this palsyng power is confined to Bengal ; for it now extends, I had almost said equally, all over the civilized parts of Asia, from the shores of the Mediterranean to the confines of China ; and like most of our late conquests, it is not the question, whether we shall or shall not make them ; for, according to the Eastern belief, the fates have ordained that that populous and rich country shall soon join the rest.

The books of the East are all in manuscript ; and the few English gentlemen who then devoted themselves to their study, saw

that the old books would soon perish, and their place be supplied, if supplied at all, by incorrect and garbled copies : and we had copies of the works of Sadi, Hafiz, and a few others, carefully collated and printed and in this we were encouraged by the advice of Sir W. Jones, who in 1788 also set us an example, by having a copy

of the *Laili Majnún* لالی مجنون of مولانا هاتفي thus printed. Soon

after, under the management of Mr. Gladwin and Dr. Gilchrist, a sort of seminary was in 1796 established at Calcutta, for teaching the Persian and Hindustani languages, which in 1800-1 was extended to a college, one of the first objects of which was to supply the students with uniform copies of school oriental books ; but this, like every part of that establishment, was put upon so expensive a scale, that it was reduced by orders from home. In the mean time, as I recollect from the catalogues of the day, numerous oriental works had issued from the college press, but with so little judgment and selection, that scarcely one of any utility is now to be bought. Since that the Calcutta professors have been more prudent ; and Doctors Lumsden, Hunter, Carey, and Capt. Roebuck, have in particular given us Persian, Arabic, Sanskrit, Bengali and other oriental dictionaries and grammars ; but under an idea that parts of the Persian classics were improper to be put into the hands of youth, their prints of these have been only selections, without recollecting that parts of Anacreon, Horace, and other Greek and Latin classics, are on this score more objectionable ; but the editors do not on that account garble them, being aware that young people consider every book they read as a task, and are too *idle* to discover such passages, unless more *idly pointed* out to them by

older scholars. At all events this does not apply to Firdôsi; and Dr. Lumsden had undertaken a complete copy of the Shahnamah, to consist of eight volumes, the first of which was published at Calcutta in 1811, and sells in England for three guineas: that is, the whole work, if ever completed, will cost four and twenty guineas! This volume does the Editor much credit, though still far from correct, as I shall have occasion to point out by and bye, in some small comparative extracts of it. However, defective as it is, a few amateurs like myself would have gone to the expense of buying it; but whether the objection was this expense, or that the advisers on such occasions are not partial to the Persian classics, the continuation of it is stopt by orders, it is understood, also from home. We were told in our newspapers, that at the royal congress Lord C. laid out £200,000, chiefly in gold snuff-boxes and such trinkets as presents, which I believe is customary, and might in more unenlightened times have been all very proper; but at this day, to each of the Emperors, to the King of Saxony, and other northern potentates, how much more appropriate and acceptable would such a copy of Firdôsi Shahnamah have proved, which is equally the mother tongue, or immediately connected, with the Russian, Saxon, English and all the Teutonic languages. At the colleges of Haileybury and Addiscombe, the oriental languages, which ought to be the chief, are scarcely a secondary object; and till lately the single professor of Persian, Arabic and Hindustani, had enough a-do to attend to his numerous pupils; but a distinct professor is this year appointed to each department; and it is to be hoped they will find more leisure, and soon avail themselves of it, for who else can do it so well, to select and collate their respective classics, and be able to publish a

small volume annually; part of the expense of which should be defrayed either by Government or the East India Company, that the printer's price of such books may come within the bounds of the scholar's purse. For in my own case it costs me between £30 and £40 yearly for printed Persian books; as for instance, I have among others paid this year £8. 8s. for the small 4to. volume of the *Burhan-Cattac*; £5. 5s. for the *Sarah* or an Arabic Dictionary, and £1. 11s. 6d. for the *Dasatir*, in the form of two pamphlets; and all of them in such coarse vile paper and bloaty print, as any two-penny radical pamphlet printer would be ashamed of!

Of four Episodes I had selected for translation into English from the Shahnamah, that of *برزو*

Barzû the son of Sohrâb, and of course the grandson of Rostam, and with whom he also holds many a tough battle, I would prefer, as offering greater variety of character and incidents: or that of

سیاوش Sayâwash the son of the uxorious Kai-kaoos; and of his step-mother *سودابه Sawdabah* falling in love with him; and on his rejecting her suit, her accusing him of an attempt on her chastity, and his undergoing the ordeal of fire to prove his innocence, a subject which the Greeks, like most of their other fables, stole without acknowledgment from the Persians, and Euripides, Seneca, Racine, and Smith with ourselves, in his Phædra and Hippolytus, have made the subject of tragedies in their respective languages; or that of *Zal* and *Rawdabah*, the father and mother of Rostam, and in the description of whose persons I mean to offer an example of Firdôsi's appropriate and forcible language as a mannerist: but I prefer that of *Rostam* and *Sohrâb*, as having been referred to by

1st. Our father of rational Persian studies, Sir W. Jones, who

from an abstract at the end of Lord Teignmouth's life of him, had intended it for the subject of a tragedy; but it does not appear whether this abstract be the composition of Sir W. himself, or of his noble biographer; for though there stated as being a story in the original, it is in fact taken from Shamsir-khan's prose and verse epitome of the *Shahnamah*, and differs from Firdósi in that most es-

sential point of making Tahiminah تهمينه impose upon Rostam, by informing him, that she had been delivered, not of a son but of a daughter. Why the author of the *منتخب شاهنامه Montakhab-shahnamah* chose to differ from his original is another point; but, as Scot Waring has given this turn also to the story, it behoves me to quote Firdósi himself, who says:

* بر مادر او بدست کسی
 * بسی بر نیاید که گردد بلند
 * نه مرد مصافست و لشکر شکن

فرستادش ز رو کوهر بسی
 * چنین پاسی آورد کان ارجند
 هنوز آن نیاز دل و جان من

Géó, another Persian chief had been deputed by the king to invite Rostam to come and oppose Sohráb, who had invaded Persia with a Turkish army, and was carrying every thing before him. Rostom says, "I cannot figure to myself where providence in his wisdom could have given origin to this Turkish and fortunate warrior: I have one son by a daughter of the Prince of Samangan, a Turkish chieftain, yet he is but a boy;" and he afterward specifies his age to be only fourteen. He now adds "I sent by a messenger to his mother, money and jewels for him in abundance, and he brought back for answer, that the wonderful boy was forward for his age, but that the joy of my heart and life was not yet equal to the duties of field service and the fatigues of war," and he afterward enlarges upon the wonders, they are to expect from him, when he shall arrive at manhood. But this is not the sole proof of Sir W. having never read this episode in the original; for in his treatise on oriental poetry, appending to his life of Nadir Shah, he gives a still more romantic and discreditable turn to it. What was better, in his *Comment. Asiat.* he says, "sed de hoc poemate (i. e. *Shahnamah*) separatim acque alio *Asiatic Journ.*—No. 51.

"volumine, si tempus acque otium supetit, copiose disseram; ac fortasse etiam totum opus in lucem proferam;" and if any such translation as that of the whole *Shahnamah* was left among his papers, it might have done more credit to his voluminous works, and stood a better chance of enduring, than half of what occupies them; for though we can detect in his translations occasional mistakes, they are chiefly done with much and superior elegance and fidelity.

2d. The next English translator of the *Shahnamah* is Joseph Champion, whom I recollect in 1785-6 civil chief of Gowindunge, a small district afterwards appending to Dinagapore, where I resided myself for eleven years. This gentleman's chief amusement, and almost occupation, then was to listen to a *khoniya-gar*, or itinerant minstrel; the dreg of a class of literati, much encouraged under the native government, but now also extinct; who could recite from memory the works of Firdósi and Nizámí, and particularly any part of the *Shahnamah* his audience desired of him; and that together with the *رقص كان Raks-kondn*, or public singers and dancers,
 Vol. IX. 2 H

many of whom had the correct action of a Siddons or Kean, with the skilful execution of a Catalani and Braham, used to afford a fascinating and rational treat to such as in those days could understand and enjoy a *ghazal* of Hafiz or Sadi, in its genuine text and accent. Mr. C. made, I fancy, his translations from those recitations, for he seldom looked into a book; and though occasionally more spirited than some contemporary bald attempts in prose, they are chiefly too diffuse and irrelevant to be trusted. A quarto volume of his translation, published at Calcutta 1785, now lies before me, beginning with گیومرث Gayúmars, the first king of Persia, and continued down to Manúchahr; which it was then his intention to complete, but which a mental derangement afterwards put a stop to; and it does not include the Episode of Rostam and Sohráb.

3. Scot Waring, in his tour to Shiraz, undertaken in 1802, and published in 1807, gives a rapid, and to the many an interesting sketch of the whole *Shahnamah*; and having been first a student, and latterly an assistant professor at the Calcutta college, and having as an assistant accompanied General Malcolm in his embassy to the king of Persia, he had the best opportunities of qualifying himself for this task; but, as also a good Greek and Latin scholar, having lent too willing an ear to the prejudices of the sheer English scholar, he is uncertain in his decisions, and far from satisfactory. As far as it bears him out, he is satisfied with quoting Champion's loose translation; and when that fails him, he gives his own prose version, which is neither happy nor correct; and concludes with a sweeping critic of his author being "tedious, uninteresting and ridiculously minute;" and supports this opinion by a single example, in which he takes a Persian nume-

ral in its literal, instead of its idiomatic sense; like most of our late travellers in Persia, who translate the چهل منار *Chil-minár* the palace of the definite number of forty pillars, instead of an indefinite number, or numerous pillars, being that colossean monument of the antient kings of Persia, which Alexander, to gratify the jealousy of his master Aristotle, attempted to destroy, but which, in its frowning sublimity and superior solidity, is as a ruin likely to out-last all those elegant temples to their gods those Greeks had the taste of building in imitation of it, and which we continue absurdly and servilely in our shivering climate to copy. Mr. Waring, in his notice of the Episode of *Rostam and Sohráb*, gives a prose translation of one of their three rencontres, which I shall take an opportunity of quoting, when I give my own; and as both are in prose, they may thus offer a fair occasion for comparison. He concludes with finding fault with Firdósi's general management of his story; but as he curiously enough draws his knowledge of that Episode, not from the original, but from Shamsíir-khan's abridgment of it, for he likewise specifies that Rostam is ignorant of having a son; and, as he is likely to have referred to the same document for his knowledge of the other parts, we can give him no credit, when he comes to decide so magisterially on the whole poem.

4. James Atkinson, in his poem of *Sohráb*, published at Calcutta, 1814, professes it to be a free translation, and, what is really valuable to the Persian scholar, gives a pretty correct copy of the original; but whatever this gentleman's opinion of him may be, so far from being flowery and prolix, Firdósi is really so hard, pithy, and nervous a writer, not in his narratives, where he is necessarily diffuse, but where he

comes to any point, that it would be scarcely possible to compress his full sense in double the number of such couplets as this versifier has used, concise, vigorous and comprehensive as he may fancy his English to be; and as the original consists of upwards of 1650 couplets, or 3,300 lines, and his translation of 716, or 1,432 lines, we may readily conceive how often he must fall short of his text, if indeed he in any instance can be said to reach it; for even on his happiest occasions, he is so diffuse in transfusing Firdosí's imagery and idiom, that it is difficult to trace him to his original. Occasionally, when I

can fix him to his text, I am sorry to remark how widely he mistakes it: numerous instances of which I shall have occasion to note, as we proceed together, which this author fortunately enables me to do throughout the whole poem; but I shall be for the present content with quoting two contiguous examples: when Sohráb has overthrown Rostam, and is going to cut off his head, the latter tells him, as an experienced warrior, that it is not customary on the first overthrow to exact this penalty; and Sohráb, with the generous spirit of youth, instantly jumps up and releases him; and

* بداد و نبود آن سخن جاي گیر
* سیوم از جوان مردیش بیکمان
* بدشتی که پیش وی آهو کزشت
* از آن کس که با وی نبرد ازمود
* بیامد به پرسید از واز نبرد

دلیر و جوان سر بکفتار پیر
یکی از دلیری دوم از زمان
رها کرد از دست و آمر بدشت
همی کرد نیچیر و یادش نبود
همی دیر شد تا که هومان چو کرد

"Young and brave as he was, Sohráb gave ear to his senior's advice, without recollecting those three maxims, of being as a youth distrustful of, 1. prowess, 2. fortune, and 3. generosity; he removed his hold of Rostam, and bounded across the plain, taking such a range as to let the antelope escape him: thus did he sport with fortune, careless of the good counsel of that person (Hómán)

"who had taught him the art of war: he was returning slowly, when Hómán followed and overtook him like the dust, and came up and asked him after the result of his combat."

In the beginning of this rencontre, Sohráb assaults Rostam with the strength of an elephant and the roar of a lion. It continues:—

* زند دست و کور انر آیر بسر

بکردار شیر که بر کور نر

"With the prowess of a lion grasping with a male *onager* or elk, he stretched forth his arms, and brought his game under him:"—

here the game is called a *گور* *gour* or *onager*, and in the former lines it is called an *آهو* *dhú* or *antelope*, but in both instances means Rostam; and where the antelope is introduced, it is after the hard but simple manner in which Firdosí uses his similes and metaphors, so unlike the stiff manner of Homer and Virgil, and which all our European poets have copied since them,

who first minutely describe their hero's feat, and with a *thus* very formerly repeat it in a simile. But let us see what Mr. Atkinson says:—

"Sohráb bestrides his prey
"Grim as a lion, prowling through the
"wood,
"Springs on his fallow deer, and pants
"for blood!"
"His lifted sword had lopt the gory head,
"But Rostam, quick with crafty ardor,
"said:
"One moment hold! what, are our
"laws unknown?
"A chief may fight till he is twice o'er-
"thrown:

" 'The second fall his recreant blood
 " is spilt,
 " These are our laws, avoid the menac'd
 " 'guilt.'
 " Proud of his strength, and easily de-
 " ceiv'd,
 " The wondering youth the artful tale
 " believ'd.
 " He left the place, and wild as wind
 " and wave
 " (Forgetting all the prudence of the
 " brave),
 " Plung'd in the dark embowering forest
 " near,
 " And chased till evening dim the
 " mountain-deer.
 " Homan, confounded at the stripling's
 " stay,
 " There wandering heard the fortune
 " of the day."

But from whom did he hear it?
 From Sohráb himself, after taking
 a frolicsome bound across the
 plain; and Homan seeing him thus
 playful, now dares to advance
 towards the field of combat; and
 having slackened his pace in re-
 turning, is able, like the dust of
 Sohráb's heels, to overtake him;
 for though not out of sight from

either army, it would be at the
 peril of his life for any man to ap-
 proach, till one of the two heroes
 had secured the victory, either by
 slaying his antagonist, or going
 aside as Sohráb did, and allowing
 him to sneak off. Skilfully, how-
 ever, as this is managed by Firdósí,
 Mr. A. gives it the translation I
 have quoted above, and finishes a
 note on the two last lines, by rail-
 ing " at the want of taste and
 judgment in the Persian poet!"
 But both his notes here, as well as
 his text, are nothing but a tissue of
 misconceptions and errors. How-
 ever numerous the episodes of the
 Shahnamah are, and however much
 each episode may run into detail,
 there is a unity and connection
 flows through the whole, and every
 portion of the whole; and the signi-
 fication of one part is often to be ex-
 plained only by a reference to ano-
 ther; but this must be done, not as
 some of these gentlemen have at-
 tempted, by consulting Shamshir-
 khan's epitome, but by studying
 the original. The story proceeds
 in telling us:

چو رستم ز چنگ وی آزاد کشت * بسان یکی تیغ پولاد کشت
 خرامان بشد سوی آب روان * چنان کم شده باز بیند روان
 بخورد آب وانکه سرو تن بشست * به پیش جهان افرین شد نخست
 بزمزمه بنالد بر پی نیا * نیایش همی کرد بر چاره ساز
 همخواست پیروری و دستکاد * بند آکه از بخشش هور و ماه

" When Rostam found himself de-
 " livered from the clutches of Sohráb,
 " he brightened up like a polished sabre:
 " he walked cheerfully along towards a
 " stream of water, and felt like a man,
 " when his spirit revisits him, after
 " falling into a trance. He drank the wa-
 " ter, and then bathed his head and body,
 " and the first thing he did was to stand
 " up before his Maker. He repeated the
 " zamzam, or prayer of blessing, with
 " earnest supplication, and set forth his
 " wants in the presence of Providence:
 " he petitioned for victory and succour,
 " and craved the intercession of the sun
 " and moon."

ship, and how similar is the cere-
 monial of it to that I have often,
 while sailing up the Ganges, ob-
 served of a Brahmin of the present
 day, who at sun-rise, stands ready
 in the stream of that sacred river,
 which he sips and uses for ablution,
 and then puts forth his prayer to
 the Deity; and indeed from what
 Firdósí says—not of a *Guabre*, for
 the Persians were not properly
Moghs or *Guabres*, till after Zar-
 tash's reformation of their reli-
 gion—but of a *Nagoshák*:

How simple is this mode of wor-

نَسَازَم خورش جز ز شیر و بده *

پرستنده باشم بآتشکده

"I must become a devotee at the fire temple, and eat no other food but rice and milk." In fact, the religious observances and ceremonials of the ancient Parsés and Brahmans were much alike, if not identically one. The word

زَمَزَم *zamzam* used in the text signifies the blessing before and after eating, bathing, prayer or other ceremonial, and is peculiar to that sect, and never omitted by a Parsi or ancient Persian. Now let us see what Mr. Atkinson makes of it:

"Rostam withdrew, in wild despairing mood

"He sought the coolness of the murmur-flood;

"There bathed his limbs, and trembling wept and prayed,

"And called on heaven to yield its strengthening aid.

"His pious prayer indulgent heaven approved, &c."

And he adds, in note on this last line, "Firdósí, like a good Muslim man, takes the liberty of making Rostam a pure theist, when he was doubtless a fire-worshipper in common with all the Persians of those days!" His translation of what in two beautiful similes offered to a young poet such opportunities of amplification and embellishment, is deficient and bald as the dullest prose; and his note is out of place, and proves, if any thing, that he did not understand his text. Indeed it appears to me, that in many places he, like many other translators from the Persian classics, translates only such lines as he finds easy; and, with the ready plea of using a latitude in expressing the idiom and imagery of the original, skips over whatever he finds difficult, and that often, as in this example, its chief ornament; beauty and spirit. Of his own merits as an English versifier, your readers, Mr. Editor, are many of them better judges than I am. His verses seem to me to be

smooth and spirited; his notes are occasionally curious and valuable; and his analagous passages prove his taste and erudition in European, as well as oriental poetry. Moreover, he has the credit of seemingly being the first English translator that has made his versions entirely from the original. With them and his notes, I shall make free when I have occasion for them. But on introducing these gentlemen into your Journal, it behoves me to apologize and explain myself. In my esteem, as fellow Persian amateurs, they all stand high, as they must with the public; but as the public has not in common the same means of judging of them, it is chiefly to prevent that public being led astray by their high characters otherwise, that I make so free with them and other oriental writers. To the two last I am a personal stranger; and of Mr. C. I have stated all I knew; but to Sir W. Jones I had the good fortune of being introduced immediately upon his arrival in Calcutta, by one that knew him well, and was then held in mutual esteem; and I had to regret that my professional duties in remote parts up the country, prevented me from following up that introduction, unless during two short and casual visits at the presidency, when I found a cover at his social table whenever I was otherwise disengaged; and an interval of upwards of thirty years has not erased the impression of that suavity of manners, and fund of instruction and entertainment, I, among his other guests, met there: and in his character as the first scholar of his age, whether in Asiatic or European languages, my humble acquiescence is all the homage I can offer, and peace be to his shade! But having again exceeded my allotted space, I must, like Sohráb, bound off, and am, &c.

GUL-CHIN.

To the Editor of the Asiatic Journal.

SIR:—When we reflect on the numerous buildings in London, erected at such enormous expense, and with almost superfluous care and attention to the comfort and accommodation of the many clerks and servants of the different households and establishments belonging to the respective courts, companies, and corporations in this metropolis; is it not a matter of astonishment, that the East-India House in Leadenhall Street should be the *only* one of those prodigious establishments totally deficient in a most obtrusive and material point of architectural provision, or rather of neglect, in not having appropriated any room or apartment whatever to which the numerous officers of their civil and military establishments in India can retire while in waiting, and remain in readiness either for attendance when summoned on the honourable Court of Directors, or on the public offices and various departments connected with that very extensive, respectable, and wonderful establishment. That such is the case is daily evident, and particularly painful to those civil, military, and marine servants, who are obliged to attend to comply with official forms, or receive instructions; and it is consequently felt as a point of

very harassing and unmerited neglect, by the officers of the civil and military services, on their return to England, from the oppressive and pernicious climate of India, especially if suffering under disorders incidental to that country so exhausting to the constitution! It is inferred, from the well-known liberality of the honourable Court of Directors and Proprietors, that this glaring instance of inattention to their foreign servants will no longer exist, now the point, so often the topic of animadversion and regret in private circles, is pointed out for their information and notice; and that in future some small share of respect and attention will be exhibited, to exempt from inconvenience a most deserving and creditable proportion of officers attached to their Indian establishments, instead of obliging *those* servants to walk the chilling passages of the East-India House, at the risk of their health, and with many positive sacrifices of personal comfort; men who have invariably been known, on every required occasion in India, to stand forward and serve their honourable employers, both with their fortunes and with their lives!

AN OLD INDIAN!!!

London, 10th Feb. 1820.

RACE OF CHINESE IN BORNEO.

(From the *Oriental Star*.)

It has been remarked, that there are few descriptions of people with whom we are less acquainted than the inhabitants of some of the islands forming the Eastern Archipelago. We have consequently much pleasure in submitting to our readers the narrative of an intelligent correspondent, which presents a partial history of an independent race of Chinese, inhabiting a portion of the large island of Borneo; together with notes of a journey inland over part of the territory which they had settled.

‘On the west coast of Borneo, between Mompava and Sambas, is a tract of land, exclusively belonging to some Chinese settlers. A river, called Soongy Ryah, about 7 miles to the northward of Mompava point, is apparently the southern limit, and Sillaca, 10 miles to the southward of Sambas, is the northern. The distance between these two places is about 70 miles. It is bounded to the eastward by a range of lofty stupendous mountains, 80 miles inland, called Traddock, almost immediately under which is the principal town, Montraddock. Within these boundaries no Malays are suffered to possess

any landed property. They may trade at any of the ports, but must live on board their praos. The account which the Chinese captain (the principal man) gave me of their first settling at this place is, that about two centuries back some junks were blown off from the coast of China. Part of them were never heard of, and others, after being three months at sea, discovered the north end of Borneo, near to Borneo Proper: where falling in with some praos, they were conducted by them into the river, where they were made slaves of. Numbers of them escaped to Sambas, with which place Borneo Proper was then at war, and in consequence of their offering, and saying that they came for that purpose, to assist the Sambas people, they escaped slavery.

At this time the religion of the natives of this place was the Hindoo, and it was not till some intelligent Arabians found their way to the country, that Mahomedanism was embraced. The Chinese captain further said, that to this day, in the interior of the country behind the mountains, there are many sects still professing the Hindoo religion, and that his people often met with Images, &c. belonging to them. Some of these Chinese, in the course of time, not liking the indolent customs of the natives, travelled into the interior and settled, every one taking a native woman for his wife. In this way they lived, and increased their families for many years; and as each Chinese dropped off, his family story was given to his children, so that if any of his descendants ever reached China, he might be able to find out his family. In the mean time the riches of the country were discovered, and these settlers became gradually a flourishing and prosperous people. At length, from curiosity, some of the second generation determined to seek the country of their forefathers. They embarked in a prao, and after having been many days at sea, were picked up by a vessel bound to China. Upon hearing their story, many hundreds of their countrymen volunteered to go to Borneo. Three junks were accordingly fitted out, and loaded with articles, which it was understood would be acceptable; and a man from the vessel, that had picked up the adventurers, being engaged to navigate the ship, she arrived in safety at Sambas. Here the Sultan levied a duty upon their landing, and enacted, that if they left the country, he was to have one third of what they intended to carry with them. After this period, junks came annually, and in the course of time, by working the mines, many made property enough to enable them to return to their own country, which they now annually do, but it is only in the proportion of about one-third of those who arrive. The population must

consequently have rapidly increased, and in the course of time they became so strong, that they expelled the Malays from their villages and bazars, and subsequently refused paying the duty upon passengers to the Sultan, which he had not the power to enforce. This is now paid to the Chinese captain, for the public service, and the junks instead of going to Sambas, go to Sillaca.

They work the mines much in the same manner as in South America, by damming the streams at particular distances. The men work the first, the women the second, the elder children the next, and finally the younger picks out what may have escaped the search of the others. They pay one-fourth of the profits of their industry to the government officers, which is applied to the necessary expenses of keeping up a kind of army, building and keeping in repair stockades, and furnishing each individual, when he first arrives, with implements for working the mines. Their laws are very simple. The Chinese captain and two others form the executive government, and are the expounders of the laws. The offender is arraigned before them, and upon the oaths of witnesses, as in England, he is condemned or acquitted. The punishment is adapted to the offence, but death is never adjudged, except in cases of murder. For minor offences they are excluded from working at the mines, and for greater ones are sent to work, for a stated time, at the government mine. If the crime is very heinous, the offender is banished from the country. The product of the government mine is applied to the relief of families distressed by their husbands being taken from them, in consequence of being condemned to work in the public mine, or from being banished, or by casualties.

Every Chinese who arrives, is not immediately permitted to work a mine. He must first serve as a soldier for a certain period, after which he is free to keep a shop or work at some trade, from which he is drawn in regular turn to work a mine, at which he may (if part of his time is not forfeited to the government mine for any offence) make sufficient in two years to go to China, unless he has been unfortunate in gambling, to which they are very much addicted. It often happens that some will work for years; and others will make their fortunes almost entirely by gambling, who have scarcely been admitted as a miner. A miner is prohibited from gambling with any but miners; the policy of which is to preclude those who have not been admitted to work, or who have been expelled from working the mines, from benefiting by the profit of them. A newly arrived Chinese, who is a miner, wishing to retire to his own country, must, if he has a

wife and family, leave enough for the support of the former for life, and for that of the children till they are eight years of age, at which time the latter are employed by the government. If he is not a miner, but has made his fortune otherwise, and wishes to return to China, he must previously work three months at the government mine, or give a sum adequate to the value of his labour. He must also leave sufficient to support his wife and children; but a Chinese, born in the country, cannot, if he has a family, leave it. If a Chinese, who has been a miner, leaves the country, and returns, and wishes again to work the mines, he must go through the gradations, unless he has done any thing very beneficial for the government, which in that case will, as a reward, enter him at once for a miner.

These people are now very strong, and promise in the course of time to be the possessors of the larger part, if not the whole, of the island of Borneo.

Between Soongy Ryah and Sillaca are several small ports for trade, of which two or three only have been at all visited by Europeans. From each of these ports there is a road to Montraddock, and at the entrance of the harbours there is generally a village, governed by three headmen, under the Montraddock government, called Congsees, to whom it is necessary, in all matters of commerce, to apply. If the foreign merchant has but a small cargo to dispose of, the Congsees will frequently purchase it; but if the cargo is large, they will apprise the government and merchants of Montraddock of the arrival of the vessel, with the articles on board for sale, and the merchants will arrive on the coast in about seven days with gold dust, to exchange for his goods. If the merchant or captain is desirous of going to Montraddock with samples of his cargo, the Congsees will procure him a guide, and furnish him with every requisite on the journey, which must be performed on foot.

As my ship lay in one of the most secure harbours (Soongy Ryah) on the coast, and understanding that one or two Europeans only had visited the capital, I determined to adopt the latter method, and was amply repaid, by passing through a country the most romantic and picturesque that the imagination can conceive. The whole of the road passed through tracts of richly cultivated lands, interspersed with country seats of the opulent Chinese, built and decorated in a similar manner to the houses in China. The face of the country presented continued changes of hill and dale; the former (where the most difficult mountain passes were, and at about half gun-shot from each other) crowned

with small forts of about five or six guns. The roads and bridges, passing over sheets of clear and transparent water, were kept in excellent order. The inhabitants are friendly and hospitable, and vie with each other to furnish the traveller with every thing he might require. The journey from the coast to Montraddock may be performed in two days, but four are usually taken. On the road are four stockades equi-distant from each other, which are considered a day's journey. These stockades are erected for the purpose of the miners depositing the gold dust which they have collected during the day, and which is done every evening; for which purpose there are offices erected round the stockade, to receive and weigh the gold. These stockades are erected in different parts of the country.

The town of Montraddock is beautifully situated in a plain under the range of hills before mentioned; and the houses are built in the Chinese style. It is about three miles long, and nearly half a mile broad, and is divided into bazars or quarters, each trade inhabiting its own division. On my arrival at this place I was conducted to the house of the Chinese captain, who was a venerable and intelligent old man, ninety-three years of age. Indeed a tolerably correct judgment may be formed of the salubrity of the place by the longevity of the inhabitants, among whom I saw many of nearly similar ages and, at the same time, in perfect health. The captain himself walked with me a distance of five or six miles, up one of the hills and back. The thermometer in general ranges from 63° in the morning to about 72°.

The amusements of these people are almost the same as in China, gambling and plays forming their principal pastime. Europeans may visit them with the utmost confidence. I remained with them in the city between three and four days, and transacted my business in perfect security; during which time I was treated with much attention and hospitality. Robbery is here scarcely known, and forms one of the crimes for which the punishment of irrevocable banishment is adjudged. When it does take place, it is in general practised by a new comer from China.

The port of Soongy Ryah, where, as I before stated, my ship lay, is one of the best harbours on the coast, surrounded by islands which break off the wind and sea from all quarters, in consequence of which there is no surf on the bar of the river, from which a ship may lie only half a mile, in five fathoms, very soft ground. The largest boats may enter the river at any time of tide.

SINENSIANA.

(From the Indo-Chinese Gleaner, No. VI.)

INTERCOURSE WITH COREA.

1818.—In Manchow Tartary, a native of Corea has been seized, and, after examination, sent back to Corea. His uncle was an officer of rank in Corea, who, some years ago, having offended the king, was put to death with all his family and immediate kindred, to the number of thirty-seven persons. This took place in 1809. The nephew, now taken, was enabled to make his escape over to Manchow Tartary, where he gave a Corea pearl that he carried with him to a man to shave his head and admit him amongst a company of beggars. No one, however, would admit him into his house; and, after begging in the day-time, he lodged at night in the forests of Tartary. He was by the Chinese subjected to torture, but adhered to this declaration.

He has been sent back under a military escort. The officer was commanded to say to the principal officer on the Corea side, in the name of the Emperor of China:—

“His Majesty issues this order to you. As your country has heretofore expressed its respectful obedience to China, we now send back a criminal of your's, who had made his escape to our territory. His case has been reported at court, and an order given to send him back. We will not harbour him. Should any criminal from this country escape, and take refuge within your limits, it is incumbent on you to make secret and strict inquiry to detect him, and in case of your doing so, to send him back to the celestial empire, then doubtless the most gracious favour and commendation will be bestowed upon you.—Respect this.”

It does not appear that the Korean officer who received the miserable man, involved by his uncle's crimes, or misfortunes, gave any answer to the Tartar who gave him up.

Traits of the Public Administration in China.

Peking, 1818, Sept. 14.—A vacancy having occurred in the Presidency of the Board of Controul placed over the western Tartar dominions, Duke Ho (brother to the empress, and the principal negotiator with the late British ambassador), is appointed to fill it. His Majesty is further pleased to confer upon the duke the privilege of wearing a garment of imperial yellow.

A new appointment has taken place at Poo-to-la, the residence of the Lama.

The Foo yuen (or vice-governor of the province of Fokkeen) has been dismissed; but no farther inquiry into his con-

Asiatic Journ.—No. 51.

duct is to take place. When he received this communication, he wrote to his Majesty, that he was going immediately to Peking, “to put his head in the mire by the side of the road, as his Majesty passed by, to render thanks for his divine goodness.” However, his majesty has commanded the governors of the intervening provinces to take no notice of him, and has forbidden him to proceed on his intended pilgrimage. “Go home,” says the emperor.

Bibliography.

The following analysis of a book in general circulation is from the same pen as the article in vol. VIII. p. 450, and forms a second specimen of this branch of Chinese literature, drawn with minute exactness.

See fang kung keú, i. e. “Public proofs from the west;” intimating that the work contains the common evidences of the religion of Füh, or Buddah.

It was compiled by Shin-ting-chin and Chow-yuen-chin, who were believers in the doctrines of Füh. The preface was written by Sha-lung, a priest of Füh. He says, “when the compilers had finished the work, and had it ready for the blocks, they asked me to write a preface; and I have written on the three grand means of attaining happiness, viz. belief, conduct, and desire, in order to lead on, and advise the reader.”

It was published in the 13th year of Keen-lung, about A. D. 1748, and reprinted at the Hae-chang-sze temple, Canton, in the 30th year of the same emperor.

The work is a compilation of miscellaneous essays, illustrated by thirty plates. There are in all fourteen essays or papers, some of them supposed to be very old. It is wholly of a religious nature, describes minutely the happiness which the sect looks for in the life to come, points out the way to it, and contains animated exhortations to the worship of idols, &c.

The whole tract forms one small volume octavo, containing 33 pages. It costs in China about the value of two shillings English money, but is most generally given away gratis; a practice not uncommon in China, with books which are supposed to have a useful tendency. There is subjoined to it a list of subscribers, consisting of twenty-five names, twenty-two priests, and three disciples, who each contributed a small sum to pay the expense of printing. They subscribe, in all the different proportions, from seven shillings and sixpence to about ninepence.

To give a better view of the contents, the subjects, though not numbered in the original, are arranged by the English commentator in the following order, for the sake of making a few extracts from them, and of describing the embellishments.

1. A preface.

2. Seventeen plates, representing the peach garden of Paradise; O-nan, a disciple of Füh, forming a groupe of persons and teaching them; the world, twenty stories high, widening towards the top, like an inverted pyramid, and resting on a lotus flower, beneath which is the sea of fragrant waters, over whose surface the winds of the metempsychosis blow; the universe divided into four islands, in the midst of which is the lofty mountain See-ne, rising up above the height of the sun and moon; the most felicitous part of Paradise; the seven palisado fences; the seven canopies of net-work; the seven rows of trees; the turrets; the seven pearl and lotus pools; the floors of the palace, paved with square tiles of gold; the birds of Paradise, perching on the trees, and singing stanzas from the sacred books; Ne-to Füh delivering laws; an assembly or group of the more eminently virtuous; the air and manner of those who are travelling in good earnest to life in the west; the people of the six quarters (viz. north, south, east, west, above, and below), praising Füh, in the language of a book which lies in the midst of them; and the manner in which the followers of Füh perform worship; these, with a variety of other things, all belonging to the other world, are represented.

3. An introduction to the following papers.

4. A general exhortation to cultivate virtue.

5. Füh delivers the O-ne-to canon. This piece is said to have been translated from some western language, by Kew-mo-lo shih. It treats of Füh, and of paradise.

6. A prayer, or charm, for the removal of all evil. It is wholly unintelligible to the Chinese, being the bare sounds of Indian words expressed in Chinese characters, without any explanation.

7. The ten repetitions. To continue repeating the words, "O-ne-to Füh," as long as a person can, without pausing to draw breath, is called a Neen, i. e. repetition.

8. A hymn of praise to Füh.

9. Nine plates, representing various forms of Füh; together with the forms of the superior, middle, and lower classes of persons, produced in Paradise from the lotus flower. These persons all sit cross-legged on the lotus, and are encircled with six lines of small dots, rising from the lotus at the bottom, and which, after forming nearly the shape of a pear, terminate in a point at the top.

10. The priest Sze-sin's address to the young and the aged, to those that have children and those that have not, to the rich and the poor, exhorting them to seek life in the west.

11. On the constancy and perseverance in repeating the name of Füh.

12. The ten advantages which arise from repeating the name of Füh.

13. Footsteps or traces of those who have already gone to life in the west.

14. Paradise, and the way to obtain it.

15. A discourse dehorting from the dread of death.

16. The teacher, Lech-ming-keu's two things that ought to be done, and three things that ought not to be done.

17. Yun-lee dehorting from taking away animal life, and exhorts to rescue it when others attempt to take it away.

18. Yun-lee on the monthly and annual fasts. In every month of the year there are six fasts, viz. on the 8th, 14th, 15th, 23d, 29th, and 30th days. Besides these there are three full months of fasts in every year, viz. the 1st, 5th, and 9th months, so that this sect has *one hundred and sixty-two fasts every year!* Both to the monthly and annual fasts are affixed six small circular plates, with thirty dots in each, and the word "Füh" placed in the centre. These are for the purpose of fixing the lowest number of repetitions in one fast.

19. List of subscribers to the second edition.

The style is what the Chinese call *Chung-tang-che-wan*, i. e. middle class composition; neither above the comprehension of the unlettered reader, nor offensive to the eye and ear of the learned. Nevertheless, the great number of technical phrases peculiar to the sect of Füh, and of foreign words left untranslated, renders the book in some parts hard to be understood. In other respects the style is simple and animated, and a very good model for tracts and discourses on practical subjects, where it is an object to touch the feelings and reach the heart. The Christian missionary should not be unacquainted with the book; those noble and divine subjects which it is his business to teach, if expressed in such clear and animated language, would fall with great force on the heart; and would be read and heard with a degree of pleasure even when their influence may not be felt. The far greater part of the books of Füh are exceedingly obscure, from such causes as those above mentioned; glossaries are sometimes attached to the end of them, but these are also frequently so obscure as to leave the reader without satisfaction. A person skilled in the Pali and Sungskrit languages, reading the books of Füh in Chinese, would possess great advantages for understanding them. Constant references to the metempsychosis

occur throughout their books, which also tend to render them difficult at first. A dictionary of the technical and foreign words employed by this sect would be a useful help to the Chinese student.

Extracts.—In making these, the writer has followed the arrangement of the subjects according to the previous numbered titles. The first is from the *preface*, and a reference to the corresponding numbers will make the others more intelligible.

1. "I have examined all the books and canons, and find that the true laws, viz. belief, conduct, and desire, are the coin and food [used on the way to] the pure land; like the feet of the tripod, one cannot be wanted."

2. In plate 3d, which represents the world like an inverted pyramid, it is said, "there are infinite and innumerable worlds such as this: this is but a single specimen selected out of myriads of myriads:"—"each single seed* of the world, produces twenty worlds."

3. "Mr. Koo-tih said, When other sects seek to learn the true way, it resembles the crawling of ants up a steep and lofty mountain: [but with the disciple of Füh] travelling to obtain life in the pure land, resembles sailing on smooth water, with a fair wind and full canvass."

4. "Alas! this body is totally void of anything that is good; yet who is there that is not deceived by it! Its bones, which exceed not seven feet in length, must be bound together by tendons. Its fleshy parts must be covered over with skin. Its nine apertures are constantly pouring out that which is impure. Its six senses are blindly indulged. Its hair and nails, and teeth collect heaps of dust! Its mucus, tears, and spittle resemble the filth of a house of office. Worms are assembled in crowds within, and its outside often becomes food for flies, who eat into the flesh. A single disease puts an end to its life!"

5. "If there are any virtuous men and virtuous women, who, hearing of O-ne-to Füh, shall hold fast the mark of his name; if for one day, if for two days, if for three days, if for four days, if for five days, if for six days, if for seven days,—they should hold it fast with one mind; then when the end of their life arrives, O-ne-to Füh, with the whole multitude of the sacred ones, will appear before them."

6. [The reader is referred to the *Asiatic Journal*, vol. VIII. p. 471, where an extract is given of the jargon in which this charm is involved.]

7. "Every morning, after dressing,

turn your face to the west; stand upright; clasp your hands; and with a continued sound, say, "O-ne-to Füh." To exhaust one breath is called "a repetition." Ten such are called the ten repetitions. But these must be according to the length or shortness of one's breathing; and cannot be all fixed at one length or one distance. When a breath is quite out that is the limit. The sound should neither be high nor low, neither slow nor quick; but modulated to the due medium."

8. "O-ne-to Füh! thy body is the colour of gold!"

"Thy countenance is lovely, bright, and without compare!"

"Thy snow-white locks, wave around the Wo-see-me hill!"

"A glance of thy scarlet eyes, renders transparent the four seas."

9. "[He who] knows that all laws and rules form but a perfect vacuum, will be without fear and trouble."

10. "You, poor people; it is good for you to repeat the name of Füh. At present your clothes and food are deficient; you are poor and vile; always hungry and cold; these all are the consequences of your not cultivating virtue in a former state of existence. Your retribution is manifest. If you do not reform the past and do well for the future, the moment you die, you will be like the weight which falls from the scales into the well: when will it again be taken out?"

11. "Having vowed to repeat the name of Füh, you must ardently pray, vigorously act, confidently hope, and be sincere in all: cherish not other thoughts. Be serious as if you were going to execution; as if fleeing from a mortal enemy; as if flames or floods beset you around. With your whole heart seek to be delivered from the bitter pains of the transmigration, that you be no more subject to mortal births."

12. [The ten advantages which the man who repeats the name of Füh enjoys, are here abridged.]—"1. All the powerful gods of heaven will secretly and always protect him. 2. All the demi-gods will constantly follow and keep him. 3. All the Fühs will day and night protect and think of him. O-ne-to Füh will constantly keep him within the circle of his resplendent light. 4. No devil can harm him; neither serpents, dragons, nor poison can touch him. 5. He shall neither be hurt by fire nor water, by thieves nor swords, by arrows nor prisons, by an untimely death, nor by a suffering life. 6. All his former crimes shall melt away; and he shall be delivered even from the guilt of murder. 7. His dreams will be all right and pleasant. 8. His heart will be always glad; his countenance shining; and his strength abundant. 9. He will be always respected by the people of the

* This figure would lead one to suppose, that they believe that worlds propagate worlds, as seeds do their kind!

world, who will liberally give to him, and worship him as they worship Füh. 10. When he comes to die, his heart will be without tear; his thoughts will be regular. He will see O-ne-to Füh with all the sacred ones, who will introduce him to the pure land."

13. "In the dynasty Sung, in the district of Tan, Mr. Hwaug, a blacksmith, at every moving of the tongs and every stroke of the hammer, used with his full force to repeat the name of Füh. One day, while in good health, he called a neighbour to write the following verse for him:—

"Ting ting tang tang,*

"The iron oft refined, becomes steel at length.

"Peace is near!

"I am bound to the west."

"Having uttered these words, he was instantly transformed (i. e. died); this verse spread far, and many people of Hoo-nan province became followers of Füh."

14. [This extract is detached, because it is on a larger scale than the others, and forms a complete article.]

15. "When one's sickness becomes serious, and he is about to die, let not relatives weep, sigh, and make a noise, and thus disturb his spirit; but let them with one voice repeat the name of Füh, and assist the man in his progress to life [in the west]. A long time after the breath is gone, it will be soon enough to mourn."

16. "[Two things that ought to be done.] 1. To seek to live in the pure land. 2. To practise all kinds of good deeds. [Three things that ought not to be done.] 1. Do not enter into corrupt sects." [It is remarkable that the *T'een-chu K'eaou*, or Roman Catholic religion, is here specified as one of those which ought to be avoided. It existed in China before this book was written.] 2. Do not reckon that [your repetitions of the name of Füh] will be turned into money [in the life to come]. 3. Do not take away animal life."

17. "All men love life. Every creature covets existence. Why, then, kill the bodies of other living beings, in order to fill our own mouths? I advise you to beware of killing animals. Families who do not take animal life, good demons protect them; their calamities melt away; the thread of their life is drawn out in length; their posterity are virtuous and filial; and countless good fortunes attend them."

18. [On fasts.] "The canons say, six days in every month four celestial kings walk about in the world, examining the actions of men. [On four of these days they send deputies:] on the 13th and

15th they go round in person, and examine who among men are filial to parents; who faithful to princes; who just in their actions; who compassionate; who accord with the *San-paou*, (i. e. three precious ones; duties of the sect), and who cultivate virtue.

I shall only further observe, that this book is also called *Ne-to-king-too*. It was published under this name in the same year with the one of which I have given the analysis. I have collated them, and find the only difference is, that the latter wants the preface.

THE PARADISE OF FÜH,

(From the *See fang kung keu of a Chinese Author*, above analysed.)

AN EXHORTATION TO WORSHIP FÜH, AND SEEK TO LIVE IN THE LAND OF JOY, SITUATED IN THE WEST.

Good friends! In the world there are a thousand, yea, ten thousand roads. Why do we then exhort men to fix the thoughts on Füh only? Because the heaviest consequences are connected with the thoughts of men. That which drags the soul, leads the spirit, renders fate favourable, and life secure, all proceeds from this source. If the thoughts are good, you ascend to heaven; if bad, you descend to hell. One straight thought will [after death] make you a man; one cross thought will cause you to become a beast. Why are there [in hades] hungry ghosts? Solely because of wrong thoughts. Think of the devil, and you will become a devil. Think of Füh, and you will become a Füh. Would you prevent the six ways [of the transmigration]? there is no other method but to think of Füh. If you will not think of Füh, you will lose a human body, and for ten thousand future ages not again be able to obtain the same. Therefore, Shih-kea, and Yu-lac, the two sacred ones, advised men to think of Füh. The master of doctrines, Yuen-kung, also advised men to think of Füh. To think of Füh, and yet not be delivered from alternate births and deaths? [There is no such thing.] For would Füh deceive men? If men pray to Füh, and yet not become Füh, the error is not in Füh. It is because the mouth prays, and not the mind. Though one prays thus, it is as if he prayed not. Though he repeat it a whole life, it is not equal to one single sound [from one who worships with the mind]. The word *Neen*, i. e. to recite, is derived from *Sin* the heart, and not from *K'ow* the mouth. But when the heart is alive, the mouth naturally utters a voice, just as the suckling naturally cries when it remembers its mother. We must have Füh in the mind, and Füh in the mouth—neither of these can be dispensed with.

* Ting ting, &c.—These words have no meaning, but barely express the sound of the hammer on the iron.

But [it may be said] seeing there are thousands and myriads of Füh, why call upon men to recite the name of *O-ne-to Füh* only? [Answer,] because, among the forty-eight vows which he made, and swore to save the living multitude of all quarters, one runs thus:—"In all the ten quarters of the world, in the midst of the living multitude, if but one of those who repeat my name, shall fail to attain life in my kingdom, then I swear that I shall no longer be a god."

The land of this kingdom is yellow gold. Its gardens, groves, houses, and palaces are all elegantly adorned with seven orders of gems. It is encircled with seven rows of trees, seven borders of elegant network, and seven fences of palisades. In the midst there are the seven turrets and towers of gems, the seven flights of pearl stairs, the seven bridges of pearl, the seven pools of pearl, the eight kinds of virtue-producing waters,* and the nine classes of the lotus. There are also lovely doves, peacocks, parrots, birds of sparkling plumage, and of exquisite notes. The great and unmeasured god *O-lo-han*, the famous disciples of Füh, the relatives of the demi-gods, the goddess *Kuan-yin*, the most powerful deliverer, the most pure gods of the vast ocean, the unnumbered renovating Füh, the unnumbered deliverers, all the demi-gods of past, present, and future ages, and all the sages, whether produced in heaven, or among men; all will be assembled on the sacred spot. But in that kingdom, there are no women; the women who will live in that country, are first changed into men. The inhabitants have the lotus for their father and mother, from whom their persons are produced. [There are three general classes, each of which is subdivided into three.] There are born of the superior, middle, and lower orders of the first class; of the superior, middle, and lower orders of the second class; and of the superior, middle, and lower orders of the third class: these differences among the multitude of animated beings, are the consequences of the various degrees of depth or shallowness, diligence or sluggishness, in the desires and active energies. The bodies of the persons produced by the lotus, are pure and fragrant; their countenances fair and well-formed, their hearts full of wisdom and without vexation. They dress not, and yet are not cold; they dress, and yet are not made hot. They eat not, and yet are not hungry; they eat, and yet are not filled. They are without pain, without itching, without sickness, and they become not old. Enjoying themselves at ease, they follow Füh, gaily frisk about,

and are without trouble. After every meal, they walk about with the demi-gods, as their companions, on the stairs and walks of that palace. Their noses inhale the most delightful fragrance, their ears are filled with the most harmonious music; the birds of Paradise singing all around. They behold the lotus flowers, and trees of gems, delightfully waving, like the motion of a vast sheet of embroidered silk. On looking upwards, they see the firmament full of the *To-lo* flowers, falling in beautiful confusion, like the rain. The felicity of that kingdom may be justly called superlative, and the age of its inhabitants is without measure. This is the place called the Paradise (or joyful world) of the west. Alas! the riches and honours of men, after an hundred years, all revert to emptiness. The elegance and glory of heaven itself, after a thousand years, will cease.

But when we enter the Paradise of the west, we shall obtain an unlimited age; and the means of obtaining it are most simple, depending solely on the one sentence, "*Ne-to*." Yet the world will not be at the trouble to seek this good, so easily obtained; but on the contrary, put on their iron boots, and go asking for the road.

"[I advise you] speedily to swear and vow, to this effect: "If I do not both now and henceforth repeat the name of Füh, and seek to live in that western world of joy; then let me become an evil demon, fall down for ever to the northern part of hades, to the metropolis of hell. Alas! alas!"

Give up the three *tsangs* and all books for others to fag at, and the fourteen thousand roads for others to walk in. Beyond the one sentence, "*O-ne-to-Füh*," you need not use a single word. Let each seek a retired room and sweep it clean; place therein an image of Füh; every day burn a pot of pure incense; place a cup of clear water; and when evening comes, light a lamp [before the image]. Whether painted on paper, or carved in wood, the figure is just the same as the true Füh; [let us] love it as [our] father and mother; venerate it as [our] prince and ruler.* Morning and evening, let us worship it with sincerity and reverence; fall prostrate [before it], like the tumbling down of a mountain, and rise up with dignity like the ascent of the clouds.

* This is as literal as possible. It will be difficult for those who maintain, that the heathens do not worship idols as gods, but only the spirit that is supposed to reside in them, to put a fair and unforced meaning on this passage (and there are hundreds of similar passages in Chinese books) without shaking the foundation of their own opinion. The writer of this paper does not seem to have been an ignorant man. The style of the original shews him to have been acquainted with letters, so that to worship the work of one's own hands as a God, is not confined to the vulgar only.

* Eight kinds of water: 1, purifying; 2, cooling; 3, sweet to the taste; 4, softening; 5, moistening; 6, conferring rest; 7, removing hunger and thirst; 8, nourishing the root of virtue.

On going out, let us inform it; returning, let us report the same: whether we travel to the distance of five or ten *Le* (miles) let us act as in the presence of our Füh. Eating or drinking, let us first offer it up for [Füh's] nourishment. Raising the eye, or moving the lips, all is [from] Füh. Let not our rosary ever leave our hands, or the sentence "*Ne-to*" depart from our mouth. Let us repeat it with a loud voice, and with a low voice; repeat it in lines of six words, and of four words; repeat it quickly and slowly; repeat it audibly and silently; repeat it with clasped hands, and with a low voice on our bended knees; repeat it before Füh, and with our faces towards the west; repeat it, and strike the wooden tablet, and beat the wooden fish;* repeat it, while fingering the beads of the rosary, and while walking in the road; repeat it when worshipping, and when alone; repeat it also in the midst of a crowd; let us repeat it in our own houses, and when abroad; repeat it when at leisure, and when in a bustle; repeat it while travelling, and while dwelling at home; repeat it sitting and lying, and let us repeat it even in our dreams; this is the true way of repeating. Thus to repeat, will make our hearts

* Instruments used in worship in the temples.

sour,* and our tears to drop; thus to repeat, will cause the fires to extinguish, and the ashes to become cold; thus to repeat, will inspire the celestial gods with awe, and the terrestrial demons with reverence; thus to repeat, will make heaven to rejoice, and the gods be glad! At the sound of Füh's name, the palace of the king of devils moves and shakes! At the sound of Füh's name, the wood of swords and the mountain of knives, will be beaten small as dust! At the sound of Füh's name, a hundred miseries, multiplying into thousands, will all melt away! At the sound of Füh's name, the road to pay the debt of gratitude to princes, parents, superiors, and the benevolent, and to obtain the three desirable things,† will instantly be opened. Thus, the man who would squeeze out the oil, must cause the sound of the pressing bodies to grind the more forcibly. Thus also the mariner, when his barge meets the swelling of the wave, must ply the oar more vigorously. Having behind us the boiling cauldron, and before us the lotus pools, were thousands and myriads of men to prevent our repeating, yet all their efforts would be vain.

* Phrase used to denote the moving of the feelings.

† Perhaps happiness, office, and age.

M A N N E R S
OF THE
P E R S I A N A M B A S S A D O R,
DRAWN IN ENGLAND.

SOME materials for a memoir of this distinguished personage have been given in vol. viii. p. 28. Those chiefly relate to passages in his domestic biography: to incidents which occurred to him as the member of a noble Persian family. The following is an outline of manners and character sketched since his second residence among us, by the pen of a British Admiral and Peer, who has the honour and pleasure of being an intimate friend of the Ambassador. It was originally addressed to a lady of rank in the shape of a letter; and, after circulating among a few private friends of Lord Radstock, has been published in a respectable morning paper (*The New Times*). We extract nearly the whole of it, omitting a few passages in which the noble writer is certainly mistaken; for example, when he says that the Mirza's knowledge of our language "extends not beyond a few familiar phrases, which he learnt on his pas-

"sage to England;" for his Excellency's acquaintance with the English language is of long standing, and his proficiency in it not slight. For the rest, the opportunities enjoyed by Lord Radstock, both for conversation and observation, confer on the anecdotes which he relates the highest authority.

"To the Countess of—

"Madam:—Your ladyship appears to be so anxious to obtain from me every information in my power concerning my friend the Persian, that I have just thrown together such matters as, I trust, will in some measure satisfy your curiosity.

"I lament that it is not in my power to do more; but such as it is, it is much at your ladyship's service, to dispose of as you may think fit.—I have the honour to be, your ladyship's very devoted, humble servant,
RADSTOCK."

Portland-place, Jan 10, 1820."

A SLIGHT SKETCH, &c. &c.

"About Hassan is in person above the common stature, and this is in

no small degree increased by a high cap, covered with a shawl, and heels a full inch and a half high. He is about thirty-five years of age. His features are perfectly regular; his eyes have a peculiar softness in them, though sometimes animated to the highest degree; his nose aquiline, his teeth the most regular and beautiful imaginable, and his profile as fine as the pencil could trace. His countenance is open and full of colour, and when in its natural state is no less mild than dignified. When conversing and highly pleased, it has a sweetness that nothing can exceed; and when animated by argument, it bespeaks a soul replete with energy, and a depth of understanding rarely to be met with. His manners are truly captivating, graceful, and as engaging as can be conceived; whilst, at the same time, they are such as ever to command respect, and remind even his very intimates, that he is the representative of a great monarch. I have visited the Ambassador every day since his arrival, excepting one, when in the evening he told Mr. James Morier that 'his heart was sick, as he had not seen his friend Lord Rastock during the whole day.' I sometimes call upon him twice a-day, and I have dined with him five times. A few days ago he gave us a grand dinner, at which were present Lord Winchelsea, Lord Teignmouth, General Grenville, Sir Gore Ouseley, Mr. Vaughan, and four or five others. Sir Gore Ouseley sat at the head of the table, and the Mirza on his left, it being the side near the fire. Nothing could surpass the grace and ease with which he did the honours of the entertainment; I do not mean as to attending to his guests' eating and drinking, but to the general tenour of his conduct and behaviour, and unceasing complacency towards them. He drank but one glass of wine at dinner, and none after, although he acknowledged that he liked wine, and we kept our seats little short of three hours. This act of his forbearance, and abstaining from religious motives, might have served as a lesson to his Christian guests; but here candour bids me own they seemed by no means inclined to follow so excellent an example, although certainly nothing like excess was committed: I merely mention the circumstance as comparative, and offering a sort of contrast. When the conversation was serious, the Mirza's attention, questions, and replies, alike bespoke a refined and superior understanding; and when jocose, he displayed his perfect knowledge of repartee, and was all life and merriment. The company were highly pleased, as you will believe; and it was really no easy matter to say in which of the above opposite characters this amiable Asiatic shone most conspicuous.

His mind appears to be as polished as are his manners; and though he is, as might be expected, utterly ignorant of European literature, Sir Gore Ouseley says, that he has a perfect knowledge of that of his own country, as he often quotes historical facts relative to Persia, and occasionally cites Hafiz, Sadi, and others of their most celebrated poets. I accompanied his Excellency the other night to the Opera for the second time, and I will throw together promiscuously, as they may occur, his observations and remarks, so far as they came within my knowledge; for, not understanding the language, you may readily suppose how much of what he says escapes me. The Ambassador was received at the King's door, and with the same ceremony as if he had been of the blood royal. This marked attention pleased him much, and he expressed his gratitude with much seeming warmth.—He appeared to be but little struck with the beauty or grandeur of the theatre, and to my surprise held the dancing very cheap. He laughed heartily at the folly of bringing forward Peter the Great and his Empress as dancing to divert the throng. 'What!' exclaimed he, 'is it possible that a mighty monarch and his queen should expose themselves thus? how absurd! how out of nature! how perfectly ridiculous!' Were I to translate the look which followed these words, it would be thus: 'Surely a nation that can suffer so childish and preposterous an exhibition, and be pleased with it, can have but little pretensions either to taste or judgment.' Soon after, he jokingly said, 'When I get back to my own country, and the King shall ask me, "What did the English do to divert you?" I will answer, "Sir, they brought before me your Majesty's great enemies, the Emperor and Empress of Russia, and made them dance for my amusement."' This he repeated with the highest glee, as if conscious of saying a witty thing. He possesses much feeling. As a proof of this, he was so affected with a pathetic scene, representing a king and queen with their children in chains and in a dungeon (in which, by the bye, there is the finest acting I almost ever beheld), that the tears ran down his cheeks during the whole of the performance.—When I complimented him the next day on this display of his feelings, he instantly replied, 'Who could have done otherwise on beholding a king and queen and their children in such a complicated scene of misery and distress?' At the end of the comic opera, at which he often laughed heartily, I asked him which he liked best, the serious or the comic opera? Without a moment's hesitation, he replied, 'The serious, when I am inclined to cry; and the comic, when I am in a humour to laugh.'

"I forgot to mention a laughable observation he made the other night during the grand ballet. He asked Sir G. Ouseley what the empress was going to do with the great chest and the casket which her slaves were carrying? Sir G. Ouseley replied, that she was going to endeavour to bribe the pasha to sign a truce and withdraw his troops. 'Is that it?' cries the Mirza, 'then I'll answer for her success; for those fellows, the Turks, would even sell their father, could they gain a piastre by it.' He appears to despise and detest the Turks as much as possible. He told the Turkish Ambassador the other morning, when I was present, that he would carry him to the Opera, where he should first see the grand vizir dance, and then sell his country. The Turk bowed, like a courtier. I will now give you a proof of the Mirza's readiness at reply. This I ought to have told you before, but you must take things just as chance brings them to my recollection. When at the private audience with his Persian Majesty, the King said, 'Sir G. Ouseley, you seem to speak Persian quite fluently.' Before the baronet had time to reply, the Mirza answered, 'better than I, Sir.' This I had from the Ambassador himself, and it afterwards was confirmed to me by Sir G. O. This man's mind seems to be ever on the stretch, and filled with interesting and important objects only. His mission is, consequently, the primary one; the next is, the attainment of useful knowledge. His questions and answers are endless, when food for an inquisitive and reflecting mind presents itself; but they are ever to the purpose, scarcely any thing frivolous escapes him, though at times, particularly at table, no one seems to enjoy pleasantry more, even to playfulness. He knows not only how to time a joke, but he can take one with the same good breeding, never saying or doing that which can distress others, or even appearing confounded or abashed, by the lively little sallies which he seems even to court, to promote convivial mirth. I was told the other day, that when he dined at Lord Wellesley's, a rallying scene passed between them that would have done credit to our most refined wits.

"The objects which hitherto seem to have made the strongest impressions on the Mirza's mind, are Greenwich and Chelsea Hospitals, the Bank, St. Paul's, Westminster Abbey, and Westminster Bridge. He desired to have the exact dimensions of the latter. He was highly delighted with his reception, both at the India House and Bank, at both which places he was received in a truly magnificent style. He conversed with the governor of the Bank for nearly half an hour, and nothing could be more pertinent than all his questions were. He then

visited the several rooms, and saw and had explained to him the mode of carrying on the business. On observing the ingenuity and facility of striking off the one-pound notes, he asked—'Is this man paid by the day, or for the number which he produces?' 'By the day.' 'But I suppose he is compelled to strike a certain number?' 'Yes; but on emergencies, when more are required, they work longer, and are paid extra wages.'—'Those are very wise regulations, for they encourage industry, whilst they are a check upon idleness.'

"Last Sunday evening the Mirza sent a message to Mrs. Morier, requesting that she would permit him to pay her a visit. This being accepted, he shortly after made his appearance, and remained with her and her family and myself nearly two hours. On enquiring what were the books he saw on the table, he was informed that they were the Bible, and some books of sermons. He then desired to have explained to him the nature of the latter, and seemed to approve much the study of such books on days set apart for devotion. The Miss Moriers then sang an hymn to him, without telling him what was the nature of the music. When they had ended, he thanked them, adding, 'I am sure that must be sacred music, it affected me so very much.' He said that among the many of our customs which he approved, he admired none more than that of not suffering the servants to remain in the room when they were not wanted. He added, that he was endeavouring to introduce this excellent custom into his own house, and for that purpose he was for ever driving his servants out of the room; but they returned like flies, in spite of all he could do. I never beheld him in such high spirits and so merry as he was during that whole evening.

"Every thing seemed to conspire to please him; the smallness and neatness of the house gave him an idea of comfort he had never experienced before. He repeated more than once, 'What could any person in the world wish for more than you have here?' Mrs. Morier shewed him a miniature of one of her daughters when a child. This delighted him so much that Mrs. M. begged he would accept it. He was so pleased with this present, that he would not part with it for a moment during the rest of the evening; but kept stroking it with his hands, as if it had been a favourite little animal. He is uncommonly fond of children, and the younger they are the more he likes them. The first time he saw my youngest daughter, who is eleven years of age, he seemed quite enchanted with her, and made her sit by him the whole evening, when she was not dancing. He afterwards saw a little girl of Mr. Elliot's, who is not yet

six years of age, and he seemed still more delighted with her, if possible, than he was with my daughter. I asked him at what age girls were married in Persia? he said, 'about sixteen.' I remarked, that in India they married at a much younger age; he replied, 'it was true, but in Persia they liked children as children, but women as wives.' He has but one wife, which he says is enough for any man, adding, 'that there can be no good or use in having more.' The first time he heard my daughters sing a trio, he was much struck with it, saying, 'this music quite delights me, but at the same time it puzzles me beyond measure; for though I can plainly discover that all of them are singing in different tones, yet it seems to produce but one sound; all is in unison, as if their very souls understood each other.'

"I find I have been throwing all these little sayings and doings together in a most irregular way, and without the slightest adherence to form or order; but the fact is, I write merely from me-

mory, and just as the thoughts occur. As to the simple facts themselves, you may rely on them; and as to the rest, if I have given you a tolerable idea of the man I have been endeavouring to sketch, it is of little consequence whether I begin with his head or his heels.

"A circumstance has just come into my recollection, which certainly ought not to be omitted. On the third or fourth day of the Ambassador's arrival, the Turkish Ambassador paid him a visit. 'What are you about?' cries the Turk. 'I am writing English!'—'Writing English! why you have scarcely been here three days, whilst I have been in England seven years, and I know not a syllable of the language, or how to form a single letter.'

"Thanks to Mr. J. Morier's kind attention and instruction, the Mirza writes daily copies that would do credit to any boy of twelve or fourteen. So much for the Persian Ambassador. Whatever more I can collect concerning him that is worth notice, you shall have.—Adieu!"

BRIEF HISTORY

OF

THE SYRIANS OF MALABAR.

WE give an insertion to this article in our Journal with the express view of exploring more perfectly the antiquity of Christianity in India. Our readers who take an interest in this subject will be gratified to learn, that independent of the accounts that have been collected and published by Catholic and Protestant writers, the natives of *Malayala* have also their histories, corroborative of the general facts, in their native language. The most important points in which these several histories agree, are, that Christianity was first planted in India by St. Thomas the Apostle; that the Indian churches have ever since had a succession of spiritual guides, and retained communion with the church at Antioch. A recent publication on Indian church history contains much information on this subject, and to which we refer our readers.*

Abstract of a Brief History of the Syrians in Malabar, preserved among themselves, as their Genuine History.—[From the nineteenth Report of the Church Missionary Society.]

THE Syrians have this history among themselves as their genuine history. Mr. Bailey, a missionary, has translated it

from the original Malayalim. It begins with a declaration that St. Thomas preached the gospel to the Parthians, Medes, and Indians; and then enters into details, which are manifestly legendary, however they may be founded on actual occurrences.

The facts as stated, stripped of apparent fable, are as follows:—

St. Thomas arrived in the year 52. His success was great, in various quarters.—In Malabar there was then no rajah or king, but the country was governed by thirty-two chief brahmins. To those, and to the natives at large, St. Thomas preached the gospel. Many believing, were baptized. Two were ordained priests. After living thirty years in Malabar, he went to Mailapore, and was there murdered by a heathen priest. After his death, the two priests had charge of the Christians in Malabar. On their decease there were no other priests for many years, the elders among the christians performing the services of baptism and marriage; many relapsed, in consequence, into idolatry. In the year 345, a bishop, with some priests and others, arrived from Syria. The then rajah of Malabar received them, and granted them many privileges, and a portion of ground; and issued a decree that no one should persecute or despise them. The influence of this decree was felt for a long course of years.

The narrative then proceeds, and speaks

Asiatic Journ.—No. 51.

thus of the settling of these Syrian christians, or Nazarites as it calls them, in Malabar :—

In a course of time, the Nazarites, who came from Jerusalem, began to interchange marriages with the christians in Malabar, according to their stations in life. The most respectable had 400 houses, on the north side of the village Crauganore, and the inferior had 72 on the south side of the village. These two castes are at present called Wadakanpaver, or North Party ; and Tekonpaver, or South Party. This was done for a perpetual distinction between them.

After this, having made inquiry after the descendants of the two priests ordained by St. Thomas the Apostle to watch over all the christians in Malabar, Jerusalem Thomas, with the bishops and teachers, appointed one of them to the office of archdeacon ; and others, chief persons, to look after the concerns of all the christians in Malabar, and to punish and protect them according to justice. From that time, bishops came regularly from Antioch to Malabar ; but the archdeacon and chief persons were appointed from the christians in Malabar.

In A.D. 825, a merchant, named Sabaroso, and two Syrian bishops, Mar Chaboor and Mar Apprott, came to Malabar, and dwelt at Quilon.

At that time, the Jews and Arabs in this country were at war. We and the Jews were allies. The Arabs commenced the war—destroyed a city—slew the two rajahs Vilyanvattale, and burnt their bodies.

Until 1545, we walked according to the law of the Syrians. On the arrival of the Portuguese in Cochin, the coming of the fathers was prohibited. In the above year Mar Abraham, Nestorian bishop, by the direction of St. Alea, came to Cochin.—He brought a great quantity of books with him. Not having a bishop, we applied to him for ordination ; and said that if his belief was the same as ours, we would acknowledge him as our bishop. The Portuguese understanding this, made the rajah of Cochin their friend ; and, having sent for the bishop, they threatened to persecute him and put him in prison. In consequence of this, he was greatly afraid, and embraced the Roman tenets. He immediately embarked from Cochin ; and went to Rome, to acknowledge the supremacy of the Pope. He afterwards returned to Malabar, with decrees from the pope. Having heard this, and also what was his belief, we refused to acknowledge him. Gevregese, the archdeacon, was at that time the head of our church in Malabar.

In 1599, Alexis, a Portuguese bishop, arrived. He bribed the rajah of Cochin, with 30,000 pieces of money, to assist in

compelling the archdeacon and christians to embrace the Roman tenets. The power of the archdeacon was diminished for the space of one year.

In 1599, the Portuguese and the Cochin rajah assembled all the christians in Malabar, at Uttriamporoor. They brought an axe to split the doors of the church in that place ; and, having entered the church, they held a synod, when it was decreed that all the Syrians should lay aside their own religion, and embrace the Roman Catholic religion. The archdeacon and christians, however, not being willing to comply, were severely persecuted, and their churches much spoiled.

In 1653, Mar Ignatius, a patriarch, came from Antioch, and landed at Mailapore. Two students, having gone thither from Malabar to worship, saw the patriarch, and told him all that the Portuguese had done. The Patriarch sent a person, and called the students privately. He then gave them letters patent to archdeacon Thomas, to authorize him to assume the title of Metran, and sent them to Malabar. They immediately departed, and on their arrival in Malabar, gave the letter to archdeacon Thomas.

The archdeacon addressed letters to all the Syrian churches ; and, when he had assembled all the priests, students, and christians, they heard that the Portuguese had brought Mar Ignatius, the patriarch, to Cochin. They all immediately arose, and went to the Cochin rajah, declared to him their grievances, and entreated him to deliver their patriarch out of the hands of the Portuguese. The rajah replied that he would certainly deliver him to them, the following morning. He immediately sent for the Portuguese governor of Cochin fort ; and said to him, " You have taken and confined the patriarch of our christians ; and nothing will satisfy me but your delivering him up to them without any delay." The Portuguese, however, gave the rajah a great sum of money, by the consideration of which he allowed them to retain their prisoner. The same night, they tied a great stone to the patriarch's neck, and threw him into the sea. In the hour that this was done, the rajah died.

After this, all the Syrians assembled in the church at Muttoncherry, and thus resolved—" These Portuguese having murdered Mar Ignatius, we will no longer join them. We renounce them, and do not want either their love or their favour. The present Francis, Bishop, shall not be our governor. We are not his children or followers. We will not again acknowledge Portuguese bishops." They all wrote an agreement, and took an oath to this effect.

On Friday, the 3d of Jan. 1654, having departed from thence, they all assembled in Alengate church ; and, according to the

request of our father, Mar Ignatius, archdeacon Thomas was appointed bishop, and called Mar Thomas. Some others were appointed to assist him, viz. Cadavil Alexandrius, Catanar of Cadamatta; Abraham Thomas, Catanar of Calloncherry; Vengoor George, Catanar of Angamallee; and Pallavettie Alexandrius, Catanar of Korawalingate. These four Catanars were in office for three years; and afterwards four others were chosen in their stead.

In 1660, by command of the Pope, Joseph, a Carmelite bishop, came to Malabar; but the Dutch Company would not permit him to land. Contrary, however, to the oath taken in Muttoncherry church, Cadavil Alexandrius Catanar, and the Syrians of Cadamatta large church, went to Wada-Kum Kuttee Rajah, and promised to give him a large sum of money, if he would interfere in the behalf of the above bishop. The rajah sent some persons to the Cochin fort, and prevailed on the Company to suffer the Roman bishop to land. The Roman bishop went to reside in Cadamatta large church, but we did not acknowledge him.

The Portuguese then inquired after the relations of Mar Thomas; and having privately called one of them, Panankary Alexandrius, Catanar, they offered to give him money if he would join them. He complied with their request. In 1663, Bishop Joseph consecrated this Alexandrius to the office of bishop; and by favours and bribes, endeavoured to persuade all Mar Thomas's relations to acknowledge Alexandrius as their bishop, telling them that he was properly ordained, but Mar Thomas was not, and was also of their family.

At that time two parties were formed: one acknowledged the Bishop Alexandrius, and are called old Christians (Roman Catholics); and the other, who separated from the Portuguese, are called New Christians (Syrians).

Bishop Alexandrius, however, did not live long. After his death, all who acknowledged him joined the Portuguese; because the Portuguese shewed them many favours, and persecuted the Syrians.

After these things came another Carmelite bishop, sent by the Pope, who had a long beard. On his arrival, he said that he was not of the Roman Catholics, and wished to join himself to us. He used much flattering language, and offered bribes, and endeavoured to deceive us. This bishop was afterwards called the Bishop of Verapoly. He governed the followers of Bishop Alexandrius; and, from that time, the Pope has regularly sent bishops to Verapoly.

After the death of Mar Thomas the Great, our bishops have been regularly appointed from his descendants.

In 1665, by the direction of St. Ignatius of Antioch, Mar Gregorius, the fifth Patriarch of Jerusalem, arrived in Malabar. By the laying on of his hands, Mar Thomas the Great was lawfully consecrated; having been only nominated before, and not consecrated. At that time we used unleavened bread in the Sacrament, which was not for some time laid aside.

In 1678, Mar Basilius, patriarch, and Mar Evanius, bishop, arrived; Mar Basilius died in thirteen days after his arrival, and was buried in Cothumulgum church. Mar Evanius afterwards governed our church. He consecrated a bishop, re-established our former church services, and taught that Christ has one nature and that the Holy Ghost is equal with the Father and the Son. Thus he laid aside some of the Roman tenets, and caused us to walk according to the church of Antioch. He died at Molandmatta and was buried in the church of that place.

In 1708, by the direction of Mar Alea, Gabriel, a Nestorian Bishop, arrived. He taught the people that the Messiah has two natures and two substances, on which account much dispute arose. Some Syrians and also Roman Catholics joined him. He used both leavened and unleavened bread in the Sacrament, and kept the Syrian fasts. After he died, no such bishop came into Malabar. Those who joined him returned to their former parties after his death.

In 1751, Mar Basilius, Patriarch of the city of Bercea, in the country of Aleppo, Mar Gregorius, Metropolitan of Jerusalem, and Mar Evanius, bishop, and with them some catanars and students, arrived. For the space of nineteen years after their arrival there were disputes about different things between them and the Syrians. Letters patent were sent by Mar Ignatius of Antioch, for Mar Thomas, who was consecrated metropolitan by one of the above bishops, and called Mar Dionysius. From Antioch were also sent, for Mar Dionysius, a staff, hood, a cross, unction, and all things necessary for the office of high priest.

All the bishops sent to Malabar by the direction of the Patriarch of Antioch, are regularly appointed bishops from the family of Pagalamattum. From the time Mar Ignatius arrived at Mailapore to the present, bishops have not been appointed from any other family. From the time that Bishop Joseph came, in A.D. 345, archdeacons began to be appointed, and continued to be appointed until Mar Ignatius arrived in 1653. At that time Archdeacon Thomas was appointed bishop, and the office of bishop has been confined to his descendants to the present time. Five bishops have been appointed from that family.

A.D. 1770. Mar Dionysius is now our metropolitan.

ACCOUNT OF THE KOONKEES, A RUDE NATION EAST OF BENGAL.

(From the Friend of India.)

IN September, 1818, a Munipore Koonkee, named Muh-koi, was procured from among the followers of Choujeet, the Raja of Munipore, who, being dethroned by his brother, had been obliged a few years ago to take refuge under the British flag, and has for some time resided at Silhet. In October following, a gentleman residing in Silhet, sent to Serampore one of the Tippera Koonkees, who are a distinct tribe. Of this savage nation, a few particulars communicated by a gentleman for some time resident among them may not be wholly uninteresting.

The Koonkees are a race of people originally from the north, who, almost from time immemorial, have sought refuge from their enemies, in those inaccessible mountains which lie between Bengal, Ava, and China. They assume certain of the habits of the caste to which that chief belongs under whose protection they may be; but they themselves have no caste, nor any peculiar characteristic which appears derived from one. They are divided, however, into tribes, which are distinct from each other. All of these tribes occupy a tract of country not less than five degrees in extent from north to south, and nearly two degrees from east to west; or, in other words, extending from north lat. 21° to 26° ; and from East long. 92° to 94° . This large tract of country is completely mountainous, and contains forests of timber which are almost impervious. These divide the British and the Burman territories, and form a complete barrier by nature against mutual invasion. To the north and the north-east, therefore, these tribes border on the Munipore, Phung, and Assam countries; to the west on the kingdom of Kachar, on the independent part of Tripoora or Tipperah, and on the dominions of the Honourable Company; but to the south and the east on the Burman dominions.

The Koonkees are divided into various tribes. The most northerly are the Nagas; who, however, are a race completely distinct from the others. To these follow the Tripoora Koonkees, including the Rangchar, and Thun-gnum, the Koo-tchong, and the Pitoo Koonkees; and to these succeed the Lan-khai, the Khin, the Mroung, and several other tribes.

This interesting race of men, as already observed, have no caste, except what some of them assume when in the service of the petty Hindoo chiefs around them. They are indeed nearly in a state of nature; but some of them are far less savage than others. The idea of their eating

human flesh, however, is quite unfounded. Unless in cases of extreme famine, or as expressive of deadly hatred, there is reason to think that nothing of the kind exists among them. Their more powerful neighbours are constantly attempting to seize them and sell them for slaves; in which they so often succeed, as to make it a regular traffic: yet their neighbours, both to the east and west of them, agree in affirming, that when they become attached to any person they make the most faithful and active domestics. They are characterized by all who have dealings with them for their detestation of fraud and deceit; but if once deceived by anyone, they are sure to seek revenge. This their neighbours often find true to their cost. About three years ago a Bengalee sircar who had been employed to transact business with those near Silhet, having carried on for some time a system of deception with them relative to certain articles of trade, they one day assembled in considerable numbers, seized him, and cut off his head, and afterwards dispersed with all quietness.

With the exception of those who are subject to the Hindoo Rajas near them, the Koonkees never worship any of the Hindoo deities. They are, however, exceedingly afraid of certain genii or evil spirits, whom they suppose to exist, and yield to them a certain degree of religious worship. But of a Supreme Being, wise and good, they have scarcely the most distant idea. They constantly burn their dead; and so strong is their feeling on this head, that if they are disposed of, in any way, they esteem it a dishonour to the family.

The Koonkees have no written language or character among them; and their mode of speaking differs so much, that the northern Koonkees are scarcely intelligible to those in the south; and the dialect of the Nagas appears wholly distinct from that of all the rest. In this, however, all their dialects agree, that they are *monosyllabic*. They all contain, also, in a greater or less degree, a mixture of Tartar, Chinese, and Burman words.

Of dress, some of these tribes are completely ignorant. Those termed the Neng-ta-Koonkees go perfectly in a state of nature, and live in the hollow trunks of trees, never erecting houses. If cloth be at any time offered them, they throw it away with disdain; and regard with a degree of astonishment any stranger who may appear among them clothed. Among the Nagas, however, a certain degree of

covering is seen, particularly among the women ; but the men wear nothing beyond a slight cincture round their loins, which scarcely answers any purpose as a covering. One tribe is said to form a kind of covering by four small pieces of wood slung on a string round the waist, which makes a clattering sound when they attempt to run or walk fast. The dress of such of them to the west as wear any clothing, has a distant affinity with that of the natives of Bengal ; and that of those on the east with that of the Burmans. That of the men consists generally of one long cloth, of which one end is tied round the waist, and the other thrown loosely over the shoulder. That of the women consists of two pieces ; one of which forms a kind of petticoat, and after encircling the body, is tucked up so high, as to cover the bosom ; and a larger, which extends from the shoulders somewhat below the knees.

In their persons, both men and women are strong and robust, and bear a considerable resemblance to the Tartars ; their faces are rather broad, and their noses have much of a characteristic flatness. The complexion, both of the women and the men, is much fairer than that of the natives of Bengal. In their carriage and manners they have little of the shyness of the Hindoo ; they have much more of the frankness of the Europeans.

The Khin tribe have a custom of tattooing the faces of their daughters in such a manner as completely to disfigure them ; this is done before they arrive at the age of maturity, and is said to have been introduced to keep their chiefs from depriving them of their daughters. The Burmans, however, as the female children are very fair, contrive to seize them exceedingly young, and rear them as domestics. In case they get them after their faces have been tattooed, they still retain them as slaves ; but employ them in the most menial offices. The men never

tattoo their faces ; this practice is wholly confined to the fair sex.

Through the immense forests which cover these mountains, these tribes, though not wholly unacquainted with agriculture, cultivate but little grain, and never a quantity equal to their own consumption. To supply the deficiency, they bring annually down to the plains the produce of these hills ; such as ivory, timber, wax, cotton, a kind of raw-silk called moog, and a variety of odoriferous gums. This they with the utmost simplicity and faithfulness barter for rice, beetle-nut, dried fish, and other articles of food, which intercourse is highly to the advantage of their neighbours. They raise great quantities of cotton. From the term *zoon*, signifying in their language a cotton field, they are sometimes termed *Zoons* ; and this has given rise to an idea that there is a distinct nation among them known by this name ; but this idea is quite erroneous. It may not be improper to add here, that in the Assam language the word *Koon-kee* signifies a basket, which the women, among the mountaineers, fix on their heads by a piece of string across their foreheads, while the *koon-kee* or basket, rests on their backs. This contrivance, as it brings forward the weight of what they may carry in this *koon-kee*, renders it easy for them to mount the hills therewith. It is possible that this term may have given rise to the general name by which they are known.

The object in procuring these *Koonkees*, now at Serampore, was to make them, if possible, acquainted with letters, and to obtain vocabularies of their own language, in the hope of being able to introduce among them, at some future time, the arts of reading and writing, the elements of useful knowledge, and above all, the knowledge of the true God, and the Saviour of men. For this purpose the Bengalee alphabet seems best suited ; as their intercourse westward lies immediately with those who read that character.

THE PASS OF PUCHMARRY, WITH ITS DEPENDENT VILLAGE ;

AND THE

CAVE OF DEO PAHAR.

(From the *Calcutta Guardian*.)

A LETTER, dated from the Puchmarry Pass, 19th February, 1819, contains the following description of this station and the vicinity.

The hills surrounding this pass are very formidable, and the glauit leading to it particularly so, much worse than experienced in the approach to Nepaul, one place excepted, where the army ascended to turn the Cheraghaty range.

The elephants brought the guns the whole way with the greatest ease ; they formed part of the advanced guard, and always got up to the halting ground long before the line. They are not injured in the least by the carriage of the guns. At exercise with the prolonge, they move with the guns in steady full stride, as fast as a man can run. The prolonge is made long enough to pass round the axletree ; a good method, by which the trail will not

be raised by jerks, as is the case in the way usually practised.

Puchmarry is a small but neat village, on a plain interspersed with numerous curious-shaped rocks and rising ground. It is surrounded on all sides by stupendous mountains, and is every where difficult to approach.

About six hundred yards from the village there is a high rocky mound, on the sides of which two or three caves have been cut out of the solid rock. They are square rooms, about twelve feet broad, and have about six inches of water in them, which oozes out of the rock. This mound is better worth seeing than the famous Deo Pahar, which is three miles from our camp at Puchmarry, and it requires a laborious journey to get there. I went with some Lascars, who desired to pay their devotion to Maha Deo. Half the way the road was good, but the last mile and half was a scramble up high hills, and over rugged rocks. When we reached the desired spot, nothing was seen from here except another high mountain, rendered famous by being a spot from whence religious devotees precipitate themselves, and which custom takes place annually at this time of the year, and will now be

celebrated three days hence, or on the 22d February.

On our return, we descended into a gloomy dell, between the two mountains, and taking a direction to the right, we were stopped by the junction of the two hills. At this point we saw two fakirs sitting in a large crevice in the rock, from which issued a stream of water that has gradually formed this low irregular cave of forty-four feet in length. In this cave is about two feet of water, in which pilgrims bathe, calling upon Maha Deo. Bevanie, his wife, occupies a crevice in the rock, just opposite to her husband.

I was greatly disappointed in not finding something more striking to mark a place so celebrated among the religious Hindoos. No temples or sculpture, so conspicuous in many parts of India, were to be found here, and I left the spot fully inclined to acknowledge, that what I had seen was not worth the labour of visiting it.

The sepoys evinced great devotion in their bathing in these sanctified caves. Each made his contribution to the high priest or servant of the deity, according to his circumstances, and received in return some of the sacred ashes, to eat, or besmear his body with.

GHAZEETORE HORSES.

THE following observations on country horses are made by a correspondent of the same intelligent paper.

"Having lately passed through the Ghazeeport district, throughout which the government stallions are permitted to serve the mares of the Zemindars, I was induced to make some observations regarding the produce that is likely to be derived from the system now adopted for the improvement of the breed of horses. I was highly pleased at having paid a visit to the depôt at Ghazeeport, at which place nearly four hundred horses for the Cavalry and Horse Artillery are during this month to be presented to a committee for admission into the service; the thorough bred horses that are to be sent to Calcutta, for sale, attracted my particular attention, they are a fine specimen of what kind of horses may be bred on this side of India, possessing size and substance for any purpose, combined with much fashion and elegance in their appearance.

The horses intended for the army are strong useful colts, and if not too severely worked until they are in full power, or about six years old, they will be found much more valuable than any country horses that can be procured for even double the sum that is allowed by the

government. It may not be amiss to remark, that the stud bred horses are longer in coming to their full size and strength than either Arab or country horses. I have even seen very many instances of colts at the age of three or four years old being pronounced by good judges to be weak and washey horses, which, at the age of six or seven, displayed a fine vigorous appearance, and were well filled out; I will therefore venture to advise all those who have any thing to do with young stud horses, not to be too severe with them until they have done growing; if they are so, they will find them wanting in that fine round form, which at the age of six years they will otherwise possess.

The condition of the horses at the depôt is highly creditable to the officers of that department, and the manner in which they are broken in has given them a very superior carriage, without making their mouths at all hard, or in the slightest degree affecting their disposition. Generally speaking, they are quiet and tractable. In passing through the Ghazeeport district, I was induced to take a look at the foals which have not yet been brought up by the stud officers; I was gratified to see the circle mares and stallions in good order, and their foals at the age of eleven or twelve months looking remarkably clean and healthy, and, generally speak-

ing, they had attained the height of about thirteen hands, without the slightest appearance of sores or diseases of any kind.

The Zemindars' mares not being so good as the circle mares, it can hardly be expected their foals should be so large as the others; though somewhat smaller, they appear remarkably well and very promising. The stud officers, I believe, have now authority to buy up all colts and fillies that are likely to attain any tolerable size; there can be no doubt that those which may not be considered eligible for the service will (if properly broken in for buggies and saddle horses) sell for much more than they can have cost the government. The plan that is now adopted, of allowing colts of the same age to run loose in paddocks, is productive of the most beneficial consequences; they soon become accustomed to each other and when grown up, shew no disposition to fight, as the country horses generally do, which arises from their being kept separate from each other; it has another and still greater advantage, it prevents their becoming thick in the shoulders and over chested, which the country horses commonly are, and which defects are caused by the manner in which they are picketed, and their being obliged to eat off the ground, without ever (while in the stable) having an opportunity of elevating the head to its natural height.

I was excessively pleased to observe the fine condition of the horses at Capt. Hunter's depôt; I attribute it to their being fed on dry food. The oats and oat straw is a most excellent food for horses, infinitely superior to wet grain and grasscutters grass, which, generally speaking, has the effect of a mild laxative, whereas the former food acts quite the contrary. It appears to me, that the cultivation of oats might be adopted very generally with great success, more particularly where alluvial land can be obtained, on which they flourish surprizingly. From what I have seen, I can safely assert, that three

and a half seers of oats and five seers of oat straw per day will keep a horse in finer condition, and enable him to go through harder work, than five seers of gram and seven or eight seers of grasscutters grass will do.

During the hot weather I would advise moist grass being substituted for the oat straw; it would be a remarkably good alternative, and tend much to keep horses in good health. I have for a long time fed my horses on parched barley instead of gram, and find it a far better food, and whenever I could I have avoided giving green grass. I tried the experiment during the late war upon two horses which at the commencement of the campaign were in equally good condition, and I found at the conclusion, that the horse which was fed on parched barley, with any kind of dry jungle grass, or the dry stalks of the bugnah and soan, was in very good order, whereas the horse that was fed on moist gram and grasscutters grass was a skeleton, like most of the horses in the division to which I was attached; as to the geldings, for such work, they appeared unable to stand the cold, or rather the great change which in this country takes place in the twenty-four hours. I have one which in the hot weather is always in very fine condition, and is I know as good a horse as is generally to be met with, but during the cold weather he is always disreputable to be seen upon, and unable to perform a hard day's work.

Should these observations meet the eye of any person who can account for geldings, where hard worked, being in such miserable condition as ninety-nine out of a hundred are, in the cold weather, I shall feel much obliged by the secret being communicated through the medium of your valuable journal. The stud bred horses, I am convinced, for general purposes, are the best horses in India, and I hope ere long to see a sufficient number of them to supersede the necessity of importing any but the finest Arabs."

CURSORY REMARKS ON BOARD THE FRIENDSHIP.

EXTRACT, No. VII.

(Continued from p. 134.)

On the 10th June our track was to the left of several small islands. Next morning we saw Cape St. George, the south-eastern extremity of New Ireland; we kept the coast on our right, at the distance of three or four miles: every part appeared to be covered with trees, of several species, some of which were tall and stately, particularly on the ridges of hills seated inland.

The shore, on many points, was seen to be rocky. No natives were observed here.—About noon we descried Cape Orford, the eastern extremity of New Britain. From this to Cape St. George, the distance was supposed to be about forty miles, both being seen at the same time, forming the entrance to St. George's Channel, up which we proceeded, having the land

on both sides of us, giving to the entrance of the strait the appearance of a large river. The weather was fine; we had a delightful view of both shores, with their fertile valleys, and gracefully sloping uplands, where, possibly, in after ages, when the tenants of this wild shall become civilized, the plough may prepare yellow trophies for the sickle, and bleating flocks and lowing herds diversify the landscape with symbols of cultivation and wealth, as in the beautiful hills and dales of Old Britain and Ireland. As we approached the coast of New Britain, we saw several boats, but none approached near the ship until the evening, when a canoe, having an outrigger, and eleven people on board, came within about a cable's length of us, where they lay gazing at the ship for some time; handkerchiefs were held up to draw them alongside, of which they took no notice. One of the men who stood up in the canoe, appeared tall, well made, and of a dark complexion. We for some time thought that they had red and white turbans on their heads; but at length discovered that their hair, which was woolly and frizzled, was covered with a sort of red powder like ochre on one side, and with a kind of lime or chalk on the other; other individuals were seen with the hair all red, and others with it all white. Nothing could entice them alongside. The canoe could paddle very fast; we did not suppose that any of our boats could overtake it if a trial had been made. As it drew near dark, they paddled round the ship very briskly, until coming to their first station, between the ship and the land, they stopped and blew something like smoke or dust from their hand lifted to the mouth, and let fly some arrows at the ship (which did not reach us) and quickly retired towards the shore. The audacity of these New Britons could easily have been checked, by firing a shot over them; but the captain did not wish to intimidate them from again approaching a ship; and preferred a course of lenity to resentment for acts indicating their disposition to be hostile. We made little progress in the night, having light winds; meanwhile we descried several fires in New Britain, but none in New Ireland, and concluded that the latter was but thinly inhabited. Next morning we saw the Duke of York's Island, lying nearly in the middle of the channel, which we thought should have been called the New Isle of Man, in correspondence with its relative situation. On the land of New Britain we noticed three remarkable hills, which have the shape of sugar loaves; one of which was much loftier than the other two; they had hence been called the *Mother and her Daughters*, by Captain Carteret. They look as if they had been thrown up by a volcano, and we had no

doubt but it had been so, for a little farther inland we observed smoke continually issuing from a hill which nearly resembles the cones just mentioned; several patches appeared like land under cultivation. As we proceeded, a number of canoes was observed coming from the Duke of York's Island. They came boldly on to the ship, singing, and playing upon an instrument of hollow reeds in the form of the pandean pipes. They held out bunches of plantains and cocoa nuts. Many articles were exhibited to them for barter, but nothing pleased them so much as red and white cloth. The captain cautioned our people to barter fairly, and to take nothing without making a return. There were at one time upwards of 30 canoes about the ship. The seamen having got a plentiful supply of plantains and cocoa nuts, had finished bartering, when the captain shewed some narrow red and white bunting, with some of my old ribbons, at sight of which, all the natives in the different canoes appeared most anxious to possess these treasures, pointing to the shore, and by signs intimating a wish for us to stop until they returned with a fresh supply of fruit and other native produce. Their boats glided to the land, and so anxious were the companies of natives to possess the pieces of bunting, that they were quarrelling as to which of them threw fruit, yams, &c. first into the ports. However, all got some of our rags in exchange for a plentiful supply of yams, &c. They were satisfied, and so were we. They took old knives and pieces of iron hoops in exchange, but did not set any value upon them. Glaring colours of red and white cloth attracted them most, there were from five to twelve men in the different sized boats; they had spears, bows, and arrows with them, but appeared to have such confidence in us, that we conceived they were placed in their boats more in readiness to repel an attack from their hostile neighbours, than from any apprehension from us.

As there was a fine commanding breeze, the ship drifted slowly between the satellite isle of New Man and the island of New Britain. Perhaps the Phœnicians, when they first discovered Britain, and had intercourse with our rudely painted forefathers, might think of the latter with mingled commiseration, contempt, and dawning hope, as we did of these poor savage people. The captain wishing to get clear of the channel before dark, made sail from the lessening coast of these fair dealing men. In passing the opposite territory of New Britain, we saw Port Hunter, where the Waaksemheyd had watered. Several openings led us to suppose, that where New Britain is placed there were more islands than one, particularly as some canoes went in at one

opening and came out at another. We observed a number of people on a projecting point of land, holding up bunches of plantains, cocoa-nuts, and yams, but we, having a sufficiency, did not bring to; at the same time a number of canoes were following the ship from different parts. As we proceeded we still perceived patches in the ravines that appeared under cultivation.

Just as we cleared the Duke of York's Island, we were surprised to see a ship following us. We were nearly becalmed, but she having a fine breeze came near enough before dark for us to discover that it was the Walker south seaman, which sailed from Port Jackson about three weeks before us. They could not see our colours, the ship's head being towards them. As it was quickly dark, it was thought we should have no communication until morning; however, about eight in the evening, we heard the boats' oars towing their ship towards us, and presently voices of individuals in their crews conversing, the night being still.—At length the captain of the Walker hailed us, saying "What ship is that pray?" by which we knew that they did not know us. "*L'Amitie*," was answered. "From whence came you?" was the next question. *Hollandex Nuora* was replied. "Who commands that ship," was then demanded? "*Capitaine Le Rouge*." We then plainly overheard them, conversing together, say we were either French or Dutch. However, not to keep them longer in suspense, our captain called aloud in English, "How do you do, Capt. Nicholl?" Their commander returned, "Who is that?" "Don't you know the *Friendship*, Reid?" was rejoined. Mutual civilities were then exchanged, and the captain of the Walker came on board us to supper, but quite altered in his looks since we saw him at Sydney. He was hardly able to come up the ship's side from weakness, in consequence of a severe wound which he had received in the breast about three weeks before, in an encounter with the savages of Egmont island, where he lost three of his people, and two more who had been wounded were not expected to live. It appeared that after he left Port Jackson he intended to go to the northward, by the way of the Philippine Isles, and stretch over to the coast of America to look for sperm whales, but scurvy beginning to shew itself among his seamen, he was induced to call at Egmont island, in order to procure as many cocoa-nuts, as possible; they could find no anchorage at the place where they touched, but seeing plenty of cocoa-nut trees on shore, and also a number of natives, they manned and armed one of their boats, the captain, accompanied by the chief mate, went in her, leaving the ship in charge of

the doctor and a junior mate. As they came near the shore numbers of the natives beckoned to them to land. Seeing the islanders appear friendly and unarmed, the captain and a party were induced to land, leaving the boat in charge of three men, desiring them to be very civil to the natives. The party on shore had but a few yards to walk to the cocoa-nut trees, but without advancing, pointed to them, shewing several trifles by way of barter; the natives then gave their visitors some nuts, but instead of offering to go up the trees for more, pointed to them, as much as to say, if you want them you may take them. On this apparent invitation, two of the seamen ascended the trees, and soon cut down all the nuts on them. At this stage of the intercourse much muttering and signs of anger broke out amongst the natives; several, after betraying the most savage looks, suddenly disappeared. At this crisis the people were ordered down from the trees, and the whole party desired to keep close together for mutual support. Many of the inhabitants now shewed themselves, armed with spears and bows and arrows, and it was their manifest intention to cut the strangers off from the boat. The three men stationed in the boat had the greatest difficulty in keeping her from being pulled ashore by the savages, who had taken out several things by force, and were endeavouring to seize the muskets. The concourse of natives increased in an alarming degree. At last the party joined the boat, but a number of the natives got hold of the painter, and would have hauled her ashore had not the man in the bow cut it. At this moment a flight of arrows was discharged amongst them, which wounded two men; the party now found themselves compelled to fire upon the savages; one man they saw drop, and others appeared to be wounded. Regardless of this, a number of the natives rushed into the water after the boat, charging with their spears, one of which wounded the captain, while, from distant assailants, arrows were flying so fast and thick as to wound every man in the boat (the mate excepted). Notwithstanding this dismaying obstacle to their retreat, the party providentially effected it. As all were engaged in getting the boat as fast as possible from the shore, but few shots were fired; the horrid yells of some hundreds of these savages when they commenced hostilities were most appalling. There were now only three men able to handle an oar, fortunately they were not followed by canoes, or they must all have been immolated, so diminished was their power of resistance. To augment their consternation they heard a gun from the ship, which was hid from their sight by a point of land. They at first concluded she had

run aground, or had been overtaken by some other great disaster. However, on doubling the point, they were relieved from these apprehensions by seeing the ship some distance from the land, but at the same time observed a number of canoes paddling very fast from her towards the shore. As soon as the captain, with his wounded companions, got alongside, and could be taken into the ship, they were informed, that shortly after they had left her to go on shore, a number of canoes approached her from the island. Portions of the crews paddling there, after some persuasion, came alongside, and subsequently on board, to the number of 18 or 20 individuals; no apprehensions were entertained respecting their intention, until a goat was seized by a native and thrown overboard, when presently, as if a concerted signal had been given, they began throwing overboard every thing they found loose about the decks, which the others, in the canoes, as readily picked up. As the surgeon told the tale, the few Europeans on board were quite taken aback, for having seen the natives come alongside unarmed, they relied that their intentions were friendly, while they had no other disposition themselves than to cultivate an amicable correspondence in the absence of the captain. But now, in the midst of this return for courtesy, forbearance on our parts was out of the question; commencing reluctant war, the seaman thumped the trespassers with

broomsticks and any thing they could get hold of, but nothing proved so effectual as the cook's scalding water, which he dealt out on their naked skins with such good effect, as made them jump directly overboard. They appeared quite at home in the water, and soon reached their boats; they were most anxious after live stock; the few fowls and ducks within the coops had stood a poor chance, if the plunderers had known how to get them out readily. The surgeon observed that the most formidable quadruped which the savages had encountered on board, was a large Tomcat, which was sitting quietly as usual near the main hatch; when Tom found himself seized by one of the natives in such a rough manner, he applied his weapons of defence so well, that the blood streamed from the arms of his assailer, who quitted his hold, glad to let his intended prize escape. Those in the ship then fired a gun, as well to intimidate the natives in the canoes, as to give a signal to the captain on shore. It was thought that the arrows were poisoned, as the three poor fellows who died suffered great agonies. The foregoing is founded on the reports of Capt. Nicholl and his surgeon of this distressing affair.

The Walker was thus rendered short of hands; two of ours volunteered to join her crew which they were permitted to do, as we had more men on board than our complement.

(To be continued.)

VARIETIES.

Indian Cure for the Ear-ache.—Take a piece of the lean of mutton, about the size of a large walnut, put it into the fire and burn it for some time till it becomes reduced almost to a cinder; then put it into a piece of clean rag and squeeze it until some moisture is expressed, which must be dropped into the ear as hot as the patient can bear it. This has been tried in a family at Madras, in more than one instance, and gave immediate relief, after laudanum and other medicines had been ineffectually applied.

Amount of the Russian Army.—The following has been published as an official statement of the military forces of the Russian empire. Their distribution is not given; but when the great surface of territory is considered, the measureless line of frontier to be guarded, the interior fortresses to be garrisoned, the isolated capitals where provincial governors must

be supported by an armed retinue, the total ought not to excite alarm in the territorial neighbours of this gigantic power, who are able to keep a commensurate army for local service, in proportion to the contiguous frontier.

Abstract from a return of the Russian army, stating its amount during the year 1819.—One hundred and eighty-nine regiments of infantry of the line, 613,722 men; 76 regiments of cavalry, 181,141; 30 battalions of artillery, each of five companies, and 60 pieces of cannon, 47,088; corps of irregular infantry, 27,632; 210 regiments of irregular cavalry, 105,534; troops forming a cordon on the frontiers 77,000; in all, 476 regiments, consisting of 989,117 men. To these are to be added the guards, consisting of 28 battalions, 61 squadrons; two brigades of artillery and two supernumerary battalions, consisting together of 48,883 men, which makes the grand total of the whole army 1,038,000 men.

COLLEGE OF FORT WILLIAM, PUBLIC DISPUTATION.

Aug. 19.—This day being appointed by his Excellency the most noble the Marquis of Hastings, for the Public Disputations in the Oriental languages, the president and members of the College Council, the officers, professors and students of the College, met at ten o'clock in the forenoon, at the Government House, where the hon. the Chief Justice, the rt.hon. the Lord Bishop of Calcutta, the hon. G. Dowdeswell, the hon. James Stuart, and the hon. John Adam, members of the supreme council, and the hon. Sir Francis Macnaghten, judge of the supreme court, with Maj.gen. Wood, and many of the civil and military officers at the presidency, and others of the principal European inhabitants of Calcutta, as well as some respectable natives, were also assembled. The Marchioness of Hastings, Lady Macnaghten, Lady D'Oyly, Mrs. Middleton, Mrs. Wood, Mrs. Udny, and several other ladies of the settlement, likewise honored the meeting with their presence.

Soon after ten o'clock the most noble the Visitor entered the room; and when he had taken his seat, the disputations commenced in the following order.

PERSIAN.

"An eminent superiority of the literary compositions of the western ancients, over those of Asiatic writers, will be found in the purity and elegance of the former, when contrasted with the glare of figurative exaggeration of the latter."

Respondent, Mr. C. Lindsay.
1st Opponent, Mr. B. H. Hodgson.
2d Opponent, Mr. W. Page.
Moderator, Lieut. D. Bryce.

HINDOOSTANEE.

"A translation of the popular works of Europe into the colloquial languages of Hindoestan would tend to expand the minds of the natives, and facilitate the extension of civilization and science."

Respondent, Mr. W. Page.
1st Opponent, Mr. E. Bury.
2d Opponent, Mr. J. C. Brown.
Moderator, Maj. J. W. Taylor.

BENGALEE.

"The Bengalee language merits assiduous cultivation, not only from its utility in business, but from its consciousness of expression and elegance of style, which renders it highly applicable to literary composition."

Respondent, Mr. W. R. Clarke.
1st Opponent, Mr. B. H. Hodgson.
2d Opponent, Mr. J. Hunter.
Moderator, Rev. Dr. W. Carey.

SUNSKRIT.

"The Sanskrit language, though at present shut up in the libraries of the Brahmins, and appropriated solely to the records of religion and literature, was probably once current over most of the Oriental world."

Respondent, Mr. A. Grote.

1st Opponent, Mr. W. R. Clarke.

Moderator, Rev. Dr. W. Carey.

When the disputations were concluded, the President of the College Council presented to the most noble the Visitor the several students of the college who were entitled to receive degrees of honor, medals of merit, or other honorary rewards, adjudged to them at the public examination held in June, and read the certificates granted by the council of the college to each student about to leave the college.

The Visitor presented to each student entitled to receive a degree of honor the usual diploma, inscribed on vellum, and at the same time expressed satisfaction at conferring it.

The prizes and medals awarded to the successful students were also distributed to them respectively, after which the Visitor delivered the following discourse.

"*Gentlemen of the College of Fort William*:—It is with gratification, though not altogether unqualified, that I meet you on the present occasion. The deductions from my satisfaction are not indeed weighty, still they are such as I feel bound to express.

"The returns of the late examination do not exhibit the extraordinary display of acquirements which has done honor to the college of Fort William at many of our former anniversaries.

"The honorary rewards distributed on the present occasion are fewer in number than those of even the last year, which I was forced to complain of as inferior to any preceding year in its product of eminent learning.

"I turn from this unsatisfactory view of the result of the examination, to remark, on the other hand, with great pleasure, that of twenty-six civil students who have been examined, no less than eighteen have been found qualified to discharge the duties of the public service, by a competent proficiency in two of the languages taught in the college.

"Of these, one student, Mr. Wm. Raikes Clarke, has qualified himself in less than five months; three, Mr. Lindsay, Mr. Hodgson, and Mr. Simson, in nine; and two, Mr. Page and Mr. Barlow, in ten.

"In this view of the subject, the aggregate proportion of qualification for the public service yielded by the college this year seems inferior only to the produce of 1816, which in this respect appears to have been singularly distinguished beyond other years.

"I am happy to have it in my power to remark, that the attendance of the students at the lectures has been more regular during the past term than it had been during many former terms, and to this amendment must, in great measure, be attributed a success in the present year extensive, if not strikingly brilliant.

"I have also much gratification in noticing those instances of individual merit which the reports of the college have brought under my inspection.

"Among the students reported qualified for the public service, Mr. Hodgson, by his general proficiency, stands first. After having been attached to the institution for the short period of nine months, he has obtained a degree of honor for high proficiency in the Bengalee, and a medal of merit for rapid and considerable progress in Persian. He holds the rank of second scholar in Persian, and second in Bengalee. It does not take from Mr. Hodgson's merit to observe, that on his admission into the college his acquirements in Bengalee and Persian were already considerable.

"Mr. Page is the second student in the order of general proficiency. Two medals of merit have been awarded to him for diligent application and rapid progress in the Persian and Hindoostanee languages, in the latter of which he stands first, and in the former on a level with Mr. Hodgson. His knowledge of those languages appears to have been acquired almost entirely at the college of Fort William since August last, at which period he entered the institution.

"Mr. Lindsay is ranked the third in the list of general proficiency, and stands at the head of the Persian class. He was admitted into the college subsequently to Mr. Hodgson and Mr. Page, and after having been attached to it little more than two months, obtained a medal of merit for progress in the Persian language. To the honor of Haileybury college he is mentioned, that when Mr. Lindsay joined the college of Fort William, he was superior to any Persian scholar in the latter. It is doubly praiseworthy in Mr. Lindsay that he brought so much knowledge with him, and that he has been able to keep his place with competitors of more than common talent. He has also obtained a medal of merit for rapid progress in the Hindoostanee language, in which he is the fourth scholar.

"Mr. Clarke, who holds the fourth place in the general list, stands first of

the students of Bengalee, and has attained a degree of honour in that language. He has also acquired considerable proficiency in Sanskrit, and is the second scholar in that tongue. Mr. Clarke's progress in the short period, little more than four months, during which he has been attached to the college of Fort William, has been rapid and honorable, and it is alike creditable to him and to the sister institution of Haileybury, that he brought with him from England a considerable portion of his knowledge of the Bengalee language.

"Mr. Simson, the fifth on the general list, has distinguished himself by rapid and considerable progress in Persian and Hindoostanee, and has obtained medals of merit in both languages.

"Mr. Grote, who was admitted only in January last, and is not yet reported qualified for the public service, has gained great credit by distinguished progress in Bengalee, in which language he has obtained a medal of merit, and by great proficiency in Sanskrit, in which he is the first scholar.

"Two medals of merit have been assigned to Mr. Thos. Temple Blackburn, for superior specimens of penmanship in Persian and Nagree characters, and a medal of merit to Mr. Garrett, and one to Lieut. Fulcher, the only military student at the college, for a similar distinction in penmanship in the Persian character.

"I am sorry to find it incumbent on me to mention, that two students, Mr. Malony and Mr. Staniforth, have this year suffered the disgrace of removal from college; and that Mr. Walter Blackburn and Mr. Hen. Smith are reported as having exposed themselves to a similar penalty.

"There is another student whose conduct has not been creditable, but whom I forbear indicating more distinctly, in the hope that his future amendment may justify this mark of lenity.

"The only degrees of honor conferred this year are two; both for proficiency in the Bengalee language. The number last year was four, all in the Bengalee language; so that in two successive years no degree of honor has been conferred either in Persian or Hindoostanee, or in any other language than Bengalee.

"I am at a loss to account for this undue preference to the provincial language of Bengal, at the sacrifice of those more extensively useful languages, the Persian and Hindoostanee.

"I am apprehensive that the name of the language must mislead the students at the preparatory college of Haileybury destined for the Bengal presidency, under an erroneous supposition, that because they are nominated to Bengal the language of that province is the one which

they should take the greatest pains to acquire.

"A short experience in this country, gentlemen, will shew you that they have done wrong who have neglected the study of the Persian and Hindoostanee languages, in order to devote their principal attention to the Bengalee.

"I trust that you will not misunderstand me, nor suppose that I undervalue a knowledge of the Bengalee language.

"To those who serve in the province of Bengal it is indispensable as a qualification, but Persian and Hindoostanee are not less necessary even in Bengal.

"Such, therefore, as wish to obtain employment in Bengal, but without relinquishing the honourable eminence of being qualified for employment in every part generally of the territories under this presidency, should endeavour to obtain a competent knowledge of Persian, Hindoostanee, and Bengalee.

"They, again, who wish preferably to be employed in the provinces beyond Bengal Proper, should understand, that, if they confine themselves to the study of two languages, the Persian and Hindoostanee are those which they will find most generally useful, the Hindoostanee for colloquial purposes, the Persian for correspondence and business conducted in writing.

"While on this subject, I must say a word respecting the study of the Arabic and Sanskrit languages. These hold the highest rank in erudition; and those students who propose to profit by this institution, in order to obtain great acquirements in Oriental literature, or with a view to arrive at a more radical knowledge of Persian, Hindoostanee, and Bengalee, and the other languages of India, will do well to apply themselves to Arabic and Sanskrit. Those, on the other hand, whose object is to qualify themselves as speedily as possible for the ordinary duties of the public service, and to quit the college as soon as they be reported qualified, will accomplish their object in the best manner by directing their principal attention to Persian, Hindoostanee, and Bengalee, reserving the venerable but less immediately needed languages of Arabic and Sanskrit for future study.

"I regret to see that, of the honorary rewards of this year, so many have been adjudged for the art of penmanship, to gentlemen who do not appear in other respects to have obtained any distinguished eminence in the knowledge of the languages. The art of reading writing, when combined with a knowledge of the languages, is invaluable; and even in these days, when a knowledge of the languages is extensively diffused, will confer marked distinction on its possessor; will always prove of the greatest advantage and com-

fort to himself, and may be productive of particular emergencies, of material benefit to the state. But I would wish you, gentlemen of the college of Fort William, to remember, that mere penmanship, that is the drawing or painting of elegant letters, without an adequate knowledge of the language, is not alone a worthy object of attainment; and that when honorary rewards were instituted for this art, it was with a view to encourage, not the mere dexterity of the pen, but an accurate knowledge of the language for useful purposes, which cannot be said to be attained without the talent of ready writing be connected with that of composing.

"I cannot conclude this review of the proceedings of the past year without offering to the gentlemen of the college council, and the officers of the college, my warmest thanks for their zealous and honorable exertions.

"I much fear that we are about to lose the services of Dr. Lumsden, the distinguished professor in the Arabic and Persian languages, and one of the chief ornaments and supports of the college from its foundation. He has quitted us on leave of absence, and probably will not resume the professor's chair, his health being much impaired by his valuable labors in the institution; but, in the hope of his possible return, I will not now anticipate the period of his final departure.

"In the course of this year a valuable donation of books on Scandinavian literature has been received into the college library from the university of Copenhagen, in return for a collection of Oriental works, presented by this government in the name of the honorable Company. The managers of the Danish university, and the commissioners for its library, have expressed themselves in the warmest terms of acknowledgment for the present we sent them, and have signified a strong desire to promote an intercourse between the two institutions, for which there is a corresponding inclination on our part.

"I am most happy to have it in my power to announce that a *Sanskrit and English Dictionary* by that distinguished scholar Mr. Wilson, is completed, and will issue from the press in the course of a few weeks. This work, which is the translation of an extensive compilation prepared by learned natives for the use of the college, comprehends the whole body of words to be found in the original dictionaries yet extant, to which particular reference is made under each term extracted from them. It also contains the radicals of the Sanskrit language, which are uniformly omitted in the original works, as being the subject of separate collections, and it comprehends many other additions that will no doubt prove highly

useful to the Sanskrit student, by whom the want of such elementary aid has long been sensibly felt. The appearance of this dictionary forms an important event in the cultivation of a very ancient and interesting language, and adds another national claim to the thanks of the literary world, to whom the successful labours of the Company's servants in India have made that language accessible and known. To Mr. Wilson we are under the greatest obligations for giving to us so important and valuable a work.

"Mr. Sutherland, of the civil service, a gentleman distinguished in the annals of our college, is about to publish English translations from the original Sanskrit of the *Duttaka Meemansa* and the *Duttaka Chundrika*, two esteemed treatises on the Hindoo law of adoption; to which the translator has added numerous notes, illustrative and explanatory, and a brief synopsis of the law. Mr. Sutherland has pursued the study of Sanskrit since he quitted the institution, and is an example, gentlemen, worthy of imitation.

"Capt. Roebuck is adding to our stock of Hindoostanee knowledge, by preparing for publication a third edition of his *English and Hindoostanee Naval Dictionary and Grammar*, greatly augmented and improved since its first appearance in 1811, especially by the addition of a Hindoostanee and English dictionary.

"In addressing to you, gentlemen, who are about to enter the public service, a few words of advice and exhortation, I indulge a feeling which might not become paternal interest. I look to your career with earnest solicitude, though with comfortable augury. The first situations you will occupy will be of a subordinate character; but the lowest offices in the service to which you belong are of importance, and are attended by duties of considerable responsibility. It may, however, fall to the lot of any of you to be employed at an early period in stations of elevated description. In no other part of the world do duties of such high trust devolve on such young men. You will have a large population looking up to you for justice and protection. You will have the rights and interests of your government, and the prosperity and happiness of its subjects, committed to your charge. With such duties before you, you will readily see that a knowledge of the native languages is not the only qualification required of you. You will have to exercise temper, judgment, and perfect impartiality, together with zeal and devotion to public business. You are called on to love and cherish the people under you,—to enter into their feelings, pay attention to their peculiarities, and view with gentle charity their prejudices and weaknesses.

"The eyes of government will be upon you: yet I depend on your spontaneous honorable impulses, much more than on any effect of our superintendence.

"Every well-ordered mind must be conscious, that where Providence has bestowed sway it has attached deep and separable conditions to the boon. The sacred duty of promoting the welfare of those over whom rule is exercised will be acknowledged by all; but there may be peculiarity of circumstances which will give that duty a more than ordinary claim. Such circumstances do distinguish our position in this country. Our domination is altogether unprecedented in its nature. History records nothing parallel to it. Britain holds here an immense empire, not by national force, but by the confidence which the most energetic and intelligent portion of the native population reposes in us. We have attained this height of power, not through plan, not through forecast, but from the result of various unprovoked and unexpected contests; the issue of every one of which was rendered favorable to us, by the fidelity of natives in our employ, and the advantageous prepossession which the inhabitants in general entertained respecting us. While we bless the bounty of Heaven for these successes, our gratitude ought to be sincere towards a people whose reliance on our justice made them, in spite of habitual prejudices, connect their own comfort with the advancement of our dominion. Superadded to the generally recognised demands of attention to the happiness of the governed, we have the special bond of justifying that opinion which so decisively facilitated the extension and stability of our interests; and since the extraordinary elevation of this fabric of power must attract the wondering gaze of the world, we have to remember that we are thence only the more under observation as to the tone in which we act for our country. It is not the character of us petty individuals that is at stake; it is Britain that stands responsible to mankind for the mode in which this unexampled preponderance shall be used: and we have the proud, but awful sensation, that our country's renown is so far committed to us. There is no one of you, young men, who will not have, even at your outset, an active part in the discharge of this vast obligation. Fashion your spirits to the situation. You ought to go forth with parental dispositions towards the natives. Contemplate the superiority of your own acquirements as only prescribing the allowances which should be made for those destitute of similar advantages. You will have to deal with a community unhappily demoralized and debased to a considerable degree. If you will reflect that this is the conse-

quence of their having been degraded by vicious and tyrannical governments, it will strike you that the remedy is to habituate them to a different influence. You will be sensible that patience, kindness of manner, and lenity of procedure, will operate towards reclaiming them still more than even equity; which, if dry and repulsive, will work but little on the feelings of such a population. Be the protectors, the consolers, the cheerers of those around you. There has been a Cleveland; imitate him.

"Of you, gentlemen, who have done your utmost in the college to qualify yourselves for the public service, it may be fairly presumed, that the applause of your own conscience has already taught you the happiness arising from a faithful discharge of duty, and that there is no danger of any deviation from the meritorious path you have hitherto pursued.—Proceed and prosper. An approving government will not overlook your toils, or neglect to reward your services; and I trust that success will crown your endeavours, and that your names will be enrolled in the number of those who do honor to the service to which they belong.

"Each of you will have more or less the means of promoting the measure most important towards the general improvement of the natives; I mean, the dissemination of instruction among them by the establishment and encouragement of schools. I therefore recommend this object earnestly to your active attention. Caution must be used, in the prosecution of it, not to revolt the prejudices of the natives by controversial arguments against their notions. Instil the universal principles of morality, open the minds of the rising generation, enable them to exert their reason, and obnoxious customs will silently die away before the light diffused. By this simple prudence you will avoid exciting any jealousies which would obstruct your beneficent purpose. It is a high satisfaction to me to inform you that the persons whom I sent to establish schools in Rajpootana have met the most cordial countenance. When they had explained to the principal men the nature and extent of their object, showing that it did not, in any degree, interfere with the habits and persuasions of the people, the project was received with fervor; and it was professed that there was no other mode in which the British government could have so strongly testified its anxiety for the welfare of those liberated countries.

"Those gentlemen who must be sensible that they have neglected to avail themselves of the advantages of the college, may yet indulge in the consolation that the door is open for improvement. Let them make amends for past idleness

by application to the duties of their respective offices. It is in their power to retrieve the past, and still to distinguish themselves so as to gain honor as public servants.

"You, gentlemen, who remain attached to the college, have before you, at no distant period I hope, the same prospects that I have been pointing out to your companions now quitting us, and you cannot think too much of the importance of the duties which await you in the employ of the state. In the mean time, your principal attention should be devoted to the means now in your reach of qualifying yourselves by an adequate knowledge of the languages. The character of the college is at present confided to your hands; and I trust that you are determined to make the coming year brilliant and distinguished in our annals, as well as honorable to yourselves."

COLLEGE OF FORT WILLIAM.

June, 1819.

NINETEENTH ANNUAL EXAMINATION,

Holden in June, 1819.

PERSIAN.

First Class.

	Date of Admission.
1. Lindsay	Sept. 1818
2. { Hodgson, } a medal of merit	Sept. 1818
{ Page, } a medal of merit	Aug. 1818

Second Class.

3. Neave	April 1817
4. T. T. Blackburn	Sept. 1816
5. Garrett	Aug. 1816
6. Bury	May 1817
7. Townsend	Sept. 1817
8. Simson, a medal of merit	Sept. 1818
9. Turner	Sept. 1817
10. Barlow	Aug. 1818
11. Palmer	Aug. 1815
12. Clerk	Feb. 1818
13. Manning	Sept. 1814
14. Brown	Sept. 1817
15. Cardew	Mar. 1816
16. Hunter	Sept. 1816
17. H. Smith	Nov. 1816
18. Clarke	Jan. 1819

Third Class.

19. Grote	Jan. 1810
20. W. H. Smith	Oct. 1818
21. Davis	Jan. 1819

DEBATE AT THE EAST-INDIA HOUSE.

In order to preserve the uniformity of the Debates, that, on the *Erection of a Statue to WARREN HASTINGS*, which was given, out of its order, at pages 198 *et seq.* of the last number, and in mere skeleton, is subjoined at large, *usque ab ovo*.

East-India House, Jan. 12, 1820.

A general court of proprietors of East India stock was this day held by adjournment, at the Company's house in Leadenhall Street, for the purpose of considering a proposition for the erection of a monument in the court room to the memory of the late Right Hon. Warren Hastings.

The minutes of the court having been read—

The *Chairman* (Campbell Marjoribanks, Esq.) stated, that the grant of 75,000 sicca rupees to Mr. James Wilkinson had received the approbation of the board of commissioners for managing the affairs of India.

The *Chairman*.—I have now to acquaint the court that it is met by adjournment, in order to receive a proposition for erecting a statue to the memory of the late Right Hon. Warren Hastings in this room, agreeably to a resolution of the court of directors of the 7th of July last, which shall be read.

Mr. *Hume* wished, before the regular business of the day was brought forward, to ask a question. At the last court a considerable portion of time had been occupied in discussing the legality of the proceedings relative to the grant to Sir G. H. Barlow. It was then stated, that the opinion of counsel would be taken on that point. He was now anxious

to know whether such an opinion had been taken; and, if so, what that opinion was?

The *Chairman* said, he was not aware of the circumstance alluded to by the hon. proprietor. He knew of no promise made by any gentlemen behind the bar, to call for the opinion of counsel. The understanding was, that, if the court of proprietors desired the opinion of counsel, they might call for it, and that call would at once be complied with.

Mr. *Hume*.—Then I am to understand that the court of directors will not take any opinion on the subject?

The *Chairman*.—The court of directors have no doubt about it. If the hon. proprietor entertain a doubt, his remedy will be to call for a legal opinion through the medium of the court of proprietors.

Here the conversation terminated.

The clerk then read the following resolution:

“At a court of directors, held on Wednesday, the 7th of July, 1819:

“It was resolved, that as the last testimony of approbation of the long, zealous, and successful services of the late Right Hon. Warren Hastings, in maintaining, without diminution, the British possessions in India, against the combined efforts of Hindoo, Mahometan, and Maharratta enemies, it be recommended to the court of proprietors to place the statue of that distinguished individual amongst those of the statesmen and heroes who have contributed in their several stations to the security of the British territories in India!”

The *Chairman* then rose, and introduced the subject to the court. He said, before he put the question, he

felt himself desirous of offering a few words on so interesting a subject. The name and character of a most eminent and faithful servant of the East-India Company were now before the court; he had no hesitation in confiding them to the justice of the proprietors. Of this he was quite certain, that it would not be necessary for him to enter into any extended detail on the merits of Mr. Hastings' exemplary conduct in those high and arduous situations he was selected to fill. The extreme notoriety of his great reputation and invaluable services relieved him from that duty. His actions are recorded among the signal exploits of the most eminent men; they are well known to the British, they are well known to the Indian public; and to none are they better known than to the proprietors of East-India stock, who are perfectly capable of appreciating merits at once so variable and so estimable.—(*Hear, hear!*) The proprietors had always treated Mr. Hastings with respect, affection, and confidence, and he (the Chairman) was assured that they would not, at this time, deviate from that strong current of opinion which had at all other times run in favour of this exalted individual.—(*Hear, hear!*)

Having stated this, he should have been induced to have left the question on this ground to the good and generous feelings of the court; but he was unwilling to pass over, without some notice, the great length of Mr. Hastings' services. About seventy years ago he entered as a servant of the Company, and travelled, with the greatest exertion and high principled honour, through the whole circle of duties; from the lowest civil appointment to the very highest and most distinguished.—(*Hear, hear!*) Through the whole of the period he conducted all his transactions on the soundest and wisest policy, seizing all the changes and occurrences around him, and rendering them subservient to the best interests of the Company, until, by the dint and influence of merit alone, he rose to the exalted situation of Governor-general of Bengal. India was at that time in different circumstances, very different indeed from those in which she is now placed, and more particularly so towards the latter part of his administration. Europe was itself placed in very different circumstances. During the long period of his administration, he had not only to contend with the native enemies of the British power in India, but he had likewise to combat with European enemies, who had established a footing in India, and were in actual possession of frontier stations. In addition to which, large fleets were opposed to fleets of greater force and number that were fitted out by hostile powers. In many instances the

strength and skill of the naval combatants were so equally poised, that the triumph on either side was doubtful, and even where the British claimed a victory, the results were indecisive, and by no means effectually checked the progress of the enemy.

All these circumstances combined, tended to render the situation of the governor-general a post of the greatest difficulty; but the hosts who opposed, and the dangers which threatened the Company's possessions on every side, did not dismay him; they merely served to draw forth the resources of his mind, to call talents into action which have become the theme of general admiration, and will be recorded in the just and faithful pages of history. The difficulties he subdued, the virtues he displayed, and the possessions he secured, can never be forgotten by the Company, and must render his memory ever dear to the recollection of the court. (*Hear, hear!*)

After Mr. Hastings had established the empire of the Company; after he had performed the most inestimable services, by his enterprise and his genius; after he had enjoyed a full and uninterrupted confidence for a long series of years, how was he treated on his return to this country? What mark of honour did he receive? How were his great achievements rewarded? He was not even allowed to repose in dignified and unnoticed retirement; he was dragged forward to contend with public accusations; he was rewarded with twenty-two articles of impeachment on high crimes and misdemeanours.

It was not his (the Chairman's) wish or intention to enter into any examination of the conduct of parliament, on that occasion; he meant not to impugn its wisdom in instituting the proceedings which distressed and harassed the feelings of that great man; they were at an end; the feelings which excited them and that great man himself were now no more; but this he thought himself allowed to say, that those proceedings were contrary to the practice and spirit of the laws of this happy nation. Of this he was quite satisfied, that the acquittal of Mr. Hastings, on that extraordinary occasion, was the acquittal of the East-India Company.—(*Hear, hear!*) Of this he was equally well satisfied, that the condemnation of Mr. Hastings, on any one point, would have been considered as the condemnation of the East-India Company.—(*Hear, hear!*)

There was still one circumstance towards which he wished to draw the attention of the proprietors; it must be in all their recollections, that the last time the East-India Company appeared before the British public, when they stood be-

for the face of the British nation and called for a renewal of their charter, the court of directors thought it was their duty to bring forward the most eminent and intelligent men, connected with their service, to give evidence before the great national councils, to afford information to the nation at large, in what state the affairs of India stood, at that moment, whether moral, political, or commercial; and this was done not from any narrow views of partial policy, but from considerations of paramount importance. Among those who were examined upon that occasion, was that distinguished character Warren Hastings!—(*Hear, hear!*)

He appeared before the bar of the House of Commons, and at an advanced period of life gave an evidence so able, so perspicuous, so lucid and so conclusive, that, as he retired, the general impulse and feeling of the House, excited by the talents he had displayed, were manifested by loud and repeated cheers.—(*Hear, hear!*)

Here he should rest the case; he had no doubt but that the proposition of the court of directors for erecting a statue of Warren Hastings would that day receive the ardent support of the proprietors. Indeed it was his most sincere wish, for the honour of the East-India Company and the credit of the general court, that the proposition would meet with an unanimous vote.—(*Hear, hear!*)

He was sure, if he could call up the departed to his aid; if he could command the presence of those heroes and statesmen, whose statues adorned the court, they would give their strenuous support to a proposition, which had for its object the conferring an appropriate and well merited honour on the memory of a faithful and long tried servant.—(*Hear, hear!*)

The hon. *Chairman* concluded by moving, that this court do agree with the resolution.

The *Deputy Chairman* (G. A. Robinson, Esq.,) said, in rising to second the motion, he should think it quite unnecessary to add any thing to the address the proprietors had just heard, at the present moment. He however felt himself disposed to offer some few observations to the court, arising out of this particular circumstance, that part of his life was spent in India at a period when the government was placed in the hands of that able and intelligent man, Warren Hastings.—(*Hear, hear!*) He had entertained a firm reliance that the proposition then before the court would have received the unanimous assent of the proprietors. He had reason, however, since he came into the court, to believe, that something in the shape of an amendment was intended to be moved on this occasion. Under

these circumstances he would take the liberty of reserving himself for some future stage of the debate, when he would make such observations on any objections that might be urged against the proposition, as they seemed to demand.—(*Hear, hear!*) He wished it, however, to be most clearly understood, that he never seconded a motion in that court, in the propriety of which his mind and disposition more entirely coincided.—(*Hear, hear!*)

Mr. S. Dixon rose and said, he hoped, as they had before them the best grounds for bearing testimony to the various merits of Mr. Hastings, that the motion would be carried unanimously. At the same time, he trusted that he should not be looked upon as a "word-catcher," if he called for the omission or the extension of one word contained in the resolution. He meant the word "last," which occurred at the commencement. If the expression "last testimony" were suffered to remain, it might be mistakenly supposed that many testimonies of approbation had been voted by that court to Mr. Hastings. He well remembered the prosecution against that gentleman; indeed, he might use a harsher term with propriety, and denominate it a persecution. It took place at that period of his life which was the more valuable to him, because, after a long and eventful career, he wished to spend the remainder of his days peaceably in his native country; but that hope was defeated, and for several years his mind was filled with trouble and anxiety. His fortune suffered greatly in the contest, but the Company behaved to him with noble liberality. They voted him a large sum of money and a handsome pension.—(*Hear, hear!*)—He (Mr. D.) was desirous either that the word "last" should be left out, or that it should be extended, by adding the syllable "ing" to it, and making it a "lasting testimony of approbation."

Mr. Hume said he rose, before they proceeded with the debate, to enter his protest against the course they were pursuing, because they had not complied with the letter and spirit of an important by-law. The court of directors had not, in conformity with that by-law, laid before the proprietors the ground on which they came to this resolution. It would be but a matter of justice, if they submitted to the court the various resolutions respecting the conduct of Mr. Hastings, that had been passed, both by the court of directors and the court of proprietors. He would venture to say, if this had been done, that the words of the present resolution would have been found improper. His conduct, it would appear, did not meet with the unanimous approbation of the court of directors. On the contrary, the

resolutions would shew that it was condemned in many instances by the court of directors, while the proprietors had, on different occasions, applauded it in the highest degree. He did not intend to offer any motion on the subject, but he would enter his protest against a proceeding which was contrary to the by-law.

The *Chairman* stated, that as the hon. proprietor did not submit any motion, it was perfectly unnecessary for him to offer any observations to the court on what had fallen from the hon. gentleman.

Mr. R. Jackson called on the court to act with that wisdom, justice, and liberality which had been recommended to them, and which were wholly at variance with hurry and precipitation. In order that they might proceed with due deliberation, he would request three or four minutes to be read (extracts from their own records), which would afford considerable information to the proprietors on the subject now before them. The following documents were then read :—

Resolution of a court of directors, held on the 8th of May, 1776. "The court having, according to the minutes of the 2d inst., proceeded to take into consideration the several papers then read, relative to charges against Warren Hastings, Esq. governor-general of Bengal, and Richard Barwell, Esq.,

"Resolved, that this court having taken into consideration the state of the Company's affairs in Bengal, are of opinion, that Warren Hastings, Esq. governor-general, and Richard Barwell, Esq. should be removed, and that an humble address be presented to his Majesty for that purpose."

Resolution of a court of directors, held on Wednesday, the 29th of May, 1782. "The following resolution, which passed the hon. the house of commons yesterday, was laid before the court :—"Resolved, that Warren Hastings, Esq. governor-general of Bengal, and William Hornley, Esq. president of the council of Bombay, having, in sundry instances, acted in a manner repugnant to the honour and policy of this nation, and thereby brought great calamities on India, and enormous expenses on the East-India Company, it is the duty of the directors to pursue all legal measures to remove them from their respective offices." The court of directors agreed to a resolution corresponding with that of the house of commons, which was afterwards overruled by a general court.

Proceedings of a court of directors, held on the 22d of Oct. 1782. "The court, in conformity with the order of adjournment of the 17th inst., now proceeded to take into consideration the conduct of their several officers in India. A motion, of which notice had been given on the 17th inst., was agreed to ; namely, "that the

orders sent out to the Company's officers in India to abstain from schemes of conquest, and to confine their views to a system of self-defence ; also forbidding any unnecessary interference with the native powers, or the forming of new connexions with them, and recommending, at the same time, the preservation of peace, by a steady adherence to existing treaties, were founded in wisdom and sound policy, and were perfectly consistent with the interests of the nation." A second motion was made and carried in the affirmative, namely, "that a contrary system had been pursued by the Company's servants in India, in direct opposition to the orders of their superiors, by which they had got into contradictory negotiations with the native powers, had plunged the Company into wars, attended with enormous expense, and had, by these means, tarnished the national character." It was then moved, and carried in the affirmative, "that it is proper for this court to give the most decided effect to the orders sent out to India, to put an immediate stop to a system of policy so ruinous in its consequences to the Company and the public." It was finally resolved, "that a steady perseverance in that line of conduct so strongly recommended by the court of directors, cannot be expected from those servants who appeared desirous to embark in schemes of conquest ; and, therefore, it is expedient to remove Warren Hastings, Esq. from the office of governor-general of Bengal."

Minutes of a general court of proprietors, held on Wednesday the 25th of May 1814. The following resolution of the court of directors, which was laid before this court on the 4th inst. being read, viz.—

"At a court of directors, held on Wednesday, the 6th of April, 1814 :—Resolved unanimously, that this court, taking into consideration all the circumstances of the case of Warren Hastings, Esq., formerly Governor-general, and the important services rendered by him to the Company, is of opinion, that the annuity granted the said Warren Hastings, for the term of 28 years and a half, from the 24th of June 1785, of 4000*l.*, which expired on the 25th of December 1813, be continued to him from that period during the term of his natural life, to issue out of the territorial revenues of India, and be payable in England."

Also "a letter from A. E. Impey and E. Baber, Esqrs., stating their intencion of proposing to the general court this day, a resolution granting an annuity of 5000*l.* to Warren Hastings, Esq., to commence from the 25th December 1813, and to continue during the term of his natural life ; also granting him the sum of 19,000*l.* being the difference for 19 years between the annuity of 5000*l.* originally voted to

him by the court of proprietors in the year 1795, and that of 4,000*l.* consented to by the commissioners for the affairs of India in 1796.

"It was moved, that this Court approve and confirm the above resolution of the Court of Directors. It was thereupon proposed to amend the above motion, by leaving out all the words after the word "that," for the purpose of introducing the following words, viz.

"In consideration of the important services of the Right Hon. Warren Hastings, formerly Governor-General of Bengal, an annuity of 5,000*l.* shall be granted to the said Warren Hastings, to commence on the 25th day of December 1813, and to continue during the term of his natural life; and that the further sum of 19,000*l.* be granted to the said Warren Hastings, being the difference for 19 years, between the annuity of 5,000*l.* originally voted to him by the court of proprietors in 1795, and that of 4,000*l.* consented to by the commissioners for the affairs of India, in 1796; the said annuity and grant to issue out of the territorial revenues of India, and to be payable in England.

"That a *marble statue* of the said Warren Hastings be erected in this court, as a perpetual memorial of his great services to the East-India Company, and of their gratitude."

And it being moved, "That the original words stand part of the question," the same passed in the affirmative. The main question for confirming the pension of 4,000*l.* per annum was then put, and agreed to unanimously.

These documents having been gone through,

Mr. Jackson proceeded. The hon. deputy had, he observed, anticipated correctly, when he stated that he understood an amendment would be offered, from some part of the court, to the present motion. He (Mr. Jackson) was the individual who meant to propose that amendment. In doing so, he was sure credit would be given to him when he stated, that during the whole period of his public life, he never felt himself in a situation which was productive of so much personal pain. He would rather have avoided the question altogether, if, consistently with his duty, he could have done so. Indeed, he had balanced with himself whether he should stay away from the court entirely, or, if he did attend, whether he should abstain from voting on the question. But, feeling that if he acted thus it would be a contradiction, in one instance, to the uniform tenor of a life spent amongst the proprietors, he therefore thought it necessary once more to address them—perhaps Providence had decreed for the last time;

but while Providence vouchsafed to grant him the power, he would state his sentiments in that court, honestly, impartially, and to the best of his judgment. He should be ashamed to offer to the proprietors a crude judgment, or to lay before them any proposition that was not founded on grave and serious consideration. He had endeavoured to come to a just conclusion, as far as a painful and laborious investigation could accomplish it. If he might be allowed to make an observation personal to himself, it was this, that, from the moment it was determined to hold this great and solemn inquest on the ashes of the dead, he had devoted many hours during the night (for only in the night could he find time for such purposes) to renew his early reading, by looking into the whole of the administration of Mr. Hastings;—by travelling through the labours and the resolutions of the House of Commons, and by doing that, which was equally important to their proceedings on this day, examining anxiously their own acts and proceedings on former occasions, respecting Mr. Hastings, before he could bring himself to that conclusion which he had ultimately done. And, though he trusted he should assign such reasons for not agreeing with the precise motion before the court, as must be satisfactory to every unbiassed auditor, still he would not leave it in any man's power to say, that he was insensible to the exalted merits of Mr. Hastings on many points. For reasons, however, which he strongly felt, this did not appear to him to be the way in which a respect for those merits ought to be shewn. Indeed he thought, and had stated that sentiment to his friends, that the whole proceeding was conducted with too little ceremony for the merits of the eminent person to whom it related. He had rather expected, that an enlarged view of Mr. Hastings' administration would have fallen from lips as eloquent as those of his learned friend (Mr. Impey), with the warmth of whose feelings, on this and other subjects, he was well acquainted. For though, in a review of that administration, much light would be found, it was, on the other hand, distinguished by a great many shadows. He did not mean to say, that on an ordinary question of pecuniary compensation—on a question at all approaching to personal liberality and generosity—the light should not overbalance the shade in the history of an individual's actions; but it became a very different matter, when they were about to perform one of the most solemn acts that could be entrusted to the wisdom of a great deliberative body; when they were about to pay to the memory of an individual, so singular and so exalted a mark of respect,

as that of placing his statue in the hall of their debates, which, if it meant any thing, was intended to hold out an example worthy of imitation to future governors; which, if it meant any thing, was to point out the government of the man thus honoured, as displaying an exalted career of undeviating rectitude. It was declaring to the world, that he possessed great zeal and extraordinary talent, and that his zeal and all his talents were uniformly applied to honest and praiseworthy purposes. Considering this peculiar mode of doing homage to the memory of the departed, it was only just, when, in the language of the motion, it was conferred on heroes of unblemished reputation, or on statesmen of undeviating integrity. However this great honour might have been perverted by bad men, in the course of wicked or revolutionary proceedings, amongst the good and virtuous it had always been considered the highest compliment that could be paid; and by them it was paid only to those who had manifested unshaken rectitude, in order that their characters might be handed down to posterity, not merely as objects of admiration, but of example. He who consented to confer this distinction with any other view, was deeply responsible to his country, and to the great cause of morals, for his conduct. On the ground, therefore, of the justice of this measure, in itself, he would offer some observations to the court; and he would also submit other observations on a different ground, namely, the indiscretion of the proceeding. What he took the liberty of calling indiscretion was, the adoption of a course which wore the appearance of great vacillation in their own proceedings, and of great contradiction between the conduct of those hon. gentlemen who had now seats behind the bar, and that of their predecessors: he might add, indeed, that the former were utterly inconsistent with themselves. At one period they would find a resolution directly opposed to the present, and at another they were called on to agree to a resolution exactly the reverse, although the circumstances were not at all altered. He conceived that inconsistency of resolutions in the court of directors, on measures of importance, ought to be sedulously avoided: a resolution like that now proposed ought to be narrowly scrutinized. Looking to their former proceedings, it must be considered as paying but a sorry compliment to that House of Commons, on whose good-will they continued so mainly to depend. Were they wholly without example of what might be the consequence of coming to a vote in that place, in direct contradiction to the votes of the House of Commons? Many gentlemen who were then in court would recollect, that those very resolu-

tions of recall, which had just been read, were by an assembly far more multitudinous than that which he addressed this day, over-ruled. That act was done by men whom, he admitted, were influenced by the most generous of feelings—feelings which did them honor, for it certainly might be deemed honorable to support such a man: but it was not prudent in those individuals to give way to a tide of zealous and enthusiastic feelings, and in that court to over-rule, as they had done, the court of directors and contradict totally and point blank the resolution of the House of Commons. When this court thought proper so to proceed, the displeasure they gave to his Majesty's government was expressed by an official communication, then on their records, which informed the Company that his Majesty's ministers did not deem it advisable to let the resolution go out to India: that they could not, consistently with what they owed to the country, and the respect which was due to the House of Commons, suffer a resolution to go abroad which would be injurious to the public welfare, and disparaging to one branch of the legislature. This was in the year 1782. The secretary of state added, using his Majesty's name, "that in consequence of the resolution which had been come to by the general court, he should command that all the papers relating to their proceedings should in the next session be brought under the consideration of parliament." They were accordingly brought before parliament, and in 1784, in consequence of the conduct pursued by the general court, the proudest privilege the Company ever possessed—the proudest and grandest privilege that was perhaps ever possessed by a corporate community, namely, the having a voice in the nomination of governor-general of an empire, the having a right to declare who should go out to India, who should stay there, or who should be recalled, was struck out of the list of the Company's immunities. From that hour to the present it had not been competent, or legal, for the court of proprietors to contravene, or contradict, any one resolution, respecting the politics of India, agreed to by the court of directors, and confirmed by his Majesty's ministers. Whatever resolution the court of directors might chose to come to, with respect to the revenue, politics, peace, or war of India, the proprietors had not the power to alter one single syllable of it: they might express their regret, they might approve or condemn the measures of the directors by subsequent resolutions, but that high authority which they had possessed, from the commencement of their history, up to the period to which he had adverted, they had lost for ever, in consequence of that resolution which put down the court of directors

and insulted the House of Commons. With this example before them, he surely did not ask too much when he demanded an attentive ear to his observations, while he deprecated the adoption of any line of conduct that could expose the Company to similar danger. Let it not be supposed that he was insensible to the merits of the eminent personage then before the court. He was an extraordinary man, and, in many senses of the word, certainly a great one. When he said "in many senses of the word," he wished to observe, that he was one of those, who inseparably connected moral, with political excellence, as necessary to the formation of a great character, still speaking, as he wished always to be understood, of the morals of public life. They had heard of many men who were great in another sense of the word. For instance, there was Alexander the Great, to whom, in the fervor of eulogium, Mr. Hastings had been compared in the House of Lords. They had had Charles V., Louis XIV., and lastly, Bonaparte.—These were all great men, no doubt, in a military and political point of view, and the last not the least: but he could not consent, in a free state like ours, to consecrate, as far as it could be done, the memory of a man, as having exhibited one undeviating course of political rectitude, and been an example for all future governors of India, who, however politically great, could not be considered great in the other sense of the word. While he was speaking of the talents of Mr. Hastings, he wished to introduce an extract from a work, in which those talents were described in language so much better than he could supply, that he doubted not but it would be heard with pleasure. The work was entitled, "An Account of Transactions in India, from 1756 to 1783," the veracity of which was confirmed by contemporaneous statements and public records. He read the passage chiefly to shew, that neither the writer of the work, from which he had drawn much information, nor the person who now addressed the court, could entertain one feeling personally hostile to Mr. Hastings. Speaking of the state of things in 1771, he said, "such was the embarrassment of the Company's affairs towards the end of 1771, when from extraordinary disbursements, both at home and abroad, the Company was more than 2,000,000*l.* in debt. Mr. Cartier, then president of the council, drew bills on the Company, for which he was severely censured, and, with several members of the board, abruptly dismissed. Mr. Hastings was immediately called from the presidency of Madras to the government of Bombay. His reputation, for talents and integrity entitled him to this distinction, and the reader can have no objection to so much intelligence as has

yet transpired of an individual, who for many years had been the principal actor in scenes which have deeply arrested the attention of all mankind; whose character and conduct have occasioned the profoundest speculations, in the general maxims of whose politics numerous factions have originated, and whose enemies and abettors, with an endeavour and ability nearly equal, have so frequently arraigned and defended him. His parentage, though not splendid, was respectable. He was said to be descended from one of the noblest families in the kingdom. The education which he received at Westminster school, from the attention of an able tutor (Dr. Nicholls), and chiefly his own capacity and application, was eminently classical and polite. His faculties were manly and cultivated at the age of eighteen, when he was appointed a writer in the Company's service at Bengal. His first object, as soon as he arrived in India, was to make himself master of the Persian and Hindostani languages, and he was the first Englishman who accomplished this difficult undertaking with any degree of accuracy. It facilitated his success in every subsequent pursuit, procured him the confidence of the natives, and sensibly increased his merits in their estimation. Every office to which he was advanced, every character he sustained, and every trust for which he became responsible, were uniformly discharged with rigid and exemplary fidelity: the establishment of a factory in the interior parts of the country was committed to his care; the project was abortive, but he acquitted himself with honour. Among all the British youth who followed the fortunes of Lord Clive, in grasping at the sovereignty of Bengal, he was the only person qualified for supporting the dignity of resident minister at the court of Meer Jaffer. The smallest impropriety in managing the delicate and important business of this interesting station, was never laid to his charge; for though he enjoyed a place for years, which to some of his successors has been deemed equal at least to 150,000*l.* annually, and at a time when Lord Clive, according to his own account, realized nearly a million of money, on Mr. Hastings' return to Europe with his friend Vansittart, while others who had occupied very inferior stations, realized and brought home fortunes of from 100,000*l.* to 500,000*l.*, his was said not to exceed 15,000*l.*! Happy had it been for him, perhaps for the natives of Hindostan, assuredly for many of his contemporaries in England, had he never deviated from this obvious rectitude, or adopted a line of conduct more obnoxious to censure or misconception." He (continued Mr. Jackson) believed it could not be supposed, that the person who wrote this pas-

sage could do otherwise than feel a transcendent respect towards Mr. Hastings; and in reading it, he hoped that some credit would be given to himself for liberality of sentiment. At the period stated in this extract, Mr. Hastings was called to the government of Bengal; and he was free to declare, that his conduct in that situation was good and exemplary, up to the time which he was about to state to the court. The first point he meant to touch on was the Rohilla war. Those transactions which had become the object of parliamentary investigation, and matters of distinct charge by the House of Commons, he did not intend to introduce. He would carefully avoid going into the particulars of any one of those charges, it being quite enough for his purpose and argument (in order to induce the court to act with caution and circumspection), that they actually existed, and that great majorities of the House of Commons deemed them of importance sufficient to be made the subject of high impeachment. The second Mahratta and the Rohilla wars were not made the objects of distinct charge before the House of Lords, for reasons which he should notice as arising from difficulties of proof created by Mr. Hastings himself; he should therefore proceed to give an outline of the warfare in the Rohilla country. They would find, at the time of which he was speaking, that Sujah Dowlah was in high authority. Unfortunately for Mr. Hastings, and for this country, Sujah Dowlah thought it would be very convenient for him if he could seize on the Rohilla country, and place it as a barrier between his territory and that of the Mahrattas. He would pass over all intermediate proceedings, and state the course which Sujah Dowlah adopted, in his great desire to possess the Rohilla country, either as a barrier of defence, or as a means of gratifying at once his cupidity and revenge. It was a country which the geographers had described as the garden of India; a country possessed by some of the most virtuous, peaceable, and happy natives of the peninsula, who had now long possessed it; a country that had given us no kind of offence, although we became, in consequence of the policy of Mr. Hastings, parties in its subjugation and destruction! The only charge made against this people was, a supposed inclination towards the Mahrattas, a circumstance which might have arisen from that state of fear and doubt into which a weak country, when placed between two powerful ones, is generally plunged. Sujah Dowlah's determination to possess the Rohilla country, was mixed up with the utmost resentment. Nothing would suit his politics and purposes but the entire extirpation of the people! He naturally enough wished for the assistance of the

East-India Company's army, to enable him to effect his object. For that purpose he solicited an interview with Mr. Hastings, and one was granted to him, which took place at Benares. The particulars of that interview had never transpired; they had been kept from the records, and even the House of Commons had failed in obtaining the correspondence on the subject. It was prior to the regulation act of 1773 being sent out, and that which Mr. Hastings did in council was nominally the act of council. Indeed there was no great likelihood of his receiving any opposition from Mr. Barlow. Be that as it may, however, all the papers connected with this proceeding, the instructions given by Mr. Hastings respecting it, his letters to the resident at the court of that prince, and every other document, had been effectually concealed to this day. It was the absence of those documents, so suspiciously withheld, which occasioned the House of Commons to propose proceeding with the impeachment on this point, on evidence which must have been drawn from Mr. Hastings himself, a course evidently illegal, and contrary to the received law of evidence. It was at first said, that this evidence was to be found in the archives of the India House; but on searching there, no such evidence was to be found, the papers had not been transmitted with others in the usual course. They were then said to be in the possession of Mr. Middleton, the resident; an order was agreed to, for his attendance at the bar of the house: but he, when called on to give up the papers, declared, upon his honour, that he had already given them to Mr. Hastings at his particular request. A resolution was then moved, "that Mr. Hastings, the accused, should be compelled to give up the papers, but it was properly overruled; and certainly from that hour to the present, the papers had not made their appearance, and the purpose of the House of Commons as to the Rohilla war had been thereby rendered abortive. He had just adverted to the previous condition of the Rohilla country, as having been, for a long series of years, blessed with all the abundance of plenty, rendered more grateful by the sweets of liberty, and the enjoyment of that repose natural to an agricultural people under the auspices of patriarchal rules. He should now, without descending to particulars, glance at the other side of the picture. Those conversant with Indian history knew that on this occasion, and he was sorry to say on some other occasions, about this period, a British army was contracted for (much in the same way as German forces were used to be procured), which marched into the Rohilla country, traversed and conquered it! Sujah Dowlah, filled with a savage joy at its success, inflicted the most dreadful

cruelties on a people who had given him no just cause of offence, and who had thus been placed within his power by an army of foreigners. At length the Rohillas, exasperated beyond endurance, raised, and marched into the field an army of 40,000 men, under the command of Hafez Rahmul, who was celebrated as a scholar, a poet, and a warrior. That force could not, however, stand before the prowess of British troops. It sank beneath their superior courage and discipline; and, in the end, with its gallant and accomplished leader, was cut to pieces! The British army, faithful to its character, remained firm in its rank, and obedient to order, when the battle was over: but far different was the conduct of their sanguinary allies! It was an historical fact, proved by the Company's own records, that Sujah Dowlah, who had kept aloof from the battle, who had not joined in the combat, no sooner perceived that the fortune of the day was in favour of our troops, than he let loose his flying hordes upon the vanquished Rohillas, and encouraged cruelties more dreadful than the head could calmly consider, or a humane heart conceive. It was said by Mr. Pitt, that the statements on this subject were probably exaggerated; but still he could not contemplate with a constant mind the extirpation of a whole people, and he completely united with those who expressed their abhorrence of the transaction. If it were not that wanton barbarities were perpetrated, why did Colonel Champion, the commander of the British force, implore this native chief to extend some mercy to a vanquished, a fallen, a despairing people? Why did he lay the circumstances before the council of Bengal, and call on them to put an end to the horrors by which that devoted country was visited? One could not read the answer which was given to his application without being chilled! Nothing could be more cold or unfeeling. Col. Champion was answered, that, however proper it might be to interfere, on the score of humanity, yet, under existing political circumstances, the matter could not be taken up without risking—what?—the pecuniary part of the bargain, the sum of money which Sujah Dowlah had stipulated to give the Company, when the whole of the business should be completed! If gentlemen approved of such a transaction, let them consecrate it to fame; the statue would of course be erected, and he had done. But if they viewed it in its true light, as a base, a cruel, and a mercenary proceeding, they would not sanction a resolution that must hold up Mr. Hastings, to after ages, as a character of consummate political virtue. By what was called the Regulating Act (Lord North's act) of 1773, it was provided that an additional council of three persons should

go out from hence to assist the governor general. The persons appointed were, Colonel Clavering, Mr. Monson, and Mr. Francis. They went out with unsullied characters, and they resided there with clear hands; never had they been charged with demeaning themselves, in their high station, otherwise than with honour and integrity. However unfortunate they might be, in differing from Mr. Hastings in opinion, it could not be doubted that they acted from an honest belief that they were carrying into execution the will of the House of Commons and the orders of the court of directors, by whom they were enjoined to abstain as much as possible, from interfering with other states, to avoid unnecessary warfare, and to cultivate, by justice and humanity, the goodwill and friendship of the natives. No voice ever raised itself in the House of Commons (and during those heated debates their enemies were challenged so to do) imputing a mercenary or sinister motive to any one of these distinguished characters, who had now become the council of the governor general. Those gentlemen took the earliest opportunity, after their arrival in India, of protesting against the war with the Rohillas, and they called on the Governor-general to state the nature of the private conference which he had had with Sujah Dowlah at Benares, and also to produce his correspondence with Mr. Middleton the resident at that court, and of his own agent there. This information, which justice as well as duty, nay, which the routine of official business should have conceded, was refused. To what did he appeal to, in order to substantiate this fact? He would quote the resolution of the court of directors themselves, of December, 1775, in which they condemned, as they ought to do, the Rohilla war, and severely censured the withholding those papers, which alone could shew the necessity or policy of engaging in hostilities. The papers were withheld, and the recorded censure which followed was a very important circumstance. The directors, on the occasion to which he alluded, "condemned the Rohilla war, as against good policy, and as contrary to the general orders of the Company;" and further resolved "that the correspondence respecting the same ought not to have been withheld, but should have been laid before the council." But though the correspondence was suppressed, they were furnished through another medium with the reason which induced Mr. Hastings to undertake that war. On the first meeting of the new council, October 25, 1774, Mr. Hastings delivered in, a minute, detailing the transactions of his government; it was a paper, which, if he (Mr. Jackson) had not already declared that the governor general possessed talents

greatly beyond what men ordinarily possess, would indisputably prove that fact. In that instrument he stated, that he "had good reasons for entering on the Rohilla war;" a war of extirpation! of violence! of rapine! of conflagration and bloodshed! for Sujah Dowlah took care to put in practice every thing that was horrible and revolting. The British army, as he had before observed, did not join in these excesses. While the troops of Sujah Dowlah committed every species of devastation, the British remained steady to their orders, merely murmuring, that after their blood had purchased victory a banditti was allowed to reap its fruits. Though he regretted that they had been employed at all on such an occasion, still it was a matter of praise and consolation, that in no instance had they acted unlike British soldiers; and it was equally cheering to reflect, that their own gallant commander protested against the proceedings of our ferocious allies. The first reason assigned by Mr. Hastings for undertaking this war, was "an addition of territory, and, of course, wealth to the vazier, in which the Company will always participate." An increase of territory, increase of revenue, increased investments, and accession of wealth: these were the leading points which were avowed as justifying so murderous a war. Money, money it appeared was the great object; as, in the correspondence between revolutionary France and America, it was said, *Il faut de l'argent, plus d'argent, beaucoup plus d'argent*. The accession of territory was a point which always carried great weight with it; and when a war, however unnecessary, was entered into, they were sure to hear the prospect of additional strength, wealth, and revenue adverted to, in terms of admiration. If Mr. Hastings had forborne (and, in his opinion, after the application of Colonel Champion, he ought not to have forborne) from interfering to prevent the extinction of the Rohillas, through fear of not being paid the stipulated sum, he ought to have recollected, that the arm which defeated the Rohillas was also able to crush Sujah Dowlah; such a fear was therefore futile and unfounded. Indeed, Mr. Hastings had himself, in the course of the minute referred to, described Sujah Dowlah as one whom it was almost ludicrous to fear; and happy would it have been if he had controuled his power, and stopped his cruelties, instead of tamely looking on, while they were perpetrating. The second reason assigned by Mr. Hastings was, "The completion of the defensive line of Sujah Dowlah's dominions, by freeing them from an inconvenient neighbour, and by taking into them the whole space included between the Ganges and the

northern mountains." Thus it was stated, as a grave cause for entering on a sanguinary, a desolating, and, as to us, an unprovoked war, that it was necessary to get rid of "an inconvenient neighbour." Merciful God! extirpate an innocent people because they were inconvenient neighbours to an ambitious and rapacious chief! The next reason assigned was, "the employment of a third part of our force, and a saving, at the same time, of its expences;" and, lastly, the stipulation of "40 lacs of rupees (or 400,000*l.*) to be paid to us on the conclusion of the undertaking;" or, in other words, that when this horrid idea of extirpation, as Mr. Pitt had justly stigmatized it, should be *bond fide* realized; when none were left to attest the dreadful deed, and when annihilation had become proof, then was the 400,000*l.* to be paid into the treasury of Bengal, to grace the glowing lines of the Governor-general's next letter, as if money were their god; as if wealth and territory were the alpha and omega of the Company! and to be obtained at the expense of all moral rule, and in defiance of all moral obligation! If that which he had stated were fact, and he challenged contradiction, did he ask too much, when he called on the court to pause before they passed this resolution? Here he would inquire, whether the real merits of Mr. Hastings had been unrewarded during his lifetime? Certainly they had not. He would shew that large sums had been presented to him from time to time by the Company; that he had received in gratuities not less than 200,000*l.* since he returned from India. To this liberality, extended to Mr. Hastings upon grounds which he should hereafter admit to be valid, he felt no objection. Indeed, had Mr. Hastings left behind him a son, he would have been the first person to say, "let that youth be amply provided for; let him have it in his power to support, with due dignity, the eminent name of his father during his life, and to hand it down with proper honour to his posterity." He was aware that private friendship towards Mr. Hastings prevailed in the breasts of many of the directors; and had they, as a mark of respect and esteem, hung up his portrait in their own room, he would not have made any observation on the circumstance. Instead of that, they sought to hold him up to the world as a man of undeviating political rectitude, and, by so doing, they compelled those who denied the proposition, to come forward this day and accuse them with having overlooked their own former resolutions, by which Mr. Hastings was severely censured, in order that they might succeed with the present. If almost any other proposition had been made, he would not have trou-

bled them, or endeavoured to distinguish between the light and the shade of Mr. Hastings' character; but he never would consent that, by such a measure as that now proposed, they should say to posterity, "notwithstanding Mr. Hastings was the author and abettor of the horrible Rohilla war, notwithstanding he was condemned for it, by the proper authorities, notwithstanding his being charged by the court of directors, up to the hour of his departure, with keeping back the papers respecting it, still he shall be pointed to, as an example for all future governors of India!" Would not this be to say to those who might hereafter govern their eastern possessions, "be hardy and daring; banish fear, be bold in enterprise, get territory, and revenue, and ready money enough, and we will look over all moral peccadilloes. Nay more, we will erect your statue in our court-room, and hand you down to admiring posterity!" Such conduct certainly was not in conformity with their own repeated declarations, with the expressed sentiments of the legislature, nor with the solemn resolutions of the House of Commons; and therefore it was that this day he earnestly opposed it.

The execution of Nundcomar was the next point to which he would advert. It was an event of the most revolting description. On the present occasion, it was not his intention to enter into a detailed history of that unfortunate proceeding. Nundcomar was a Bramin of the very highest rank; he had been, for many years prime minister to Meer Jaffer, and it was the almost dying request of that Prince that he should be the minister of his son and successor. It so happened (as might be seen in the Bengal correspondence) that Nundcomar thought proper to prefer a charge of corruption against Mr. Hastings. He did not do this in a private and covert manner, but like a prince, for such was his rank, like a man who was at the head of his sacred *caste*, a *caste* which was the object of almost universal worship amongst the natives of India; he openly made his charge, he distinctly pointed out facts of bribery, and offered himself to substantiate them openly, before the council of Bengal. The minutes on this subject were signed by Col. Clavering, by Mr. Monson, and by Mr. Francis. It was stated, that Mr. Hastings declared "it would not be consistent with his dignity, as governor-general, to allow himself to be confronted in this way." Perhaps it would not, but certainly he ought to have adopted some other mode of meeting this high charge: some other course by which the truth might be elicited more consistent with his dignity. Nundcomar was, however indicted for a conspiracy against

Mr. Hastings, at the very moment when those charges were pending. He was acquitted of the alleged offence by a jury, and consequently restored to his capacity as a witness; but he was unfortunately soon afterwards indicted capitally under an English act of parliament for a forgery, said to have been committed some years before; a crime thought far less of in India than in this country, and not punishable with death by any native law. He was however tried, condemned, and, to the horror of all India, and he believed he might add, to the horror of the people of England, he was executed!! Yes, this prince, this chief-minister, this member of the highest class amongst the Bramins, holding a rank which in his country was as high, as sacred, and as venerable as that of bishop or judge in our own, suffered a most vile and ignominious death. Although Sir Robert Chambers, one of his judges, expressed his doubts if the law relating to forgery, which rendered it a capital offence only in England, and which did not at that time extend even to Scotland, could be operative in India; notwithstanding the opinion of one of the bench, this man, with all the high appendages of rank and station about him, he, who had been prime minister to Meer Jaffer, and had been implored by his dying sovereign to act in the same capacity for his son, was banged like a dog, in the presence of thousands of astonished and terrified natives, who did not think such a catastrophe possible till they saw his suspended body, and who then, with an involuntary shriek of horror, fled to the Ganges, to wash away the pollution of having even witnessed so sacrilegious a scene. He was amazed that Mr. Hastings, possessing the power he then held, did not respite the execution till higher authorities were consulted; till the opinion of other judges could be taken on the legality of this conviction, as was the usual course in this country when a difference of opinion prevailed in the court. He should have done so, if it were only in pity to the prejudices and agonized feelings of the natives. Had he been in Mr. Hastings' situation, he confessed that he would have cast himself at the feet of his colleagues, he would have implored them to preserve Nundcomar, at least until he had been allowed to bring forward his charge. He would have said, "consider, if Nundcomar now dies, he dies with my accusation in his mouth, he dies casting imputations on me, which cannot afterwards be investigated and cleared; and in the grave that receives his remains must be intombed my honour. If his death must take place, oh, let it not be until after he has produced his proffered evidence in support of his charge." No such intreaty was made,

no such influence used: the accuser died, and the charges with him. The court of directors at that period felt, he presumed, somewhat on the occasion as he now expressed himself; for it was but a very short time after they could have possibly received an account of these different transactions from the majority of the council at Bengal, of the Rohilla war, of the withholding of the documents relating to it, and the execution of Nundcomar, that they came to the resolution of the 8th of May 1776, which he took the liberty of causing to be read, in order to convince his fellow proprietors, that when he undertook the painful task of opposing so strong and popular a feeling as he saw at that moment existing in the court, he had not done so, without having due authority for pursuing such a course. With the Bengal consultations before them respecting the Rohilla war, and with the open and direct charge of bribery made by Nundcomar against Mr. Hastings, and the account of the tragedy which followed, the court of directors resolved, "that having taken into consideration the state of the Company's affairs in Bengal, they are of opinion that Warren Hastings, Esq. governor-general, and Richard Barwell, Esq. should be removed, and that an humble address be presented to his Majesty for that purpose." They evidently regarded the conduct of Mr. Hastings as highly reprehensible, when they came to a resolution of so strong a nature; a resolution which went to the recal of a man whom they had, a very few years before, in the just admiration of his talents, and after a sober experience of his qualities, placed at the head of the government of Bengal, where, during the early part of his career, he conducted himself so as to receive and to deserve their approbation. The third point to which he would refer was the second Mahratta war, which proved of the utmost importance, both to the interests of India and to those of the Company. That war also produced a resolution of the house of commons and of the court of directors, demanding the recal of Mr. Hastings. But perhaps, in justice and candour to the other side of the question, he ought to state, that the resolution thus come to, by the court of directors, was afterwards over-ruled and expunged by the court of proprietors, in which Mr. Hastings had a great number of very zealous friends. He frankly confessed, that one of the first causes which drew his attention to the character of Mr. Hastings was the remarkable adherence of his friends, who never forsook him under any difficulty.—When at the period of his trial he saw men of the first character coming forward, to aid him in "the moment of his utmost

need;" when, knowing that his expenses were enormous, he saw individuals engaging themselves for their munificent patron, to the whole extent of those fortunes which they had made under his administration; he could not but admire the man who had conciliated so large a portion of esteem. He seldom, if ever, had seen instances of such devotion; and on expressing his admiration of the circumstance, he was told that it had been the constant rule of Mr. Hastings, through life, never to forget a political obligation, and the natural consequence was, that those to whom he had been, as he thought, but grateful, adhered to him in the hour of peril, and under circumstances when such characters as he had sometimes contemplated, would have been deservedly deserted, or have met but with cold support. Mr. Hastings, however, found himself surrounded, sustained, and comforted, by men whom his conduct had endeared him to, and whom he had immutably attached to himself, by generously exerting his influence to promote and serve them. Indeed, he believed so strong was their affection, that few of them but would have gone with him to the scaffold with as much alacrity as marked their self-devotion to him in other respects. He certainly possessed the boundless and universal love of his friends, while he, in return, was too exalted not to be grateful; and, as he had always understood, of too much private virtue, not to be a man of great sensibility. But as he (Mr. Jackson) was dealing only on that day with the public and political character of Mr. Hastings, he should proceed with his subject. The second Mahratta war was not formally taken up by the house of commons, as a distinct charge; but though it was not made one of the articles of impeachment, its circumstances were inquired into, and it occasioned those resolutions of that house and of the court of directors to which he had previously alluded. The first Mahratta war he would pass over in silence: it was commenced in the old spirit, for the purpose of securing an accession of territory, an increase of revenue, and a sum in ready money! Here he would do Mr. Hastings the justice to state, that when he saw the career which the governments of Bombay and Madras were running at that period, he peremptorily ordered the troops to be withdrawn, and those governments to terminate a war which they had shewn themselves utterly unequal to the comprehension or management of. But that he was himself the author of the second Mahratta war, and its consequent calamities, could not be doubted, since it appeared from the minutes that his casting vote was in favour of, and determined the commence-

ment of hostilities. Englishmen, living in a free country, who endeavoured in public as well as private life to act according to the rules of justice and humanity, and who were taught to consider the property of their neighbours as sacred as their own, could not easily understand why such a resolution was adopted. It was, however, determined to march an army of observation, as it was called, through the heart of India, that is, through the territories of divers independent states, with their consent, if obtained, and without it in case of refusal. This was partly, as was argued, to strike the native sovereigns with awe at the greatness of our power and the excellence of our discipline, and partly to intimidate some of the Mahratta states. It was impossible that this army could be marched from one side of India to the other without committing aggressions on different states; and aggressions certainly were committed, though he believed not of an atrocious or sanguinary nature. The governor of Bombay also marched an army of 4,000 men. It was, however, conducted very differently from the Bengal army, to which he had just adverted. They were a weak, a clumsy set of politicians at Bombay. Their cupidity urged them on, but they had not ability to effect their own venal purposes; it was easier to find an excuse for the enterprize than skill to conduct it. They sent forward an army, which was accompanied by their ally and protégé, Ragobah, one of the worst men on earth; a wretch who had destroyed his own nephew, the young peshwa, in the hope of becoming the ruling minister of his successor, and whose atrocities had by this time driven the whole Mahratta empire into confederacy against him and his protectors. Swarms of Mahrattas, like gad-flies, surrounded and hung upon this devoted force, harassing, opposing, and provoking the troops by every means in their power. At length, fire and sword were had recourse to, and a war of extermination was begun; the natives mustered in great strength, attacked this army, and almost entirely cut it to pieces! That these were the circumstances which really occasioned the second Mahratta war, he would appeal to the resolution of the House of Commons, and to their own records.—The immense confederacy which was afterwards formed included within its circle Hyder Ally, the Mahrattas, and various other states, who entered into one vast combination to annihilate the power and obliterate the very name of Englishman in the peninsula. They had too nearly accomplished their design. The government of Madras, like that of Bombay, undertook what was above their capacity.—As had been well remarked, they shewed “they had a desire to do ill, but they had not adroitness sufficient to do ill, well!”

The state of India was now most perilous, and he hastened to do justice to the noble conduct of the Governor-general on this critical occasion. When he saw that our empire was trembling in the balance; when he perceived that a secret confederacy had been formed, to an appalling extent, native and European, to drive us out of India for ever, then it was that he exercised his mighty powers; then it was that he acted with wisdom, promptitude, and decision; then it was that the transcendent talents of Warren Hastings were shewn in their most glorious lustre. (*Hear, hear!*) He admitted this; and while he lamented and deplored that the conduct of the Governor-general had created the confederacy, he acknowledged him to be its destroyer. It was his firmness, his greatness (for he would now use that term), his statesman-like qualities altogether, which dissolved that formidable junction. (*Hear, hear!*) At that period the war had broken out with France, and assistance was expected and afterwards derived from that power, and also from the Dutch; the French had even an ambassador at the court of Hyder Ally. Thus, then, the governor-general had to contend with a combination of all the native powers of India, aided by the French and Dutch: he, however, by calling into action his great abilities, defeated their schemes, rendered abortive their machinations, and enabled him (Mr. J.) so far to join the friends of Mr. Hastings, in hailing him, in that sense, the saviour of India!

He had referred to the resolution of the House of Commons of 1782, which it would be recollected was passed with all these circumstances before them. They well knew that Mr. Dundas, who was rather an admirer of Mr. Hastings, brought forward the resolution for his recall in 1782. In doing so, he allowed that the latter part of his administration had been beneficial to his country; so did Mr. Pitt, and every gentleman who spoke on the question. But with this resolution before them, no one could doubt but that his conduct in entering on the war was viewed as highly culpable. The resolution set forth, “That “Warren Hastings, Esq. governor-general “of Bengal, and William Hornby, Esq. president of the council of Bombay, having “in sundry instances acted in a manner “repugnant to the honour and policy of “this nation, and thereby brought great “calamities on India, and enormous expenses on the East-India Company, it “is the duty of the directors to pursue “legal measures to remove them.” So said the directors, but the proprietors over-ruled their resolution; and having thus opposed the House of Commons and their own executive body, the loss of their most valuable privilege was the consequence. He meant to pass over, without

comment, the proceedings in Aude, the treatment of Cheit Sing, and the oppression and plunder of the Begums, as it was enough for his argument that the directors had highly disapproved of those transactions, and that the House of Commons had agreed to impeach Mr. Hastings on twelve articles out of twenty-one, after long and solemn debate, and by considerable majorities on each article of impeachment. On looking into the proceedings of that period, he observed that the numbers on some of the charges were as follows, viz.—

	Majority.
Benares charge (that it contained matter of impeachment) ..	110 to 79.... 31
Begums	175 to 68.... 107
Nabob of Furruckabad	112 to 50.... 62
Corrupt contracts and salaries	60 to 26.... 34
Fizulla Cawn.....	96 to 37.... 59
Presents.....	165 to 54.... 111
Revenues	71 to 55.... 16
And, for receiving the report upon the whole.....	175 to 89.... 86

He (Mr. Jackson) would avail himself of the sentiments delivered during the debates on those charges, by a man (Mr. Pitt) who never would have lent his countenance to their prosecution, if he had not felt a conscientious assurance that the facts alleged against the Governor-general were well-founded. He was aware that it might, and no doubt but that it would, be answered, that the House of Lords ultimately acquitted Mr. Hastings of these high crimes and misdemeanors. It was very true, and he was ready to give him all the benefit of their decision; a verdict, under any circumstances, was still a verdict. He would, however, observe, that 23 or 25 peers only, met to decide the question, after the country had been for seven years together, agitated by the consideration of the subject. But when he found such large majorities of the Commons, after most earnest debate, determining that those facts of which he had spoken were supported by evidence, and ought to be solemnly investigated; when he looked to the resolutions of the House of Commons, and of the court of directors, deciding that Mr. Hastings ought to be recalled, he conceived that no dispassionate man could condemn him for declaring that Mr. Hastings was not that immaculate character, to whose memory so high an honor as that now proposed ought to be paid. One leading principle of his argument was, that they ought not to wage war thus contumeliously with the House of Commons, by setting up a statue in their court room, in the very teeth of the resolutions and decisions of that honorable house. Mr. Pitt had emphatically de-

clared, in his place, that "he had once thought the language of the prosecutors gross and personal, but when he discovered the nature of the crimes that were alleged, and how strong was the presumptions that the allegations were true, he could not expect that persons who were reciting what they thought acts of treachery, violence, and oppression, and demanding an investigation into those actions, should speak a language different from that which would naturally arise from the contemplation of such actions. He was ready to confess, that whatever might have been his opinion in the origin of the proceedings, he was now fully satisfied that no consideration ought to influence the house, after what had passed, to reject or hesitate upon the vote of impeachment. He professed to be as deeply and as earnestly engaged in this object as any member of the house; and greatly indeed should he accuse himself, if any step adopted by him should prove injurious to their ultimate proceedings. Such was the opinion that he entertained of the importance and criminality of many of the charges, that he could not conceive how the greatest merits that had ever been imputed in this case, could be set in opposition to them as a plea, even against conviction and punishment, much less enquiry and trial." He (Mr. Jackson) had endeavored to shew, that he took a fair and unprejudiced view of the character of Mr. Hastings; that while he blamed much of his conduct, he regarded him, in the latter days of his administration, as the saviour of India, by dissolving that combination of enemies, which however, he was sorry to say, he had by his own conduct created. But he wished to ask, had the Company, who were now called on to erect his statue, been insensible to those services? Had they been cold spectators of his conduct? Had they shut out that generous sympathy which his situation demanded, during the course of his long trial?—a proceeding which he was at least at liberty to deplore, as unjust in its burdensome operation, however just the charge—a proceeding which he hoped would never again be paralleled in this country. He should be sorry indeed if the people of England, if the natives of India, were led to believe that the Company had been insensible to the merits of Mr. Hastings, or passed over his private circumstances unnoticed and unmoved. Feelings of the utmost liberality and generosity had been manifested towards this eminent person. If they looked to the records of the court, it would be found, that in different ways, since Mr. Hastings' returned to this country, the Company had gratuitously advanced to

him a sum little short of £200,000. This was no indifferent admission of the magnitude of his services: it was a proof that they were viewed with a most favorable eye by the proprietors at large. With these feelings, he hoped he should be excused for the freedom he had used in canvassing the administration of Mr. Hastings, and for differing from what might be the popular feeling of the court, when he objected to the erection of a statue, which would imply a uniform series of political merit, while there were in fact so many established drawbacks on his fame. The House of Commons had resolved on his recal and impeachment; the court of directors had censured him, and repeatedly resolved on his recal; no man could believe that those resolutions were agreed to without being supported by fact. He (Mr. Jackson) had no other mode, save that which he should adopt, of placing his opinion on record. He had ventured, solely from a conscientious desire to promote the honor and welfare of this great corporation, to speak his sentiments openly, however they might differ from those entertained by persons whom he was known so much to respect. Let others profess what they owed to this or that government, or to this or that institution, his allegiance was there. Long habit had with him the effect of obligation, and he should ever, according to the best of his judgment, maintain those interests which so great a part of his life had been spent in anxious endeavours to support. Under those impressions he should now propose his amendment, calling on the proprietors to recollect, that if they agreed to it, and negatived the original resolution, they were doing no more than they had done in 1814, when it was proposed, besides granting to Mr. Hastings a sum of £19,000, and a pension of £5000 a-year, to erect his statue in the court-room. Nothing could be more evident, than that a great majority of the directors discountenanced the proposition at that time; some of whom, although the known friends of Mr. Hastings, declared, "we think enough has been done for that gentleman, and we cannot countenance the erection of a statue to his honor." He would not say that the proposition was altogether scouted, but it was notorious, that it did not even go to a division. He had endeavored to draw up his amendment with a fair recognition of the merits of Mr. Hastings, while he strongly deprecated the measure before the court as wholly unwise, and not warranted by the deserts of the party. The learned gentleman then moved, "That all the words after the word 'that,' be omitted, for the purpose of inserting the following:—

"This court regrets that it cannot

"agree with the recommendation of the court of directors to place the statue of the late right hon. Warren Hastings among those statesmen and heroes whose figures adorn their court, because they think it highly impolitic, by so signal a distinction, to hold out to the imitation of future governors a person who, according to the recorded sentiments of the court of directors, involved the Company in unnecessary, bloody, and expensive wars; and was guilty of oppression and wrong towards the native princes, so as to have induced the court to come to a resolution on the 8th of May 1776, and to another on the 22d of October 1782, for recalling the said Warren Hastings from the government of Bengal.

"And that this court would feel it inconsistent with that respect, at all times due from this court towards the House of Commons, to confer an honour which necessarily implies the most distinguished merit, and great and general satisfaction, upon a public servant, against whom that hon. House came, in the year 1782, to a resolution of severe reprobation, advising the directors to recall him from India; and whom, at a subsequent period, the said House, namely, on the 25th of April 1787, did resolve, by a considerable majority, and after great and solemn debate on each separate charge, to impeach before the House of Lords for high crimes and misdemeanours.

"That this court are nevertheless duly sensible of the great merit which belonged to the said Warren Hastings, for having, by his skill and address, dissolved the most dangerous confederacy among the powers of India that ever threatened the British possessions, and by his activity, vigilance, and firmness, baffled the designs and operations of our European enemies, and thereby maintained and preserved the strength and authority of the East-India Company.

"That this court reflect with satisfaction, that they have endeavoured to shew their sense of these services, by having presented to the said Warren Hastings, at different times since his return to this country, upwards of 168,000l. sterling, exclusive of the remission of all engagements for the payment of interest on any part of the same."

Mr. Hume seconded the amendment.

Mr. Impey then rose and said, "When he entered the court, he had very little idea that it would have fallen to his lot to answer such a speech as that which had been just addressed to the proprietors. He had thought that the very wise and cautious manner in which the proposition which came before them from the court of directors was drawn up, would

have precluded any gentleman from entering into such topics as had been recently discussed. They were called on to erect a statue to the memory of Warren Hastings, on account of a great service which was acknowledged on all hands, a service, which even his enemies allowed to be of paramount importance. And what was that service? It was this: that when a combination of all the native powers, assisted by foreign states, was entered into, for the purpose of expelling the very name of Englishman from India, when no assistance could be procured from this country, which was then at war with America; when no efficient force was to be found on the peninsula; when every man in India despaired of the Company's safety; they were called on to vote a statue to Warren Hastings, because in that hour of peril and difficulty he, by his vigour, his sagacity, his promptitude, saved India; because, on his achievements at that period, the great power which the Company now possessed in that country evidently rested; and without which, he need scarcely add, the East-India Company would not now be in existence!—(*Hear, hear!*)—Let the court look for a moment at the general history of Mr. Hastings. He left this country at an early age, wholly unprotected, wholly unprotected! He proceeded to India; and there, by his own unassisted merits, in travelling through all the successive gradations of the service, he at length raised himself to the highest and most honourable situation, that of governor-general. At that time his character was held in the greatest estimation. He was called to this elevated distinction at no very early period of life; and, before he attained it, his talents and integrity had been tried, over and over again. So distinguished was he for his virtues, that it was stated by the minister of England, standing in his place in the House of Commons, that "Warren Hastings was the only flesh and blood in India that was incorrupt!"—(*Hear, hear!*)—Nothing could give a stronger idea of his integrity than the single fact, that, although he was a man wholly unconnected with the great and powerful in this country, he held the government of India from 1772 to 1784, the longest period that the situation of governor-general was ever held by any individual. The whole of that period, too, it should be remembered, was distinguished, or rather disgraced, by such a combination of factions, as perhaps was never known before. He was attacked by, factions in this country; he was attacked by factions in India. In ancient or in modern history, no character could be found against whom so many malicious calumnies were propagated.—The whole world was ransacked for slanders, to destroy his fame and fortune! He

was treated, most unjustly treated, as a man fitter to receive punishment, than to be honoured with reward! Resolutions were passed against him in the House of Commons, because factions existed in that house. Resolutions against him were agreed to by the court of directors, because factions existed in that court! Mr. Hastings, however, conscious of the justice of his cause, stood on his own individual merits. He came to this country; his enemies selected a series of charges against him; those charges were brought to the bar of the house of lords; and, after an investigation which lasted for seven years, he was almost unanimously acquitted of the whole of them, for not more than four peers found him guilty of any one charge: this he considered a triumphant answer to those who censured him. He did not wonder that his learned friend felt the course he had taken to be a most invidious one. He went back to those malignant charges which had been rejected even by the House of Commons; charges brought forward by his professed enemies; who, with all their zeal and all their anxiety, could not prove one of them. Now, after a long lapse of years, his learned friend raked up old and often-refuted calumnies, and misrepresented every thing that had occurred. The whole of the statements he had brought forward constituted a mere tissue of malevolence and falsehood. He meant not to say that his learned friend had invented them, or that he did not believe them; but he would assert, that he had taken them from publications sent abroad for the worst purposes; publications, than which nothing could be more false or infamous. His learned friend had accused Mr. Hastings of entering into wars, not to preserve the East-India Company, but to gather and amass treasure; to procure wealth, by shedding the blood of those who fought their battles. He had charged him also with corrupt practices: for if there were any truth in the accusation of Nundcomar, on which so much stress was laid, he must have been a corrupt man. Now, if there were any individual in that court who thought that Mr. Hastings *did* enter into wars for this sordid purpose, or who believed that he *was* personally corrupt, he would vote against the proposition for erecting his statue: but, if he felt that he did *not* enter into wars for base ends, if he thought that Warren Hastings was *not* a corrupt man, he was bound to vote for the motion. The circumstances of the Rohilla war, and the case of Nundcomar, were so extremely wide of the matter before the court, that he would be justified in not noticing them at all. He might be, however, allowed to say a few words on these two points. The Rohilla war, though

it was brought forward as a charge against Mr. Hastings in the House of Commons, was not, it must be observed, carried up to the House of Lords. How had the Rohillas been represented by his learned friend? In order to excite a prejudice against Mr. Hastings, they were described to be a peaceable, quiet, happy people, living in a sort of paradise, who were sacrificed to forward the purposes of his criminal ambition. What, however, was the fact? Those Rohillas were a fierce Afghan Tartar tribe, who, on the breaking up of the Mogul power, took possession of a country to which they had no right whatsoever. Yet those persons who thus aggressively seized this territory, were depicted as the mildest and most inoffensive of the human race. They were told that Nundcomar was a man of high character and of exalted rank in India; and that for many years he had been prime minister to Meer Jafier. It was true that he was a man of rank; but he spoke before individuals who knew him, and if they would not declare that Nundcomar was perhaps the worst, the most depraved, the most corrupt character in India, he would be content that they should reject the motion for a statue to Mr. Hastings. It was said, that with respect to the legality of his conviction, a difference of opinion prevailed in the supreme court. It was totally false: Sir Robert Chambers never expressed any such opinion, and no execution was ever ordered in India that the judges, both jointly and severally, more decidedly approved of. With respect to suspending the judgment, Mr. Hastings could not do it. He could not prevent the execution. The power to do so, was wielded by other hands. He here begged to state to his learned friend, for his information, if he did not already know it, that the supreme council of Bengal, those even who were opposed in sentiment to Mr. Hastings, ordered the very calumnies and misrepresentations, which were this day uttered against him in that court, to be publicly burned by the common hangman, as libels on the government.—(Hear, hear!) Such were the nature and character of the calumnies levelled at Mr. Hastings. He would willingly have come forward, on this occasion, with a motion similar to that which he made some years ago, for the erection of a statue to Mr. Hastings, but he could not but feel that the proposition came from the hon. Chairman and his hon. colleague, much better than it could have proceeded from any gentleman before the bar. The firm conviction of his mind was, that the honour and character of Mr. Hastings were inseparably connected with the honour and character of the East-India Company, and that they must go down together, glorious or infamous,

to the latest posterity. He hardly felt it necessary to repeat any thing that he had heretofore addressed to the court on the character of Mr. Hastings; but he should be offering a great degree of violence to his own feelings, if he did not make a few observations on so solemn an occasion; he hoped, therefore, the court would give him leave to occupy a little more of their time, in speaking of a character so deservedly dear to the East-India Company, a character whose fame was so intimately connected with their own.—(Hear, hear!) An allusion had been made by his learned friend to a letter, written by a minister of state, on the subject of the recal of Mr. Hastings. That minister, who was a man of no mean talent, had ultimately done justice to the merits of Mr. Hastings, beneath whose bust he placed the inscription "*Ingrata Patria*;" thereby instituting a comparison between Mr. Hastings and the great Scipio, who having vanquished the Carthaginians, and freed his country from its dire foe, Hannibal, was on his return subjected to a public prosecution by his ungrateful fellow citizens. Scipio declined to submit to such a proceeding. He went into exile, leaving an indelible stain on the character of his country. Mr. Hastings took a different course. He met the storm, and by meeting it, rose with superior lustre above its violence.—(Hear, hear!) Hitherto, the stain of ingratitude had not been fixed on the East-India Company; but if the motion of his learned friend were agreed to, that stain would rest on them for ever.—(Hear, hear!) It could never be forgotten, that in the very crisis of Mr. Hastings' fate, when he was on the point of sinking beneath his enemies, when a resolution of the House of Commons and a resolution of the court of directors were directed against him, in that eventful moment, it never could be forgotten, the court of proprietors stood in the breach, and over-ruled the proceeding of the executive body, by a resolution which his learned friend had not thought proper to have read. By that resolution, an opportunity was given him to complete his great plans, and to leave India in that flourishing situation in which it was allowed by all he had left it. He meant to make no observations on those with whom Mr. Hastings had to contend. Most, if not all of those who opposed him, were gone from this evanescent state; they were gone before that tribunal, where their motives and actions would be justly appreciated. If any spark of hostility against him still remained in any human breast, he had hoped that the sense of our common mortality would not have suffered it to blaze forth on this occasion! It had been said by a writer of antiquity, that the

evil passions which generally pursued great men during their lives, died with them. If this were true amongst heathens, what a libel must it be on those who were bred in the Christian religion, if their principles of moral action were not more pure than those which were encouraged in heathen times!—(*Hear, hear!*) He would not draw any comparison between the achievements of Mr. Hastings and those of other persons, for the purpose of exalting his character at their expense. To use the words of a great poet:

“I need not raise
Trophie to him on other men's dispraise!”

He freely admitted the eminent services of Lord Clive, of the Marquis Wellesley, and of the Marquis Cornwallis. He gave them all the praise that was due for the benefits derived from those services by the Company; at the same time, he could not but be surprised that his learned friend, who professed to be so steadfast and sincere an admirer of Marquis Wellesley, should direct observations against Mr. Hastings, which were, in a ten-fold degree, more applicable to the noble Marquis. One other observation he wished to make, with respect to the services of Mr. Hastings, which the honourable chairman had briefly touched on in his opening speech: it was this—that, of all the great and illustrious men who had been employed by the East India Company, Warren Hastings was, with the exception only of Lord Clive, the most exclusively and entirely their own. He was literally brought up in their service; to their interest he dedicated the whole of his life; and when borne down with age and infirmity, he came forward to bear testimony in their favour before the legislature. (*Hear, hear!*) None who were present at that affecting scene could ever forget it, when, bending beneath the weight of age, he displayed a firmness of mind, a clearness of intellect, a zeal for the honour of the Company, a love for the people of India, which, combined, almost led them to imagine that he had entered into that higher state of existence to which he was fast advancing. (*Hear, hear!*) In considering his administration of Indian affairs, it was necessary to look at it in two points of view; one, the external relations of the government of India; the other the government of those provinces which were under his immediate control. The court of directors had most wisely confined their motion to the former branch: they had called on the proprietors to erect a statue to him for his defence of India against external enemies. It had been already most truly stated, that when he was placed at the head of the Indian administration, in 1772, he found that a long series of previous misgovernment had brought the Company's affairs to a very low ebb; but, by the ap-

plication of his great abilities, he placed British India in a situation which enabled the Company to meet and overcome the storm that soon after rose against them, and threatened their destruction. Many gentlemen could still remember the universal despair that prevailed at the time, in consequence of the unprotected state of India; when the distress occasioned by the American war rendered assistance from this country hopeless; and when all the powers of India combined with the powers of Europe, jealous of our wealth and prosperity, to expel us from India for ever. They could recollect when Hyder Aly was at the gates of Madras, and not a soldier or a sepoy to oppose him. But the great talents of Mr. Hastings retrieved and preserved all. He dispatched armies to Madras and Bombay across the continent, and, before he left India, he reduced both the Mahommedan and Hindoo powers to agree to equitable terms of peace; and when he quitted India, it should not be forgotten that he left it with that, the value of which at the present day they well knew how to estimate—he left India possessed of the large surplus revenue of £2,000,000 sterling a year. With respect to his mode of internal government, his policy always was, to examine the principles, institutions, manners, customs, nay even the prejudices of the natives; and he endeavoured, by assimilation, to introduce good government into the country, without violating the customs of the inhabitants, or destroying those elements of society which they had long established. Since his time a new system had been acted on. An attempt had been made to introduce principles and institutions wholly and exclusively British into the country, and to confer on the people the blessings of regular government, in a manner more consonant to our notions on the subject than to theirs. Whether this system would answer the views of those who introduced it, time alone could shew; but Mr. Hastings lived long enough to know that many eminent Indian statesmen looked upon the plan as decidedly wrong, and regretted that his principles had ever been departed from. The scheme of policy which he pursued, procured him, in an extraordinary degree, the affections of the people of India, in a degree that never was known before, nor had been ever known since; and that affection was most warmly returned by him. If a proof of the truth of the first position were necessary, it would be found in the testimony of the natives of India, spontaneously given in his favour when he was on his trial. If a proof of the second position were required, they had only to look to the testimony given by Mr. Hastings at the bar of the House of

Commons in 1813. Fortunately he came to this country, and lived long enough in it, to have his character well understood and appreciated here. Had he died soon after his arrival in England, his character would have probably been viewed in the fictitious colours with which oratorical falsehood and malevolence had bedaubed it. He would perhaps have been considered as a fierce and sanguinary tyrant; the oppressor and destroyer, instead of the preserver and benefactor of India! But, living as he did in this country, after the storm of calumny had blown over, a full opportunity was afforded for the development and knowledge of his real character. The mildness of his temper, the urbanity of his manners, his domestic virtues, his warm affection to his friends, his placability to his enemies, his unaffected humility and plety, created for him an almost universal veneration.—(*Hear, hear!*) It was most delightful to his friends to see all ranks of life, from the prince to the peer downwards, vying with each other in honouring and admiring him. It was not the contemplation of any honours which they could offer him, nor of any gifts they could confer on him, nor of any statue they could erect to him, that formed the true consolation of his declining life. But it was the reflection, that his honour had been established, and that his actions were recognized as having been eminently serviceable to his country. Few men of his cotemporaries would fill so large a portion in the pages of history, or in the veneration of posterity, as Mr. Hastings; and he was sure his friends who loved him, would join in applying to him the celebrated lines of Shakspeare:

—"Take him for all in all,
"We shall not look upon his like again."
—(*Loud cheering.*)

Mr. R. Jackson, in explanation, begged to know whether his learned friend meant to say that Sir Robert Chambers had not expressed his doubts respecting the application of the act of Geo. II. to the case of Nundcomar? Did not that learned person repeatedly intimate his dissent from the other judges, who thought that the act made forgery committed in India a capital offence, as it did in England, where previously to its passing it was considered only as a misdemeanor. If he were wrong in this statement, he erred with some of the most eminent men of that day, and particularly with the late Lord Minto, who had expressly so stated it, in the course of his accusation of the judge who tried the cause.

Mr. Impey replied, that his learned friend was totally wrong in supposing that Sir R. Chambers had expressed any such doubt. As to the point of law applying to Nundcomar's case, there could be no doubt about it, for an Hindoo had

been executed under it in 1766, and Nundcomar's case occurred, as he believed, in 1774.

Mr. Hume was of opinion, that on the present occasion it was incumbent upon the court of proprietors to take into their consideration the whole public conduct of Warren Hastings. One half of the resolution now proposed by the court of directors expressly abstained from touching upon the general conduct of that individual; it was in fact confined to his services, with reference to a particular act. He would shew, that in the amendment proposed by his learned friend Mr. Jackson, there was the same express approbation of the able conduct pursued by Mr. Hastings at the particular crisis to which allusion was made in the original motion, and which was said to have preserved British India from the native confederacy then formed against it. That service was fully admitted in parliament. The amendment drew an important and necessary distinction between two periods of Mr. Hastings' administration. His unexampled exertions on the occasion alluded to had been fully appreciated. But was that one act, great as it unquestionably was, to be held up as such an achievement, as entitled the author of it to the honor of a statue, to convey to posterity the greatness of his career? And the more particularly, when, if all the documents respecting his administration were produced, it would be found, on the whole, that they contained three times more censure than approbation. Were they now to admit, as it had been asserted by some gentlemen, almost with unanimity, a motion which they dismissed without a division, nay, *scouted* in 1814? He knew he was discharging an unpopular duty in that court; he knew too well that the feelings of the gentlemen whom he now addressed were not in unison with his own. He hoped at the same time, that while he gave credit to them for the rectitude of their intentions, they would allow him to require at their hands similar sincerity for the conscientious motive which influenced him on the present occasion. He earnestly called upon them to look to the effect of such a motion as this, on the future character and conduct of their governors. They ought to remember that they were not now acting in a factious period (as stated by some gentlemen to have been the case), but that they were acting with the page of history open before them, containing the whole conduct of the individual who was the object of their vote. Thirty-seven years had now elapsed since the occurrences took place in which he had been a prime mover; they could now be surveyed with deliberation and calmness, uninfluenced by the heats of faction. He should be

glad if, from this retrospect, he could conscientiously concur in placing the statue of Warren Hastings in that room on the same principle which placed former statues around it. He would ask, whose statues filled the niches above their heads, and for what purposes had they been placed there by the unanimous vote of that court? The words of the vote which recorded their erection declared, they were set up, "that their eminent and signal services" to the Company may ever be held in remembrance." The three in the centre were erected in 1760, to Vice-Admiral Pocock, Colonels Clive and Lawrence; they were erected for distinguished services certainly, but for military exertions alone. They had erected only one statue to the Marquis Cornwallis as a statesman, for the whole of his conduct; and if the present motion was agreed to, it would be the second statue to an individual as such. If the proposal to erect a statue to Lord Clive had been made after the whole of his services in India, it is doubtful if they would have done, on a review of his whole conduct, what they did above in 1768 for his distinguished military conduct. They must, therefore, see how important it was to consider the consequences of the step they were about to take, and the necessity of reviewing the whole of Mr. Hastings' services, before they decided upon paying him this great honor. The next statue in their room after those which he had enumerated, was that of Sir Eyre Coote, which was placed there the 28th of April 1784, and the record respecting it merely stated, that the court resolved upon its erection, without the accompaniment, as in the other cases, of the reasons for taking the step. The last and remaining statue was to a great man: it was that erected in January 1793, to the late Marquis Cornwallis, as a distinguished statesman, for the whole of his conduct. The resolution of the general court of the 23d Jan. 1793, "*unanimously resolved*, that it is the opinion of the court that the most noble Marquis Cornwallis, knight of the most noble order of the garter, has displayed uncommon zeal and ability in the management of the affairs of the East-India Company *during the term* he has been governor-general and commander-in-chief in India, and particularly in conducting the late war with Tippoo Sultan, and also in concluding the late treaty of peace with Tippoo, in terms so honorable and advantageous to the Company and their allies. And they further *unanimously resolved*, "That his statue be placed in this court room, that his great services may be ever had in remembrance." The proposed statue to Mr. Hastings was not for such general conduct, it was merely

for a special act, and he could never consent to such a tribute, unless where the object of it could properly be held out as an example for the imitation of future generations. Entertaining these opinions, it was his intention to have proposed an amendment to the motion, if his learned friend had not precluded him by that, which he had proposed. But the arguments with which his learned friend supported his amendment, had been attempted to be got rid of, with the sweeping assertion, that they were fictitious calumnies. If they were all deserving such an appellation, then the whole proceedings of a select and of a secret committee of the House of Commons, and the proceedings of the House of Commons of the 28th May 1782, with all their subsequent transactions, were equally deserving this appellation: mere dreams and fictions of my learned friend!! Could any person, even the most prejudiced, hear without conviction of the hollowness of their cause, such an answer to my learned friend's able and manly statement of facts. If they had dared to review the whole conduct, why confine the motion to the last act of Warren Hastings' administration? The only reason he could imagine was, that they could not venture, even in the court of directors, to propose to erect a statue to commemorate his whole public life, conscious that it would not bear examination. The learned gentleman, too, had stated that the House of Lords acquitted Mr. Hastings with so triumphant a majority, that those who voted against him, only amounted, upon any one charge, to the paltry number of four. This was not a fair statement of fact, for the numbers that held a contrary opinion to the majority, amounted to one-fourth or one-fifth of the whole house. The fact was this, that on some of the charges twenty-three peers voted to acquit, and six voted Mr. Hastings as guilty. Was this the triumphant majority, if more than one-fourth of the House of Lords declared him guilty of high crimes and misdemeanours? The numbers on the other votes were less; but of fifteen charges on which he was impeached by the House of Commons, he was only acquitted of two of them unanimously. It is but fair to consider, therefore, that one-fourth or one-fifth of the *whole peers* of Great Britain considered him guilty, for in that proportion those who voted did declare. He knew that he was acquitted in the eye of the law; but yet on a calm perusal of the mass of facts alleged against him, now that the engines of faction were no longer at work to give a false colour to his actions, it was impossible, he thought, that an impartial man could look at the whole conduct of Mr. Hastings, and at the court which tried him, without saying that it

would have been well, if, in many parts, it could be recorded differently in the impartial page of history. He meant nothing disrespectful to the House of Peers, but after carefully reading of their proceedings, every gentleman would, he was confident, concur in hoping that they should never see such a mockery of a trial again : such an expensive farce and tedious course of examining into the justice of any case. But let it not be supposed that the whole, or one-tenth of the blame of that unexampled delay can be cast upon those who conducted the prosecution, for it must never be forgotten that it was not they, but the counsel for the defendant, who started all the difficulties, and caused a great deal of time to be occupied in taking technical objections to the admissibility of particular evidence. As an example, the minutes of consultation of the president and council of Bengal, although signed by Mr. Hastings himself, and sent officially to the directors, were refused by the House of Lords as evidence. The testimony of Mr. Francis was refused ; a letter written by Muny Begum, containing the charges and proofs, were refused : in short, captious objections of all kinds were taken, which led to the utmost delay. He declared, therefore, that from a review, free from all passion or personal feeling, he was one of those who thought that Mr. Hastings was not so fully and freely acquitted as the learned gentleman, Mr. Impey, seemed to think. If ever the court were engaged in an act which called upon them to pause, this was he thought that act. It was not a tissue of falsehoods and calumnies that had been heaped upon parts of Mr. Hastings' character ; if the fact were so, how lamentably deficient successive directors must have been, who from year to year, throughout a long course of time, left on their records such resolutions as had been read, condemning the conduct of this individual. They must also bear in mind, that the resolution of the House of Commons which had been referred to, was adopted by a committee that sat two years in an enquiry upon the subject. If Mr. Hastings had been guilty of no other objectionable act than that of assisting, for a sum of money, Sujah Dowlah to ravage and lay waste the country and extirpate the Rohillas, he should oppose the motion. It had been said by the learned gentleman, that the Rohillas were invaders and strangers in India, and that Mr. Hastings assisted to destroy them : but when this court recollected that the Rohillas were in possession and settled in Rohilkund, before the East-India Company had a field of land there, he thought the directors would not thank the learned gentleman for that observation, as a defence of Mr. Hastings' conduct in that most

atrocious and abominable transaction. How could they, after such an act, and the plunder of Cheyt Sing, couple the name of Mr. Hastings with that unsullied honour and virtue which they wished the Company to bear in India, and which alone, they ought to hold up for an example, by such a mark of admiration and respect as the present motion was calculated to convey ? He protested against such a step ; nor did he believe that there had been so much faction raised against Mr. Hastings, or so much calumny levelled at his conduct, as was believed by many. He was satisfied there were too good grounds for many of the charges against him. What inducement, he would ask, did there exist at that period to arm against that person such characters as were arrayed against him ? What reason had they to raise an outcry against him, unless they felt that they had strong grounds to support the charges they meant to adduce ? Many were perhaps too strongly framed ; many also it was known were, through a want of technical form, not persevered in ; but he saw nothing in the whole proceedings which could justify any man in saying that all the charges were a tissue of calumnies and falsehoods, got up by factions in India, acting upon factions at home. He concurred in the eulogy bestowed upon one act of Mr. Hastings' life (the dissolution of the Mahratta confederacy), but that did not warrant the erection of a statue to his memory. He had, in fact, in a great measure raised the danger which he was able, at a great expense to the Company, to put down. They ought to be prepared to shew both parliament and the country, full reasons for the course they were about to take, and to prove that the whole tenor of Mr. Hastings' conduct deserved the distinction they were about to confer upon it. Mr. Pitt at the time of the impeachment distinctly stated, that from a review of the whole allegations, and circumstances attending them, he could not, as a lover of justice and a man of honour, hold up Mr. Hastings' conduct as justifiable. He knew that he was speaking against the feelings of a majority in that court ; but nevertheless his sense of duty compelled him to take the course he had done ; and he again entreated them to pause before they erected a statue to Mr. Hastings, as a man whose conduct in public life was worthy of being held out to future governors of India as irreproachable, and who presented an example fit for general imitation.

Mr. Impey begged permission to add, on the authority of a gentleman who sat near him (Mr. Edmonstone), who was wholly unconnected with Mr. Hastings, and who was in India when the news of his acquittal arrived there, that never

had such expressions of joy been heard throughout all ranks of the natives in India, as when that news arrived; the acclamations were general throughout the whole Bengal provinces.

Mr. *E. Baber* said, he did not think the hon. gentleman (Mr. Hume) had put a fair construction on the numbers which decided upon the charges brought against Mr. Hastings. The principal reason why the numbers were as the hon. gentleman had stated was no less than this, and it threw a light upon the unexampled trial of the individual, that during the seven years while it lasted, *three-fourths* of his judges (the peers) had died. The numbers, therefore, as put by the hon. gentleman, were only calculated to mislead. It was said that Mr. Hastings had displayed none of the qualities of a statesman: could that man be said to shew none of these qualities, who was called to preside over a government charged with a heavy debt, and who left it not only unincumbered with any such pressure, but with a surplus revenue of £2,000,000 a year, though he found it with a debt to that amount? Was it nothing to revive the exhausted resources of a country, to controul them, to regulate them under the most trying circumstances, to improve the whole face of the country, to abolish an oppressive collection of taxes, and, at the same time, while he relieved the people, to double the revenue of the country? It was long contemplated to raise a revenue from salt and opium, and from these sources Mr. Hastings created new funds for the exigencies of the government. Were these acts, then, no proofs of the faculties of a statesman? Again, when a formidable array of the native powers was combined against him, and actually threatened the existence of British India, did not Mr. Hastings, by the vigour and wisdom of his councils under most alarming circumstances, preserve the Indian empire, and repel the formidable confederacy? Bengal was in fact the only part of the British dominions which was not invaded and plundered by the forces of an enemy. If any man then deserved a statue, it was such a man; who, as a public servant, scorned to consider his private interests, while he devoted the whole energies of his powerful mind to the promotion of the public good, and the maintenance of the paramount interests of that corporation. If ever a man had sacrificed his private interest to the public good, that individual was Warren Hastings: who, when he might have amassed immense wealth, even in the midst of duties the most arduous, preferred remaining in honourable poverty.

Mr. *Robinson* (the deputy Chairman) commenced by stating, that he should not detain the court long while replying to

some of the observations which had been made, in opposition to the motion he had the honour of seconding; it was the easier to do this, because the substance of the arguments and reasoning of the learned gentleman who moved the amendment could nearly be reduced to two points.

The first of his objections rested upon three acts in which Mr. Hastings had been engaged; and though the House of Commons found no criminality in them, yet certain resolutions had been adopted at former periods by the then court of directors, condemning those acts.

And the other objection to the proposed measure was, because Mr. Hastings had been arraigned on twenty charges, and his impeachment thereon voted by the House of Commons.

With reference to the first point, the opinions of former courts (whose resolutions had been read), all he should urge was this, that he protested against being bound by the opinions of former directors; he totally disclaimed being so fettered: by his own acts alone would he be judged, by them alone must he stand or fall in the opinion of that court. It was his intention, and he had no hesitation in avowing it, to pay an act of the greatest and most serious homage to the character of Mr. Hastings. He felt himself perfectly justified in offering that homage: not, as the hon. seconder of the amendment seemed to think, for one act of that great man's life; he meant to embrace the whole tenor of his administration in India; he considered it included in the present resolution, which was meant "as a last testimony of his long and successful services." These terms he considered, not as applicable to any single act, but as embracing the whole of Mr. Hastings' conduct. As to the other reason assigned by the learned mover of the amendment for opposing the resolution, namely, the impeachment upon twenty charges, he (Mr. Robinson) had only this reply to make: if the learned mover thought it enough to presume, that because Mr. Hastings had been impeached of twenty acts by the House of Commons, that therefore he must have been guilty of them, he (Mr. Robinson) in his turn thought it quite sufficient to state, that as the House of Lords acquitted him upon every one of the charges, he concluded him to be innocent.

Then it was urged, if a statue should be voted to Mr. Hastings, the Company would offer thereby an affront to the House of Commons. When the learned gentleman offered this as an objection, was he not aware that a short time ago the fountain from which honour flows in this country had thought fit to confer upon Mr. Hastings one of the proudest

honours he could have enjoyed? * Was his Royal Highness the Prince Regent, in conferring this great distinction, offering an affront to the House of Commons? or was he distinguishing this high character in a different manner only to that which was now proposed by themselves. Before the idea was thrown out by the learned proprietor, no person could ever have conceived that such marks of homage and regard for Mr. Hastings could by any possibility have been construed into an affront to the House of Commons.

It has been said, too, that a British officer had intreated Mr. Hastings to remonstrate with Sujah Dowlah against the cruelties he perpetrated during the Rohilla war. He (the Deputy Chairman) admitted and regretted the perpetration of such cruelties: but he was sure they were as foreign to the wish, as they were remote from the knowledge of Mr. Hastings, for *he knew him* to be a man averse to every species of cruelty. The misfortune in that particular case was, that Mr. Hastings was at too great a distance from the spot to have prevented, or even checked, those excesses with which he has been unwarrantably charged; it was the highest injustice to consider him culpable for acts, over which he could not have had any controul. Another complaint, equally unfounded was, that he had not prevented, or suspended the execution of Nund-comar: the truth is, he had no more to do with that person's execution than any proprietor then in the court. The act was judicial; the judges might, if they pleased, have suspended the sentence, if sufficient ground had been offered for such a course. But why was Mr. Hastings to be arraigned for not impeding the track of justice, when none of the authorities presiding at the trial transmitted a recommendation to that effect? Not only was no such recommendation offered, but, on the contrary, when attempts were made to induce the jury to sign a petition for mercy, the jury declined all interference; if then the jury declined interference, if the judges declined recommendation, could it be incumbent upon the Governor-general? could he be justified, in opposition to the parties composing the tribunal, and who were alone competent to speak advisedly of the fact which had been laid before them, to intercede for the pardon of the criminal, or even to aim at suspending the judgment?

He confessed himself equally surprised, to hear the event of the second Mahratta War attributed to the irritation caused throughout India, by the march of the detachment of troops under Colonels Lisle and Goddard across the Peninsula. That war had its origin in measures emanat-

ing from the acts of the Bombay government, and unsanctioned by Mr. Hastings. The timely and critical arrival of the Bengal detachment could alone have repaired the evils of the defeat of the Bombay army. He would put it to the good sense of the court, whether such a detachment, so small in number as that which moved from the upper provinces of Bengal to Bombay, could have caused any such inflammation.

[Mr. Jackson here said, "and the march of the Bombay army too."]

But Mr. Hastings had nothing to do with that army from Bombay. The Bengal troops were alone acting under his orders. If the strictest regularity in its discipline, if an absence from all aggression could create an enemy, that army might have excited one: it was impossible they could so have acted, as to furnish grounds of resentment. Their numbers were so small it was impossible they could have traversed many miles, much less so extensive a track, under a system of warfare and plunder, without being entirely overpowered, by those superior numbers whom it is now supposed they must have offended. The fact is, no such irritation was raised: the army alluded to marched across the country, unmolested and unmolesting, to its destination, and this was effected under the able negotiations of Mr. Hastings assisted by Mr. Elliot. The learned mover of the amendment has, however, admitted that no praise can be too great for the early part of Mr. Hastings' service; and his most important and invaluable act, the last of his achievements in India, the dissolution of the Mahratta confederacy. How did it happen that his intermediate services were not so fortunate? The true and the only reason was, that Mr. Hastings experienced a determined opposition at those periods; he was trammelled in his efforts; he was thwarted in the prosecution of his objects. Those who opposed themselves to Mr. Hastings were now beyond the sphere of human tribunals, and that generous forbearance which morality imposes, ought to be exercised towards them. Though willing and anxious to pay this respect, yet he was bound to state, that the first acts of the council, composed of gentlemen in opposition to the measures of Mr. Hastings, were actually and hastily adopted, before they could have had sufficient time to reflect upon the great scale of events, or receive real and well-founded information of the whole state of affairs in that country. It was impossible, therefore, to suppose they had formed their opinions and decided upon good and solid grounds, or have fully reflected upon the measures under their consideration.

With regard to his opposition, at a former period, to a motion like the pre-

* Mr. Hastings was made a Privy Counsellor.

sent, explanation he conceived was not at all difficult. The motion for a statue was *then* coupled with a proposition for an augmented scale of pension, and the payment of a large arrear. He conceived at that time, the directors, in continuing the pension which Mr. Hastings had previously enjoyed, had gone as far as the occasion called for, and as far as was necessary for the convenience and comfort of Mr. Hastings. Nor did he *then* think, that the erection of a statue, conjointly with the pecuniary proposition which accompanied it, either well timed or judiciously blended together. Circumstances were now changed, Mr. Hastings was no more. This was the last testimony it was in their power to pay, as able, as zealous, as disinterested, and as efficient a servant as ever presided over the administration of the affairs of India. With this conviction, it remained for him only to say that he most cordially concurred in the motion which he already had the honour of seconding.

Mr. Grant. "I would request the indulgence of the court for a few minutes on this very interesting question. When I entered the India House to-day, I had not the least idea that any such proceeding would be followed as has been adopted here by some honourable proprietors. I thought it entirely probable that in the line which, after due consideration, my sense of duty prescribed to me in this affair, I should have to act alone. On that account, I revolved with more anxiety what it might be necessary for me to say, determining to say no more; and in so particular a case, I did what is not my usual practice, I threw upon paper the few ideas I had thus premeditated. In the speech of the hon. and learned member, who moved the amendment, I heard some sentiments which so much coincided with those I myself entertained, that afraid lest I should be suspected of borrowing them, I shall beg leave to do what I have never done before, read to the court a short paper, the same which I had written. I am the more inclined to follow this course, because I have heard much said on all sides to-day, with which I can by no means agree, and to avoid entering into any of those topics, I am willing to confine myself to what I have already prepared. One thing more I am induced to premise, which I should certainly not have thought of offering, but for something said in the course of debate, which seems to render it expedient. I have for five and twenty years, in which I have had the honour of a seat behind this bar, always thought it my duty when I stated my opinions at all, to lay them fairly before my constituents. In that long period, it has not unfrequently happened that I have had to take a part

which was not popular in its day. But following what I conceived to be the dictates of duty, I took that course which only could give satisfaction to my own mind, and I trust also, that I have appeared to my constituents to maintain a course of consistency.

Then Mr. Grant read the paper to which he had alluded.

"Mr. Chairman: With the opinions I have long held respecting various measures of the administration of Mr. Hastings, the motion, Sir, which you have now proposed, imposes a painful task upon me. It is painful to differ from many gentlemen with whom I live in friendship; painful to stand perhaps singular on such an occasion as this; but I feel that I have no fair alternative. I have not sought this occasion. The question comes to me at my post. I cannot deny my sentiments, I cannot abandon that post, for I hold it not allowable to a public functionary to desert his place, and shrink from the performance of what he deems his duty, because it may be an unpopular one.

"Although my opinion of many of Mr. Hastings' measures have been long settled, I have never been forward to express it; never have, I believe, expressed it in public till now. I never had any personal difference with that gentleman, nor feeling of personal hostility towards him. I am far from meaning to deny his talents, his good qualities, or his services in various instances; and now that he is no more, I would rather not allude to his name, unless conformably to the old adage, of saying nothing that is unfavourable of the dead. But here I am not left an option. The measure now proposed, is to decree by a public act, the erection of a statue in honour of Mr. Hastings. Thus to decree a statue in honour of any person, goes to hold up that person to the admiration of the world, and to transmit a solemn testimony of his pre-eminent excellence to all future ages. On the present occasion the terms in which this act is proposed, "long zealous and successful services," will sanction at least the more prominent measures of a long administration, and to be truly honourable to Mr. Hastings, must be supposed to sanction also as wise and just, the principles, political and moral, involved in them.

"In such a testimony and such an act, I feel myself utterly unable to join, and as silence might imply concurrence, I am obliged expressly to declare my dissent.

"It will not, I hope, be imagined, that I mean to engage the attention of the court, by going into any discussion of transactions, often debated and long since past. I could assign the reasons on which my opinions are founded, reasons which are

to me very convincing; but the truth or error of those opinions, a thing chiefly of consequence to myself, is not the question to which I wish now to speak. The point is, that honestly holding such opinions, I must avow them and be guided by them in my present vote."

Mr. *Gahagan* rose amidst loud cries of question, and said, that before the opinions which the learned mover of the amendment entertained of the attributes of a great statesman could be realized, there must be a regeneration of human nature. What public man could stand such a test as that proposed for his ordeal by the learned gentleman? Where was the individual who had spent a long life in the public service, in whose conduct some weak part might not be sought out, to detract from his general merit? No man, however pure, according to the standard of general observation, could escape being impugned, if this were the manner in which his conduct was to be estimated. It was fortunate, however, for the sake of Mr. Hastings, and indeed equally so, for the characters of any of the great men who had figured in past times, that neither of the gentlemen who had proposed and seconded the amendment was likely to become an historian. If they were destined to assume that province, they would not, according to his judgment, be very likely to perform their task with the candour, which ought to mark such an office. It had been truly said, that Mr. Hastings never appeared to greater advantage than when he was brought to the bar of the House of Commons to give evidence upon the renewal of their charter. What a compliment was it to pay to that man who had been arraigned by a House of Commons for every crime which could blacken the catalogue of human guilt, that another House of Commons, more justly appreciating his merit, should, after hearing his enlightened evidence, salute him with the loud testimony of their warm approbation; and, with one accord, rise from their seats, and remain standing as he withdrew from the bar. Was this no proof of the stores of his mind? was it no

admission of its comprehensive and statesmanlike qualities, that he should have been selected to give Parliament the best information respecting the mode of administering the future government of India? Was there no statue erected to a statesman whose life could not stand the test required by the learned proprietor? Had he never seen Mr. Pitt's statue in Westminster Abbey? And could he not lay his hand upon some parts of that great man's career from which he would withhold his approbation?

The *Chairman* then put the question, "That the words proposed to be left out, stand part of the question," which was carried in the affirmative. The main question, for agreeing to the resolution of the court of directors, was then put, and also carried in the affirmative, four hands only being held up against it.

VOLUNTEER CORPS.

The *Chairman* stated, that the court was also met for the purpose of taking into consideration an unanimous resolution of the court of directors, recommending the court of proprietors to authorise the court of directors to offer to his Majesty, to raise and maintain, at the expense of the Company, a corps of volunteer infantry, from amongst the persons in the Company's employ; and if his Majesty shall accept such offer, then to authorise the court of directors to defray the expense of the corps so to be raised, out of the funds of the Company; and if necessary, to apply for an act of parliament to sanction the application of a sufficient part thereof for the purpose.

Mr. *S. Dixon* suggested, that at so late an hour, it would be very inconvenient to proceed with the consideration of the question. He therefore hoped it would be postponed.

The suggestion was adopted, and the court adjourned.

Erratum in our report of the debate on Sir G. H. Barlow's pension, see last number, page 159, for *Rao Reddy Mow*, read *Roya Reddie Row*.

ASIATIC INTELLIGENCE.

It is a theme for congratulation amongst the friends of persecuted virtue, the lovers of reparative justice, and the admirers of the first class of talent, which, when successfully exerted in the service of the country, constitutes the highest greatness, that whilst the character of Warren Hastings has been vindicated at home, and a

statue voted to his memory by the East India Company, a similar tribute to his merits and his services has been simultaneously paid by the inhabitants of Calcutta, by persons living in the very country where those services were performed, and amidst the very people who are the best judges of his merits; for they were

witnesses of them, and feel, as they acknowledge, their beneficial effects at this hour, and cherish the hope, that these effects will be experienced by their children's children.

Under "Calcutta," will be found a report of the proceedings at this meeting. It ought to be remarked, as placing the impulse of the parties above any ordinary bias, that there is not in the assembly, and scarcely in the town, ten persons who were in India during the period of Mr. Hastings's administration; so that their unanimous vote is a tribute of public veneration, unmixed with any private motive. If posthumous honour can be a compensation for the wrongs which calumny causes, which are many more than it can inflict, for the first false impression extends to the well disposed, two permanent memorials of rewarding plaudits are about to convey the late satisfaction.

INDIA—BRITISH TERRITORY.

Political—Official.

*Fort William, General Department,
August 20, 1819.*

The Honourable the Court of Directors having, in their recent dispatches, noticed with expressions of displeasure the conduct of certain individuals, residing under the protection of a subordinate presidency, in having been concerned in the management of some commercial speculations, illegally prosecuted by a civil servant of the Company; the Governor-general in council obeys the commands of the Honourable Court, in announcing the penalty, which will attach to such associations in future.

Although the Governor-general in council entertains a confident persuasion, that the instances of such inconsiderate encouragement of unlawful speculations must be of the most rare occurrence, his Excellency in council is nevertheless under the necessity of signifying to the public, that the protection of the Honourable Company will be withdrawn from any person who may henceforth be discovered to have aided and abetted commercial transactions on the part of the civil servants not employed in the commercial department, or otherwise authorized to trade.

OPERATIONS OF THE ARMY.

Official—published in India.

SIEGE OF ASSEERGHUR.

As they came to hand, we have given several documents describing successive stages of this important siege, which, for the plan of approach, the combinations

Asiatic Journ.—No. 51.

in the attack, and the services of the corps engaged, is a model for the military student.—(See vol. VIII. pp. 294, 487, 598, 600; and the present volume, p. 59.) But the previous official accounts, dispatched at the close of the operations, distinguish no individuals in the general acknowledgments to the besieging army; a debt of honour to the divisions of Gen. Doveton and Malcolm, which the camp orders annexed discharge.

Copies of Orders transmitted to Capt. Stewart for the notice of his Exc. the Most Noble the Governor-General.

Head-quarters, Hyderabad Subsidiary Force.—Orders by Brig-gen. Doveton, C. B. Camp Asseerghur, 9th April, 1819.

The garrison of the fortress of Asseer will consist of 5 battalion companies of H. M. 67th foot, under a field officer, and the 2d battalion 13th M. N. I.

Lieut-col. Mac Dowell is appointed to the command, and subject to the approval and confirmation of superior authority.

The Brig-gen. congratulates the army on the termination of their uncommon exertions and fatigues by the unconditional surrender of the fortress of Asseerghur. Had the garrison held out, the issue would have been equally certain, but on the score of humanity he rejoices in the present result. To all those to whom he is so much indebted, the Brig-gen. will take an early opportunity of returning his best thanks.

*Orders by Brig-gen. Doveton, C. B.—
10th April, 1819.*

The fall of Asseer leaves to the Brig-gen. only the pleasing task of recording his sense of the merits and exertions of the officers and troops, and of bringing them to the notice of superior authority, where they can alone be fully and properly appreciated.

To the means placed at the Brig-gen's disposal by the rapid advance of the division under the personal command of Brig-gen. Sir John Malcolm, K.C.B. and K.L.S. as well as of the troops from the Nerbudda field force, and from Saugor, under the personal command of Brig-gen. Watson, C.B. to the science and skill of the engineers and artillery branches, and finally to the distinguished gallantry and persevering exertions of the whole of the officers and troops whom the Brig-gen. has the honour to command, are principally to be attributed the fall of so stupendous a fortress in eleven days from the opening of the trenches.

The distinguished and well-known merits of Sir John Malcolm, might be con-

sidered as rendering any observation on the part of the brig.gen. superfluous, if not almost presumptuous; but he cannot refrain from paying the just tribute to public as well as private feelings, by expressing his warmest acknowledgments for the assistance which he has derived from his unwearied and persevering energy and activity during the entire period of military operations.

To Brig.gen. Watson, his best acknowledgments are also due for his able and useful co-operation since the period of his arrival.

The science displayed by Lieut. Coventry, the superintending engineer, in selecting the only two points in which the fort was assailable, and in the choice of the positions for his enfilading, bombarding, and breaching batteries, reflect the most distinguished credit on that officer, and on Lieuts. Irvine and Purton, and Ens. Lake and Warelow, by whom he was so ably seconded; while the skill and admirable practice displayed by the artillery, call upon the brig.gen. in the most forcible manner to express his acknowledgments to Lieut.col. Crossdill, C.B. commanding that corps, to Lieut.col. Hetzler, Maj. Weldon, Capt. Prigaund, Capt. Banner, of the horse artillery, and generally to the whole of the officers and men of horse and foot artillery, for their indefatigable conduct during the entire progress of the siege.

The unceasing fatigue and uncommon exertions of the corps of pioneers, so cheerfully and unremittingly displayed, entitle Capt. Mc Craith, commanding those of the coast, and Lieut. Aitcheson, of the Bengal establishment, to the brig.gen.'s warmest thanks.

He requests also that Lieut.cols. Mc Dowell, Dewar, Ewart, Greenstreet, and Pollok, commanding brigades of infantry, will be fully persuaded of the high estimation in which he holds the eminent services rendered by them, as well as by officers and men of their several brigades; and although the cavalry, from the nature of the service, have principally been employed in duties of fatigue, yet the cheerfulness and alacrity displayed in the performance of these duties, entitle Maj. Walker, the senior officer, and the other officers and men of that branch, to the brig.gen.'s best thanks.

To the whole of the general staff of the force, the brig.gen. feels himself under high obligation, but particularly to Maj. McLeod, deputy quarter-master-gen. and Capt. Smith, acting assist.adj.gen. for their distinguished and indefatigable exertions. To his personal staff and Persian interpreter, Capt. Morgan, the general is totally at a loss for words in which to offer him his acknowledgments, for endless and unwearied activity, and must there-

fore leave his exertions to be better estimated by superior authority. To Capt. Craecroft, his aid-de-camp, his thanks are likewise due for his attention and assistance. To Capt. Grant, commanding the irregular troops of the Nawaub Sella-but Khan, who was present during the whole of the military operations, with one of the battalions, and particularly attached to the brig.gen. himself, he has also to acknowledge obligations of a superior nature, for the equally eminent display of the same qualifications noticed in Capt. Morgan, and from which he has been the means of rendering the most distinguished services to the brig.gen. himself, as well as to the public interest.

The gen. also requests that Capt. Grant, depy. assist. com.gen. will accept his thanks for the able manner in which his exertions have been directed in the supply of the troops and camp followers; so much so, that never for an hour has there been experienced a want of any article necessary to their subsistence or comfort.

The operations of the division under the personal command of Brig.gen. Sir John Malcolm, having been for the most part carried on in an opposite quarter, it is impossible that the brig.gen. can himself speak as to the merits of individuals, until such time as he shall have received a specific report from that officer, and which, when received, will be published for general information; all that he can at present say, is his perfect knowledge, that they have not been inferior to those of the officers and troops more immediately under his own observation.

Orders by Brig.gen. Doveton, C. B. 11th April, 1819.

Extract of a report from Brig.gen. Sir John Malcolm, K. C. B. and K. L. S. of the unremitting and successful operations of the officers and troops of the Brig.gen.'s division during the siege, in publishing which Gen. Doveton requests that every individual of that division will accept his best and grateful acknowledgements for their persevering intrepidity and exertion.

Extract. "For his endeavours to ascertain by careful examination on the best points of attack, and for the construction of all the different works and batteries, I consider myself greatly indebted to the science and personal efforts of Lieut. Cheape, of the Bengal engineers, whose exertions have been unremitting in the performance of his duty.

"The conduct of the artillery from the hour they opened their fire, till that on which it was stopped by the submission of the enemy, demands my unqualified praise. The obstacles they had to overcome, and the fatigue they underwent, had no effect but to increase exertion.

"To Major Blair I am greatly indebted for the aid I received throughout the service, from his energy, experience, and judgment.

"My thanks are also most particularly due to Capt. Frith, commanding the Madras artil. with the division: Capt. Manson, of the Bombay, and Lieut. Black, commanding the horse artil. and commissary of stores, and indeed to all the officers and men of the corps, who vied with each other in supporting the high character of the branch to which they belong.

"I have much pleasure in noticing the conduct of Capt. Fleetwood, of the rocket establishment; that officer, when not required in his own line, volunteered to do duty in the batteries, where he is reported by Maj. Blair to have been most active and useful throughout the siege.

"How well the duties of the pioneers have been performed, is evinced by the works they had done. In expressing my sense of the conduct of this useful corps, I have to notice the exertions of Lieut. Nash, commanding the party of Bengal, Lieut. Wheeler, of Madras, and Lieut. Roe, of Bombay pioneers.

"I have the greatest reason to be satisfied with the manner in which the harassing duties allotted to the cav. during the siege have been performed. Those of inf. have been severe, but both European and native officers and soldiers have undergone continual fatigue, with an animated zeal, that lessened every difficulty they had to encounter.

"I have received from Lieut.col. Scott, C. B. that essential aid which a full knowledge of his character led me to anticipate; my best thanks are also due to Lieut. Corsellis, commanding the Bombay troops in my division, to Lieut.col. Russell, C. B. Lieut.col. Ewart, and Lieut.col. Smith, C. B. To the latter I am particularly indebted for his excellent arrangements, when he commanded in the Pettah previous to the occupation of the lower fort, and those he made upon entering the latter as reported in my letter of the 30th ultimo. I have also to express my thanks to Maj. Andrews, who commanded a brigade in my force before the arrival and subsequent to the removal to your division of Lieut.col. Ewart. I have generally to express my obligations to all the officers who commanded corps and detachments in my force; I was much pleased with the prompt and military manner in which Capt. Edsall, commanding the 1st batt. 8th Bombay N. I. led a detachment of his corps to the occupation of the 2d fort, when it was evacuated by the enemy, who contrived their efforts to annoy the entering corps from the upper works, but without effect, owing to the celerity of the movement, and the judicious manner in which the

troops were posted. I consider it a most pleasing part of my duty to express on this occasion, the great obligations I am under to the whole of the division and personal staff. I am particularly indebted to Capt. Napier, Assist.adj.gen., and Lieut. Gibbeass, Assist.qr.mast.gen. of the division; to the former for that clear arrangement of detail, that distinct communication of orders, and that attention to every point of the service, which enables a staff officer to be useful; to the latter from indefatigable exertion which led him personally to aid in the execution of every work in progress, and not only to apply, but to superintend the efforts of all in his department. I have also much satisfaction in expressing my approbation of the services of Lieut. Mitchell, of the Qr.mast.gen'l's. department, and Capt. Danjerfield, of the survey branch.

"The manner in which the force has been supplied, as well as that in which the means of his department have been applied to the promotion of the service, reflects great credit on Capt. Alves, commissariat officer of the division.

"To Capt. Caulfield, of the Bengal cav. assist. to the resident at Indore, I have on this, as on former occasions, to express my gratitude for the aid he has given me.

"I have to state my sense of the zeal and activity of my Aid-de camp, ensign G. Pasley, of his Majesty's 14th foot, and extra Aid-de-camp Lieut. J. Pasley, of his Majesty's 67th foot, and of Lieut. Lawrie, paymaster of the division, and Lieut. Bell, postmaster, who have constantly acted as my personal staff.

"I cannot conclude this testimony to those under my command without paying the tribute due to the great exertions of my native Aid-de-camp Subadar Syed Hussain, of the body guard of the right honorable the governor, which have been as unremitted as they have been useful throughout the whole course of the service."

Extract from Orders by Brig.gen. Doveton, C. B. 12th April, 1819.

Letter from Brig.gen. Watson, C. B. To Brig.gen. Doveton, C. B. In publishing which, the commander of the Hyderabad subsidiary force requests that the officers mentioned in it will accept his best acknowledgments of their services.

Asserghur, 11th April 1819.

Sir,—The fall of Asserghur to the troops under your command affording me the opportunity, I have great satisfaction in bringing to your notice the meritorious exertions of the whole of the officers composing my general and personal staff, during the operations of the siege, which entitle them to my warmest acknowledgments.

ments; and which are particularly due to Capt. W. James, Dep. assist. adj. gen., Capt. Knolles, Aid-de-camp, and Lieut. Stretzell, Dep. assist. q. mast. gen., for the valuable assistance I received from them on the present as well as former occasions.

Letter from Brig. gen. Sir John Malcolm, to Brig. gen. Doveton.

Sir,—In the hurry of sending in my report of yesterday's date, I omitted to mention Lieut. col. Comyn of the 29th reg. Bengal N. I. who commanded several posts on the south side of Asseerghur, and was directed by you to furnish on my requisition the assistance of his detachments. For this I was obliged very frequently to call, and the zeal and alacrity with which the Lieut. col. obeyed all my orders, did not merit that I should have forgot (as I did at the moment) to bring his exertions to your notice.

I have, &c.

J. MALCOLM, Brig. Gen.

Camp Asseerghur, 12th April, 1819.

The return of killed and wounded during the operations against Asseerghur, together with returns of ordnance captured in the lower and upper forts, and an estimate of the quantity of grain found in the latter. Gen. Doveton, who signs the return, says; "From the best information I have been able to procure, the loss on the part of the enemy seems to have been 40 killed and 90 wounded."

Camp Antoorlie, March 17, 1819.

[The return of killed and wounded is the same in amount as that already given, Vol. VIII. p. 598.]

Return of Ordnance taken in the Lower Fort of Asseerghur.

Iron ordnance.—Guns, 2 thirty-three pounders, 1 fourteen, 1 eight, 2 one; howitzers, 1 seven inch.

Brass Ordnance.—Guns, one 13½ pounder.

Return of Ordnance, &c. taken in the Fortress of Asseerghur.

Brass Ordnance.—Guns, 1 one-hundred-and-forty pounders, 1 eighty-five do. 1 sixty-eight do. 1 forty-two do. 2 twenty-four do. 1 eighteen do. 1 twelve do. 2 eight do. 4 one do. 1 half do.—*Iron do.* 1 three-hundred-and-eighty-pounder, 1 one-hundred-and-ten do. 2 sixty-eight do. 1 forty-four do. 1 forty-two do. 1 thirty-two do. 7 twenty-four do. 2 eighteen do. 1 fourteen do. 5 twelve do. 3 nine do. 5 eight do. 7 six do. 1 three and half do. 3 two do. 1 one and half do. 35 one do. 11 half do.; howitzers, 1 twelve inch, 1 nine and half do. 1 nine do. 1 eight do. 1 six do. 4 five and half do. 1 four do. 1 three and half do. 3 three do. 1 two do.—*Total.* Brass ordnance, 15.—Iron do. 104.—N.B. Round shot of different sizes about 30,000 do. stone do. 6090; gunpowder, loose, in

different magazines, about 2 cwt.; about 2000 wall pieces, of different sizes; about 4 cwt. of grape-shot.

Estimate of the probable quantity of Grain and Garrison Stores contained in different Godowns.

[We omit the details: the calculated value is 13,114 Hyderabad rupees.]

CALCUTTA.

CIVIL APPOINTMENTS.

Aug. 20.—Mr. B. H. Hodgson, to be assist. to commissioner in Kumaon.

Mr. Colin Lindsay, to be assist. to secretary to Board of Customs, salt and opium.

Mr. J. Neave, do. to secretary to Board of Commissioners, Ceded and Conquered Provinces.

Mr. T. J. Turner, do. to collector of Meerut.

Mr. F. Townsend, do. to collector of Bareilly.

Mr. H. Palmer, do. to superintendent of Western salt chokies.

Mr. J. Hunter, do. to collector of Agra.

Mr. T. T. Blackburn, to be assist. to sub-treasurer.

Mr. W. Page, assist. to magistrate of Nuddeh.

Mr. W. R. Clarke, do. to magistrate of Bareilly.

Mr. E. Bury, do. in the office of register of Sudder Dewanny and Nizamut Adawlut.

Mr. W. N. Garrett, do. to magistrate of city of Dacca.

Mr. Robert Barlow, do. do. Backergunge.

Mr. J. C. Brown, do. do. Benares.

Mr. G. Clerk, do. do. suburbs of Calcutta.

Mr. C. Cardew, do. do. Juanpore.

Mr. H. Manning, do. do. Burdwaun.

GENERAL MILITARY REGULATIONS.

Aug. 21.—The following modifications directed in the 5th article 2d section of the medical code, for providing detachments of European troops with subordinate medical officers.—1st. For a detachment of 24 men, and upwards, but not exceeding a troop or company, an assistant apothecary and steward in one person.—2d. For a detachment of more than a troop, or company, but not exceeding half a reg. of cav. half a bat. of inf. or half a bat. of art. an assist. apothecary, and an assist. steward.—3d. For a detachment exceeding half a reg. or half a bat. an apothecary and steward.

His lordship in council is pleased to authorize three assist. stewards, and eleven assist. apothecaries to be added to the hospital establishment. The assist. stewards to be stationed, one at the presidency general hospital, one at Cawnpore, and one at Meerut, whence they will be ready to accompany any detach-

ment of European troops proceeding from those stations, and when not required for detached duty will be employed in their respective hospitals.

Presidency general hospital, 1 assist. apothecary.—For art. at Dum Dum, 1 do.—Horse art. 1 do.—2 regs. of European drags. at 1 each, 2 do.—6 regs. of European inf. at 1 each, 6 do.

MILITARY APPOINTMENTS AND PROMOTIONS.

Aug. 14.—Surgeon W. Ainsley to the civil station of Patna, vice Muston.

Aug. 26.—Ens. Jackson and Farquharson to do duty with the European regts.

Aug. 27.—Lieut. and acting Adj. Impey, 2d bat. 25th, to officiate as interpreter and Qr.mast. during absence of Lieut. Wilson.

Aug. 28.—Mr. Heysham, formerly a Lieut. 11th N.I. is admitted to the pension establishment, and will draw the allowances of a capt. of inf.

Artillery Regiment.—Maj. Clements Brown to be Lieut.col. from 2d Aug. 1819, vice Butler, deceased, and Capt. G. Swiney to be maj., 1st Lieut. W. G. Walcott to be capt. from the 2d of Aug. in succession.—Acting Superintend.Surg. R. Lowe to be Superintend.Surg. from 14th of March 1819, vice O'Neil deceased.—Senior Assist.surg. A. Halliday to be surg. with rank from 29th June 1819, vice Howell deceased.—D. Hodgkinson, apprentice at Presidency General Hospital, to do duty as assist. apothecary with detachment of H. M. 27th, proceeding to the Upper Provinces.—Acting Assist.surgs. J. MacTaggart and J. Ronald, at the Presidency General Hospital, to do duty with the 2d bat. 22d reg. at Cuttack.

Extracts of General Letters from the Court of Directors, under dates annexed :

Mar. 30, 1819.—We have permitted Capt. C. J. Ridge, to return to his rank on your establishment.—The undermentioned officers belonging to your establishment, to remain in England until the departure of the first Company's ships of season 1819-20, viz. Lieut. T. Trist, and Cornet J. S. Williams.—We have permitted Mr. C. Mackinnon, and Mr. J. M. Todd, to proceed to your presidency to practise as surgeons ; and direct that they succeed as assist.surgeons on your establishment.

April 7, 1819.—We have appointed Mr. T. Sewell, now abroad, a cadet of inf. on your establishment, provided you shall be satisfied that he is not the son of a native Indian, or exceptionable in any other respect.—Col. Loveday, 20th reg. N.I. to the permanent command of the troops at Agra and Muttra, with the temporary rank of Brigadier, vice Brev.col. R. Frith deceased.—Sub-assist.commiss. gen. Lieut. D. Bruce, 13th N.I. to be an assist.commiss.gen., from 22d April 1819, vice Maj. G. Becher, proceeded to Europe

on furlough.—Acting sub-assist.commiss. gen. Lieut. J. Syne, 19th N.I. to be a sub-assist.commiss.gen. vice Bruce.—Dep. assist.qr.mast.gen. Lieut. Palmer, 3d class, to be dep.assist.qr.mast.gen. 2d class, vice Brownrigg removed.—Capt. J. Smith, 3d N.I. to be a dep.assist.qr.mast.gen. 3d class, vice Palmer.—Surg. A. Halliday to be a presidency surg. vice Ainslie removed. Assist.surg. A. Wood to be senior assist. at the presidency general hospital, vice Halliday promoted.—Officiating assist. surg. J. M. Gerard, to perform medical duties at the civil station of Mymensing, vice Stephens.—Mr. R. Nighland, to do duty as an assist.surg. on this establishment with temporary rank.—Officiating assist.surg. R. Nighland to perform the medical duties at the civil station of Howrah, vice MacRa appointed surg. to his excellency the commander-in-chief.—Mr. Hawkins to be a sub-assist. in the training department of the Company's stud, vice Lieut. Hanbury deceased.—Mr. C. MacKinnon is admitted an assist.surg. on this establishment.

Aug. 28.—The leave of absence granted to Lieut. W. Oliphant, artillery regiment, to proceed to sea for the benefit of his health, is commuted to a furlough to Europe on the same account, from 18th Jan. 1819.—Lieut. W. Barnett, 27th N.I. has been permitted by the court of directors to return to his duty on this establishment without prejudice to his rank ; also Brevet Capt. and Capt. Lieut. J. B. Pratt.—Lieut. Mac Kinnon, 1st bat. 21st reg. to officiate as adj. and paymaster of invalids, during the absence of Lieut. Pope.

Sept. 10.—Officers are posted to regiments and battalions as follows :

Artillery.—Lieut. Col. R. Hetzley, removed from 1st to 2d bat.—Lieut. Col. C. Brown posted to 1st bat.—Maj. J. Ahmuty removed from 2d to 1st bat.—Maj. G. Swiney posted to 2d bat.—Capt. W. G. Walcott posted to 2d comp. 4th bat.—Capt. C. H. Bell removed from 2d comp. 3d bat. to 4th comp. 1st bat.—Lieut. E. Watts removed from 2d comp. 3d bat. to 3d comp. 1st bat.—Lieut.col. Hetzler will repair to Agra, when the weather permits, and assume the command of the 2d bat.—Maj. Ahmuty will repair to Saucor, and take the command of the artillery at that station.

Cavalry.—Lieut.col. Elliot, C. B. to the 3d reg.—Lieut.col. W. D. Knox to the 8th reg.

Infantry.—Col. J. Dun (Lieut.gen.) to 15th reg. vice Sir J. Macdonald.—Col. J. Morris (Lieut.gen.) to 17th reg. vice Dun.—Col. J. Tetley (new promotion) to 4th reg. vice Morris.—Lieut.col. R. Patton, C.B. (new promotion) to 2d bat. 5th reg.—Lieut.col. A. Hennessy from 2d bat. 5th reg. to 1st bat. 4th, vice Tetley.—Lieut.col. Greenstreet from 2d bat. 15th to 2d bat. 30th, vice Weston.—Lieut.col. Pe-

kins (new promotion) to 2d bat. 15th, vice Greenstreet.

5th N.I. 2d bat. Maj. Huthwaite.

12th N.I. 2d bat. Capt. Gale, and Capt. Moore.

29th N.I. 1st bat. Maj. Delamain, 2d bat. Capt. Morrisson.

FURLONGHS.

Aug. 16.—Lieut. Newton Wallace, 27th N.I. and adjutant to Cuttack legion, to make a voyage to the Cape of Good Hope, for the benefit of his health, and to be absent ten months.

Maj. G. Becher, 5th light cav. as-sist. commis.gen. to proceed to Europe for the benefit of his health.

Capt. G. Cunningham 7th N.I. commanding 2d Rohillah cav. the extension of leave of absence prolonged for six months.

Aug. 27.—Brev. Capt. Horsburgh, 2d bat. 23d reg. to Lohargoug, on private affairs, from 16th Aug. to 16th Sept.

Asst.surg. Sullivan, 2d bat. 22d reg. on medical certificate to the presidency, in order to go to sea.

Lieut. Stoddart, 8th light cav. in extension, from 5th Oct. to 30th Nov.

Lieut. Harvey, sub-assist.commis.gen., on private affairs to the presidency, from 1st Oct. to 1st April 1820.

Surg. Muston, 1st bat. 7th reg. to the presidency, on private affairs, from 27th Aug. to 30th Nov.

Lieut. Marshall, 2d bat. 1st, has leave to visit the presidency, previous to making application to go to sea.

The undermentioned officers have leave of absence :

Aug. 28.—Lieut. Simpson, 2d bat. 28th reg., and Lieut. Calheart, 1st bat. 2d reg. to remain at Allahabad till 15th Oct.

Lieut. A. Pope, adj. and paymaster of invalids, Allahabad staff, on private affairs to the presidency, from 19th Sept. to 10th March 1820.

The leave of absence granted to Lieut. and Adj. H. Barnett, 2d bat. 23d N.I. to commence from 9th June, instead of 15th May.

Surg. J. Law, medical staff, to visit the presidency on private affairs, from 1st Nov. to 1st May 1820.

LOCAL AND PROVINCIAL.

Mariners' Widows' Fund.—On the 25th of August was established, under this title, an institution for the benefit of the widows and orphans of commanders and officers of the Bengal marine. It is cherished by the patronage of the Governor-gen, and has met with the greatest support. It is a fund which all Englishmen ought peculiarly to patronise. At the first meeting, John Palmer, Esq, so well known for his charitable munificence, gave a donation of 1000 rupees.

Conversazioni.—This species of rational entertainment has been revived by a select body of subscribers among the gentlemen of Calcutta. The plan has obtained the patronage of the Marquis of Hastings. The following are the names of the president and stewards.

S. Goad, Esq.

J. P. Larkins, Esq. Capt. Dawes.

Capt. Cobb, Capt. Croker.

N. Alexander, Esq. Capt. Rainey.

Capt. Macan, A.D.C. Jas. Barwell, Esq.

Capt. Patrickson. Chas. Trower, Esq.

We quote the leading regulations to shew the sphere of refined amusement which this elegant institution has opened.

1. The conversazioni will be held at the town hall every alternate Friday, commencing the first Friday in Sept.—2. The rooms to be opened at eight o'clock. The ball-room will be provided with a military and country dance band. Tables with all kinds of refreshments will be provided, but no regular supper. One room will be appropriated as a retiring room for the ladies; one room for card tables; one for prints, magazines, &c. and another for chess and backgammon boards, and amusements of this description.—3. The music will cease at twelve o'clock; at which hour it is expected the assembly will break up.—4. The amount of subscription to be 16 rupees per month, payable in advance on the bill and receipt of the treasurer.—5. Three of the stewards will attend each evening of the assemblies; to whom it is requested all applications may be made in case of inattention on the part of the persons engaged to provide the refreshments, or any other account.—6. Hookabs will be admitted in all the rooms, except the dancing room.—7. A general invitation will be sent in the name of the managers to all H. M.'s and the hon. Company's corps doing duty in Fort William, Dum Dum, and Barrackpore; but it is of course optional for any officer to subscribe.—8. Tickets are not required for officers attending under this regulation, but it is requested that they will give their names on a card to the European appointed to receive the tickets at the door.

Fatal boldness of a Tiger.—Extract of a letter from the captain of the brig *Salamanca*, going through the Sunderbunds to Backergunge on the 8th August.—"We have had the misfortune to lose one of our men, taken out of the boat by a tyger, when pulling up, at least twenty feet from the jungle, and not more than fifty from the brig. The animal leaped into the boat, seized the man pulling the bow oar, badly wounded another with his claws, (who is however doing very well) and in one spring, with the man in his mouth, reached the jungle. It is sin-

gular that the creature never made the least noise, when he sprung into the boat."

The Weather, and the Crops.—The Calcutta Journal of Aug. 28, says: our intelligence from the interior gives some hope of the apprehended evils of famine being likely to be averted by the rains which have lately fallen. Throughout the Upper Provinces the prospect of the grain crops is much improved, and in the Lower Provinces the change has been such as to cause a very marked decline in the price of rice and other grain, during the past week.—A letter that we have before us, dated from Naa Colly, Aug. 20, 1819, says, that the first crop of rice is nearly all cut in that neighbourhood, and the ryots were all engaged in planting the second. The rain, it is added, had been abundant, and had extended to Chittagong.—At Allahabad, the apprehension of famine had been so great at first, that the grain-holders stored all their stock in magazines, and shewed a reluctance to sell at almost any price. The fall of rain in that quarter had, however, induced them to supply the market at very little above the ordinary rate.—At Cawnpore the same thing had taken place, and throughout the whole of Bundelcund the rains had given hopes of a harvest not less abundant than usual.—The corroborating testimony of all these reports from opposite quarters of India, induces us to hope that the visitation of famine need not be dreaded; and that the distress, which the mere apprehension of this calamity has already created, will be gradually removed.

The Mirror of Aug. 30, quotes a letter dated Saugor in Bundelcund, Aug. 5, which mentions that the country had been blessed with plentiful showers of rain since the 10th of the preceding month, and that the weather was then extremely pleasant, the climate resembling that of Kumaon and the district being free from the cholera, though it had been committing ravages in parts not very remote from that station. At Cawnpore also, we are happy to hear that they had experienced a considerable fall of rain, and that some light showers had fallen at Allahabad, at which latter place the Bunias had actually shut up their shops, refusing to sell any grain, when the showers above alluded to produced a fortunate change. They appear however to have been very scanty, and by no means sufficient to raise the hopes or spirits of the poor, who were living on a species of flour made from the pounded kernels of mango stones, and other food of the most unwholesome qualities.

Dacoits.—"On the 27th of August, a boat laden with sundry European articles, at the risk of the River Insurance Company, proceeding to the Upper Pro-

vinces, was attacked by a body of Dacoits at Balloogunge near Sooty, who after wounding three of the dandies, robbed them, the Manjee and Peon, of all their money and clothes, and broke open one of the chests, but finding that it contained beer, they left it in that state and examined no farther.

Specimen of the Gorkhur.—Gen. Sir D. Ochterlony has lately dispatched, as a present from the Nuwab of Bhawalpoor to the Governor-general, a beautiful wild ass of that species called by the natives Gor Khur. This elegant creature is described as being between eleven and twelve hands in height, of a beautiful light fawn or cream colour, with long ears, and large black eyes. In disposition it is untractable, and in this as well as in every other respect, excepting the colour, resembles the Zebra. It is said to be a complete model of strength, beauty, and agility.—*Mirror.*

Spasmodic Cholera.—Extract of a letter from Meerut, dated 21st Aug. Heavy rain has fallen since the 17th, before which the weather was very disagreeable, and the prices of grain very high. The cholera is, I am sorry to say, making horrible havoc among the King's 14th; within the last week that corps has lost nearly thirty men; we thought the change of weather had lessened the violence of the symptoms on the 19th, but yesterday the disease was as fatal as ever, about seven men having been cut off by it in less than twenty-four hours. The 8th dragoon and artillery have escaped as yet, but I am in daily, or rather momentary apprehension of its breaking out among our men, among the natives it seems also to be confined to particular spots and bazars.

Alligators.—July 13. Many inhabitants of Calcutta recollect how fearful a sensation was excited a few years ago among the natives at Garden Reach, in consequence of their numbers being almost daily thinned by the voracious alligators that then infested that part of the Hoogly. A similar alarm now prevails at Baudel, where, within the last three weeks, several persons, while engaged in their morning ablutions, have been carried off and devoured. A few days ago, a prepared attack was made upon these unwelcome visitors; and some fishermen killed one of them eighteen feet long. On Saturday morning, another appeared among a crowd of bathers, and selected a young Brahmin for his prey, whom he promptly devoured. The monster afterwards swam round the spot for several hours, to the great consternation of the shuddering grompes that he had driven out of the water.

Series of Accidents to a Fleet of Boats.—The following is an abridged notice,

from a letter in the Calcutta Journal, describing a series of accidents which happened to a fleet of boats, carrying a detachment, under the command of Maj. Brooke, of the horse artil. from the period of their entering the Ganges, to that of their arrival at Dinapore.

On the 18th of June one of the boats, on board of which a detachment of his Majesty's 24th regt. was embarked, is stated to have upset, by which accident one private and three children were drowned. On this occasion the heroic conduct of a Naique, belonging to the 14th N. I., is deservedly spoken of in terms of the highest approbation, this brave fellow having at the peril of his life rescued no less than eleven men, two women, and one child from destruction, being under the necessity of carrying off each of them separately from a part of the wreck to which they were clinging, with scarcely any reasonable hope of escaping. On this arrival of Mongeer on the 26th, they heard of the loss of a budjerow belonging to Ens. Farrington, which was upset in a very broad and deep part of the river, at the distance of a few miles below that place. This young officer is described as having lost the whole of his property and baggage, and to have been indebted for his life, first to the exertions of a boatman who dragged him out of the water, and set him on the bottom of the boat which was then uppermost, and next to the assistance of his friend Ens. Armstrong who relieved him from that perilous situation, and took him on board his own budjerow. On the evening of the 30th, after leaving Mongeer on the 28th, another budjerow belonging to the fleet was upset, and Lieut. Bowers, of his Majesty's 14th regt., washed fairly out of the window, by the sudden influx of the water on the opposite side.—This officer appears to have been saved principally by the presence of mind of his bearer, who, though in an equally perilous situation himself, was not forgetful of his master, but succeeded in placing him on the bottom of the boat. This accident occasioned great bustle in the fleet, and a small guard boat, dispatched immediately by Maj. Brooke, arrived in time to receive those who were clinging to the wreck; but no sooner had she quitted her than it sunk and totally disappeared. On the day after the loss of Lieut. Bower's budjerow, another of the European boats sunk off Bar, when one of the privates of his Majesty's 87th regt. of foot was drowned. This poor fellow had himself reached the shore, though quite exhausted with the exertion, when observing the wife of the serjeant, who still remained on the wreck struggling to save her children, in a state of the utmost peril and anxiety, weak and exhausted as this brave soldier was, he

threw himself into the stream, in the hopes of saving them; but his strength failed him, and in this heroic act he sunk beneath the overwhelming mass of waters. It is gratifying to learn that the fond mother and her children were at length saved, though the brave fellow who thus devoted his life to the cause of humanity, alas! rose no more.

Proceedings held at a Meeting of the British Inhabitants of Calcutta, in the Town Hall, on Monday, the 13th September, 1819.

In consequence of the notice published on the 4th instant, by the sheriff of Calcutta, a general meeting of the British inhabitants was this day held, for the purpose of considering the best mode of expressing the respect entertained by this settlement for the character and memory of their former Governor-general, the late Rt. hon. Warren Hastings. The meeting was opened by the sheriff in nearly the following terms:—

Gentlemen—I trust that the object of this meeting, as expressed in the requisition, which I have caused to be published, is perfectly understood, and approved of by every man present.—No one can feel more anxious than I do, that the inhabitants of this city should testify, in a distinguished manner, their respect for the memory of the late Warren Hastings, and their esteem for his severely-tried and well-proved merits. It would, however, be foreign from my duty, if I were to state any opinion of my own respecting the best manner of carrying this object into effect; I shall therefore content myself with suggesting, that you begin the business of the day by electing a chairman to preside during your deliberations.

Mr. Fendall then moved, that Mr. Larkins be requested to take the chair; which motion was seconded by Mr. Palmer, and unanimously agreed to.

Mr. Larkins having accordingly taken the chair, addressed the meeting in an impressive speech, illustrative of the great public and private virtues of Mr. Hastings, and of the gratitude due to him by the Indian community and his country at large. It was not, he observed, without the strongest conviction of his own inability, that he entered upon the duties of the chair, to which he had been honoured by the call of the meeting, who would, he begged, accept his unfeigned thanks for so flattering a mark of distinction, which was the more acceptable, as it had been conferred upon him by a meeting so respectably constituted as that was, and on an occasion no less interesting to himself than he believed it to be to all present. He would say of all present, because he felt satisfied that no one had associated himself with them, but from the

purest reverence and esteem for the memory of Warren Hastings, in whom virtues and accomplishments were most happily united to form all that was valuable, all that was honourable in human life.—He stated how averse he was to panegyricize the dead, and how necessary he considered it that there should be something extraordinary in the character of a man to justify the expressions of praise. He appealed to the meeting whether he could not plead such a justification on the present occasion, and observed, that however highly he might applaud Mr. Hastings, he was not afraid of passing the bounds of truth, nor of exceeding the sentiments and feelings of those who heard him; and that the only apprehension he felt was, that he might fail in doing justice to the many and invaluable qualities that adorned the head and heart of this excellent man and admired statesman.—He stated that the meeting had been convened for the purpose of considering how they might best evince, by some commemorative token, their affection and regard for the memory of Mr. Hastings, of a statesman whose virtues and talents had raised him to the highest situation which a British subject can fill in this country, and who, during a long, tried, and faithful course of services, was exposed to more than ordinary trials and difficulties.

Mr. Larkins then expatiated on the difficulties of delineating the character of Mr. Hastings; he stated, that he was deficient in that information and ability, which it was so indispensibly necessary to possess, in order to succeed in such an attempt; but as they had done him the honour to place him in the chair, he felt that something would be expected from him, and that relying upon the indulgence of those around him, he should proceed, notwithstanding he was aware how tender was the ground on which he must necessarily trespass; that the public life of the renowned, but sadly persecuted statesman must be spoken of with delicacy and discrimination, since it was so extremely difficult to dwell upon the pre-eminent features of such a life and character without condemning, or appearing to condemn, those who had associated themselves in the spirit of party, to asperse one whose unblemished name would be remembered by posterity with the same reverence that attends the most celebrated civil characters in the annals of our history.—He observed, that the whole course of Mr. Hastings's public life was passed in the service of the Company in India, in situations of high trust and responsibility, the duties of which he fulfilled with honour to himself, and extremely to the advantage of the many millions whose welfare and happiness it was no less the wish of his heart, than it was the object of his

government to promote. He adverted to the benefits which had resulted to the country from the wisdom of Mr. H.'s measures, and said they were recognised and acknowledged to this day, and were not only recorded in the proceedings of the government over which he presided, but in the fairest pages of his country's history. The worthy Chairman next adverted to the recorded public services of Mr. Hastings, and observed how unnecessary it was that he should speak of these before those who were so intimately acquainted with the history of our governments in India, and with the share Mr. Hastings had in the administration of affairs; indeed, his virtues, talents, and services, had left too strong an impression to need being dwelt upon, to those who had so many opportunities of appreciating them.

Mr. Larkins next went into a description of the principal features of Mr. Hastings's public life, adverting to the disordered state in which he found the Company's affairs abroad when he was called to the supreme government; his wisdom, fortitude, and perseverance in the restoration of them, and his final success, in spite of all the opposition and difficulties which he had to encounter. He then shortly noticed his impeachment, his long protracted trial, and his final acquittal.

After having thus briefly surveyed the course of Mr. Hastings's public career, Mr. Larkins called the attention of the meeting to the humble sphere of social and domestic life, in which Mr. Hastings was beloved, and adored in the highest degree. He observed, there were a few present who were intimately acquainted with Mr. Hastings, and could bear him out in the assertion, that he possessed in an eminent degree the virtues of a benevolent heart, the agreeable qualities of which displayed themselves in the circle in which he moved, and gained him the love and admiration of all who knew him.

Harassed by the most cruel prosecution to which perhaps a British subject was ever exposed, he submitted with becoming resignation, and without even a feeling of resentment towards those who persecuted and calumniated him. Mr. Larkins remarked that, on the contrary he had understood that Mr. Hastings expressed his most unfeigned forgiveness of them. In a word, he was happy in himself, and transferred happiness to others. His mind was ever cheerful and serene, his life regular and temperate; circumstances which, with a good constitution, contributed to preserve him in health and comparative vigour to the uncommon age of fourscore and six years.

Such, Gentlemen, said Mr. Larkins, was Mr. Hastings; and whilst remembrance dwells in the minds of those who

knew and loved him, he must ever be lamented.

Mr. Palmer stated to the meeting, that one of the persons, an old and meritorious officer, who had assisted in the convocation of the present meeting, but who was prevented by indisposition from attending it, had requested him to submit that a monument more useful than ostentatious, and congenial with the spirit and consonant to the genius of the revered name we were this day met to commemorate, should be adopted, as the most appropriate tribute of respect to the late Mr. Hastings.

That the proposition was for a free school, to be founded in this city, upon an enlarged scale, and liberally and generously endowed; and that the Honourable the Court of Directors, all retired East-Indians, and all India itself, should be invited to contribute to the support and perpetuation of the institution.

Mr. Palmer, however, expressed his apprehension, that neither times nor circumstances favoured this enlightened and benevolent suggestion; but that he discharged a delightful obligation in submitting to the consideration of the meeting the hint of a scheme, which did equal honour to the head and heart of a veteran, his esteemed friend Col. George Dick.

Mr. Wynch then rose, and addressed the assembly as follows:—

Mr. Chairman, — As an individual member of this assembly, I rise to express my humble concurrence in the propriety of our evincing some mark of public respect to the memory of Warren Hastings. The erection of a statue appears to me the most unexceptionable mode for that purpose: I accordingly propose it; indeed I know not to what better purpose we can ever aspire to direct the skill of the sculptor.

Some of those whom I have the honour now to address, have possibly possessed the good fortune of an acquaintance with that distinguished man: others, still more fortunate, may have shared the advantages of his friendship; none are strangers to the fame of Hastings, to his name, or to the great events with which that name is associated; and all this assembly, I am sure, will cordially contribute their aid towards the production of some testimony of respect for his eminent virtues, of admiration for his splendid talents, of veneration for his revered memory!

Gentlemen, I have read that, on a certain occasion when the image of Brutus was wanting to complete the pageant procession of Caesar, it

“Did but of Rome’s best son remind her more.”

So, methinks, should we be found to neglect some outward demonstration of our reverence for Hastings, that neglect would but serve to obtrude the remem-

brance of him on our recollections, more than under such circumstances we could well desire. It is true, that the virtues and the deeds of Warren Hastings have of themselves wrought for him a memorial more perennial than brass, more durable than marble; it is true, that he has for himself raised a name which will survive in after-ages, when the proudest monument we might elevate to his memory may have mouldered beneath the mutative hand of Time, or the stateliest column crumbled into dust. Let it, however, be remembered, that human works, any more than human institutions, are not infallible; and though we know too well, alas! that neither “storied urn or animated bust,” can “back to its mansion call the fleeting breath,” yet it is not the less incumbent on us to mark our sense of the merits, and to endeavour, as far as we can, to preserve to posterity, the reminiscence of so great and glorious a character.

If, then, a statue to his memory should be determined upon, as I propose, it ought, I think, to be placed in the most conspicuous part of this capital; the seat of his government for thirteen years, the centre from which his energies were diffused throughout the then British empire of Hindoostan.

Gentlemen, Having offered thus much regarding a tribute to the memory of Warren Hastings, and the mode in which I would propose it to be rendered, I request your indulgence to be allowed to add something respecting the man himself, who, whether we consider him with reference to his public or private character, is not, to use the ordinary language, “justly entitled to,” but absolutely commands our admiration. That portion of his public life which appears to me the most interesting, is the period during which he presided at the helm of the Supreme Government of Indian affairs. How gallantly, how fearlessly he navigated the vessel of state through the conflicting storms and tempests which then assailed it; how skilfully he shunned the rocks, and steered clear of the shoals with which it was on every side surrounded: how calmly and ably he at length conducted and moored it in a placid haven, it belongs not however to me to tell; the record will be found in the page of history; I should indeed, I fear, exceed the limits of your patience, and I am sure, the compass of my ability, did I attempt even a rough outline of the leading acts of Hastings’s administration, acts, the performance of which as represented, on rather misrepresented in the memorable charges exhibited against him, furnished matter for judicial investigation before the highest and most awful tribunal on earth, for a protracted period of seven years. I must confine myself to general assertion, but nevertheless true. Mr. Hastings, I

believe, assumed charge of the Supreme Government in India in 1772. What was then the state of affairs? He found the finances exhausted, the revenue declining, the expenses enormous, the country lingering under the effects of a mortal famine! its inhabitants unprotected in person, insecure in property; the British authority circumscribed, controuled, and overawed. In 1785, Mr. Hastings had resigned his office, and had returned to his native land. What was the language of his immediate successor in 1786, Sir John Macpherson, respecting the inhabitants of this country, our allies, ourselves, and the independent powers? "The native inhabitants of this kingdom (meaning the British dominions in Asia) are the happiest and best protected subjects in India; our native allies and tributaries confide in our protection. The powers of the country are aspiring to the friendship of the English, and from the King of Tidore, towards New Guinea, to Timour Shah, on the banks of the Indus, there is not a state that has not lately given us proofs of confidence and respect."

By whom, I ask, had these results been obtained, if not by Hastings? Such too were the sentiments, not merely of his immediate, but of his noble successor, a man equally great in the cabinet with Hastings, greater in another respect, as he was as famed for deeds of valour as he was illustrious in arms, he whose statue stands before us, whose actions, "approach and read," for they are engraven on its pedestal, Cornwallis!

Gentlemen, besides the grand and leading acts of the administration of Mr. Hastings, which naturally occupy the prominent portion of our thoughts, but as I have already observed furnish too fertile a field for my present descent, there are others which distinguished his government, and which, as serving to mark the liberal and expanded mind of the man, should not be passed over in silence. Such were his acts of encouragement to oriental learning, to philanthropy, to enterprise, and to commerce.

In proof, I adduce his foundation and endowment of the Mahomedan Mudrusu in this metropolis; his repair of the Hindoo Temple in the sacred city of Benares;* the compilation and translation under his direction of learned treatises of law, Sanscrit and Arabic; the able and public support he afforded to Cleveland in the prosecution of his philanthropic, and towards the completion of his successful

undertaking; his deputation of an ingenious and enterprising traveller to the unexplored regions of Bootan, and the snowy mountains of Thibet, which led to the capitals of Tassissudon and of Lassa being visited by an Englishman for the first time; the communication he established for the facility of commercial intercourse between Europe and India, by Suez.

Gentlemen, should you require from me any additional testimony of the title of Mr. Hastings to admiration for his public conduct while governor-general of India, I must request you to receive his own declaration. I am free to confess, it is the best further evidence I can pretend to offer—"To the Commons of England," said he, "in whose name I am arraigned for desolating the provinces of their dominion, I dare to reply, that they are the most flourishing of all the states in India. It was I who made them so. The valour of others acquired; I enlarged, and gave shape and consistency to the dominion which you held there; I preserved it; I sent forth its armies with an effectual, but economical hand, through unknown and hostile regions, to the support of your possessions; I maintained the wars, which were of your formation, not of mine. When you cried for peace, and your cries were heard by those who were the objects of them, I resisted this, and every other species of counteraction, by rising in my demands; and accomplished a peace, lasting, and I hope, an everlasting one, with one great state. I gave you all, and you have rewarded me with confiscation, disgrace, and a life of impeachment!!!"

[Here Mr. Wynch adverted to Mr. Hastings's trial, and then proceeded thus:—]

Absolved from the cares and anxieties of public life, and freed from the storms and dangers of political persecution, we beheld this great and good man retire to the seat of his ancestors, and there, beloved by all who surrounded him, dedicate the sun-set of life to the placid pursuits of literature, of which he was himself a chief ornament, and to the useful occupation of agriculture. There we beheld him, like the Cicinnatus of ancient, like the Washington of modern story, finding more heartfelt satisfaction in the cultivation of a few paternal acres, than he had formerly derived when obtaining the cession of territory, or from the conquest of provinces; and though his later days glided on in serene tranquillity, himself cheered the while by the recollections of a well-spent life, yet it is satisfactory to find that he was not suffered to languish in obscurity. It reflects lustre on the diadem of the Sovereign of England, that Hastings, at his advanced age, was called to assist in his councils; and the

* Mr. Hastings also laid the foundation of a large church, which was much wanted for the European inhabitants of Calcutta; and his evidence before the House of Commons on the last renewal of the Company's Charter greatly conduced to the Ecclesiastical Establishment which has since been formed for British India.

spontaneous tribute of homage, I may call it, offered to him a few years ago, by the House of Commons, alike honourable to them, and merited by him, was a theme of delightful remembrance while he continued to live, and cannot therefore be forgotten by us.

Gentlemen, over the mortal remains of Warren Hastings, the grave, into which sink alike, and at last, the endowed with talent, the possessed of virtue, the favoured by fortune, and the blessed with beauty, the grave has closed for ever! Peace then to those hallowed ashes! but the spirit of Hastings has soared beyond the precincts of the tomb, his memory will live immortal!!

Captain Bryant rose to second the motion of his friend, Mr. Wynch, for the erection of a statue to the memory of the late Warren Hastings, and before he sat down, expressed himself to the following effect:—

Sir, I know nothing of Warren Hastings but as a name in British history, and as a sound still unexpired in this Indian world. I came to this country, with all the glowing fervent affections of youth. As a boy, I had shuddered over the pages which told of his atrocious administrations; and my heart swelled with abhorrence at the dread violator of every holy tie, at the arch apostate from his country's honour. It is now many years that I have passed in active life in India, and I have not been an inattentive observer of manners and opinions so wholly foreign to European education. My military duties have led me over a vast tract of country embracing the scenes of his political power, and rendering me familiar with people of various climes, who had felt the influence of his gigantic action; and wherever I have passed, and in whatever situation I have been placed, I have never heard the name of Warren Hastings pronounced but with awe, with reverence, and affection. I have heard the aged Indian cling to it, as the memory of greatness that had no second birth, and I have heard their children repeat it as a name on which their fathers loved to dwell. I have entered the temple of the Hindoo, and I have heard the name of Warren Hastings breathed as the protector of the religion in which their fathers lived, and I have heard the Mussulman include in his prayers the name of Warren Hastings, as the benefactor by whose bounty he read the volume of his faith.

I recollect, some years ago, when stationed by my military duty at one of the most important scenes of his mighty and electric action, and when I attempted to trace the true character of those events for which his honour and fair fame had been demanded at home, that an aged Musselman, whose observations on those

times I courted and encouraged, came to me, complaining with violent indignation of the magistrate of a neighbouring Zillah, who had required him to take an oath. He had pleaded his respectability, his age, his devotion, that the koran, his book of faith and hope, was his occupation and his life, and that he dared not prophane it in earthly disputes; at length, when he found all his pleading vain, he proudly declared himself safe from every severity, exempt from every ill, for he had a letter in his possession, in which Warren Hastings himself had called him his friend.

Sir—These are the facts which have long awakened me from that dream of horror which presented Warren Hastings as the captain general of iniquity, and have induced me to turn with admiration and reverence to the man, who had the virtue and the courage to oppose the strongest feelings of our native land, to arrest the English laws in their oppressive career, and to tell to our country, that the laws of England have no congenial soil in this climate of peculiar and luxuriant passions: and that while human action is influenced by the body over which it is exercised, human laws have their only wisdom in their application to the character of life.

The foreign policy of Hastings has been tried by time, and it has been at length conceded to him, that the anarchy which prowls among the ruins of empires requires a different policy from that which is due to well regulated and settled states. The character of his successors in the government of India has been estimated by their approximation or deviation from the leading principles of his administration, and it is difficult, at this moment, to trace even the foundation of those opinions which once attacked his fortunes and his honour. It was said in the British senate, by a statesman who was an admirer generally of Warren Hastings, that he was a meritorious servant of the East India Company, but that he ought not to be permitted to play the part of Alexander. Now, I have always thought, that in the circumstances of that period the part of Alexander was the only part of prudence or of safety. Glory and dominion were its results, and they became to him a misfortune and a crime. My friend near me, sir, has furnished me with a happy illustration; it is the old story—the play of *Hamlet*, to be performed by command, but the part of *Hamlet* to be left out. Without the part of Alexander, what had been Warren Hastings! What had become of his countrymen? Driven from the shores of India with ignominy and disgrace, and the splendour of the British name traced only by the melancholy gleam with which

some faithful sepoy lighted up the sepulchre of Coote! No, sir, the crime of Warren Hastings was not that he was an Alexander; it was that he was not the son of Philip. In the confined horizon of British views, he was but the agent of mercantile adventure. Contracted minds at home shrunk from the splendid actions of a mere citizen, the servant of an exclusive commercial body—they revolted at the anti-climax of citizens of London, traders to the Indies, succeeding the pupil of the Stagyrite, the conqueror of the world, in the protection of the religion and philosophy of the east. But if time rolls its ceaseless course, the minds of men must travel with it. The history of India is not to be traced in the classic page, and modern India was unknown to England. To pronounce on Indian actions, a knowledge is essential of Indian life; and when Warren Hastings was brought to the bar of England to answer for the violation of her laws, and for the pollution of her name, interpreters from the east should have stood by the judges of the land, and the history of the temper, the spirit, the passions of India, should have been placed by the statute book of England. England has recently sent an expedition to the north pole. Will she try the gallant conductor of that glorious enterprise, if in the arctic regions he considers not the experience of the navigation of the channel? Will she try him if, instead of the light-house on the Scilly rock, he guides his perilous course by those very icebergs that threaten him with destruction? And was not Warren Hastings launched on an unknown raging element, with his own wisdom only for his compass? But happily for him, when called on to give an account of his voyage, he brought India herself to relate his actions. When Verres stood at the bar of Rome, it was the voice of Sicily that pronounced his accusation. When Hastings stood at the bar of England, it was the voice of India that pronounced his defence. India stood near the criminal Hastings when he uttered that beautiful, that noble, that sublime appeal, which the happy eloquence of the gentleman who preceded me so feelingly introduced. India dictated the proud assertion, while his own heart uttered the melancholy reproach—"I gave you all, and you have rewarded me with a life of impeachment, confiscation, and disgrace."

But I beg distinctly to be understood as dissenting most determinedly from the opinions, as I understand them, which have been expressed. I do not believe that the impeachment of Warren Hastings was urged by personal enmity, or from any other feeling. No; the illustrious names of Britain's proudest public virtue, and noblest talent, are irrefragable evidence against it. In them, I believe, it

originated in a lofty principle—a just jealousy, and long may that jealousy exist, of the honour of the British character. But I do lament, that the illustrious men who conducted the inquiry did not carry with them greater knowledge of the actual state of India; and I believe, that if India had been known then as it is known now, that such a prosecution would have never taken place.

Convinced, sir, that Warren Hastings was the great captain, the great statesman of India—convinced that we are this day assembled to do an act of justice to his memory, and of duty to our country, I support the proposition of Mr. Wynch.

Captain Lockett rose to offer a few words to the meeting, and said, that though he agreed with them in every syllable of praise they had bestowed on the public and private character of Mr. Hastings, yet he differed from some sentiments which had been given on the motives of those who had impeached him.

Mr. Young followed Captain Lockett, and expressed nearly the same sentiments on the subject of the motives of those who impeached Mr. Hastings. He then went on to say, that he had been misled in the early part of his life into an erroneous opinion of the true character of Mr. Hastings, that time and experience had altered that opinion, that he had since read with much care and attention all the publications which threw light on the transactions of those interesting times, and that he rose from those studies fully persuaded, that Warren Hastings was in almost every particular the reverse of what he (Mr. Young) had hastily pronounced him to be.

In a conversation which followed, on the propriety of inviting all India to contribute to this public testimony of esteem for the memory of Mr. Hastings, Mr. Palmer stated, that in the year 1802, his Highness the Nabob Vizier Saudut Ali, hearing that the late Warren Hastings had emerged in ruin from his unexampled trial of seven years and a half, generously notified his wish, through a gentleman now here, to alleviate Mr. Hastings's distresses by granting him a pension for life of £2,000. per annum, offering to secure the amount in the hands of Mr. Hastings's friend. The gentleman immediately submitted the circumstances to the Marq. of Wellesley, for the purpose of receiving his Lordship's sanction to a procedure so honourable to the Vizier, and to the character of Mr. Hastings. Lord Wellesley, after a long deliberation, having satisfied his mind that no public objection existed to the operation of the Vizier's bounty, notified his approbation of the measure, and made it the subject of official reference to the Hon. the Court of Directors, dictating at the same time one

of the most flattering letters ever penned to Mr. Hastings, and taking that occasion to testify his admiration of Mr. Hastings's administration in India.

This produced a characteristic acknowledgement from Mr. Hastings to the Marquis of Wellesley, and an intimation that various considerations would induce him to decline the Vizier's munificence, as in effect he did, when this liberal offer was conveyed to him by the Court of Directors.

The Marquis Wellesley, on arriving in Bengal, did not disguise his adverse impression regarding Mr. Hastings's government, under the view he had taken of it in Europe, and which was at one moment so deep, that he had offered to conduct the prosecution contemplated against Mr. Hastings. But, with the candour and magnanimity which ever distinguished that exalted nobleman, as he grew familiar with the detail of Mr. Hastings's administration, his unfavourable sentiments subsided; and, finally, his better knowledge led to the expression of his unqualified applause.

The motion for erecting a statue having been unanimously agreed to, the following gentlemen were appointed a committee to conduct the preparatory arrangements:—Mr. Larkins, Mr. Palmer, Mr. Fendall, Sir Charles D'Oyly, Mr. Maitland, Mr. James Young, Major Bryant, Capt. Lockett, Mr. Jameson, Mr. Wyuch, Mr. T. Plowden, Mr. James Barwell, Colonel Dick, and Col. Hardwicke.

Among the resolutions then agreed to, *mem. con.* were the following, which have been officially communicated:—Resolved, that a book be left open at the Town Hall for subscriptions.—Resolved, that the committee communicate these resolutions to the principal stations under the Bengal presidency.—Resolved, That the retired officers, civil and military, of this establishment, now residing in England, be invited to join in the objects of this meeting; and that the right hon. Lord Teignmouth be solicited to become the channel of communication between them and the general committee.—Resolved, That Messrs. Palmer and Co. be appointed Treasurers, and authorised to receive the amount of subscriptions.

J. P. LARKINS, Chairman.

Town Hall, Sep. 13.

Pursuant to the above resolutions, the chairman of the committee, accompanied by Mr. Palmer, Sir C. D'Oyly, and Maj. Bryant, waited, by permission, on his Exc. the Marquis of Hastings, on Saturday the 18th Sept.

The Chairman addressed his Lordship: My Lord—At a meeting held at the Town Hall on Monday the 13th inst. by the British inhabitants of Calcutta, for the

purpose of considering the best mode of expressing the respect entertained by this settlement for the character of the late right hon. Warren Hastings, it was unanimously resolved, that a statue be erected in this city to perpetuate the memory, the virtues, and the public services of this great and eminent statesman, and we have been deputed respectfully to communicate the resolutions to your lordship, and to solicit permission to erect the statue in Tank Square, or any other site that may, after due consideration, be deemed equally eligible and conspicuous.

We venture to anticipate your lordship's hearty concurrence in the feeling which pervades the public mind on this interesting occasion, as we do to believe that your lordship is as desirous as the most devoted amongst us to join in this commemorative tribute of public veneration to a statesman, whose vigour and counsels so essentially contributed to the protection and extension of our possessions in this country, to uphold the honour of the British name, and support the credit, the influence, and authority of the government over which he presided.

It is with this impression on our minds that we are induced to solicit your Lordship's patronage and support in furtherance of the object of the general meeting.

In reply to this address from the chairman his lordship was pleased to assure the committee that he concurred warmly in the sentiments they had expressed respecting the venerated character, to whose memory they wished to raise a permanent trophy, and that he should be most happy in being allowed to contribute towards that object. His lordship mentioned that he had been earnestly punctual in his attendance as one of the judges on the trial of Warren Hastings, with whom he had never exchanged even a word or a communication before the conclusion of that impeachment. He believed that he had entered on that duty without prepossession or prejudice; and he trusted that the vote of acquittal which he had pronounced on all the charges, was conscientious. Of this he was sure, that all which he had learned since his arrival in this country strongly supported the rectitude of the verdict which he had then delivered.

Calcutta, 20th Sept. 1819.

At a full meeting of the committee for carrying into effect the resolutions of the general meeting of the inhabitants, held at the Town Hall the 13th inst., for erecting a statue to the memory of Warren Hastings,

Resolved, That the proceedings and resolutions of the general meeting be published in the Government Gazette.—Resolved, that the proceedings and resolutions be printed, and copies

forwarded to every station of the army and civil establishment, and recommended to the particular protection of the chief person in authority.—Resolved, That the proceedings and resolutions be translated into Persian, Bengalee, and Hindoostanee, for general circulation to the native inhabitants under this presidency, and that Mr. Wynch be requested to prepare the translations.—Resolved, That the principal authority at each station be requested to collect the local subscriptions, and to remit the amount to the treasurers, Messrs. Palmer and Co.

J. P. LARKINS, Chairman.

SHIPPING INTELLIGENCE.

Aug. 31.—H. C. ships *Carnatic* and *Thomas Grenville*, from Madras 27th inst.

Sept. 5.—H. C. ships *Princess Charlotte of Wales* and *Marquis of Wellington*, from England 24th May. Passengers per *Princess Charlotte of Wales*: Mrs. Sherlock, Pemberton, and Brown; Misses Keys, S. Keys, and Sherlock; Col. Robinson, Lieuts. Watson and Mellis, Ensigns Murray and Hartly, and Surgeon J. Featherstone, H. M. 24th foot: Capt. Holford, H.M. 59th foot; Capt. Husband, Lieut. O'Brien, and Mr. Sherlock, Paymaster, of H. M. 87th foot; Lieut. Morgell, and Cornet Robinson. H. M. 8th Lt. Dragoons; Captains Dickson, Andore, and Pratt, N.I.; Lieut. Pemberton, and Cadets Garrett, Wilson, Griffith, Stevens, Shortland, Temple, and Dalzell; Mr. Franklin, volunteer, H.M. 24th (regt.; Messrs. Gardner, Ashmore, and Robertson, free merchants; Mr. Mayne, free mariner; Messrs. Ross, Hammond, and Freeman, pilot service.

Sept. 9.—Greenock, M'Larty, for Greenock.

The *Windermere*, Williams, which sailed from Calcutta for Liverpool the 28th August, has put back to repair, having experienced severe gales in the river.

BIRTHS.

July 2, the lady of Capt. John White, of Chittagong, of a daughter....5, the lady of Capt. Robt. Allan, of a daughter....22, at Seetapore, the lady of Lieut. col. Shapland, C. B. 2d batt. 25th N.I. of a daughter....24, at Cawnpore, the lady of Lieut. C. D'O. Aplin, of a son....*Aug. 9*, at Bareilly, the lady of Lieut. J. J. Hamilton, 4th N.I. of a son....12, at Bhaugulpore, the lady of W. J. Lemarchand, of a son....Same day, at Coel, the lady of Capt. G. D'Aguilar, 13th N.I. of a daughter....25, at Shah Jehanpore, near Bareilly, the lady of M. T. Wish, Esq. of twins....26, at Chowringhee, the lady of the Hon. J. E. Elliot, of a son....31, the lady of C. A. Catchick, Esq. of a

daughter....*Sept. 1*, Mrs. J. Isabella D'Agular, of a son.

MARRIAGES.

July 11, at St. John's Cathedral, Capt. W. Deller, country service, to Mrs. J. Tapson, widow....13, at Cawnpore, Mr. J. H. Love, steward, artillery, to Miss E. Greene....14, Capt. W. Croker, H. M. 17th foot, to Miss E. Stokes....Same day, M. A. Aganoor, Esq. third son of A. S. Aganoor, of Bombay, to Miss M. Sarkies, third daughter of the late Johannes Sarkies, Esq....19, Mr. C. Lefevre, to Miss M. Hall, eldest daughter of H. Hall, Esq....21, J. C. Burton, Esq. to Miss E. C. Farquhar....23, at the Cathedral, Mr. John Poat Reynolds, Assist. surg., H. C. service, to Miss J. Middleton....24, at Patna, Mr. W. G. Burnet, son of Lieut.col. J. Burnet, to Miss S.W. Jacob....28, at St. John's Cathedral, Mr. T. Forth, apothecary H. C. service, attached to H.M. 17th foot, to Mrs. E. Edgeworth....*Aug. 20*, at Benares, Lieut. R. S. Sutherland, Bombay establishment to Miss Robeson....23, at Dum Dum, W. Harris, Esq. to Eliza, second daughter of the late Maj.gen. Sir J. Horsford, Bengal artillery....24, at the Cathedral, Lieut. Caine, H.M. 17th foot, to Miss M. Keene, daughter of the late J. H. Keene, Esq....*Sept. 11*, T. Boulton, Esq. of the firm of Richardson and Boulton, to Miss S. Densdale....13, at the Cathedral, T. V. Newton, Esq. to Miss A. Lumsdaine, daughter of Jas. Lumsdaine, Esq. H.C. service, Bencoolen.

DEATHS.

Dec. 29, 1818, at Rewarrie, Lieut. J. Francis Appack, 1st bat. 28th N.I....*March 5*, 1819, at sea, Capt. G. Hunter, of the Commissariat....*April 30*, at Hossainabad, of the cholera, Capt. J. Jones, 7th L.C....*June 6*, at Gya in Bengal, of the jungle fever, Maj. Colin Campbell, of the 4th regt. N.I. and on the 8th, two days after, Mrs. Campbell, his widow....16, at Futtighur, Miss M. A. Davies, aged 8 years....21, at Nussurabad, of a fever, Capt. M. C. Dunbar, of the Commissariat....25, at Saugor, Brev. Capt. J. A. Holmes, 13th N.I....30, at Sehore, W. Gerard, Esq. assist.surg. attached to the political mission at Blopal....*July 3*, at Dacca, J. Esaw, Esq. an old resident of that place, but formerly of Rungpore....7, of the cholera, at Nussurabad, in Rajpootana, Lieut. Cauty, qr. mast. 2d bat. 19th....Same day, at Nurdah, in the district of Bhaugulpore, Mr. J. Clark, son of Capt. Alex. Clark, of Inverness....8, at his residence in the Bow Bazar, C. Lambert, Esq....10, at Dinapore, Miss E. Adair....14, Capt. R. Rayner Young, officiating deputy secretary to government in the military department, aged 81 years....19, at Pursewauk, Mr. J. F. Zacher-

pel, conductor of ordnance on the Madras establishment....22, at Dacca, Mrs. C. E. Eweler....23, at Sylhet, Henry Raitt, Esq. resident at that station....24, on the river, near Budge Budge, Lieut. G. C. Coote, 1st bat. 20th N.I....25, at Furruckabad, W. Rennell, Esq. collector of government customs at that station, youngest son of Major Rennell....26, in childbed, E. Woutersz, wife of Mr. J. H. Woutersz....28, Mr. T. Taylor, seal engraver, aged 60 years, a very old inhabitant of Calcutta....29, Mr. J. Chalk, master in the pilot service.... In July, at the presidency, W. Fallowfield, Esq. garrison surgeon of Bangalore.... Aug. 1, at the house of Dabols de Sarau, Esq. Chandernagore, Emily Lydia, infant daughter of Capt. L. Shaw, 18th N.I.... Same day, at the age of 68, Mrs. J. Vickers....8, at Hoshungabad, of a fever, Serj. Major T. Noble, 1st bat. 2d reg. and his two eldest children....23, at Calcutta, of the cholera, Mr. W. Doll, chief mate of the Stockton....27, at Dinapore, troop qr. mast. P. P. Gillis, late of H. M. 24th Lt. Dragoons.

MADRAS.

CIVIL APPOINTMENTS.

Aug. 21, 1819.—Hon. L. G. K. Murray, junior member of board of trade.—Mr. J. Gwatkin, export and import warehouse keeper.—Mr. J. B. Pybus, sec. to board of trade.—Mr. W. R. Taylor, dep. sec. to board of trade, and assist. to superintendent of stamps.—Mr. H. W. Kensington, assist. to mint master.—Mr. D. Elliot, register to zillah court of Chingleput.

Sept. 28, 1819.—Mr. H. Chamier, senior dep. sec. to board of revenue.—Mr. E. Unthoff, jun. do.—Mr. H. Mortlock, dep. Persian translator to government.—Mr. W. Hudleston, jun. dep. register to court of Sudder and Foujdarry Adawlut.—Mr. J. F. Thomas, head assist. to register to the court last named.

GENERAL MILITARY REGULATION.

Aug. 9.—The medical pupil establishment, which was limited to thirty, is augmented, to receive forty boys for professional instruction.

MILITARY APPOINTMENTS AND PROMOTIONS.

Aug. 18.—Capt. J. F. Gibson, Mad. Eur. reg. to command 1st extra bat.—Lieut. P. Brown, Madras Eur. reg. to be adj. vice Fenwick.—Lieut. T. Walker, 4th N.I. to be adj. to 4th extra bat.—Lieut. R. Marklove, 9th N.I. to be interpreter and qr. mast. 2d bat. vice Rodger.—Lieut. N. L. Austin, 10th N.I. to be interpreter and qr. mast. to 1st bat. vice Jourdan.—Lieut. G.

B. Tolson, 10th N.I. to be adj. to 1st bat. vice Austin.—Lieut. R. Gordon, 13th N.I., to be adj. to 2d bat., vice Bently.—Lieut. W. M'Leod, 18th N. I., to be adj. to 1st bat., vice Watkins.—Lieut. D. S. Maitland, 19th N.I., to be interpreter and qr. master to 1st bat., vice Kippen.—Lieut. E. Dickson, 19th N.I., to be adj. to 1st bat., vice Maitland.—Sen. Assist. Surg. R. Sladen, to be full surgeon, vice Fallowfield.—Surg. S. M. Stephenson, to the garrison of Bangalore, vice Fallowfield.—Assist. Surg. J. Dalgas, to the medical charge of Zillah of Salem, vice Sladen.—Mr. G. Wilson admitted an assist. surgeon.—Lieut. G. Muriel, 2d bat. 8th reg. to join the detachment of the Madras European regt., under the command of Capt. Simpson, at the presidency.

PENSION AND GRANT TO THE FAMILY OF A NATIVE OFFICER.

Aug. 18.—The commander-in-chief having submitted to the Governor in council the circumstances attending the death of Soobudar Cheyn Singh, late of the 2d bat. 4th N.I., who was attacked and slain while in the act of conveying a flag of truce and summons to the Killudur of Sholapoor, on the 9th May 1818, having been selected for this charge from his exemplary character and known zeal, and who gallantly displayed on the occasion, though fired at by some Arabs on approaching the gateway, the same undaunted mind, and the same fidelity and devotion, for which he had been conspicuous throughout his career; the Governor in council, in consideration of the valuable and important services rendered by the deceased, was pleased, under date the 8th May, to resolve that a pension, equal to the full pay of his rank, should be granted to his nearest heir, Kaval Kashim, for life.

The Governor in council further considers on the family of the late Soobudar Cheyn Singh, a grant of 30 Canies of cultivated nunjah land, on shotrium tenure, in Digapilly cum Mhimundalum, in the northern division of Arcot, for three lives.

RELATIONS WITH THE NATIVE POWERS.

Political—Official.

Auzum Jah.—Proclamation.—“It is hereby proclaimed, under the sanction of the most noble the Governor-gen. in council, that his highness the Prince Auzum Jah, Omdut ool Omrah, Mokhtar ool Moolk, Roshun ood Dowlah, Mohumud Moonwur Khan Buhadoor, Buhadoor Jung, the eldest legitimate son of his late highness the Nabob Azeem ul Dowlah Buhadoor, has succeeded to his deceased

father in the rank and title of Nabob Soubahdar of the Carnatic."—Published at Fort St. George, the 11th Sept. 1819.

LOCAL AND PROVINCIAL.

Ball at the Mount.—On the evening of Sept. 23, the Mount afforded a gay and animating scene. The officers of the artillery stationed at that cantonment, gave an elegant entertainment at the new Mess House, to the Mount Society, and a large circle of fashionables from the plain. The lively dance commenced soon after nine o'clock, and was kept up with vivacity. The supper tables were covered with a profusion of delicacies, and the wines were excellent and well cooled. The ladies did not leave the happy meeting till half past four, and a few convivia remained to recount the pleasures of the evening over the sparkling glass, till the sun was high in the heavens.

Tribute to the Memory of Dr. Mousley.

—Sept. 4. The date of the archdeacon's death may be seen in the obituary. He died in the forty-eighth year of his age. His remains were interred on Tuesday evening in St. George's burying-ground. Many will lament the premature death of Dr. Mousley, though, probably, but few can duly appreciate so excellent a character. He was mild and unaffected in his deportment and conversation; cherished a benevolent and charitable disposition, and evinced a simplicity of manners, often the attributive of transcendent merit.—As a member of the church of England, the archdeacon was firmly attached to its tenets, but he tempered his opinions on this, as on all other subjects, with the meekness of Christian charity; his profession of religion was, in a word, that which is best calculated "to turn many to righteousness."—As a scholar he was "a ripe and a good one," and to the last moment of his life employed his leisure in literary acquirements, directing his attention particularly to those branches of learning, which would best serve the cause and illustrate the religion of his Heavenly Master.

At a meeting of gentlemen who knew him well, held on the 24th Sept., the hon. Sir John Newbolt in the chair,—it was resolved, that a monument be erected to commemorate the public and private virtues of the late learned and pious Dr. Mousley, the first archdeacon of Madras. A committee was appointed to complete this design; and a subscription opened for receiving sums of not less than thirty nor more than a hundred rupees.

SHIPPING INTELLIGENCE.

Arrivals.—Aug. 31.—Lloyd, M'Pherson, from London 11th Feb.—Sept. 16.

Asiatic Journ.—No. 51.

H. C. chartered ship Almorah, Capt. Winter, from the Downs 26th May.—Passengers for Madras: Mrs. Cordiner, Mrs. Nicholson, Miss Calder, Miss Brown, Mr. M. Cordiner, surg., Capt. H. Ross, Mr. A. Cheap, writer; Mr. G. B. McDonnell, and Mr. Robt. Wright, assist. surg., and Mr. D. L. Arnoth, cadet.—For Bengal: Mr. T. P. McGregor... 20, Aurora, Earl, from Calcutta, 2d inst.—Passengers: Mrs. Hodgson, Col. Hodgson, Capt. Blacke, H.M. 24th regt., Lieut. Home, H.M. 86th regt., and J. E. Davies, Esq.... 22, William Miles, Beadle; from the Downs 16th May.—Passengers for Madras: Mrs. Sherson, Mrs. C. H. Higginsou, Misses D. Sherson and G. Sherson, Capt. Walker, 10th N.I., Capt. Scott, 15th do., Messrs. G. A. Underwood, C. Richardson, C. Leslie, J. B. Puget, and R. Alexander.—For Bengal: Mad. de l'Etang, Misses L. Pattle, M. Pattle, Bayley, Burck, L. Burck, Ford, and Ridge, Maj. Ridge, 4th N.C., Mr. J. Pattle, Mr. C. Haley, Messrs. E. S. Ellis, J. A. Campbell, D. Campbell, T. Johnson, C. Ridge, and F. Ridge.... 24, Bengal Merchant, from Calcutta.—Passengers: Mrs. Balston and child, Maj. Waugh, Capt. Wallis, H. M. 46th regt. Mr. Assist. surg. Edwards.

Departures.—Aug. 21, Bacchus, Parkin, for London.... Sept. 5, Mary, Scott, for London.... 18, The Almorah, for Bengal.

BIRTHS.

June 25, at Bangalore, the lady of Capt. S. S. Gummer, 23d N.I. of a son.... 26, at Secundrabad, the lady of Capt. Tolfrey, 1st bat. 1st N.I. of a son.... 27, at Pondicherry, the lady of L. Fondclair, Esq. of a daughter.... 28, at Bangalore, the lady of Capt. Benj. Blake, 1st bat. 23d N.I. of a daughter.... 29, at the Presidency, the lady of Lieut. Fullerton, Eng. of a daughter.... July 2, at Pondicherry, the lady of J. Benjamin, Esq. of a son.... 16, the right hon. Lady E. M. Murray, of a son.... 17, the lady of Lieut. col. Blacker, C.B., qrmast. gen. of the army, of a son.... 25, at Tellicherry, the lady of T. H. Baber, Esq. judge of the provincial court in the western division, of a son.... Aug. 24, at Cuddalore, the lady of P. Boyd, Esq. of a son and heir.... 25, the lady of Col. Muat, of a daughter.... 26, Mrs. G. Anderson, of a daughter.... Sept. 2, at Bellary, the lady of the Rev. W. Reeve, of a daughter.... 6, at St. Thomé, the lady of Lieut. and Adj. J. W. Cleveland, 2d bat. 19th N.I. of a son.... 9, at the hon. Sir E. Stanley's, Mrs. Bontein, of a son.

MARRIAGES.

July 14, C. M. Bushby, Esq. civil service, to Mary Catherine, eldest daughter of the late Col. A. M'Cally, Madras estab.

VOL. IX. 2 R

.... 15, at the Black-Town Chapel, Mr. W. Childs, merchant, of the firm of Laird, Maggs, and Childs, to Miss M. J. Erskine.... Aug. 2, the Rev. W. Roy, chaplain of Masulipatam, to Anne Catharine, eldest daughter of Evelyn J. Gascoigne, Esq. dep. mast. attend.... Sept. 9, at the Armenian church, G. A. Avetick, Esq. to Miss C. Burguez.

DEATHS.

July 28, at Tranquebar, Col. Strecker, of his Danish Majesty's service.... Aug. 17, at Purneah, of a bilious fever, John Maxwell Davidson, Esq. civil surg. of that station, aged 28.... 19, at Masulipatam, H. J. West, son of Lieut. H. Newman, 20th N.I.... 24, at Chittledroog, Mr. W. Jackson, dep. com. of stores.... 28, at Cochín, the lady of Capt. J. D. Stewart, master attendant at that place.... Same day, at Wallajahbad, Gr. mast. J. Park, H. M. Royal Scots.... 29, at Connatore, on his way to Madras, Maj. D. Carstairs, 1st bat. 8th N.I.... Same day, at Madura, the infant daughter of G. F. Cherry, Esq.... 31, at Wallajahbad, Lieut. and Adj. Brody, 2d bat. 24th N.I.... Same day, at his house, Madras, the Rev. J. Mousley, D.D. archdeacon of Madras.... Sept. 4, at the Presidency, of a liver attack, Lieut. G. M. Smith, 5th L.C.... 5, at Vepery, of the cholera, Mrs. S. Selby.... 6, at Madras, Lieut. col. J. C. Stokoe, of the 4th Nat. Vet. Bat.... 6 and 7, at Trichinopoly, Louisa, in her third year; Sarah, an infant of five months; and Mary, aged 18, daughters of Capt. C. A. Walker, 18th N.I. and maj. of brigade of the southern division. Thus within twenty-four hours, two affectionate parents were bereaved of their whole offspring.... 7, Mrs. C. E. Reily, relict of the late Capt. Reily, Madras estab. 13th, Capt. R. Simpson, 16th N.I. 17. Mons. P. de Rede, an old French merchant.

BOMBAY.

Political.—Unofficial.

Extract from Original Correspondence, Bombay, Sept.—"Of local news we have but little. Sir C. Colville is daily expected: the augmentation has not yet taken place. Two regiments of cavalry, with three regiments of infantry, are expected to be included in the new arrangement. Capt. John Lewis, who sent home his wife lately, died a few days ago at Poonah. Col. Kenny died not long ago, and Lieut. Baird, of the 5th, only a few days since in Landrish, where the 67th have lost, in a few weeks, Col. Maxwell, Major Owen, and Major Benjafield, in addition to one or two officers of junior rank they lost before. An expedition is ordered for the Gulph, the

47th, 65th, 1st, 2d, under Hogg, a company of artillery, and one of pioneers from the force under the command of Sir W. Keir; a staff for Candiesh have passed council; Stephen Whitehill goes as assist. adj. general; Wilson, from the commissariat, as assist. qr. mast. general; young Baillie succeeds Whitehill at Poonah. An additional troop of horse artillery is talked of. Sir Evan has been, and is frequently very ill, but labours in official duties to the last; he certainly will not go away before October. After the rains it is supposed the Deccan force will be employed in accommodating the differences in the Nizam's districts."

MILITARY APPOINTMENTS AND PROMOTIONS.

All the cadets of the season 1817, below Lieut. Humphrey Lyons are promoted to fill existing vacancies, and finally posted to corps as specified opposite their respective names, viz.

Lieuts. C. Crawley, 2d N.I.; G. White, 10th; L. R. Home, 7th; A. J. F. Sten-ton, 1st; E. T. Jones, 6th; E. W. Jones, 2d; R. Ord, 2d; J. W. Robertson, 4th; W. Fonquet, 10th; J. H. Irwin, 10th; J. Fawcett, 3d; V. F. Kennett, 11th; G. P. Lemesurier, 7th; E. Dumaresq, 4th.

The undermentioned cadets for the season 1818 are admitted on the establishment from the date of their arrival. Cadet Johnstone for cavalry is appointed an acting cornet, and those for infantry promoted to ensigns and lieutenants to fill existing vacancies, and permanently posted to regiments as follows:—Lieuts. T. Gidley, 6th N. I.; J. Hardy, 1st or gr.; O. Gidley, 11th do.; G. W. Blachley, 7th do.; S. J. Smith, European; B. Seton, 8th N.I.; C. R. Wright, European; J. C. Peyton, 5th N.I.; F. Sanderson, 8th do.; J. G. Lascelles, 1st or gr.; W. Reynolds, 6th do.; E. E. M. Willoughy, 9th do.; A. J. Bartlet, 9th; W. W. Dowell, 5th.

Aug. 12.—Maj. A. Aitcheson, having returned from the Cape of Good Hope, will resume charge of the office of military auditor general, and his seat at the military and clothing boards.

Sub-conductor Thomas Westford to the rank of conductor of ordnance

Assist. surg. Gibson at the disposal of the hon. the commissioner in the Deccan.

Aug. 17.—Assist. surg. Glenn to the medical duties of the H.C. cruiser Ariel.

LOCAL INTELLIGENCE.

Naval Architecture.—On the 5th of Sept. a new frigate, called the Seringapatam, built for his Majesty's service, and pierced for 46 guns, was floated out of Bombay dock. She is constructed on a theory calculated to combine the greatest stability with the least possible resistance to her sailing; and considered, from the

durability of the timber and the strength of the building, to be one of the most formidable ships of war, of her class, known. The carved work on the prow appears chiefly designed in compliment to the natives of Hindoostan, and represents the Mysore Rajah, attended by his kitta-sol bearer.

Hurricane in Kutch.—A Madras paper of Oct. 9, states, that there had been a dreadful hurricane in the western part of this country. It lasted one day and two nights; every tree has been torn up by the roots, and every kind of cultivation laid waste; towns and villages have been deluged, and all perfectly destroyed. But few people have lost their lives; cattle, however, of all descriptions, excepting buffaloes, have in many places been nearly extirpated; the water generally, in the open country, was running four feet deep, and carts in the fields were carried away many miles, by the force of the wind. The hurricane had not been felt at Bhooj up to the 29th Sept., but they had experienced eight days of high wind, rain, and such constant clouds, that the sun was a stranger to that capital. The rains, though not heavy, had yet been constant, since the 12th July: not a seed of cotton had been sown up to the former date, whilst the grain crops had rotted.

The late Earthquake.—The advantages to science from collecting the accounts of various observers at distant places, have been stated in a former number. The annexed are the more valuable, as they contain traces that many of the writers exercised great intelligence with unusual presence of mind.

Surat, 17th June.—"At 20 minutes past seven yesterday evening, I felt a strange trembling sensation; I looked up, and observed the wall shades shaking violently and the chandeliers swinging. There was not a breath of air, though not a minute before the wind was blowing very pleasantly. I ran down stairs out of the house, fully expecting it would fall, but this not happening, I ventured up stairs again, being desirous of observing the barometer.

"The quicksilver was moving up and down rapidly, but this was occasioned merely by the motion communicated by the shaking wall to which it was suspended. I remained, however, no longer than was absolutely necessary to observe this, and ran down again, my speed not a little accelerated by the increased velocity in the movement of the wall shades and chandeliers, the latter of which swung so much as to throw all the tumbler glasses off their stands, against the sides of the shades. When I reached the open air, the earth still moved, and it is my belief

that the shock must have lasted nearly a minute and a half; I did not return into the house for some minutes after the trembling ceased. When I did so, I went directly to the barometer, but no change had taken place in it. It remained as before the earthquake commenced; the thermometer at 83."

Broach.—On the 16th June, about 19 minutes past seven in the evening (the time corrected by observation), a violent shaking of the earth was perceived throughout the town of Broach; such of the houses as are elevated, and at all loosely built, creaked like the masts and rigging of a ship in a gale, the venetians and window-frames rattling violently, and the buildings threatening immediately to fall; a considerable lateral motion was impressed on every thing that admitted of it. After this more violent concussion had lasted a minute or upwards, it was succeeded by an oscillatory motion of a more equable character, which continued for more than a minute and a half, making the whole period of the convulsion nearer 3 than 2½ minutes. The direction of the vibrations of objects was between west and east; and this direction was distinctly marked in Mr. Shubrick's garden by the projection of some water from the brim of a large earthen jar, two or three feet to the eastward of it; the vessel is about two feet high, and about the same diameter at top. After the commotion, the water stood about five inches below the brim, and this is of course the height that some of it must have been raised to escape over the side.

It is remarkable that those in palanqueens were scarcely, if at all, sensible of the convulsion, and two gentlemen who were in a carriage without springs, were so little aware of it, that they were not easily persuaded that any thing extraordinary had taken place. A gentleman riding through a narrow street at the time, was not conscious of the motion in his own person, but was alarmed by seeing the houses on both sides of him shaking violently, the tiles falling from the roofs, and the people, with one instinctive movement, quitting them and flying to the open spaces.

On the 17th, at one minute before 10 in the morning, another shock was perceived, but it was over in an instant, and appeared to consist of two slight undulations; four minutes afterwards there was another, still slighter.—There was nothing unusual in the state of the atmosphere; the day had been cool and showery, Fahrenheit's thermometer ranging from 81° to 85°.

Ahmedabad, June 18.—On the 16th June, a few minutes before 7 o'clock P.M. the city was visited with an earth-

quake, of unusual violence and duration for this part of India. It commenced gradually with a slight trembling of the earth, attended with a rumbling noise : this increased every second, and was succeeded by a strong rushing noise, with a violent undulating motion, so that it was with difficulty we could keep on our legs. At this time, all the disagreeable sensation was experienced of being tossed in a ship at sea in a swell, and the rocking was so great, that every moment we expected the earth to open under our feet. From its commencement to the termination of the shock, it could not have been less than four or five minutes. The sky was overcast, dark and cloudy, and the thermometer an hour before was at 90°. Nothing peculiar, however, was observable which was not to be apprehended at this season of the commencement of the monsoon, which set in mildly ten days before, though little rain had fallen three or four days previously. To assist philosophers in accounting for this wonderful phenomenon of nature, they should be informed of the state of the weather for the last twelve months in the province of Guzerat, as compared with former years. The rains of 1818 were late, and at the close immoderate. The cold season exhibited ice it was so cold, and the hot season was actually insufferable. Although the present rains have set in mildly, and without much violent thunder and lightning, yet a great quantity of rain has fallen, especially to the northward of this. The river Sabarmuttee, which runs under the walls of Ahmedabad, had a high fresh in it, which rendered it impassable for many days before the shock, a circumstance quite unusual at this early period of the monsoon.

This city is justly celebrated for its beautiful buildings of stone and other materials, and was not less so for the famous shaking minarets, which were admired by every stranger. Alas ! the devastation caused by this commotion of the earth is truly lamentable. The proud spires of the great mosque, the Juma Muzjid, erected by Sooltan Ahmud, the king of Guzerat, and the founder of the city of Ahmedabad, which have stood nearly four hundred and fifty years, have tumbled to the ground, within a few yards of the place where they once reared their heads ! The mosque itself has sustained less injury than could have been expected, and the handsome arch which divided the minarets has escaped unhurt. Another Muzjid, of elegant structure, which lies to the left of the road leading to the Shahee Bagh, denominated the Beebee's or Unchunt Koonkee ke Muzjid, has shared the same fate. A gentleman while riding out saw the minars come down : the tops were thrown to a dis-

tance, and immediately afterwards the stones came tumbling down one after another. The only remaining shaking minarets, which are at all worthy of notice, and much inferior to the others, have, I hear, been sadly fractured ; they are situated in the Goompteepoorra, to the east of the city, outside the walls. The mausoleums (Rozas) and places of Moohumudan worship have suffered considerably, both in the city and surrounding country. Hindoo temples are few in number, and of recent build in the city, since its conquest from the true believers seventy years ago by the Mahrattas ; consequently a very small number have been damaged. The walls of the Udalut, an old building erected by the Mahrattas, and the palace of the Peshwa's Viceroy in Goozerat, has been much injured, and the walls rent in many places. The magnificent towers also forming the grand entrance into the citadel have been much shaken, and cracked in several places, especially the one on which the flag-staff has been placed. Many private houses have been reduced to ruins ; and it is most fortunate, amidst all our disasters, that not a single life has been lost, and but few accidents.

Between the hours of 12 and one the same night, we experienced two or three slight shocks, and the following morning (the 17th) another at six. At a quarter before 10 we had one very severe, which shook the houses and caused the windows and doors to rattle violently. We were now on the alert, and quitted our houses in haste : but the shock did not continue above a few seconds, and was trifling when compared with the one of the previous night. At half past 10 o'clock we were again visited slightly, and at intervals during the whole of the day. The last which I felt occurred about half past 12 in the night, and since then I cannot say that I have experienced any more, although fancy has frequently led me to pause, and expect a return of this terrible visitation.

Kaira.—Further extract of the letter from Ahmedabad : " reports from Kaira mention, that the grand shock was experienced there 22 minutes after us, and that it lasted only 37 seconds ; two natives were killed by the falling of their houses, and a good deal of damage has been done there. The Adawlut has suffered, and the walls rent : the Jain Temple opposite to it has also received a terrible fracture. With respect to the difference of time between the two places, I do not know whether it is exact or not. Our watches vary much, having nothing but the sun and Bombay calendar to regulate us, which is seldom looked at ; it however tends to shew that the course of the earthquake from this was south-

erly. Kaira is distant from Ahmedabad eighteen or twenty miles."

Jelilsheer.—Letters thence received in the camp at Bhooj, state that the earthquake was severely felt in that place, and the loss of lives terrible. The fort and town are reduced to ruins; many of the people killed were already out of doors, which is usually considered a situation of comparative safety. A marriage was about to be celebrated in a rich man's family, and the casts had assembled from various distant quarters; the shock occurred when they were feasting in the streets, and upwards of 500 of the party were smothered in the ruins of the falling houses.

Surat, 17th June.—At 20 minutes before eight yesterday evening, the city of Surat, its vicinity for some miles round, and the opposite banks of the Taptee, were visited by the phenomenon of an earthquake in a very awful degree. The vibration of the couch I was lying on was so great that I was glad to get off of it; the house was considerably agitated, the furniture all in motion, a small table close to me kept striking the wall, and the lamps swung violently. I ran down stairs and got out of my house as fast as possible. This occupied about the space of three minutes. On getting on the outside, I found a number of people collected, gazing with astonishment at my house, which stands alone, and was so violently agitated that I expected it to fall down. The earth was convulsed under our feet. The shock lasted about five or six minutes, and appeared to me to run from east to west. There was not a breath of wind, and the sky was serene.

On enquiry this morning I find that some damage has been done. At the village of Omer, about two miles west, several houses were thrown down, and one side of a Parsee pagoda fell down; report says one man was killed. I likewise felt two slight shocks about half past 8 last night and 10 minutes past 10 this morning. This last shock stopped my watch. The glasses containing the oil in the lamps were upset in several houses, and the water in the well of the jail, which is ordinarily about four feet from the surface, overflowed. The water in the river was also much agitated, and the water from the tank in the bazar was thrown out.

Specimen of the English style of a Native.—A correspondent of one of the journals of the presidency, being a native, expresses himself thus:—"Last night I come from office; then we get *durttee up*, ground so much shook; water jar is broken; all women and children run away. No man understand this thing, only God. Lamp is cracked. Goat is gone away; all the persons is much frightened."

Commercial.—Remittance to England at six months, 2s 2d. per rupee; freight to England, £6 per ton, nominal; loose freight, £5.

Exchange on Calcutta.—Bombay rupees 108 per 100 sicca; do. on Madras, par.

Some little variations appear in the price current in the price of cotton, but it is merely nominal, for no business whatsoever is doing in the market.

From Surat and Broach we are informed that the cotton grounds exhibit a very sorry appearance; much of the seed has been washed out of the soil, and a great deal of it must be replaced, when the violence of the rains abate.

SHIPPING INTELLIGENCE.

Arrivals.—Aug. 19, Bombay Castle, Hutchinson, from Liverpool 6th April. —Passengers: J. Hutchinson, Esq. surgeon.... 21, H. C. chartered ship Marquis of Hastings, Capt. Arkcoll, from the Downs 4th May. —Passengers: Lieut. G. Harper, W. W. Willie, cadet.... 27, Diana, of this port, Williams, from Liverpool 22d April. —Sept. 12, Hannah, Heathorn, from the Downs 8th June. —Passengers: Messrs. G. C. Robinson, J. Neville, and B. Buckley.

MARRIED.

Aug. 4, Cornet Potts, H. M. 17th Lt. drag. to Miss M. Hewitt, youngest daughter of M. Hewitt, Esq. of Beverly, Yorkshire.

DEATHS.

June 4, on board the Oracabessa, on her voyage to the Mauritius, Caroline, 2d daughter of T. Norris, Esq. of this presidency.... July 16, at Poonah, Alexander, son of A. Gibson, Esq. M.D. of this establishment.... 17, at the house of her brother the Rev. Mr. Payne, Miss Vibar.

RAJPOOTANEE.

LOCAL.

Extract from a private letter.—"Our bungalows now make a very pretty shew, and the whole station presents a novel and interesting appearance. Our Sudder bazar is indeed growing into a city, and the Banyans and Shroffs, &c. have built many handsome houses, several of which are actually tiled after the fashion of Old England. The climate here is certainly one of the best that I have as yet experienced in India, and the soil is excellent. The latter in most places is full two feet deep, in many parts three and four, and rich beyond idea. For irrigation, however, water, that essential support to vegetation, is wanting, at least in any positive supply that can be at all times available. In rain is reposed the only hope, which cheers the labourer in the

field, and all other people belonging to the country. Last year the rains descended in torrents, and this year also they have been plentiful and propitious. The great lake forms now a noble and extensive sheet of water; all the ground is saturated with moisture, and grain, with every other species of vegetation, is to be seen springing up in every quarter. Fields, waste and desolate before, are now covered with grain and the necessities of subsistence, and the face of the husbandman wears the smile of contentment and thankfulness.

"Such is the present state of this district, at least round about Ajmeer, and on the road to it from our cantonments.

"Round the cantonments there is plenty of amusement for sportsmen, such as coursing the hare, wild duck and goose shooting at Pokur and other lakes, but nothing of this latter sort is to be met with on either of the lakes at Ajmeer. Black, grey, and red partidges are common. Wolves have been found in the ravines, but their appearance at the cantonments is rare. Tigers are to be found not a great way from us; a party was once made to shoot them, but its success was slender, one only having been shot. Jackalls are of course numerous, but the reptiles are most to be dreaded here; viz. the snakes, scorpions, centipedes, &c. The most venomous kinds of serpents are very numerous, and it requires caution to avoid them, as they insinuate themselves through every opening, and get in the way of the unwary.

"Sickness was very prevalent in Ajmeer last month, when I was there, raging chiefly in the city. No case of illness, however, occurred in the Dowlat Baug, where I resided. Fevers were the principal complaints. Fortunately we have had no instance of the cholera lately. A distressing accident occurred the other day, when two European artillery men were out shooting at a large species of bird, something like the pelican; not perceiving a boy and girl that were on the other side of a hedge, in the course of their firing the former was shot dead and the latter wounded. The men bear excellent characters, and the enquiry that is making on the subject will no doubt render it clear, that the melancholy event was purely accidental. I am sorry to state, that our brigadier's lady, Mrs. Knox, is at present unwell, which of course throws a gloom over the pleasures of Nusseerabad."—*Hurkaru*.

LAHORE.

Runjeet Sing, the Lahore chief, has again assembled his army, and put it in motion towards Cashmere. The advance is commanded by his eldest son, Curruk

Sing. This is the most favourable season for penetrating that country; and Runjeet Sing encourages his troops, by assuring them that many of the Cashmere Sirdars will join him and give up the place without making resistance.—*Madras Cour.* June 22.

Accounts from Scind state Runjeet Sing to have conquered Kashmeer.—*Bombay, Sept.*

The expedition to Cashmere was not commanded by Runjeet Sing in person, as before understood, but by one of his confidential chiefs, Dewan Chund. After he had received advices of the conquest of the province, he expressed his intention to proceed thither, but circumstances have since changed his mind, and he is now occupied in making choice of a faithful and able governor.

The shrewdness and prudence, and the military skill of Runjeet Sing are well known; and it is probable that he will render Cashmere even more productive than it has been to the king of Caubul. He has the genius and intrepidity to awe and control a great number of disaffected petty states, which are constantly on the watch to evade the payment of the stipulated tribute. While he lives, his power over those states will most likely remain unimpaired, but in the event of any accident befalling him, the Sik'h empire will in all probability crumble to pieces at once, and be divided into a thousand conflicting interests.—*Calcutta, Sept. 2.*

NEPAUL.

KATMANDOO.

Late Earthquake.—Accounts from the residency at Katmandoo inform us, that the earthquake of the 16th June was experienced in the valley of Nepaul, and continued for some time.

Cholera.—This far-circulating epidemic had reached the same country, notwithstanding the climate of the happy valley is famed for salubrity. Only two cases, however, had occurred at the residency, one of which proved fatal.

CEYLON.

Political—Official.

ARRIVAL OF GEN. BARNES.

On the 19th of July H.M. ship Dauntless, Capt. the Hon. V. Gardner, anchored at Galle, having on board Maj.gen. Sir Edward Barcus, K.C.B. appointed to the staff of this island. The Maj.gen. landed the same day under a salute, and arrived at Colombo on the 21st. His entry into the fort was announced by a salute, and a guard of honor received him at the King's House. On the 22d Sir Edward was, in pursuance of the commands of H.R.H. the Prince Regent, sworn of

his Majesty's council in Ceylon, and took his seat under a salute of 11 guns.

FORT KING.

July 30. In General Orders of this date, his Exc. the Governor and Commander of the Forces records his high sense of the essential services rendered by Capt. King at Attapitiya, where, since the year 1816, he has been employed in establishing a fortified post and cantonment, now nearly brought to a conclusion; in the construction of which Capt. King has displayed considerable professional talent, as well as gained for himself the greatest praise in conciliating the surrounding Kandyan inhabitants, who, in consequence, contributed their voluntary labour in the public service, and between whom and that station the most unreserved and cordial communication has subsisted. As a just mark of commemoration of Capt. King's valuable services and labours, his Exc. directs, that the post of Attapitiya be in future called and styled by the name of Fort King.

CIVIL APPOINTMENT.

Aug. 1.—Barry St. Leger, Esq. to be first assistant in the chief secretary's office.

MILITARY APPOINTMENTS.

July 24.—Notice that H.R.H. the Commander-in-chief at home has approved of Lieut.col. A. Hamilton, on the half-pay 4th West India reg., being appointed aide-de-camp to Maj.gen. Sir E. Barnes, K.C.B. as also Lieut. G. Hutchinson, of the corps of Cavalry, extra aid-de-camp to the Maj.gen.

July 30.—Capt. Cleather, 1st Ceylon reg. to command at Attapitiya in the four Korles, vice Capt. King, of the royal staff corps, whose health obliges him to relinquish the direction of the works at that station.

Political—Unofficial.

REVIEW OF THE CONDUCT OF THE NATIVE CHIEFS.

Ellepoley, the prime minister of the late king of Kandy, and who afterwards held under the British government the title and power of an Adajar, was, on the 6th of March 1818, when the insurrection was fiercest, removed, on account of equivocal appearances in his conduct, to the fort of Colombo, where he and his family are treated with every attention; and it was intended that he should be permanently confined, after the rebels ceased to use his name and authority.—*See vol. VII. pp. 89, 90.*—He is a fine intelligent-looking man, and possessed of considerable talents. Four or five of the Kandyan chiefs, who were leaders in the insurrection, after their profound perfidy had gained them important commands

from the British government, were taken in arms and executed. *See vol. VII. and VIII. passim.*—Others, whose refractory spirit involved them in the unsuccessful revolt, were not long since sent to Mauritius in the Liverpool frigate, for secure custody under diminished restraint. Several inferior rebels are confined in different fortresses on Ceylon. The deposed king of Kandy has, since circumstances required his removal, been a state prisoner at Vellore, on the continent of India. The Pretender, when the revolt was entirely crushed, assumed some humble disguise, under which he has for the present escaped, though several times reported to be captured.

On the other hand, the trying period of the rebellion has been, in respect to many of the Kandyan chiefs who held commands under the British government, a crucible from which their characters for honour and fidelity have come out with refined lustre. To reward them in a conspicuous and impressive manner, Gen. Brownrigg set apart the last birthday of our venerated sovereign which Britons have been allowed to celebrate, to confer upon them, in the midst of the public rejoicings, expressions of approbation and symbols of renown. On this day, after the levee, his Exc. received the native headmen of Columbo, including such of the Kandyan chiefs as are at the seat of government; and invested with splendid gold medals of different gradations, in reward for services performed during the Kandyan rebellion, the undermentioned:

Abraham de Suram, 2d maha modeliar of the governor's gate.

Eknelligodde, Disave of Kurnwelly and Atakolon Korles in Saffragam.

Johannes Jacobus de Saram, modeliar of the governor's gate.

Johannes Poulus Perera, 2d modeliar of the Attepattoo of Colombo.

F. J. de Silva, 2d modeliar of the residency of Kandy.

Don Salomon Dias, modeliar of the Gange hadde and Oodoogahapattoos of the Hina Korle of Colombo.

Marselus Perera, modeliar of the Aloot-coor Korle and Negombo.

George Madoris de Silva Mohotty, modeliar of the Mahabadde.

Don William Adrian Dies, mohandiram of the governor's gate.

His Exc. addressed himself individually to the two first named, when he invested them; recapitulating the exertions and services to government which had induced his Exc. to distinguish them by the presentation of these medals on the behalf of his majesty; and at the close of the ceremony he delivered a general acknowledgment to the others to the same effect.

Medals have been prepared for Don David de Alvis, 3d modeliar; and Don Cornelis, and Cornelis de Fonseca, mo-

handirams of the residency in Kandy; which their absence on duty preventing them receiving from his Exc.'s hands, will be presented by the hon. the resident at Kandy.

These marks of distinction possess a high value in the minds of the natives, and were never better deserved.

LOCAL AND PROVINCIAL.

Aug. 3.—*The Governor and his successor.*—The introduction of Gen. Barnes to the council, officially announced as above, is preparatory to his entering on the office of governor, when Gen. Brownrigg, whom he has been appointed to succeed, goes home. The natives are attending to the cultivation of their lands, and there is a prospect of permanent tranquillity in the country.

Sept. 4.—His Exc. the Governor and Lady Brownrigg were met by Maj.gen. Sir E. Barnes at Maturata, on the 1st inst.: the whole party were in good health on their return to Kandy, his Exc. and Lady Brownrigg proposed to visit the the Dambooi Weharé.

Maj.gen. Barnes commenced his tour in the Kandyan provinces on the 19th Aug. attended by Col. Hardy and Capt. Dawson.

Marriage Feast.—On the evening of the 31st April a grand ball and supper were given by Don David Jeyetilleke Abbe Sirewardene Illangakoon, Maha Modeliar, to his Exc. the Governor, the civil and military servants of H.M.'s government, and all the principal European inhabitants of Colombo, in celebration of his son's marriage with Francina, daughter of Martinus De Saram Wijeyesiriwardene, adjunct mohandiram of the governor's gate. The house of the father of the bride at Wolfendahl, was the scene of this splendid entertainment. At 9 o'clock the ball was opened by Lady Brownrigg, and the hon. R. Boyd. — At 12 his Exc. conducted the bride, who was richly clad, and adorned with a profusion of diamonds, to the supper room, where she sat on his Exc.'s right hand.—About 200 persons partook of this splendid repast in a magnificent saloon erected for the occasion, and brilliantly lighted and ornamented with rich festoons of olas and flowers, according to the beautiful simplicity of Cingalese taste. —At supper his Exc. drank the health of the bride and bridegroom, adverted in forcible terms to the high character and eminent services of the bridegroom's father, who had for so many years been conspicuous for his zeal, fidelity, and attachment to the British government in his high official situation of maha modeliar.

DEATHS.

In July, at Trincomalee, in consequence of the bite of a dog, in the 22d year of his age, Lieut. H. Rushworth, of H.M. ship Liverpool, youngest son of the late E. Rushworth, Esq. of Farrington Hill,

Isle of Wight.... 14, at Colombo, Mrs. Isabella, widow of Capt. J. Brohier, aged 60.... 23, at Jaffnapatam, Mrs. B. Hunter, aged 61.... 26, at Colombo, Assist. surg. R. Thin, M.D.H.M.'s 2d Ceylon regt.

PENANG.

DEATH OF COLONEL BANNERMAN.

General Orders, dated Fort Cornwallis, Aug. 9, convey the melancholy announcement that Colonel Bannerman, late Governor of the presidency at this island, died in the evening of the 8th. In the mingled language of eulogy and regret, this official document records of the deceased, that he was one "whose zeal and anxiety to promote the public welfare were ardent and unceasing, and whose useful and honourable labours, marked alike by integrity and every manly virtue, were not confined to the sphere of this presidency, but have been exemplified, and often publicly appreciated, during a period of upwards of forty-three years, passed in the service of the Hon. East-India Company, in various stations of difficulty, honour, and responsibility."—His funeral was celebrated with marks of appropriate honour, and on the receipt of the news at Madras, minute guns, corresponding with his age, 61, were fired from the ramparts.

The *Madras Courier*, to the particulars of the last honours paid to his memory, adds the following notice respecting his life and character:

"It was at this presidency that Colonel Bannerman commenced his career of public life. During a long period of service as an officer of the Madras army, which he ever continued to regard with feelings of pride and attachment, he acquired high honour by his able and successful conduct, both in military and political capacities. He afterwards sat in parliament for a short time; and he was, for many years, an eminent member of the Court of Directors of the East-India Company. In the situation from which he has been now removed by death, he exercised the power with which he was entrusted in a manner worthy of his former reputation. With that active public spirit and inflexible integrity which belonged to his character, he steadily pursued, under circumstances of no common difficulty, the course of proceeding which he firmly believed to be demanded by the honour and true interests of his country. But, distinguished as have been his public services, it is chiefly on the recollection of his private virtues that the memories of his friends will love to dwell. His mind was endowed with every exalted sentiment, his heart filled with every amiable affection by which human nature is capable of being ennobled or adorned."

The Hon. William Edward Phillips has succeeded to the government of the Presidency.

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS.

Mercantile Petition.

Dec. 24. Mr. Irving presented a petition from certain merchants of the city of London, which he stated to be numerous and respectably signed. It prayed, among other things, for a removal of some of the remaining restrictions upon the East-India trade, particularly for an admission of the general merchants of this country to the trade between China and the continent of Europe. But it also prayed for several other measures for the invigoration of commerce, and obscurely alluded to the intended payments in bullion by the Bank, and seemed to depend most on those resources which it was least explicit in designating. It will be enough to give an extract from the speech of Mr. Grenfell, who defended the propriety of resorting to the new currency in bullion, which the petition was understood to deprecate, by those who endeavoured to discover what the subscribers to it solicited.

Mr. Grenfell, in the course of a speech chiefly dedicated to the bullion question, stated as follows:—Having heard, in the course of last evening, that such a petition was to be presented, he made it his business to go into the city this day to make inquiries on the subject, and he would state to the House what was the result. He got into conversation with gentlemen respecting the petition, and for some time he only met one who had known any thing of it before, and that was an honourable member of the House, who had about the same information of it as himself. There was, however, one gentleman who had been applied to to sign it, just as he was leaving town. He very naturally and properly asked what was its nature, and what object had those in view by it who seemed so very active in procuring signatures. The answer given to this inquiry was one which he begged the House to mark. The gentleman replied, "Oh, it is a petition from the other end of the

town; it comes from Lord Castlereagh."

—(*Hear, hear! and laughter.*) "The member for Shrewsbury (Mr. Grey Bennet) moved for inquiry the other evening into the state of the manufactures and the distress in particular districts, which his lordship refused; but he has no objection to go into an inquiry, if it be stripped of all political views." The gentleman to whom this reply was given, said, "I shall have nothing to do with it, and will not put my name to it." After this he (Mr. Grenfell) met with two gentlemen who had signed the petition, and he would state their opinions upon it. One of them said, that he did not know who had signed it, but he considered it a mere milk and water thing (*a laugh*); he put his name to it in the ordinary way, at the request of some friends. The opinion of the other gentleman was still more strong, and shewed the manner in which this petition had been got up. When he (Mr. G.) asked him what was his object in having signed such a petition, he received the following answer in writing:—"I signed the petition to which you refer at the particular desire of a gentleman with whom I deal. He strongly urged me to sign it before three o'clock, as I should be too late. I confess I considered it quite ridiculous (*a laugh*), but as it appeared harmless, I had no hesitation in putting my name to it. I have, however, now no hesitation in stating, that from what I have since heard, I am sorry for having done so, and if it was possible, I would willingly withdraw my name from it. If the allegations in it refer to the state of the currency, I wholly disapprove of them."

Mr. Irving explained.

After Mr. J. Smith, Mr. Ricardo, Mr. Finlay, Mr. Douglas, Mr. Brougham, Lord Castlereagh, Mr. Ellice, Mr. Alderman Wood, and Mr. Alderman Heygate had spoken upon the apprehended compass and object of the petition, it was ordered to lie on the table, and to be printed.

HOME INTELLIGENCE.

DEMISE OF GEORGE III.

Extract from the London Gazette Extraordinary, of the annexed date.—*Whitehall, Jan. 31.*—On Saturday afternoon, at 35 minutes past eight o'clock, our late Most Gracious Sovereign King George the Third, whose strength had gradually declined for some weeks, expired without the least apparent suffering, at his Castle *Asiatic Journ.*—No. 51.

of Windsor, in the 82d year of his age and the 60th of his reign. No sovereign ever possessed in a higher degree the veneration and affection of his subjects, and their grief for his loss is only abated by the unhappy malady which has precluded his Majesty from directing the measures of his government during the nine latter years of his glorious reign.

In the publications from the London and provincial press, in the public addresses to the throne, and in the interchanged sentiments of private circles, which impulsively followed the knowledge of an event causing a nation to mourn, an eloquent flood of grief and eulogy has already been poured forth. Time may dry the springs of the first; but the latter will never be exhausted. On a theme which, in ordinary cases is, of all others, the most monotonous, different organs of public thought and feeling have, in calling veneration to trace a reign of sixty years, run into a rich variety of accessory facts and reflections: this natural and unaffected diversity not merely of language but of matter, is owing to the virtues of the deceased monarch being too numerous for a hundred messengers of condolence to touch them all. But those who sympathized most with the living sufferer during his last years of nominal royalty, will now be the easiest to impress with motives to consolation; the too solicitous guardian had been lost to his people long before his removal to an invisible world.

The *Inverness Journal* urges this dissuasive from prolonged melancholy, now, on his account, in an honest passage, which we subjoin.

We have just received accounts of the death of our excellent old king. We claim a full share in the deep reverence and warm affection with which he was so deservedly regarded by all his subjects, for qualities which made him not less the father than the king of his people. Who amongst them have passed a life which gives a better hope of a joyful hereafter? Considering the lamented state in which his majesty so long lived, and the little hope there existed of recovery, it would be unworthy of the sincerity of the affection we bore him, to say, that we now deeply lament his demise. It is the highest consolation which his family and his subjects can receive, to know, that the utmost and tenderest attention has been paid him, during his affliction, by the Prince Regent, the Duke of York, and other members of the royal family.

The good spirit of his government has not been unstudied; the ability to perpetuate it survives.

ACCESSION OF GEORGE IV.

Further extract from the *London Gazette Extraordinary*.—*Whitehall, Jan. 31.*—Upon the news of this melancholy event arriving in London, the lords of the

privy council assembled yesterday at Carlton-house, and gave orders for proclaiming his present Majesty, who made a most gracious declaration to them, and caused all the lords and others of the late king's privy council, who were then present, to be sworn of his majesty's privy council. And this day, about noon, his majesty was proclaimed, first before Carlton-house, where the officers of state, nobility, and privy counsellors were present, with the officers of arms, all being on foot. Then, the officers being mounted on horseback; the like was done at Charing-cross, within Temple-bar, at the end of Wood-street in Cheapside, and, lastly, at the Royal Exchange, with the usual solemnities; the principal officers of state, a great number of the nobility, and other persons of distinction, attending during the whole ceremony.

The signatures affixed to the act of proclamation were the following: Frederick, William, Augustus Frederick, William Frederick, Leopold Prince of Saxe-Coburg; C. Cantuar, Eldon, C. Montrose, Atholl, Wellesley, Camden, Lauderdale, Chatham, Bathurst, Liverpool, Mulgrave, Melville, Sidmouth, Melbourne, Chetwynd, W. London, Sam. Carlisle, Ellenborough, Charles Manners Sutton, N. Vansittart, Frederick John Robinson, W. Scott, T. Wallace, W. Grant, John Nicholl, R. Richards, Charles Arbuthnot, Robert Peel, W. Sturges Bourne, Charles Bagot, John Leach, C. Abbott, R. Dallas, B. Bloomfield, Ailsbury, George Bridges, Mayor, George Clerk, Christopher Robinson, R. Gifford, J. W. Croker, G. R. Dawson, Wm. Courtenay, W. Curtis, John Eamer, John Perring, James Shaw, George Scholey, Samuel Birch, Matthew Wood, C. Smith, Gerrard Andrewes, R. Hodgson, John Ireland, G. Cockburn, Henry Hotham, Besborough, C. Warren, Thomas Pere. Courtenay, J. S. Copley, H. Banks, C. Flower, John Atkins, John Sylvester, C. Magnay, Robert Albion Cox, John Thomas Thorp, Richard Rothwell, John Edmund Dowdeswell, R. Clark, Henry Woodthorpe, T. Tyrrell, William Borradaile, jun., Thomas Smith, Herbert Taylor, W. Keppel, F. T. Hammond, William Congreve, Newman Knowlys, the Com. Serj. of London, James Bulker, Jos. Whatley, G. Naylor, York.

At the Court at Carlton House, the 30th day of January, 1820, present, the King's Most Excellent Majesty in Council, His Majesty was pleased to make the following declaration:—"I have directed that you should be assembled here, in order that I may discharge the painful duty of announcing to you the death of the King, my beloved father. It is impossible for me adequately to express the state of

my feelings upon this melancholy occasion, but I have the consolation of knowing, that the severe calamity with which his Majesty has been afflicted for so many years, has never effaced from the minds of his subjects the impressions created by his many virtues; and his example will, I am persuaded, live for ever in the grateful remembrance of his country. Called upon, in consequence of his Majesty's indisposition, to exercise the prerogatives of the crown on his behalf, it was the first wish of my heart to be allowed to restore into his hands the powers with which I was entrusted. It has pleased Almighty God to determine otherwise, and I have not been insensible to the advantages which I have derived from administering in my dear Father's name the government of this realm. The support which I have received from Parliament and the country, in times the most eventful, and under the most arduous circumstances, could alone inspire me with that confidence which my present station demands. The experience of the past will, I trust, satisfy all classes of my people, that it will ever be my most anxious endeavour to promote their prosperity and happiness, and to maintain unimpaired the religion, laws, and liberties of the kingdom."

ILLNESS OF THE KING.

The announcement, in a medical bulletin of the 1st. of February, that "the King has been attacked with inflammation on the lungs," alarmed and agitated the metropolis and nation, and it was not until the 10th that the public apprehension was entirely relieved, by an official intimation from the same authority, that "the King is free from complaint."

FUNERAL OF THE LATE DUKE OF KENT.

The body of the deceased prince lay in state a short time at Woolbrook Cottage, Sidmouth. On the 7th of February, commenced the funeral procession towards Windsor; on the 11th, it reached Cumberland Lodge; on the 12th, an additional train of mourners and attendants joined in the last stage of the solemnity, and at night the remains of his Royal Highness were deposited in the family tomb.

FUNERAL OF GEORGE III.

The remains of his late Majesty, lay in state at Windsor Castle from nine in the morning of the 15th of February, to the time of interment. At half past eight in the evening of the 16th, the funeral procession moved from the state apartment, to St. George's chapel. The last offices

of tributary honour and lingering regret, constituted a splendid and grand, a solemn and affecting scene. An official account of the ceremonial, was published in a supplement to the London Gazette of the 19th of February.

EAST-INDIA HOUSE.

Feb. 2.—A Court of Directors was held, when the undermentioned ships were thus timed, viz:

New Ship, *Moir*, and *Woodford*, and *Coromandel*, for Madras and Bengal, to be afloat 28th February, and sail from Gravesend 29th March.

Brothers, and Camden, for Bombay, to be afloat 29th March, and sail from Gravesend 29th April.

New Ship, *James Sibbald*, *Phoenix*, *Lady Raffles*, for Bengal; *Asia*, *Hyperion*, and *Regret*, for Bombay, to be afloat 28th April, and sail from Gravesend 29th May.

Brampton, Providence, and Kirk Ella, for Bengal, to be afloat 27th May, and sail from Gravesend 27th June.

Waterloo, Lady Carrington, *Asia*, *Timandra*, and Richmond, for Bengal, to be afloat 10th June, and sail from Gravesend 10th July.

February 9.—A Court of Directors was held, when Capt. J. B. Sotheby was sworn into the command of the ship *Scaleby Castle*, consigned to China direct.

11.—A Court of Directors was held, when Captain N. Turner was sworn into the command of the ship *Princess Amelia*, consigned to China direct.

18.—A Court of Directors was held, when the under-mentioned Commanders took leave of the Court previous to departing for their respective destinations, viz.:—Captain W. Patterson, of the *Canning*, and Captain J. Stewart, of the *Lady Melville*, both for St. Helena, Bombay, and China.

23.—A Court of Directors was held, when the undermentioned Captains were sworn into the command of their respective ships, viz.—

Captain J. Innis, Prince Regent, and Captain A. H. Campbell, for Madras and China; Captain M. Hamilton, Dunira, and Captain D. M'Leod, Marquis of Huntley, for Bombay and China.

NAVAL AND MILITARY MISCELLANIES.

On the 29th of Dec. Capt. Marjoribanks, for Madras, with his Exc. Maj.gen. Sir T. Munro and suite, sailed from Portsmouth in the *Thomas Coutts*.

On the 6th of January, Rear-admiral Sir H. Blackwood, Bart. and K.C.B., sailed for the East-Indies, in the *Leander*, 58, Capt. Charles Richardson, C.B. to relieve Rear-admiral Sir Richard King, who returns home in the *Minden*.

MILITARY ORDER OF THE BATH.

The list of Companions in Vol. VI. p. 554, received afterwards two official corrections in subsequent numbers of the London Gazette, which at the time escaped our notice. We now insert them.

Extracts from the London Gazette, Whitehall, Oct. 21, 1818.—The following officers (whose names were omitted in former Gazettes), Companions of the Most Hon. Military Order of the Bath :—

Lieut.-col. J. F. Ewart, 67th foot, late of Royal York Rangers.

Lieut.col. W. Robinson, 24th foot.

Maj. T. Amburey, Bengal Engineers.

Oct. 29, 1818.—The nomination of Lieut. col. W. Morrison, Artillery Madras Establishment, to be a Companion of the Most Hon. Military Order of the Bath, as published in the Gazette of the 17th inst. does not take place; it appearing that the rank held by him is official and temporary, and that his permanent rank is only that of captain.

COMMERCIAL NOTICES.

Duty on Cotton Wool.

Treasury Chambers, Nov. 22, 1819. —Gentlemen: I am commanded by the Lords Commissioners of his Majesty's Treasury, to refer you to the 12th sect. of the Act 59 Geo. III. cap. 52, and to acquaint you that there appears to have been an error therein, as it was not intended that the duty of 6s. 7d. per cwt. on Cotton Wool should attach after the 5th January, 1820, on which day the duty of 6s. per cent. *ad valorem* attaches by the 24th sect. of said Act. I am to desire you will cause a clause to be prepared for altering the Act in question, and until the pleasure of Parliament shall be known, you are to desire your officers to abstain from receiving the former duty after the 5th day of January.

S. R. LUSHINGTON.

To the Commissioners of Customs.

N.B. Directions have been given to the Collectors and Comptrollers of the out-posts accordingly.

Return of over-paid Duty on East India Coffee.

Copy of a letter, dated Treasury Chambers, December 22, 1819.—Gentlemen: I am commanded by the Lords Commissioners of his Majesty's Treasury to refer you to the letter of this Board of Oct. 29, authorising you to return the duty of 4½d. per lb. on coffee taken into consumption subsequent to the 9th June, on a certificate from the officers of Excise, that the new duty of Excise has been paid thereon; and to acquaint you, that it is their lord-

ships' intention that this order should apply to East India coffee, on which a duty of 5d. per lb. is to be returned.

(Signed) S. R. LUSHINGTON.

To the Commissioners of Customs.

CONTINENTAL NOTICES.

The Emperor Alexander, it is said, intends towards the commencement of next summer, to visit his provinces bordering on the Caspian Sea. The consort of the Shah of Persia has transmitted by the minister sent to the court of St. Petersburg, a letter to the Empress of Russia, couched in all the extravagance of oriental composition; which, however, was accompanied with some valuable presents, including, among other articles, a necklace of pearls weighing 498 carats.

Irkutsk, Sept. 24, (O. S.)—By accounts received from Kamtschatka, dated June 18 (O. S.), we learn that on the 4th of that month an American merchantman arrived there in twenty-six days from the Sandwich islands. The cargo consisted, besides other articles, of a large supply of provisions, of swine, goats, poultry, water-melons, and potatoes, which were remarkably well tasted and of extraordinary size: some of them weighed 10lbs.

Petersburgh, Dec. 10.—Troops have been embarked lately at Cronstadt, who are destined to occupy the Russian possessions in Asia, and the islands situated on the coast of Kamtschatka, this way being considered as preferable to that hitherto used, of marching troops by Siberia.

Paris, Jan.—The routes from Petersburg to Kamtschatka have been considerably improved. A great number of ships, freighted with skins, set out every year from the north-west coast of America, double the Cape of Good Hope, and bring their rich cargoes to the Gulf of Finland. The Russian colonies are increasing in an extraordinary manner, as well in the eastern parts of Asia as in the west of America, and everywhere the Russians introduce liberal institutions. It is evident that they have in view to seize upon all the commerce of the north-western coast of America, and to induce the natives, who live by hunting and fishing, to furnish them with skins for the Chinese markets. It cannot be doubted that upon this point the Russians have already done much injury to the Americans, particularly in whatever concerns their trade with China, and their traffic with this empire must increase more and more. By the extension of their establishments on the north-west coast of America, they carry on by Asia regular communications between America and Europe.—*Moniteur.*

LONDON MARKETS.

Friday, Feb. 25, 1820.

Sugar.—East-India Company's Sale.—Bengal
ordinary to fine white 38s. a 48s. 6d., yellow 31s.
a 35s., damp 28s. 6d. a 44s., brown 21s. a 25s.;
Manilla strong grey 35s. a 38s. 6d., damp 31s. a
31s. 6d., brown 22s. a 26s. 6d., damp 22s. a 23s.
6d.; Bourbon yellow 27s. 6d. a 33s., brown 26s. a
27., damp 21s. 6d. a 26s.

Coffee.—The demand by private contract this
week has been inconsiderable; the India sale
went at very low rates. Cheribon good ordinary
117s. 6d. a 119s. 6d.; Java pale 129s. 6d. a 126s.
6d.; Sumatra good ordinary 110s. a 114s.; da-
maged 1st class 103s. 6d. a 121s. 6d.; 2d and 3d
105s. a 114s.

Cotton.—The market continues without brisk-
ness, and the India Company having declared
another sale, will tend to depress the market
still farther. The letters from Liverpool, this
morning, state, that extensive sales of Cotton
were made at prices a shade lower.

Daily Prices of Stocks, from the 26th of January to the 25th of February, 1890.

THE ASIATIC JOURNAL

FOR

APRIL 1820.

ORIGINAL COMMUNICATIONS.

MEMOIR OF A PATRIOT KING.

(Continued from p. 216.)

WE were going to cite a passage from the speech when the narrative was suspended.

“ Born and educated in this country, I glory in the name of Briton, and the peculiar happiness of my life will ever consist in promoting the welfare of a people whose loyalty and warm affection to me I consider as the greatest and most permanent security of my throne ; and I doubt not but their steadiness in those principles will equal the firmness of my invariable resolution to adhere to and strengthen this excellent constitution, in church and state ; and to maintain the toleration inviolable. The civil and religious rights of my loving subjects are equally dear to me with the most valuable prerogatives of my crown ; and as the surest foundation of the whole, and the best means to draw down the divine favour on my reign, it is my fixed purpose to countenance and encourage the practice of true religion and virtue.”

The entire address was delivered
Asiatic Journ.—No. 52.

with such exquisite propriety of emphasis, and striking dignity, that it formed the the topic of conversation every where. Quin was known to have given Prince George lessons in elocution : and on hearing from a friend how highly the King's speech was admired, “ Aye,” answered the tragedian, “ I taught the boy to speak.”

In the reign which had just closed, the British arms had triumphed every where, and this tended to diffuse happy feelings and high expectations through the nation ; for it was not then the mark of public spirit to repine at victory ; and had a pretended patriot dared to write and publish a confession, that he had shed tears at the fall of a foreign tyrant and national enemy, overthrown by his countrymen in arms, he had signed his permanent exclusion from any employment in the service of the state, whether the nomination should depend on the approving selection of the crown, or the

sympathizing attachment of the people.

The nation were animated by social exultation, and felt the common pleasure which attends the diffusion of mutual goodwill, confidence, and esteem, through all the classes of a united people. The new sovereign had qualities, personal and mental, of a nature to enhance the popularity which awaited his accession. His graceful and engaging manners diverted the pen of Horace Walpole from its accustomed employ, that of caricaturing scenes at court. The beau of fashionable literature, in a letter to Mr. Montague, introduces us to the levee like a master of the ceremonies, almost forgetting his occupation of jester.

"The young King has all the appearance of being amiable. There is great grace to temper much dignity, and extreme good nature, which breaks out upon all occasions. * * * For the King himself, he seems all good nature, and wishing to satisfy every body; all his speeches are obliging. I saw him again yesterday, and was surprized to find the levee-room had lost so entirely the air of the lion's den. This Sovereign does not stand in one spot, with his eyes fixed royally on the ground, and dropping bits of German news; he walks about, and speaks to every body. I saw him afterwards on the throne, where he is graceful and genteel, sits with dignity, and reads his answers well."

As soon as legislative forms allowed the King to propose some new enactments, he evinced that sincerity had drawn the outline of early promise.

On the 9th of December his Majesty gave up to Parliament the hereditary revenue of the crown, and accepted a fixed sum of £800,000 year, in lieu of it, for the support of the civil list.

Another measure, completed within six months after his access-

sion, was to make the judges independent; of which Blackstone says; "By the noble improvement of the law, in the statute of 1 Geo. III, c. 23, enacted at the earnest recommendation of the King himself from the throne, the judges are continued in their offices during their good behaviour, notwithstanding any demise of the crown (which was formerly held immediately to vacate their seats), and their full salaries are absolutely secured to them during the continuance of their commissions; his Majesty having been pleased to declare that "he looked upon the independence and uprightness of the judges as essential to the impartial administration of justice, as one of the best securities of the rights and liberties of his subjects, and as most conducive to the honour of the crown."

At this period, a rumour prevailed that the King's heart had been deeply touched by the attractions of a young lady, in the highest rank of English nobility, and he was strongly bent on removing every legal obstacle which impeded the indulgence of his affections. The rule, instituted by reasons of state, which on every occasion for a royal marriage contracts a foreign alliance, is a powerful means of guarding against the evils of a disputed succession, which intermarriages of the reigning family with branches of the native nobility have a progressive tendency to cause, as their ramifications become more and more involved. The King consulted his confidential friends on the propriety of the union which he had contemplated; and in deference to their advice relinquished the design, as a sacrifice to the public good. Admitting this piece of private history be true to the extent here stated—and contrasting the bitter disappointment which frequently attends what are called love matches, with the domestic satisfaction and harmony which

rewarded his subsequent entry into the conjugal relation under the auspices of prudence—who will presume to say that the King eventually sacrificed any portion of personal happiness? While the King's attention was directed to some of the foreign courts, for the choice of a consort, a discreet and confidential envoy returned with a pleasing portraiture of the amiable qualities which entitled a princess of the house of Mecklenburgh Strelitz to his eminent regard.

On the 8th July 1761, the King announced to the Privy Council his intention to marry, and on the 7th of the following August the arranged wedding with the late Queen Charlotte was publicly celebrated. In this union, affection was cultivated by principle, and nourished by desert. Tenderness and fidelity are among the obligations contracted by marriage; nor can passion keep alive the mutual desire to discharge duties which reward themselves, without it is allied with honor and virtue. The wisdom of the King's choice was completely proved, in the long course of happiness which he enjoyed with a consort, whose best pleasures, like his own, consisted in the exercise of the domestic virtues: and who maintained inviolate those principles of rectitude which uniformly rendered the British court the most virtuous in Europe, and the best model for heads of families of every degree.

We pass over the splendid details of the coronation, to notice two striking facts illustrative of his late Majesty's habitual piety. On this occasion, when he received the sacrament, he advised with the Archbishop if it were not proper to take off his crown during the solemnity. His Grace hesitated. The King immediately removed it, and placed it beside him, until that part of the ceremony was concluded. On the same night, when he retired to rest, he composed a

solemn prayer, imploring a blessing on his future reign, which was seen on his table the next morning.

The early years of the reign of George III. were distracted by party conflicts of the most virulent nature. These produced changes of Ministry, which demanded from the King the exercise of the strongest forbearance, as well as the greatest address. On the resignation of the first Pitt, in 1761, the King displayed at once the firmness and benevolence of his nature. His Majesty expressed concern at the loss of so able a minister; and to show the favourable sense he entertained of his services, made him an unlimited offer of any rewards in the power of the crown to bestow; at the same time he avowed himself satisfied with the opinion which the majority of the council had pronounced against that of Mr. Pitt. The great minister was overpowered by the nobleness of this proceeding. "I confess, Sir," he said, "I had but too much reason to expect your Majesty's displeasure. I did not come prepared for this exceeding goodness; pardon me, Sir, it overpowers, it oppresses me." He burst into tears.

About this period of his reign, his Majesty had to bear up against a spirit of wilful turbulence, not only amongst the populace, but displaying itself very violently in some municipal authorities, and organs of privileged bodies, which to the dispassionate observation of the present day must present more of the character of licentiousness, than of a genuine love of freedom. The popular commotions which arose out of the factious violence of Wilkes and his adherents, are disgraceful to the faction which excited them; and still more disgraceful to that party of vacant statesmen, who gave them countenance and protection, as a means of weakening and perplexing their political rivals; and degrading, in

a lower key of falling character, to that portion of the misled people whom the two classes of mercenary and ambitious agitators moved like puppets.

In February 1772, George III. lost his excellent mother, the Princess Dowager of Wales. Her popularity was in its origin less founded upon her many good qualities, than upon the opportunities which the dissensions between King George II. and the Prince of Wales, her husband, had presented to factious individuals for extolling her character at the expense of the court, and employing an amiable Princess, unconscious of such a perverted use of goodness, into an instrument of annoyance and insult to her royal relations. As she had been applauded by malice, caressed by antipathy, supported without attachment, and idolized without devotion; so when the misunderstanding between her and George II. was cleared up, and she flourished in the bower of the court, a rose without a thorn, her undeviating course of exemplary virtue could not protect her from the fabrications of calumny. The author of the *Life and Anecdotes of Bishop Newton* has interspersed, in a summary of her character, some facts and remarks, which would be invaluable lessons of public instruction, if an exposure of the manner in which the writers of venal publications in the last reign played upon the feelings of an abused people, might prevent a repetition of the same artifice of an abject delinquency from being attended with profit. We cite the whole passage, hoping it may operate against the unsuspecting entertainment of mercenary libel.

"She was indeed a most remarkable instance of the fluctuation and uncertainty of popular favour: for, from her first coming very young into this country, her behaviour was so discreet and prudent, so courteous and affable,

that she gained the love and esteem of the whole nation: and no princess was ever more admired and applauded than she was, till some time after the death of the Prince of Wales. But the King's (George II.'s) behaviour to her upon that melancholy occasion was such, that she could not with decency support and encourage the faction that was formed against the court: and hence it proceeded, that the tide of popularity, which had risen so high and run so strong in her favour, first began to turn against her. Upon his present Majesty's (George III.'s) accession to the throne, when her influence was believed to be greater, the clamours of faction increased in proportion. The scandalous, but at that time popular, author of *The North Briton*, laid to her charge several things of which she was entirely innocent: and one day, being asked how he could assert such a particular, which he knew was not true. "No matter for that," replied he, "it will do very well for a *North Briton*; the people will swallow any thing." It is by no means an agreeable situation to be made the subject of popular outcry; but conscious virtue will rise superior to all. She would often ask in a morning, "Well, what have the papers said of me?" and would read them and laugh over them; for never was more vile abuse with less foundation: and it is to be hoped she regarded it as little as she deserved it. Her good deeds were more silent and unknown. Never was any one actuated with a truer spirit of benevolence and charity. The sums which she gave away in private benefactions and pensions amounted, as it has been affirmed on good authority, to no less than £10,000 in the year; and the merit of her charities was greatly enhanced by their secrecy. Several families who were relieved by her, did not so much as know who was their benefactor till after her death, when

the current of her bounty ceased to flow. The calmness and composure of her death were further proofs and attestations of the goodness of her life, and she died, as she had lived, beloved and honoured most by those who knew her best."

The King felt a moral indignation against Wilkes, on account of the facility with which he supplied the current ware of marketable falsehood; the sound of this lampooner's name was therefore deemed to be grating to the royal ear. About 1772, the eldest prince of the blood, then a mere boy, having been chid for some boyish fault, took a child's revenge, by stealing to the King's apartment, and shouting at the door, "Wilkes and No. 45 for ever!" His Majesty laughed at the trick with his accustomed good humour.

The American war commenced in 1773. We reserve such reflections as may arise on an impartial review of this subject, for the division of "National Memoranda."

The riots in 1780, which threatened to overturn the foundations of social government, called for the decision of the King to be interposed in so signal a manner, when his counsellors were divided, that the energy of his character is recorded with individual distinction. When the advisers of the Sovereign were in a state of confusion and alarm, bordering on despair, he at once decided upon that necessary resort to military assistance, which effectually repressed the tremendous dangers of a populace, infuriated by seditious leaders to acts of spreading outrage; and the presence of the King's Majesty in Council was eminently felt to be the presence of mind.

At the council on the morning of the 7th of June, the King assisted in person. The great question was there discussed on which hinged the protection and preservation of the capital—a question

respecting which the first legal characters were divided, and on which Lord Mansfield himself was with reason accused of never having clearly expressed his opinion up to that time. Doubts existed whether persons riotously collected together, and committing outrages and infractions of the peace, however great, might legally be fired on by the military power, without staying previously to read the riot act. Lord Bathurst, President of the Council, and Sir Fletcher Norton, Speaker of the House of Commons, who were both present, on being appealed to for their opinions, declared that "a soldier was not less a citizen because he was a soldier, and consequently that he might repel force by force." But no minister would sign the order for that purpose. In this emergency, when every moment was precious, Mr. Wedderburn, since successively raised to the dignity of a baron, and of an earl of Great Britain, who was then Attorney-General, having been called into the council-table, and ordered by the King to deliver his official opinion on the point, stated in the most precise terms, that any such assemblage might be dispersed by military force, without waiting for forms, or reading the act in question. "Is that your declaration of the law, as Attorney-General?" said the king. Wedderburn answering decidedly in the affirmative; "Then so let it be done," rejoined his Majesty. The Attorney-General drew up the order immediately, which the King himself signed, and on which Lord Amherst acted the same evening: the complete suppression of the riots followed in the course of a few hours. Never had any people a greater obligation to the judicious intrepidity of their sovereign!

The second William Pitt came into power in 1783. This was the most important era of the King's life. Never was an English mi-

nister invested with such unbounded power as this great statesman; and never did a servant of the crown better deserve the confidence placed in him.

In November 1788, his late Majesty was attacked by that malady, which has for the last ten years deprived his family and his people of the guidance of his once active and benevolent mind.

The King had a strong presentiment of his growing malady some time before it happened. Four or five evenings previous to his being taken ill, after a private concert, his Majesty went up to Dr. Ayrtton, and laying his hand on the Doctor's shoulder, with his usual benignity, "I fear, sir," said his Majesty, "I shall not long be able to hear music; it seems to affect my head, and it is with some difficulty I bear it." Then, turning round, he softly ejaculated, "Alas! the best of us are but frail mortals."

In the national gloom produced by this visitation, it was necessary to agitate the question of the regency; for the history of the country afforded no precedent for such a case. But just as the form of proceeding was decided, the sudden recovery by the afflicted monarch of self-possession prevented the commission of regency from being opened.

On the 23d of February 1789, Mr. Pitt and Lord Melville were dining with Lord Chesterfield, when a letter was brought to the former, which he read, and sitting next to Lord Melville, gave it to him under the table, and whispered, that when he had looked at it, it would be better for him to talk it over in Lord Chesterfield's dressing-room. This proved to be a letter in the King's own hand, announcing his recovery to Mr. Pitt in terms somewhat as follow:—

"The King renews with great satisfaction his communication with Mr. Pitt, after the long suspension of their intercourse, owing to his

very tedious and painful illness. He is fearful that during this interval the public interests have suffered great inconvenience and difficulty.

"It is most desirable that immediate measures should be taken for restoring the functions of his government, and Mr. Pitt will consult with the Lord Chancellor to-morrow morning, upon the most expedient means for that purpose. And the King will receive Mr. Pitt at Kew afterwards, about one o'clock."

There could be no hesitation on the part of Mr. Pitt: having held the necessary conference with the Chancellor, he waited upon the King at the appointed time, and found him perfectly of sound mind, and in every respect as before his illness, competent to all the affairs of public station.

This was the first notice in any way which Mr. Pitt received of this most important event. The reports of the physicians had indeed been of late more favourable; but Lord Melville verily believed there was not a man except Dr. Willis who entertained the smallest hope of the restoration of the King's mind. Mr. Pitt continually declared this opinion to Lord Melville, and they had both determined to return to the bar, as the dissolution of the ministry was then on the point of taking place.

The letter in question Lord Melville took from Mr. Pitt, saying he had a trick of losing papers, and furnished him only with a copy, the original remaining in his Lordship's possession. The King wrote the letter at a little table of the Queen's which stood in his apartment, without the knowledge of any person; and gave it to his valet-de-chambre, directing it to be carried immediately to Mr. Pitt.

The perfect convalescence of the King was announced, by a medical bulletin, on the 26th of March. The affection of the nation to

George the good, and great as good, was manifested in unbounded joy at his recovery. On the 23d of April, the King went in state to St. Paul's, to join in the general thanksgiving. The authentic anecdotes which indicate the state of the King's mind between his recovery and the recurrence of the same calamity at distant intervals of his life, are among the most interesting passages in his personal history.

The late George Hardinge, Esq., one of the Welsh judges, and distinguished for his classical acquisitions, describes an interview with which his Majesty honoured him in the summer of 1789. These are his words:

"I went through a very handsome apartment into another, most beautifully fitted up, with a ceiling of the modern work, "done," as the King told me, "in a week." Into this room I was shut, and found in it, standing by the fire, without any form, the King, Queen, three Princesses, and this bed-chamber woman, whoever she was, for I have not made her out, but liked her very much (because she seemed to like me). It is impossible for words to express the kind and companionable good humour of the whole party. I almost forgot that any one of them was my superior. The King looked 15 years younger, and much better in the face, though as red as ever. He said a number of excellent things, and in the most natural way. The Queen, with amazing address and cleverness, put a turn to the conversation, and mixed in it just at the right places. You will not believe me when I tell you that I passed half an hour (at least) in the room.

"The Princesses looked, as they always do, the pink of good humour. The Princess Royal had a very fine colour, the two others were pale. The King did a very odd thing by the Princess Royal; but I loved him for it. He said,

"he would ask me, as a man of taste, what I thought of the ceiling?" and then called upon the Princess Royal to explain the allegorical figures on the ceiling, which she did, blushing a little at first, in the sweetest manner, with distinct voice, and great propriety of emphasis. This one trait would at once demonstrate how very kind they were. The King began by asking me, "how I could run away from London and give up my fees?" I told him that I never minded fees, but less when they interfered with my sense of duty to him. The Queen then came up to me, and said, "You have less merit in the visit, because a little bird has told me that you are on your way to your circuit." This produced the topic of my circuit, and the King said, "that he understood Moysey to be a good man in domestic life."

"We went slapdash into politics, Queen and all. The King laughed heartily at the *Rats*, by that name, and said, "they were the boldest rats he ever knew, for that all the calculation was against them. Even * * * * said, it was probable I should recover; not that I am recovered, according to some of them. And yet I have read the last report of the physicians, which is a tolerably good proof that I am well. By the way, your uncle is considerably better, and I flatter myself that my getting well has done him good." I then said, "that I had left him in some alarm how he was to wear the Windsor uniform with a tie-wig over it, from the fear that he should be mistaken for an old general that had fought at the battle of Dettingen." The Queen said, "Oh! I plead guilty to that; and I see you enjoy it. I said Hardinge will enjoy it, for though he is very good natured, he loves a little innocent mischief." The King then told me the whole story of his conference with Mr. Pitt; commended

the House of Commons, and said, "his illness had in the end been a perfect bliss only to him, as proving to him how nobly the people would support him when he was confined." This tempted me to say, that "it was no political debate, but the contest between generous humanity and mean cruelty, and it interested human nature." The King seemed very much pleased with this idea, and worked upon it. I commended the conduct of the bishops, and it made them laugh : said the King, "You mean to commend it as a *wonder*!" He talked over Lord North and the Duke of Portland. He talked of the Chancellor, of Loughborough, and even of Mr. Baron Hotham, and said, "You are almost the *only man who loves the land for its own sake*." Then we talked of Mrs. Siddons, Jordan, &c ; and the Queen said, "Siddons was going to Germany, to make the English find out by her absence that she was good for something." Then we flew to Handel ; after which the King made me a most gracious bow, and said, "I am going to my dinner." I was near the door, made a low bow to the females, and departed."

The greatest event of the age was the French revolution. This test of the qualities and character of European states and statesmen, of political foresight and intellectual courage, of zeal for the na-

tional independence, and honour in foreign relations, was applied to this country in the vehicle of occurrences, demanding a solemn decision from George III. on the part of himself and people, about the middle of his reign.

The King exercised a judgment independent of the minister, and the minister independent of the King ; they both concurred in seeing the same course right, and reluctantly embraced the alternative of war. Although "the stupendous monument of human wisdom" dazzled the understanding of Mr. Fox, George III., and the second William Pitt saw that a timely counteraction was necessary to defeat the ambitious rulers of the French convention, who, not satisfied with a sanguinary revolution at home, already menaced every other country with a participation in the rights acquired by French citizens, as an ill-disguised cover for pursuing a scheme of universal empire. The grave determination of the King's cabinet was ratified by a large majority in Parliament ; and the bulk of the nation embarked in the contest with approving eagerness, and perhaps with too sanguine expectations of immediate success, not foreseeing how much the progressive expenditure of the resources of the state would try their consistency and patience.

(*To be continued.*)

To the Editor of the Asiatic Journal.

SIR:—One century has nearly elapsed, since the advances towards the present magnitude of the British empire in the east, became an object of great attention to statesmen in the west, and to those individual families, who gradually extended their domestic prospects towards a vast and rich portion of the globe, where their young male relatives, qualified by

talents and education for civil, commercial, and military services, might obtain employments suited to their habits and rank in society, sweetened with the prospect of returning to their native land, with a provision for retirement in dignity and ease. This partial but temporary emigration, in process of time, increased to such a degree, that few persons in the

middle walks of life, could be found in the British isles, whose public and private interests were not connected by some interesting ties with the rise, progress, and existing grandeur of the East-India Company; interwoven as the system which supports their greatness is, with the magnificent departments of that honourable body, in all of which, Britons, in whatever part of the empire born, may acquire the greatest renown and skill, both in the arts of peace and war, as well as in the fertile fields of oriental literature. One would naturally have imagined, that such dazzling scenes could not fail of attracting general, if not universal attention, in the bosom of the parent state, but this was so far from being the case, that Indian affairs till lately were hardly viewed as having a national relation and importance, so as to deserve attention from the merchants or any great mass of the public in England. An obvious change in these respects has at last taken place, which, among other causes, may be traced to the circulation of Mr. Mills's historical work, independant of that *primum mobile*, which is now more efficient than all the rest. Canada, the Cape, New South Wales, South America, and the West Indies, afford each a certain outlet for the superfluous population of many among the poor, the daring, the desperate, and unconnected portion of the British community, who have no longer either the army or navy as an asylum against want, while the sons of those who have a claim to be introduced in that fruitful region for patronage, are pressing forward for employment on the boundless plains of Hindoostan. This circumstance alone must daily augment the estimation of India in the eyes of all ranks in our native land. During such a period of dependance upon eastern resources, one may naturally presume that every thing

Asiatic Journ.—No. 52.

conducive to the permanence and prosperity of British India will merit and meet with the public favour on an enlarged scale. Among other unfolding consequences, I trust, we soon shall be able to say, that the profound but useful lucubrations of your valuable correspondent (orthoepigraphically) *Gool Cheen*, are esteemed as they merit; which will compensate, in some measure, for the unaccountable neglect to which his interesting dissertations have been too long exposed, from persons whose continued silence on the subjects he discusses, looks more like an invidious obliquity than a conscientious desire to promote the general cultivation of eastern learning. I, for one, have long held the opinion, that the *sacred Sanskrit* was rather a disguised than a primitive tongue, and the more I read Gool Cheen's essays on the ancient Persian, my conviction is the stronger, that either *it*, or some cognate language nearer us, will prove to be the grand source of all the Indian dialects, not excepting the divine speech of the Brahmuns itself, from being only one highly *refined stream* from the fountain head of the whole, which is still mantling in deep obscurity, under etymological ground. Among the able pioneers of this philological age, few have a higher claim to consideration than your accomplished correspondent, and long before it closes, *his writings* will be hailed as the auspicious dawns of that primeval light which may then shine abroad in meridian splendour, when the lowering clouds of a *sullen taciturnity* shall no more eclipse its lustre. From the last report published in your useful Journal of the examination at the Calcutta College, by the Governor-general of India, (whose splendid talents bid fair to equal, in the various situations of warrior, statesman, philanthropist, and oriental scholar, if not to surpass, all his predecessors,

VOL. IX. 2 U

hardly one of whom ever took the trouble to learn the Persian, and speak the Hindoostanee, as the noble marquis has actually done, from a conviction of their paramount utility), his address to the students will be found to contain several observations intended to excite them to a more diligent cultivation of those languages, the Persian and Hindoostanee. "A short experience in this country," said his lordship, "will show, that they have done wrong who have neglected the study of the Persian and Hindoostanee languages, in order to devote their principal attention to the Bengalee, which in this province is indispensable as a qualification, but Persian and Hindoostanee are not less necessary even in Bengal. The Arabic and Sanskrit hold the highest rank in point of erudition, but these venerable languages may be safely reserved for future study, after a previous acquaintance with Persian, Hindoostanee, and Bengalee has been acquired for the speedy and efficient discharge of all the ordinary duties of the public service. They who confine themselves to the study of two languages any where beyond Bengal, should understand, that the Persian and Hindoostanee are those which they will find most generally useful, the Hindoostanee for colloquial purposes, the Persian for correspondence and business conducted in writing." What is here extracted shows the spirit, without perhaps the very words of the noble orator's excellent discourse, which may be consulted at full length in your March Journal, page 260, where every British Indian, with their relatives and friends, will discover some important useful truths, that might not otherwise have been publicly known for months, nay, for years to come. In the universal dissemination of real knowledge on all

eastern topics, consists the superior advantage of your periodical numbers; for every individual, who has the least interest in our Asiatic dominions, looks with avidity into a journal which is now circulated through every corner of the United Kingdom. When a prominent essayist like *Gool Cheen* falls into any mistake, it becomes the duty even of his admirers and friends to point those errors out, which would otherwise mislead your readers, and with that honourable view alone, I shall here notice some oversights in his last recondite epistle; much however of its contents deserves and has my cordial assent.

That many have very different notions of roman oriental orthoepigraphy, is quite evident from the fact, that hardly one of our best eastern scholars has paid it any attention, even where a critical acquaintance with the elements of those languages points out the necessity of literal reform, among the learned at least. They are well aware that a consonant must continue initially and finally mute, till animated by a vowel, either *à priori*, or by its most congenial substitute *à posteriori*, especially at the end of a word; thus, **اب** becomes *ub*, and if *ubu* is the vocable wanted **اب** forms it by affixing to **ب** the occult aspirate *s* as the final short *u* or *s* only, every trace of the audible aspiration being thus destroyed, as completely as "the baseless fabric of a vision." We all know how *bund* means *bound*, from which, with the simple affix *s* *u*, we can readily make *bund-u*, *slave*, *servant*, and in the plural *bundugan*, whence the very form of *s* has fled along with every idea of the aspirate as a *breather*, because the *d* not being here *final* is called into action by the intermediate *zubur*, which cannot alone give conspicuous life and soul to

any consonantal termination whatever. The self-same reasoning applies to *nam name*, converted into *book* by the very commodious significant particle *u* thus affixed, in *nam-u*, or according to Gool Cheen *nama* at most, though he constantly writes *namah* with a redundant *h*, which to those who can express this inspirate, must give a false idea of oriental pronunciation, and, if I be not mistaken, of Persian prosody likewise. At all events, the *useless h* destroys the beautiful simplicity of all such words in their Hindoostanee inflections, *namu*, *name*, *namop*, which, as *namuh*, would be differently declined; and were this the proper time or place for that part of the argument, it might be rendered still more conclusive against the future retention of a mute superfluous symbol on these occasions.

In page 231, Gool Cheen has inadvertently substituted a very inapplicable Persian epithet, *bala*, *high*, *lofty*, for the Hindoostanee more appropriate *b.hula*, *good*, *kind*, *gentle*, as *b.hula admee*, *b.hula manoo*s, truly denote *gentleman*, while *b.hulce admee*, *b.hulce manoo*s of course refer to *gentlewoman*; whence *b.hulmunsec*, gentleness, civility, suavity of manners, the very reverse of *bala admee*, a *high* and mighty personage, who would not perhaps stoop low enough to be *gentle* with a fellow creature not as *lofty* as himself. Indeed, it is doubtful

with me, that ever such a combination as *bala admee* was heard by good ears in any part of Hindoostan, though we still can discover our own *balcony* in *bala khanu* a *lofty* place, in company with *buramudu* a *projection*, which imperfect European organs have tuned to *verandah*! on the very principles by which a *khansaman*, or butler, is metamorphosed, perhaps with too much cause, to *consumer*! Before closing this communication, let me add, that the subsequent list, *bula evil*, *bule well*, *b.hula good*, *buhla amuse*, *b.hoola forgotten*, *boola call*, *bala high*, *young*, *b.hala spear*, exhibits but a brief specimen of Hindoostanee words, which sound alike to *bad* hearers (*carers*.) when the *sense* is often as opposite as the poles, or night from day. Gool Cheen has been misinformed concerning Mr. Gladwin, who never was associated with Mr. Gilchrist in the experimental institution which preceded the Calcutta College, and where the latter gentleman alone instructed his pupils, *not only* in Hindoostanee but in the rudimental parts of the Persian language and grammar. On this and other portions of Gool Cheen's animadversions, regarding that establishment and its professors, I shall reserve my strictures at present, that neither he nor you may complain of a too long-winded critic and contributor, in yours obediently,

GHICOLAM EESA.

To the Editor of the Asiatic Journal.

SIR :—The letter signed "*A Clerk*," inserted in your last number, furnishes a retrospect of the irregularity and vexatious delay which occurred between October 1816 and August 1819 in the transmission of letters to India; and although so much of the Act of the 55th George III. cap. 153, under which the subject of complaint arose and was long con-

tinued without redress, has been repealed by the 59th George III, cap. 111,* and a new system for regulating the postage between Great Britain and India introduced, yet the history which your correspondent has given of the course of obstruction, surcharge, and disappointment now super-

* See an Abstract of the *Asiatic Journal*, vol. viii, p. 204.

seded, may be useful in many respects. First, such a review is a satisfactory vindication of the friends relatives, and commercial agents who were blamed by their respective correspondents at each extremity of the line of separation, for inattention to anxious inquiries, or for the neglect of important commissions, and whose tardy replies came to England, as if in mockery of the parties whose expectation had been kept in painful suspense, when the interest of the primary communications had been extinguished by the vicissitudes in families, or the fluctuations of trade. Secondly, it is difficult for the legislature to devise any law, of which the practical results will not depend on the spirit and temper of the officers whose part it is to execute it. On the workers of the machinery it must greatly depend whether the operation shall be entire or partial, commodious and beneficial to the public, or inconvenient and tantalizing; for the precision of verbal enactment is seldom so complete as to obviate the possibility of the design of the law being in some subsidiary point legally counteracted; and although, where the scene of vexation is distant, the exposure of it at home must be late, yet even the late exposure of official perversion may prevent the recurrence of similar impediments to a cheap and expeditious system of correspondence; similar, I mean, in spirit, for the same in kind they cannot be. Your informant, therefore, might well enlarge upon the past, as that is not redressed, although the legislature have made a provision which, I trust, will prove in the main to secure a prompt and punctual management of the Indian correspondence for the future. There appears, however, to be one serious deficiency in the new act (59th Geo. III. cap. 111). By the fifth clause, the postmaster-general at home may, "in his discretion," receive newspapers, printed

price-currents, and any printed paper duly stamped, in covers open at the sides, for transmission to India, for which the sea-postage is limited to one penny per ounce, according to the weight of the packet. There is no clause, however, in the act, for extending a correspondent privilege to newspapers sent from India. Is this a deliberate omission of the legislature, or one of the customary blunders which almost make it a problem whether the flaws for which the chapters of statute law are proverbial be the effect of negligence or contrivance in the learned draftsmen? The effect of the fifth clause is to exempt newspapers sent to India from inland postage. But if newspapers, coming from India, through the post-office, be made up into packets, under the third clause, the higher rate of sea-postage imposed upon packets so sent, will not exempt them from the addition of a heavy inland postage. Now, as far as abuses of the press are concerned, there is much more danger of exporting mischievous and combustible materials from England, than there is of importing conscious falsehoods framed by perverse hearts, or involuntary errors concocted by half-enlightened minds, from India. The freedom of the press in India is yet a plant of too recent growth, and too fresh as a seedling with the vigor of unsophistical nature, to bear the same fruit as an artificial tree of which specimens abound at home, which is derived from inserting a succession of cankered drafts on a juvenile stem, while a capricious agriculturist assigns the form of the spray and determines the future fruit; so that what seems a young idea just taught by enlightened education and free opinion how to shoot, is too frequently the final slip, transmitted through a hundred degenerating grafts from the diseased and worn out stock of a false philosophy;

which, when fresh and original, and comparatively sound, sprung but from a want of capacity to distinguish between right and wrong: whereas a luxuriant desire to confound right and wrong is the last vicious imitation of nature's honest wildness, the last delectable va-

riety in the fruit of cankered principle, the last picturesque improvement in the character of the branches from being trained to disorder, and then growing without restraint.

AGRICOLA.

To the Editor of the Asiatic Journal.

SIR :—On my late voyage homeward from Madras on sick certificate, our ship touched at St. Helena, and with the rest of my fellow passengers I tried all lawful means, but in vain, to get a sight of the Ex-Emperor, and I understand that he has become more and more averse to shewing himself to strangers. This disinclination to exhibition may be generally known to your readers, but it is as well to make as public as possible the penalty attaching to those who may presume to trespass within

the guard at Longwood, viz. that any servant of the Company's endeavouring to pass the *guard line* without special permission, will be subject to immediate suspension from the service.

As I had this from the highest authority in the island, you may depend upon its correctness.

I am, Sir,

A CAPTAIN OF MADRAS NATIVE
INFANTRY.

London,
March, 1, 1820.

To the Editor of the Asiatic Journal.

SIR :—In Gulchin's very interesting essay for last month he states his regret at the stop which was put to Dr. Lumsden's edition of the *Shahnamah*, and conceives that the non-prosecution of that most desirable work originated in orders from this country; allow me, through the medium of your Journal, to put your learned correspondent in possession of the facts of the case.

In 1816 Dr. Lumsden found it necessary to acquaint the Bengal government that the work would take at least five or six years before it was completed; that a large establishment of Moolavies and other natives must be kept up during the whole of that period, and that the total expense of the work would amount to at least 30,000 rupees; the Doctor also reserved to himself the liberty of

declining the undertaking at any period of its progress. Upon this the Bengal government were alarmed at the idea of proceeding, and referred the matter home. I do not remember that any reply to this reference arrived while I remained at Calcutta; but it was scarcely to be hoped that, after this discouraging statement, the Court of Directors would order the work to proceed.

I do most heartily join my lament to that of Gulchin's, that any thing should have occurred to deprive us of a translation of *Firdosi*; and to the glowing admiration which animates your correspondent, when he speaks of his *Shahnamah*, I am also anxious to add my humble tribute.

Dr. Lumsden purposed to add to the translation a life of the author, and to illustrate the whole

with explanatory notes. The slight sketches of the character of Firdosi, which Gulchin has occasionally favoured your readers with, of his chivalry, his independence, and his wit, only sharpen desire after a more intimate acquaintance with him. Could not Gulchin favour us with a translation of Firdosi's life in Gulchin's own style, and in as succinct a manner as the laborious undertaking of his Persian Dictionary will permit?

Allow me in this place to draw the attention of your readers, and especially the students at Hertford, to that part of the eloquent* address of Lord Hastings at the last examination at the College at Fort William, in which his Lordship alludes to the preference given, in a few instances, to the study of the Bengalee language over the Persian; and to remind them that the relative rank in point

of usefulness is Persian, Hindoostanee and Bengalee, and not Bengalee, Persian and Hindoostanee.

His Lordship's remarks on the study of the Arabic and Sanscrit languages are worthy of particular attention, and I trust they will have met with it at the Company's colleges at home.

I would also recommend to the particular perusal of every Persian scholar in Europe and in India, the most instructive and elegant essay of your learned correspondent Gulchin, which appeared in your number for August 1818, page 113 to 126. Anxiously as we look for the appearance of his Dictionary, the delight with which we peruse his essays will prevent our hearts being sickened with hope deferred.

I am, Sir, yours, &c.

ESSAY ON MISSIONS TO THE EAST.

(Continued from p. 111)

1. On the notion that the empire of India has been transferred to Britain, as a means, in the hand of Providence, of propagating the Gospel there.

I use the word "notion" in the sense which custom has affixed to it; intending by the term an unsupported opinion, as distinguished from any subject of certain knowledge, or any deduction from principles resting even on moral evidence. This noun has no correspondent relation with the verb *nosco*, from which it is derived, or it would be misapplied. To advance an affirmative, or a negative proposition, as to what the designs of Providence may be, I consider to be equally an act of presumption; and therefore, while I endeavour to examine this unsupported opinion by the light which history affords respecting the Divine

economy in propagating the Gospel in the earlier ages of Christianity, it is to collect some materials for direction from the past, and not to engage in a conflict of conjectures as to the future.

Christ has said: "My kingdom is not of this world;" and the Divine authority under which the apostles planted the seeds of Christianity was evinced by its growing up to be a plant of renown, and taking deep root in the earth: not merely without the excitement of imperial influence, but without the protection of human power. The eleventh chapter of Hebrews describes the triumph of faith; but a modern school of missionaries, instituted for teaching "Christianity made easy," soothes its own spirit of compromise with the world, by imagining that triumphs can be achieved

without heroes. If the papal tradition be true, that St. Peter was the first bishop of Rome, he stood on a perilous eminence. At Jerusalem the converted Jews had to encounter the opposition of the chiefs of their own nation; thus the toleration, which subject Judah enjoyed by capitulation with imperial Rome, gave to the vigilant persecution which tried the constancy of the first Christian another sword. The faith, thus discouraged in the persons of its original professors, subdued kingdoms, by degrees overspread the provinces, and ultimately the empire. In the reign of Constantine, the Christian religion was established in Constantinople, the new metropolis of all the territory of Rome.

When Providence employs human means, the invisible direction is attested by evident proofs that the combination of the instruments has not originated among themselves, and that some primary cause, operating from an immeasurable height and distance, has put the machinery of secondary causes into harmonious action. We know the engineer is above the pioneer, the general above the engineer, and the sovereign above the general; but human thought cannot ascend to the intervening scales of altitude between the First Cause and what the imperfection of language terms secondary causes. To apply, however, an imperfect comparison: if we were to see a body of pioneers going about from place to place, to make towers of earth and approaches under ground, forgetting the bearings of their own approaches, and converting them into caverns for shelter, as if they were going to live like Troglodytes at the side of a pleasant hill; reasonable doubts might be entertained—whether they were alternately banking and burrowing under the guidance of an engineer, and the orders of a general.

To revert a little more distinctly

to the progress of the Gospel under the adverse supremacy of Pagan Rome. Gibbon, the historian of the decline and fall of the empire, attributes the rapid spread of Christianity to the five following secondary causes. 1. The inflexible zeal of the Christians, derived from the mental obedience inculcated by the Jewish religion, but purified from the unsocial spirit which, instead of inviting, had deterred the Gentiles from embracing the law of Moses. 2. The doctrine of a future life, improved by every circumstance which could give weight and efficacy to that important truth. 3. The miraculous powers ascribed to the primitive church. 4. The pure and austere morals of the Christians. 5. The union and discipline of the Christian republic, which gradually formed an independent and increasing state in the heart of the Roman empire.*

In stating these causes, the insidious design of Gibbon was to undermine the sacred foundation upon which Christianity rests, by ascribing to natural and temporal causes its success, in competition with the pagan mythology of Rome, and other nations of antiquity, among whom the Gospel was preached. But when all these causes are considered together, the deduction which results from pursuing them till they converge in one end, recoils against the author; for that five such extraordinary causes should operate for so many ages as independent, yet consistent auxiliaries to the propagation of Christianity, is an argument for ascribing to Providence the origin and success of such an arrangement; thus the scriptural expression, that Christ came in the "fullness of time," acquires an obvious and emphatic meaning.

These five causes are essentially different from the human machi-

* Decline and Fall, chap. xv.

nery, which some of the most conspicuous modern associations for conducting missionary attempts are content to set at work, to continue, and to extend, as if with an increasing, if not an exclusive dependence upon secular instruments and artificial excitements.

Gibbon might have enumerated several other secondary causes, which assisted the progress of Christianity, namely :

6. The extensive range of the Roman empire, and correspondent use of the Latin language. 7. The diffusion of the Greek language by the conquests of Alexander in Asia, and the plantation of Greek colonies. 8. The dispersion of the Jews, by which the Hebrew language was carried to many remote regions, and the passage of the mind over the slight intervals which separated it from many eastern dialects facilitated, and led by a sure path ; so that the primitive translations from the Hebrew have the highest claim to govern the construction where it would be otherwise doubtful.

In generalizing the facts of scattered passages in the primitive history of the Church, Gibbon is not to be implicitly followed, because of the oblique intention of the writer. He tells us, that Scythia and Germany still remained involved in the darkness of paganism up to the fourth century ; and that the conversion of Iberia, of Armenia, or of Ethiopia, was not attempted with any degree of success till the sceptre was in the hands of an orthodox emperor. He then enumerated some local exception to this general conclusion : the banks of the Danube in respect to Scythia, and of the Rhine, on the part of Germany, Mesopotamia, and the seats of the Greek empire, then extant in Asia, for the most accessible regions of the east. His summary states : " The most favourable deduction, will not permit us to imagine, that more than a twentieth part of the

subjects of the empire had enlisted themselves under the banners of the cross before the conversion of Constantine." He had commenced his review by stating, that the first advances of Christianity were principally made in the domestic territory of the imperial city, in Greece, Syria, and Asia Minor. Constantine was the first emperor who publicly professed and established the Christian religion. By his victory over Licinius, the Roman world was again united under the authority of one emperor, thirty-seven years after Diocletian had divided his power and provinces with his associate Maximin. The foundation of Constantinople, and the establishment of the Christian religion, were the immediate consequences of this revolution. In another place, Gibbon says : " His powerful influence, and that of his sons, rendered Christianity the reigning religion of the Roman empire." It is disingenuous to attribute the victory of Christianity over the entire state to the first two or three Christian emperors, when all the previous battles had been fought under a long succession of Pagan emperors. Might not the same cause which was equal to the conversion of the emperor, while but a *twentieth* part of his subjects were converted, be adequate, by its multiplying effects, to the conversion of the people ?

Of the five secondary causes enumerated by Gibbon, not one is unworthy of Christianity ; and had the author adverted to some other secondary causes, in which the preparing hand of Providence is plainly indicated, his insidious design, in making a prominent display of those five, might have given way to admiration and conviction. It is to be lamented, that although the third only in his catalogue might be expected to cease, when the foundations of an historic faith were laid, the others are either weakened or extir-

guished in the modern Christian church. 1. Inflexible zeal is succeeded by a spirit of sordid policy and compromise. 2. The doctrine of a future life, so far from being improved by every circumstance which could give weight and efficacy to that important truth, is deprived, by the licentiousness of Antinomian expounders of the Gospel, of every salutary influence over that part of their congregations, who are inclined to abuse the comfortable delusion of an absolute impunity. 4. The pure and austere morals, which are consistent topics in primitive history, survive with difficulty the heavenly motives which fallacious interpreters of Scripture conspire to undermine. 5. The union and discipline of the church are alike destroyed, by the infinite generation of independent sects.

In tracing the progress of the Divine economy, in effecting a prepared state of things for a rapid propagation of the Gospel in the earlier ages, it is particularly observable that the two great circles of conquest, which by the extensive diffusion of two cultivated, copious, definite, and well constructed languages, presented ready vehicles for written truth, vehicles with which the nations were familiar, were made by Pagan powers, unconscious instruments in traversing these stages of complete preparation. It appears that the originals of two, if not all the four Gospels, were written in Greek: St. Luke's and St. John's. Although the notes of subscription met with in some ancient copies, which confine the use of the Greek to these two, have been lightly dismissed by some well-meaning critics, to support their own theories of harmony, there is a beautiful propriety in the distribution which assigns to St. Mark's Gospel the Latin, and to St. Matthew's the Hebrew, as the original languages in which they were composed. Be this as it may, au-

thorized translations, coeval with the first ministrations of the Apostles, might provide the Jews and Romans with the joyful intelligence of redemption in their own tongue. Let those who can see any parallel to this, in the yet imperfect diffusion of the less classical English in the region of India, build a lofty tower of expectation on the circumstance. The essential difference consists in English not being one of the original languages of the Scriptures; and the fidelity of particular parts of either a new or an old translation, however good, may always be questioned; hence by the time the Indian converts are well grounded in its elements, Mr. Bellamy's improved version may present a Bible to their perplexed apprehension, reducing the primitive world to chaos, and involving the living race of Postdiluvians in a profound flood of doubt.

If the conquest of India, the supremacy of Britain, and the conversion of the natives to Christianity, be necessary links in one continuous chain, will the charitable possessor of a missionary spirit, moved by such an excitement, confine his beneficial plans and exulting hopes to this limited field? Will not the good man be impatient to see the same prelude to conversion extend its embraces to Thibet, to Burmah, to Siam, to Cambodia, and to all the shades of population which fill up the interval thence unto the eastern shore of China? In such a plan of seeking proselytes there is a happy medium between the enterprising course of a devout Jesuit, and the decisive system of a victorious Mussulman. The Portuguese Jesuits who went into Japan, preached the Gospel under much personal risk, and made some converts; but spoilt all by being detected in a plot to depose the native sovereign whom they had converted. This perfidy not only caused their expulsion, but has

made the Christian name ever since odious in the country. To reverse their plan would be equally odious, and more unsafe. But it is a moderate and politic course for the missionary to wait until the politician and the soldier have prepared for him an avenue and an escort. Mahomed and his successors, as long as their bands of armed disciples were irresistible by the ordering nations, made new converts by the sword and spear. This system of physical compulsion savours too much of persecution to be imitated. The modern missionary, however, finds it a lawful resource to borrow defensive armour from the militant Turk; to carry no spear, but to take a shield, or at least to approach under the shield of a triumphant soldier, with a flag of truce. By this contrivance martyrdom is neither inflicted nor suffered. And yet there seems to be left in Scripture a prophetic rebuke of this incongruous display of enterprize without peril. "Jesus answered, My kingdom is not of this world: if my kingdom were of this world, then would my servants fight, that I should not be delivered to the Jews."—John xviii. 36.

2. On the modes of Missionary exertion.

The authorized envoy from a sovereign whom he knows is powerful enough to support him in his mission, will be open and bold in his deportment, and direct and steady in executing his master's commands. If he went to reclaim a nation of rebels in arms, to invite them to allegiance, and to make overtures of mercy and conciliation to men over whom he believed destruction was impending, would he be content by slow and circuitous methods to prepare the next generation for receiving his message? Would not the people of the province ascribe to some oblique and latent design the postponement of a direct communication to them, while the envoy was stealing to all the nurseries, and

requesting to be entrusted with the education of the children, promising not to divert them from the habits and principles of their fathers, which he admits, by the bye, he has instructions to change? To whom is he faithful? Not to his lord; nor to his remote subjects, if he believes his own representation of their errors and danger? On the principles which it is the business of this essay to unfold and urge, the consistent Christian may look to temporal effects, in weighing the expediency of persevering in the attempt to convert the natives of India: but on the principles on which the missionary embarks in the undertaking, a politic attention to secular considerations is an absurd mixture of jarring motives and ends. The deliberation and complacency with which both the conductors and the agents of missions to the east voluntarily impose the curb of a temporizing policy on the exercise of an office solemnly undertaken, and which they proclaim to be a spiritual duty, involving the immortal interests of millions of men exposed hourly to perdition, is scarcely to be reconciled with the deep and pervading obligations to missionary efforts, which give so much pathos to addresses for exciting contributions to the funds at home.

The fundamental measure is the voluntary dedication, or the judicious engagement of missionaries. By the 30th article of the *Laws and Regulations* of the Church Missionary Society, it is stipulated that the missionaries who go out under that institution shall be allowed to visit home, with the permission of the General Committee. The Lord Bishop of Calcutta, in his letter to the Society for propagating the Gospel in foreign parts,* proposes such salaries for the professors and missionaries to be attached to the new Mission College near Calcutta, as almost seem high enough to exclude unemployed

clergymen accepting the terms, from the opportunity or merit of making a sacrifice. The former is an indulgent remission of the renunciation of local connexions, which Christ required in those disciples who were candidates to go out with the Seventy to preach the Gospel in the neighbouring countries. Luke, ix, 59, 60. The missionary assumes an apostolic office, which is altogether different in character from that of a secular clergyman. The bishop's plan is a piece of worldly mechanism, constructed to attract qualified performers by a direct appeal to those feelings which regulate the choice of professions by calculations of interest.

The first operation of the missionary would seem to be, that of enabling the intended convert to read and understand the Christian Scriptures. There are three modes of attempting this:

1. By putting into his hands a version in his vernacular tongue; or into one of the classical languages of the East—for a native of superior education—such as the Sanscrit, the Persian, or the Arabic. What the Bishop of Calcutta observes of the translations which had been made at the date of his letter is an indirect admission that their utility is diminished by many pervading defects. His lordship says: “In the third place, I would make the Mission College subservient to the purpose of translation. Much has, indeed, been done or attempted in this way, but by no means so much and so well as to make this department of missionary labour superfluous or unimportant. We still want versions, which, instead of being the work of one or two individuals, should be the joint production of several, taking their allotted portions of Scripture, submitting their tasks to approved examiners, and sending the whole into the world under the sanction of authority. Rapidity of execution, and the carrying on of many

versions at the same time, should not be among the objects aimed at; it is not to be expected that standard works can be thus produced.”

2. The favourite speculation now is, to teach the natives of Hindostan the English language, and the elements of European science. This is one of the four objects to be provided for in the mission college near Calcutta; and thus enounced in the lord bishop's plan: “For teaching the elements of useful knowledge and the English language to Mussulmans or Hindoos, having no object in such attainments beyond secular advantage.” This point therefore may be reserved, to be distinctly examined in all its secular bearings.

3. It is well to have a good alternative in reserve. The third—which presents all the advantages of an untried resource, in reviving the animation of hope, and the confidence of promise, if the other two should fail—is to teach the natives of India the Hebrew and the Greek languages; for which purpose the schools now used for teaching English, may, by a liberal addition to the funds, be elevated to colleges.

Meanwhile I beg to collect, for the service of the managers and agents of missions, a few points for remark which have been suggested by others.

A late number of the *Calcutta Journal*, in tracing the career of the Rev. Mr. Burckhardt, who was a Christian missionary, travelling to distribute bibles, and who died at Aleppo, takes occasion to remark an apparent disposition in the framer of the account published at home, to magnify trivial and common incidents, by relating them in a style of disproportionate importance. The writer first distinctly notices, that the recent death of the missionary Burckhardt, has been confounded with that of the traveller Burckhardt, who performed the pilgrimage to Mecca as a Mahomedan, and

gave his dying request to be buried according to the rites of that religion, by the Mahommedan priests at Cairo. The following are alternate quotations from Dr. Naudi's letter, secretary to the Malta Bible Society, and remarks by the editor of the *Calcutta Journal*.

We have seen many here who appeared to be well adapted to take Bibles and Testaments into Egypt; but most shewed some fear, either of the Bashaw, or of the Musselmans, or of the different Christian denominations, or of the Jews; but our esteemed Burckhardt left Malta on board a Greek vessel, with six large cases full of Bibles and Testaments, in various languages, without any fear; he read, conversed, and distributed, in the most open manner; and Divine Providence, which, without doubt, conducts these grand and important objects, assisted him in every step, as well in giving him a right discernment in his enterprises, as in preparing the people for the reception of the word of truth.

“Without desiring to detract in the slightest degree from the laudable objects of those extensive and widely-spread societies for disseminating the Holy Scriptures, or from the zeal and enterprise of their missionaries, who are employed in this evangelical task, our regard to truth compels us to state that the glowing picture of Doctor Naudi, and many of the expressions which escape him in the letter given above, convince us that his ardour to spread the religion of the Gospel in these benighted countries, far surpassed his knowledge of the character of the people who dwelt in them.”

“In the triumphant boast that Mr. Burckhardt embarked in a Greek vessel, with six large cases full of Bibles, without fear, while most of his predecessors betrayed strong symptoms of this unworthy passion in such a cause, he could hardly have known that all the classes whom he enumerates, Jews, Mohammedans, and different sects of Christians, had all of them from various causes such a respect for the Scriptures, even in our form, that the wildest fanatic would

hardly dare to shew it even a mark of disrespect. It must be remembered that all these classes build on the same foundation, at least from Adam to the last of the Jewish Prophets; though from thence the Jews, Christians, and Mohammedans begin to divide; and that Moses, David, Solomon, Daniel, and others, are personages equally respected by all; while the Mohammedans admit the miraculous conception of Jesus, His being born of a Virgin, His exemplary life, and His divine doctrines; and the Christians of course would be sufficiently bound by still higher considerations to respect the word of their God, His Son, His Prophets, and his Apostles.”

“The ‘discernment given to the missionary in his enterprises, and the preparation of the people for the reception of the word of truth,’ are blessings which it belongs only perhaps to Providence to accomplish; but the symptoms of this would best appear in learning that great success had followed the steps of the worthy missionary—in something more than the *mere distribution* of Bibles, which any one else might perform as well as himself; and by learning that many of the Jews and Gentiles, whose hearts had been prepared for the reception of the truth, had openly embraced and publicly professed their conversion to the new faith preached, of which, however, nothing is said.”

On his arrival in Alexandria, Mr. Burckhardt landed courageously, with all his cases, which he took to an inn, where he with difficulty obtained a little garret, which hardly held him and his cases. After two or three days, the masons came to make some alterations in the inn, and began to pull down his room; but he, thinking the situation favourable for the sale and propagation of the Scriptures, would not quit the house, but removed, with his health-giving merchandize, into a shed belonging to it. There he conversed with every one that passed by, peasants, strangers, and merchants, both foreign and from the interior of the country. The seamen, who are very numerous at Alexandria, came so often to

him, that he wrote to us, saying, that "the Greek Testaments which he had dispersed would only be like so many drops thrown into the sea; so great was the demand for the word of God.

In his hours of leisure he walked all over the place, visiting the Patriarch, or the Archimandrite of the Greek Priests, mixing also often with the Turks, Copts, Jews, &c. Thence he departed for Grand Cairo, on board a country boat, surrounded by a great number of Bibles. After experiencing some dangers, he arrived, took a little lodging, and, as before, exposed his wares to public sale. Here he found, that not only was his mission known to all, but that he was really waited for. Jews, Turks, Syrians, Copts, Christians, and Pagans, went to visit him; and, what is of more importance, to profit by him.

"There is something almost ludicrous, if one could possess any feelings but those of reverence when treating of such a subject, in the manner in which it is said Mr. Burckhardt "landed courageously with all his cases, which he took to an inn, where he with difficulty obtained a garret that hardly held him and his cases." The fact is, that at a trading port like Alexandria, where there are sometimes upwards of a hundred sail of vessels from all quarters of the globe, landing every commodity of commerce and barter that is known, it required no particular courage to land with a few cases of books; and the difficulty of getting a little garret large enough to hold him and his cases, must have been an imaginary or exaggerated one, because there is no place in the world where large caravanseras for ships' cargoes, and empty houses for dwellers, might be had with greater facility than at Alexandria; besides which, it is the constant practice when any reputable person of any nation arrives there, for him to be entertained at the house of the Consul of the particular nation to which he belonged. Mr. Burckhardt, therefore, as a missionary of the Malta Bible Society, being under British auspices, would unquestionably have been entertained in the large and spacious establish-

ment which the Levant Company give to their Consul there; or if any temporary circumstances prevented this, abundant accommodation would have been furnished him elsewhere."

"The 'removal to a shed to dispense his health-giving merchandize while the inn was repairing,' was a thing which the opulent and hospitable Europeans of Alexandria could not possibly permit, unless these privations were voluntarily courted by the missionary, as laudable and meritorious; and it could not have escaped their notice, since all the Europeans, and consequently the inns, are centered in one large street, called on that account the *Strada Franca*, which is the greatest thoroughfare of the city."

"His 'conversing in this shed with every one that passed by, peasants, strangers, and merchants, both foreign and from the interior of the country,' is also difficult of belief, unless it is supposed that he was well acquainted with Romaic, Slavonic, Turkish, and Arabic, which are the languages of the foreign merchants, and the peasants and labourers of the place, and which cannot be acquired but by years of study or long actual residence, neither of which are mentioned among Mr. Burckhardt's preparatory qualifications."

"The sailors, who were so numerous at Alexandria, and so pressing in their demands, that Mr. Burckhardt thought the Greek Testaments he had distributed among them would be only 'like so many drops thrown into the sea,' are as dissolute and abandoned as the common sailors of every other nation; and, as far as an indiscreet dispersion of the Scriptures among them would be likely to produce little good, the simile of the worthy Doctor regarding the 'drops in the sea,' might be well applied."

The following remarks, applying to the last two branches of the

subject, are contributed by a separate correspondent, who has given us permission to incorporate them into this essay.

“ One great branch of the human machinery in motion, for the pious purposes of enlightening and christianizing the immense population of the east, is the translation of the Scriptures into their languages or dialects. The intention is good and noble in its kind, but the ultimate success of it remains to be proved. The translation of the Scriptures into languages so widely different from the European, and for those whose customs, habits, and manners are so extremely dissimilar from our own, must prove a most arduous work indeed; and this is indicated by all the modern versions even in Europe, in which is found no small variety. But in the east we find a set of men in the pay and employment of Europeans in quality of interpreters and translators, called *learned natives*, Moonshes and Pundits, mostly heathens. Now, we will ask: if this has not been the plan, as it is disclosed to us in the missionary accounts long ago published? The revision of these elementary translations of the sacred books is undertaken by their employers: in some cases it is to be suspected that both are incompetent to the task, and that consequently these preparatory and imperfect translations may hereafter produce infinite mischief and cavillation, when the minds of the heathen are open to receive and apprehend the important truths of Divine revelation. It is something like Christians employing Jews to translate the New Testament, a book in which they do not themselves believe; and the point is, what such a translation must be, done by a set of unprincipled hirelings and unbelievers? Every man who understands his vernacular tongue is not able to express himself readily, and in appropriate words; neither is every man who understands a foreign language able to compre-

hend the precise meaning of a writer in that language, in the more difficult and obscure places; there is much more requisite, in order to make a good interpreter in another language, than a mere ability to give a grammatical resolution of sentences by the aid of lexicons and concordances. There is an innate aptness and qualification in some men beyond others, an idiosyncrasy for interpreting—especially in the sacred language—a genius native and inimitable, not to be supplied by all the grammatical knowledge in the universe. The question is, whether all, or any such mechanical translations of the holy Scriptures will prove ultimately beneficial and subservient to the interest of Christianity, and the honour of the inspired volume. We speak of these matters with caution, not as directed against every effort of the kind, but against such as have been manufactured on the principles of mechanical process.

“ Such translations as have been prepared in the Indian languages, by the industry and unwearied labours of Europeans, will bear in them intrinsic marks of real worth, and such will outlive all others. These alone are the fruits of study and true piety; such are the Tamul translations by the Danish missionaries of Tranquebar, and the Madras edition of the New Testament from the labours of the unparalleled Tamul scholar, Mr. Fabricius, who many years laboured in this work. This is very different from the ephemeral efforts of hired natives, whose aids are always suspicious, and whose unsanctified hands and hearts are not to be admitted to the discharge of these most sacred of all labours.

“ Another branch of the human machinery is the dispersion of religious tracts among a people by no means prepared to receive them. The publishing of short tracts on scripture subjects with a view to scatter the Divine word in

the pagan empire of China is altogether speculative. Do we think that Christianity is thus to be propagated by measures so clandestine, and as it were by stealth? How degrading the idea to put into the hands of every Chinese bargeman or illiterate porter a packet of tracts to sell or give them away on his journey, as he pleases: this is not only casting bread upon the waters, but pearls before swine; when, instead of the common subjects of religion, the copies of the holy gospel are thus indiscreetly dispersed among the unprepared people of China. The same may be said of the public reading of the Scriptures in the open market places of the cities of Hindostan. We should be glad to know whether, in the early ages of Christianity, the sacred mysteries of the gospel were thus indiscriminately published to the heathen, or whether they were not communicated exclusively to the catechumens duly prepared to hear and receive with reverence the words of life in the congregation of the faithful. Dr. Watts' *Catechism* and Dr. Watts' *Hymns*, translated into Chinese, have already entered into the speculations of men studying missionary devices in England. How absurd, when we know for certain the deep speculative truths and doctrines contained in such works require a high state of cultivation in Christianity, before the minds of illiterate pagans can be qualified to receive them. We should rather hear of tracts and translations published against idolatry: such as teach the doctrine of the supreme God, the creator of the universe, and expose the vanity of idol worship. There are numerous helps of this kind in the books called *Apocrypha*: there are some very excellent pieces of this sort to be met with of standard antiquity, such as the Epistle of Jeremy subjoined to the Book of Baruch. 'Now ye shall see in Babylon gods of silver and of gold and wood, borne upon men's

shoulders, which cause the heathen to fear; beware, therefore, that ye be in no wise like strangers: neither be ye afraid of them when ye see the multitude before them and behind them worshipping them. But say ye in your hearts, O Lord we must worship thee.' Here is an exact picture of the idolatrous professions of the Hindoos; we meet a most pathetic and just exposure of the vanity of paganism in these excellent monuments of antiquity; and we should do well to erect the Christian church among the heathen on such foundations as are already made in the sacred volumes. Then may we hope for the divine blessing on all our exertions calculated to teach and promulge the Christian faith in the whole heathen world."

One of our monthly *Reviews*—London, July 1819—has recorded an anecdote which shews that one at least of the societies conspicuously active in co-operating with more direct missionary efforts, by distributing books in all the travelled parts of the globe, requires the timely interposition of a faithful remonstrance, pointing to the danger and unworthiness of making fulsome concessions or equivocating approaches to any system of religion which they profess to think false, and know to be repugnant to christianity. The adverse believers, whom it is their object to convert, will despise what must appear to them a palpable and degrading artifice; and the native christians, instead of being edified, will have their faith weakened. *Anecdote*.—"Application having been made by the *Society for promoting Christian Knowledge* to the English chaplain at the court of Constantinople respecting the best means of distributing Arabic Bibles, a letter, received in due course from him, was read by the secretary some time last year, the Bishop of Gloucester and many other clergy and members being present. The chaplain informed them, that much discre-

dit and suspicion had been attached to the European editions of the Scriptures by the Asiatic Christians, owing to the *Bible Society* having inserted, in the title-page of their edition, the first sentence of the Koran, "*In the name of God the most Merciful,*" instead of the form of baptism, "*In the name of the Father, Son, and Holy Ghost*"—the words of our Lord himself, the CUSTOMARY MOTTO in the oriental manuscripts; and hence there was much difficulty in disposing of any copies whatever. One or two of the members present strongly reprobated the conduct of the Bible Society in thus substituting the words of Mahomet for those of our Blessed Saviour; and it was sarcastically observed that deism was the only point in which such a heterogeneous mixture of *soi-disant* christians could agree."

Without compromising creeds, a deal of good may be effected by appealing to the moral principles of the natives as far as the precepts of the religion which they profess agree with the code of christian morality; as was done with much success by Col. Alexander Walker, commanding the Company's force in Guzerat, and resident at Baroda; who, by argument and negociation, produced a written engagement from the Jahrajahs to abolish the practice of female infanticide.

To the circulation of Bibles, and the institution of schools, the missionaries in India have added

the substitution of native assistants, hired to read a version of the Scriptures in the local dialect. But of preaching, the direct ministration of the missionary by preaching, each at his assigned residence, we hear but little; and from the following remarks, which occur in a sermon by Dr. Bryce, at the opening of St. Andrew's Church in Calcutta, March 1818, it may be collected, that the little performed in this way is not always adapted to prove by its effects, that *faith cometh by hearing*: "Too frequently, I fear"—this is the tempered language of the chaplain of the Scottish congregation—"has the inquisitive heathen wondered at the wild and incoherent harangues of the man, who, with a zeal destitute of knowledge, would thus guide him to the truths of revelation: too often has he trembled at this vehemence with which his Christian monitor denounces—against an unbelief, which he employs no rational means to remove—the terrors of hell and eternal misery; and is it not to be apprehended, that too often has he retired from listening to such rhapsodies, with no other sentiment than a feeling of pity for his teacher, and a prayer of thanks to his God, that the religion of his fathers has taught him greater charity than any of which the faith that is thus propounded to him can boast?"

(*To be continued.*)

To the Editor of the Asiatic Journal.

The enclosed Persian lines convey a delicate compliment in a truly beautiful style. I send them for a translation from some of your Persian readers; they have hitherto invariably suffered in the process of rendering them into

English; let us once more try how far the comparative roughness of our language is capable of polish.

Your constant reader,

March 10.

THE BOOK OF PRECIOUS STONES.

Extracts from the Persian Work called "The Book of Precious Stones," by Mohammed Ben Manssur. Translated into German by Mr. Joseph Von Hammer.

THERE can remain little doubt but that the knowledge of precious stones first came to us with the specimens from the East; even the names of most of them do not differ from those in the countries where the mines are situated; and yet nothing has been made known from these sources except some specimens of the Arabian work of Tēfīaschi, which Ravius published in the year 1764, at Utrecht, and some passages in Bochart's *Hierozoicon*, treating of precious stones. These extracts will, therefore, not be unwelcome, particularly to lovers of mineralogy, as they not only contain the original Persian names of the precious stones, but also the classification; by which it is attested, that the fact, that rubies, oriental topazes, and sapphires, belong to one and the same class: namely, the *Jakut* (which is a modern discovery in Europe), has long been known to the inhabitants of the East, and that they have been acquainted for centuries with the mode of determining the specific gravity. The author composed his work in the seventh century of the Hegira (in the 13th of the Christian era) for the Emperor Abu Nassr Behardirchan, of the family of Abbas, in two books, the first treating of precious stones, and the second of metals. Considering the ideas that have prevailed in the East for thousands of years, it will not be surprising that among the former the pearl takes the lead.

Every chapter regularly consists of four sections, the first of which treats of the external and visible qualities, the second of the mine, the third of the value, and the fourth of the internal mystical qualities. Our extracts are confined to the first two sections of each chapter; as the value set on precious stones in Asia in the 13th century could, at the most, be a useless gratification of the curiosity of amateurs, and an enumeration of their secret, fabulous, and talismanic properties, could be of no kind of use to real science.

CHAP. I.—Of the Pearl (*merwarid*).

Sect. 1. Of the Classes of Pearls.—Pearls are called *merwarid* (hence the Latin *margarita*), or *lulu*; this last name is usually given them when pierced. They are divided into various classes, according to their water and lustre. 1. *Shahwar*, i. e. Royal pearls, the brightest and purest. 2. *Dürr*, the common pearls, likewise called *choshab*, *nedshmi*, and *Asiatic Journ.*—No. 52.

ojun. 3. *Shekeri*, i. e. sugar pearls, are of a red and yellowish colour. 4. *Benini*, yellow-white. 5. *Serdi*, the yellow-red. 6. *Keubdi*, the blue-white. 7. *Rossassi*, clouded with a kind of lead colour. 8. *Sarchab*, watered with red. 9. *Siahab*, watered with black. 10. *Shemi*, the wax-coloured green and yellow, and not transparent. 11. *Rochami*, the marbled, dark, not transparent, and without lustre. 12. *Chuschkab*, of dull water, in contradistinction to those called *choshab* (mentioned above) i. e. of pure transparent water.

With respect to their form, they are divided: 1. Into *mundakredsh*, those quite round. 2. *Ghabni*, egg-shaped. 3. *Arkid*, half flat and half round. 4. *Sheldshami*, turnip-shaped. 5. *Adsi*, lenticular. 6. *Seituni*, in the form of an olive. 7. *Shairi*, shaped like a barleycorn. 8. *Seili*, formed like a tail or train. 9. *Shemi*, in the form of a taper. 10. *Fokai*, in the form of a can. 11. *Ninrui*, hemispherical. 12. *Mussarres*.

With respect to their size, they are divided into fifteen classes, according to the number of the sieves through which they are passed, and of which one has always larger holes than another. The pearls of the first sieve, which has the smallest holes, are called: 1. The twelve hundred; because 1200 of them weigh a *niskal*. 2. Those of the second sieve, the five hundred. 3. The four hundred. 4. The three hundred and fifties. 5. The three hundreds. 6. The hundred and eighties. 7. The hundred and seventies. 8. The hundred and sixties. 9. The hundred and fifties. 10. The hundred and twenties. 11. The hundreds. 12. The eighties. 13. The seventies. 14. Fifties. 15. The forties, 40 of which weigh a *niskal*.

Sect. 2. Of the Pearl Fisheries.—The best are at *Serendib* (Ceylon), and in the Gulph of Persia at Bahrein, Kish, and Sharek; but the Arabian are less valued than the Indian. Their colour and quality depend on the bottom of the sea where they are produced; they become dark in a black mud, and yellow in a shallow sea. The pearl oysters drawn out of the sea sometimes move very quickly, and sometimes not at all.

CHAP. II.—Of the Sapphire (*Jakut*).

Sect. 1. Of the properties of the Jakut.—It is of six different kinds: 1. The

• It cannot be doubted that the *jakut* is our sapphire (télésic), and it is astonishing that the orientalists had already, at that time, a proper idea of this stone, such as we have only acquired by the latest researches, which particularly coincides with the division into four classes: the *red* (rubis d'orient), *yellow* (topaze d'orient), *blue*, and *white*.

red. 2. The yellow. 3. The black. 4. The white. 5. The green, or peacock colour. 6. The blue, or smoke-coloured. The first, namely, the red, is again subdivided into six kinds: 1. *Wirdi*, the rose-coloured. 2. *Erghiwani*, the purple-coloured. 3. *Behremani*,* the yellow-red. 4. *Lakmi*, the flesh-coloured. 5. *Sumaki*, the porphyry-coloured. 6. *Remmani*, the pomegranate-coloured. The second kind, the yellow, has three divisions: 1. *Mishmishi*, the apricot-coloured. 2. *Nurendshi*, the orange-coloured. 3. *Kahi*, the straw-coloured. The third and fifth kinds (the black and green), and the second and fourth kinds (the yellow and white), are one and the same. The sixth class (the blue) consists of four kinds: 1. *Asrak*, the light-blue. 2. *Ludshimerdi*, the azure-colour. 3. *Nili*, the indigo-coloured, each of which has several subdivisions. Some divide the jakut into four classes: into the red, yellow, dark, and white, as they count the peacock-coloured and the blue among the dark. The jakut cuts all stones, except cornelians† and diamonds, and can only be cut by the diamond.

Of other precious stones, only the *Laal*, of Badachshan, has the lustre of the jakut; it is harder than all other stones, and cool in the mouth. The red jakut appears white in the fire, and again attains its former colour when taken out of it. When it is cut, it is called *mamsuh*, and in its original state *alshemi*. There are six kinds of precious stones similar to the red jakut. 1. The *Laal*. 2. The *Bidshade*. 3. The *Benefsh*. 4. The *Kerkend*. 5. The *Kerkin*. 6. The *Kuser*. The *kerkend* is of a dark-red colour, and the *kerkin* reddish-black, and transparent in the sun. The *kuser* has all the colours of the various kinds of the jakut. The difference between the jakut and the stones that resemble it is, that it scratches them, is heavier, and bears the fire.‡ Thus the white jakut weighs more than the crystal, which it often resembles.

Sect. 2. Of the Mines of the Jakut.—On the island of Saharan, which is sixty-two farsanges in diameter, and lies about forty farsanges behind the island of Ceylon, is a high mountain called *Sahun*, in which jakuts of all colours are found. In the year of the Hegira 669 (A. D. 1270), a mine of jakut was discovered to the east of the village of Tara, in the third climate, and in the same latitude as the Canary Islands, and half a day's journey from Cairo, though some people assert

that there is no jakut mine except the mountain of Sahun.

CHAP. III.—Of the Emerald. (*Semerrüd*).

Sect. 1. Of the Properties of the Emerald.—It is divided according to its colour. 1. Into the *subabt*, grass-green. 2. *Rihani*, basilisk-green. 3. *Suluki*, leaf-green. 4. *Sindshari*, dirty-green. 5. *Kerassi*, euphorbia-green. 6. *Asai*, myrtle-green. 7. *Sabuni*, soap-green. The grass-green is of a beautiful light colour, like the green worms which are often seen in the grass; it is the lightest, as the soap-green is the darkest. The emerald, according to the degrees of its purity, is also divided into the bright polished (*sakali*), and the dark (*sulmani*). The first reflects every thing that is held before it like polished steel, while the latter does not bear the fire so well. The difference between the emerald and stones resembling it, as the jasper, the green *laal* and *mina* (green glass), consists in the polish. The oblong emerald is called *kasaba* (staff), and several pieces of emerald joined together by *mina* (green enamel) are called *astar*.

Sect. 2. Of the Mines of the Emerald.—On the borders of Negroland is a pit of emeralds which still belongs to Egypt, where they are dug first out of talc, and then out of a red earth. The soap-green emerald is also found in Hedshas, and it is on that account called the Arabian.

CHAP. IV.—Of the Chrysolite. (*Seberdshed*).†

Sect. 1. Of the Properties of the Chrysolite.—Abunassr Farabi, and many other learned philosophers, do not consider it to be of any particular species, but a kind of emerald: it is more beautiful and clear, and is divided into three classes; namely, 1. The dark-green. 2. The middle-green. 3. The pale-green.

Sect. 2. Of the Mines of the Chrysolite.—It is dug out of the same mines as the emerald, and seems to be composed of the same materials, but less finished.‡

* It is very interesting to learn, with some degree of precision, the oriental mines of the emerald; to be able to explain where the Greeks and Romans, of whom we have indubitable works in emerald, procured this stone, as they could not be acquainted with the only place where they are now found, the valley of Peru. From the latest accounts of the Frenchman, M. Calot, who had been sent by the Pascha of Egypt to look for the ancient emerald mines, he has been so fortunate as to discover them in the neighbourhood of the Red Sea, which pretty nearly coincides with these accounts.

† Ravius merely translates the *Seberdshed* as "Smaragdum minoris valoris" in his Latin treatise, because *Telshshi*, as appears from the text, merely considers it as a kind of emerald.

‡ The difference between the emerald and the chrysolite, both in their external as well as chemical characters, is now sufficiently known, and also that, according to modern travellers, the chrysolite is found in Syria.

* Behreman is an Indian flower, and, as some will have it, the blossoms of the Carthamus.

† Though the oriental cornelian is uncommonly hard, and difficult to polish, this far too high estimate of its hardness is a singular but pretty general error.

‡ This statement of its hardness and weight characterizes it with the most precision.

Tēfashi says, that in his time no chrysolite was dug; the rings which are seen of them come from Mauritania, and tradition considers them as fragments of the treasures of Alexander, who sought in the deserts of Africa for the fountain of life. After he had penetrated with his army into the land of darkness, in which flows the green fountain of life, it is said that the gravel under their feet (green, with the reflection of the fountain of life) was called the pebbles of repentance (*hassbaen-nedamet*). When they returned to the light, this saying was confirmed; for both those who had gathered none of the pebbles, and likewise those who had gathered some, repented; the first, because they had nothing, the second, because they had only chrysolite, and which was on that account called the *pebbles of repentance*.

CHAP. V.—Of the Diamond.

Sect. 1.—There are seven kinds of it. 1. The white-transparent. 2. The pharaonic. 3. The olive-coloured, the white of which inclines to yellowish. 4. The red. 5. The green. 6. The black. 7. The fire-coloured. The first two kinds are the most common, the others more rare, and that which is quite polished the most seldom found. It does not break on the anvil under the hammer, but rather penetrates the anvil. In order to break it, it is laid between lead, which is struck with the hammer, and then it breaks. Others enclose it in resin, or wax, instead of lead. The diamond has an affinity with gold, small particles of which are attracted by it; it is also much sought for by the ants, and covered with them, as if they would devour it. In India, where it is very highly esteemed, the exportation of it was formerly prohibited.

Sect. 2. Of the Diamond Mines.—In the eastern part of India is a deep ravine inhabited by serpents,* where diamonds are produced. Some people suppose that it is found in the *jakut* mines.

CHAP. VI.—Of the Cat's Eye. (*Ainol-hurr*.)

Sect. 1. Of the Properties of the Cat's Eye.—It is a brilliant transparent stone, which appears to the spectator like the eye of a cat seen in a light place. If you turn the stone, this bright focus also turns; and if light falls on it, it plays in waves, which move the more, the stronger the light is which falls on it; if you break a cat's eye into pieces, you find the same focus in every one of them.

Sect. 2. Of the Mines of the Cat's Eye.—It is affirmed that the cat's eye is found in the *jakut* mines, and formed of the same matter.

* Here the well-known fable is mentioned, out of "The Thousand and One Nights," of the birds which feigned up pieces of meat to which the diamonds stuck.

CHAP. VII.—Of the Spinell. (*Laal*.)*

Sect. 1. Of the Properties of the Spinellus.—It is of four different kinds: 1. Red. 2. Yellow. 3. Violet. 4. Green, like the emerald. Sometimes the same stone is half green and half red. The red is of eight kinds: 1. *Geshdimegi*. 2. *Piasegi*. 3. *Temeri*, the date-like. 4. *Lahni*, the fleshy. 5. *Anabi*, the dove-like. 6. *Bikani*, having the colour of Brazil wood.† 7. *Edrisi*, the stone enoch. 8. *Ekeheb*, the dark. The *geshdimegi* is remarkable for its pleasing colour and lustre. The *piasegi* has derived its name from the village of Piaseg. The flesh-like is dark-red. The gradations of the spinell are various, and jewellers know very well that there is sometimes no difference in the colour between the spinellus, the garnet, and the coloured crystal. The difference consists in the superior hardness of the spinellus, which is not broken on the anvil, while the coloured crystal, when held to the sun, appears white. The *laal* had its name from Bedachshan, not so much because it is found there, as because it is sold in that province.

Sect. 2. Of the Mines of the Spinell.—At the time of the Caliphate of the Abbassides, a mountain at Chatlan was rent open by an earthquake, where there was found the *laal* of Bedachshan bedded in a white stone. It is very hard to polish, and it was a long time before it could be smoothed,‡ till it was at length accomplished by means of the *gold marcasite* called *ebrendsh*. Smaller stones are found in the bed round a large one, like the seeds of a pomegranate. The miners call this bed of the spinell *maul*. There were found in the mines first red, then yellow *laal*, and it belongs to the kinds of the *jakut*.

CHAP. VIII.—Of the Turquoise.

Sect. 1. Of the Properties of the Turquoise (Firase).—It comes 1. From Nishapur. 2. From Ghasna. 3. From Irak. 4. Kerman. 5. From Chowaresm. The first is the most valued, on account of its hardness, purity, and durable colour. This has seven kinds: 1. *Abu Ishaki*. 2. *Esheri*. 3. *Sulzamani*, a milky and sweet stone.

* It is not to be doubted that *laal* is our spinellus, which is found in all shades of red, and several of violet and bronze, as also green, like *piere de Mahomet*. As yellow, or under a denomination of red, the author, perhaps, took the hyacinth, which has much resemblance, both in its brilliancy and the manner of treating it for the purpose of polishing.

† M. Von Hammer has here the word *Pernambukartige*, which it seems difficult to translate otherwise; yet Brazil was not known to the Persian author.

‡ The spinell is extremely difficult to polish, which can only be effected by oil of vitriol on a copper-plate. And it is very remarkable that the author mentions, instead of the oil of vitriol used by our lapidaries, the *marcasite* (iron pyrites), from which the oil of vitriol may be produced.

4. *Sermuni*, with golden spots. 5. *Chaki*, sky-blue. 6. *Abdol-medshidi*, beautifully coloured but soft. 7. *Andelibi*, a little milky. The turquoise is bright or dull, according to the weather ;* and is larger in rainy days than in fair.† One kind of it becomes of a more beautiful colour in oil, but then loses it again. Jewellers call it *mesha* ; that of two colours is called *ebresh*. The turquoise is also similar to a kind of green and blue enamel. According to the time in which it was dug up, it is divided into the old and new mines, of which the new change the colour.‡

Sect. 2. Of the Mines of the Turquoise.—It is found in those places after which it is called ; the most beautiful and richest mines are at Nishabur, where that called after Abu Ishak is the most beautiful, and the *andelibi* the faintest.

CHAP. IX.—Of the Bezoar (*Paschir*) and other Animal Stones.

Sect. 1. Of the Properties of the Bezoar. It is of two kinds : 1. The animal. 2. That found in the mines. The latter is divided into : 1. The yellow. 2. The green. 3. The dust-coloured. 4. That spotted like a lizard. 5. The whitish, spotted with gold spots. They make of it chessmen, draughtsmen, handles for knives, and the like. If you throw the green bezoar into the fire, it turns black without being burned ; the inhabitants of Kerman call it *muchati shzi'an*. It is the contrary with the animal bezoar ; it is likewise sometimes green, sometimes yellow, sometimes of a dust colour, may be easily powdered, and assumes a white colour when it is powdered on the stone. It is divided into the cow bezoar (*bakari*), and into the sheep bezoar (*sachti*). The former is a soft yellow stone ; the latter, green and soft. It is very often counterfeited ; The real may be distinguished from the false, as the former will not take a mark of fire, as its colour does not fall into a blueish, as it has no dots, and, when rubbed, gives off a white colour.

Sect. 2. Of the Mines of the Bezoar.—It is found on the borders of India and China, as also between Mossul and Dsche-sirei Ben Omer, in Persia. It is said that the animal bezoar is produced in China in the eyes of the stags, in which the

exhalations of serpents, which they have devoured, precipitated by the water, are said to be condensed into bezoar. The sheep bezoar is said to be produced in the stomachs of some sheep on the frontiers of Persia.

CHAP. X.—Of the Cornelian (*Akik*).

Sect. 1.—Of the Properties of the Cornelian.—It has seven kinds : 1. The liver-red. 2. The rose-red. 3. The yellow.* 4. The white. 5. The black. 6. The blueish. 7. That of two colours. Though a hard stone, it is much used for engraved seals.

Sect. 2. Of the Mines of the Cornelian.—It is found in Sanaa and Aden, in Yemen, on the frontiers of India, and at Rum, in Persia, also in the neighbourhood of Bas-ra.

CHAP. XI.—Of precious Stones resembling the Jakut, viz. 1. The *Benefsh*† (Violet). 2. *Bidshade* (Garnet). 3. *Budendsh*.

Sect. 1. Of the Properties of the Benefsh.—It is of four different kinds : 1. *Madeni*, of a pure bright transparent red colour, quite similar to the red jakut ; so that if it is strung with the jakut upon the same, the best judges can scarcely distinguish them. 2. *Rutbi*, garlic. 3. *Benefshshi*, blackish-red. 4. *Istusesht*, of a light-yellow colour. All kinds of the *benefsh*‡ have an affinity with the laal, but the *benefsh* inclines more to blue than the laal.

Secondly, *Bridshade*, the garnet, is a red stone, of pure water, which often loses its lustre when worn in the dress,§ and which is distinguished from the jakut, not only by its inferior weight, but also by a greater degree of warmth, the jakut, when taken into the mouth being cold, and making it moister, while the contrary takes place with the garnet. Thirdly, the *mudendsh*, or *mad-bendsh*, is a very red stone ; it is quite similar to the garnet, but its red inclines more to black, and it is lighter in weight. It has no lustre till it is cut deep from below.||

Sect. 2. Of the Mines of these Stones.—The *benefsh* is found in the mines of the spinell ; the garnets and *madendsh* (*made-bendsh*, or *madenidsh*) are found on the frontiers of *Bedachschan*, and

* These are probably limestone coloured by vitriol of copper. A chemical analysis of the turquoise has been given, in vol. IX, p. 23.

† The blue of the turquoise is in reality of so delicate a colour, that the influence of the light on a bright or gloomy day seems to cause a striking change in it.

‡ Some turquoises frequently change the shade of their colour, which probably is caused by their inferior hardness or porosity, and from the effects of acids, or imbibing of oily particles : thus in a ring with four blue turquoises one turned green after an illness of its wearer.

§ Yellow is called *sard* in Persian ; and here, and not in the city of Sardes, we are to look for the origin of the name of the sardonyx.

† *Benefsch*, *Bidshade*, and *Madenisch*, are certainly only different shades of the garnet, and may probably be the violet (almandin), the dark-red, and the yellowish-red oriental garnet ; namely, that of Ceylon and Syria. That their specific gravities are very different is well known.

‡ Ravius translates *Benefsch* by amethyst, as falsely as he does jakut by hyacinth.

§ As they have little hardness, they soon become dull.

|| It is also usual among us to cut garnets of a dark colour hollow, or to lay foil under them.

brought to *Cachemire*, about ten days' journey off, which has given rise to the erroneous supposition that there were mines of them at *Cachemire*. The garnet has a division like the *laal*, and is found in the mountain of *Sahun*, where there are also *jakut* mines. When they come from the mines, they are dark, and without water, and are not bright and transparent till they are cut.

CHAP. XII.—Of the *Onyx* (*Dschesi*).

Sect. 1. Of the Properties of the Onyx.—There are several kinds, as: 1. *Bakraei*. 2. *Habeshi*. 3. *Anchi*. But they are classed according to their colour: 1. Into the white. 2. Into the black. 3. Into the red. 4. Into the particoloured. The *bakraei* has three layers; the first, red, and not transparent; the second, white and transparent; the third, transparent, like crystal. The *habeshi* has likewise three layers, two dark, and a white one in the middle. The *onyx* is the hardest stone after the diamond or *jakut*, and is about the same weight as a *cornelian*. Some *onyxes* are striped, others not; in others, the stripes are interrupted; so that they form singular figures.

Sect. 2. Of the Mines of the Onyx.—Though the *onyx* is found in several places, the most esteemed are those found on the frontiers of *China* and *Arabia*.

CHAP. XIII. Of the *Magnet*.

Sect. 1. Of the Properties of the Magnet.—There are four kinds of the magnet: 1. The iron magnet, commonly called the iron robber, *akenruba*. 2. The gold magnet. 3. The silver magnet. 4. The tin magnet, which attracts gold, silver, and tin. The magnet loses its power in oily substances, but increases it when put into blood, gold, or vinegar. The silver magnet is a white light stone, which swims on water, attracts silver, and is commonly called *hatschrol-hokur*, i. e. cow's-stone. The gold magnet is a pale yellow stone, which attracts gold, and the tin magnet is a heavy sinking stone, which attracts tin.

Sect. 2. Of their Mines.—They are found in *Arabia*, *India*, and other places.

CHAP. XIV.—Of the *Senbad** (Quarry Spar?) (German *Spath*?)

Sect. 1. Of the Properties of the Spar.—It is a hard stone, which polishes iron and steel. It is distinguished from stones which resemble it by its hardness, which is next to that of the diamond, which alone scratches it. It is either reddish or bluish.

* *Senbad* is most probably the diamond spar, or corundum; and the word *spat* (*spath*) is more likely derived from *senbad* than from *spahen*, from which *Adelung* derives it.

Sect. 2. Of the Mines of the Spar.—It is found in many places, as in *India*, *Zanguebar*, *Siwas*, *Kerman*, *Nubia*, and *Ethiopia*. The best comes from *Nubia* and *Siwas*.

CHAP. XV.—Of the *Malachite* (*Dehne*).

Sect. 1. Of the Properties of the Malachite.—The malachite is a green stone, which has the colour of verdigrise, with red and black spots. Some persons affirm that in *Turkistan* a red malachite, of the colour of the red *jakut*, is produced. The *dehne* is of five kinds: 1. The leek green. 2. Basilisk-green. 3. The black-green. 4. The white-green. 5. The emerald-green. The pure malachite is called the sweet (*schirin*), and the dull the bitter (*telch*). This is only valued very much in *Syria* and *Europe*. When it is smeared with oil, it receives additional lustre; when it is old and much worn it loses its beauty, and the white of its spots turns yellow. It appears, like the turquoise, bright in serene weather, and in cloudy, dull. If you rub it with natron and oil, you obtain the purest copper.

Sect. 2. Of the Mines of the Malachite.—It is found in five places: in the mountains of *Mauritania*, in *Kerman*, in *Haskeck*, near a city which was built by *Efrasslab*, in *Turkistan*, and in *Arabia*, in the cavern of the *Beni Salem*.

CHAP. XVI.—Of the *Lapis Lazuli* (*Lad-schiwerd*).

Sect. 1. Of the Properties of the Lapis Lazuli.—Its four kinds are; namely, 1. *Bedachshi*. 2. *Gurdshi*. 3. *Dermari*. 4. *Kermani*. The first, i. e. that from *Bedachshan*, is divided into that with gold spots, and into that without. Powdered lapis lazuli thrown into the fire produces a many-coloured smoke.

Sect. 2. Of the Mines of the Lapis Lazuli.—The most remarkable of them is the lapis lazuli mountain in *Chatlan*, near *Bedachshan*, but it is also found in *Georgia*, in *Kerman*, and in other places.

CHAP. XVII.—Of the *Coral* (*Bessed and Merdshan*)*

Sect. 1. Of the Properties of the Coral.—There are four kinds of corals: 1. The red. 2. The white. 3. The black. 4. The dark-coloured. They are soft and white as long as they are in the water, only become hard when out of the water, and assume different colours. The genuine can be distinguished from the counterfeit by the smell of the sea weed; in oil, they become beautiful and shining, but in vinegar soft and white. They are very

* Some say that *bessed* is the Persian, and *merdshan* the Arabian word for corals; others, that the former signifies the stem, and the latter the branches.

much valued in China and India, because they are used for adorning the idols. *Teifaschi* relates that he had seen a smelling bottle made of a coral, a span and a half long, and three fingers broad.

Sect. 2. Of the Places where they are found.—They are generally fished up in the Mediterranean Sea. The best are the reddest, and the largest of a straight stem. They are polished with spar, and bored through with steel of Damascus.

CHAP. XVIII.—*Of the Jasper (Jaschep, or Nassb).*

Sect. 1. Of the Properties of the Jasper.—It has five kinds; 1. The white and light. 2. The whitish-yellow. 3. The black-green. 4. The transparent black.* 5. The dust colour. In China they make a false jasper, which is distinguished from the genuine by its smoky smell. If a vessel of genuine jasper breaks, it is repaired with artificial pieces, which are scarcely to be distinguished from the natural.

Sect. 2. Of the Mines of the Jasper.—In China there are two mines of it, of which the one called *Ah Kash* produces light jasper, and the other called *Kut Kash*, dark. The large pieces belong to the Emperor, the smaller to the workmen. Jasper is also found on the frontiers of *Kaschgar*, in *Kerman*, and *Arabia*.

CHAP. XIX.—*Of the Crystal (Bellor).*

Sect. 1. Of the Properties of the Crystal.—It is more pleasing, pure and clear than other precious stones, and is of two kinds: 1. The clear and pure. 2. The dark-yellowish. It can be melted like glass, and then coloured in imitation of the *jakur*, *laal*, or *emerald*. *Teifaschi* relates, that in his time a merchant of Mauritania was in possession of a bath made of two pieces of crystal, which was so large that four persons could sit in it. In the treasury of *Gasna* there were four crystal vessels, each of which contained two skins (*borachio*) of water. *Abu Rihan* mentions the assertion of the lapidaries, that there was often found in crystal wood, and the like, and that he himself had seen two crystals, in one of which was enclosed a green twig, and in the other a hyacinth.

Sect. 2. Of the Mines of the Crystal.—The crystal is found in seven places; In India, Turkistan, Europe, Arabia, China, Armenia, and the remotest frontiers of *Moghrib* (Mauritania). Some prefer the Arabian to the Indian, but the least valued is the Armenian, which is called *rim-bellor*.

CHAP. XX.—*Of the Amethyst (Dschemest).*

Sect. 1. Of the Properties of the Ame-

thyst.—The amethyst has several colours, like the rainbow, and four kinds; 1. Deep rose-coloured and sky-blue. 2. Pale rose-coloured and deep azure. 3. Pale rose-coloured and sky-blue. 4. Deep rose-coloured and pale sky-blue. The Arabians set an extraordinary value upon the amethyst, and adorn their arms with it.

Sect. 2. Of the Mines of the Amethyst.—It is found in the environs of the village of *Safwa*, about three days' journey from *Medina*. Wine drunk out of a goblet of amethyst does not intoxicate.*

CONCLUSION.

Of various other Stones.

Sect. 1. Of the Weshich, or Shebak (probably Set).—It is a black stone, easily broken, which reflects objects. It is of two kinds; the Indian and the Persian: the former is better than the latter.

Sect. 2. Of the Chumaken.—It is called the ass's stone; it is very hard, and can only be bored by the diamond. When broke it divides into branches; and when rubbed on a hard stone, colours it red. The most beautiful is the blackish-red; it is found in the district of *Karak*.

Sect. 3. Of Talc (Talk).—It is of two kinds; that produced in the open air, and that found in mines. It is called *sitarei semin*, i. e. star of the earth, on account of its clearness and lustre. Artificial pearls are made of it, which are scarcely distinguishable from the natural. They may be known from each other by this, that the artificial swim on the water, but the genuine sink. The talc does not burn nor calcine in the fire. If you dissolve it and rub the limbs with it, it makes them fire proof.† It is found in many places; the best in *Cyprus*. The talc can neither be pounded in mortars, nor broken to pieces with iron hammers. The way to dissolve it is to boil it with beans, to wrap it then in a piece of linen, and to beat it till it is dissolved, and oozes like milk through the linen. If dissolved talc is mixed with a little resin and saffron, and used as ink, it makes a gold ink, and without saffron, silver ink.

Sect. 4. Of the Rainstone.—A soft stone, of about the size of a large bird's

* To this opinion of the amethyst, which is current also in Europe (by which it has gained the honour of being used as a test or touch-stone, it seems to owe its Persian name, in which we find the name of *Dachem* or *Dschemshid*, whose goblet is said to have consisted of a single amethyst. The Greek name *αμεθυστικός* is also unintoxicated, but it is originally to be derived from *Dachemest*, as the jasper from *Jaschep*, the hyacinth from *Jacui*, the emerald from *Sennerrud*, pearls (*Margaritæ*) from *Merwarid*, the turquoise from *Firnee*, the lapis lazuli from *Ludschiwerr*, the sardonyx from *Sard*, talc from *Talk*, chalk from *Kals*, &c. &c.

† If this is confirmed, it is probably the secret of the incombustibility of the Dervise *Rufaji*, who performed all kinds of tricks with a red-hot iron.

* The transparent black jasper may, perhaps, be the obsidian, if it is known to oriental naturalists.

egg, which is much celebrated among the Turks. It is of three kinds; 1. The dust coloured with red and white spots. 2. The dark-red. 3. The various coloured. Some persons consider it as a production of a mine; some as an animal stone, which is said to be found in the stomachs of swine, or in the nests of some large bird. The Turkomans affirm that they can produce rain and snow with this stone.

Sect. 5. Of the Eagle Stone.—If you shake it you hear it rattle as if there were something in it; and on breaking it, you find nothing in it.

Sect. 6. The Jarakan (Jaundice Stone).—It is a stone with red and yellow spots, which, when it is rubbed, leaves a red mark. It is so hard that it can only be bored through with the diamond; a little black stone which the swallows carry into their nest to cure their young of the jaundice.

Sect. 7. The Vinegar Stone.—It attracts vinegar, but cannot remain in it, as it always flies out when thrown into it.

Sect. 8. The Oil Stone is set in flames when water is poured over it, but it is extinguished with oil.

Sect. 9. The Jew's Stone.—A shining stone, which is produced in the sea, and has three kinds; 1. The round. 2. That in the shape of a nut. 3. The oval; is often marked with black stripes, is hurtful to the stomach, but very useful to the bladder.

Sect. 10. The Milk Stone, which, when rubbed, leaves a white mark; it is ash-coloured, and has a sweet taste.

Sect. 11. The Mouse Stone, which has the smell of mice.

Sect. 12. The Blood Stone, also Shadendsh, i. e. Lentil Stone.—This last kind is used to polish the surface of the eye (den spiegel des auges damit zu glatten).

Sect. 13. The Moon Stone, a stone with spots, which become larger and smaller with the increase and wane of the moon.

Sect. 14. The Colour Stone, which always reflects different colours.

Sect. 15. The Sleep Stone, which produces sleep when hung over the bed.

Sect. 16. The Stone Miskal, which is said to be thrown up from the Mauritanian Sea.

Sect. 17. The Marcasite, likewise

called *the Stone of Brightness*, is divided into several kinds; the gold marcasite is dug up near Ispahan, and is called Ebrendshe; it is used to polish the spinellus. The silver marcasite comes from the frontiers of Bedachshan; the copper and iron marcasite is similar to copper and iron.

Sect. 18. The Magnina (Manganese ?) which is used by the glass manufacturer. It is divided into that with little and into that with large shining spots; but according to the colour into the blackish, yellowish, and reddish.

Sect. 19. Of the Surme and Tutia (query Antimony?).—It is a bright, heavy, transparent, black stone, which is divided according to the country where the mines are situated, into those of Ispahan, Herat, Sabulistan, Georgia, and Kerman. The first is the best, the last the worst. If powdered Surme is applied to the eyes, it increases their polish. The tutia (the genuine eye-paint), is divided into those of Kerman, Kand, India; the last is pure and white like salt; that of Kerman yellowish. It is made by laying the natural tutia stone upon coals, and catching the vapour in an alembick upon nails. The lightest tutia, and the best for the eyes, is that which forms on the points of the nails, the second sort on the middle, and the coarsest sort on the heads of the nails. The Indian is produced on the shore of the sea, and is much used in alchemy.

Sect. 20. Of the Proportions of some precious Stones to others.—Abu Rihan is said to have found by experiment that a *miskal* of blue jakut is equal in size to five *dank** and three *tissu* of red jakut, or to five *dank* and two and a half *tissu* of laal; and that four *dank* minus a *tissu* of coral are equal in size to four *dank* minus two *tissu* of onyx and crystal. The mode of discovering the size and weight is the following: a vessel is filled with water, and the stones thrown singly into the water; the quantity of water which is expelled from the vessel by means of each stone is equal to the room it occupies. God knows best.

* According to Meninski, a *dank* is equal in Egypt to three carats; according to Cassira, two in Spain. It is the fourth part of a drachm, but according to Ferheng the sixth. The *tissu*, according to Ferheng, weighs sometimes two, sometimes four barley-corns; and the *miskal* is one drachm and a half.

GOLDEN IMAGE OF VISHNU:

CERTIFICATE OF ITS CAPTURE, WITH A DESCRIPTION OF IT.

THE image of Gold, described in the following document, is now deposited in the East-India Company's Baggage Warehouse. It is intended to be sold; and from its great beauty, it is hoped that the Company will purchase it for their library.

COPY.—Bombay, May 31, 1819.—This is to certify, that the golden image of the idol Vishnu, herewith exhibited, was found at Nassick on the month of May 1818, with jewels and other property belonging to his highness Seremunt Maharajah Bajee Row Peishwa Row Pundit Purdhan Bahander. — This beautiful image, which is composed of the finest gold from Mount Ophir, was made in the year 1707, and weighs 370 tolas. It has ever since been preserved with the highest veneration as one of the principal household deities in the family of Leewajee and his descendants. — A numerous and expensive establishment of Bramins and other attendants were constantly maintained for it. It accompanied the late P. ishwa in all his pilgrimages in a state palanquin, escorted by part of his choicest troops. In this manner the deity was sent to Nassick during the late Mahratta war, where it was discovered by the British authorities, and sent to Poonah with the rest of the property found at Nassick, to the Hon. Mr. Elphinstone, who directed Capt. Fearon to dispose of the same on account of government. — (Signed) J. FEARON.

I certify the above to be the signature of Capt. Fearon, one of the prize agents to the Poonah division of the army. — W. NEWNHAM, acting chief Sec. to Gov.

Bombay Castle, July 1, 1819.

GOLDEN IMAGE OF VISHNU.

The religion of the Hindoos is Monotheism, they worship God in unity, and express their conception of the divine Being and his attributes in the most awful and sublime terms. God, thus adored, is Brahma, the one eternal mind, the self-existing incomprehensible spirit.

The will of God that the world should exist and continue is personified, and his creative and preservative powers appear in Brahma and Vishnu; while Siva is the emblem of his destructive energy, not however of absolute annihilation, but rather of reproduction in another form.

In mythology, therefore, this triad of persons represent the almighty powers of creation, preservation, and destruction. In metaphysics, Brahma is matter; Vishnu, spirit; Siva, time; or in natural philosophy, earth, water and fire.

Vishnu is therefore the second person

of the Hindu triad, and has on the whole no doubt a greater number of aders than any other deity or attribute.

If indeed we take the sect of Vishnu in its most comprehensive sense, including, as we are warranted in doing, the schism of Buddha, he has more than all the other collectively.

He is a personification of the sun, or conversely, the sun is a type of him.

Considering Vishnu as time, he corresponds with the hours of Egypt. There are legends of his sleeping, waking, joining on his side, evidently alluding to the sun at the solstices, also the phenomenon of the overflow and receding of the Ganges, so similar to that of the Nile in Egypt. On the 11th day (sometimes on the 14th, which is the day of the full moon), of the bright half of the lunar month Cartien, Vishnu is fabled to rise from his slumber of four months.

Vishnu, during his repose of four months, and when it is just half over, is supposed to turn himself on his side: this is on the 11th of the half-bright of the Badia.

Vishnu, in the accompanying drawing, is attended by his two wives; Ladsmi Devi, with the Gadha and Padma in her hand, and Satyavannas. The latter was with him under the same name in his Avatara of Crisna, and so was Ladshmi under that of Rickmun.

Vishnu is reposing on the five-headed serpent; Sesha, emblematic of eternity, or Ananta as the serpent, as well as Vishnu, as sometimes called, meaning endless or infinite. The heads of the serpent are spread into a kind of canopy over Vishnu, and from each of its mouths issues a forked tongue, and seems to threaten instant death to any whom rashness may prompt to distrust him.

Vishnu is contemplating and willing the creation of the world. The creative power, Brahma, is seen springing from his navel on a lotus, and Schoa forus a couch for the contemplative deity. Brahma is in his usual four-faced form; in two of his hands are the Vedas.

In his left hand he holds the Gadha; the right arm is extended towards his favorite Lachuni. On his breast is a gem named Bhuguilita, worn also by him in his Avatara of Crinna, and his head-dress is called mungut for moogort.

The Hindus are taught to believe that, at the end of every calpa, creation or formation, all things are absorbed in this deity, and that in the interval of another creation he reposes himself upon the serpent Liska.

SCIENTIFIC TOUR IN CEYLON.

The following Extract of Letter from Sir H. Davy, M. D., to Sir H. Davy, dated Cinnamon, Oct. 3, 1817, relates to the same scientific tour in Ceylon of which a short notice was given in the *Asiatic Journal*, vol. VI, p. 475. But something more is unfolded of the extent to which Dr. Davy was able to explore the country. With chemical and geological researches he combined attention to the remains of antiquity, to existing specimens of natural history, to the manners of the native inhabitants, and to the statistics of an important dependency of the empire.

My different excursions have been highly interesting. As soon as possible I shall give you a pretty minute account of the results of my observations: now I must be very concise indeed. In July I went to the southern part of the island, and visited the districts of Matura and the Malagan-patton. In the former gems abound. I saw the natives at work in search of them in alluvial ground. Here I ascertained that the native rock of the sapphire, ruby, cat's-eye, and the different varieties of the zircon, is gneiss. These minerals and cinnamon-stone occur imbedded in this rock. In one place I found a great mass of rock, consisting almost entirely of zircon in a crystalline state, and deserving the name of the zircon rock. It is only a few miles distant from a rock called the cinnamon-stone rock, from its being chiefly composed of this mineral, in company with a little quartz and adularia.

In the Malagan-patton, the most remarkable phenomena, and what I went chiefly to see, are the salt-lakes, the nature of which hitherto has been considered very mysterious from the want of inquiry. This I was able to make in a very short time, and ascertain the source of the salt. Many of these lakes are of great extent, and in a great measure formed by an embankment of sand, thrown up by a heavy sea along a level shore; the water, that falls in torrents during the rainy season, is thus confined, and inundates a great part of the country; the sea, more or less, breaks over or percolates through the sand-banks, and thus the water is rendered brackish. In the dry season the wind is very strong and dry, and the air very hot; it was from 85° to 90° when I was there; the consequence is, a very rapid evaporation of the water, the drying of the shallow lakes, and the

formation of salt. It is from these lakes chiefly that the island is supplied with salt. The revenue that this one article brings government, amounts to about £10,000 annually.

The Malagan-patton altogether is a singular country; its woods, and it is almost all wooded, are principally composed of euphorbia, and mimosa: its few inhabitants are a sickly race, miasmata destroying their health, and the wild animals with which the country abounds, as elephants, hogs, deer of different kinds, leopards, bears, &c. destroying the fruits of their labour. In the beginning of January I attended the Governor and Lady Brownrigg to Kandy, and had a good opportunity of becoming acquainted with the manners of the natives. The country in the interior, and particularly round Kandy, is magnificent; its grand features are high hills and mountains, and deep vallies and perpetual wood, and perennial verdure: the wood is in faulty excess. The climate is fine; the air cool; generally at night below 75° , averaging all the year round the moderate temperature of 74° .

From Kandy I made an excursion alone into Doombura, and explored a mountainous region, where a white man was never seen before. My object was to examine a cave that yields nitre. It is a magnificent one in the side of a mountain, in the depths of a forest surrounded by mountains of great height and noble forms. I shall send you a particular account of this and other nitre caves I have visited. The rock is a mixture of quartz, felspar, mica, and talc, impregnated near the surface with nitre, nitrate of lime, and sulphate of magnesia, and in one spot with alum, and in another incrustated with hydralite, similar to that round the Geyser in Iceland. From the mountains of Doombura, I looked down on the wooded plains of Birtanna, and saw the great lake of Birtanna, which no European I believe ever before visited: it is full of alligators.

Returning to Kandy, after a short stay there I next came to this place, through a country almost entirely over-run with wood. I wish you could see some of the noble ebony trees which flourish here. Three days we travelled in a noble forest without seeing a single habitation, and without observing any traces of cultivation; but some fine remains of antiquity, especially about Caudely lake, indicating that the country had once been in a very different state.

ACCOUNT OF THE CITY OF JEYPOOR.

THE following account of this celebrated city begins with promising only a sketch of its present appearance. It preserves us, however, some traditional information from native sources; and some authentic observations made in the British camp on the recent state of things in that part of Rajpootana.

The notes of an intelligent correspondent have enabled us to give a rapid sketch of the present appearance of the celebrated city of Jeypoor. The Rajah Jey Sing is well known for having been a great encourager of European science, and it is mentioned at Jeypoor that the plan of the city was laid out by an Italian, who had gone thither in his early youth, and who was specially sent by the Rajah to Europe, to be instructed in the knowledge of the arts and sciences necessary for the completion of his plans. The Italian was amply supplied with the means of obtaining every sort of information, and after several years returned to Jeypoor. It is added, to his honor, that he brought back with him a very considerable portion of the money that had been advanced to him, and that he died in the city which his talents and ingenuity had principally formed. It is possible that this story may not be correct in every particular, but it is certain that the arrangement of the buildings and streets of Jeypoor is superior to the genius of a Rajpoot, or any other native of India. In 1779, Jeypoor became the refuge and sanctuary of Hindoo learning, and it was from thence that Col. Poller procured the first complete copy of the *Vedas*, which he afterwards presented to the British Museum. The manner in which they were obtained is related in the memoir of that distinguished character [republished in the *Asiatic Journal*, vol. VII, p. 465, under the express sanction of the learned author]. Don Pedro de Silva was at that time physician to the Rajah, and many other Europeans were entertained at court for the cultivation of scientific pursuits. With such a disposition, there can be little doubt that the Rajah availed himself of European taste and skill, for the purpose of improving and embellishing his city. The liberality and magnificence of his patronage seem to diffuse over the period in which he reigned, though in an inferior degree, the charm which gave importance to that of Augustus.

The annexed account is the result of a very short visit to the splendid capital of the Rajpoots.

The city of Jeypoor is enclosed on three sides by hills of a moderate height, sur-

mounted with several forts and works, but at such a distance from town as not to afford it much protection. The hills, though apparently destitute of verdure, have with their white fortifications a very pretty aspect; the town has also good and lofty walls of stone, and the gates are double, with large open courts between. To the west the city is open, with the exception of the wall; but here are several old castle-like forts, by which the plain is overlooked and commanded. As these fortifications are frequently met with in Rajpootana, they do not denote the vicinity of a royal residence, nor does anything else in the neighbourhood; a few villages scattered about having the usual appearance of meanness and poverty, and the country is particularly desolate and unpleasant from its deep sand, a belt of which seems to encircle Jeypoor to the extent of three or four kos. On first entering the city by the western or Ajmeer gate, the breadth of the street, as well as the apparent regularity with which the houses have been built, excites some surprise; but here, as in all the outer parts, much ruin prevails.—It is not until we reach the main street, or Chouk, that the extraordinary beauty of Jeypoor strikes the stranger, as much with delight as with the utmost astonishment, to behold an Asiatic city so agreeably different to all he has seen before. Instead of narrow miserable streets, across which, as at Benares and elsewhere, one might almost leap, and large houses crowded with filthy huts, here is one which for extent, width, and regularity, might be considered noble in any part of Europe. It is two miles long with a breadth of between 80 and 90 feet. The houses from end to end on either side have the most exact and pleasing uniformity, except at the corners, where other streets run into this, and here in some places are the Rajpoot temples, and in other situations ornamented cupola-buildings opposing each other, which give a gay and tasteful variety to the scene.

This Chouk is wholly a series of shops or warehouses, and the buildings are confined to the ground floor; but above them rises a sort of balustrade, or open screen, of fretwork masonry, and this again is crowned by a very pretty light turret. The whole is white, and the general effect singularly beautiful. It is somewhat in decay towards the extreme ends of the street, where the population, as in the suburbs, generally had become scanty, from the miseries suffered in this country,

* Two miles of 25 furlongs, by perambulator. The breadth is from guess by pacing.

ready are repairs in several quarters on. From the palace, which apparently almost an entire quarter of the city, rises a lofty minar of a very elegant form, overlooking the Chouk, which run other streets of almost equal width to that already described, regularly meeting each other at a central point, where the Chouk forms several squares, and in the middle of these are large reservoirs of masonry, now dry, as also the channel of the canal running through the city by which they were formerly supplied. The works, however, appear throughout in the most excellent order, and add greatly, even without reference to the beauty of the city: which, it may be here observed, presents a rare and most pleasing appearance of cleanliness. The Chowringhee road is not nearer: and when a street of nearly the same length, perhaps of greater breadth, and the most pleasing uniformity in its buildings, is brought before the eye, accustomed in other Asiatic cities to all that is disagreeably the reverse in every respect, the very powerful and lively effect of the contrast may be easily conceived. There is one drawback to this, in the number of little temporary sheds for the sale of goods in the very centre of the streets; they are of wood, or the common grass reed (*surput*), and also abound in the squares, where they are covered over with white cloth and filled up with bales of goods, like a large fair. Although the eye is somewhat hurt by this Indian custom, the space is so ample that no inconvenience arises from it, while it gives a busy trading character to the city, and affords protection to the inhabitants from the sun. The temples are of stone, and in them the most elaborate curious workmanship is thrown away on figures, without taste or proportion; yet, take these buildings altogether, viewing them from a little distance, their forms, though somewhat grotesque, are by no means destitute of beauty. They would be gladly adapted to give an oriental feature to an European park. The ringing of their bells in the evening, the cries of the wandering traders, and the hum of the busy multitude collected in the Chouk, with the display of all sorts of merchandize, from the gay *kimkhab* to the musk melon (of which the neighbouring sandy plains give great abundance), form with the pleasing situation a most lively picture. The gates only of the palace present themselves to the streets (with the exception of one building), and the interior could not at this time be seen. The palace is said to possess within itself spacious tanks, groves, &c., and to have many buildings of fine white marble; that just alluded to is the *Hawa-khana*. Intention or imagination has given it the form of a peacock's tail, full spread, and certainly looking

for such a conceit, it comes home to the eye without much exertion of fancy. It is a pretty light building, but has no character of magnificence; abounds in little windows, seeming to mark the gaudy spots of the tail, and is crowned with small gilt spires, &c. The rooms must be very narrow, as one can from the street almost see through them.

This fine extensive city, once the great mart between Delhi and the south of India, has a vast number of large houses very superior to what is commonly seen among natives, yet not without the faults they usually display, such as low rooms, small windows, &c. But to this there are exceptions; and throughout Jeypoor there prevails a comfortable cleanliness, and a taste so striking in its plan and style of decoration, that the stranger involuntarily, when he reaches its interior, stops to gaze with the most agreeable satisfaction and surprise. Though all without has a cheerless desert wildness, here all is life and bustle: and the bazar appears to be excellently provided. Considering the many miseries to which this city must have been subject, during the long period Meer Khan was encamped near it, and possessed in effect the whole province, its present appearance may be just cause for wonder. The place where the chief just mentioned breached a wall, running from the town up the hills to the fort, is observable from the new work by which it is filled up. At the distance of six or seven miles from Jeypoor is the Rajah's country palace of Amber, said to be very beautiful; but as the interior could not be seen at this period, we did not go so far. The country between Ajmeer and Jeypoor has all that cheerless, half desolate aspect common to Rajpootana, but that its state is already greatly improved must be evident to every observer. Few villages now are seen in total ruin; much cultivation prevails in parts, and the traveller falls in occasionally with passengers and loaded cattle, which was by no means the case fifteen months ago. Ajmeer is certainly a more agreeable province than Jeypoor. It is not so sandy, the towns and villages appear to have suffered less, and fine groves with pieces of water are often met with, refreshing the heart and eye. The near cantonment Husseinabad (the British "local habitation" with "a name") has already within a few months assumed its proper form, by dint of the most persevering exertion, for shelter, and this it abundantly exhibits in all the varieties of taste and fancy. The cantonment is about eight miles from Jeypoor. The situation is high and promises to be very healthy, and indeed it has hitherto been so. At a distance rise the hills of Ajmeer near which the first British ambassador had his presentation."—*Cul. Gov. Gaz.*

Emersions of the first Satellite of Jupiter.

Note.—The emersions of the Satellites were viewed with a telescope magnifying about twenty-five times; the equal and double altitudes taken with the time of the observations noted by a good watch.—*Original Communication.*

CALCUTTA.

Penang Painting. Aug. 12.—The lovers of art in Calcutta have lately been very much delighted with a masterly effort of a pencil, now at the government house, the production of Captain Smith of the Honourable Company's Engineers, and sent here from Penang, as a present from an officer to the Marchioness of Hastings.

It is a picture of about eighteen feet in length by three in height, painted in oil, and representing a tract of country around Hurdwar, of nearly fifteen miles in extent. The scenery is magnificent, including fertile plains, rising uplands, and towering ranges of stupendous mountains, that rise above each other in snowy grandeur till their summits touch the skies. The number of the figures is not to be conceived by reference to any previous picture, unless, perhaps, the mind should have a vivid recollection of a crowded panorama. This design represents the grand army of Lord Hastings in motion; and though all the figures, from a scale and perspective observed, are necessarily small, yet they are almost all of them portraits of such fidelity as to be easily recognized.

The picture, independently of its peculiar attractions as a piece of great local interest, is said by the first judges here to be perfectly unique as a production of art. The more enthusiastic admirers of it declare their belief, that no individual now known could execute such a piece except Captain Smith: while all admit it to be as wonderful as it is beautiful, and think it will ever stand alone and unrivalled in excellence, for fidelity of representation and perfection of finish.

This same accomplished artist has been exercising his pencil at Penang, as we find by the last gazette of that presidency, dated 10th July, which announces his embarkation for England; and subjoins the following list of drawings from his pencil.

1. View taken from the Convalescent Bungalow.
2. View taken from Mr. Phillips's, or Strawberry Hill.
3. View taken from Mr. Halliburton's Bungalow.
4. View of Suffolk House and the Hills towards Glugor.
5. North Beach and Hills, taken from the old Council House.
6. View of Mount Erskine and Pulo Tecoose Bay and Point.
7. View of Glugor House and Plantations to the Southward.
8. View of Amie's Mills.
9. View of the Waterfall.
10. View of the Great Tree.

These views, the most strikingly picturesque that could have been selected, are gone home to be engraved, and it is intended to have them executed by the first artist in London, each subscriber being furnished with two copies of the set. We understand there are already forty gentlemen on the list of subscribers, and

we have little doubt that on the object becoming known, many others who are admirers of beautiful scenery, and particularly those acquainted with the island of Penang, will be desirous of joining the list of subscribers, which is allowed to remain open, as the more ample the funds the larger will be the scale of the engravings, and the more finished the style of execution.

Previous to Captain Smith's departure from the island, the cordial acknowledgments of the subscribers were presented to him, for his kind compliance with their wishes, and the eminently skilful manner in which he had completed the drawings.

CAPE OF GOOD HOPE.

Phœnician Navigators.—A discovery was recently made in the environs of the Cape of Good Hope, which must be interesting to the historian; whilst digging a cave, the workmen found the hull of a vessel, constructed of cedar, which is said to be the remains of a Phœnician gallery. If this appropriation is just, there is no longer room to doubt that the bold adventurers of Tyre had reached the south point of Africa.—*Calcutta Journal.*

EGYPTIAN ANTIQUITIES.

(Continued from p. 52.)

The letter dated *Cairo*, March 4, 1819, thus proceeds:—

"In our return to Thebes, we took in Ombos, Hagar, Tileit, and Hemrisha; Trenchis and Edfir we had seen coming up. Ombos is very late, and very bizarre in its construction; five pillars in front, and two entrances into two separate and parallel ranges of apartments. Hematis is a small and curiously enriched temple, originally unfurnished. Euneh, celebrated for its zodiac, and unquestionably the finest portico in Egypt, is nothing but a portico; the body of the temple is buried, and the town built on its roof. Edfir, in the same manner encumbered, is the most entire in its accessories, at least of any other Egyptian temples; it has all the accompaniments of propyla, area, inclosure, &c. quite perfect; but all sunk in Thebes. I am literally afraid of saying any thing of its gigantic size; a size not only of extent, but mass. The disjecta membra occupy many miles, and the largest temple, that of Kamek, is 1,200 feet in length alone, without comprehending its dependent sacella temples, to the number of fifteen or twenty, with which it is surrounded. I do not remember a more positively sublime effect produced by any architecture I have ever seen, than the vista from the obelisk down the great portico. I cannot say how much it struck and astonished me, when I suddenly turned, without any preparation from former travellers, and

unexpectedly came upon the whole forest of its pillars, enormous fragments of moss lintels, &c. I shall well and long remember it; if I had seen nothing else in Egypt, this would have repaid me for the worst part of the Egyptian tour, the seventeen days voyage to Alexandria. We occupied so much time, as you may easily imagine, in taking the measurements and plans of this city of temples, that we had less time, perhaps, than was necessary, for the Tombs of the Kings; but I contrived, notwithstanding our hurry, to spend two entire days there—a place of wonders, half seen, half lost; and perhaps irrecoverably so, in the darkness of their strange emblems and language; but it is sufficiently impressive to confound and humble modern conceptions. Most of these tombs are a series to long strait excavations in the limestone rock, some of the length of 100 feet in galleries, opening into rooms, and terminating in the large arched sepulchral chamber, where the body of the monarch was deposited in a granite or alabaster sarcophagus. The sarcophagus is already on its way to England. The sight of the stuccoed painting which I have got, will give you a better idea of its unaccountable preservation, than any vague terms could possibly do. It is not only fresh, but fresher than any oil painting I have ever seen at home after the first week. It is probable that its date is very ancient, and may exceed, if Herodotus's Persian chronology may be relied on, 1,000 years before Christ. All the injury it has received has been subsequent to its late opening; the excessive rain for a day and a night at Thebes, almost proved a miracle (Herodotus justly regards the same phenomenon in his time) has damaged the painting and sculpture at the entrance. We left Thebes late, and ran as fast as we could for Cairo; reports of the plague had reached us, and apprehensive, in case they proved true, of being detained in the country till the heat of summer, before which it could not possibly cease, we decided on sacrificing any ulterior or former projects, such as a journey to the Great Cairo, to the Faccem or Lake Moris, to these salutary and essential precautions. On our arrival here, we found that some accidents had occurred, of course in Alexandria, where its return is now periodic, but had not extended further, so that we were only allowed the time for the Holy Easter of Jerusalem and Mount Sinai; for my own part I have seen so many of these displays, and am now so little affected by any thing which is mere display, that were my companions originally willing, I should have preferred seeing objects which can communicate information; I should prefer a prosecution of our journey a little further into Arabia, to the sight of all the pilgrims

from Godfrey de Bouillon down to teaubriand. On these occasions, however, I remember the advice of Terence, as satisfied with a circuitous route. We main a few days at Cairo, and have gaged camels for next winter; we of course travel in June. You may guess what appearance may be, when some of my companions have expended nearly two hundred pounds on their costume. I am happy to say I have not been one of the fortunate. We travel twelve or thirteen in a party, including servants, interpreters, &c. Easter occurs the 16th, I think, of April: to-day is the 4th of March. We expect to have sufficient time to see the city during the week, and shall set off immediately after for Damascus and Palmyra, or Tadmor in the Desert. I doubt the practicability of a tour in Asia Minor after this, as the heats are dangerous on the whole of the coast at a very early season, and I am not so Quixotic an errant as to risk my health so obviously as I should do by travelling there after July. You may therefore reckon as a certain thing my return, somehow or other, to Smyrna before the first of the month. I may go once more to Attica, where my baggage has been sent from Constantinople, should I find a ship of war, and thence to Malta for quarantine. We have already had many kind offers from the officers on this station, to take us thither. I propose being in Sicily in October, and making the tour of the island before the end of the month. I shall take Calabria, and the Volscian and Samnium country in my way back to Rome."

CURRENT IN DAVIS'S STRAITS.

The bottle, No. 2, thrown overboard by Captain Ross, of his Majesty's ship *Isabella*, on the 3d of June, 1818, lat. 65. 40. N. long. 54. 10. W. of Greenwich, to ascertain the direction of the current in Davis's Straits, was found by one of the servants of A. Macdonald, Esq. at Balranald, North Uist, on the 17th of July last, and the paper inclosed in it quite dry; so that it was 13 months and 14 days on its passage; the latitude of Balranald is about 57. 20. N. The paper has been transmitted to the Admiralty, agreeably to their request.

SWORD OF METEORIC IRON.

In June 1814, Mr. Sowerby had a sword-blade hammered at a low red heat, out of a slice of the nicoliferous iron from the South of Africa, and supposed to be of the same meteoric origin as those stony masses which have been so frequently seen to fall through the atmosphere. This blade was welded into a steel haft, and mounted in steel; it was intended to present it to the Emperor of

While his Imperial Majesty was in London; but various circumstances united to frustrate that design, and it was finally referred to the Minister of the Interior at St. Petersburg, with a letter, of which an extract follows:—

To his Imperial Majesty Alexander, Emperor of all the Russias.

May it please your Imperial Majesty: Part of a mass of iron, of the same nature and celestial origin as that so celebrated which Professor Pallas discovered some years ago in Siberia, and which is now placed in your Majesty's museum, being in my possession, I have presumed it would be agreeable to your Majesty to accept a sword made from it, as a mark from an individual of that gratitude every Englishman is so anxious to express, and of respect for the familiar way in which your Majesty has been pleased to visit my country.

"Your Majesty's most obedient

"and ever grateful servant,

"July 3, 1814. JAS. SOWERBY."

But now a fresh delay was experienced, in consequence of the disturbed state of Europe, which kept the Emperor from his city and capital. At length, however, the sword was received; and a letter, part of which is copied below, was sent to Mr. Sowerby by the Minister of the Interior:

"SIR,..... Several circumstances have hindered for some time the presentation of your letter and sword to the Emperor.

"Now, I have the honour to inform you, Sir, that his Imperial Majesty has been pleased to read your letter, and to accept your sword with particular benevolence; and, as a mark of his satisfaction, to make you a present of a ring adorned with diamonds, and a large precious stone* in the middle of them.

"As Dr. Creighton, physician to his Imperial Majesty, is going now to England, and is so good as to take upon him the delivery of this my letter, and of the said ring to you, I send it herewith by him. I feel at this moment a double satisfaction, both for your zeal towards my gracious Sovereign, and for the reward you have so worthily merited by it, &c.

(Signed) "KOSODAWLEW."

"St. Petersburg, May 16-28, 1819."

A paper accompanied the sword, of which a copy is subjoined:

"The descent of solid stones or masses of ductile iron from the sky, or from meteors, is so inconsistent with the familiar operations of nature, as to excite at first disbelief: but when the fact is established by incontrovertible evidence, wonder and reverence succeed. The ore of the mine or the diamond of the Indies are indebted for their value to their usefulness or rarity;

their origin is too familiar to excite any extraordinary emotion. We are little surprised at meeting with hail or rain; but meteors strike the beholder with amazement, and stones or metal falling from them complete his astonishment.

"This is the only blade ever formed of unaltered meteoric iron; a material that derives its value from its quality, which is superior to other iron, from its scarcity, and, above all, its extraordinary celestial origin, with the terrific phenomena attending its fall: a value no other substance possesses, and which renders it worthy to become a sacred pledge of national gratitude towards, and esteem for, the heroic "giver of blessings," who, in alliance with the magnanimous and lawful sovereigns of Europe, has generously fought for "peace alone," and whose arms the Almighty has favoured against the scourge of the earth, to chase away the horrors of ambitious warfare; of which gratitude Mr. Sowerby wishes to express his part as an Englishman.

"The immense mass of iron which lately blazed with such fury in America, the one discovered by Professor Pallas in Siberia, another which fell in Normandy, are all of them (at least such specimens as have been seen here) so full of earthly matter, pyrites, or flaws, as to render them totally unfit for hammering into any instrument, even of small dimensions. The only attempt of the kind on record was made in 1620, when Jehangire, Emperor of the Moguls, had four blades formed from the iron of lightning as it was called; but the workmen found it necessary to add one-fourth of common iron, to make it suit their purpose.

"That meteoric stones were revered by the ancients, we have many authorities for believing; and it is understood that the Psalmist alluded to them, when he said, 'The Highest gave his voice, hail-stones and coals of fire.' And it is also understood that the first wonder of the world, the Temple of the Ephesians, dedicated to Diana, was built in reverence to one of them. And in the Acts the town-clerk appears to mean a similar thing when he observes, 'What man is there that knoweth not how that the city of the Ephesians is a worshipper of that which fell down from Jupiter?' A stone which fell at Ensisheim was preserved in the church in the Emperor Maximilian's time. In short, every part of the globe has been visited by such phenomena at some period, and particularly Russia and Europe lately, where hundreds have witnessed their fiery descent.

"In 1805, Mr. Sowerby received part of the large mass of iron, found upon the surface of the ground about 200 miles within the Cape of Good Hope by Captain

Barrow. Another piece, sent to Holland, is all that was brought away. The remainder was removed as far as the Table Mountain; but its situation is now unknown. It has been examined by Smithson Tennant, Esq., who found in it about 10 per cent. of nickel, which adds to its toughness, gives it a silvery lustre, and proves its analogy to the small grains of iron dispersed through the stones and the masses of iron which have been showered down from meteors in Russia, Great Britain, Benares, Normandy, &c., which is distinguished from all other iron of this globe, by its containing a portion of nickel alloyed with it.

"The blade has been hammered at a red heat, without admixture, out of a single piece of this iron, an inch thick, ground and polished. Its spring was given it by hammering when cold. The haft was lengthened by welding on a small piece of steel. It was found to work very pleasantly, the whole operation taking about ten hours. The mounting and engraving occupied the two following days. Thus no sword was ever completed from the crude material in so short a space of time.

"Mr. Sowerby, under all those circumstances, considers it likely to be revered by posterity, and hopes it will attract attention, and continually be a memorial of the grand example of the merciful Emperor."

The length of this sword is two feet: it is slightly curved, pointed, and sharpened at both edges to eight inches from the point: its width is 1 inch and 3-8ths. The part that is blunt at the back is nearly filled on one side with engraving: beneath the imperial crown is a wreath of laurel and palm, inclosing the word "Mercy;" under this is the Russian spread eagle, and then the following inscription: "This iron having fallen from heaven, was, upon his visit to England, presented to His Majesty Alexander Emperor of all the Russias, who has successfully joined in battle to spread the blessings of peace through Europe, by James Sowerby, F.L.S. G.S., Honorary Member of the Physical Society of Göttingen, &c. June 1814." On the other side, "Pure meteoric iron, found near the Cape of Good Hope."

The surface is not quite free from blemish, in consequence of the spreading of some minute flaws in the material; but they are only superficial, and will serve to distinguish this blade from any imitation that might be made of it. It possesses an excellent spring, much hardness, considering it is not steel, that is, equal to an old Highland broad-sword, and a whiter colour with a more silver-like lustre than other iron.

It is highly probable that the foliated structure of most of the other meteoric

irons* will render them unfit for mering out to such a length as is necessary for a sword blade, if they will beaming at all. Thus the blade ascribed is not likely soon to have a/ it was fitted up in a black scabbard m ed with steel,—a material by no m ers generally used in Russia.

TOPICAL REMEDY FOR THE HYDROPHOBIA.

Sig. A. M. Salvatori of Petersburg, a letter to Professor Marrichini of Rome, gives the following remedy for this dreadful malady:

"The inhabitants of Gadici, but whether or how I know not, have made the important discovery, that near the ligament of the tongue of the man or animal bitten by a rabid animal, and becoming rabid, pustules of a whitish hue make their appearance, which open spontaneously about the 13th day after the bite; and at this time, they say, the first symptoms of true hydrophobia, make their appearance. Their method of cure consists in opening these pustules with a suitable instrument, and making the patient spit out the ichor and fluid which ran from them, often washing the mouth with salt water. This operation should be performed the ninth day after the bite. The remedy is so effectual, that with these people this hitherto incurable disease has lost its terrors." *Bibl. Ital.* xiv. 426.

TRACES OF ENORMOUS BIRDS.

Mr. Henderson has discovered, in New Siberia, the claws of a bird measuring each a yard in length; and the Yakuts assured him that they had frequently, in their hunting excursions, met with skeletons and feathers of this bird, the quills of which were large enough to admit a man's arm. Captain Cook mentions having seen an immense bird's nest in New Holland, on a low sandy island, in Endeavour river, with trees upon it, and an incredible number of sea-fowls; he found an eagle's nest with young ones, which he killed; and the nest of some other bird of a most enormous size, built with large sticks on the ground, not less than twenty feet in circumference, and 2 feet 8 inches high.

EFFECT OF IRON MINES ON THE COM-PASS.

It has been commonly believed that the isle of Elba, in consequence of the inexhaustible mines of iron in which it abounds, especially Mount Calamita, which is supposed to be a solid mass of loadstone, has a sensible effect upon the

* An account of several of these will soon appear in No. 27 of Sowerby's *Exotic Mineralogy*, with figures showing this structure, from which, however, the Siberian is exempt.

needle; hence it has been thought that vessels in the neighbourhood of this island could no longer depend upon the declination of their needles, being the same as at a distance. This was tried by Mr. Charles Rumker in 1818; but at the distance of two, three, or four nautical miles from the island, he did not find that the needle in his vessel was in the least affected by the action of the island. The variation of the compass was $18^{\circ} 18' 40''$ W.

LITERARY FABRICATION DISAVOWED.

The Persian ambassador, who now reads our language with fluency, and peruses our newspapers with interest, has expressed great surprise and anger, on reading in a morning print a long paragraph, entitled "*Tour of his Excellency the Persian Ambassador in England and France reviewed, from a French Journal.*" The whole of this is a fabrication; a selection from the "*Travels of Mirza Abu Talib Khan,*" an Indian, of Persian extraction, who never resided in Persia, and who travelled in Europe some thirty years ago. The extracts from the pretended journal express sentiments which his Excellency totally disavows, and which are both illiberal, and tending to produce an unfavorable impression in the minds of those who have not discrimination enough to detect the fallacy. The ambassador keeps a journal, but no part has yet been translated or published in any European language.

CALCUTTA JOURNAL.

The number dated *Sept. 1* announces a commutation into which the proprietors have entered with the Post-office, on the following basis:

"On guaranteeing the payment into the Post-office at Calcutta of the whole sum now actually received at all the various post-offices in the country from the circulation of that paper, the proprietors have obtained a grant of free circulation for it throughout India generally: the good effect of which will be, that the Calcutta journal will be now delivered, at the nearest and the most remote stations, free of postage to the subscribers, and at an equal rate of subscription far and near."

FUNERAL MEDAL.

Those who wish to support the reputation of British art by discriminating encouragement, and to raise one of the most difficult branches of sculpture to an emulous level with the engraved gems of antiquity, which have made the miniature sculpture of an Alexander immortal, will learn with satisfaction that Mr. Mudie (whose grand series of national medals is

so justly distinguished) has caused a medal to be struck, commemorating the death of our revered sovereign. The obverse of this beautiful specimen of the medallion art exhibits a fine likeness of the late king, exquisitely executed. It combines a degree of sharpness, fleshiness, freedom, and relief, rarely attained. The reverse presents an appropriate inscription, recording the age, accession, marriage, coronation, and demise of George III., combining an historic memorial with a faithful portrait.

HINDOOSTANEE LECTURES IN LONDON.

To students living at a distance, or whose course of attendance has been interrupted, it may be useful to know, as assisting them to make arrangements for renewed application with certainty, that the days for attending the Hindoostanee lectures have been altered, and the hours for the classes are thus divided:

On Tuesdays, Thursdays, and Fridays, the senior classes commence precisely at 10 A.M. and the junior students begin and continue from 12 till 2 P.M. every lecture day.

HINDU ORTHOEPIY.

Among the efforts to advance Oriental literature in London, we have to notice a new edition, with considerable additions and improvements, of the *Hindu-Roman Orthoepigraphical Ultimatum*, for speedily acquiring the accurate pronunciation of many Oriental languages, exemplified in one hundred popular anecdotes, tales, jests, maxims, and proverbs of the Hindoostanee story-teller. By John Borthwick Gilchrist, LL.D.

Description of a Piece of Plate presented to Major General Sir David Ochterlony, Bart. G.C.B., by the Officers who served in the Division of the Army under his Command during the Campaign against the Goorkhas.

This piece of plate is composed of three parts—the *patera*, the *pillar*, and the *base*.

Among the ancients, the *patera* was used to offer libations to the gods in acknowledgment for signal victories. This form of the memorial is adopted as an emblem of public gratulation for the eminent services of Major General Sir David Ochterlony. This elegant bowl may be filled with artificial flowers and fruit, in classical allusion to the practice of the Greeks and Romans, who, at their feasts, crowned the goblets and strewed the tables with roses and other fragrant productions.

A zone of chased work surrounds it, of interwoven branches of laurel and palm, executed in *mat* silver, deeply relieved by contrast with the rest of the convex surface, which is highly burnished, and reflects the several objects beneath it.

The second part of the design consists of the pillar, supported by two figures. To the torsel-shaped and fluted stem of the acanthus, upon the upper leaves of which the *patera* reposes, are affixed military trophies, among which are several shields, inscribed with the words "Delhi," "Nepaul," &c., and on one of them is represented the head of an elephant, in memory of the great undertaking which proved so successful at Malown and Jyctuck; Sir David having ordered pieces of field-ordnance to be placed upon those animals and brought to the very summits of these celebrated mountains of Nepaul, where the strong holds of the enemy were attacked and carried.

In allusion to the motto, granted, together with honourable armorial distinctions, under the royal sign manual, to Sir David Ochterlony, viz. *Prudentia et Animus*, two allegorical figures, in characteristic attitudes, support the *patera*. Courage is personified by a strong muscular

young man, in an ancient military dress, holding a palm branch in his right hand. On his helmet the lion of England, and on his shield the arms of the Honourable East-India Company, designate the service in which the achievements to be commemorated were performed. The female figure, representing Prudence, supports the trophies which were obtained by her efforts, combined with those of Courage.

The third part of this elegant work of art consists of the base and socle. Front under the circular plinth acanthus leaves luxuriantly spring, and adorn a triangular platform supported by three tigers. The concave sides are decorated with three tablets; one of which exhibits the arms of Sir David Ochterlony in chased work; and the others contain inscriptions in raised letters. The beautiful and tastefully wrought socle, which supports the whole, rests upon three feet in the form of shells.

The execution of this piece of plate does great honour to the artists of this country. As an acknowledgment of the high sense of esteem and affection manifested towards Sir David Ochterlony by his brave companions in arms, it is a gratifying memorial of the most amiable feelings of the heart, and of the elevation of character inspired by public spirit, and by a vivid sympathy with the honoured instruments of our national greatness.

Description of the Armorial Bearings on the first Tablet.—Arms: azure, a lion rampant argent holding in his paws a trident erect or, and charged on the shoulder with a key, the ward upwards, of the field, being the arms of Ochterlony, with the following honourable augmentations, granted by royal sign manual, dated 31 December 1816, viz.—A chief embattled or, thereon two banners in saltire, the one of the Marhatta states, vert, inscribed "Delhi," the other of the state of Nepaul, azure, inscribed "Nepaul," the staves broken and encircled by a wreath of laurel proper, with this motto to the arms, viz. "*Prudentia et Animus*."—Crests: crest of honourable augmentation under the aforesaid royal sign manual, viz. out of an eastern crown or, inscribed "Nepaul," a dexter arm issuant, embowed, vested gules, cuff azure, the hand, proper, grasping a baton of command gold, entwined by an olive branch also proper. Crest of Ochterlony, a swan proper, ducally crowned, and gorged with a collar and chain reflexed over the back or, on the breast a rose gules.—Supporters: on the dexter side, a golandauze or native artillery-man, and on the sinister, a sepoy, both of the Bengal establishment, in their respective uniforms, and in an attitude of rest, the former supporting a spongestaff, and the latter a musket with the bayonet fixed, all proper.

Inscriptions.—On the second tablet :
 “ Presented to Major General Sir David
 “ Ochterlony, Bart. G.C.B., by the Offi-
 “ cers who served in the Division of the
 “ Army under his command during the
 “ campaign against the Gorkhas in the
 “ years MDCCCXIV and MDCCCXV.”—On
 the third tablet : “ Nalagur, 5 Nov.
 “ 1814 ; Rangur, 16 Feb. 1815 ; Tar-
 “ ragur, 12 March 1815 ; Chimpagur,
 “ 16 March 1815 ; Malown, 15 May 1815 ;
 “ Jyetuck, 15 May 1815.”

Diameter of the patera 14 inches ;
 depth of ditto, 3 inches ; height of the
 whole piece of plate, 29½ inches.

This classical and elegant piece of plate,
 with the addition of a pair of superb tu-
 reens, ornamented with the bacchanalian
 figures and devices taken from the cele-
 brated Roman vase at Warwick Castle,
 and two beautiful round dishes raised on
 pillared stands, with rich embossed cov-
 ers, and the whole engraved with the
 arms of Sir David Ochterlony, including
 the above inscriptions, were executed, in
 the most magnificent style of their work-
 manship, by Messrs. Rundell, Bridge,
 and Rundell, under the direction of a
 committee, consisting of Sir Isaac Heard,
 Lieut.-Colonels Alston and Campbell,
 and Major Morrison, and was sent to
 India in the course of last year.

Pamphleteer, No. XXX.—The thirtieth
 number of the Pamphleteer is just now
 published, and presents us with the fol-
 lowing articles.—1. Lord Erskine's De-
 fence of the Whigs ; a new edition, with
 a preface, in which his Lordship vindic-
 ates himself from the charges of political
 versatility, thrown out against him, in
 many recent publications.—2. Report of
 the Select Committee of the House of
 Commons, appointed to consider of so
 much of the Criminal Law as relates to
 Capital Punishment in Felonies ; contain-
 ing a variety of important evidence touch-
 ing the evils which arise from the obsta-
 cles raised, by the present state of our law,
 to the bringing offenders to justice, leav-
 ing scarcely a choice between sanguinary
 revenge or passive submission to injuries,
 hurtful alike to the individual and to so-
 ciety at large.—3. Comments on some re-
 cent Political Discussions, with an Ex-
 posure of the Fallacy of the Sinking
 Fund ; by A. H. Chambers, Banker, Bond
 Street, author of the Resumption of
 Cash Payments. In these comments, Mr.
 Chambers considers the agricultural capa-
 bilities of this country, and the tendency
 of the corn-bill to affect the interests of
 the farmer, on whose exertions he con-
 ceives all the real wealth of the country
 to rest.—4. A Concise History of Tithes,
 with an Inquiry how far a forced Mainte-
 nance for the Ministers of Religion is
 warranted by the Examples and Precepts

of Jesus Christ and his Apostles ; by Jo-
 seph Storr Fry. In this concise history
 much information will be found which
 must interest the general reader, though
 the particular conclusions which Mr. Fry
 draws from the facts he states may not
 be so universally admitted.—5. Notes on
 a Visit made to some of the Prisons in
 Scotland and the North of England, in
 company with Elizabeth Fry ; with some
 general Observations on the subject of
 Prison Discipline ; by Joseph John Gur-
 ney. These notes are concluded from
 the last number of the Pamphleteer ; the
 beneficial effects of classification, employ-
 ment, and kind treatment are evident,
 from Mr. Gurney's account of the pris-
 ons where those means of reformation
 have been resorted to, and we hope that
 his “ Notes” being preserved in a work
 of such extensive circulation as the Pam-
 phleteer, will be the means of their being
 read and reflected upon with as much con-
 sideration as the important subject on
 which they treat deserves.—6. Sir Wil-
 liam Congreve on the Impracticability of
 the Resumption of Cash Payments ; shew-
 ing the danger of any reduction, in the
 present state of affairs, in the circulating
 medium, and endeavouring to prove the
 sufficiency, under due regulations, of the
 representative currency of the country.—7.
 Reflections on the Liberty of the Press in
 Great Britain : this pamphlet is from the
 German of the celebrated Von Gents,
 Aulic Counsellor to the Emperor of Aus-
 tria, and author of Fragments on the
 Balance of Power in Europe, and several
 other political works of much merit. It
 is written with vigour and impartiality,
 though the author leans towards season-
 able restraints on what may be termed
 the licentiousness rather than the liberty
 of the press ; yet his views are clear and
 liberal, and his production is as worthy of
 the notice of Englishmen, as of those
 countries which are wishing to imitate
 their privileges.—8. Germany and the Re-
 volution : Professor Goeyres, the author
 of this essay, has long been known to
 the public as the editor of the Rhenish
 Mercury ; his present work was suppress-
 ed by the Prussian government, and that
 circumstance alone would suffice to make
 it looked after by an English reader. It
 is now freely translated, exclusively for
 the Pamphleteer, and will, no doubt, be
 thought by many the most interesting ar-
 ticle contained in the number now before
 us.—9. Mr. Heathfield's Plan for the Li-
 quidation of the Public Debt ; in which
 he asks the question, and at the same
 time too truly answers it, “ how does it
 happen that the increase of public happi-
 ness is not only not co-extensive with the
 increase of power in the body politic, but
 is to be contemplated as declining in the
 inverse ratio of that increase ? That power

in the whole is suffering and sorrow in the individual?"—10. Report of the Select Committee of the House of Commons appointed to enquire into the State and Description of Gaols, and other Places of Confinement: suggesting means for relieving Newgate from the immense numbers of persons which are sent to it, beyond its means of proper accommodation.—And, lastly, a general classed Catalogue of the first thirty Numbers of the Pamphleteer, presenting the best evidence of its utility in the enumeration of its contents, consisting of above three hundred Pamphlets, all of them on interesting subjects, and the majority of them by the most able modern writers.

NEW LONDON PUBLICATIONS.

The History of the Crusades for the Recovery and Possession of the Holy Land. By Charles Mills. 2 vols. 8vo. £1. 4s. boards.

Good Humour, or My Uncle the General. 2 vols. 12mo. 12s. boards.

Domestic Scenes; a Novel. 3 vols. 12mo. 21s. boards.

Lessons of Thrift. By a Member of the Save-all-Club. Royal 8vo. £1. 1s.

Voyage to South America, performed by the Order of the American Government, in the Years 1817 and 1818, in the Frigate Congress. By H. M. Brackenridge, Esq. Secretary to the Mission. 2 vols. 8vo. 24s. boards.

Geraldine, or Modes of Faith and Practice; a Tale. 3 vols. 12mo. 21s. boards.

The Sketch Book. By Geoffrey Crayon, Gent. 8vo. 12s. boards.

A Register of Ships employed in the Service of the Honorable the United East-India Company, from the Year 1760 to 1819, with an Appendix, containing a Variety of Particulars and useful Information interesting to those connected with East-India Commerce. By the late Charles Hardy. Revised, with considerable Additions, by his Son, Horatio Charles A. Hardy. 3d Edition. 12s.

A Mother's Journal during her Daughter's last Illness, with a Preface. By Miss Jane Taylor. 12mo. 3s. 6d. boards.

The Mystery, or Forty Years ago; a Novel. 3 vols. 12mo. £1. 1s. boards.

Memoirs of the Life of John Duke of Marlborough, with his original Correspondence, collected from the Family Records at Blenheim, and other Authentic Sources. Illustrated with Portraits, Maps, and Military Plans. By William Cox, M.A. F.R.S. F.S.A. Second Edition. 6 vols. 8vo. and 4to. Atlas. £5. 5s.

A Key to the Chronology of the Hindus; in a Series of Letters. Two vols. 8vo. 18s. boards.

A Narrative of a Journey into Persia, and Residence at Teheran. From the French of M. Tancoigne, attached to the Embassy of General Gardane. 8vo. 12s. boards.

An Account of the Arctic Regions, with a History and Description of the Northern Whale Fishery. By William Scoresby, jun. F.R.S.E. Two vols. 8vo. £2. 2s.

A Manuscript found in the Portfolio of Las Cases, containing Maxims and Observations of Napoleon, collected during the last two years of his residence at St. Helena. Translated from the French. 8vo. 4s. 6d. boards.

George the Third, his Court, and Family. Two vols. 8vo. £1. 8s.

The Bruce and Wallace. Published from two ancient manuscripts preserved in the library of the Faculty of Advocates; with Notes, Biographical Sketches, and a Glossary. Two vols. 4to. £6. 6s.

The Edinburgh Annual Register for 1816. 8vo. £1. 1s.

The Emigrant's Guide to Upper Canada; or, Sketches of the present State of that Province. Collected from a Residence therein during the Years 1817, 1818, and 1819. By C. Stuart, Esq. 12mo. 2s. boards.

The Quarterly Review, No. 44, 6s. Likewise No. 39, being the first part of a general index to the first nineteen volumes. 6s.

The Works of Lord Byron; containing Beppo and Mazeppa. Vol. 8, 12mo. 7s. boards.

The Poetical Works of the Rev. George Crabbe, consisting of "Poems," "The Borough," "Tales," and "Tales of the Hall." Five vols. 8vo. £2. 18s. 6d. On fine paper, 5 vols. royal 8vo. £4. 12s. 7 vols. small 8vo. £4. 2s.

The Hermit of Glenconella; a Tale. By Eneas Macdonnell. 12mo. 7s. boards.

Debrett's Peerage. A New Edition. Two vols. 12mo. £1. 4s. boards.

Lectures on some Important Branches of Practical Religion. By Thomas Raffles. 12mo. 7s. boards.

Edinburgh Review. No. 65. 6s.

British Review. No. 29.

The History of the Anglo-Saxons, from their First Appearance in Europe, to the End of their Dynasty in England. By Sharon Turner, F.S.A. Third Edition. Three vols. 8vo. £2. 12s. 6d.

The Monastery. By the Author of "Waverley." 3 vols. £1. 4s.

The Hindoe Roman Orthoeographical Ultimatum; or a systematic discriminative View of Oriental and Occidental Visi-

ble Sounds, on fixed and practical Principles, for speedily acquiring the most accurate Pronunciation of many Oriental Languages. By John Borthwick Gilchrist, LL.D. Second Edition. 8vo. £1. 5s.

IN THE PRESS.

Memoirs of the Life and Writings of Louis de Camoëns. By John Adamson, Esq. 2 vols. 8vo.

Travels in various Countries of the East, being a Continuation of Memoirs relating to European and Asiatic Turkey. By Robert Walpole, Esq. 4to.

Tales of the Heart. By Mrs. Opie. 3 vols. 12mo.

The Fudge Family in Italy. By the Author of the Fudge Family in Paris.

Memoirs of M. Oehlin, Lutheran Pastor of Walshback. By the Rev. Mark Wilks.

Journal of a Tour in Greece, Egypt, and the Holy Land, with Excursions to the River Jordan, and along the Banks of the Red Sea, to Mount Sinai. By Mr. Wm. Turner. 3 vols. 8vo.

Travels through Holland, Germany, and part of France, in 1819. By W. Jacob, Esq. F.R.S., 4to.

The Personal History of King George the Third. By Edward Hawke Locker, Esq. F.R.S. 4to.

On the Administration of Criminal Justice in England, and on the Spirit of the British Constitution. By M. Cottu. 8vo.

Travels in 1816 and 1817, through Nubia, Palestine, and Syria. By Capt. Mangles, R. N. 2 vols. 8vo.

A Narrative of the late Political and Military Events in British India, under the Administration of the Marquis of Hastings. By H. T. Princep, Esq. of the Hon. East-India Company's Civil Service, Bengal. 4to.

The History of the late War in Spain. By Robert Southey, Esq. 3 vols. 4to.

A Geographical, Statistical, and Historical Description of Hindostan, and the Adjacent Country. By Walter Hamilton, Esq. 2 vols. 4to.

A Journey in Carniola and Italy, in the Years 1817 and 1818. By W. A. Cadell, Esq. F.R.S. 2 vols. 8vo.

An Account of Timbuctoo and Houssa, Territories in the Interior of Africa. By El Hage Abd Salem Shabeenic, a Native of Morocco. 8vo.

The Huntingdon Peerage; comprizing a detailed Account of the Evidence and Proceedings connected with the recent Restoration of the Earldom. By H. N. Bell, Esq. 4to.

MISSIONARY INTELLIGENCE.

MADRAS.

Tamul Bible.—The following extract of the journal of the reverend missionary Rhenius, at Madras and its vicinity, for the year 1818, is intended to remove a mistake respecting the authority of the first Tamul Bible, into which Dr. Buchanan, though learned in the classics of the Oriental as well as the western world, was led by a sanguine facility in estimating the present utility and expected fruits of missionary labours. The mistaken estimate forms one of the themes for glowing expatiation in the sermon entitled the "Star in the East." There the vocal announcement of the fallacy was first heard; but its subsequent echoes are innumerable.

The translation which Dr. Buchanan thus extolled, it now appears without sufficient foundation, was introduced in Southern India a little more than a century ago, by the associated missionaries from Denmark and Germany.

May 3.—I read to-day, in vol. ii. page 511, of the Society's Proceedings, the following remark of Dr. Buchanan respecting the Tamul Bible: "It became the father of many versions; and, after a succession of improved editions, it is now considered by the Brahmins themselves as the classical standard of the Tamul tongue." From whom Dr. Buchanan received this information I cannot tell; but from whomsoever it be, he has been misinformed.

Account of the Syrian Christians.—We give the following letter at length, on account of its great authority, although, on one or two incidental facts, the course of refraining to omit or abridge involves a repetition of intelligence which has already appeared in the journal.

Extract of a Letter from Lieut.col. Munro to the Rev. Marmaduke Thompson.

Nagracoil, May 26, 1818.—The Syrians claim our first attention; and indeed require our strenuous aid. They are fallen into a deplorable state of ignorance and vice; but they are not, like

the Roman Catholics, averse to receive and to follow our instructions.

During my residence in the vicinity of some of their principal churches, in November and December last, I received very unfavourable impressions of the morals, both of the Catanars and the people. Many of the Catanars lived in a state of acknowledged licentiousness; and the people seemed to resemble the Roman Catholics in ignorance and superstition. Yet they have still retained some virtues: they are honest, have a regard for truth, and are aware of their own faults and of the necessity of a general reformation. The state of the Syrians ought not to excite our surprise; but it ought to awaken all our exertions, for their instruction and religious improvement.

We must act in strict harmony with their own metropolitan, and conciliate his co-operation. His income has hitherto been derived from very improper sources. It is important that he should have a fixed and sufficient income, and that all such abuses should be abolished: in fact, they have, for some time, been abolished. I have therefore requested Mr. Bailey to allot a permanent income, of 50 rupees each month, to the metropolitan, from the funds of the college. That is the amount of income recommended by Mr. Bailey, it is rather too low; but it cannot, at present, be augmented. The present metran co-operates most cordially with Mr. Bailey, and supports all our plans of instruction and reform. The execution of these plans depends, in a primary degree, on the introduction of a proper course of education at the college, for all candidates for holy orders.

The funds of the college are now sufficient for its maintenance. By one of Mr. Bailey's letters, you will see that they had an annual income of 425 pagodas before the late donation of 20,000 rupees was granted to them*; and that income, together with the interest of the donation, will amount to about 3000 rupees per annum, or 2400 after paying the metropolitan's salary. The maintenance of 45 students, at the annual expence of 40 rupees each, which is found to be sufficient, comes to 1800 rupees per annum; leaving 600 rupees, or 50 rupees each month, for two teachers. Forty-five is, perhaps, a much greater number of students than will be requisite for the supply of vacancies among the clergy; and the students will probably be composed partly from the laity.

I have repeatedly urged on Mr. Bailey's attention the necessity of establishing a regular and efficient course of instruction at the college; but the services of another missionary, in addition to Mr. Bai-

ley, seem to be essentially requisite at that institution. Every thing is to be done from the beginning; and Mr. Bailey has been so much occupied with the translation of the Bible, that he has not been able to bestow so much attention on the affairs of the college as was perhaps requisite. I earnestly recommend that another missionary may be stationed with him at Cotym; and that a proper plan of study for the institution may be submitted to their society, and receive the benefit of their revision. The affairs of the college ought, in fact, to be reported in detail to you by the missionaries. A course of English instruction is very much wanted at the college, for it would be eminently useful in enlightening the minds of the Catanars; and I should hope that an English teacher might be sent from Madras.

Some allowance from the British Government, for the support of the parochial clergy and schools among the Syrians, would be most useful; but I am not sanguine in my hopes of its being granted. The Syrians will, however, be soon in a condition, I trust, to provide, by a regular contribution, for the decent maintenance of their clergy. More than 200 Syrians are now employed in public offices, in Travancore and Cochin; and the whole body of the Syrians has received such marked encouragement and protection, that they will probably exert a greater degree of industry than they have hitherto manifested. The present mode of supporting their clergy, by "*Chatams*," or feasts in honour of the dead, is highly objectionable; and I have requested Mr. Bailey to concert with the metropolitan a plan for its early abolition.

The masses and seven sacraments, still observed by the Syrians, will likewise be gradually abolished.

The translation of the scriptures will be completed in the course of another month, and two or three catanars may be sent with the manuscript to Calcutta. But would it not be a better plan to establish a press, and print the scriptures in the college at Cotym? There is ample room in the college for a printing and book-binding establishment; and the formation of such an establishment at that institution would, in my judgment, be very useful. We must regard the Syrians as instruments for the more enlarged diffusion of christianity; and our endeavours to reform and enlighten their minds should have a reference to these extended views. The Bible, and Malayalim version of our Liturgy, and translations of religious and moral tracts, could be printed at the college; and circulated in the adjoining countries, by means of the Syrians. If the proposition of establishing a printing

press at Cotym should be approved, its execution ought not to be delayed.

But, above all things, send us all the missionaries that you can possibly send. Mr. Bailey requires one coadjutor, at least, at the college: a missionary is wanted to replace Mr. Dawson at Cochin and Cranganore; and, in fact, we could employ 20 missionaries with facility and advantage.

Country Schools.—Character of Sandappen.—The native christian, Sandappen, employed as the visitor and superintendent of many schools in simultaneous operation, is noticed in the *Asiatic Journal*, vol. viii. p. 593. The following fuller and more distinct account of his proceedings relates to the same scene of action and point of time.

It was there observed, to the credit of Sandappen, that the attendance of adult auditors at the country schools gave opportunities for preaching the Gospel, in availing himself of which Sandappen was particularly diligent.

Of the country schools, those at Trivaloore, Panabakum, and Rannipoottoore, are visited and superintended by Sandappen, of whom some account was given in the first report; those at great and little Conjeveram, by Tiroovengada Asarier Brahmin; and those at Koorookapettah (which is close to Madras), Vengendamangalum, and Chingleput, by a catechist from Madras. All of them are, besides, occasionally visited by the missionaries themselves, as circumstances permit.

The superintendence exercised by Sandappen and the Madras catechist, consists in examining the scholars in the lessons which they have learnt, catechising them in passages of scripture or from catechisms, observing whether the schoolmasters conduct the schools according to the regulations, and using every means to excite them to fresh diligence. From Tiroovengada Asarier, as being yet a heathen, so much is not of course required: his superintendence consists simply in seeing that the schoolmasters observe the regulations. Nearly the same course is pursued by the missionaries themselves, when they visit: with this difference only, that their inquiries into the state of the schools are more extensive; and that they have authority to make such new regulations, and give such additional instructions to the schoolmasters, as they judge requisite.

Besides a respectable acquaintance with the scriptures, and an apparently conscientious adherence to their precepts, the native visitor, Sandappen, is possessed of a considerable knowledge of the sacred and classical literature of the Hindoos,

which he is skilful in using to illustrate and confirm the truths of scripture. He has composed an original address to his heathen countrymen; which, after receiving the corrections and approval of the missionaries, has been circulated to some extent, and is often inquired after. His labours, in instructing, catechising, and reading, are almost incessant; and this under the discouragement of an opposition, as vexations as has been offered to any native servant of the mission. Of his schools, one had been discontinued at the date of the last report; another, that at Tratschi, has since found a similar end. One of his latest reports respecting this village, before the school was given up, was in the following words: "The more diligently I preach the gospel of the lord at Tratschi, the more they harden their hearts, and the more they revile me. The number of children who come into the school is now only seven or eight."

Other variations, indeed, in the names and number of the schools, will be remarked, on comparing the statement given above with that exhibited in the last report. It will be seen that two schools have been discontinued at Madras, and one at Trivatore; while new ones have been founded at Panabakum and Koorookapettah. The failure of those at Madras appears to have been ultimately caused by dislike of christianity, which was taught in them; mixed, in some instances, with an undefined apprehension of some sinister motive connected with them; the progress of their decline was slow, as they were maintained, in every instance, as long as any prospect of good remained. The history of the fifth school displays an instance almost as striking as that before recited of the third school, though in a contrary direction, of that rapid and total transition to opposite sentiments above remarked as characterising the native community of India. This school was established in consequence of a petition, signed by several respectable heathen natives who lived in the street where it was to be carried on, or in its vicinity, and one of them offered unasked a piece of ground to build a school-house; but, before long, the whole scene was changed: the owner of the ground delayed, on various pretexts, to complete his grant; and, during this interval, the children were assembled and instructed in the front of some native houses in the street. Soon after the owner of the ground declined to grant it at all; whereupon the petitioners were informed, that unless they provided a suitable place for the school, it would be discontinued: after a while, the natives, before whose houses the children assembled, became troublesome, and wished to have them removed; the petitioners failed to procure a new school-

place by the time limited them; and then, at last, the school was finally discontinued. A change somewhat similar, though not so decided, was the cause of the fourth, or Mussulman school, being discontinued: it was established, indeed, only as an experiment; though not applied for, it was apparently liked by several respectable Moormen at first, and some seemed disposed to interest themselves in procuring a proper scite for a school-house; but these hopeful appearances quickly vanished; the teaching of the bible was the grand objection; indifference succeeded to interest, and dislike to indifference; and the prospect of benefit from its continuance was at length so small, that it no longer justified the expense of maintaining the school.

The committee cherish, however, a persuasion, that, short as was the continuance of these schools, the instruction given in them has left some good impression, perhaps even some savour of christian truth, in the minds of many who attended them, either as scholars or auditors; and that thus both were useful, in some degree. One at least, the fifth, has left a lasting memorial behind it. A few adult natives from the country, who, when passing by, had stepped into it, and examined what was being taught, reported and commended what they had heard at their own village of Tirookatchoure, near Chingleput; from whence, before long, a petition was sent, requesting that a like school might be established there, with an express declaration that the petitioners wished the ten commandments to be taught in it; and though a school has not been actually established there, for reasons which will be stated hereafter, the circumstances of the petition induced Mr. Rhenius to visit the place twice in his country tours; and, on both occasions, he had opportunities of preaching the gospel, and of distributing tracts and testaments.

In the course of the last year, a general assembly of all the schoolmasters was held, thrice, in the mission-house at Madras. On the first of these occasions, instructions* were read to them, and a copy afterwards delivered to each. At these assemblies, minute and confidential communications were elicited from the schoolmasters, of their own proceedings at their stations, of the state of the surrounding country with respect to religion, and of the sentiments entertained concerning the christian books introduced among them; on all which was founded much advice and exhortation, how to avoid and overcome their difficulties, answer objections, dispel apprehensions, and encourage a more familiar re-

sort to their schools and readings. A sort of examination was also held of the schoolmasters, as to their own progress in acquaintance with the scriptures, and particular portions were pointed out, of which they would be expected to give an account at the next assembly. A solemn address concluded the meetings. Much harmony and friendly feeling attended them, and much increase of unity and diligence seems to have followed from them.

It was noticed, in the last report, that the committee had consented to the employment of heathens as schoolmasters. The same system has been continued; and, out of 13 schoolmasters now employed under the Madras mission, nine are heathens, besides Roman Catholics.

Compare this with the *Asiatic Journal*, page last referred to, col. 2, l. *penantepeult*. We would publish the truth at once, if we could obtain it fully and circumstantially, but it comes out by fragments.

The heathens have not, in every instance, maintained a faithfulness and perseverance in their duty proportioned to the readiness with which they undertook it. At the visitation made by Mr. Rhenius, it was found, in two schools, which had been established near a twelvemonth before, that the children did not know even the Ten Commandments, which are the first christian lessons taught; and had made, besides, scarce any progress in other prescribed parts of learning. A change of sentiment had happened in the heads of the village. Those who had applied for, or consented to the establishment of the school, now opposed it; some of the scholars were prevented by their parents from attending: the Brahmins persecuted the schoolmaster, or dealt deceitfully with him; and he, yet a stranger to the supporting hope of the gospel, became fearful, and desisted at length from the obnoxious duty of Christian instruction. In these cases, mild but strong reproofs were applied, and the salary of the offenders was reduced; but the occasions for these severities have been rare.

Palamcottah, and vicinity.—The Rev. Mr. Hough has continued through this year, observes the report of the Madras Committee, to the close of Dec. 1818, to carry forward his numerous plans for promoting the objects of the Church Missionary Society with unabated zeal and prudence, and with increasing success. The Hindoos count the waning moon as a month; but they honestly call it the dark half of the moon;

* See these Instructions in Appendix XII.

but from the following specimens of increasing success, the terms *crescent* and *decreasing* seem to be confounded.

The large town of Tuticoryn, on the sea coast of Tinnevely, about forty miles from Palamcottah, had very early engaged Mr. Hough's attention. It is a Dutch settlement, containing a considerable native population, a great proportion of which are "Purrawars," a class of Roman Catholics inhabiting the sea-coast of this district and of Ceylon, and engaged chiefly in the coasting trade of that part of the country. He established a school there, with some prospect of success, at the beginning of the year; but the jealousy of the Roman Catholics, and the prejudices of the natives against a Protestant Christian schoolmaster, defeated the plan.

A Roman Catholic schoolmaster was then proposed to them, and the measure was approved of at the time: but it fell to the ground when it should have been carried into effect; and every attempt to gain a footing among them was disappointed, till a Heathen schoolmaster was selected, who was instructed in the improved method of teaching, and was found willing to adopt the prescribed lessons and books. Under him the school still continues, but in a very low state.

From the schools at Palamcottah Mr. Hough derives increasing satisfaction. Much suspicion and prejudice prevailed for a length of time against the use of the Scriptures and books, and some modification of the lessons was at one period found unavoidable; but the jealousy of the people on this point has gradually lessened; and so long ago as the month of March last, Mr. Hough reported that religious books were read with much more freedom than they were formerly, and indeed, that there were several instances where a lively interest appeared to be taken in their contents.

Tinnevely, the chief town of the district, situated at a little distance from Palamcottah, was the next place to which Mr. Hough's attention was turned; but the difficulties opposed to his making an entrance there were many, and for a while seemingly insuperable.

With the fickleness of disposition which has been remarked of the natives of India in a preceding part of this report, some of the most respectable inhabitants of this place, after long evincing the greatest repugnance to the introduction of a school among them under European superintendence, suddenly relented, and professed much desire for its establishment. Hardly were the necessary preparations begun when their minds changed again, and every obstacle was thrown in the way. Three months elapsed before a

house could be obtained adapted for the accommodation of the school; but one was at length procured, and on the 1st of June an English school was opened, in which there were soon twenty children.

At the beginning of the following month another school was opened in the village of Tachinoor, near Tinnevely, and forty scholars were shortly collected in it.

In the month of December another school was opened, with the full concurrence of the inhabitants (one of whom appropriated a house for its use), in a populous place called Mylappallyum, about three miles from Palamcottah, which by the end of the month contained seventy children. At this period Mr. Hough reported on the state of his schools generally, in the following terms:

"Our school at Palamcottah continues much the same as when I wrote last. That at Tinnevely is greatly increased; and there is every appearance of the people's coming to a better mind toward us. I have a native of some ability, preparing himself to take charge of a Tamil school in that town, and fully expect him to be qualified in a few weeks. The school at Tachinoor continues as it was: the school-room is finished, and we were under the necessity of building a house for the master in the village.

"The opening of the school at Mylappallyum was a scene most gratifying to my feelings. Moormen and Hindoos flocked around and in the place, to hear the Christian prayer that was offered to the Majesty of Heaven, invoking the divine blessing on our labours.

"The school at Tuticoryn still disappoints me. At one time since our last report there were seventeen scholars; but they have fallen away again, and the last account stated that the number was reduced to ten. Indeed, if the report for December prove no better, I think of withdrawing the schoolmaster, as the gentleman who has hitherto superintended the school is removed; and if it flourished so little under his care, there are but faint hopes of its prospering without him. I find the Roman Catholics, in every other case as well as this, far more perverse than the heathens. I visit their churches, converse with their priests, and offer them books; but not one has yet accepted the proffered boon. I have, notwithstanding, the most pleasing encouragement to hope that these poor labours are not in vain.

"It has caused a stir among the Catholic people. Several have intimated to the catechist here a wish to join our church; and one, though a most perfect Nicodemus, has been to me several times, first to ask for a book, next to talk about it and beg a Testament, and next to ex-

quire into the origin of the worship paid to the Virgin, and other parts of their service, the legitimacy of which he evidently began to suspect."

Excommunication of Christian.—These additional rays of allusion have broken their scattered way through a cloud of obscure concealment.

It is, however, the painful duty of the committee to record a general failure of the hopes and promises which had been for a long time held out in the person of *one of their earliest native assistants*, the reader Christian. In the character and proceedings of this late much-esteemed servant of the mission such circumstances have been brought to light, as have obliged the missionaries to depose him from his office, and to interdict his appearance at the Lord's Table. This disclosure took place a year ago; and the committee lament to say that, from want of sufficient evidence, in the judgment of the missionaries, of a true repentance, he remains suspended from his office and the communion of the church to this day.

CALCUTTA AND NORTH INDIA.

Ministrations at Chunar and vicinity.—Extract from Mr. W. Bowley's Journal.—

Jan. 6, 1818.—Mr. Adlington arrived this morning. We went to the resort of pilgrims; met several devotees, and questioned them whither they were bound. One replied, "To Allahabad, that place of sacred bathing." Another began to speak in high terms of some who had cut their throats and drowned themselves in the sacred stream; while others sunk themselves with large pots of water! I spoke to them at large on the love of God, in sending his Son to die for sinners. Two or three appeared much affected, and promised to come and reside with me, to hear more of the gospel. They sent one of their company to see my place, promising to come themselves in the afternoon; but, as I expected it would be, none came.

Jan. 9.—A pundit from a neighbouring village, who has argued strenuously for months, had not a word to say against the Christian religion; but, on the contrary, appeared much for it to-day, and was not ashamed, as they generally are, to accompany me to Bukhtawins; and earnestly intreated to have a copy of the new translation of the *Hindee* gospel, having read and heard portions of it before, at a time when he did not discern the value of it. *The other translations*, he said, *were not intelligible to Hindoos*. He now seems to be aware that it requires great fortitude to close in with the gospel, and that the world would rise up against those

who should profess 'it openly. Some months ago he experienced something of this kind from those of this village, to whom he had read the tracts which he had received from me. He argued in favour of the doctrine contained in them; but finding that it only got him the ill-will of his neighbours, he himself then broke loose, and renewed his arguments against us as headily as ever, till the change observed in him to-day.

Jan. 14, 1818.—The pundit spoken of on the ninth attended, and heard me read on the New Birth. He said many things very pleasing: such as that he saw daily the infinite difference between the Christian and the Hindoo systems of religion; that it was the most difficult thing in life to break through the obstacles which lie in the way of the Hindoos; that to be a proper judge of these matters a person should close his eyes to the world, lest he lose sight of the truth again; and that he plainly saw that all, without exception, who adhered to the vades, shasters, and pooranas, which are their sacred books, were under great delusion. He was nearly reconciled to the gospel before: but the great opposition which he met with from other learned men of his village, caused him to break loose again, and commence a new series of arguments; and now again he seems perfectly aware that there is no salvation out of Christ.

Jan. 19.—Early this morning I visited two villages, about two miles and a half distant.

At one of them the number of inhabitants is about 700; and out of all this number there is but one Bramhin who can read: he accepted of a tract; and about twenty persons heard me read and expound it gladly: at the other village were many Bramhins, but of a different spirit from those of the former village. The learned pundit already mentioned belongs to this village. One Bramhin came up to us in a great rage, while I was reading a portion of the gospels under a tree, and said that it was a sin for him to hearken to me. I desired him to shut his ears if he did not like it.

Jan. 20.—My pundit received a letter from a subadar's son, stating that he had parted with the scriptures and tracts which he had taken with him to the army up the hills; and begged to be supplied with others, as the people were eager for them.

Jan. 22.—An invalid sepoy, who has been a bitter enemy for a long season, appeared convinced of his sin, and much downcast that he cannot come out from among his companions. He asked me if he might not go on to believe in Christ, and think upon him all his days, without making an outward profession, and be saved at last. I told him that if we be-

lied in Christ with the heart, we shall confess Him with the mouth.

Jan. 26.—I set out for Secrole, and arrived at four o'clock: saw dear Mr. Corrie.

Jan. 31.—The invalid sepooy, on account of persecutions which he had suffered, left the tracts that he had some days ago received. He said that he could not bear to be treated thus, and that we were commanded to live in peace with our neighbours. I told him that the scripture did not say that they would live in peace with us; and as he would rather please his neighbour than his Creator, he had made them his gods, and let them save him.

Feb. 8, Sunday.—Being requested by Mr. Corrie to visit the native Christians and others at Buxar, about 70 miles down the river, I set out, after English worship, about ten o'clock at night, in a boat, accompanied by Bukhtawin and a pundit.

Feb. 11.—Came to Ghazepore with my two friends, and walked about the streets. Two Hindoos accompanied us to the boat; and, after they had received tracts we set sail. Two Brahmins came running along the shore, begging for books. Two Hindoos accompanied us from this place. One of them had two stone idols, which he had been purchasing to set up in a temple which the Brahmins had persuaded him to build. On entering into free conversation with him on the absurdity of these things, and on the difference that there was between them and the salvation of the gospel, he seemed convinced of his sin, and laid the whole blame on his advisers, and begged to know what he should do. On hearing our reply, he said the people would laugh at him if he withdrew from his purpose; but, to remedy the evil, he said he would make the whole over to the Brahmin, and begged that we would visit the village on our way back.

A Woman delivered from the Burning Pile.—Extract from the Journal of Mr. Smith, Baptist Missionary at Benares:—*Aug. 27.*—Addressed the word to a crowd of people at Prublad-ghat, where a woman was to be burnt alive with the corpse of her husband. At the close of the discourse a Brahmin said, "your Scriptures are quite contrary to ours, therefore I hope you will not speak much." The corpse and the woman were taken to Brumha-ghat, where they intended to burn her with the corpse. After they had performed their superstitious ceremonies, they placed the woman on the pile with the corpse, and set fire to the wood. As soon as the flames touched her, she jumped off the pile and fell into the water; immediately the Brahmins seized her, in order to put her again into the flames;

she exclaimed, "do not murder me: I don't wish to be burnt." The Company's officers being present, she was brought home safely."

Malda.—The Baptist Mission have a station at English Bazar, near Malda. Krishna, the first native convert, is their resident missionary, having been removed hither in 1818. He continues to labour as an earnest preacher with success. Two of his countrymen, the mission report states, have openly confessed the Saviour in the course of the past year; and afford him some degree of help in his labours.

It deserves to be remarked, that the circumstance of conversion is followed by that of employment under local mission in so many instances, as to be a frequent and almost a constant effect of the powerful change wrought, or professed to be wrought, in the heart of the new convert. This effect greatly increases the expense of missions.

To return to Krishna, who seems to have been sincere in his profession, the mission report styles him the "earliest of Hindoo evangelists," and states that he begins to feel the infirmities of age, being near sixty. It is intended for his relief to send him farther assistance.

Gnyah.—This is a large city, 265 miles west-north-west of Calcutta, and a place of great idolatrous resort, where the Baptist mission have another station, at which Rughoo, a Brahmin convert, officiates.

Mr. Fowles, born in India, who resided here on his own estate, and was a volunteer labourer among the natives, has lately removed. Rughoo goes out daily, to read the scriptures to any one who may be disposed to hear them.

Benares.—Some account was given of Jay Narain's liberal endowment of a school in this ancient seat of Brahminical learning, in the *Asiatic Journal*, vol. viii. p. 589—591. He gave the house, which cost him 48,000 rupees, and an endowment of 40,000 rupees in money. In March 1819, the number of scholars was 121; of whom 63 were studying English, 32 Persian, 11 Hindce and Sanscrit, and 15 Bengalee; teachers of the native languages having been appointed. The New Testament is read by the upper classes of those who are studying English. A small daily allowance is made to most of the scholars out of the funds; but others of good family attend, for the acquisition of English.

Beside this school there is another at Secrole, a station of the military close to Benares. It has been supported during the year by the residents in the neighbourhood, at an expense of about £75.

In a letter addressed to the committee

of the society, Jay Narraïn earnestly requests that two missionaries may be sent to Benares, and a printing press established. The committee, anxious that the benevolent intentions of this benefactor of his countrymen should be fulfilled without delay, have appointed to this station the Rev. Benedict La Roche and the Rev. John Perowne.

*The most economical arrangements for Jay Narraïn's school leaving on the Society an annual charge, on its present scale, of nearly 4000*l.* per annum, beyond the proceeds of the founder's endowment, the Governor-general has, on the representation of the case by Jay Narraïn, liberally agreed to relieve the society of its expenditure on account of this school.*

RANGOON.

Death of a Missionary.—The *Asiatic Mirror*, of Aug. 26, contains two paragraphs, which together compose an announcement too melancholy to be given abruptly.

By the report of the *Britannia*, the vessel which brought to Calcutta advices of the king of Ava's death, we are sorry to find that the Rev. Mr. C. Wheelock, missionary, had fallen overboard and was drowned, on the 20th August.

It appears that he had been for some time in a declining state of health: on the day that this unhappy accident happened he was sitting beside Mrs. Wheelock, who was writing, when he left her without being perceived; hearing the door of the quarter-gallery close, and missing him from her side, she concluded that he was gone there; his unusual stay however gave her some alarm, and she was induced to open the door, but he was not there: every part of the ship was searched in vain for him, and it is conjectured

that he must have let himself down by the quarter-gallery, as no noise of his fall was heard by any person on board.

CHINA.

A letter from a missionary at Macao, dated 1st April 1819, gives the following details respecting the persecutions which the Christians have experienced in China:

“Every European priest whom they discover is arrested, and put to death on the spot; the same fate is reserved for the Chinese Christian priests. The other Christians, when they will not apostatize, suffer the most dreadful torments, and are afterwards banished in Tartary. In this year, 1819, there are in the prisons of the provinces of Sutchuen alone 200 Christians, who wait the moment of exile; a Chinese priest had been strangled, and two others are about to die in a similar manner. In the whole empire there are but ten missionaries, five of whom are at Pekin, who can have no connection with the inhabitants but in secret. The emperor has declared that he will have no more painters, watch-makers, nor even mathematicians. The bishop of Pekin has attempted in vain to introduce himself into his diocese under that title. The only means which remains to the missionaries to penetrate into the country, is to gain the couriers which go from Macao to Pekin; but if the thing is discovered, the missionary and the courier are put to death on the spot. In spite of all these persecutions, the Catholic religion is extending itself in the midst of the torments of the faithful. For 50 years they reckoned in the province of Sutchuen but five or 6,000 Christians; there are now 60,000. Thus is verified the ancient prediction of Tertullian—“The blood of the martyrs is the seed of Christianity.”

DEBATE AT THE EAST-INDIA HOUSE.

East-India House, March 8, 1820.

A general court of proprietors of East-India stock was this day held, pursuant to advertisement, for the purpose of considering of an address of condolence from the East-India Company to his Majesty, upon the death of the late King his revered and lamented Father; and of congratulation upon his Majesty's accession to the throne of these realms.

The minutes of the last court having been read;

The *Chairman* (Campbell Marjoribanks, Esq.) after stating the occasion on

which the proprietors had been convened together, proceeded to observe, that in discharging his duty of addressing them, he was perfectly convinced the feelings of the whole court were in unison with his own; he was entirely satisfied of his only echoing the sentiments of the East-India Company, when he spoke of their late revered and lamented Sovereign, as a monarch whose reign was equally mild and splendid, and, during the long period of sixty-years, displayed an uninterrupted example of all the virtues which could dignify the man and adorn the throne! (*Hear, hear!*) His conduct and charac-

ter during the course of government, so singularly and providentially protracted, must be contemplated as producing, not merely benefits, but blessings for the people of this nation; blessings which they would ever hold in dear and grateful remembrance. (*Hear, hear!*)

The glories of his reign, brilliant and numerous as they were, added a stability to the existence and prosperity of the country, while shedding a lustre over the pages of its history, which would be read with exultation by succeeding ages. (*Hear, hear!*)

While, however, they were lamenting the past, they were called upon to view the future with the feelings of hope. He was well assured that the East-India Company, a body of men eminent for their zealous loyalty, were, at the same time, prepared to express their veneration and affectionate attachment towards the new sovereign, and their inviolable zeal for his Majesty's most illustrious house. (*Hear, hear!*)

Having made these few observations (and the subject was too eloquent in itself to require more, in order to insure the unanimous concurrence of the court), he should direct that the address which had been prepared be now read, and submitted to them for their consideration and approval.

"To the King's most excellent Majesty.

"**MOST GRACIOUS SOVEREIGN:**

"We, your Majesty's most dutiful and loyal subjects, the United Company of Merchants of England trading to the East-Indies, in general court assembled, humbly beg leave to approach your sacred person, sincerely to condole with your Majesty on the loss of our late most excellent sovereign, whose memory, so deservedly dear to the present age, will be transmitted with reverence and affection to our latest posterity. We reflect with peculiar satisfaction, that, under the auspices of your royal father, the East-India Company has been the fortunate instrument of extending to distant regions some of the many blessings which this country enjoyed, under his mild and benignant government, during a long and glorious reign.

"Permit us, gracious Sire, to offer to your Majesty our sincere congratulations on your accession to the throne of these kingdoms; and to add, with all humility, our most faithful and earnest assurances to your Majesty, that the East-India Company, firmly united in principles of loyalty and affection to your illustrious family, will invariably persevere in the most dutiful attachment to your royal house and government; and that our anxious endeavours shall be employed to impress deeply on the minds of all connected with us the most zealous regard for that happy

government under which we live, and the truest sentiments of allegiance, fidelity, and affection to your sacred Majesty.

"We pray that your Majesty may long continue to reign over us, on the throne of your ancestors; and may the blessings which we now enjoy be perpetuated under the government of your royal house."

The *Chairman*.—"I shall now move, that this court approve of the address which has been just read, and that the chairman and deputy-chairman be requested to present the same to his majesty."

The *Deputy-Chairman* (G. A. Robinson, Esq.) in seconding the motion, felt it quite unnecessary to add a single observation to those by which his hon. colleague had introduced it; satisfied that, on an occasion like the present, there could be but one sentiment and one feeling in the court, both with respect to the loss which had been sustained in the demise of their late revered and lamented sovereign, and with reference to the congratulation with which they might justly approach the throne, now filled by his illustrious heir; under these impressions, he should content himself with merely seconding the motion.

Mr. R. *Twining* apologized to the court for intruding himself upon their attention; he, however, should not have offered himself to their notice, if the court had been attended as numerous as the interest and importance of the subject demanded. He certainly should have remained silent, too, if any gentleman of more weight and of greater talent than himself, and he perceived a learned friend in court (Mr. R. Jackson) whose abilities were universally acknowledged, had risen to address the proprietors. But, as no gentleman had claimed their attention, he hoped he should be pardoned for offering a few remarks, since he could not, in justice to his own feelings, suffer a motion, on an occasion so solemn and so important, to be passed over in almost total silence. He gave to the address, which had recently been read, his unfeigned and unreserved approbation; and he was sure no proposition had ever been made in that court, on which more perfect unanimity could be manifested. It was not necessary that individuals should be possessed of high rank and elevated condition in society, in order to enable them to offer an opinion on the subject now under consideration; happily for this nation, the merits of his late Majesty were of so open and undisputed a nature, as to make a deep and lasting impression on all ranks of his people. (*Hear, hear!*) He was not, indeed, deeply versed in the science of political intrigue; a science which, though sometimes beneficial to a state, was more frequently attended with evil conse-

quences; but throughout the whole period of his reign, he shewed a just capacity for governing, and an anxious desire to promote the solid happiness of his subjects. (*Hear, hear!*) Commencing a career, as his late Majesty had done, at an age which precluded the advantage of matured experience, he uniformly held out an example of patriotism and virtue, which must be remembered with gratitude now that he was no more, as it procured for him, while he lived, the love and veneration of all classes of society. (*Hear, hear!*) He was not only great as a sovereign, but in all the private relations of life; as an husband, a father, and a friend, his virtues shone conspicuously. He left the example of those virtues, as a valuable legacy to his country, and posterity would, he had no doubt, turn it to a good account. His Majesty's reign could not, consistently with the nature of human affairs, have been protracted to so great a length, without the occurrence of many circumstances of embarrassment. But it was not too much to say, that on every occasion where his Majesty was called on to make use of his executive power, the good of the country, unmixed with any feeling of ambition, seemed alone to actuate his mind. (*Hear, hear!*) If there was any portion of his long reign, the events of which were peculiarly splendid, perhaps it was that portion which was more immediately connected with the success and prosperity of the East-India Company; and to which, therefore, he might be permitted more immediately to allude. It was scarcely in the nature of human events, that any future sovereign should witness such a succession of governors in India, as had presided there during his late Majesty's reign; governors who administered the affairs of that great empire with justice, mildness, and forbearance. (*Hear, hear!*) His majesty had lived to witness many of those great actions, many of those glorious achievements, which had been performed in India, and which would, for ever, ornament the pages of their history. Unhappily, his Majesty's last days were clouded and overcast; but it was pleasing to reflect, that if, in the latter period of his life, it had pleased heaven to restore him to reason, he would have turned with unmixed satisfaction to the situation of their Eastern empire; not on account of the conquests which had been achieved there, but because the mild spirit of the British law had been introduced. That law was not exercised merely for the benefit of the European inhabitants, but for the safety, security, and protection of that immense population which was subject to its sway." If it afforded satisfaction to look back at the past reign, it imparted equal pleasure to

contemplate that which was about to commence. There were, it was true, at the present moment, some embarrassments and difficulties to be encountered; but still they had, amidst all that was gloomy, sufficient grounds for hope and consolation. The "*civium ardor prava jubentium*" certainly prevailed in some parts of the country; but when they had on the throne, the "*justum et tenacem propositi virum*," they had nothing to fear from the threatened calamity. (*Hear, hear!*) As long as the throne displayed firmness, moderation, and an anxiety for the general good, he was sure there would always be found good sense and good feeling enough in the country, to give to his Majesty's government every confidence, and every assistance. While such a disposition existed amongst the great body of the people, this country had little to apprehend from the design of wicked individuals. He could not conclude without making one other observation; and the circumstance was a most remarkable one, with respect to the estimation in which his late Majesty was held by persons of all religious persuasions: at the time of his funeral, there was scarcely a place of religious worship throughout the country which was not opened, for the purpose of expressing the deep regret his demise had occasioned; the united talents of the clerical profession were exerted on that melancholy occasion. The utmost abilities were called forth, and the utmost sincerity of heart was manifested, in dilating the virtues of the deceased monarch. The language used on the occasion was glowing and energetic. But as the clergy felt that they were uttering the praises of God's viceroy on earth, who had administered the laws with mildness, some allowance should be made, if, indeed, any were necessary, for their warm expression of attachment and regret. (*Hear, hear!*)

Mr. R. Jackson said, he had not intended to offer any observations on this occasion, because he felt most strongly the justice and propriety of what had fallen from the chair. It was truly stated, that on an occasion like the present there could be but one heart, but one feeling, but one sentiment in that court. He conceived it so impossible to select language more forcible than that which had been made use of by the hon. chairman, in speaking of his deceased Majesty, and the apprehension that any thing which he might offer would perhaps weaken its effect, and fall short of what such a subject demanded, had induced him to remain silent. He was very glad that he had proposed that course, because it gave to an hon. friend of his, who would not otherwise have spoken, an opportunity of pronouncing a very eloquent and appro-

prate eulogium on his late Majesty, and a very just panegyric on their present sovereign. He did not believe it possible for any person, however conversant, not merely with the history of his country, but with that of the world, to point out a monarch so perfect, so worthy altogether of praise and honour. (*Hear, hear!*) They all knew that many designations had been affixed to the names of a variety of princes: how far they had been deserved, he would not stop to inquire; they had "the great," and "the desired," "the l'aimable," and "the well-beloved;" if they could hear the latter epithet without smiling at its modern application. They found, indeed, in history, various additions of honour and public esteem. But if he were asked what addition he would affix to the name of his late Majesty, it should be that which was always in his mouth and in his heart when he contemplated his character: he would call him "GEORGE THE GOOD!" (*Hear, hear!*) His hon. friend had said, that, during his long reign, his Majesty had met with some reverses and embarrassments—but he believed (and those who most minutely viewed his reign would accord with him in sentiment), that in all critical situations, he looked up to the constitution of Great Britain as his judge; and, according to his conception of that constitution, he shaped his conduct with a firmness of spirit which would have accompanied him to the block, had it been necessary for him to have sacrificed himself in its defence. (*Hear, hear!*) In cases of political emergency, whatever difference of opinion might exist as to the measures adopted, he sincerely believed that his late Majesty acted according to the purest dictates of an upright mind. In all moral difficulties, he looked with steadfastness to his God—he looked up to that sacred source, from which alone aid could be derived; and in all political difficulties, he looked up to the constitution, which he wished to share in common with his people. (*Hear, hear!*) There was another part of his hon. friend's speech which also deserved notice. He had adverted to our possessions in India, and had justly described the general principles on which they were governed. He could not help himself adverting to the well known fact, that, happy as our European subjects had felt themselves, under a succession of rulers who had administered their authority with great urbanity, yet all the advantages which they enjoyed fell infinitely short, when compared with those which his country had bestowed on the people of India. He knew that European states were very facile in speaking of the blessings they conferred on those who were placed under

their colonial sway, while perhaps the people themselves felt no advantage whatsoever; such, for instance, had been the connection between Spain and South America: but he would confidently assert, that infinitely the greater portion of the natives of India, of those who were now inhabitants of the Company's territories, who had been rescued from the oppression of tyrannous, despotic, and selfish sovereigns, would be affrighted and dismayed, if it were attempted to withdraw from them the protection of British law. Nay, not only the infinitely greater part of the population who shared that happiness felt thus, but others who were not so situated, courted, when they could, the benefit of the firm and inflexible administration of British justice, in preference to all other systems. There was scarcely one of the natives who, in a case of the utmost importance to himself and family, would not, if the question were put to him, much rather trust to British integrity than to any other species of adjudication.

He could not conclude without expressing the great satisfaction he felt at the mode in which this motion had been brought forward; because, up to a very recent period, it had been the practice to confine addresses of this kind to the court of directors, and the first the proprietors knew of any address to the throne, was by learning from the Gazette that their directors had gone to court with one, exclusively their own. He could not give offence now, as the practice had gone by, in reminding the court that he formerly objected to that mode of proceeding; and when the objection was made, the gentlemen behind the bar most honourably met the wishes of the court. He always conceived that a corporate address should be the address of the whole corporation; and he did not think it would be the less acceptable to the royal personage for whom it was intended, because it was the address of the entire East-India Company, and not of a portion of that body. Gentlemen might be assured that it was with their executive, as with all other governments: if they wished their power to be strong, their conduct must be conciliatory; if they wished the popular voice to assist them by its great and commanding influence, they should always recollect how easily it was to be cultivated by those who would take the trouble to study the English character. The presentation of the address by the hon. chairman and deputy-chairman, was perhaps on this occasion, considering the circumstances of his Majesty's health, the fit and proper course. But he still thought that on any future occasion, when the Company approached their so-

vereign, whether with earnest assurances of attachment in time of danger, or with any other sentiment, which impelled them forward with one feeling and with one heart to the foot of the throne, their representation could not have less force or weight, if some of the members of that court were delegated to go up with the executive body, as was the case on a late occasion. It would be time enough, however, to advert to this subject when the occasion offered. At present, he conceived that delicacy and propriety justified the course recommended. The address itself had his cordial approbation, which was equally due to the manner in which it had been introduced, and the admirable terms in which it was drawn. The motion was agreed to, and the court adjourned.

GENERAL QUARTERLY COURT, 22d March, 1820.

[From the lateness in the month when the debate took place, the Editor laments that the proceedings at the India House on March the 22d cannot be given in the present number with proper effect. A sketch, however, is subjoined, for the information of the public; and the whole will be published in detail, fully and correctly, with all its documents, in the next Journal.]

A general quarterly court of proprietors of East India stock was held at the East India House on Wednesday the 22d day of March, which was made special for the purpose of confirming a resolution of the same court of the 22d day of December last, approving a resolution of the court of directors of the 10th day of November preceding, for granting to Sir George Hilaro Barlow, K.B., a pension of £1,500 per annum, to commence from the 21st day of May 1818; and further, for the purpose of taking into consideration a resolution of the court of directors for offering to his Majesty to raise a corps of volunteers, at the expence of the Company, in aid of Government; and to enable the directors, if such resolution be approved, and it should be necessary, to apply for an act of parliament to carry such resolution into effect.

The minutes of the proceedings at the last court were read, when

Mr. Howorth rose, and requested the attention of the court, while he stated that the consideration of the committee of bye-laws had been called to the proceedings of a general court, upon a proposed grant to Sir G. H. Barlow, as far as those proceedings related to a due observance and execution of the bye-laws. The committee entertaining doubts upon this subject, deemed it their duty to refer the question to legal opinions. He assured the court no captious disposition urged

them to cavil at the proceedings of the executive body, nor an idea entertained of impeding the proposed grant, but that the committee were influenced solely by a desire of faithfully discharging their own duties, and obtaining a legal sanction for the proceeding.

He moved that the case and opinions of Mr. Serjeant Lens and Mr. Serjeant Bosanquet be read, which motion was agreed to unanimously; the case and opinions being read, were ordered to be filed on the journals.

These opinions having affirmed that the proceedings of the court of directors had been conformable to the bye-law, and might be carried into effect if sanctioned by the court of proprietors, and that the grant of such pension would be legal, should the court of proprietors be satisfied of the necessity for granting it,

The *Chairman* (C. Marjoribanks, Esq.) proceeded to state that the court was made special for confirming the resolution of the special court of proprietors, on the 22d day of December last, sanctioning the resolution of the court of directors on the 10th day of the preceding November, for granting unto

SIR GEORGE HILARO BARLOW, K.B.

a pension of £1,500 per annum, to commence from the 21st day of May, 1818, and to be paid to him out of the Company's territorial revenues during the continuance of the Company's present charter, if he should so long live.

The *Chairman* moved that the court do now confirm the said resolution, which being seconded by the deputy-chairman (G. A. Robinson, Esq.),

Mr. R. Jackson rose to move an amendment; he suggested that the clerk should read the report of the court of directors upon the case of Sir Geo. H. Barlow, K.B. and the grounds upon which the proposed grant was recommended, together with the appendix of vouchers and documents. He commenced a long speech by stating his feelings of gratitude to the committee of bye-laws for the course they had taken; and was assured that Sir George's friends would not be disposed to question the motives of duty which actuated those who contended that a proper degree of information, according to the laws of the Company, had not been laid before the court of proprietors, for that court to sanction the resolution. The evidence forming the principal inducement for the directory in granting the pension, touching the amount of Sir Geo. Barlow's fortune, was not forthcoming; it was not produced on the score of delicacy; he thought the learned counsel might not be aware of this circumstance when they gave their opinion; they had, however, in distinct terms, said, that the bye-law had been sufficiently complied with, if the pro-

prietors were satisfied. He thought, however, that the court ought not to be satisfied, quoting the acts of 1773, 1793, and 1784; shewing as a matter of history, that grants had been so improvidently made as to call for the interposition of the legislature, and that several checks were provided to restrain them; particularly that of subjecting them to the approval of the commissioners for the affairs of India; he related the origin of a new formation of bye-laws, remarking on that which bore upon the present case. He observed that these limitations on pensions had been superseded by grants of specific sums by way of gratuity, viz. to the late Lord Nelson, other distinguished individuals, and many meritorious officers of the Company, which had been the occasion of another bye law for restricting them; he considered these shewings as necessary for his conclusion, that sufficient evidence had not been given to sanction and justify the proposed grant, and concluded with a very long amendment.

Sir John Sewell, in seconding the amendment, followed the same line of argument, contending likewise that the general court of proprietors was in the nature of a court of appeal from the court of directors, and consequently ought to have all the evidence laid before them, upon which the directors had decided, advertising to the letter written by Sir G. Barlow to a former chairman.

Mr. Bebb allowed it was true that he had received a letter from Sir G. Barlow; that it was a *private* one, stating the amount of his fortune; that he certainly had communicated the contents of that letter to the court of directors, but that it never was on the records of the house, and could not be considered as a public document. He had, however, no objection to read it *then*, if it were the pleasure of the court. (*General cries of no, no.*)

Mr. Gahagan ably combated the arguments of the mover and seconder, contending that the court of proprietors was not an appellat jurisdiction, approving the law opinions which had been filed, assured that the court, if themselves were satisfied, were justified in sanctioning the original motion.

Mr. Dixon expressed himself dissatisfied, considering the evidence insufficient.

Mr. Pattison observed jocosely on the incongruity of the different legal opinions in and out of court, he asked

“Who shall decide when doctors disagree?”

and determined from this difference of opinion to take leave of legal advice and apply to plain common sense, which instructed him to think the evidence upon the table was quite sufficient to justify the conscience of the court in confirming their former resolution; he played

Asiatic Journ.—No. 52.

upon the terms delicacy and indelicacy, alluding to the remark of the sarcastic Dean of St. Patrick, “that the nicest man was a man of the nastiest ideas;” wished that no idea of delicacy had been attended to in the first instance; and considered the gallant officer was entitled to the pension, the reward of his distinguished merits.

Mr. R. Jackson shortly replied.

The Chairman in putting the question assured the court of proprietors, that the directors had acted on the principle which invariably governed them upon all former occasions of the like nature.

The question on the amendment was then put and negatived by a large majority, and the *original question for confirming the pension* carried almost unanimously.

CORPS OF VOLUNTEERS.

The Chairman then rose to state that the court was further made special for the purpose of taking into consideration a resolution of the court of directors for offering to his Majesty to raise a corps of volunteers at the expense of the Company, in aid of government, &c. &c.—After several perspicuous observations, pointing out the utility of, and the reasons for, adopting this measure, the Chairman concluded by moving, that the said resolution be approved of.

The Deputy Chairman seconded the motion.

The Chairman gave the following explanation as to the permanency, the numbers and the expense of such an establishment.—viz: Number of men, eight hundred. Expense of clothing and accounting the same for the first year £9,820 Supposing the duration of their service to be six years, and spreading the expense of the outfit, in the first year, over that period,—the expense of the first year would be £4,630 and that of the subsequent years £3,630 each. But it was stated as part of the plan that an account of the expense of maintaining the corps should be annually laid before the court of proprietors, in order that the expediency of continuing the same during the period mentioned might be subject to their consideration.—The resolution was then put and carried unanimously.

CHINA TRADE.

Mr. Weeding then rose, and stated, he understood an application had been made by certain merchants and ships' owners to the lords of His Majesty's treasury, for adopting some parliamentary measures, to give the petitioners a participation in the trade to China; he had no doubt of the decision of the court of directors upon the subject, and was assured if such a measure should be granted, it would end in delusion and disappointment to the great and serious loss of those who should embark in it.—Adjourned.

ASIATIC INTELLIGENCE.

A MILD splendor diffused over the face of public affairs in India, indicates that augmented power is but a broader base for peace, repose and security, when a spirit of equity and wisdom animates the government, which has conducted a reluctant war to a victorious termination. Various little episodes of military operation grew out of the late Pindaree and partial Mahratta war; some of which had a relation with the plan of the grand campaign; others were the effects of a temporary diversion of British detachments from the old exterior points in the circle of stations, which, in the erroneous calculation of some native chieftains, presented them with an opportunity of taking up arms with success. These skirmishes too are ended; and the gradual subsidence of intelligence from the field army, allows us to bring up some arrears of intelligence relating to transactions, as well in the contiguous countries of Asia as in India.

INDIA—BRITISH TERRITORY.

Political—Official.

The minutes of a court martial, of which an abstract follows, give authority to a nice distinction in the character of vituperative language, which must have the tendency to give a tone of increased urbanity to genteel conversation.

Head-quarters, Calcutta, Aug. 20.—

At a general court-martial, held at Secunderabad, on the 24th May 1819, and on subsequent days, Ensign Charles Deane, H.M.'s 30th, was arraigned on the following charge, signed by Wm. Sullivan, Lieut. H.M. 30th regt.:—For ungentlemanlike and unofficerlike conduct, in saying in the presence of Major Murray, H.M.'s 30th regt., Lieut. Garvey, and Lieut. and Adj. Atkinson, H.M.'s 30th regt., and others, at different periods, that I was a coward, liar, and blackguard, and this at a time when I was not present with the corps to defend my character against such harsh expressions."

Upon which charge the court came to the following decision.—*Sentence.* "The court finds the prisoner, Ensign Charles Deane, of H.M. 30th regt., guilty of the charge preferred against him, with the exception of "ungentlemanlike conduct," of which the court fully acquits him. For that part of the charge on which the court have found him guilty, it doth sentence him to be reprimanded in such manner as

the officer confirming this sentence may be pleased to direct."

Lieut.-gen. Trapaud deemed it expedient to make the following observations:—"If the prisoner knew any circumstances implicating the character of Lieut. Sullivan, it was his duty to represent it officially to the commanding officer of the regiment; but his conduct in resorting to private aspersion is highly reprehensible. I confirm, therefore, the sentence of the court, and in pursuance thereof most severely reprimand Ensign Deane, of H.M. 30th regt. of foot, accordingly.—Ensign Deane is to be released from arrest, and return to his duty."

The most noble the Commander-in-chief directs that the foregoing order be entered in the general order book, and read at the head of every regiment in his Majesty's service in India.

Extract from Original Correspondence.

We are very quiet in India, and likely to continue so for some years to come. It is true the ex-Rajah of Nagpoor, my good friend Appa Sahib, is still at large, though nobody knows where he is gone to, and indeed it is of small consequence, as he is a man of no talent, neither has he treasure to feed those who have. This part of India labours under a great scarcity of grain, and which is felt heavily by the poor, numbers actually dying of famine every day. To give employment to the poor wretches, the government has been good enough to make capital roads all through the cantonment and residency: I mean the Nagpoor government, alias the resident at this court. Perhaps five or 6,000 people are working at these roads every day: you see we take care of ourselves first; for some are of opinion that if the 5 or 6,000 workmen were employed in improving the streets of this capital, streets which are choked up with filth, stagnant water, and every possible impurity, more lives would be saved in 20 years than what the famine will carry off.

DISTRIBUTION OF FORCE.

*Light Battalion in Gen. Smith's Division disembodied.—Sept. 29, 1819.—*D. O. by Brig.-gen. Smith, C.B.—"Brig.-gen. Smith has had frequent occasions of witnessing the good conduct of the light battalion; and their valuable services during the late campaign shewed the per-

fection and utility to which the native troops of this presidency could be brought, under intelligent officers, as light infantry. It is with very great regret that the commanding officer has found it expedient to break up this battalion.—He desires to express to Capt. Montresor the perfect satisfaction he has given him in conducting the command of this battalion, and begs that officer will accept and communicate his best thanks to the whole of the light companies, for their soldierlike conduct while they have been embodied together.—(Signed) S. HALLIFAX, Dep.-adj.-gen."

OPERATIONS IN THE BAITOOL VALLEY.

Nerbuddah.—No continuous account of the operations in the Baitool valley having appeared in England, we extract the following from a Calcutta paper; but as the narrative proceeds, we have inserted references to pages in the *Asiatic Journal* containing collateral intelligence.

"On the accounts reaching Lieut.col. Adams, commanding the Nerbuddah field force, that Capt. Sparkes's post at Baitool was threatened by an invading body of Arabs and Poorbys,* a reinforcement of two companies of the 1st bat. 23d reg. under Lieut. Gammon, was immediately detached from Hussingabad; but, before it had arrived, accounts were received that Capt. Sparkes and his detachment had been surrounded and destroyed. [*Asiatic Journal*, vol. vii. p. 312.] Report making the enemy very numerous, Major M'Pherson, with seven companies of the 2d bat. 10th reg., three companies of the 2d bat. 23d reg., and a squadron of the 7th native cavalry, was detached, with orders to pursue and destroy, if possible, this new enemy, who, by the game they were playing, threatened ruination and destruction to the villages and ryots in that neighbourhood. This force marched about the 20th of last July; on the 23d or 24th a requisition was made for more troops. [*Idem*, p. 435.] Accordingly on the 25th, Capt. Newton, with the three flank companies of the 2d of the 10th, and two 6-pounder field pieces, moved towards that quarter. On the 26th, at about 3 p. m., in the middle of his march, and at the distance of fourteen miles from Shahpore, which place he intended to reach that night, he was met by a sepoj of his own corps desperately wounded, and immediately after by four or five others, together with the Dawk people from Shahpore, who all stated that five or 6,000 Arabs, Poorbys, and Goands, had

that morning attacked and destroyed a party of about 30 of our sepoys, with the exception of those few who escaped badly wounded; and that they were then on the way to attack Capt. N. and his detachment, which consisted only of 150 men. That officer resolved on stockading them and his guns, and awaiting their attack; but not finding an eligible spot here for that purpose, he proceeded on for three miles, and established himself between two nullahs, giving immediate notice to Col. Adams of what had occurred at Shahpore, and of his then situation.—[*Idem*, p. 550.]

On the Lieut.colonel's receiving Capt. N.'s dispatch, Maj. Cumming with a squadron of the 7th brigade of gallopers, and four companies of the 19th N.I. was detached to his support. After the arrival of this force, accounts were brought of 200 of the enemy's horse being within a few miles, posted on a hill. The major, fearful of giving alarm, and to prevent delay, did not move with the whole force, but sent a troop and the 1st company of the 2d of the 10th against them. The account of their having been there proved true, by the embers of fire being quite fresh, and the discovery of a sepoj of the 2d of the 10th tied to a tree; he was alive, but cruelly mutilated. On the arrival of the detachment at Shahpore, all enquiries possible after the enemy were made, but without effect. The village, which is very large, was deserted; the dead bodies of many of our poor sepoys were discovered dreadfully mangled. Numerous trunks, belonging to Maj. M'Pherson's officers, were strewed about completely pillaged, and other property belonging to officers, which being useless to the marauders, was rendered by them of no utility to others. The major hearing that the Shahpore pass was occupied by Arabs, sent out a reconnoitring party that evening, the 31st, with orders to possess it if found vacant. The following morning the detachment pursued its route. On the baggage ascending the ghaut, the Goands, to the amount of about 100, came down from the hills, and succeeded in carrying off some private baggage and hackeries belonging to officers. The alarm soon communicated to the line, when they were pursued, and eleven of them killed. On the 3d of August this detachment and Maj. M'Pherson arrived at Baitool. Maj. M'Pherson had been very active and zealous in marching after the enemy whenever he heard of them, which was every where, but he could find them no where.

On the 4th, the gallopers and the four companies of the 19th were sent back to Shahpore, which was assigned their post. We now heard the enemy had concentrated at Rannypore and Aumlah; but the road there was so dreadful and appalling from

* Signifying Pitoon and Bohillah emigrants from our provinces, principally Rohilkund.

incessant rain, that we could not possibly move; at last, however, on the 9th, finding there was no appearance of its clearing, and that it was necessary to make an early example, the detachment marched to Amrowdah, eleven miles south-east of Baitool, and about eight miles from Aumlah. The difficulty experienced on this day's march, rendered it absolutely necessary to relinquish any further attempt until the weather moderated. I shall take this opportunity of mentioning, that the officers and men came out ill equipped, owing to the sudden and unexpected call for their service in this inclement season, and the expectation of their early recall to cantonments: hence arose hardships and privations, which, added to the severity of the weather (quite unprecedented to the oldest memory), still increasing in its violence, became most horrible.

On this spot, with rain falling night and day in torrents without the slightest intermission, we remained till the 16th or 17th; and I may venture to say scarcely any officer ever slept on a dry bed; some, who had lost their's at Shahpore, were obliged to make what shift they could, and as for living, nothing could be more wretched; hardly a bottle of wine amongst the whole for days past, and brandy was so scarce, that half a wine glass of it was at one time considered a good allowance. Tea we were nearly out of: what remained was damaged and tasteless; however this, even bad as it was, was nursed and made much of; milk we at times went without, and when procured it was with difficulty, most of our goats having died, and the rest dying. Sugar we were entirely out of, and latterly substituted common goor to sweeten our tea. Notwithstanding these privations and state of wretchedness, in rotten and worn-out tents, by constant rain, drenched through above head and below foot, nothing but good-humour and cheerfulness prevailed throughout.

As to the Europeans, troopers, sepoy, and cattle, words can hardly do justice to their sufferings; grog alone kept life and soul together with the Europeans. The cavalry marched at a moment's notice, came away without tents or baggage of any sort, and were obliged to huddle together in an old paul or two, spared to them with much and serious inconvenience by the infantry. This trifling assistance afforded them but partial shelter; such as it was they were glad to get, and were thankful for it. They had no change of clothes, consequently night and day they wore the same; the infantry, though somewhat better accommodated with tents, shared equally hard with the rest in other respects. The miserable and deplorable appearance of the officers and cavalry horses was really melancholy;

changing their pickets gave but temporary relief, for they were soon again up to their knees in mud; their legs were lacerated by the ropes, and swollen to an alarming degree; for the ease of which, they were tied by one leg only at a time, and some were so bad in their legs that they could only be tied by the neck. These very horses, now spiritless and tame as cows, from their low and emaciated condition, are kept with difficulty at their pickets in cantonment when chained and apparently securely fastened. Many of them died, and some never recovered their strength or condition.

The enemy, who had for days past remained quiet, stole away and wrested the village of Mooltaie from our police, who shamefully abandoned their charge, although fully equal in means to have resisted twice the number opposed to them, having a ghurry inside with five pieces of cannon and 250 Nujeebs to defend the place. This news being communicated to Major Cumming, the order for our march was issued. In the mean while, he detached Capt. Ker with a troop from Synkerah (the place to which we marched that day, the 17th, distant south 8 miles), to reconnoitre the enemy's numbers, and the plan itself. Capt. Ker arrived a little before day break, and came upon a mounted picquet, distant from the walls 300 yards; this picquet he charged, and destroyed 29 out of 30. He then proceeded to examine the town, which he had nearly completed without discovery, when on a sudden he observed the enemy coming out on the plains in hundreds, infantry and cavalry. The latter advanced on him, protected by their infantry, who spread out and tried to outflank him, sniping as they moved along; but they were at too great a distance to incommode him in the slightest degree. They were in a swamp and secure from his attack; which he saw, and confined his movements to the horse, who on every attempt to surround him were repulsed with loss by his charge, and fell back on their infantry, who had now advanced to their support. Owing to the weak state of our horses, and the overpowering numbers of the enemy, and being at a long distance from support, he was obliged to make good his retreat, which he effected by the best management possible.

The enemy at one time broke into his ranks, and actually speared a trooper; in this manner, charging and retiring, he was followed for seven or eight miles. Too much cannot be said in this officer's praise; he conducted his party in a style which commanded the admiration of the whole detachment; and but for his steady and determined gallantry, instead of meeting with the trifling loss of six or seven killed and wounded, his whole troop

most have been annihilated. [*Asiatic Journal*, vol. viii. p. 380.]

The day after this, I think the 19th, we all moved towards Moultaie; but owing to the execrable badness of the road, and the torrents of rain which continued to break over us, we with the utmost difficulty arrived before the place on the 21st ultimo, distant south of Syukerah only twelve miles.

Moultaie is an extensive village, having a puckah wall on three sides; the south face is covered by a large deep tank, with puckah ghauts ascending from the village close to the tank; inside, on the west face, is a fort mounting two three-pounders on its bastions, commanding the village completely; it has also numerous puckah houses capable of much resistance, and the zemindar's residence is a sort of citadel. In the centre street was planted a 12-pounder; some one or two, of the bastions at the gateways mounted 3-pounders. On our earliest approach we were greeted by large bodies of horse and foot on the plains; when we arrived within 1,000 or 1,200 yards of the walls, they saluted us with their guns and matchlocks, and presently a skirmish commenced between our cavalry and light infantry and theirs, in which we succeeded in driving them inside; at the same time a few shells from our 6-pounders were fired inside, and some round shot, but with what execution I cannot say. They had the effrontery, at one time, to run a 3-pounder out of one of their gates; which they opened on our column, and for all the harm it did, they might have saved themselves that trouble.

Lieut. Fell commanded the light infantry on this occasion, and killed and wounded about 15 of the enemy. The cavalry did the same execution. On finding it would not be prudent to attempt the place with the means we then had, and being 100 miles from any support, just midway from Hussingabad and Nagpore, we retired a few hundred yards and pitched our camp. I must now mention, that out of 15 companies present and two squadrons, our numbers, from sickness occasioned by the severity of the weather, was reduced to 550 fighting men. On the 22d, finding our picquets within range of their largest guns, we fell back and took up a new ground. The enemy observing the picquets by themselves, made an attempt to surround them. Major Cumming seeing this, ordered out a troop and the light infantry of the 2d of the 10th, under Lieut. Fell, to reinforce our parties which were left to cover and protect the baggage. The additional force did not deter the enemy's approach, which terminated in a skirmish similar to the one on the preceding day. In this little bout we had two men wound-

ed, and the enemy lost 13 killed and wounded.

On the 23d, nothing of moment occurred. On the 24th, in the morning, accounts were brought of the enemy having abandoned the village; a detachment was instantly sent in pursuit, but from taking the wrong road or other cause they returned unsuccessful. At 11 P. M. that night, Capt. Newton of the 10th, with 150 infantry and a troop of cavalry, was detached, and after a march of 21 or 22 miles computed distance, wading through mud, and whilst raining in torrents nearly all night, found the enemy at day-break on the 25th, resting on the east bank of the river Bhail, about 33 yards from the ghaut. The river was wide, rapid, and so deep in places, that sepoy were here and there taken over their heads, having their muskets and pouches in their hand. The cavalry, on effecting a landing, commenced to form, the infantry with all celerity forming in their rear; while forming, the party was descried by the enemy, whose cavalry collected in a moment, when our's charged. The better mounted of the enemy made off, leaving their comrades to their fate, which was soon determined, for hardly a man of them escaped. Our infantry made a dart to reach a deserted village close by, and gain it before the Arabs and Poorbys had time to establish themselves behind the walls; this succeeded, and they came to close quarters at once, determining in a short time the fate of the day in our favor, at the point of the bayonet. Muskets, pistols, and matchlocks were much on a par, nine out of ten flashing in the pan, and the enemy's swords had no chance with the bayonet. Not an Arab attempted to run or ask for quarter; this afforded the sepoy of the 10th a fine field for revenging the fate of their butchered brothers, who so gallantly fell by the side of poor Sparkes. [*Idem*, p. 381.]

Meer Sahib's brother, a fine dashing young fellow, who commanded this body of the enemy, was amongst 117 counted dead on the field. It is impossible to estimate the number of wounded, but the natives give out 175. Lieut. Lane, who commanded the cavalry, had his horse shot under him, and Cornet Sydney was slightly touched with a sword. A havildar of the cavalry was killed, some sepoy wounded, and several horses were killed and wounded. On the 21st, in the afternoon, Capt. Ker was detached after another part of the garrison, and came upon them at the village of Lallawary, but on his approach they went into the ghurly of the plain. Ker took up a position, and sent into camp for a reinforcement; but before it had time to arrive, the enemy, unobserved, got out of the opposite side of

the ghurry; and before they were discovered on the plains, they had a mile or two start of our troops, who pursued and came within shot of them at a nullah, where we killed and wounded about 30 of them. Night coming on, and a further pursuit being thought useless, our party returned. We had in this affair six or seven men wounded.

Early in September we then began to clear, and we were favoured with a sight of the sun occasionally, though still very seldom; but until now we had scarcely the slightest intervention of fair weather for forty-five days and nights. Madras troops under Maj. now Lieut.col. Munt, having arrived at Moultaie, we returned to Baitool. On our arrival there, Maj. Cumming with a squadron of his reg. returned to Hussingabad, making over the command of the Bengal troops to Capt. Newton, Maj. M'Pherson being left in civil charge of the district at Moultaie.—The march of the cavalry to Hussingabad opened the road for us, and we were soon enabled to replenish our stock of supplies.

Towards the middle of September, Maj. now Lieut.col. Bowen, of the Madras service, stationed with a bat. of the 16th light inf. at Aumlah, made a surprise on a large body of Poorbys and Goands at Bhowday, and killed and wounded about 100 of them. On the 17th Capt. N. had intelligence of a body of the enemy being assembled to the N.E. of Baitool, and accordingly detached a troop of cav., 100 of Roberts' horse and 200 inf. under Capt. Cruickshanks, to attack them, and move against the enemy in any quarter he might hear of them. On the 22d that brilliant and dashing affair at Jwah Jany took place, of which the Calcutta papers have already made full mention. On the 24th this detachment returned to Baitool, covered with glory.—[*Asiatic Journal*, vol. vii. p. 657 and vol. viii. p. 381, col. 2.] During its absence Capt. N. heard of numerous other parties in the heart of the hills, but waited Capt. C's return to enable him to proceed against them. In the meanwhile he provided himself with five days' provisions for 300 men, trusting to his wits for more, should he find it necessary to remain out longer.

On the 25th, at 2 A.M. Capt. N. with the 2d of the 10th, some of the 23d, and a squadron of the 7th, in all 300 men, marched for the rendezvous of Thakoors Futub Sing, Leichmun Sing, and Keru Bhaer, situated behind a strong and large stockade in the Dood Pahah. At 10 A.M. 17 miles distant N.E. of Baitool, the detachment came in sight of the enemy's position, when they formed in three columns and moved to the attack, the cavalry

centre column. The moment the enemy discovered the detachment, they were seen running up the hills in every direction, bag and baggage. On approaching the stockade, they opened a sharp, though ill-directed fire, and made for the hills.—The rout now became general, and they proved too nimble for our sepoys, ill-suited, after a long march, to travel fast or far over hills with a musket on their shoulders and 36 rounds in pouch. Report states about 50 of the enemy to have been killed and wounded. Capt. N. finding a pursuit fruitless, re-assembled his men, destroyed their stockade, burnt their cantonments, and marched in the evening to Rannypore 3 miles north, at which place he had ordered the gallopers from Shahpore to meet him, under the supposition, when at Baitool, that the enemy had re-occupied the ghurry there.

On the 26th the gallopers were sent back to Shahpore, and the detachment marched towards Bakore, to beat up the Koor Gubbo's quarters; Capt. N. apprehending delay, moved on with the cav. When within five miles of the place, at the distance of three quarters of a mile of it, he made a detour round a jungle not to be observed; but this chief having recently been touched up by Capt. C's, was too much on the alert to be surprised. The party being discovered, the enemy took to the mountain behind the village; our cav. charged, but were brought up by two nullahs, which caused delay, else many of the enemy must have been cut up; as it was, between 40 and 50 men are said to be killed and wounded. Cornet Allen was sent after them up the hill with the skirmishers, dismounted, while Capt. N. and C. followed the enemy in pursuit as far as Jwah Jhany, 4 miles east. Meer Sahib's palanquin and Capt. Sparkes' tent, a camel, and about 100 head of cattle, fell into the hands of the detachment, which for the night rested at Bakore, and returned their steps to Rannypore the next day.

On the 28th it rained so hard that the detachment could not move until evening, when it changed ground to the foot of the Dood Pahah district, south 3 miles, to be ready for a dash early the next morning at the three Thakoors, of whose haun' Capt. N. had fresh tidings. On arriving near the hills, several Goands were seen below; they were pursued, and followed over the hills, until it was quite dark. One man only of them was killed, and about 60 head of cattle taken.

On the 29th the detachment marched at 3 A.M. to attack the Thakoors. At day-break and not sooner it was discovered that the wind and rain had so beaten down the long grass, as to completely hide all traces of the pathway. The guide, however, seemed confident, and

was allowed to lead on, through beds of nullahs and some places where certainly human beings had never before been. At length, about 1 o'clock, it was determined the detachment should return, and he only consolation it had, if it may be allowed to be any, was, there was no help for the disappointment. Capt. Newton heard afterwards, to his mortification, that he was within two miles of the enemy when he returned, but they were off the road he was pursuing. On the 30th the detachment halted, and the march back to Baitool was ordered for the next day; but at 10 p.m. Capt. N. was turned out of bed by a party of villagers, who came to inform him that Kulloo Thakoor with all his followers was then in the hills, making for the headquarters of the ex-rajah. It was then raining dreadfully, and the idea of another disappointment to the poor men was a serious consideration. The villagers, however, were urgent in their solicitations, and a party of 80 inf. and as many cav. was instantly ordered. Capt. N., Capt. Cruickshanks, who volunteered, and Cornet Allen, moved off at 11 A.M. It was expected they would have come on the enemy at day-break; but the distance proved farther than was stated, and they could not get on so fast as they wished on account of the rain, which never for one moment ceased to pour. This afterwards proved fortunate, as it detained the enemy, who at 8 A.M. were surprised by our party, and Thakoor Kulloo and his adherents were to a man destroyed.

Kulloo headed the attack against our sepoy at Shahpore, in which he received a musket ball through his left knee, and was then lame from its effects; his mother and two infant brothers were taken and brought into Baitool. Kulloo was supposed by the natives to be invulnerable to the sword, and was esteemed by them as a brave and enterprising soldier.

On the 1st of October the detachment returned to Baitool, when Capt. N. made over the command to Maj. McPherson, who had returned from Mooltaic; and now we may say ended all further surprises and attacks on the enemy; for the whole of the officers, with the solitary exception of the commandant, were shortly laid up with dangerous fevers, of which three have since died. Our men also died daily, and upwards of 700 men were sick in hospital by the 15th of Oct.; 50 men, cav. and inf., could not be mustered on the parade fit for duty. The cattle, public and private, were all dead and dying. Latterly we were obliged to leave the tents on the ground for want of cattle to bring them away; indeed by this they were so rotten and torn, as not to be worth the trouble of conveyance from one ground to the other. The Madras troops at

Mooltaic suffered equally with ours. I believe they lost four if not five officers in less than two months; in short, troops never underwent more hardships and privations, and in no instance could it be borne with more patience, so truly the characteristic of the Mulla and Qui Hye's. I shall now take my leave of the subject and the hills of the latter, I would fain say for ever; but, alas, I fear I am not yet quite clear of them.

Another pen now takes up an independent part of the narrative.

[*This private account has already been given in Asiatic Journal*, vol. viii. p. 296; with the official corroboration, p. 293. For other operations in the same field, other corps, see also the same volume, p. 77, 180, 484, 486.]

RELATIONS WITH NATIVE POWERS. *Unofficial.*

ELLICHPORE.

Bismillah of the Nabob's Son.—A letter from Umrette, published at Calcutta, Aug. 25, describes the celebration of the Bismillah at the court of Ellichpore, in the following terms.

The Newaub Salabut Khan Behadar has lately given a very splendid entertainment to the European officers of his brigade, and the principal native sirdars in his service, at Ellichpore. The Newaub's youngest son having arrived nearly to the age of five years, he has been initiated in the principles of the Mahomedan religion, which is called the Bismillah, which ceremony has taken up several days, when the khelauts or dresses of honor were distributed. Then the maindee or staining the fingers and feet with the hina, afterwards the mukhtub or first lesson in reading the Persian or Arabic alphabet, which was followed by the shurgush, or grand procession round the city by torch light, which was truly splendid, consisting of many thousand torches, coloured lanterns, transparent figures, blue lights, fire-works, and every variety of show that could be seen in an eastern sowaree.—The latter part of this ceremony was celebrated by a very splendid dinner given by the Newaub, at his palace, to the European gentlemen then at Ellichpore; no pains were spared to make every thing most agreeable and pleasant. The two grand halls which face each other were splendidly lit up by beautiful chandeliers, and an immense number of large lamps and wall shades, which being most tastefully fixed in the hall and verandah, formed a pleasing contrast, and set off the Eastern architecture to the greatest advantage. The enclosed court or garden between the two halls was gradually illuminated by many thousand little lamps

placed on each side of the court (which is more than 200 feet long) on the pallsades, in two rows, and their reflection from the large fountain and jet-d'eau in the centre had a grand effect. The native music and nautch added much to the hilarity of the evening, as they had put on rich dresses and entertained us with a few Persian songs. On our going away, we were presented with butter and garlands of flowers. The old Newaub and his family shook hands with us, and we departed highly delighted with the attention and pleasure we had experienced, and which would have done honour to the most enlightened European nobleman. The old Newaub, though more than sixty years old, is very active, and perhaps good if not a better horseman than any of his illadars. His kindness, and wish to please all ranks of society, make him much liked by all who have any communication with him.

P. S.—It is rather extraordinary we did not feel the shock of the earthquake of the 17th June at Umrntee; but it was sensibly felt at Ellichpore, about 30 miles N. Westerly, and water was thrown out of the fountain in the palace, &c. &c.

CALCUTTA.

HATRAS AND MOORSAN PRIZE MONEY.

July 31, 1819.—An official notice was published, referring to general orders of 11th Aug. 1818, of a further distribution of the amount value of ordnance and stores captured in the forts of Hatras and Moorsan, awarded by Government to the captors. [See *Asiatic Journal*, vol. vii. p. 314.] The amount at present to be distributed is Furrackabad rupees 38,567 11 5. The troops engaged, were: H.M. L.C. 8th and 24th.—Foot 14th and 18th.

Horse art.—rocket troop.

N.C. 1st. 3d. and 7th.

2d. grenadier batt.

N.I. 2d. batt. 1st.—2d. batt. 11th.—2d. batt. 12th.—2d. batt. 15th.—1st. batt. 25th.—1st. batt. 29th.

Pioneers and Miners.—Engineers and Sappers.

Rohilla Cavalry 1st. and 2d.

Artillery, Cawnpore division.—Agra.

Maj.gen. Marshal.—and staff.

CIVIL APPOINTMENTS.

Aug. 28.—Mr. E. Sterling to be an assistant to the resident for the States of Bundelkund, and superintendant of the Nerbudda territories.—Mr. J. Simson to be ditto ditto.

MILITARY APPOINTMENTS AND PROMOTIONS.

Aug. 28.—Major Colebrooke, of the roy. art. and supernumerary aid-de-camp to

the Governor-gen. to proceed to Bombay, under instructions that will be communicated, and place himself at the disposal of the officer commanding the forces at that presidency.

H.M. Army.

Aug. 16.—Until the pleasure of H.R.H. the Prince Regent, in the name and on the behalf of His Majesty shall be made known.

17th Lt.Drag.—Arthur Dalzell, to be Cornet without purchase, vice W. Marriott, promoted—18th July 1819.

65th Foot.—Ensign J. Mulkern to be Lieut. without purchase, vice E. Thomson, deceased—15th July 1819.—W. Fitzmaurice to be Ensign without purchase, vice J. Mulkern, promoted—ditto.

67th Foot.—Cornet W. Marriott from the 17th Lt.drag. to be Lieut. without purchase, vice W. Jones, deceased—18th July 1819.

53d Foot.—The following appointment is cancelled.—W. Hislop to be Ensign without purchase, vice G. Despard, promoted—30th Jan. 1819.

Artillery Regiment.—Aug. 21.—Maj. C. Brown to be Lieut.col. from the 2d of Aug. 1819, vice Butler, deceased.—Cap. G. Swiney to be Maj.—Lieut. W. G. Walcot to be Capt. of a company.—From the 2d Aug. 1819, in succession to Brown promoted.

Medical Dept.—Acting superintending surg. R. Lowe to be superintending surg. from the 14th March 1819, vice O'Neil, deceased.—W. Barnett, 27th N.I. is permitted to return to his duty by the Hon. the Court of Directors, without prejudice to his rank.

Transfers.—Cornet R. E. J. Kerr, from the 4th (Sneyd's) to the 1st Rohillah Cav.—Lieut. Cave and Cornet T. B. Smith, from the 4th Rohillah Cav. to the 2d Nusseree batt. the former in his present rank, and the latter as Ensign.

Aug. 24.—Lieut. Duke, late of the Coldstream Guards, and at present an ensign in H.M. 46th, to be an extra aide-camp to his exc. Lieut.gen. Sir T. Hislop, vice Capt. Sir J. Gordon, resigned.

Aug. 25.—H.M. 67th.—Until the pleasure of H.R.H. the Prince Regent, acting for His Majesty, be known, A. Pillford to be ensign without purchase, vice McDonald promoted, 1st April 1819.

LOCAL OCCURRENCES.

Miscellanies.—Letters from Tirhoot mention that another shock of an earthquake had been distinctly felt at different places in that district on the 3d of Aug.

We regret to state that, on Monday evening, Aug. 30, Capt. Haviside, of the H.C. ship *Streatham*, met with a very severe accident, while riding on the course. Being unfortunately thrown from his horse, he had his thigh bone broken, and his spine much injured.

About the 30th of Aug. a very large shark was caught by the people on board the Lord Cochrane lying immediately outside the mooring off Colvin's Ghaut. The *Hurkara* of Sept. 2 mentions the circumstance, in order to warn those seamen and others, who are fond of bathing in the river, of the danger to which they thereby expose themselves. We recollect instances of persons having been drowned, while bathing alongside of ships off town, where it was suspected they sunk, to rise no more, in consequence of their having been bitten by some of those voracious inhabitants of the watery element, and such suspicions would now appear to have been just.

Subscription Race Stand.—In consequence of the resolutions of the jockey club at Calcutta, passed on the 24th of May, a subscription paper for a race-stand has been circulated, accompanied with a drawing of the proposed building. We copy some of the principal resolutions.—2. That every person shall be at liberty to subscribe whatever sum he may think fit.—4. That the subscribers shall not be subject to any further demand or charge than the amount they may at first subscribe.—5. That the stewards for the year shall have the charge and control of the race-stand after it has been built, and that no entertainment shall be given in it without first obtaining their permission.—6. That the jockey club engage to keep it in perfect repair.—7. That the jockey club do subscribe 3,000 rupees to build the same.

The Calcutta Journal of Aug. 22, contains an engraving of the design.—The race-stand is situated to the south of the course, on the north side of the road running between the Kidderpore and Allypore bridges; having two fronts, one facing the north, and the other the south.—The upper colonnade is intended for the accommodation of the spectators, and is to be fitted with chairs and benches, and protected from the sun by Venetian blinds, fixed between the columns: there will also be a strong railing, to prevent accidents.—The lower story of the building may be used as a ball room, having a wooden floor in the centre, 40 by 25 feet, and palladium doors at each end, for the convenience of throwing the whole into one space.—The height of the lower story will be 17 feet 6 inches; the upper 18 feet. The whole of the building will be nearly of the doric proportions, with plain cornices and friezes.—It is also in contemplation to have a range of offices on the south, half way between the nullah and the road, to correspond in its architecture, as nearly as possible, with the race-stand.

The Weather and the Crops.—The apprehensions of famine in the Upper Provinces, adverted to in several extracts from provincial letters below, have been removed by an auspicious commencement of the rains. The distress which was the ideal creature of alarm is past; but some of the facts stated may be instructive subjects for calm review.

Hussingabad.—This part of India is at present perfectly quiet, and the good effects of putting down the Pindarries and introduction of our sway, are beginning to develop themselves, though the great scarcity of provisions during the present year has had a baneful influence, in retarding the prosperity of the hitherto sadly harassed inhabitants of this fine valley.

Attah at one time sold for eight seers the rupee; but I am happy to say the price has lately become more moderate, and I trust the distressing spectacle of parents bringing their children for sale will ere long be spared us, as the present rains have set in most favourably for the cultivation of the land. The Nerbuddah has not risen to any height till to-day, but, I am sorry to say, that at least a dozen unfortunate people have been seen to pass on *chuppurs* and pieces of wood, who have been swept from their villages by the sudden rising of this river, or some of its tributary streams; three boats have been sent to rescue these miserable sufferers from a watery grave, and I hope to hear shortly of their having succeeded in the attempt. It is painful to humanity to observe, that the owners of the boats were obliged to be forced upon this duty, though they might have performed this pleasing act without the smallest danger to themselves, as the river was perfectly smooth and the wind very moderate.

Ghazi-pore, Aug. 5.—The rains can hardly be said to have set in, only some occasional showers having fallen. Grain is dreadfully dear, and such has been the distress of the lower classes, that mangoe stones have been selling at 30 seers for a rupee, which is one-third higher than wheat sold at, when I arrived at Ghazi-pore in 1816. They take out the kernel, and having hoiled and dried it, convert it into flour.

Pitcairn's Island.—A subscription was set on foot on the 1st Sept. in Calcutta, and soon completed, for supplying the inhabitants of Pitcairn's Island with implements of husbandry, and other useful articles. These interesting people, it will be recollected, are descendants of the mutineers of H. M. S. *Bounty*, and were visited a short time since by Capt. Henderson, on his voyage from Valparaiso to

Calcutta; he is now proceeding again to Chili in command of the ship *Hercules*, and proposes calling at Pitcairn's Island with the articles which have been purchased under his direction for the use of its inhabitants: it appears about 3,000 rupees have been expended. Among the articles which have been provided, besides useful tools and implements of husbandry, are some live stock; two chests of fruit-trees, secured for a long voyage; one keg of marrow-fat peas; two boxes of vegetables, and a select assortment of seeds and stones for sowing and planting, suited to the soil and climate of Pitcairn's Island, from Dr. Wallich, superintendent of the Botanic Garden; a strong boat, of which the islanders were much in want; some elementary tracts, and a few bibles and prayer books.

Police.—The following letter, giving an account of some daring robberies committed on the writer, and complaining of negligence in the police, was addressed to the Editor of the *Calcutta Journal*.

Ex facto jus oritur.—Sir; As you have shewn a desire to publish whatever may be of service to the community in general, I am induced to hope that you will give the following circumstance a place in your Journal, as I had supposed there was some meaning annexed to the proverb that "Justice never sleeps."—An attempt was made to break open my godown, about one o'clock A. M. (in which was my pay, yesterday received.) The chokcedar hearing a noise, proceeded to the spot (about 50 yards from the house), calling to the police chokcedars, but in vain, though they ought to have been round the premises, as I pay monthly for this additional protection, and I am close to the bazar, and not far from the thannah. The robbers, on the approach of the chokcedar, wounded him in five places with an instrument used by the doomes (called a cuttah), and I continued to have an alarm made, as soon as I heard the noise, by my bearers, &c. who had collected round him; and one of them went also to the bazar and to the thannah, but could get no assistance. I waited above an hour, and as in that time, I could not procure any, I dispatched a letter to the magistrate, relating my situation; but after waiting another hour, my servant returned and informed me, that although he had stated the occurrence, and said the application was "*zurroee kham*" (or of immediate consequence), he could not get the letter delivered, the servants telling him they had orders never to disturb their master at night; the letter was therefore left until the morning. I remember a similar circumstance when the jail at another station where I lived was broken

open by the prisoners, and the native officers could not get to the magistrate, as his servants said it was not their *mug-door*, or, in other words, in their power to awake him when asleep; on this occasion also there was a great disturbance, and several men were wounded. At this place I have been twice robbed to a large amount, and my premises often invaded, and I see no further security, as my representations have produced no change; and in cases where the thannaahs usually are allowed to interfere, I have applied in vain for their protection. Since writing the above I have had a letter from the magistrate, acknowledging the receipt of mine, with a request (on account of the frequency, as he says, of the attempts on my property) that he may proceed to examine my premises. But of what use is this, Mr. Editor? Whether they are good or bad, it cannot lessen or increase the obligation to have them protected. All my servants, myself, and family, might have been murdered last night; and yet the magistrate must not be awakened, and the thannadars (as he informed me) could not act without his orders! To apply to him, therefore, was of no use. At home, if a justice of peace will not, on complaint made to him, execute his office, or if he shall misbehave in his office, the party aggrieved may move the Court of King's Bench for an information, and afterwards may apply to the Court of Chancery to put him out of the commission. In this country, there being neither Court of King's Bench nor Court of Chancery, what is the regular mode of proceeding? Your reply will infinitely oblige

July 29, 1819.

ROGATOR.

Note in reply.—Our reply may be given in three lines. As we think it must be evident to all, that the remedy should be sought by an authenticated statement of the neglect complained of to the government, if it be beyond the power of any other authority to redress.

Elephant Hunt.—Extract of a letter received in London, dated Khasgunge, May 4.—"For some days before our arrival at A—, we had intelligence of an immense wild elephant being in a large grass swamp within five miles of us. He had inhabited the swamp for years, and was the terror of the surrounding villagers, many of whom he had killed; he had only one tusk, and there was not a village for many miles round that did not know the *burrah ek durt ke hathes*, or the large one-toothed elephant; and one of our party, Colonel S—, had the year before been charged, and his elephant put to the right about by this famous fellow. We determined to go in pursuit of him; and accordingly, on the third day after our arrival, started in the morning, mustering

between private and government elephants 32, but seven of them only with sportsmen on their backs. As we knew that, in the event of the wild one charging, he would probably turn against the male elephants, the drivers of two or three of the largest were armed with spears. On our way to the swamp, we shot a great quantity of different sorts of game, that got up before the line of elephants; and had hardly entered the swamp when, in consequence of one of the party firing at a partridge, we saw the great object of our expedition, the wild elephant, get up out of some long grass about 250 yards before us, where he stood staring at us and flapping his huge ears. We immediately made a line of the elephants, with the sportsmen in the centre, and went straight up to him, until within 130 yards; when fearing he was going to turn from us, all the party gave him a volley, some of us firing two, three, and four barrels. He then turned round, and made for the middle of the swamp. The chase commenced now, and after following him upwards of a mile, with our elephants up to their bellies in mud, we succeeded in turning him to the edge of the swamp, where he allowed us to get within 80 yards of him, and gave him another volley in his full front; on which he made a grand charge at us, but fortunately only grazed one of the pad elephants. He then again made for the middle of the swamp, throwing up blood and water from his trunk, and making a terrible noise, which clearly shewed that he had been severely wounded. We followed him, and were obliged to swim our elephants through a piece of deep stagnant water, occasionally giving shot; when making a stop in some very high grass, he allowed us again to come within 60 yards, and got another volley; on which he made a second charge more furious than the first, but was prevented making it good by some shots fired when very close to us, which stunned and fortunately turned him. He then made for the edge of the swamp, again swimming a piece of water, through which we followed with considerable difficulty, in consequence of our pads and howdahs having become much heavier, from the soaking they had got twice before: we were up to the middle in the howdahs, and one of the elephants fairly turned over and threw the rider and his guns into the water. He was taken off by one of the pad elephants, but his three guns went to the bottom. This accident took up some time, during which the wild elephant had made his way to the edge of the swamp, and stood perfectly still, looking at us, and trumpeting with his trunk. As soon as we got all to rights, we again advanced with the elephants in form of a

crescent, in the full expectation of a desperate charge, nor were we mistaken. The animal now allowed us to come within 40 yards of him, when we took a very deliberate aim at his head, and on receiving this fire, he made a most furious charge, in the act of which and when within ten yards of some of us he received a mortal wound, and fell as dead as a stone. Mr. B——, a civilian, has the credit of giving him his death-wound, which on examination proved to be a small ball from a Joe Manton gun over the left eye, for this was the only one of 31 that he had received in the head, which was found to have entered the brain. When down he measured in height 12 feet 4 inches; in length from the root of the tail to the top of the head 16 feet; and 10 feet round the neck. He had upwards of 80 balls in his head and body. His only remaining tusk when taken out weighed 36lbs, and when compared with tame ones was considered small for the size of the animal. After he fell a number of the villagers came about us, and were rejoiced at the death of their formidable enemy, and assured us, that during the last four or five years he had killed nearly fifty men. Indeed the knowledge of the mischief he had occasioned was the only thing that could reconcile us to the death of so noble an animal. We were just three hours from the time we first saw him, until he fell; and what added much to the gratification of the day, we had not a single accident to man or elephant, excepting Capt. P's upset, and he was so fortunate as to recover his guns the following morning, by means of divers. Col. S——, an old and very keen India sportsman, declared he had never seen or heard any thing to equal the day's sport."

Unsuccessful Attempt to prevent a Suttie.—A letter to the Editor of the *Calcutta Journal*, contains a private individual's own account of his ineffectual interference to prevent a Suttie. We insert the letter as a narrative of facts. The writer expatiates beyond these, and in a strain rather of coarse feeling than refined sentiment, calls for the direct interposition of force, to suppress the practice, either too forgetful, or too mindful of the mutiny at Vellore. In the present state of the press at Calcutta, great circumspection is incumbent on the editors of papers in admitting or copying anonymous communications; for it may be that a few envious strangers would gladly see all the forests in India felled, and stacked into one immense pile for Britannia to make a *suttie*

of herself; while a few weak children contribute their well intended preparations for the previous catastrophe.

To the Editor of the Calcutta Journal.—Sir, Returning from Chitpore on Sunday evening, about six o'clock, I observed a concourse of natives assembled on the banks of the river, a little above the Baug Bazar Ghant, and curiosity having prompted me to enquire the occasion, I was informed that a Suttee was about to be celebrated.

Having never witnessed the horrid spectacle of which I had heard so much, I directed my boat to proceed to the spot, for the two-fold purpose of endeavouring, if possible, to prevent the wretched victim from immolating herself on the funeral pile of her husband, and in the event of interference proving ineffectual, to see a ceremony which the inhabitants of a civilised country would hardly admit the existence of, unless certified by the evidence of a person who had actually witnessed the scene.

On arriving at the bank of the river, I immediately enquired for the Thanadar of the place, who I found was not on the spot; but the Jenadar being present, I requested him to come on board my boat. I asked him whether any licence or authority had been granted by the magistrate, to sanction the ceremony for which I saw preparations; and if so, to inform me from whom it was obtained.

He replied that the usual authority, or *kaboocha*, had been procured from the magistrate, and that the document was in possession of the Thanadar. I requested him to send for it, which he did; but an answer was returned by the Thanadar, that compliance with my application was deemed unnecessary. I then asked the Jenadar whether he was certain that the sacrifice about to be made was voluntary, and whether any interference might not operate to prevent it; he answered, that it was the wish of the widow to burn with the body of her deceased husband, and that any effort to prevent it, would prove unavailing, as the measure was sanctioned by the usual authority.

During this conversation, I observed preparations for the erection of the pile going on with great activity; it was constructed of alternate layers of firewood, straw, and dry bamboo twigs. In a few minutes I noticed a poor decrepid wretched-looking old woman, apparently more dead than alive, and probably upwards of 50 years of age, borne down to the river in the arms of another woman, surrounded by two or three men, who I was given to understand, were relatives of the miserable creature.

On the arrival at the edge of the river,

some pots of water were thrown over the head of the woman, and a bunch of leaves placed in her hand, which she appeared to be almost without strength to support; and after this operation, she was stripped of a few ornaments. A parcel of wooden combs were stuck in her hair, and her apparel being changed, she was conveyed towards the pile, on which the body of her husband lay extended.

On reaching the pile, she was released from the arms of the woman, who had hitherto supported her, and hustled round it three or four times amidst the vociferations of the multitude; and then with the aid of the ruffians that surrounded her, she mounted the pile, on which she reclined in a state apparently as inanimate as the dead body of her husband. At this interval I observed one of the most active of the attendants, fasten her with a cord to the body of the deceased, and instantly a quantity of straw, dry bamboos, and fire-wood were thrown over the victim of this disgraceful scene, sufficient to prevent her moving or extricating herself from her dreadful situation, had she been so inclined. A long bamboo was then laid across the whole, no doubt with a view to prevent resistance, had any been practicable, but which on this occasion appeared superfluous. In two minutes the whole was enveloped in smoke and flames, and the work of destruction was complete.

I turned from this diabolical scene with sentiments of horror and disgust, which I can hardly find words to express, lamenting that such should be tolerated under the humane sway of a British government, satisfied that if those in power had been witnesses of the shocking exhibition, greater efforts would be made to subvert a practice that well timed interference might do much to check, and in time perhaps entirely extirpate.

On the present occasion it appeared obvious to me, that the wishes or intentions of the unfortunate woman were not consulted, and that she was hurried into eternity by a number of unfeeling monsters, who in any other country would have been guilty of wilful and deliberate murder.

(Signed) A SUBSCRIBER.
Sunday, Aug. 8.

SHIPPING INTELLIGENCE.

Loss of the Oswin.—The following correct statement of the circumstances which occasioned the abandonment at sea of the ship *Oswin*, Capt. Ray, was communicated in a letter to Calcutta, on the authority of the commander.—She had got round the Cape before the 29th Jan. 1819, on which day she sprung a leak, having before experienced a heavy sea on

the Lagullus Bank, which occasioned her to make water. The leak was very serious, and both pumps were kept constantly going for twenty-four hours, without being able to gain upon it. On the contrary, at noon on the 30th, there were five feet water in the hold, and the greatest exertions that could be used were unable to prevent its increasing fast. In this critical situation, the only chance that remained for those on board of escaping her inevitable fate, depended on their preparations for quitting her, and accordingly the long boat was got out, and water, and bread, as well as such necessaries as could be readily got at, were put into her. Embarking in the boat the commander and crew steered for Saint Helena, and were from the 31st Jan. to the 12th Feb. exposed to great sufferings and anxiety, until they reached Saint Helena. During this time they ran about 1400 miles, and were particularly fortunate in making the Island to a mile. All who had been on board were saved with only the clothes that they wore, as nothing could be brought away besides, with the single exception of the mail. They afterwards proceeded to England, as we have already stated, in one of the Company's China ships.—*Hurkara, Aug. 13.*

Loss of the Margaret.—The Margaret vessel, of Calcutta, Capt. Georgeson, sailed from the Cape of Good Hope on the 14th of Feb. last, bound to Zanibar, an Island on the N. E. course of Africa. She continued her voyage through the Mozambique channel. On the 2d of April she struck on a shoal in lat. $11^{\circ} 27'$ south, and long. $40^{\circ} 31'$ east. As a nautical memorandum, it is essential to state, that from the lat. of 12° deg. $30'$ south, the land should not be approached nearer than just to see it in clear weather, until in the lat. of the Cape Delgado northward, of which, as far as the lat. 7° deg. $47'$ S. is safe.

A further extract from the log-book may be useful to navigators.

Friday, April 2, 1819.—P. M. Pleasant breezes and clear weather. At 12. 30. saw the island of Macalce, bearing south. At 2 passed it. At 4 saw Mast Island, bearing N. $\frac{1}{2}$ E. Hauled up N. E. by N.—At 6 abreast of Mast Island, about 3 or 4 miles distance. Saw a reef projecting from the N. E. end of it in a N. E. direction for about 3 miles. Hauled up N. E. by $\frac{1}{2}$ N.—At 7. 50. saw breakers on the starboard bow; put the helm up, in order to wear; but before the ship had fallen off more than two or three points, she struck. Took in studding sails and clewed up and furled every thing, but from the press of sail being on the ship, and going fast at the time, she forged ahead considerably before it could be got in, and fell over on her larboard broadside.

Sounded, had two fathoms of water abaft, and eight feet forward. Hoisted out the jolly boat, and long boat, and ran out the stream anchor astern in eight fathoms of water. Started the salt water, and shifted the ballast and other things aft to lighten her forward, then heve on the stream cable, but could not start her.—By this time the water had fallen considerably, having only about ten feet aft and six forward, and it began to break alongside. We now thought of getting one of the bower anchors out astern, and for the better security of the long boat, endeavoured to get her buoyed up with empty casks to receive the anchor. After having done so, we endeavoured to haul the boat under the bows to receive the anchor, but found the breakers too high to attempt it without running the greatest risk of losing the boat; we therefore hauled the boat outside the breakers, and made fast to the stream cable.—The weather at this time (about midnight) began to assume a very threatening appearance, and we had some very hard squalls from the S. E. attended with heavy rain, thunder and lightning, which continued until day-light.—At day-light we found the reef to extend in shore of us as far as we could see, and outside the ship in an easterly direction for about four miles, then stretching away to the northward. Mast Island, which we had passed the night before, bearing about S. W. by W. ten or twelve miles distance, and another island to the N. W. bearing N. W. $\frac{1}{2}$ N. about the same distance from the ship, and the main land to the westward about eight leagues.—Find but little probability of getting the ship off, there being no appearance of the tide's rising; we thought of sending the long boat to the island to the N. W. with part of the crew and some provisions, that in the event of our being obliged to leave the ship, we might have some place of safety. Accordingly we got two casks of water and some provisions, arms, &c. into the long boat, and left the ship at 8 A.M. for the island, taking a part of the crew in the boat, which did not reach the island until 11, 30 A.M. and having landed the articles, left eight men to take care of them, whilst the remainder returned again to the ship, which they did not reach until 5 P.M. Found the second officer and remainder of the crew preparing to leave the ship; the captain having determined to remain by her during the night.—After getting some few articles which we thought would be useful to us, we quitted the ship and landed on the island at 10 P.M. In the morning both boats returned to the ship, found she had been beating on the rocks violently during the night, the stern post being broke, the rudder unshipped, and larboard side

bilged.—Seeing now no prospect of saving the vessel, we determined to abandon her, and endeavour to reach some port on the coast in our boats. Accordingly at noon on the 4th we quitted the ship for the last time, taking with us in the boats fifteen small bags of dollars, and landed on the island at 4 P.M.—In the course of the night, we came to the following resolution, of staying on the island for a few days to get the boats in order; to take the crew, being 35 in number, besides provisions, water, &c., and the long-boat being in a very leaky state, we thought it unsafe to leave until something was done to her; but being apprized of three of the crew being in a state of mutiny, their intention being to take away the long-boat, with the dollars, to some part of the coast, (and no doubt had they met with any opposition, something desperate might have ensued) we determined to confine them at the present time, and having previously armed ourselves, we sent for them, lashed their hands behind them, and kept a watch over them throughout the night.—In the morning we determined to leave the island as soon as possible, as we thought, by deferring our departure, other disturbances might arise among the crew; we, therefore, began to get the provisions and water into the boats, and having divided the crew in them, left the island at noon, on the 5th of April, our intention being to sail along the coast to Zanzibar.—On the passage we met with numerous difficulties, falling in with reefs of rocks, sandbanks, islands, &c. and in one place we were obliged to unload both boats and haul them over a sandbank, near a quarter of a mile; otherwise we must have pulled against wind and current to the southward for ten or twelve miles, in order to clear a very extensive reef. On the passage we landed on several of the islands, all uninhabited, and were fortunate enough to find a little fresh water on most of them. We did not arrive at Zanzibar until the 14th April, having been nine days in the boats, the crew being much fatigued and very low spirited.—A few days after our arrival, we found there was a dow bound to Bombay, on board of which we got a passage, and arrived at Bombay on the 30th of May, having been at sea forty-one days, and the greater part of the time on very short allowance of water, through the negligence of the Arabs having neglected to fill the tanks before we left Zanzibar.

Capt. Georgeson adds: "I think it my bounden duty to inform the public of the singularly kind attention and hospitality experienced by myself, officers, and crew, from the Arab governor of Zanzibar, who readily furnished us with a house, provisions, &c. of the best the island afforded

during our stay there, and afterwards procured us a safe passage on board his own vessel to Bombay, free of any expense."—*Calcutta Journal*, July 16.

Loss of the Brig Hope.—On Thursday, the 6th of May, says the log of brig Hope, Capt. A. Penn, belonging to the port of Calcutta, we were off the island of Bourbon. At 11 A.M. saw the land, and at 4 P.M. discovered the point of St. Dennis. At 5 were near the shore; but haze prevented them from seeing the town or the coast. An hour after, the mate went to the top-mast head, and mistook the flag-staff on St. Dennis for a ship lying at anchor. The soundings suddenly diminished from twenty, to ten, and five fathoms, and while the ship was endeavouring to wear to 2½; when she instantly struck on the rocks. The captain ordered the long-boat out, but before the crew could get an anchor in it, the boat, with the gunner, one sookanny, and four lascars, was forced off by the wind and surf, and drifted away. A pilot from the shore cried out, to cut away the masts, which was done; the captain, while on the quarter-deck, received a violent blow on his chest, from the main-boom. The disabled captain, and the mate, conceiving their further exertions with the remaining crew to save the vessel, quite unavailing, quitted her at 11 P.M. leaving a topaz or sweeper on board. The captain's lady came on shore, in the jolly boat, with two lascars; the rest of the people reached the shore by swimming on the spare main topmast, and the mate, in attempting anxiously to swim without assistance, unfortunately went against the rocks and terminated his existence; this life was the only one lost on the occasion.

The gunner went to the wreck the next morning, and brought away the Bourbon government dispatches, and three days afterwards four casks of brandy only were recovered from the cargo and stores.

Loss of the Hayston.—This vessel was wrecked on a reef near the Maldives. The humane and ready assistance afforded to the unhappy survivors by the chieftain of that group of islands, claims the warmest acknowledgment from every British government of the East.—The ship Hayston, Capt. Sartorius, left the Isle of France on the 1st July, and struck on a reef to the westward of the Maldives on the evening of the 28th of the same month. The ship was in stays when she struck; by which means her head was to the surf, and it is to this circumstance that the preservation of the survivors is chiefly to be attributed. The Hayston remained on the reef for three days, at the end of which time all exertions to save any part of the ship or cargo were found totally unavailing. A raft was then constructed, on which three lascars volunteered to em-

bark, and on which they put off from the ship, but they have not since been heard of. The remainder of the crew was obliged to remain two days more on the wreck, on account of the heavy surf, and during that time prepared a large raft, capable of conveying nearly all the people on board : but this was carried off by seven lascars, who succeeded in gaining the land upon it. The long boat, jolly boat, and pinnace were then prepared ; the two latter were upset by the surf, and the pinnace stove in pieces ; the long boat struck on the rocks, and was filling fast, when the sarang and lascar succeeded in taking Capt. Sartorius and two others out of her upon a small raft : the raft could hold no more, and the long boat drifted away to the N. N. E., and, with those on board her, has not since been heard of. The rest, with the assistance of some Maldiv boats, ultimately reached the land, and proceeded to the main islands of Mall, where the sultan resides, who afforded the most humane and liberal assistance to the sufferers.—After a stay of fifteen days, Capt. Sartorius, the passengers, and a part of the crew, embarked in a Maldiv boat supplied by his highness, the rest of the crew preferring to remain, in order to proceed direct to Calcutta, whither the sultan promised to furnish them with a passage. His highness most liberally refused any payment for the vessel, or for any of the supplies made to the crew of the Hayston during their stay at Mall, although the commander offered drafts on Calcutta to the amount of the expense which his highness had been put to.—The island of Mall lies in latitude 4.11.N. Mr. Meyer, a passenger, is the only name which has reached us of those who lost their lives on this melancholy occasion. See *Capt. Sartorius's Letter, in the Madras Intelligence*.

Arrivals.—Passengers by the Marquis Wellington, of which the arrival, Sept. 5, was noticed last number : Mrs. Hope ; Mrs. Wyatt ; H. Hope, Esq. civil service ; J. M. McNabb, Esq. ditto ; M. M'Leod, Esq. M.D. assist. surg. ; C.W. Welshman, Esq. M. D. assist. surg. ; — Griffiths, Esq. assist. surg. ; — Fairlie, Esq. ; Lieut. Col. Tidy, C. B. ; Lieuts. Brennan, G. Mackenzie, Fowler, Kent, Mansell, H. M. 14th reg. with a detachment ; Ensign Murray, H. M. 59th reg. with a detachment ; Ensign Canuthers, H. M. 17th reg. ; Ensign Cates, H. M. 87th reg. ; Messrs. Wyatt, Cheap, Cooke, Campbell, writers ; Messrs. Fleming, White, Wakefield, Cantly, Campbell, Roberts, M'Morine, Moorshead, Halded, M'Vitie and Corbett, cadets ; Mr. Furber, free mariner.

Departures.—Aug. 31. Lord Cochrane, Williams, for London, via Madras, Cape

BIRTHS.

July 29, at Hussingabad, the lady of G. Webb, Esq. assist. surg. 15th N. I. of a son.... Aug. 16, at Calcutta, Mrs. Ann Nicholas, of a son.... 23, at Nattore, the lady of I. F. Ellerton, Esq. civil service, of a son.... 24, the lady of the Rev. James Keith, of a son.... 25, at the same place, the lady of A. Orr, Esq. of a son.... 26, at Cawnpore, the lady of Major H. Bowes, 10th N. I., of a son.... 29, the lady of the Rev. Mr. Hampson, of a son.... 30, Mrs. W. H. Twentymann, of a son.... 31, Mrs. C. M. Pratt, of a daughter. Same date, Mrs. W. Wallis, of a son.... Sept. 4, the lady of Major Robert Hampton, of a still-born son.... 7, the lady of Lieut. Whittle, R.N. and master of the floating light vessel torch, of a daughter.... 10, at Jessore, the lady of W. Wonder, Esq. of a son.... Same day, the lady of Ensign Donnithorne, H. M. 65th, of a son.

MARRIAGES.

Aug. 9, at the Presidency, Mr. J. Fielder, of the Bengal marine service, to Miss Louisa Walters, second daughter of Mr. James Walters, of Cawnpore.... 26, at her uncle's, Major M'Pherson's, quarters of the Imperial Palace of Delhi, Lieut. R. Rideout, of the 7th regt. E.I. to Miss I. Clark.... Sept. 17, Mr. C. W. Lindstedt, deputy register in the secretary's office, military department, to Miss Mary A. M. Turnbull.

DEATHS.

May 5, at sea, on board the Moira, Mrs. Maddock, the lady of Capt. Maddock, assist. secretary to the military board, and the daughter of Benjamin Comberbach, Esq.... July 14, at Sylhet, Mr. M. R. Smith, at the advanced age of nearly eighty years. For nearly fifty years of his life Mr. Smith was a resident at Sylhet ; he had for ten years been assistant to the superintendent of the botanic garden of Calcutta, to the riches of which he contributed many of the most rare, useful, and interesting plants, cultivated there, or described by its successive superintendents. His zeal and exertions were indefatigable and successful, and his memory will be cherished, both at that garden and several others which largely share in the interesting and beautiful specimens that he distributed among them, as long as Indian botany has an admirer.... Same day, in Rajpootana, Capt. B. Mather, 2d L.C.... 22, at Almorah, Lieut. J. Bateman, interpreter and gr. mast. 1st bat. 13th N.I. of a typhus fever.... 24, at Chittagong, Lieut. R. J. Grange, 16th N.I.... 25, at Muttra, Lieut. R. Wharton, 7th L.C.... 31, on board the Eliza, at sea, Lieut. col. Weston, Bengal estab.... Aug. 1, at Agra, Lieut.

col. W. E. Butler, commanding the Agra division of artillery.... 2, at Kedgee, Mr. W. Jones, private assist. to Mr. Tucker.... 6th, Mrs. A. Henderson, wife of Mr. J. Henderson, pilot service.... 8, at Calcutta, Lieut. G. Hanbury, 25th N.I. and sub-assist. to the superintendent of the hon. Company's stud.... 9, at Calcutta, Mrs. I. S. Regelly, the wife of Mr. V. Regelly.... 14, at Bandel, Capt. Nickels, aged 69 years.... 16, at Bareilly, George, infant child of Lieut. I. J. Hamilton, 4th N.I.... Same day, Anne, infant daughter of Lieut. H. Mackenzie, artillery.... 18, Henry, infant son of H. Tyler, Esq.... 19, at his house in Chowringhee, S. M. Duntze, Esq. assist. superintendent of police in the lower provinces.... 20, at Calcutta, Mr. C. Pritchard, aged 28.... 21, Mrs. E. Minor, aged 19.... 22, at the Fort, Mary, wife of Col. Sherwood, aged 49.... 23d, J. Sharpe, Esq. proprietor of the nautical academy.... 27th, Mr. J. Gross.... Same day, Mr. J. Tulloch.... 28, at Fort William, the lady of Lieut. J. Robins, Madras N.I.... 29th, at his house in Jaun Bazar, Lieut. F. Austace, 17th N.I.... Same day, the lady of the Rev. Mr. Hampson with her infant.... 31st Mrs. A. wife of Mr. D. Jones, pilot service.... Sept. 2, Mrs. A. Grant, widow of Major P. L. Grant, officiating town and fort major.... 5th, after having performed his usual duties as organist at St. Andrew's church, John Al-sager, Esq. acting proprietor of the Asiatic Mirror press.... Same day, at Pulta, P. Brady, Esq.... 7th, drowned by the boat upsetting in which he was crossing the river from Sulkeah, Mr. R. Barclay, printer.... 10th, Mr. J. Morress, second officer of the ship Sappho.... Same day, at Chinsurah, Eliza Maria, infant daughter of L. Betts, Esq.... 11th, Mr. W. Collins, late coachmaker.

MADRAS.

CIVIL APPOINTMENTS.

Oct. 2.—Mr. R. H. Clive, assistant to the secretary to government in the military department.

Mr. W. H. Parry, second assistant to the secretary to government in the revenue, judicial, and public departments.

Mr. B. Babiington, acting deputy secretary to the board of revenue, and secretary to the native pension fund committee.

Mr. E. Bannerman, second assistant to the collector and magistrate of Masulipatam.

Mr. H. Munro, placed at the disposal of the hon. Mr. Elphinstone in the late Pelshwah's countries.

Mr. J. R. Wheatley, assistant to the register of the zillah court of Bellary.

Mr. J. Thomas, acting head assistant to the collector and magistrate of Tinnevely.

Mr. R. Sherson, postmaster-general.

Mr. H. Spottiswoode, collector and magistrate of the northern division of Arcot.

Mr. P. R. Cazalet, collector and magistrate of Ganjam.

Mr. R. Clerk, assistant to the sub-treasurer.

Mr. C. Roberts, acting collector and magistrate of the northern division of Arcot.

Mr. P. Cleghorn, coroner of Madras.

Mr. J. T. Ansrey, head assistant to the collector and magistrate of Bellary.

Mr. W. D. Adamson, head assistant to the collector and magistrate of Guntoor.

Mr. F. V. Stonehouse, assistant to the secretary to the board of revenue.

Mr. T. Warden, commissioner for investigating certain matters of charge against Mr. C. J. R. Ellis, judge of the zillah of Canara.

Mr. R. Clarke and Mr. A. D. Campbell, committee under section IX, regulation II. of 1810, in the investigation concerning the conduct of Mr. C. J. R. Ellis.

Mr. A. Wilson, acting judge of the provincial court of appeal and circuit for the western division.

Mr. J. Hutt, register to the provincial court of appeal and circuit for the centre division.

Mr. J. B. Pybus, acting secretary to the native pension fund committee.

Mr. E. Uthoff, acting junior deputy secretary to the board of revenue, and deputy Tamil translator to government.

Mr. J. Munro, acting judge and criminal judge of the zillah of North Malabar.

Mr. C. Bird, sub-collector in the district of Ganjam.

Mr. W. Hudleston, acting junior deputy register to the court of Sudder and Foud-darry Adawlut, and acting deputy Persian translator to government.

Mr. J. F. Thomas, Sanscrit examiner at the college, and acting head assistant to the register to the court of Sudder and Foudjarry Adawlut.

Mr. R. Nelson, acting register to the zillah court of Coimbatore.

Mr. C. Woodcock, collector and magistrate of the northern division of Arcot.

Mr. H. Spottiswoode, collector of Madras.

Mr. F. W. Robinson, collector and magistrate of the zillah of Rajahmundry.

Mr. J. H. D. Ogilvie, Mr. J. Casamajor, and Mr. W. Wayte, board for preparing regulations.

Mr. R. Clarke, secretary to the board for preparing regulations.

Mr. P. Grant, register to the zillah court of Nellore.

Mr. J. Taylor, Mr. J. Gwatkin, committee for conducting an investigation at the general treasury.

Mr. W. Harington, jun. assistant to the secretary to the board of revenue.

Mr. E. Baunerman, head assistant to the collector and magistrate of Masulipatam.

Mr. F. Lascelles, head assistant to the collector and magistrate of Cuddapah.

Mr. H. Spottiswoode, member of the committee for revising the custom regulations of the road committee, and of the committee for providing a new market-place.

Mr. J. Thomas, head assistant to the collector and magistrate of Tinnevely.

Mr. G. W. Saunders, acting judge and criminal judge at Trichinopoly.

Mr. R. Sherson, Mr. Geo. Stratton, and Mr. J. Taylor, committee for conducting an investigation at the general treasury.

Mr. J. B. Pybus, secretary to the treasury committee.

Mr. C. A. Thompson, assistant to the register to the zillah court of Combeconum.

Mr. H. Oakes, commercial resident in the Ceded Districts.

Mr. A. Robertson, second assistant to the collector and magistrate of the northern division of Arcot.

Honourable L. G. K. Murray, junior member of the board of trade.

Mr. J. Gwatkin, export and import warehouse-keeper.

Mr. B. Pybus, secretary to the board of trade.

Mr. W. R. Taylor, deputy secretary to the board of trade, and assistant to the superintendent of stamps.

Mr. J. Casamajor, Mr. W. Harington, members of the treasury committee in the room of Mr. J. Taylor and Mr. George Stratton.

Mr. H. W. Kensington, assistant to the mint master.

Mr. H. Lord, acting third judge of the provincial court of appeal and circuit for the centre division.

Mr. J. B. Hudleston, acting judge and criminal judge of the zillah of Nellore.

Mr. D. Elliot, register to the zillah court of Chingleput.

Mr. H. Fetherston, Mr. C. S. Clarke, Mr. A. F. Bruce, provincial assistants in the secret department.

Mr. C. H. Higginson, member of the treasury committee.

Mr. John Sullivan, ditto ditto ditto

Mr. J. Dent, acting secretary to the ditto.

Mr. R. Bayard, sub-collector in the zillah of Canjam.

Mr. H. Chamier, senior deputy secretary to the board of revenue.

Mr. E. Uthoff, junior ditto ditto ditto,

Asiatic Journ.—No. 52:

Mr. J. Paske, acting judge and criminal judge in the zillah of Vizagapatam.

Mr. W. Hudleston, junior deputy register to the court of Sadder and Foudjarry Adawlut.

Mr. J. F. Thomas, head assistant to the register to the court of Sadder and Foudjarry Adawlut.

Mr. H. Mortlock, deputy Persian translator to government.

Mr. C. A. Thompson, acting register of the zillah court of Bellary.

Mr. C. H. Cruttenden, acting register to the provincial court of appeal and circuit for the southern division.

Mr. T. Boileau, acting register of the zillah court of Trichinopoly.

MILITARY APPOINTMENTS AND PROMOTIONS.

Aug. 2.—Ensigns recently promoted posted to duty:—Ensign R. J. Vivian, with the rifle corps.—Ensigns J. Campbell, R. M. Humphreys, J. Waymouth, G. D. Clayhills, W. Ord, and C. Fladgate, with the 5th extra bat.—Ensigns E. Franklyn, and J. Gunning, with the 1st bat. 18th reg. N.I.—Ensign W. B. Coxe, with the 2d bat. 23d reg.—The ensigns of infantry appointed to corps serving in Mysore, will place themselves under the orders of Lieut. Marklove, rifle corps, and proceed with him on route to join their corps, and Assist.surg. Hewatt is appointed to afford medical aid to the detachment.

Aug. 7.—Removals ordered:

Light Cavalry.—Lieut.col. T. Nuthall, from the 7th to the 8th reg.; Lieut.col. F. A. Daniell, from the 1st to the 2d reg.; Lieut.col. Colebrooke, C. B., from the 2d to the 8th reg.; Lieut.col. J. Russell, C.B. from the 3d to the 7th reg.; Lieut.col. J. Doveton (late promotion) is posted to the 3d reg.; Lieut.col. D. Foulis (late promotion) is posted to the 1st reg.; Lieut.col. J. D. Stokoe is removed from the Carnatic Europ. Vet. Bat.

24th Reg.—Maj. G. Waugh is removed from 1st to 2d bat.

13th Reg.—Capt. C. W. Yeates, from 2d to 1st bat.

10th Reg.—Lieut.G. B. Tolson, from 2d to 1st bat.

19th Reg.—Lieut. E. Dickson, from 2d to 1st bat.—Lieut. Walker, 2d bat. 4th reg., is placed in charge of the cadets lately arrived from Europe on H. C. ships Carnatic and Grenville.—Lieut. Marklove, 2d bat. 9th reg., doing duty with the rifle corps, has permission to rejoin his corps.

Aug. 13.—Assist.surg. G. Bucke, 18th N.I., is appointed to the medical charge of the 7th light cav., during the absence of Assist.surg. Shepden on sick certificate.—Assist.surg. N. A. Woods, is appointed

to afford medical aid to the officers recently posted to corps serving with the Hyderabad and Nagpoor subsidiary forces, the detachments of the Madras Europ. reg. and 1st bat. 3d reg., proceeding from Poonamallee under the command of Capt. Hankins, 1st bat. 22d reg., as also to the lascars, dooly bearers, and all public followers attached.—Ensigns recently promoted, posted to duty until further orders : E. J. Dusantoy, J. W. Roworth, J. Mills, and G. W. Whistler, with the 2d bat. 10th reg. ; E. Dyer, W. J. M. Wynter, T. Rooke, and J. Deane, with the 2d bat. 14th reg. ; W. H. Smith, C. W. Young, J. Humfreys, and P. D. Barrow, with the 4th extra bat.—The ensigns of infantry lately promoted, and appointed to corps at Vellore, will place themselves under the orders of Lieut. Walker, 2d bat. 4th reg., and proceed with him on route to their corps.—Asst.surg. Cox, rifle corps, to accompany and afford medical aid to the detachment proceeding from the presidency under the orders of Lieut. Walker, 2d bat. 4th reg.

Aug. 16.—Maj. Mason, 5th reg. L. C. to take charge of the detail of that reg. now at the presidency under marching orders, and all officers of that corps at Fort St. George, will join and accompany the detachment on route to join the head quarters of the reg.—Lieut.col. Steel, 2d bat. 2d reg., is appointed a member of the general invaliding, &c. committee directing to assemble in Fort St. George, in the room of Maj. West, relieved from that duty.

Aug. 18.—Capt. J. T. Trewman, gr.-mast. of brig. in Mysore, to act as the paymaster during the absence and on the responsibility of Capt. Crewe.

Aug. 28.—Lieut. (brev. capt.) C. Laurens, 1st L. C., to be interpreter and gr.-mast., vice Kemble ; Lieut. G. Gray, 24th N.I., to be adj. to 1st bat., vice Berrie ; Lieut. J. Robins, 3d N.I., to be fort adj. of Seringapatam, vice Oldnall ; Lieut. J. G. Mitford to act as fort adj. of Seringapatam, in the absence of Lieut. Robins.

19th N.I.—Sen.lieut. J. Michael to be capt., from 9th Aug. 1819, vice Hurdis, deceased.

24th N.I.—Sen.lieut. (brev. capt.) W. Berrie to be capt., from 9th Aug. 1819, vice Biss, deceased.

The undermentioned officers have returned to their duty, by permission of the Hon. the Court of Directors, without prejudice to their rank :—Lieut. (brev. capt.) J. F. Palmer, 5th L. C. ; Capt. J. N. Abdy, artillery ; Lieut. T. Beadle, ditto ; Capt. T. Dwyglas, 5th N.I. ; Lieut. G. Murel, 8th N.I. ; Lieut. C. H. Gibb, 12th N.I. ; Lieut. N. Waters, 25th N.I. ; Surg. Gilbert Briggs ; Asst.surg. John Irving, M.D.

Cadets promoted to ensigns : F. S. Adams, J. E. Laveridge ; Mr. W. Farsken admitted on the establishment.

Sept. 6.—Lieut. J. J. Underwood, engineers, to be aide-de-camp to Lieut.gen. Trapaud, chief engineer ; Capt. J. Bell, 9th N.I., to be aide-de-camp to Maj.gen. Bell, commandant of artillery ; Capt. G. Rose, N. I., to command the 3d extra bat., vice Chauvel ; Capt. E. Wallace, 2d L. C., to be maj. of brig. in Mysore, vice Osborne ; Lieut. (brev. capt.) E. J. Foote, 25th N. I., to be maj. of brig. in the southern division, vice Walker ; Lieut. (brev. capt.) H. Conway, 4th N. I. to be cantonment adj. at Wallajabad, vice Kutzleben ; Lieut. P. Corbett, 8th N. I., to be adj. to 1st bat. of that corps, vice Page ; Lieut. G. Dunmore, 8th N. I., to be interpreter and gr.-mast. to 1st bat., vice Isaacke ; Lieut. S. Hughes, 24th N. I., to be adj. to 2d bat., vice Brody.

8th N.I.—Sen. capt. C. J. Walker to be maj., and Sen.lieut. J. H. Isaacke to be capt., from 30th Aug. 1819, in succession to Carstairs, deceased.

FURLONGHS.

Aug. 18.—Capt. R. Crewe, paymaster in Mysore, to the presidency for three months.

Aug. 28.—Maj. G. Waugh, 24th N. I., extended to 31 Oct. ; Lieut. (brev. capt.) W. G. Page, 8th N.I., to Europe ; Lieut. F. Blundell, horse artil. to Bengal, for six months ; Lieut. J. S. Kinsey, 1st N.I., vet. bat., to Bengal for five months.

LOCAL OCCURRENCES.

Sept. 5.—The Hon. Sir George Cooper embarked on the ship *Reliance*, Capt. Pike, for Bombay, under the salute due to his rank.

Extract of a letter from Masulipatam :—"A boat belonging to the ship *Palmares*, in working on shore on the 21st July, against a strong westerly wind, was upset about three miles to the southward of the bar, by which distressing accident Mr. Herring, the chief officer of the ship, was unfortunately drowned. The accident being observed by the look-out lascar at the flag-staff, the master-attendant's boat was immediately dispatched, and providentially succeeded in saving the boat's crew (consisting of six lascars, who were driven fast out to sea on the boat's bottom, and nearly exhausted) from a watery grave, after they had been half an hour in the water, exposed to a heavy swell."

BIRTHS.

Aug. 29.—At Madura, the lady of G. F. Cherry, Esq. of a daughter. . . Sept. 3, at Bangalore, the lady of Lieut. F. Simkins, of H. M. 34th reg. of a daughter.

....5, at Quilon, the lady of Capt. Elphinstone, of a daughter.... Oct. 6, the lady of John Shaw, Esq. register of the supreme court of judicature, of a son.. Same day, the lady of H. W. Kensington, Esq. civil service, of a daughter.

MARRIAGES.

Sept. 8.—At Nagpoor, James Gordon, Esq. surgeon to the residency, to Maria Louis, only daughter of Major George Fraser.... 21, at Secunderabad, Capt. J. Wetherall, H. M. Royal Scots, to Almeria Laura; and Capt. F. Larkins Doveton, 3d Madras I. C., to Emelia Sophia, twin daughters of C. T. Grant, Esq. paymaster of H. M. Royal Scots, and wives of the late Lord Viscount Falkland.... 28, at St. George's Church, G. Mather, Esq. H. C. Medical Estab. to Mary Anne, eldest daughter of the late C. Chambers, Esq. of Middlesex.

DEATHS.

July 14, at Madras, the right Rev. Fre Joze de Grace, acting bishop of the Roman church.... Aug. 23d, in the Ganjam district, Mr. C. Bird, civil service.... Sept. 14th, Lieut. M. Smith, 5th regt. I. C.... 18th, near Aldelabad, on the route from Nagpoor to Hyderabad, Major P. G. Blair, of the artillery.... 19, at Chittledroog, Eleanor, infant daughter of Capt. J. J. A. Willows, 2d batt. 16th.... 28, at Black Town, Mr. A. C. Meyers.

BOMBAY.

EXPEDITION TO THE PERSIAN GULPH.

Oct. 4.—The right hon. the Governor in council is pleased to direct, that the strength of the force assembled for foreign service under the command of Maj. gen. Sir Wm. Grant Keir, K. M. T. be reduced, by withdrawing the battalion companies of the 1st 3d reg. N. I., the flank companies of the 2d 4th N. I., half a company of pioneers, and one company of artillery lascars.

CIVIL APPOINTMENTS.

Oct. 9.—Ollivet Woodhouse, Esq. to be advocate-general.

Mr. J. Kentish to be acting register to the Sudder Adawlut and superior tribunal.

Mr. G. M. Blair to be assist. to the register in the eastern zillah north of the Myhee.

Mr. H. Borradaile to be assist. to the register in the southern Concan.

Mr. H. Sher to be second assist. to the collector of the eastern zillah north of the Myhee.

MILITARY APPOINTMENTS AND PROMOTIONS.

Aug. 23.—4th. N. I. Lieut. and Brevet capt. W. Hollis to be capt. of a company, vice Lewis deceased.—Date of rank 11th Aug.

The most noble the Gov. gen. in council having authorized the appointment of an effective staff for the force of Kandelah, at present under the command of Col. Huskinson, H. M. 67th, so long as that force shall continue in the field, the right hon. the Gov. in council directs the following appointments, to have effect from 1st Sept. 1819.—Capt. S. Whitehill, to be assist. adj. gen. with the field force in Kandelah.—Capt. D. Wilson, assist. quar. mast. gen. do. do.—Surg. F. Cruso to be superintending surg. do. do.—Lieut. T. Bailie, 2d N. I. to be maj. of brigade at Poonah in succession to Capt. Whitehill.

Alteration.—Infantry.—Lieut.-col. W. D. Clelland to be lieut.col. vice Warden deceased.—Date of rank 15th April 1819.

First or Grenadier Reg. N. I. Maj. F. F. Stunton to be maj., and Capt. R. Macfarlane to be capt. of a company vice Clelland promoted, do. do.

Promotion.—Infantry.—Sen. Maj. J. Mc Clintock to be Lieut.-col. vice Kenny deceased.—2d June 1819.

Sixth Reg. N. I. Sen. Capt. F. Donnelly to be maj. and lieut., and Brevet Capt. M. Blackall to be capt. of a company, vice Mc Clintock promoted,—do. do. do.

Aug. 27.—Cadet W. Wyllie to be ensign.

Aug. 28.—Assist. surg. Wallace is placed at the disposal of the hon. commissioner in the Déckan, that gentleman vacating the situation of deputy medical storekeeper to the Poona division of the army.

Sept. 26.—Capt. Hore, maj. of brigade, to act as assist. adj. gen., and Lieut. Steele assist. quar. mast. gen. on the Madras estab., to act as assist. quar. mast. gen. with the force in Kandelah, until relieved by those officers who have been nominated to those situations, date of appointment 1st Sept. 1819.

Surg. Maxwell to act until further orders as garrison surg. of Bombay, vice Eckford resigned, and Assist. surg. Hathway acting garrison assist. surg. during the employment of Mr. McNeill as deputy medical storekeeper with the expedition to the Persian Gulf.

Sept. 30.—Lieut. fireworker J. Lloyd, Bombay artill. bat., to proceed to Nagpoor, and place himself under the orders of the Resident. Acting Lieut. fireworker Wm. Jacob, to be Lieut. fireworker artill. bat., vice Osborne deceased.—Date of Rank, 30th August, 1819.

Oct. 2.—Assist. surg. Hathway to act as Dep. Med. store-keeper at the Presidency during the absence of Assist. surg. McNeill on the expedition to the Persian Gulf. Brev. Cap. J. Sheriff to act as Sub-assist. Comm. with the force assembled for foreign service, without prejudice to his situation on the staff of Brig. gen.

Smith on the return of the force to Bombay.

4.—Office of dep. paymaster to Poonah division is abolished; and Lieut. Hughes, who filled it, to be paymaster to the force in Kandeish.

6.—Assist. surg. Barra is appointed to the Med. charge of the garrison of Tannah during the absence of acting superintending Surg. Jukes with the expedition to the Persian Gulf.

FURLOUGHS.

Aug. 26.—Lieut. E. P. Lester, artill. batt. to Europe for three years.

Sept. 1.—Ensign C. Waddington, Engineer corps, for one year.

30.—Maj. W. Sandwith, H. C. Europ. l. to England for three years. The order notices the major's valuable services for several years in the pay and commissariat departments. Lieut. col. the hon. L. Stanhope, commanding the northern division of Guzerat, to the Presidency.

Oct. 6.—Surg. W. Currie, Madras establishment, to England for three years. Capt. J. Brown 2nd batt. grenadier N.I. to England for three years.

LOCAL OCCURRENCES.

Recorder's Court, Sept. 8.—W. Millburn, Esq. took the oaths and his seat on the bench as an alderman of the Recorder's court of Bombay; and Graves Chamney Irwin, Esq. barrister at law, took the oaths on his being admitted to practice in the same court. Sir G. Cooper is daily expected.

The late Governor and his Successor.

Oct.—The rt. hon. Sir Evan Nepean has taken his passage in the free trader *Albion*, Capt. Lynn, for London, to sail hence about the 1st Nov. The hon. M. Elphinstone is expected to arrive here on the 28th inst.

Northern Ports, Sept. 1.—Accounts from Surat and Broach continue to lament the devastation made by the unusual fall of rain, during this last month, in both the cotton and pulse grounds in the neighbourhood of those places. This, on referring back, we find to be a very usual complaint, and that every year a quantity of seed is sown in the end of August, or even so late as the end of September, to replace what has been washed away.

SHIPPING INTELLIGENCE.

Arrivals, Sept. 25.—H. M. ship *Liverpool*, Capt. F. A. Collier, C. B., from Mauritius, 8th Sept. 1819.—26th. Ship *Upton Castle*, Howell, from London 8th May, and Isle of France, 3d Sept. 1819.—Passenger: Mr. Hitchings, frer merchant.—Oct. 9, H. C. ship *Barossa*, Hutchinson, from England 6th May.—Passengers: Sir C. Colville, G. C. B., Lady Colville, Mrs. Lamy, Mrs. Kane, Miss Franklin, Miss Campbell, Miss Cooke, Miss Muir,

Lieut. col. Blair, Maj. Jackson, Capt. Lamy, Lieut. Bunfoy, Messrs. Kane, Taylor, Grant, Pratt, Stewart, Jones, Hagart, Troward, Duff, Hall, Warry, Pinching, Ennis, with 50 recruits for the 47th regt.

BIRTHS.

July 26, the lady of Capt. Landale, of the ship *Jessy*, of a daughter. . . 29, at Surat, the lady of S. Sproule, Esq. superintending surg. on this establishment, of a daughter. . . Aug. 5, at Anjar, the lady of Capt. Charles Paine, 2d bat. 8th reg. N.I. of a daughter. . . Sept. 3, the lady of Capt. Mathew Boles, of a daughter. . . 9, at Bombay the lady of Capt. Keitt, sub-assist. com. gen. of a daughter. . . 18, the lady of Dr. Barnes, archdeacon of Bombay, of a son. . . 23, the lady of Capt. John Hall, Bombay marine, of a son. . . 30, at Byculia, the lady of Major Hodgson, commissary of stores, of a daughter. . . Oct. 2, the lady of Wm. Erskine, Esq. of a daughter.

MARRIAGE.

Oct. 12, A. N. Riddell, Esq. H.E.I.C.S. to Mary Anne, youngest daughter of Lieut. col. Edwards, H.M. 73d reg.

DEATHS.

Aug. 29, at Broach, Lieut. Fireworker, H. L. Osborne, artillery, dep. com. of stores. . . Sep. 16, at Anjar, Charlotte Catherine, daughter of Capt. C. Payne, 2d bat. 8th N.I. . . 29, H. G. Macklin, Esq. Adv.gen. . . 30, G. G. Wallace, serg. maj. 15th N.I. . . A short time since at Kattiwar, James Roy, Esq. late assist. surg. on this establishment.

PROVISIONAL GOVERNMENT IN THE DEKAN.

POONA.

Festival of the Battle of Assaye.—Sept. 3, Major Lushington, C. B. and the officers of the 4th regiment Madras cavalry, gave a grand dinner at Poona, to the Hon. Mountstuart Elphinstone, in commemoration of the battle of Assaye, in which that corps bore a distinguished part. The toasts cherished the remembrance of many names of high celebrity, as well among absent friends as the guests present. We cite part of the speech with which the chairman introduced the health of the Hon. Mountstuart Elphinstone. "It may be well supposed, commemorating the battle of Assaye must be a pleasing occupation, yet how greatly is the pleasure increased, by having on my right hand the companion of the noble Wellington in that arduous struggle. Yes, on this very day, Thursday 23d Sept. 16 years ago, a specimen was afforded our honourable guest, what British troops could do, and the recollection of their steadiness and bravery on that eventful day, must have dissipated all vain fears

and doubts, 'If any such ever existed in his mind, as to the result of the perfidious attack of Bajee Row, on the small force under the valiant Colonel Burr at Kirkee, on the 14th November 1817, where the character of the Bombay army was nobly upheld under circumstances of a very trying description. Though not bred to arms, Mr. Elphinstone is a good soldier. He deserves that honourable appellation from the service he has seen, and from his gallantry in action; and I am confident you all feel towards him, as you do towards those of your own profession, who, from their distinguished conduct in the field, have established claims to our particular regard."

CEYLON.

CIVIL APPOINTMENT.

Sept. 11.—C. Scott, Esq. to be prov.-judge of Jaffna, from the 1st inst. vice W. H. Ker, Esq. who resigns.

SHIPPING INTELLIGENCE.

Loss of the Hayston.—The Hayston, Capt. Sartorius, we regret to state, was wrecked on a reef to the westward of the Maldiva Islands on the 20th of July last. The captain, with part of his passengers and crew, reached Galle on the 25th inst. by means of a Maldiva boat, which sailed from Maldiva on the 18th inst. The following brief account of the disastrous event has been furnished by the captain.

The Hayston left Mauritius on the 1st July, and experienced a very fair passage until we crossed the line, when the weather became exceedingly squally from the N.W. and continued such until the 20th of July, then in lat. 6. 0. 0. N. long. 72. 20. by account East, having been for several days without any observation; at 8 P. M. observed breakers to leeward, put the ship immediately in stays, but when the head sails were aback, she struck and knocked off the rudder, which carried away the starboard counter, and in course of a quarter of an hour there was seven feet water in the hold; since that period up to this day we have gone through various hardships.

A gentleman passenger, Mr. Meyer, lost his life in the surf; the long boat with a woman, two little girls, and three men, and a raft with three lascars, are still missing, and I fear have met a watery grave.

H. SARTORIUS.

Galle, 26th August, 1819.

BIRTHS.

Sept. 11.—At Colombo, the lady of W. Glasborne, Esq. H. M. civil service, of a daughter.... Same place, the lady of Lieut. Swinburne, H. M. 83d regt. fort-adj. of Colombo, of a son.

DEATHS.

Aug. 7.—At Ballicalon, Mrs. Vallance; and on the 8th, Major Vallance; of H. M. 73d regt.... 8, At Galle, after an illness of a few days, aged 69 years, Robt. Nicholls, Esq. paymaster of H. M. 19th regt.... 18, at Columbo, the lady of R. Rogers, Esq. of the ordnance department.

AVA.

Political—Unofficial.

Death of the King, and Accession of his Grandson.—The following account comprises many circumstances of painful interest which accompanied the new accession, and which, for the sake of humanity, we hope are seldom heard of even in despotic countries.

His Burman Majesty, the King of Ava, died on the 5th of June 1819, at a very advanced age, after a reign of 38 years.

The Prince Regent, grandson of the late King, succeeded him, and ascended the throne on the 6th; and on the 7th the remains of the deceased King (attended by his successors, with the Princes of Taunoon, Proue, and others, as chief mourners) were with solemn ceremony and grandeur placed on the funeral pile, composed of sandal-wood and various other odoriferous combustibles. The torch was applied to this by the hands of the Princes, and mourners occasionally poured out costly oils on the fuel until the corpse was totally consumed, when the ashes were carefully collected together, put in an urn, and deposited in a royal cemetery, as a relic for the future veneration of his deceased Majesty's descendants and relatives. The present King having reason to fear his own brother, the Prince of Taunoon, whose daring spirit led him to form the design of seizing on the throne, had him arrested, together with the whole of the children, grandchildren, and the rest of the family, who were afterwards put into red sacks and thrown into the sea, a death reserved by the laws of the country for the royal family only! The Prince Proue, uncle of the King, and who was also leagued in the conspiracy, was tortured on the rack, and afterwards strangled while in prison. Prince Lem Gain, whose elder brother, Mohe-ning, is the son-in-law of Rangoon, was likewise executed as a conspirator. One of the prime ministers of the governor of the western provinces was also punished with death, for the same offence. The number of the principal personages attached to the cause and interests of the late Princes, who suffered death for their attachment to them, is said to be about 1,400; and it is confidently believed, that from 10 to 15,000 men of the lowest class

have shared the same fate. The property of Prince Taunoo, which has been confiscated by the royal authority, amounted to about 1,848,000 sicca rupees; the property of Prince Proue is stated to have been more than that of Prince Taunoo, and by order of the King, was distributed amongst the army. All the arms found in the magazines have been seized, and carried to the royal arsenal.

His Majesty has pardoned the crews of five war-boats belonging to the Prince of Proue, who were engaged in the conspiracy, but they are to be transported to Martaban until further orders.

After the re-establishment of tranquillity in his kingdom, his Majesty made the following appointments and promotions.

Burman Empire—Abstract Official.

DECREE.

Mahn-lau-na-orthah, formerly viceroy of Rangoon, known by the name of Merada Takan, to be the first prime minister of the state, and commander-in-chief of all the forces of his majesty, being foster-brother of the late Inghebrah, the father of his present majesty, and an old and faithful servant. His daughter is to be ranked as one of the junior princesses.

Men-ye-yajah, the present viceroi of Rangoon, known by the name of Moun-shoa-thah, of royal lineage, being the grandson of the Alloun Prahghey Mauloon prince, to be a prince of the empire.

Maunggyaio, to be governor of Taunoo.

Takan Mau-moon, (of noble blood) to be governor of Martaban.

Mpuntsee, to be governor of Bassin.

Mon-hya-g, hyow, eldest son of Merada Takan, to be governor of Syrian.

Chau-dau-thee-ree, to be governor of Proue.

Mauncoon-Thaunoo, to be general of the cavalry.

Men-Mahah-men-hlah-men-goung, to be one of the prime ministers of state.

Men-nao-myoo-thee-hah-thoo-rah, to be one of the ministers of state.

Men-naa-myoo-rajah-thoo, ditto ditto.

Men-naa-myoo-thee-ree-then-hah-yah, ditto ditto.

Thaun-yo, to be governor of L'hine.

The king was further pleased to permit the following princes to have the honour of visiting his majesty.

Traurauwoody, his majesty's brother.

Makrau-main, his majesty's uncle.

Thaun-dooah-main, ditto.

Meeng-hoon-main, ditto.

Thain-nee-main, ditto.

On the 3d of July, the royal order for all these state arrangements arrived at Rangoon, and on the 6th the population

proceeded to Shoa-dagon, the great pagoda of Rangoon, where, after the usual form and ceremony, they took the oaths of allegiance to the present sovereign.

The following is a literal translation of the royal mandate issued on this occasion.

"Men-hlah-nau-ra-tah, Men-mahah-men-hlah-men-goung, Men-naa-myoo-thee-ree-then-hah-yah, give information:

"Tha-do-men-yay-rajah, Ray-woon, collectors of revenue, collectors of duties, and military chiefs of Nan-thah-wah-tee!

"In regard to the various chokeys, where duties are taken, beginning with the landing places, and chokeys of the royal city, the duties are, by royal authority, remitted for three years.

"In regard to the outer appendages of the country, the subordinate parts and villages let, that which has been rightly fixed of old, as the outer appendages of the country, the subordinate parts and villages, be those appendages.

"In regard to lauds which are late arrangements of new lauds and islands, and have been taken possession of, let them not be appendages of the country; but let them be according to the bounds of the towns and villages.

"In regard to taking the produce of the ground, called Ali-loung, let it not be taken.

"In regard to the That-thah-maa-dah money, so called, let it not be demanded of the common people of the town and villages.

"In regard to the trading boats up and down the river, let there be no distinct revenue bearing on boats; but let there be only the boats belonging to the palace.

"According as we have received on our heads these royal orders of his majesty, you are to remit, and not receive, whatever pertains to the revenue and duties of the chokeys, the landing places, the land chokeys, and the petty officers, excepting the duties which are customarily taken on foreign ship people and the Karan revenue.

"In regard to the that-thah-maa-dah money, you are not to demand it of the common people of the various towns and villages.

"This is officially transmitted. Let it be communicated to all the officers of government, and the chiefs of districts, that they make no demands, and, according to the original excellent moderator, let people remain in quietness, that they may pursue their business and make profit.

"Let the that-thah-maa-da money, and the duties for presentation which have been already taken, be forwarded with accurate registers, and presented at the royal feet."

RANGOON.

Irregular Impositions and Acts of Oppression.

For the information of traders, we give a detailed report of the system of extortion, and acts of oppression, to which vessels frequenting the port of Rangoon are exposed.

The brig Hope, Capt. Thissel, belonging to Penang, went on a commercial voyage to Rangoon in January 1819. Several other Anglo-Indian vessels, named in the following narrative and protests, were lying in the port at the same time, having similar objects. Soon after the Hope arrived, two men of her crew deserted, and, being unable to extort payment of their wages by any other means, voluntarily surrendered themselves slaves to the minister, to secure his interference. On the 18th February a third, a Caffre, followed their example. Not contented with recovering their pay, the two former accused Capt. T. of having thrown a man overboard during a former voyage. Capt. T. was seized, confined in the stocks for three days, and severely beaten. His serang also received a copious allowance of punishment, because he refused to support the charge that was falsely made. The termination of the affair was, that Capt. T. was obliged to pay 580 ticals, in flowered silver, to the minister, for his liberation; and the shabandas (who, we blush to say, is by birth an Englishman, and formerly commanded a vessel belonging to Calcutta) appropriated to himself, as his perquisites of office, the fowling pieces, muskets, &c. which Capt. T. had at that time in his house on shore. It is curious, however, to state, that the insolence of villainy did not stop here; for when, in the fire which happened soon after, the stocks of these fowling pieces, &c. were consumed, the barrels were sent back to Capt. T. with orders to provide complete ones in their stead, and with the threat of further severity in case of non-compliance.

The following abstract of Capt. T.'s protest is a full and authentic account of the transaction.

On the 6th January 1819, two men, Ally, a lascar, and Pedro, a topass, deserted from the brig Hope, and going to the minister (viceroy of Rangoon), gave themselves up as slaves; and on the 18th February, Antonio, cook, also absented himself from my house, and in the same manner became a slave.

On the 20th these three deserters came from the minister's house, demanding their wages and clothes, and threatening if I did not immediately comply with their demands that they would take me to the minister's, and have me well flogged. I

refused, on the ground of their having forfeited all that had been due to them by their desertion. On hearing this reply, they loaded me with abuse, and retired.

On the 21st, at 7 A.M. the minister's linguist came to me, attended by several people and three deserters, demanding their wages. I told the linguist that I should not pay them, as I had, in concert with Mr. Gibson the shahbunder, drawn up a petition to the minister for the restoration of my men, as they had shipped with me at the port of Penang, and left me without any cause for so doing. At nine A.M. I went with Mr. Gibson and the linguist to the minister's house, in order to present my petition; when after I had been detained two hours, the two men, Ally and Pedro, finding that they were likely to be sent on board again, swore that I had killed one of the lascars on the passage to Rangoon.

I immediately sent on board for the serang, tindal, gunner, and one sookannie, who had shipped with me at Penang, to prove the falsehood of the accusation, and to this effect their and my oaths were instantly taken. The lascar Ally then swore that the crime with which he charged me was not committed during the present voyage on the passage here, but in the voyage before; and that I had been tried at Penang by the police, and acquitted, in consequence of the serang swearing that the man whom I was thus accused of having murdered was killed by the falling of a mast, and that the serang had been bribed to swear this.

The tindal was then examined as to his having seen me ill-treat any man during the voyage alluded to, and he swore that not a man had been hurt or flogged. In consequence of this direct contradiction, the serang was ordered to be put in the block (a machine like the stocks in England). As all my witnesses were of no use, I was ordered to sit down with one of the minister's guards over me; but was released about an hour afterwards.

On the 22d, at 8 A. M. Mr. Gibson sent for me to his house, where I found the three before-mentioned deserters, and enquired of me how many mouths they had been in the brig Hope, and what money they had received from me. I informed him correctly of these particulars, and he then insisted on my paying the full balance of wages due up to the 22d of February: this I did, and Mr. Gibson then further requested me to get as many Europeans as I could, to accompany me to the minister's house, between the hours of 10 and 12 o'clock, and to bring the petition he had made out for me, with a doubled barrelled fowling piece as a present to the minister, that he might

settle the business. This I also complied with. At the appointed time Mr. Turner, ship-builder, Captains Court, Arbuthnot, Trill, Protheroe, and Mr. Jones attended me to the Minister's office of justice. When we reached the house, the Minister was asleep, but Mr. Gibson was sitting there.

Shortly after our arrival at the office, Mr. Jones left us to go and see the *serang*: he found him lying on the ground, with his hands lashed to his feet, and a Burmah beating him with a large rattan, desiring him to tell the truth, as to when and where Capt. Thisselle killed the man, and whether he was not tried at Penang and acquitted. They (the Burmahs surrounding him) said if he would tell the truth, they would let him loose. The *serang* said he had spoken the truth before. Mr. Jones then came and informed us of this, and Captains Court, Arbuthnot, and myself, went to the place where the *serang* was, as before stated. I was asked several questions by the Burmahs round him, respecting the supposed deceased, and they said that they were fully convinced that I had killed a man, somewhere or other, and upon my denying it I was forcibly dragged away, and both my legs put in the blocks in the presence of the above-mentioned gentlemen, the door of the prison shut, and none of the Europeans permitted to see me.

The men in charge of the blocks endeavoured to extort 50 ticals from me, and upon my refusing to pay it they put my legs in two holes further apart, and shut the blocks, which pressing hard upon my legs, soon deprived me of feeling as high as the knee. I remained in that state about two hours, during which time I was severely beaten between the shoulders by men's elbows and fists, in order to extort money from me, till at length an order came to release me from the blocks, but not from confinement. In a short time after I was released: the blood in my legs had so far circulated as to enable me to stand up. The before-mentioned gentlemen then went with Mr. Gibson before the minister, when my petition was read, as was also that of Ally, to which the minister's answer was, that he believed Ally was speaking the truth, after saying which he immediately went away. Mr. Gibson told all the gentlemen who attended me that they had better go away, and he would endeavour to get me clear. In the evening I was informed by one of Mr. Gibson's men that I was to be set at liberty on the following morning, and I accordingly remained a prisoner during the night.

On the 23d, at 7 in the evening, an order came for me and the *serang* to be released, when I went to my house, and the *serang* returned on board.

On the 24th a bill was sent to me, demanding 520 ticals, which I was obliged to pay to the minister.

I do hereby protest against the government of Rangoon, for all and every damage I have sustained, viz. false imprisonment, detention, &c. &c.

(Signed) PAUL THISSELLE.

We, the undersigned, do hereby declare and attest that the above-mentioned statement is correct, as far as we are concerned, and do give it as our opinion that the conduct of the Rangoon government is infamous in the extreme.—(Signed) John Arbuthnot; T. R. Court, commander of the *Byramgore*; G. Cowper, master of the sloop *Mary*; John Daniel, commanding the ship *Four Sisters*; L. Protheroe, late commander of the ship *Cornwall*; R. G. Trill, commanding the ship *Sussex*.

Annexed to the above protest and attestation is an extract from the log of the brig *Hope*, proving that she was detained for her order to go down the river, from the 1st of March to the 7th, and that of the arms belonging to her lodged in the king's godown, sixteen muskets had been taken to the minister, by whom, after much trouble and delay, four of them were restored, but the rest he kept, paying for them the price he himself put upon them, which was much less than half their value.

After this occurrence it happened that one of the crew of the *Shaw Byramgore*, who had been sick since the ship left Calcutta in September last, departed this life while she was laying in Rangoon river. The ingenious roguery of a moorman interpreter contrived to found on the circumstance a false charge of murder against the commander of the ship, Capt. Court, who was accordingly exposed to the scandalous oppression of the Rangoon authorities, and his ship had to pay a considerable sum before he was allowed to quit the place. The particulars are detailed in the following protest, drawn up and signed by the commanders and officers of the country service, at that time in Rangoon, and it is only necessary to add to their detail, that the *Serang* was finally compelled, by continued beating, to make the statement which the shabander required, and was detained together with the *cassab* at Rangoon, to screen them from any investigations that might take place at Calcutta.

Protest.—We, the undersigned, do hereby protest against the Rangoon government, in regard of their conduct towards Thomas Rowland Court, commander of the ship *Shaw Byramgore*, by falsely imprisoning him, and causing the ship to pay for clearing him the sum of 1,650 ticals, 25 per cent. alive, although no blame could possibly be attached to

him, nor was there to be proved against him. The circumstance we protest against was as follows: A lascar on board the *Shaw Byramgore*, of the name of Sitabdee, died in this port on the 7th day of February 1819, of a violent flux. On the 28th day of February 1819, the serang, Cassab, &c. belonging to the ship *Shaw Byramgore*, went to a linguist belonging to the government, named Cunie, a moorman, and complained to him against Capt. Court. He wrote down the complaint, falsely stating that Capt. Court had killed Sitabdee, lascar, by kicking him when on board the ship. Capt. Court was sent for by the governor.

At about 6 P. M. the same linguist with about 20 men came with ropes, &c. to bring Captain Court before the governor by force. Fortunately for him he was at that time on-board the *Byramgore*, otherwise he would have been dragged away, put in the blocks, and otherwise ill treated according to the governor's orders. Mr. Aratoon Avetick, agent for the *Byramgore*, became security to the amount of three thousand ticals for Capt. Court's appearance next day. On the following morning, Capt. Court, and we the undersigned, went to the governor's house. When we arrived there Capt. Court was ordered into confinement, and was immediately put into a small room, the door of which was secured, and a guard placed over him: Mr. Aratoon Avetick attended the whole day endeavouring to get Capt. Court out of confinement. The result was, that Capt. Court was acquitted of the crime of killing the man. The serang, Cassab, &c. denied what the linguist had written, what they told him being quite different. They put the Serang and Cassab in the blocks, and beat them to make them say that Capt. Court had killed the man. Although Capt. Court was acquitted and released from confinement, the government of Rangoon demanded 1,650 ticals, 25 per cent. silver, which Mr. Aratoon Avetick was obliged to pay, otherwise they would have stopped the ship, and would have put Capt. Court in the blocks and beat and otherwise ill used him.—John R. Arbuthnot, owner of the ship *Sussex*; John Daniels, owner and commander of the ship *Boar Sisters*; G. Couper, commander of the *Mary*, cutter; Richard Trill, captain of the ship *Sussex*; Benjamin Herring; R. W. Heming, George Polton; officers of the *Shaw Byramgore*.

ACCIDENT DURING THE PASSAGE OF THE BRITANNIA.

Melancholy Death.—The first version of this account, given under "*Mission-Asiatic Journ.*—No. 52.

ary Intelligence," is not so full as the annexed.

The following particulars of the melancholy accident that occurred on board the *Britannia*, Capt. Snowball, on her passage from Rangoon to Calcutta, have been sent to us for insertion:—

On the afternoon of the 20th of Aug. Mr. Wheelock, baptist missionary, who had been for some time in a declining state of health, had been sitting by his wife, who was writing, when he left her without her immediately perceiving it. Hearing the quarter gallery door close, and missing him from her side, she concluded he was gone there; the circumstance therefore excited no alarm, till his long stay there induced her to open it, to render him such assistance as his debilitated state sometimes required.

On opening the door of the quarter gallery, it was found empty, and the window being wide open, it was conjectured that this unfortunate gentleman had either accidentally fallen overboard through it, or in a fit of delirious phrenzy had jumped out of it into the sea. As an immediate and thorough search was made all over the ship, and proved unsuccessful, there can be no doubt of the melancholy fact. For several days previous to this lamentable accident, Mr. Wheelock had not been perfectly sane. It is singular, considering the noise occasioned by a body falling into the water, that in this instance not a soul on board heard it.—*Calcutta Journal*.

PENANG.

Col. Bannerman.—A correspondent in London has communicated, for insertion in the *Asiatic Journal*, some additional particulars relating both to the biographical notice of the late governor of Prince of Wales' Island, and the changes in the council there consequent on his death.

The late Col. Bannerman entered the Company's military service at the early age of 17 years. To the various stations which he successively filled, both as a distinguished soldier and an eminent member of the civil service, he rose by the decisive character of his merits alone. An ardent zeal and unceasing solicitude for the interests of the Company were the leading features of his active and honourable career.

The early part of the late Col. Bannerman's life was spent under the presidency of Madras, and soon after his return to England he was elected a Director of the East India Company. In 1817 he retired from the direction, and was, on the death

of the late Mr. Petrie, appointed governor of Prince of Wales' Island. His abilities were of a very superior order: penetrating and sagacious, rapid in execution, yet guided by a judgment matured by long experience, he passed the various gradations of the service with equal honour to himself and advantage to the Honourable Company.

By this event W. E. Phillips, Esq. succeeds as Governor, and W. A. Cluble, Esq. has been called up to council till the arrival of J. Macalister, Esq., who is on his way from England to succeed to council, under the orders of the Court of Directors.

It is remarkable, that no person who has filled the office of Governor of Prince of Wales' Island since it has been constituted a presidency, has yet lived to return to his native country.

To avoid repetitions, we have omitted some coincidences with the general orders published at Penang and Madras, of which our last contained an abstract.

Extract of a Letter received in London, dated Aug. 10, 1819.—"We have just received the afflicting intelligence of the death of Col. Bannerman, governor of Penang. Ten days before that event he had attended the funeral of Mr. Phipps, the Accountant-general, who died after a very short illness. Upon his return from the funeral he complained of a pain in his chest; his severe illness continued to increase, and baffling all medical efforts, put a period to his valuable life in a short time: he was attended to the grave by an immense number of followers, regretted by all, particularly the missionaries, whom he kindly patronized.

"Mr. Phillips succeeds as governor, whose talents and experience have long been felt in the island. He originally came to India in H.M. military service, with Lord Cornwallis."

CIVIL APPOINTMENTS.

July 31.—Mr. W. Sartorius, to be accountant and auditor.

Mr. Wm. S. Cracroft, to be dep. accountant and auditor, and to be agent for the affairs of Acheen.

Mr. A. D. Maingy, to be sub-treasurer.

Mr. J. Anderson, to be dep. warehouse-keeper and Malay translator.

LOCAL OCCURRENCES.

Execution.—The two criminals, Loke and Latiff, underwent the awful sentence of the law on Wednesday last, May 5. Loke expressed a desire to become a Christian, and was accordingly baptised by a Romish priest a few days previous to

his execution; the rites of the Catholic church were performed on his remains, and the funeral was attended by a large portion of the congregation of that church.

COMMERCIAL.

May 18.—Neither pepper nor betel-nut is at present to be obtained in the market. The French ship *Titus* remained here three weeks, and was obliged to go away without getting any.

SHIPPING INTELLIGENCE.

May 22.—Accounts from Malacca state, that the brig *Lively*, Mahomed Fuzzell, which sailed from this port for Malacca on the 22d of February last, had been attacked and plundered by several pirate boats near Salaugore, on her way to Singapore, and was compelled to return to Malacca.

RELATIONS WITH NEIGHBOURING MALAY STATES.

In a former paper we stated, that considerable disturbance had occurred at Pulo Perah between the people of Quedah and of that state. We are now informed that a treaty has been concluded between the two states, by which the Rajah of Perah has agreed to pay an annual tribute (boonga mas) to the Rajah of Quedah; in consequence of which, perfect tranquillity has been restored, and free entrance allowed to all vessels and boats proceeding to Pulo Perah.

DEATH.

July 22.—At Penang, at the age of 30 years, John Lyon Phipps, Esq. of the civil service, accountant and auditor, after a short but most severe illness. He was the son of the late Constantine Phipps, Esq. of the Island of St. Kitts. After having served the East-India Company for about 14 years, he has quitted all earthly cares, and has left a widow and infant son to deplore his early death.

SINGAPORE.

New Settlement.—Letters brought by the *Endeavour*, describe the state of this settlement to be most flourishing, and the report which we mentioned before of the Malays flocking to it from all directions, is fully confirmed. The shore is crowded with life, bustle, and activity, and the harbour is filled with square rigged vessels and prows.—*Cafe Journal.*

It appears that at the new settlement of Singapore there were already 500 fixed inhabitants, and every thing went on well.—*Chart Paper, Aug. 31.*

Governor Parquhar has made considerable progress in cultivating the land. He has tried (but with what appearance of success our correspondent does not state)

coffee, spices, cotton, and pepper.—The Isabella, Capt. Forster, was the latest arrival from that island. At the period of her departure Sir S. Raffles and suite were there.—*Penang Paper*.

BIRTH.

On the 25th of July, Mrs. Barnard, of a daughter. This is the first birth at the new settlement.

MALACCA.

Destructive Fever.—The depositions of the medical gentlemen at Penang, published a few days ago, went to prove that the disorder prevailing at Malacca was not the cholera morbus. It appears, however, to be a disease of almost equal violence to this, as we find in the Penang paper the following paragraph:—"We are concerned to state, that the fever, which we lately noticed as prevailing at Malacca, continues with increased violence, and that the daily victims to its destructive ravages were numerous."—*Cale. Journal*, Aug. 23.

DEATH.

July 17.—Mrs Joaquina Bruyues, wife of Mr. Barnaldo Bruyues, aged 43 years; and on the 19th of the same month, his daughter, Miss Maria Antonio Bruyues, aged 17 years.

SUMATRA.

ACHEEN.

Relations of the British with the Native Powers.—Aug. 31.—By the Minto we have received letters from Penang, which state, that the son of Syed Hussein, one of the late rival kings of Achcen, had been ordered from that place to Penang. The candid and direct conduct of Sir S. Raffles, in effecting a decision between the contending claimants to that kingdom, is spoken of with much encomium, and appears to have been worthy of the representative of the British government. He is stated to have declined employing any military force beyond one hundred men as a guard. On his departure from Achcen he left arms and ammunition, and a civil servant behind him. Our letter concludes this subject with stating, that "it now depends on the government to decide, whether it will be eligible to form a settlement at this place or not, as the sultan and people are much disposed to place themselves under the protection of the British power."—*Oriental Star*.

A correspondent of the *Calcutta Journal* introduces the following sketch of the circumstances under which the rival kings in Achcen stand, in respect to each other, by saying, that from the state-

ments which had been given in some of the late Calcutta papers respecting the state of affairs at Achcen, that subject appeared not to be well understood; on which account he was induced to communicate what he had the best grounds for believing to be an authentic sketch.

It is, as the Calcutta editors observe, generally known, that a revolution took place some time ago, which expelled from his throne and capital, the then reigning Monarch, Jowhar Alum Shah, and raised to the vacant musnud Sy-ul Alum, the son of Tuankoo Syeed Hussein, who for many years has been a resident at Penang; but it is not as generally known, under what circumstances this revolution was effected, or upon what foundation the Tuankoo's claims to the high destiny of regal elevation are built. Tuankoo Syeed Hussein is accurately designated, as being now a wealthy and opulent merchant of Penang, but he claims from the famous Jemal-ul Alum, who sat upon the throne of Achcen in the last century, and is celebrated as one of their best and most respected princes. The successful rebellion and treachery of the great officers who held under Jemul-ul Alum, the officers of Shahbunder and Maha Rajah Lea, drove that unfortunate prince from his throne, and transferred the sovereign authority to the usurper. Syeed Hussein's father, waged an unsuccessful war against the usurper and was killed in battle; the Syeed's family therefore quitted the kingdom, and sought a refuge in some neighbouring country. Soon after the establishment of this colony, Syeed Hussein settled at Penang under every encouragement that could be offered him by the then local authorities, bringing with him a numerous train of followers and dependents. Here he continued to reside and to carry on extensive commercial pursuits, enjoying the respect of the community and the good opinion of the government.

Jowhar Alum Shah, the deposed King, is the descendant of the Maha Rajah, who usurped the throne from Jemul-ul Alum. Jowhar Alum succeeded to the throne when a minor, but does not appear ever to have established an official authority; his peculiar habits, attachments and pursuits, appear to have created a general feeling of dissatisfaction, and gave equal offence to the aristocracy of the country as well as to the people; accordingly, whilst on one hand the sovereign authority has been gradually sinking, and lower into a state of feebleness, degradation, and decay, the country in general has been a prey to misrule and its attendant consequences, anarchy and confusion.

The vexations and injuries experienced by British traders, in their intercourse with the ports of Achcen, had become so

multipled and frequent, that at length they attracted the attention of the government, and in 1814, Capt. Cauning was deputed by the supreme government, as commissioner invested with full power, to discuss and adjust all existing differences with the state of Acheen, and to form arrangements for the future and permanent protection of our commerce.

The insulting and injurious treatment which the infuriated king was induced to offer to the accredited envoy of the British government is well known; but to such a height had the dissatisfaction at this prince's misconduct arisen, on the part of his chiefs, that at the very time he was thus insulting and provoking the British government, the leading men in his kingdom were preparing to depose him and expel him from his throne, to which extremity they did at length proceed in a solemn council of state.

The deposition of Jowhar Allum Shah was formerly announced to the British government by the great "chiefs of Acheen," and was followed by an invitation from them to Tuankoo Syed Hussein, to repair to the capital and resume the throne of his ancestors.

The aged Syed wisely preferring the security, ease, and comfort he enjoyed under the British government of Prince of Wales's Island, to the cares and anxieties of sovereignty, declined for himself the tempting offer; but deeming it not just to his family, to deprive them of the inheritance to which their birth entitled them, notified to the government, that he would go over with his son to visit the tombs of his ancestors, and if the chiefs of the kingdom chose to accept his son for their King, he would leave him.

The Syed accordingly repaired to Acheen, about the middle of the year 1815, when the assembled chiefs of the kingdom solemnly invested Syf-ul Alum Shah, the Syed's second son, with the sovereignty, and swore allegiance to him. Tuankoo Packee, the powerful chief of Pedir, attending in person and bringing a powerful aid to support and establish the new King.

The deposed King sought a refuge in a remote corner of the kingdom, where he continued in indigence and obscurity until the disaffection of Tuankoo Packee, the Pedir chieftain, and his abandonment of the new King, on account of some pecuniary claim, restored him to some degree of consequence by serving as a tool to further Tuankoo Packee's personal views of ambition.

The new King, Syf-ul Alum, quitted the capital and retired to Telluswamoy on the eastern coast, where he has since remained, but the government at Acheen (such as it is) has been carried on in his name, and the duties at the capital

and at the other ports, excepting those dependant on Tuankoo Packee, levied under his authority.

It has throughout been the uniform and cautious policy of the government, to avoid any participation in the internal disputes of the country, or to give any countenance to one party in preference to the other; but it has always been an object of just and anxious desire to see some settled government and fixed authority established, with which we might form arrangements of a permanent nature for the security of our commerce, and for the mutual advantage of the subjects of both states.

To effect this very desirable purpose, Capt. Coombs was dispatched by the government of Prince of Wales's Island, in Jan. last, on a mission to Acheen, instructed in the first instance to ascertain whose authority was recognized by the chiefs and people, in what hands the sovereign power was lodged, and having ascertained this point, empowered to negotiate a commercial treaty with the actual authority.

Capt. Coombs repaired to Acheen, where he was met by the great chiefs of the kingdom, and the purposes of his mission being explained to them in a full assembly of what may be termed the national council, the chiefs distinctly and unanimously gave him the most formal and solemn declaration of their unchanged adherence and allegiance to their new sovereign, Syf-ul Alum Shah, declaring that they had renounced for ever the authority of Jowhar Allum and would never more admit him to reign.

A few days only previous to Captain Coombs' arrival, a brig under British colours belonging to the port of Nagore had been captured and plundered off the coast by Tuankoo-Packee, and the Pedir crew made prisoners. This outrage, on being made known to Capt. Coombs, was represented by him to the assembled chiefs, who expressed their deep sense of the disgrace such acts brought on their country, and their resolution to call the Pedir Chief to account. It must be understood that the Sagis or great chiefs of the three principal divisions of the kingdom of Acheen proper, form the council of the state, and of late years have in fact more than participated in the sovereign power.

After a stay of a fortnight at Acheen, having been referred by the chiefs to Syf-ul Alum as the acknowledged king, who alone had the power of making any treaty with foreign states, Capt. Coombs had intercourse with Syf-ul Alum, and then repaired to Calcutta to submit his report and the result of his enquiries to the governor general.

It is quite an error to suppose that a counter-revolution had again been brought

about, and that the ex-king had been successful in any attempt to recover his throne or overthrow what he and his friends designate as the *Usurper*. Such an impression had been industriously disseminated in Bengal and Prince of Wales's island, and has found partizans of no inconsiderable weight to support it; but it has been grounded on a misconception of the transaction that took place at Pedir, which has been also greatly misrepresented.

It was asserted on the authority of some persons who had touched at Pedir, that a deputation had been received from Acheen, sent by the great chief of the kingdom, to tender their submission to Jowhar Allum, to solicit pardon and to invite him to return to the capital and resume his authority, and at the head of this mission was the Shabundar of Acheen, the principal executive officer of the state.

The main facts were true, such a deputation was sent and was confided to the Shabundar, who was sent to accomplish by stratagem, a purpose the chiefs feared they could not otherwise effect. Under pretext of a respectful embassy to entreat forgiveness, and to invite the ex-king to return to his throne, the Shabundar was employed to get possession of his person as a prisoner to the Sagis. Finding himself unable to effect his object, the Shabundar determined on getting rid of the new king's most powerful adversary, Tuankoo Packee, and accordingly seizing his opportunity he stabbed the Pedir chieftain to the heart. He soon afterwards fell himself by the hands of the Tuankoo's adherents. Thus terminated the fictitious embassy, said to have been sent to invite the deposed king back to his throne. So thoroughly the reverse of any such design existing, or of the leading chiefs of Acheen proper, having again changed sides, no later than December, a deputation headed by one of the principal chiefs, a brother of one of the Sagis, arrived at Tilluswamoy, to entreat Syf-ul Allum to return without delay to the capital.

It will be clearly evident from the foregoing sketch that the state of the kingdom is as nearly as possible the same as it was when Captain Coombs left it, in February last year, and as it has been since the end of 1815. The deposed king remains at Pedir, acknowledged by the chiefs immediately dependant on Tuankoo-Packee; whilst Syf-ul Allum continues to reside at Tilluswamoy, acknowledged and the government administered in his name, at the capital; but in effect, the whole authority exercised by the Sagies or great Acheen chiefs. On one hand, the party of Syf-ul Allum appears to have gained strength rather than lost it, by the removal of his

powerful adversary the Pedir chief, whilst on the other, the hopes of the old king have been recently revived, by his professed expectation of support from a powerful friend which he has interested in his cause.

It is not however likely that either of the two rivals will ever be able to establish any thing like efficient authority without the intervention of foreign aid and council."

The above was published 23d March 1819, about the time when Sir Stamford Raffles effected the treaty mentioned, *Asiatic Journal*, vol. viii. p. 511.

Picture of a Sultan.—The following was published in the *Penang* paper; but as several articles which lately found their way into the Indian prints under the date of Penang, make it apparent that it is the object of some partisans at that island, to depreciate the acquisitions in territory and influence, which Sir Stamford Raffles has effected for the Company; the description of the Sultan of Acheen, is perhaps not a faithful picture, but a studied caricature.

Extract of a letter from Pedir Roads, by a passenger on board one of the transports.

June 2.—Our touching here may prove of some public use, as it will give us an opportunity of taking to Calcutta the latest and most authentic intelligence respecting the state of this country, and of the affairs of its sultan Jowhar Allum. Col. O'Hallaran whose ideas of a sultan were of course all founded on Nabobs of Lucknow and other great princes of India, landed here in state shortly after our arrival; his surprize and embarrassments were rather amusing, when he saw a poor creature surrounded only by a set of half starved chooliahs, sitting in a wretched common Artap house. The king, however, behaved with much civility, and talked a great deal about his future plans and operations. He said (which I can scarcely credit) that the late commissioners had promised, by their treaty, to send him immediately from Penang a lac of rupees, and a large supply of military stores, and that his prime minister had gone to receive them. He applied to the officers of the 20th reg. for a book on drill, saying that he was going to raise a corps of 600 men, and that the moment his military stores arrived, he intended to march, with his great guns in front, all along the sandy beach, from Pedir to his good city of Acheen! I dare say he will never be able to execute one half of his present intentions, for he does not appear to have one respectable native near him, and seems to

possess a considerable portion of that kind of good nature which generally goes by a harder name. I make no doubt, if this story about the money and military stores be true, the former will soon be squandered away, and the latter share the same fate with the handsome service of porcelain which Lord Minto sent him some years ago, but the greater part of which was shortly after hawked about Penang for sale."

We have inserted the last article chiefly as an example of the mischievous uses to which a free press may be perverted in India, if it be suffered to degenerate into an organ of jealousy, and an engine of counteraction between the Company's own servants. But suppose the above representation of a harassed and distressed sultan, struggling under the difficulties of divided dominion and precarious power, were true, that would not detract from the value of any territorial cession which he had made with the Company; so that the political position and influence which the treaty negotiated by Sir Stamford Raffles has acquired is the main thing to be appreciated.

Character of the Acheenese.—By private letters, containing the results of recent observation, the Acheenese are represented as in the highest degree treacherous, which corresponds with what we have before heard of them; and it appears that they have lately endeavoured to cut off a French gentleman at Acheen, whom they robbed of some fowling pieces and some shooting equipage. Mr. Deard, however, by quietly surrendering these, and making no effort at resistance, but calmly preserving his temper, saved his life, and succeeded in swimming to a distant point of land. By creeping along the shore he at length reached his boat, although the villains fired at him twice with his own fusil. He had been long amongst them, and had been deceived by placing a degree of confidence in them which they did not merit.—*Calcutta Journ. April 23.*

PALEMBANG.

Relations of the Dutch with the Native powers.—The *Batavian Courant* of the 31st July announced, that M. Muntinghe, the commissioner at Palembang, had been forced to retire from that place, with the troops, to the island of Banca.

A letter received in Calcutta, dated Batavia, July 28, communicates some particulars of this occurrence:

Mr. Muntinghe, the resident at Palembang, arrived here yesterday, after be-

ing driven from thence by the Malays; they opened a battery of thirty pieces of cannon on them, which the Dutch soldiers stormed threentimes and were as often repulsed; after a loss of 117 men and two officers, killed, Mr. Muntinghe has gone after the governor (who is to the eastward) and nothing further will transpire until his return."

The *Penang Gazette* of 17th July, after mentioning the fact in concise terms, adds some explanatory details:

The *Penang Gazette* of the 17th of July mentions, that the Dutch were driven from Palembang, with the loss of many men, but not by the chief who was set aside by the Netherlands' government, on the restoration of the Dutch possessions, but by the reinstated sultan, on whom implicit dependance had been placed. It may be remembered, that, while Java was under our dominion, Palembang was ceded by the Sultan to Great Britain, on the express condition that he should be maintained on his throne and supported in his dignity by the British government. By a distinct and separate article in the treaty of 1814, this island was also transferred to the King of the Netherlands; but on the conditions, and subject to those compacts which had existed between the King of Great Britain and the Sultan. The first act, however, of the Dutch commissioners who were sent from Java after the transfer of Palembang, was to depose the Sultan whom we had protected, and seat another on the throne. It is this other who has expelled the Dutch from his territories.

A letter, dated Batavia, July 19, conveys some further insight into the origin of the contest, and the manner of the explosion. This statement coming from a Dutch source, rests on private authority.

Commissioner Muntinghe had concluded some negotiation with the Sultan (the object not distinctly known), one condition of which stipulated that three hostages, princes of his family, should be surrendered to the Dutch. The time fixed upon was seven in the evening; but Muntinghe dispatched a messenger, requesting that an earlier hour might be appointed. His envoy found the gates of the Kraton closed, and saw preparations making for battle, which induced him to proceed to the commanding officer of about 200 troops, stationed near the palace, who were all ready to embark for the other side of the river, where Muntinghe was stationed. The troops embarked hastily with their baggage, but were fired on from a battery of heavy guns, upwards of 30 in number, and suffered

considerably. A corvette and schooner, stationed in the river, opened a heavy fire upon the Kraton and battery, under the cover of which the troops rushed to the assault. They found the outer gate open (a trap!), but on proceeding to the second, met with so warm a reception, that they drew off with the loss of several men; and about this time the fire from the vessel slackening for want of ammunition, the troops were all embarked, and the place entirely evacuated. They have since reached Banca, and Muntinghe has arrived here from that place. He has proceeded after the governor, who is absent in the interior. The number of troops at Banca is stated at 800; but a large expedition is ordered to be in readiness from hence of 1,500 or 2,000 men. Nothing will be done until the receipt of the governor's orders, which he may find expedient to give in person, and will probably return for that purpose. The natives in the mean time will have leisure to strengthen their defences. They are said to have some heavy guns, which are conjectured to have been obtained from the wreck of the *Alceste* frigate. The Dutch talk of sending one of their 74's with the troops, for the purpose of demolishing the works by the weight of metal, and if such a ship can get up the river, it is supposed she will effect that object.

Nor does it appear that they have been allowed to remain in quiet possession of the island of Banca, to which they retired after this defeat.

In the *Supplement to the Madras Gazette* of October 6, it is stated that the news was confirmed of a revolt of the natives of Banca against them. There is every reason to conclude, therefore, that the dominion of the Dutch in these possessions will not be easily established.

Relations of the Dutch with the English.—This subject is mixed with the preceding in a letter from Penang, received in Calcutta, Aug. 21.

Since my last we have received intelligence of the Dutch at Palembang having made the whole of the British subjects, whom Mr. Raffles sent to Palembang, prisoners, and sent them to Batavia. A few days subsequent, the natives of that place rose on the Dutch: the latter defended themselves till they could embark in boats, which, under favour of the night, they succeeded in doing; and, with the loss of ten men, abandoned Palembang and proceeded to the mouth of the river, where they embarked in a brig for Batavia. The Dutch government intend to dispatch, immediately, an expedition against the place.—*Oriental Star*.

PADANG.

Relations of the Dutch with the English.—The *Batavian Courant* of 1st May confirms the intelligence of the surrender of Padang to the Dutch authorities, by an order from the supreme government in British India, as contained in the following paragraphs, published in the Penang Gazette of the 3d July.

It is well known that Mr. Du Puy, who has sent last year to take possession of the Dutch settlement of Padang, on the west coast of Sumatra, refused to receive that place on the conditions prescribed by the British lieut. gov. of Bencoolen, and that this officer unsuccessfully returned.

The governor has since received information from the British supreme government in Bengal, that positive orders to deliver the residency of Padang to the Dutch authorities, have been forwarded to the lieut. gov. of Bencoolen.

Mr. Du Puy has, in consequence, been appointed a second time commissioner as well as resident of Padang, and sailed for that place on the 26th April, in H.M. frigate *Wilhelmina*, under command of Capt. Dibbets, knight of the military order of William. On board this ship are also several civil officers and troops for the garrison of Padang.

JAVA.

BATAVIA.

Political—Unofficial.

State of the Interior.—The representations on this subject circulated by the Dutch differ widely from the accounts transmitted thence by visitors from other parts of India permitted to trade there.

Batavia, Aug. 22.—By accounts from Samarang, we learn that his Exc. the governor, and the Baroness Vander Capellen arrived there on the 29th July, and set out on the 15th of this month on a journey to the courts of Sourakatta and Djoc-jocarta.

The crops hitherto have been very productive, and the corn still in the field promises very well. These favourable circumstances led the native population fully to appreciate the advantages which the measures of the government procure them; since the direct sale of most of the fruits of their industry, and the circulation of money thereby occasioned, afforded them indeed a degree of prosperity which they probably never before enjoyed.

Batavia, Sept. 30.—Extract of a letter received at Penang.—Insurrections have occurred in some districts of Java owing to the dissatisfaction of the natives under the unexpected restraints imposed by the Dutch. A plot had been discovered at

Tangerang, in which some Chinese were concerned, eight of whom were taken into custody and sent on board a guard-ship. The Dutch troops, in the midst of this alarming situation of affairs, were far from being in a state of perfect subordination. One soldier was shot on the 21st September for stabbing his own officer, and three more were under sentence of death for similar offences. The practice of the Dutch government, in employing Malays and Javanese as sailors on board their vessels, in too great a proportion to the Europeans, had led to some scenes of horrible atrocity; these wretches frequently rebelling and murdering their officers. No less than four small vessels of war, within a few months, had been lost in that manner. These events had induced a determination on the part of the Dutch government, not to trust any of their vessels with a majority of Malays and Javanese on board, and a supply of sailors would consequently be required from Europe.

Expedition to Palembang.—Batavia, Aug. 22.—After conferences held at Samarang with Mr. Mutinghe, commissioner for Palembang and Banca, Maj. gen. de Kock, and Admiral Wolterbeck, the measures have been arranged which are to be employed against the sultan of Palembang, Machmoud Budroedin. Admiral Wolterbeck has the command of the expedition destined for that place.

Commercial.

In January 1819 the commissioners-general for Dutch India issued the following *Proclamation* for controlling the natives in their commercial transactions.

Proclamation.—As we are sufficiently sensible that the common islanders do not yet possess the judgment and penetration which are necessary to treat upon equal terms with others, in matters relative to their interest; and as we constantly intend to fulfil the duty incumbent upon us, to protect, in every way, the native population, we have perceived the necessity of protecting them from deception, and from the abuse that may be made of their ignorance. For these reasons we have thought fit to decree, and we hereby decree as follows:—1. No contract or agreement whatsoever, between Javanese and others not Javanese, or between Javanese and their governors or chiefs, shall be valid, nor considered as valid in justice, till they have been duly registered by the resident of the place where the contracts are to operate.—2. No contracts shall be entered into with the heads of villages alone, but individually with every native, who is in any way bound by it, &c.—3. Contracts for plantations, or delivery of growing crops which may be completed in a

year, shall not be entered into for longer than a year; but in case the plantation, on delivery of these productions, requires more than a year, contracts may be concluded for such longer period.—4. Individuals are allowed to appoint overseers over their manufactories, or over the plantations of any kind of produce to manage the same, and for other similar purposes to divers planters or workmen in their labour; but their overseers shall exercise no authority over the people, except as regards their work, and all are bound in the ordinary and daily affairs of police, &c. to obey the orders of the chiefs of their districts confirmed by the government.—5. The residents shall not register any contract till they have duly convinced themselves of the identity of the persons who appear as the contracting parties, and of the entire concurrence of these parties, who, to this end, must personally appear before them; and these officers are not only bound on the one hand to abstain from all direction or influence, but also, on the other hand, to neglect nothing to instruct those under them, when they enter into obligations of their rights and interests; to prevent as far as possible all deception, and not to suffer the natives, by the suggestion of ill founded hope or fear, and still less by means of threats or constraint to be induced, in spite of themselves, to enter into engagements which do not entirely coincide with their own free will and choice.—The assistant residents and overseers of the revenue shall take care that no extension be given to the obligations in question which is contrary to the contents of the contract, and shall for this purpose receive from the resident an extract from the register of the contracts of the residency to which they belong, each as far as he is concerned; and that nobody may pretend ignorance of the present decree, it shall be proclaimed, posted up, and published, in the Dutch and native languages, in all the usual places. Given at Batavia, the 5th of January, 1819. The commissioners-general for Dutch India. By their order, the secretary-general R. D'Ozy.

The new organization published by the commissioner-general had greatly curtailed the advantages arising from the trade to Java, so far as related to British ships or manufactures; restrictions having been imposed, which, from the terms of the treaty concluded between the two nations, were not at all expected.—*Bombay Courier*, March 18.

The Asiatic Journal, vol. viii. p. 192, contains the abstract of a decree confining all vessels from Europe or America, or from the ports of European powers in Asia or Africa, to enter and unload at

Batavia, unless after arriving there they should obtain a special permission to proceed to Samarang and Sourabaya.

The government, finding this system would not answer, as there are not vessels enough of the colony to bring the produce to this city, determined, on the 25th of June, to open the two ports before-named, making it first necessary to petition for consent. A vessel proceeding to either of these ports must complete her lading at the one first visited, not being allowed to visit more than one, neither to stop here to complete it should she not succeed. All the vessels coming to the island must, by government regulations, first visit Batavia.

LOCAL OCCURRENCES.

Natural Phenomena.—Accounts from Sourokerts mention, that on the 8th of March, in the territory of Diagorogo, it rained so heavily for 24 hours, that a number of the hills burst with the water. The hill of Paroda was rent in five different places, to the length of three roods in each place; three houses were buried in the earth, and a Javanese was killed. The hill of Somleo was rent in five places; that of Tromper in three; Maughe in three; Passes in three; and Boctollo in three. Masses of earth rolled down from these hills into the rivers Kayen and Klito, whereby 30 houses were destroyed, and 20 sheep killed. On the 29th of March, a severe earthquake was experienced in Djokjokarta, in the direction from the northwest to the south east, accompanied with a noise like the driving of a great number of carriages. The shock was three times repeated. In the hussar barracks, the sabres which were hanging on the wall, struck so violently against each other, that the officer on guard thought that the men were fighting.

BORNEO.

DUTCH SETTLEMENTS.

Political.

Relations with the Native Powers.—May 14.—Maj. Nahys, knight of the military order of William, who in November last was sent by the Commissioners-general to the island of Borneo, has lately returned from thence. He has entered into contracts with the Rajahs of Pontiano, Semah, and Mampauwa, by which the interests of the Dutch government and that of the Rajahs are closely connected together. The settlement of Bantirassang, which he visited, was found to be in a progressive state of prosperity. — *Batavian Courant*.

Commercial.

Accounts from Borneo represent that
Asiatic Journ.—No. 52.

the English ships are allowed to trade on that coast, by paying a duty of six per cent on all goods sold, and 100 dollars per chest for opium.

Trade to the eastward is represented as being extremely dull. No coffee or pepper whatever to be procured. — *Oriental Star*, Aug. 31.

CELEBES.

DUTCH SETTLEMENT AT MACASSAR.

Operations against Aboe Bakar. 1819, August and Sept.—Col. Lafontaine, commanding the troops of the Netherlands at Macassar, has sent to the government a report of his operations against Aboe Bakar, who has been for some years the terror of the interior of Celebes, and all means employed to seize him had been fruitless, owing to his address, and the great number of his adherents. The civil and military authorities of Macassar judged, that the best means to destroy his influence would be to induce him to fight a battle. For this purpose, when in August last he made a fresh incursion into the territory of the Netherlands, he was suffered to approach without opposition to Beba, only three leagues from Macassar, which was thought the best position to execute the plan intended. Colonel Lafontaine, with 220 men from Fort Rotterdam, advanced towards the rebels, while a body of auxiliary troops surrounded the village of Beba, to cut off the retreat of the insurgents, who were there to the number of 2000. On the 21st at day-break our troops advanced upon Beba; they soon met with an armed band advancing towards Col. Lafontaine; it was at first doubted whether they were allies or enemies, but this doubt was of short duration, for when they were only a few paces distant, Aboe Bakar attacked with extraordinary fury, with sabres drawn, our little detachment of Europeans then with the Colonel. An obstinate combat ensued; but our men, following the example of their brave commander, performed prodigies of valour, and put to flight the assailants, who lost 150 men, while a great many more were killed or wounded by our allies. Aboe Bakar, with several of his relations and chief men of his party, were found dead on the field.

Among the wounded on our side are Col. Lafontaine, who received a sabre cut on the thigh, also the first Lieut. Van Doornum, and the Capt. Inspector Lucasan; the second Lieut. Clarison was killed. Col. Lafontaine bestows the highest commendations on our troops, and on Capt. Bouwens, and Lieuts. Van Doornum and Bodemeyer; Capt. Lucasan, who constantly fought at the side of the Col., was at the expedition as a volunteer. — *Batavian Courant*, Oct. 1.

LOCAL OCCURRENCES.

Accounts from Macassar state, that the vaccine inoculation makes great progress there, above 1,000 children having been inoculated by the surgeon, Mr. Godepoy, with matter brought from Java by Gen. Severatus. The King of Macassar has had all his children and several of his relations inoculated, and measures are taking to extend this useful discovery throughout the island of Celebes.—*Batavian C. June 11.*

EASTERN SEAS.

Native Pirates.—Extract of a letter received in London, dated Calcutta, 1819, Feb. 21. I believe I mentioned in my last that the Java seas were infested with pirates, and truly I found them so; for on my arrival there on the 10th of March last, we were attacked at night by four very large ones, carrying, as I suppose, from 50 to 60 men each, and after fighting them for nearly two hours and a half, the rascals thought proper to sheer off; lucky, indeed, this was for us, for had they continued the contest a quarter of an hour longer, we should have been all hands murdered, having only six cartridges left. On the following morning we saw them quite plain from the decks, but they did not think proper to approach us. I have since sunk a pirate to the eastward, but the villains had left her before my boats could get on board. There is never any mercy shewn by them, as they always murder every one they take.

Accounts from Batavia on the 31st May, state, "the pirates become every day more and more daring: they have but lately seized on several vessels, and capture our fishing-boats in the very sight of our harbours."

The brig Hope, Capt. Fromstend, we understand, has been taken possession of by the pirates between Samarang and Batavia. The captain and crew had taken to the boats and landed at the former place.—*Penang Gaz. June 12.*

Dutch Pirate.—A Dutch pirate has made his appearance in the eastern seas. A man named Thunderwold, formerly a resident at one of the outports in Java, whose property had been confiscated for some offence committed against the Dutch government, has armed and manned two brigs, one mounting 22 guns, and with six praus, is committing great depredations in those seas. It is stated, that he has attacked and sunk two Dutch cruisers and is otherwise annoying their trade materially. A Dutch 74 and a frigate are gone in quest of this marauder, who is reported is now cruising about the straits of Singapore. We do not, however, learn that he has molested any vessel under British colours.—*Ibid.*

CHINA.

CANTON.

Clerical Appointment.—The Rev. H. Harding has been appointed chaplain to the factory at Canton, the Rev. Atwell Lake, formerly chaplain at Penang, having declined the appointment.

Company's Shipping.—Arrived at Macao, Apollo, 20th August; Cornwall, 30th ditto; Lord Castlereagh, 1st Sept.; Lowther Castle, Charles Grant, and Kellie Castle, 2d ditto; Essex, 6th ditto; Vansittart and Matilda, 8th ditto; Inglis and Marquis Camden, 16th ditto.

NEW SOUTH WALES.

SYDNEY.

Festival given to the Natives.—On the 28th Dec., 1818, in pursuance of the invitation of his Exc. the Governor, announced in two Gazettes, many different parties of the aborigines of the country met together in one large assembly, to partake of the hospitable entertainment offered to them by the hand of government. Although the day was intensely warm, it was not altogether unfavourable for the occasion. At 11 in the forenoon his Exc. the Governor, accompanied by the Lieut. governor, the members of the Native Institution, and several other gentlemen, entered the circle where these children of nature were seated. Chairs were provided for the chiefs of tribes, detached and advanced from the line of the grand circle, which not only distinguished them personally, but shewed the number and strength of their several tribes, which were placed to the left of their respective chieftains, and consisted of the families of each of them.—The number thus assembled very far exceeds that of any former occasion, being 300 persons, among whom were some tribes who had travelled from beyond the Blue Mountains to be present at this festival, and who were distinguishable from the natives on this side, by their hair being decorated with a number of white feathers, and the teeth of wild animals suspended in rude festoons over their foreheads; their bodies and faces were also painted with red and white ochre, which rendered their appearance singularly *outré*. There was, however, a degree of confidence in their manner, which indicated a consciousness of security in the protection of European friendship, a circumstance, perhaps, the more to be wondered at, when it is considered that this was the first time that several of them had held any intercourse with white men, or had an opportunity of seeing the advancing improvements of the interior settlements of this colony. There were other tribes from the north and south, who had travelled a distance of upwards of 100 miles. After his Exc. had conferred some

badges of chieftainship, and of merit on the deserving, the more interesting part of the ceremony took place: this was the introduction of the Native Institution into the circle, where they were shown to relatives and friends, and specimens of their progress in reading, writing, and drawing; this latter acquirement seemed to delight the elder natives beyond any thing yet presented to them; which was manifested by bursts of loud laughter, leaping upwards, and other wild gesticulations, the spontaneous offerings of uncultivated nature.

When these ceremonies had passed, the whole of the native party were regaled with roast beef and plum-pudding, and a fair proportion of exhilarating beverage.

On the Governor's retiring from the circle, the guests, with one accord, and from one impulse, rose and gave his Exc. three cheers, not knowing any stronger or more intelligent way of expressing gratitude for his kindness, and for the protection of the British government.

Progress of the Colony.—The Sydney Gazettes of April 1819, contain several striking proofs of the colony in agriculture, strength, and prosperity.

Government Marine.—On the 7th of April there were in the harbour of Sydney, four king's vessels and five colonial ones, in the service of the local government, besides the trading vessels belonging to and visiting the port. The names of the former were: H.M. brigs Elizabeth, Henrietta, Lady Nelson, and cutter Mermaid.

Ship Launch.—We had the pleasure on Wednesday, the 7th of April, to witness the launch of the new schooner built at H.M. dock-yard at Sydney, by command of his royal highness the Prince Regent, as a present for the King of the Sandwich Islands, and named by his Exc. the Governor "*The Prince Regent*." The novelty of the sight attracted a great number of spectators, as well on shore as on the water; and the stately manner in which she first saluted the "retiring wave" afforded general satisfaction. She is a very fine vessel; her burthen 40 tons; and will be dispatched to the King of the Sandwich Islands as soon as completely rigged and properly equipped for so long a voyage.

Holiday Race.—The notice annexed is copied literally, as a specimen of correct and elegant style—not to say that a piece of writing, free from tautology, cannot be easily abridged.

"His excellency the governor's permission having been obtained for a race on Whit-Monday, upon our neat and very handsome course, the following stakes are contributed for, by amateurs. The following is the account of prizes to be

run for, viz.—1, An elegant silver cup, of English manufacture. 2, A silver bowl, cover, and ladle. 3, A saddle and bridle of the first London make and fashion. The horses (not particularizing the gender) are to be entered for running at the house of Mr. Robert Hazard, in Castle-reagh-street, *previous* to the day of running; which, it is to be repeated, will be on Whit-Monday, falling upon the 31st of May; by which time those horses that shall be considered by their owners worthy of contending for the palm of victory, will have sufficient time to animate, and drown the remembrance of their ordinary labours, in the full flowing tide of an ardent expectation, so that to outstrip their speed, must be at least to rival Pegasus himself. Our breed of horses are known to be good, and we must, therefore, look forward to some pleasant sport.

School Examination.—At an annual examination of the public schools at Paramatta, a black native girl, 14 years of age, who had been three or four years in the school founded by Mrs. King, bore away the chief prize; thus proving the aborigines to be susceptible of mental improvement in a sufficient degree to adapt them for the relative provinces of employment and utility in civilized society.

Rural Economy disturbed by Insects.—The Gazette of 17th April, after recording the fact in the following words,—"*The floods, the rains occasioning which, together with the intervals of heat necessary to the hatching of the beetles' eggs, have been more generally destructive of our field and forest grasses than they were in 1812, which also was a direful season*,"—gives, for the assistance of the farmer and grazier, the communication of a correspondent in these words:

"I cultivate, in the vicinity of Sydney, an extensive farm, on which I have a garden and orchard. As February finished with rain, so March began; and during these rains I first perceived the caterpillar, in numbers that astonished me; and what was to me no less unaccountable was, that they appeared to have attained their full growth when first observed, as I never afterwards perceived any difference in their size. Of their origin, therefore, I can form no possible conjecture. The grazing ground was entirely covered all about me; and in the space of a yard square of grass four or five inches high, I collected as many insects as filled a three pint measure. My garden contained most table vegetables, of which all escaped but the asparagus, the leaves of which were a good deal destroyed, but the haulm not touched. Potatoes, cabbages, calivances, and other pease and beans, were all untouched; but the asparagus completely covered, as I really believe there were from eighty to one hundred in many instances

upon a single stalk. Horses and horned cattle seemed to feed that swarmed, and most days devoured prodigious numbers with the grass. While I witnessed the devastating progress of this little animal, I was disheartened by their number, and the extent of ground they covered, from suggesting any means to destroy them; but I am now sorry that I made no experiment of the kind, as I had much time upon my hands, and had I been so fortunate as to make any discovery of promised utility, even upon a slender scale, it might have benefitted future years. I remarked, that the only spontaneous production of the field or heath that they obviously appeared to shun was the fern. In the afternoon of Sunday, the 5th, as I entered a beaten track, the ground appeared to be in motion; occasioned by the innumerable multitudes of caterpillars moving all in one direction. They were in single rows, joined head and tail together, in one connected line composed of many hundreds. They were travelling directly east, and pursued their course, surmounting every impediment that opposed them; and if either of the rows were disunited, they came again into contact, not joining with any other than that from which they had separated. I might have slain thousands in a moment, and have thus avenged their unwelcome incursion upon my grounds, to the inevitable injury of my stock; but all this regularity of motion, the precise order in which they conducted their retreat, inspired me with sentiments of forbearance, and I consented to their escape. Night coming on, I left them to pursue their march without interruption, and the day following scarcely any were to be seen in those places they had so lately swarmed. Whither they went I know not, nor do I know from whence they came; but I am wholly of opinion, that had they appeared two months later in the year, the whole of the wheat then up must have been inevitably cut off. I have nothing more to add than the assurance, that so far from imagining they have any property inimical to vegetation, the fields about my neighbourhood, which were literally laid waste, have already recovered their verdure, and that the growth of the grass appears better than when it had been eaten off by cattle.—I am, Sir, your very humble servant, VERITAS."

Piracy.—March 6.—The schooner *Young Lachlan*, which, for the convenience of loading, was at anchor in the river abreast of Capt. Howard the owner's residence and store on Macquarie Point, was on the night of Saturday last carried out of the river by a band of pirates. The master of the vessel was gone into the country; and it appears that the under deck, &c. were left on board, and that

the lower sails were bent. There being a strong land wind, and the night dark, and the position in which the vessel lay outside the harbour enabling the pirates to get her over to the other shore without being observed, she was not seen by the guard at Mulgrave battery. At day-break the event became known, and two government boats, with the pilot, and a party of the 84th regt. were dispatched in pursuit. Soon after mid-day, Mr. Birch's sloop, which was stripped of a mere hull, was got ready to follow with another party of the 48th, Captains Howard and Bunster accompanying Capt. Kelly in this vessel, which being a good sailer, must overtake the schooner should they get sight of her.—The following are the names of the pirates:—Malc. Campbell, Geo. Young, John Wallis, Dan. Clarke, Robt. Edou, Obad. Savage, Pat. Cotton, Hy. Cooper, Wm. Evans, Wm. Green, Sam. O'Hara, Chris. Kead, and J. Cartwright.

Increase of Rats.—The quantity of rats now in the colony becomes surprising. They are imported by every vessel that arrives; and neither cats, traps, nor terriers can keep them under.

The following is an abstract of the colonial population in New South Wales, as per muster 1817 and 1818:

In 1817, the muster took place from October 6 to November 25 inclusive, when there were 7,309 souls at Sydney; 3,124 at Paramatta; 4,257 at Windsor; 1,922 at Liverpool; 553 at Newcastle; making a total of 27,165.

In 1818, from September 28 to November 11, inclusive, there were 9,328 souls at Sydney; 4,017 at Paramatta; 4,568 at Windsor; 2,597 at Liverpool; 784 at Newcastle; making a total of 21,294.

The population of Van Dieman's land amounts to 3,760; thus making a grand total of 25,054 souls.

Account of cultivated Lands in New South Wales, for 1817 and 1818, taken respectively in November.

Recapitulation.

The total increase of cultivated land in one year is 54,491 acres.

In 1818 the quantity of wheat reaped was 15,242 bushels; of maize, 41,916 bushels.

The increase in cattle is, horses 603; horned cattle, 6,457; sheep, 6,680; hogs, 6,999.

CUMBERLAND ISLANDS.

Loss of the Frederick.—We are concerned to have to report the unfortunate loss, sometime in Sept. 1818, of the *Frederick*, Capt. Williams, of Calcutta, on one of the Cumberland Islands, between Sydney and Torris Straits. She had lain at anchor all night, in company with two other ships; and while getting under weigh in the morning went broadside upon a reef, and canted on her side. The captain and five of the passengers and crew were picked up by a free trader, and landed at Timor: but it is feared that 23 of the crew have perished, who were in the long-boat, and falling in with a current in Endeavour straits, which was running at the rate of eight miles an hour, could not reach the Wellington, as those in the jolly-boat did.—*Penang Gaz.* June 12, and *Mauritius Paper*.

MAURITIUS.**GOVERNMENT ORDER.**

Aug. 14.—It having been represented to the Major-general commanding, that many of the foreigners who have arrived in this island since its final cession by France to the dominion of Great Britain, have proceeded hither upon the invitation of friends resident within it; that many of them when they arrive have no visible means of gaining a livelihood, and engage, in consequence, with less reflection in any undertaking or pursuit which holds out the prospect of an immediate advantage, without considering in how far it may be authorized and lawful: he has deemed it proper to take this opportunity of signifying that the government will not hereafter admit this plea as a sufficient ground for granting its sanction to such persons remaining and settling in this colony; and he therefore hopes that after this warning, the inhabitants will abstain from inviting persons to come out, unless they shall have previously obtained the permission of government to that effect.

The above order alludes chiefly to adventurers engaging in the slave trade.

CIVIL APPOINTMENTS.

July 31.—Mr. T. E. Viret, to be private secretary to the Major-general commanding, in the room of Mr. Blane, resigned.

Mr. D. Vinay to the situation of officer of police, in the room of Mr. A. Mangeot, nominated civil commissary of the district of the river du Rempart.

Surg. J. B. Kell, to be vaccinator at Grand Port, and to have medical charge of the government blacks and convicts in that district, vice Markham.

Dr. Bell, to be vaccinator at Black River, and to have medical charge of the government blacks and convicts in that district, vice Shanks.

Assist.surg. W. Milligan, to be vaccinator at Flacq, and to have medical charge of the government blacks and convicts in that district and Rivière du Rempart, vice Bell.

Aug. 16.—Mr. Leguen, to be sub-inspector of guildives and caution licences for the district of Grand Port, under the orders of the collector of internal revenues.

LOCAL OCCURRENCES.

Embarkation of the 22d Regiment.—On the 27th July, the 22d regiment sailed from this port on board the transports, which were sent to convey them to England. They had served in these islands since the year 1810, and acquired the esteem and regard of the inhabitants; the principal of whom waited upon Col. Dalrymple, with a parting address, expressive of esteem, regret, and remembrance of services in terms which did honour to both parties. A ball was given to Mrs. Dalrymple. The general order of the 22d conveys the acting governor's entire approbation of the conduct of the regiment, and corresponding acknowledgments to Col. Dalrymple and the officers.

Contagious Fever.—Letters received in London give an alarming account of a contagious fever which prevails in that seat of various and scarcely intermitted visitation, the island of Mauritius. 90 Europeans and 600 natives are stated to have died. Martial law has been proclaimed to enforce the regulations adopted for the safety of the inhabitants against the progress of the disease.

Regulation interesting Merchants.—The British Consul at Bordeaux has addressed a letter to the President of the Chamber of Commerce of that port, informing him that "by virtue of a royal proclamation, framed in council, on the 28th of May last, no foreign vessel will be admitted into the ports of the Isle of France, unless such vessel be provided with a certificate from the British Consul residing at the port from whence she cleared out, which document must certify, that the regulations, enacted by the

412 *Asiatic Intelligence.—Red Sea.—Cape of Good Hope.* [APRIL,
said proclamation of the 26th of May, have been promulgated by the government of the country in which the signing Consul is resident.

SHIPPING INTELLIGENCE.

Arrival.—Aug. 14.—*Lady Barrington*, living, from Bombay, 10th July, on her way to London. Passengers: Col. and Mrs. Maxwell, and child; Capt. and Mrs. Lewis, and three children; Mesdms. Eckford and M'Intosh; Lieut. col. Stewart, B.N. I.; Maj. Cassidy, H.M. 67th; Capt. Morrison, B.N.I.; Lieut. M'Intosh, M.N.I.; Misses C. Moore and M. A. Lodwick; Mrs. W. Best, and G. H. Eckford.

BIRTH.

Sept. 13.—The lady of Capt. T. S. Begbie, 82d foot, of a son.

DEATHS.

July 28.—At Port Louis, Mrs. Mary Graves, wife of the Rev. Dr. Graves, of London. . . . In Sept. R. J. Brandram, youngest son of the late S. Brandram, Esq. . . . Lately, A. W. Young, Esq. commiss. gen. of the island.

RED SEA.

Shipwreck.—The American ship *Fawn* of Boston, was lost on the Panther Shoal in the Red Sea on the 20th of March; she was working down the sea from Mocha, and the commander having no charts, or directory which pointed out the extent of the shoal was not aware of its position or danger. The *Fawn* struck in the night under double reefed top-sails, and notwithstanding the spirited assistance which was rendered her the ensuing day, by the *Isabella*, Capt. Scarvell, and also the assistance of the American ship *Emily*, all exertions to heave her off proved abortive. A gale came on and the *Fawn* bilged, and filled before it subsided; only a small part of her cargo was saved. Capt. Austin, late of the *Fawn*, who communicates the above intelligence, came passenger in the *Isabella*, with thirteen of his crew. He takes this opportunity of expressing his high sense, and admiration of the exertions, and intrepidity, manifested by Capt. Scarvell and his officers in the alacrity with which they rendered assistance to the *Fawn*, and subsequently in their humane and generous attentions to the wants and comforts of his crew, and to acknowledge with grateful feelings the polite and friendly attention he has received on board the *Isabella*.—*Bomb. Gaz.*

Coffee Mart.—The accounts from Mocha by the last arrival confirm the former reports. The *Saco*, a solitary American, remained at Mocha for the purpose of purchasing coffee; but that cannot be effected until the new crops come in, in Nov. and Dec.—*Bombay Gaz.* Oct. 13.

CAPE OF GOOD HOPE.

INFORMATION TO EMIGRANTS.

Intended Settlement on the Fish River.—Intelligence from the Cape of Good Hope states that the news had just reached the Cape of the intention of government to form a settlement on the Fish River, and produced, as might be expected, a very pleasant impression, as the importance of the colony would be increased by this new arrangement.—*See Asiatic Journal*, vol. vii. p. 32.

Settlers taking Arms.—The two following official letters from the respective departments of the state, permit settlers to take arms for their individual use without the usual exportation license:—

"No. I.—*Downing-street, Dec. 3.*—Sir,—Earl Bathurst has received representations from several of the settlers proceeding to the Cape of Good Hope, setting forth the difficulty and inconvenience under which they are placed by the existing laws in respect to the exportation of arms and ammunition; and I have to request that you will state to the Lords Commissioners of the Treasury, that there exists no objection on his part to allow the settlers to take with them such proportion of arms and ammunition as may appear clearly intended for their individual use, leaving it to those who may be desirous to export larger quantities of these articles, to obtain the usual licenses for that purpose from the Lords of the Council; and I have therefore to request, that you will move the Lords of the Treasury to cause such directions to be given to the officers of his Majesty's Revenue of the Customs, as they may conceive best calculated to facilitate the embarkment of arms and ammunition belonging to the settlers.

(Signed) "HENRY GOULBURN.

"To S. R. Lushington, Esq."

"No. II.—*Treasury Office, Dec. 15.*—Gentlemen,—I am commanded by the Lords Commissioners of his Majesty's Treasury to acquaint you, for your information, that they have seen the copy of a letter from Mr. Goulburn, dated 3d Dec. stating the opinion of Earl Bathurst, as to permitting the settlers going to the Cape of Good Hope to take with them arms and ammunition; and I am to desire you will give the necessary instructions to your officers to allow the settlers to take with them such proportions of arms and ammunition as may appear clearly intended for their individual use.

(Signed) "S. R. LUSHINGTON.

"To the Commissioners of Customs."

DEATH.

Jan. 24.—At Cape Town, Mrs. A. Ogg, wife of Col. S. W. Ogg, of the Madras Establishment.

ST. HELENA.

Buonaparte—*The cruising squadron.*—H. M. sloop of war *Sappho*, Capt. J. H. Plunridge, arrived at Portsmouth, on the 23d of March, from the Cape of Good Hope and St. Helena, having on board his excellency General Lord C. Somerset (governor and commander-in-chief at the Cape) and family, and Lieut. Stocker, royal engineers, aid-de-camp to his lordship. Lord Charles has left the command at the Cape, until his return, with Major Gen. Sir R. S. Donkin. His lordship landed under a salute from the *Sappho*, and proceeded to London. The *Sappho* left the Cape on the 13th, St. Helena on the 27th, and Ascension on the 31st of January. Buonaparte was in good health; his chief amusement latterly was gardening. The new residence intended for him was nearly finished. Lord Charles Somerset, we understand, expressed a desire to have an interview with him, but he refused to accede to it. The *Sappho* lay three days in St. Helena; she left there the following ships:—*Conqueror*, 74, Rear Admiral Plampin, Capt. F. Stanfell; *Tees*, Capt. Rennie; *Menai*, Capt. Moresby; *Redwing*, Capt. Hunn; *Rosaris*, Capt. Hendry; and the *Leveret*, Capt. Shannon. —The *Heron*, Capt. Hanmer, was at Ascension. The *Nautilus*, Capt. Chapman, and *Sophie*, Sir William Wiseman, had left the cruising limits for the Jamaica station.—*London Papers*.

Charges found against Mr. Stockoe.—A friend has forwarded to us the substance of the charges on which Mr. Stockoe, late surgeon of the *Conqueror*, was tried. They are ten in number. Mr. Stockoe was accused of having, contrary to his

instructions, indulged in conversations with the Ex-emperor and his attendants; of having delivered to General Buonaparte a — libel (O'Meara's statement) reflecting on the conduct of Lieut. gen. Sir Hudson Lowe; of having disobeyed the orders of his commanding officer, in not returning to his duty on board the *Conqueror* at the hour specified in his instructions; of having written bulletins relative to the health of Gen. Buonaparte, though such conduct was diametrically opposite to his orders; of having, in a bulletin, declared, that the life of Gen. Buonaparte would be in great danger, should he suffer a relapse of his disorder, without being in possession of immediate medical aid; thereby insinuating that the said Gen. Buonaparte was destitute of proper medical attendance when necessary; and of having represented in such bulletin that the health of Gen. Buonaparte was in a much more alarming state than it really was; he, Mr. Stockoe having waited four hours at Longwood before he was admitted to the presence of the General, at the time when he stated the General was dangerously ill. The court found the ten charges proved; and sentenced Mr. Stockoe to be dismissed his Majesty's service; but in consideration of his former faithful services and his excellent character, recommended him to the Lords of the Admiralty to be placed on the half-pay list.—*Western Luminary*.

DEATH.

Lately, by the rupture of a blood-vessel, Mr. Valentine Joseph Munden, of the Hon. East India Company's service, son of Mr. Munden, of Drury-lane theatre.

SUPPLEMENT TO THE ASIATIC INTELLIGENCE.

EXPEDITION TO THE PERSIAN GULPH.

London.—The gratifying news has just arrived in town, that the expedition from Bombay against the Arab pirates in the Persian gulph, has been carried into effect with complete success. The principal seat of the pirates, where their marine strength was supported by a fortified hold, has been taken.

INDIAN MAUSOLEUM.

Relation of Bombay with the Guzerat.—On the 11th Oct. minute guns to the

amount of 55 were fired in expressive respect to the memory of Anund Row Guicowar, who departed this life on the 8th Oct. in the 55th year of his age. Anund Row ascended the musnud in the year 1800, and has been, since the rebellion of Mulhar Row in 1802, under the especial protection of the British. Anund Row has been for some time incapable of taking any active part in the government, and his brother Futteh Sing, who died about a year ago [vol. vi. p. 654.] was a long time regent; he was succeeded in the regency by his brother Syjee Row, who now ascends the vacant musnud.—*Bombay Gaz. Oct. 13.*

IMPERIAL PARLIAMENT.

PROCEEDINGS ON THE DEMISE OF THE CROWN.

Jan. 30.—The House of Lords met on Sunday, at half-past four o'clock, and adjourned immediately after prayers were read. The House of Commons met the same day soon after three, and, at the request of the Speaker, accompanied him to the long gallery, where he informed them, that, in consequence of the absence of the Lord Steward, the oaths to his present Majesty could not then be taken. The members then separated. Next day, in the upper house, the oaths were administered by Mr. Cowper, the clerk, to the peers present; and the Lord Steward being in attendance in the long gallery, the Speaker of the lower house, and a number of the members, took the oaths, and retired to their own chamber, where, according to custom, they were re-sworn, and the Speaker took the chair. The process of swearing in continued on Tuesday and on Wednesday, up to four o'clock, when both houses adjourned to the 17th Feb., a motion to that effect having been made in the upper house by Lord Liverpool, and in the other by Lord Castlereagh.

HOUSE OF COMMONS.—Jan. 31.

The Lord Steward (the Marquis of Cholmondeley), who had been for some time at Brighton, on hearing the intelligence of the demise of the Crown, hastened immediately to London, and at twelve this day arrived in the long gallery, contiguous to the House of Commons, where the oaths are administered to the members on the assembling of a new Parliament, before they enter the House of Commons, and proceed to the election of a Speaker. The clerks of the House of Commons were in attendance, and the members now assembled in the long gallery.

The Lord Steward took his station in the long gallery, at the centre of the furthest table. The Speaker then entered the gallery, dressed as a private gentleman, and presented himself to take the oaths of allegiance to his Majesty King George the Fourth. The oaths having been administered, the right honorable gentleman left the gallery and proceeded to the Speaker's apartments.—The other members present were then immediately sworn.

Having sworn in a few of the members, who first presented themselves, the Lord Steward retired.

Thirty-five minutes after twelve the Speaker, dressed in a black gown as usual, entered the House, the deputy Serjeant-at-law carrying the mace, preceded

the Speaker, who entered the House, unattended by the train-bearer. The Chaplain was not required to attend, and there were no prayers read. The Speaker, on entering the House, proceeded immediately to the chair, and then again took the oaths of allegiance to the new Sovereign. The Speaker then called upon the members present to do the same at the table.

A considerable number of members were then sworn.

At four o'clock the House, on the motion of Mr. Brogden, adjourned.

ADJOURNMENT.

Lord Castlereagh rose, he said for the purpose of moving that the House adjourn to the 17th of February. It was the usual custom of Parliament, on the demise of the King, not to enter upon any business until the funeral ceremony was over. It could not be necessary now to go into any argument as to the propriety of adhering, upon this occasion, to the established usage. If ever any similar event was felt as a great public calamity, if there ever was one which should excite more powerfully than another, the sensibility of the House and of the whole country, it was the present. He was convinced they would be anxious to shew that sensibility. It would be superfluous, therefore, to offer any reasoning upon the propriety of adjournment. His Lordship concluded by proposing that the House should adjourn to Thursday the 17th. The funeral ceremony would in all probability be over by that time. If this, however, should not be the case, he would then propose a further adjournment.

The motion was agreed to, and the House rose a quarter past four.

HOUSE OF LORDS.—Feb. 17.

Lord Liverpool presented the following message from his Majesty:—

“George R.—The King is persuaded that the House of Lords deeply participates in the grief and affliction of his Majesty, for the loss which his Majesty and the nation have sustained by the lamented death of the King his father. This melancholy event imposing upon his Majesty the necessity of summoning, within a limited period, a new Parliament, the King has taken into consideration the present state of public business, and is of opinion that it will be, in all respects, most conducive to the public interest and convenience, to call the new Parliament without delay. The King, therefore, recommends to the House of Lords to concur in such measures as may be found indispensably necessary to provide for the

exigencies of the public service during the interval which must elapse between the termination of the present session and the opening of a new Parliament.

"G. R."

Lord Liverpool said he should propose an address to-morrow on that point which recommended the concurrence of the House on the measures indispensably necessary for the public service. With respect to the first part, there could be no difference of opinion, and he should therefore move an address of condolence to his Majesty forthwith, viz:—

"That an humble address be presented to his Majesty, to express our deep and unfeigned sorrow at the death of the late King, whose virtues had so justly endeared him to all classes of his subjects.

"To assure his Majesty, that the many blessings which we have enjoyed under his Royal Father's mild and paternal government can never be effaced from our minds; and that we most gratefully acknowledge the signal advantages which the country has derived during this long and eventful period, from the augmentation of all the great sources of our national prosperity, and from the splendid and unparalleled achievements of his Majesty's fleets and armies.

"That whilst we condole with his Majesty on the loss which the nation, in common with his Majesty, has sustained, we beg leave to offer to him our most sincere congratulations upon his accession to the throne.

"To testify to his Majesty our loyal and affectionate attachment to his sacred person, and to assure him that the experience of the past, as well as our confidence in his character and virtues, can leave us no doubt that his efforts will be invariably directed to promote the welfare of the country and the happiness of his subjects."

The Marquis of Lansdown expressed his cordial concurrence in the address of condolence, and approved of the course taken in keeping that subject distinct from that part of the message, which (whether constitutional or not, he should not inquire) certainly was unprecedented. —The Marquis of Buckingham concurred in all the sentiments proposed to be addressed to his present Majesty. There was not a man in his dominions who did not look back with feelings of gratitude to the illustrious example which had been set by the late lamented monarch.—Lord Darnley, after expressing his concurrence in the address, intimated his surprise that no notice should have been taken of the decease of an illustrious Duke.—Lord Liverpool said, an address of condolence on that event would be moved to-morrow, and it was ordered to be presented by the Lords with the white staves.

Feb. 18.—The Marquis of Cholmondeley laid on the table his Majesty's answer to the address of yesterday. It concluded with, stating that his Majesty was "impressed with the deep sense of the duty of following the great example which had been set him, and assured them of his endeavours to promote the happiness and prosperity of the nation."—On the motion of Lord Liverpool, an address of condolence to his Majesty on the death of the Duke of Kent, and a message of condolence to the Duchess of Kent, were agreed to. The noble Lord highly panegyrized the conduct of the Duchess.—In these praises Lord Rolle sincerely concurred. So close, he said, was her attendance on the Duke in his last illness, that for five days she never had put off her clothes: but she had her reward in the look which her royal consort gave her before he expired, and which proved his feeling of her conduct, and the consolation it had afforded him.

Lord Liverpool then rose to move an address to his Majesty in answer to that part of his message which related to the dissolution of Parliament. His Lordship expatiated on the inconvenience which would result to the public business from entering on the discussion of the civil list, and other matters incident to the commencement of a new reign, under circumstances which, from the prospect of a certain dissolution in the course of a few months, would preclude that attendance and due deliberation which it was desirable to obtain. He concluded by moving, that an address be presented to the King, thanking his Majesty for having taken into his royal consideration the present state of public business, and concurring in the opinion that it would be most conducive to the public interest to call the new Parliament without delay; also assuring his Majesty of the readiness of their Lordships to concur in such measures as may be necessary to provide for the exigencies of the public service until the opening of the new Parliament.

The Marquis of Lansdown said the measure of submitting to Parliament the propriety of its own dissolution was entirely unprecedented; so was that of postponing until the meeting of a new Parliament the settlement of the civil list, and the other questions connected with the commencement of a new reign. Were their measures in contemplation now of a different nature from those which took place on the accession of Queen Ann, Geo. I. Geo. II. and Geo. III.? Was it also intended by a side wind to procure the sanction of Parliament to the permanent increase of the army in time of peace, by procuring its consent to the Mutiny Bill, which it would be absolutely necessary to pass under existing circumstances?

Lords Harrowby, Bathurst, and the Lord Chancellor, supported the motion, which was opposed by Lords Grosvenor, Lauderdale, Carnarvon, and King. In answer to a question from the Marquis of Lansdown, Lord Liverpool said, that for the support of the civil list, and carrying on the public service, temporary grants would be proposed. The motion for the address was then carried without a division.

HOUSE OF COMMONS.

Feb. 17.—Lord Castlereagh brought down a message from his Majesty to the same effect with that presented this day at the Upper House. On the motion of the noble Lord it was ordered to be taken into consideration to-morrow, his Lordship thinking it right that a day, at least, should be afforded for considering one part of it; but he was convinced the House would feel the propriety of offering an immediate address of condolence on the death of the late Sovereign, and of congratulation on the succession of the present. His Lordship accordingly proceeded to panegyrisé the character and conduct of his late Majesty, who had, by his mild and amiable qualities, secured the esteem of the nation, and during whose unusually long reign this country had grown up to rank, power, and commercial splendour, unequalled among the nations of the earth. He then eulogised his present Majesty, from whose declaration, that he would make the example of his Royal father the basis of his conduct, the country had to hope for a prosperous reign. He trusted that this expectation would be fully verified, and that his Majesty, though he might not have to achieve any additional glories in war, would add the only remaining laurel to his brow, by looking in peace, to policy, justice and moderation in the administration of his government. His lordship concluded with moving an address to the same effect as that proposed in the House of Lords.—Mr. Tierney cordially concurred in the address with the exception of what alluded to “the experience of the past,” which he thought might better have been let alone. He wished to bury all the past in oblivion. He would turn his back upon it, and only look forward to a new reign: that, he trusted, would be such as to reflect credit on the sovereign, and be of advantage to his people. The address was then put and carried unanimously; and it was, on the motion of Lord Castlereagh, ordered that in consideration of his Majesty’s illness, the address he presented by such members of the House as were of his Majesty’s most hon. Privy Council.

Lord Castlereagh then moved an address of condolence to his Majesty on the death of the Duke of Kent, which was unanimously agreed to, as was also a resolution of condolence to the Duchess of Kent.

Feb. 18.—Sir W. Curtis and Mr. Abercrombie presented petitions for the renewal of the insolvent debtors’ act for a short time. Mr. Vansittart said there would be no objection on the part of his Majesty’s ministers to the continuance of the existing act for a short period.

Lord Castlereagh, on the same grounds as those advanced by Lord Liverpool in the upper House, moved an address of thanks to his Majesty for his communication respecting the intended dissolution of Parliament. The motion was supported by Mr. Vansittart and Mr. Cannine, and opposed by Mr. Tierney, Mr. Brougham, and Mr. McDonald.

In the course of the discussion, Mr. Vansittart stated, that the hereditary revenue was no longer applicable to the civil list, having been appropriated to the purposes of the consolidated fund; its amount might be between 5 and £600,000 a year. He intended to propose a vote, enabling the crown to make payments out of the civil list during the quarter commencing April 5, and ending on July 5; a vote which would thus leave ample time for considering of a permanent arrangement.

In answer to a question from Mr. Hume, as to a provision for the Queen, her income as Princess of Wales being now extinct, Lord Castlereagh said that a communication would probably soon be made on that subject. Measures had already been taken to prevent any inconvenience from being felt in the quarter alluded to. The motion was then put and carried without a division.

Lord Jocelyn appeared at the bar, and read his Majesty’s most gracious answer to the Address of the House. It concluded by assuring the House, that it would be the object of his Majesty’s reign to maintain the liberties, and to promote the happiness of his people.

Colonial Accounts

Feb. 22.—Mr. Hume moved for a statement of all accounts audited by the commissioners for Ceylon, the Mauritius, the Cape of Good Hope, and other places; and also an account of the periods to which they brought down their labours, distinguishing the times and places for which they were so audited.—Ordered.

Ceylon.

23.—Mr. Goulburn presented a return of all the civil officers and military staff at Ceylon.

Prorogation and Dissolution.

Feb. 28.—The Parliament was prorogued by commission. The Speech of the commissioners adverted briefly, but forcibly, to the late sanguinary, and for atrocity unrivalled conspiracy, which had been so seasonably discovered and happily defeated.

Feb. 29.—The Parliament was dissolved by the King’s command.

HOME INTELLIGENCE.

THE KING'S COURT.

On the 24th of March, his Majesty held a court at Carlton Palace.

The Persian Ambassador, accompanied by his Secretary and Mr. Morier, took leave of his Majesty.

Governor Farquhar was introduced to his Majesty, to take leave on his return to his government of Mauritius, by Earl Bathurst.

Richard Otley, Esq. was also introduced by Earl Bathurst to his Majesty, on his being appointed one of the judges at Ceylon; upon which occasion he received the honour of knighthood.

EAST-INDIA HOUSE.

Feb. 29.—The dispatches were closed, and delivered to the pursers of the following ships, viz.:—Dunira, Capt. M. Hamilton; and Marquis of Huntly, Capt. D. McLeod, for Bombay and China.

March 1.—William Edward Phillips, Esq. was appointed Governor of Prince of Wales Island.

— A Court of Directors was held, when the under-mentioned commanders took leave of the court, previous to departing for their respective destinations, viz.:—Capt. W. Adamson, Winchelsea, and Capt. S. Lyde, Dorsetshire, for St. Helena and China.

— The dispatches were closed and delivered to the pursers of the following ships, viz.:—Duke of York, Capt. A. H. Campbell; Prince Regent, Capt. J. Innes, for Madras and China.

11. The dispatches were closed and delivered to the pursers of the following ships, viz.:—Winchelsea, Capt. W. Adamson, and Dorsetshire, Capt. S. Lyde, for St. Helena and China.

15. A Court of Directors was held, when Capt. F. Adams, of the ship Buckinghamshire, took leave of the Court previous to departing for China direct.

24. The dispatches, by the ship Buckinghamshire, for China, were closed at the East-India House, and delivered to the purser of that ship.

Three several Courts of Proprietors were held in the course of March; see pages 372 and 376.

LEADING MISCELLANIES.

Orders have been dispatched to India, directing that his present Majesty be proclaimed at the several presidencies with due solemnity.

Major General Sir Wm. Toone, C.B., will succeed to the staff of the Bengal army on the retirement of Major General Thomas Brown.

A monument to the memory of the lamented Dr. James Anderson, late of the Madras Medical Establishment, has been completed under the superintendence of Dr. Bury, and forwarded to India for the purpose of being placed in St. George's Church at Madras.—“The memory of the just is blessed.”

The Persian Ambassador is expected to leave England soon in April for Persia.

PORTUGUESE SAILORS.

The statement respecting the description of East-India ships by which distressed foreigners are left in this country, as it appeared in the daily papers, is a tissue of misrepresentations, either ignorantly or maliciously put together.

No charge can be made out against the Company—they have no controul over the captains of free traders in this respect. The Portuguese vice-consul makes a high and sweeping charge against the Company of *invariably acting in this manner*, that is, of engaging Portuguese seamen to work home their ships, and then abandoning them: this charge cannot be borne out by a single fact. The free traders, trading with the license of the Company, are *not the Company*, and it would be hard indeed if the Company were to be made answerable for the conduct of the commanders of those vessels. It is really curious to observe how all parties, before the alderman, join in directly blaming the Company, and the public ought to be put into possession of a fair statement.

Baptism of two Budhu Priests.—In the second week of March, a novel sight was witnessed at Brunswick chapel, Liverpool, which made a great impression on the spectators. Two learned heathens, high priests of the Budhu religion, from the island of Ceylon, being deemed sufficiently instructed, were introduced to the privileges of the Christian church. They were baptized agreeably to the ritual of the established church by the Rev. Dr. Adam Clarke, before a numerous, respectable, and deeply interested congregation.

NAVAL AND MILITARY REINFORCEMENTS.

On the 29th February, a detachment of the 13th dragoons, and detachments of the 30th, 34th, 49th, 69th, and 89th infantry, marched from Chatham to embark at Gravesend, on board the *Prince Regent*, for Madras. Also a small detachment of the 65th regt. on board the *Dunira*, for Bombay. Upwards of 350 men of the Hon. East India Company's artillery and infantry, have also marched from Chatham garrison to Gravesend, to embark for Madras.

On the 23d March, Rear-adm. Lambert hoisted his flag on board the *Vigo*, 74, Capt. T. Brown, and is expected to sail on the 29th to relieve Rear-adm. Plampin at St. Helena.

PASSENGERS TO INDIA.

By the *Dunira*, for Bombay: Mr. Wathen, factor; Messrs. Elphinstone, Blane, and Jackson, writers; Mr. surg. Baird; Mr. assist.-surg. Downey; maj.-gen. Lawrence; Messrs. Fortune, Poole, Pelham, Campbell, Ennis, Conyngham, Barlow, Wynter, Hele, Whitaker, Burnet, and Probyn, cadets; Mr. Hayman, volunteer Bombay marine.

By the *Marquis of Huntley*, for Bombay: Mr. Arbuthnot, writer; Lieut.col. and Mrs. Dyson; Maj. and Mrs. Cowper; Mr. Assist.-surg. Stuart; Misses Maitland and Gwinnett; Messrs. Hockin, Cooke, Darke, Dardes, Hobson, and Gordon, cadets.

CONTINENTAL NOTICE.

The King of Denmark has prolonged the charter of the Danish East India Company for one year, from the 14th Jan.

A List of Members already returned to the New Parliament who are connected directly or indirectly with East India Affairs, alphabetically arranged.

Astell, W.—Bridgewater.
 Apsley, Lord—Cirencester.
 Alexander, James—Old Sarum.
 Binning, Lord—Rochester.
 Bourne, W. S.—Christchurch.
 Bentinck, Lord W.—Nottinghamshire.
 Baring, Sir T.—High Wycombe.
 *Bailie, Col.—Hedon (Yorkshire).
 Baring, A.—Taunton.
 Boughton, W. E. Rouse—Evesham.
 Canning, Rt. Hon. Geo.—Liverpool.
 Cockerell, Sir C.—Evesham.
 Courtenay, T. P.—Totness.
 Castlereagh, Viscount—Down.
 Cumming, Geo.—Inverness (District).
 Crawford, A.—Old Sarum.
 Dowdeswell, J. E.—Tewkesbury.
 Edmonstone, Sir C.—Stirlingshire.
 Ellis, Hon. G.—Seaford.
 Ellis, C. P.—Seaford.
 Finley, Kirkman—Malmesbury.
 Forbes, Chas.—Malmesbury.
 Fairlie, Sir W. C.—Leominster.
 Gladstone, John—New Woodstock.
 †Grant, Rt. Hon. C.—Inverness County.
 †Grant, R.—Bamf District of Burghs.

 Lowther, Viscount—Westmoreland.
 Mills, Charles—Warwick.
 Moore, Peter—Coventry.
 Macintosh, Sir J.—Knaresboro'.
 Marjoribanks, Sir J.—Berwick County.
 Marjoribanks, Stewart—Hythe.
 Money, W. T.—St. Michael.
 Nugent, Sir Geo.—Buckingham.
 Ommancey, F.—Barnstaple.
 Roberts, A. W.—Maidstone.
 Ricketts, C. M.—Dartmouth.
 Robertson, A.—Grampound.
 Staunton, Sir G. T.—St. Michael.
 Smith, Geo. Wendover.
 Smith, R.—Wendover.
 Smith, Sam.—Midhurst.
 Smith, John—Midhurst.
 Twiss, Horace—Wotton Bassett.
 Vansittart, Rt. Hon. N.—Harwich.
 Wallace, Rt. Hon. T.—Weymouth.
 Wigram, Sir R. jun.—Lestwithiel.
 Wigram, W.—Wexford.
 Wood, Col.—Breconshire.

Sir John Jackson, Col. Allan, Mr. Howorth, Dr. Fleming, &c. &c. who sat in the former Parliament, have not been Candidates for the present.

Lord Howden (late Sir John Francis Cradock) was a candidate for the city of York, but did not succeed; and Sir Henry Russel stands for Colchester, but is considerably behind on the Poll.

* Formerly Resident at Lucknow.

† These gentlemen have not been returned, but there is no opposition.

BIRTHS, MARRIAGES, AND DEATHS,

HOME LIST.

BIRTHS.

March 12. The lady of Thos. Pergrine Courtenay, Esq. M.P., of a son.

13. At Dulwich, the lady of J. P. Muspratt, Esq. of a son.

Lately, the lady of J. Selimpey, Esq. of a son.

In Manchester Square, the Rt. Hon. the Countess of Buckinghamshire, of a daughter, still born

MARRIAGES.

March 14 J. E. Clowes, Esq. of Gray's Inn, to Sophia, only daughter of J. B. Cobb, Esq. and niece to the late secretary to the Hon. East-India Company

22. Lieut. Bowness, of the Madras military establishment, to Aracella, daughter of Dr. Hill, of Devon.

25. At St. Martins-in-the-Fields, by the Rev. J. Holden, Oct. Archdeacon of London, John Worthy, Esq. of the Hon. East-India Company's Bombay military establishment, to Jane Rebecca, eldest daughter of Mr. Hume, Long-acre.

Lately, the Rev. Thos. Wetherhera, M.A. chaplain on the Madras establishment, to Miss Overton, of Chelsea.

DEATHS.

Feb. 23. At Dartmouth, aged 10 weeks, Eliza, infant daughter of Capt. John Hine, East-India naval service

27. Aged 38, in childbirth, Mary, the wife of Mr. Swale, of Croom, in the North Riding of Yorkshire, and niece of the late Wm. Sandwith, Esq. formerly president of the medical board at Bombay.

28. In George Street, Portman Square, Lady Floyer, the widow of the late Sir Augustus Floyer, in the 49th year of her age.

March 1. On board the H. C.'s ship, Duke of York, while on the point of sailing to India, in the Downs. Capt. Whannel, of H.M.'s 34th regt.

8. In George Street, Hanover Square, Mrs. Harrington, the wife of F. T. Harrington, Esq. of Seaford, Cape of Good Hope, and niece of the late Earl of Seaford.

19. In Gower Street, in the 25th year of his age, Wm. Oliver, Esq. late of the Hon. Company's service after an illness of near three years.

15. Mr. Jacob Chaille, aged 84, of the Hon. East-India Company's home service.

Lately, the highly respected Wm. Mills, Esq. formerly a director of the East-India Company.

Lately, at Clifton, near Bristol, the youngest daughter of John Huddleston, Esq. one of the directors of the Hon. East-India Company.

INDIA SHIPPING INTELLIGENCE.

Arrivals.

Feb. 26 Milford, Bounty Hall, Roberts, from Bengal.

Mar. 2 Beaumaris, 9 Liverpool, Mary, Kneale, from Bengal.

— Liverpool, Theodosia, Morrison, from Bengal.

12 Off Portsmouth, 16 Gravesend, Hyperion, Lashley, from Bengal 12 Sept. and the Cape 8 Dec.

25 Gravesend, Buckinghamshire, Adams, for the Mauritius and China.

LONDON MARKETS.

Tuesday, March 28, 1820.

Cotton.—The purchases of Cotton during the last week exceed 1,500 bags. Surats in bonds at the price they were taken in at the last India House sale. It is reported that the boweds and a few of the Bengals were taken for shipping, but the greater proportion for re-sale.

Coffee.—The public sale on Thursday went off at much higher prices, and with more spirit than was generally anticipated; the prices were about 2s. lower than previously obtained by private contract. Generally the prices of Coffee may be stated nominal, on account of the little business doing. The India sale—4580 bags Coffee—(3400 taken in).

Sugar.—The brisk and extensive demand for Muscovades continued on Wednesday, but towards the close of the week the request appeared to subside. The sale of 1832 bags East-India Sugars on Wednesday was nearly all taken in. At the India House on Thursday, nearly 4,000 bags were brought forward; they went off freely, the brown Sugars 1s. a 2s. higher.

INDIAN SECURITIES AND EXCHANGES.

Accounts from Bengal to the end of September last, state the Company's 6 per cent. loan paper to be at one-half per cent. discount.

The exchange at Calcutta on London was at 2s. 6d. per sicca rupee, and London on Calcutta at 2s. 2d. to 2s. 3d. for bills at 60 days sight.

TIMES appointed for the EAST-INDIA COMPANY'S SHIPS of the SEASON 1819-20.

Who's sailed.	Ships.	Tons.	Managing Owners.	Commanders.	First Officers.	Second Officers.	Third Officers.	Fourth Officers.	Surgeons.	Purveys.	Consignments.	To be afloat.	Times to Depart.

ORIGINAL COMMUNICATIONS.

MEMOIR OF A PATRIOT KING.

(Continued from p. 328.)

WHAT is popularity? The transient breath of noisy applause, depending for its intensity on the number of persons who can be filled with one common sentiment, and for its duration on the steadiness with which the caprice of many can find an agreeable interest in the same object. If good men are often unsuccessful candidates for the approbation of the people, while bad men, by stooping to be their base sycophants, rise to be their decided favorites, the cause is not to be sought in any perversion of moral taste, that can take delight in the shameless repetition of the same system of imposture by every generation of political quacks, but in a deficiency of that social wisdom which is derived from the lessons of history, by which the experience of past ages instructs the present, and the masquerades which have been acted in the assemblies of any one country, when the minions of the mob are exhibited to

posterity, stript of their disguise, ought to undeceive every other. If an honest man is unpopular, his integrity is not known; and if a knave is popular, his turpitude is either not detected, or the evidence of it not believed. The people are most romantic in their abstract attachment to virtue, and their standard of ideal excellence rises to the summit of perfection. Hence if any man have done the state some service, he is never good enough while living to keep the people's approbation long. The boundless expectation created by the indulgence of a political reverie produces higher transports than the moderate satisfaction afforded by a real benefit. Hence previous to experience of what their principles and capacities are, the good and the bad have an equal chance in drawing lots for popularity, provided their absolute merits are in the future tense; the first class of public favorites will always be those who have never

done any thing for the country. If the patriotic warrior or statesman, in the hazardous predicament of having administered to the public utility in the field or in the cabinet, be sometimes admitted into the second class, for a pit-tance of praise, or a cold exemption from outrageous insult, the gracious condescension of the mob to these minor favorites is never in proportion to the degree of success with which great achievements have been undertaken and extensive plans executed. Thus Sir John Moore was more popular than ever the Duke of Wellington will be. If, on the other hand, a few individuals who can lead through the streets, as an obedient band, ten thousand shouting followers, have betrayed some weak declarations of selfish wishes and odious feelings, acquired by "thinking for themselves," or by borrowing the sentiments of French clubs; pleasing the local crowd by deserting the interests of the community, stepping into a laurel car, and trampling on the first duty of a patriot: the accident of supreme popularity winding up the chapter of absurdity is not to be accounted as a stain on the character of other men, on whom, although they would disdain to seek it in the same way, this flattering distinction may have fallen.

Indignant at the conduct of these political quacks, I have sometimes applied the term "patriot" to them in an ironical sense. But after contemplating the endearing and noble character of George III., in those relations to his people which identify the good King with the true patriot, I will not hereafter degrade this sublime word, by hazarding a momentary conception in the reader's mind that it might be seriously applied to those devoted worshippers of a putrescent notoriety; and when I have to speak of an English Schimmenninck, or an English Melzi, the epithet "false patriot"

or "pseudo-patriot," with an occasional reminiscence to the base servility of the Dutch and Italian prototypes, which could take or resign the presidentship of a betrayed nation, at the nod of a foreign tyrant, shall explain the danger of trusting to the turbulent claimants for constitutional liberty in a state already free.

During the excesses which grew out of the spirit of anarchy, called into action by the French revolution, the King was repeatedly exposed to the insults and attacks of a licentious mob. On each of these occasions he manifested the utmost fortitude and calmness; his personal courage astonished his friends, and awed his enemies.

The same qualities were displayed in 1800, when a maniac, at Drury-lane Theatre, fired at the Royal person.

Few of his subjects would have shewn the presence of mind, and attention to every thing except himself, which pervaded his whole conduct, on the evening of the 15th May, 1800, at the time that Hatfield discharged a pistol over his head in the theatre, loaded with two slugs. His whole anxiety was directed towards the Queen, who, not having entered the box, might, he apprehended, on hearing of the event, be overcome by her surprise or emotions. The dramatic piece which was about to be represented, commenced in a short space of time, precisely as if no accident had interrupted its performance; and so little were his nerves shaken, or his internal tranquillity disturbed by it, that he took his accustomed doze of three or four minutes between the conclusion of the play and the commencement of the farce, as he would have done on any other night.

The King manifested a like extraordinary composure after the attempt made to assassinate him by Margaret Nicholson.

The expanding ambition of France menaced Europe rather

with increased strength than increased fury, when transformed from a republic to a growing nucleus of despotism under a military emperor. In many stages of the war this country had to combat the victorious oppressor of the Continent without an ally; and George III. uniformly gave his personal sanction and support to the system of persevering in the struggle, until a reduction of the power of France should offer a guarantee for the stability of peace, and should allow Britain to disarm, without risking the national independence. When almost every other country lay at the feet of the restless invader, the King did not deem it politic to convert, by a sealed recognition, what might prove to be but a temporary disturbance of the balance of power, into a permanent ascendancy on the part of that ambitious nation, whose appetite for conquest was sharpened by successful aggression. The preliminaries of the peace of Amiens were concluded by the King's responsible servants, without his knowledge or concurrence. On reading the letter communicating this important intelligence, he said to those about him, "I have received surprising news, but it is no secret. Preliminaries of peace are signed with France. I knew nothing of it whatever; but since it is made, I sincerely wish it may prove a lasting peace."

During the cessation of hostilities, Buonaparte trampled at leisure over the prostrate Continent! this peace had the good effect of undeceiving many who had thought that he could sign a treaty in the spirit of peace.

It belongs to history to detail the causes which led to the rupture of this short truce. The independence of the European states appeared on the eve of being engulfed in the vortex of France. The King's heart expanded to witness the glorious rallying-cry of

his whole people on the prospect of invasion; and he saw in the mighty victory of Trafalgar the total destruction of the naval power of our enemy. But, like his great minister, it was not permitted to him to witness that succession of triumphs, which finally placed this country in the most commanding attitude of her history, and broke down for generations the once called invincible power which had aimed at universal empire. The glories of Spain had just commenced, when, in October 1810, the fiftieth anniversary of the good Sovereign's accession, presented a day of jubilee, on which his people with one accord devoted themselves to joy and festivity, in honour of the prolonged term of his reign. His eyes had already lost the power of vision; but as he rode through the assembled thousands of his subjects, his countenance was dilated by the goodness and the rapture of his heart: he was indeed the object of every one's veneration and love. In a few weeks one of the most afflicting domestic calamities he had ever experienced, the loss of his amiable daughter Amelia, bowed him to the dust. The anguish of the father was too great for a wounded spirit to bear; in his mental suffering his reason forsook him. The difficulties under which his country laboured, and the cloud of military despotism which obscured the political sky in every part of Europe, save half-rescued Spain, no doubt contributed to weigh down his spirit, which from this melancholy era never resumed self-possession.

The aberration to which the human mind is liable, is a melancholy subject; nor is the strongest mind more exempt from this calamity than the weakest, when the combinations of adversity are so great and heavy, as to break down the system of apprehended connection between cause and effect, on which the oppressed intel-

lect has relied in constructing defeated plans. If ants are sometimes crushed by falling straws, the mighty elephant may be overloaded. The ordinary wave that swamps a boat hardly ripples under the bow of a frigate; but when an ocean is agitated by the rolling tempest, and the aspiring billows mix their foam with the lightning of the clouds, the noblest ship may founder in the fathomless deep.

To whine over the fall of Buonaparte is not an English feeling, nor an engaging imitation of French sentiment; loyalists at home repel such virtue, republicans abroad disown such grace. It is a pity that Gay's fable of the "monkey that has seen the world" should ever have been written; better that travelled coxcombs should adhere to frivolous pursuits than set up for statesmen. A foreign writer of acknowledged sagacity, of eminent fame; whose influence on the Continent may be ascribed to her independence of mind, united with judgment, to her consistency and incorruptibility, qualities which very few of the liberal school in France preserved when the imperial tyrant was scattering his tempting favours, whose sober reflections adverse to the cause of despotism procured her exile; thus depicts the awful situation of Europe when the master of the continent, intoxicated with power, was finishing his boldest pieces of aggression.

"The duration of the power of Buonaparte was a perpetual lesson of immorality. If he had always succeeded, what should we have been able to say to our children? There would have been left, it is true, the solace of religious resignation; but the mass of the inhabitants of the world would have sought in vain to discover the intentions of providence in human affairs."*

* Considerations on the French Revolution, Posthumous work of the Baroness de Staël. Translated. London, 8vo. 1819, vol. ii. p. 308.

Meanwhile the energy of Geo. III. was remembered, although he was shrouded in solitude; the Prince Regent pursued the tenor of his councils first from filial veneration, and then from seeing it right to join in the decision on which they had been founded. The firmness of the British people in the great and noble cause of national independence was at least equal to the devotion of the French to the never-ending toil of conquest. For the complete success which crowned our efforts, let us never cease to thank Almighty Providence.

The empire of India acquired during the reign of George III. is not more astonishing for its magnitude, than for the unanimity with the native inhabitants of the country of all origins, classes, and religions, praise the beneficent spirit, and acknowledge the corresponding effects, with which the British government has been exercised over that extensive region. The translator of the *Desatir* concludes his preface by saying: "the few years of his life that may yet remain to him he intends to devote to the completion of an Epic poem on the conquest of India by the British,* on which he has for many years been employed; and which he has nearly brought to a close."

"If his name is to be enrolled among the small number of poets whose works have survived the touch of time, he fondly hopes that it may be conveyed to posterity by the same work which records the unrivalled triumphs of British valor; and that by the fortunate association, his fame may perish only with the memory of British glory."

This is the language of a grateful Parsee; the blessings experienced under British sway have already employed the pens of Hindoo and Mussulman writers.

* The George-namck.

Under "national memoranda" we shall notice some of the principal steps of the Company's power to this eminence.

We need not repeat the dates of his late Majesty's demise and funeral, which have been given in p. 313. Had we room to attempt a delineation of his character, we should still want the ability to complete the undertaking worthily. But we subjoin a few anecdotes of the man and the sovereign, arranged under the relations under which they exhibit him, or the qualities which they illustrate.

Domestic.—The virtue of humanity was one which his Majesty was always particularly careful to instil into the minds of his children. On one occasion, at breakfast, whilst the King was reading a newspaper, one of the younger branches of the family, looking up in the Queen's face, said, "Mamma, I can't think what a prison is." Upon its being explained, and understanding that the prisoners were often half-starved for want, the child replied, "That is cruel, for the prison is bad enough without starving; but I will give all my allowance to buy bread for the poor prisoners!" Due praise was given for this benevolent intention, and their Majesties made an addition to the child's gift, that when bestowed, it might be an availing relief.

A writer sketching the domestic scene in 1779, says; "Their Majesties rise at six in the morning, and enjoy the two succeeding hours, which they call their own. At eight, the Prince of Wales, the Bishop of Osnaburgh, the Princess Royal, and Prince William Henry, are brought from their several houses to Kew to breakfast. At nine, the younger children attend to lisp or smile their good-morrows: and whilst the eldest are closely applying to their tasks, the little ones and their nurses pass the whole morning in Richmond Gardens.

"The King and Queen frequently amuse themselves with sitting in the room while the children dine; and once a week, attended by the whole offspring in pairs, make the tour of Richmond Gardens. In the afternoon the Queen works, and the King reads to her. In the evening, all the children again pay their duty at Kew-house before they retire to bed; and the same order is observed through each returning day."

Temperance.—The King took a slight breakfast at eight, and dined at one on a plain joint. His abstemiousness at table, in regard to high-seasoned viands and stimulating drinks, was in the moderated taste. An author before cited, describing his habits in 1779, says: "Exercise, air, and light diet, are the grand fundamentals, in the King's idea of health and sprightliness; his Majesty feeds chiefly on vegetables, and drinks little wine; the Queen is what many private gentlewomen would call whimsically abstemious, for at a table covered with dainties, she culls the plainest and the simplest dish, and seldom eats of more than two things at a meal."

Amusements.—In the early part of his life George III. joined in the balls given at court with great animation and spirit. One instance appears in a letter from Daniel Wray, Esq. formerly Deputy Teller of the Exchequer:

"Oct. 1, 1768, we found all the world gaping at the King of Denmark. At the Queen's ball, after several country dances he asked his brother monarch (George III.) whether his Majesty was tired? Not at all, replied the King, and called for the *The Hemp Dressers*, which he continued for two hours. At Carlton-House, the same question was returned upon the Dane, who confessed himself *abattu*, and cried *quarter*."—(*Nichols's Illustrations*, vol. 1, p. 134.)

The King pursued health as well as pleasure in the exercise of

hunting. In the field he was all animation and affability. Before and after, as well as during the chase, he entered into all its varieties with the great number of private gentlemen who constantly attended; and to each individual he paid the most marked civilities.

His late Majesty was a most distinguished horseman; and no horse whatever could possess too much speed for him. His courage was also the admiration of all those persons who were permitted to join in the Royal Hunt, and the most dangerous leaps were regarded by his late Majesty with the utmost indifference; and nothing could have stopped his arduous career, in the true sportsman's style, but the duty imposed upon his attendants of pointing out to the King the danger of exposing his sacred person, upon which the happiness of the nation depended. His late Majesty was always in the field to a minute, and frequently the first on the spot, so anxiously did he enjoy the pleasures of the chase.

His Majesty never, till indisposition obliged him, omitted the honour of his annual visit (with his whole Family) to the Races at Ascot Heath, at which place he gave a plate of 100 guineas, to be run for on the first day, by such horses as had regularly *hunted with his own hounds* the preceding winter; as the King was known not only to be attentive to the perfections of each horse, but to analyse minutely their qualifications during their exertions in the chase.

He was pleased with a naval excursion, and enjoyed this recreation frequently at Weymouth. When aboard, he examined all parts of the vessel, and, while on deck, was constantly engaged, either with his glass to catch distant objects, or making himself, by quick inquiries, conversant with the whole system of the sails and rigging. When he went down to

the Nore to see the Dutch men of war, taken by Lord Duncan off Camperdown, he was greatly diverted with the circumstance of a Lord of the Admiralty falling seasick.

His chief amusement, in-doors, was music; and that of a select character. By compositions of grandeur and sublimity, he gratified a well-tuned ear, and exalted his devotional feelings. In domestic concerts, the mutual entertainment of such members of the family as when grown-up, continued to be inmates, chiefly the female branches, was promoted by playing pieces occasionally lighter, but combining pathos and sweetness, with a correct and refined harmony. He had little relish for the meretricious bravuras of the Italian stage. For many years before his retirement from the world, the Opera had not been honoured by the regal presence. Neither the music, nor the shew, nor the circled splendours of his nobility, and still less the lateness of the hours, had attraction sufficient to claim his evenings, or interfere with the regularity of his habits. But he loved with all his heart to go and see and enjoy an English play as often as he could make it convenient. Here he was quite at home; an English King, in the midst of his subjects of all ranks and classes, partaking of the common amusement, and sharing in the universal pleasure.

As a Friend and Neighbour.—On one occasion, when his Majesty had walked from the Castle, to mount his horse at the Mews, in order to ride to his farms, he entered into conversation, in a familiar manner, with Mr. Smith, an inhabitant of Windsor, who was superintending the building of his own house, which had been destroyed by fire. His Majesty observed, that it would be a great improvement if the external wall was carried out a few feet further; and

upon Mr. Smith replying that it was his Majesty's private property, and of course he could not have presumed to have solicited such a favour, the King turned round and said quickly, "What! did you think, Smith, I was so bad a neighbour? Take it, take it."

Becoming Attention to Dignity.

—The King's whole behaviour at the coronation was justly admired and commended by every one, and particularly his manner of ascending and seating himself on the throne after his coronation. No actor in the character of Pyrrhus in the *Distrest Mother*; not even Booth himself, who was celebrated for it in the *Spectator*, ever ascended the throne with so much grace and dignity.—*Life of Bishop Newton.*

Though the course of the King's domestic living was plain and unostentatious, he was not averse to have that public state supported which corresponds with the dignity of the personage who represents the British nation in her intercourse with foreign powers, and to have those forms of splendid pageantry observed which the records of heraldry have connected with the appearance of former Princes in the exercise of the regal office, or in filling a part in processions, or military reviews.

Piety.—The habitual piety of his late Majesty, was a striking part of his character. Those who have been with him at his morning devotions at the private chapel at Windsor, will never forget the fervour of his responses during the service. When one of the young Princes was hourly expected to die, the King was sitting on a Sunday, reading a sermon to his family. An attendant came in with the tidings of the child's death. The King exchanged a look with him, signifying he understood his commission, and then

proceeded with his reading till it was finished.

In the course of the interview with which his Majesty favoured Dr. Beattie, the celebrated author of the *Philosophic Essay on Truth*, he asked him what he thought of his new acquaintance, Lord Dartmouth. Mr. B. said, there was something in his air and manner which he thought not only agreeable, but enchanting; he seemed to him to be one of the best of men; a sentiment in which both their Majesties heartily joined. "They say that Lord Dartmouth is an enthusiast," said the King; "but surely he says nothing on the subject of religion but what every Christian may and ought to say."

The sermons of that profoundly learned divine, Dr. Barrow, of whom the witty Charles II. used to say, that he was an inexhaustible preacher, constituted the favourite theological work of our excellent Sovereign; who made it a rule to read a portion of them regularly in his family every Sunday evening. Sometimes his Majesty would, with a pencil, mark the divisions of the sermons which he intended to read; and thus the entire collection, with a little variation, lasted the year round.

The next anecdote was communicated to Bishop Watson by the late Dr. Heberden.

The clergyman at Windsor Chapel, on a day when the Athanasian Creed was to be read, began with "Whosoever will be saved," &c.; the King, who usually responded with a loud voice, was silent; the Minister repeated, in a higher tone, his "Whosoever;" the King continued silent: at length, the Apostles' Creed was repeated by the Minister and the King followed him throughout with a distinct and audible voice.

Clemency.—Lord Mansfield, on making a report to the King of the conviction of Mr. Malowny, a Catholic priest, who was found guilty, in the county of Surrey, of celebrating mass, was induced, by a sense of reason and humanity, to represent to his Majesty the excessive severity of the penalty which the law imposed for the offence. The King, in a tone of the most heartfelt benignity, immediately answered — “ God forbid, my lord, that religious difference in opinion should sanction persecution, or admit of one man within my realms suffering unjustly ; issue a pardon immediately for Mr. Malowny, and see that he is set at liberty.”

[We place the following under this head, because perhaps the principal quality displayed, may be supposed to belong to it ; but it rather illustrates the punctilious regard to the King, in fulfilling an indefinite offer, which contrary to his intention or expectation, involved him in an implied promise to depart from an established rule, of which the partial relaxation, by holding out the hope of pardon, creates perhaps fifty new criminals. Indeed when such a distinction is made on any other ground than a distinction in the cases, partial clemency is cruelty.]

In the year 1802, a dignified divine, preaching before the Royal Family, happened to quote a passage illustrative of his subject, from a living writer, whose name he did not mention. The King, who was always remarkably attentive, was struck with the quotation, and immediately noted the passage for an inquiry. At the conclusion of the service, he asked the preacher from whom his extract had been taken ; and being informed that the author was a Dissenting Minister, in Yorkshire, he expressed a wish to have a copy of the original discourse. The royal inclination was accordingly imparted to the au-

thor who lost no time in complying with it, accompanying the work with a very modest letter, expressive of the high sense which the writer entertained of the honor conferred upon him. His Majesty was so well pleased with the production, as to signify his readiness to serve the author.

At the York assizes, in 1803, the clerk to a mercantile house in Leeds, was tried on a charge of forgery, found guilty, and condemned to death. His family, at Halifax, was respectable, and his father bore an excellent character. Immediately after the sentence was passed upon the unfortunate young man, a Dissenting Minister of the Baptist persuasion, the same whom the King had promised to serve, who had long been intimate with the father, addressed his Majesty in a most moving petition, soliciting the pardon of the son of his friend. Although this demand upon the promise of a King, was to save a life, and not take one, it was in the spirit of the request preferred by the daughter of Herodias ; it was asking the king to perform an unguarded promise in such a way as to make an inevitable grace to a favourite, an act of injustice to society at large. The young man was of course pardoned.

Magnanimity. — His Majesty having been told of a gentleman of family and fortune in Perthshire, who had not merely refused to take the oath of allegiance to him, but had never permitted him to be named as *king* in his presence : “ Carry my compliments to him,” said the King, “ but — what ? — stop — no — he may perhaps not receive my compliments as *King of England* — give him the *Electors of Hanover’s* compliments, and tell him that he respects the steadiness of his principles.”*

(To be continued.)

To the Editor of the Asiatic Journal.

SIR ;—The chronology of the Chinese is a subject deserving of more assiduous cultivation than it has hitherto received; especially, when we consider how widely the christians of eastern and western Europe differ in the computation of time from the creation of the world, and how each supports and defends its respective system. The Greek, Russian, Coptic and Ethiopic churches uniformly follow the septuagint computation; whilst the Protestants and Roman Catholics adhere to the date of epochs as assigned by the Vulgate and Hebrew; and these accounts differ by some whole centuries of years. The Jews of Europe, although they abide by the text of the Hebrew copies, reckon *two hundred and fifty years* less than we do, and the Samaritans reckon almost *four hundred years* more from the creation, notwithstanding they allow for the antediluvian period a less interval than seems authorised by any other copy. A certain Emperor of China who reigned about the commencement of the last century having perceived a diversity in reading the religious books translated by different missionaries, some of whom followed the Septuagint and others the Vulgate, replied: "How comes it to pass," says the Emperor, "that your books are not clear? do not you affirm, that they contain nothing but what is sure and indubitable?" The point in question was the palpable difference in the chronology, an enquiry which the missionaries were unable to answer; they had not been fortified on the subject by sufficient erudition. To excuse this defect at home, they pretended, that what they could advance to a European on this difficulty could have but little effect upon a prince who was but imperfectly acquainted with religion, and who could not

Asiatic Journ.—No. 53.

conceive how its doctrines could be true and its chronology false? Thus we see how very perplexing these differences in the sacred chronology have been; how considerable the objections raised against it, and what a stumbling block it remains until some farther light shall emanate, and the whole be restored to a degree of harmony and uniformity.

Some writers, unfavourable to the integrity of the sacred writings, have not spared to take advantage of this unsettled point, and to urge objections against christianity itself on the ground of these apparent discordancies in the Mosaic records, as extant in the different copies, and particularly in the article of chronology; concerning which an acute writer scruples not to deliver himself in these terms: "The chronology of ancient kingdoms," says he, "is involved in the greatest uncertainty, and all the systems of sacred chronology have been various. Nor is this to be wondered at, since our three Biblical copies of principal note give a very different account of the first ages of the world. The Hebrew text reckons about four thousand years from Adam to Christ, and to the flood one thousand six hundred and fifty-six years. The Samaritan makes this interval shorter, and reckons from Adam to the flood only one thousand three hundred and seven years; and the version of the Septuagint removes the creation of the world to six thousand years before Christ. The interval between the creation and the flood, according to Eusebius, is two thousand two hundred and fifty-two years; according to Josephus, two thousand two hundred and fifty-six years; and according to Julius Africanus, Petavius, and others, it is reckoned at two thousand two hundred and

VOL. IX. 3 K

sixty-two years. Now of all the attempts made to reconcile these differences, says he, none are satisfactory."

In reply to these objections some of the christian fathers, and others since their time, have conjectured, that the ancients had a care to preserve these things from the vulgar, and expressed them in secret or mystic characters; and Clemens Alexandrinus assures us, that this was a practice not only among the Jews but likewise among the Egyptians; and indeed among the wisest of all nations in ancient times. In the same spirit Jerome asserts, that in the most ancient copies the Hebrew numbers were not expressed in words at full length but in numerical letters and contractions. But be this as it may, there is unquestionably a most extraordinary agreement preserved in the copies of the same kind, as evinced in the Hebrew text, with so little variation that we may rely upon them to have been preserved to our time with the utmost exactness and fidelity. The Hebrew chronological numbers are also attested and confirmed by the ancient Chaldee and Syriac copies, which prove, that howsoever these chronological numbers were written and understood, they have been carefully and religiously secured from any capital defect or deterioration.

The whole matter, therefore, required in order to reconcile these differences appears to be this, namely, to discover if possible the grounds of the variation, on some established and general principles, such as being applied by way of *hypothesis*, may be compared with other ancient and collateral histories. It is in this manner, and for this object, that I now proceed to the examination and comparison of the Sacred with the Chinese chronology as far back at least as the age of Noah, when I presume some branches of the families of

Ham peopled the eastern parts of Asia.

1. The period elapsed from the time of the foundation of Solomon's Temple in the fourth year of his reign to the birth of Christ is reckoned *one thousand and twelve years*; from thence to the departure of the Israelites from Egypt, *four hundred and eighty years*, and from thence to the vocation of Abraham *four hundred and thirty years*, making in the whole *one thousand nine hundred and twenty years*, or thereabouts, which measure of time has been so well proved and established by the author of the Index to the Oxford Bible, and other eminent chronologers, that I look upon this period to have the general sanction and authority of all antiquity, as there stated.

2. The most difficult interval between the epochs, the most important to measure and establish is that from the birth of Abraham to the flood, in which time very considerable transactions took place, namely, the colonizations under the directions of Noah and his Sons, the building of the tower of Babel, the division of the earth in the days of Peleg, the revolutions in Canaan before possessed by the ancestors of Heber, and afterwards by his descendants the Hebrews. All these occurrences are comprised within this period, which according to the Hebrew chronology is limited to about *three hundred and fifty years*: whereas these transactions required more than twice that number of years, as all history seems to indicate.

A repeated examination of this difficulty, a calm review of the various hypotheses hitherto advanced for solving it, and the studious research for a solution which may avoid the new difficulties which some of them create, have concurred in leading me to the following conclusion. I offer it of course but as an *hypothesis*; but

I would not trouble your readers with it, if I did not apprehend it to be a more probable hypothesis than any of those yet advanced. In order to found a solution of this difficulty on consistent principles, I avow it with diffidence to be my opinion, that the Samaritan numbers for this period give the notation of what is deficient in the complement of the Hebrew; and that both of them together and neither of them separately, will amount to the correct and ancient total that will harmonize and reconcile the whole difficulty; and this I shall call the *Hebrew Samaritan* account.

3. The vocation of Abraham was in his seventy-fifth year, therefore to the former sum, viz. 1920, add 75, and hence the birth of Abraham happened about the year 1995 as stated in the Index to the Oxford Bible; thence to the birth of Terah according to the same chronology 130 years, or the year 2125; thence to the birth of Nahor according to the Samaritan text 79 years, which places the birth of that patriarch about the year before Christ 2204, viz. fifty years more than in the Hebrew. Thence to the birth of Serug 130 years, according to the Samaritan text, but in the Hebrew 30, which being corrected by the excess of the Samaritan, makes it 80 years, fixing his birth at A. C. 2284. Thence to the birth of Reu by the same correction of the Hebrew by the excess of the Samaritan 82 years, which carries his birth so far back as A. C. 2364, not 2217, as the Hebrew states it. Thence to the birth of Peleg according to the Hebrew-Samaritan account is 80 years, placing his birth A. C. 2444, which happened nearly 450 years prior to the birth of Abraham, whereas the Hebrew reckons only about 240 years. Thence to the birth of Heber 84 years, according to the Hebrew-Samaritan account, fixing his birth at about A. C. 2528, and not in the year 2280,

as the Hebrew figures express. Thence to the birth of Salah 80 years, viz. A. C. 2608. Thence to the birth of Arphaxad 85 years according to the corrected account, and consequently as this patriarch was born two years after the flood, that event happened about A. C. 2695, viz. 2695 years before the birth of Christ: which conclusion, for this period is neither so limited as the Hebrew nor so enlarged as the Greek, but falls in with a mean between them, and allows for all the recorded transactions a sufficient and reasonable space. This period gives great countenance to the probable truth of the Chinese chronology; and however extraordinary it may appear, the deduction is made with the greatest simplicity and ease.

The flood happened according to the Hebrew chronology in the year A. Cir. 2349, but according to the foregoing Hebrew-Samaritan account A. C. 2695, viz. about 350 years earlier; consequently that objection against the history for want of time is removed, without rejecting the testimony of the one or the other, but qualifying and accrediting both, and without resorting to the extravagant charge of Vossius against the Jews who imputes to them, "that they did thus mutilate their computations not 'till after the destruction of Jerusalem, out of a hatred to the christian name; when, besides many other lesser intervals, they cut off 1440 years from the true computation extant in their most ancient manuscripts, that thus, by introducing a defect of two thousand years, they might render the coming of Christ dubious to posterity." Isaacus Vossius published his first dissertation concerning the true age of the world in the year 1658, expressly on this subject. Strauchius observes, that after many contests concerning the differences of some years, he declared open war against the whole body of chronologers in this dis-

sertation, which was followed by another under the title of *Chronologia Sacra*, wherein he coincides with the Septuagint Version, and maintains the integrity of the Chinese chronology.

The method of establishing a chronological canon on the combined evidence of the Hebrew and Samaritan copies was a resource which did not occur to Vossius and his contemporaries, who had certainly never bestowed such unqualified praises on the Chinese histories, and charged upon the Jews such enormous and wilful corruption of their sacred books without proof of the fact. If it can be shewn to be a mere probable hypothesis, that the Hebrew and Samaritan copies correct each other, and that the true canon is alone to be obtained by their mutual assistance; then it will follow, that however such canon may embrace the periods of the more authenticated histories among the Chinese and other histories of antiquity, the computation in the sacred history will stand on its own basis, independent of all other and prophane history whatever.

In the Chinese chronology, says a French author, we ought to distinguish what is manifestly fabulous, what is dubious and uncertain, and what is evident and incontestable: the Chinese writers use the same discretion; there are some who pronounce as uncertain and mythological the history preceding Fohi; they add that from the time of Fohi to Hoam-ti there is great historical doubt, but from Hoam-ti their history stands confirmed by indubitable evidence and historical facts. It is certain that China was peopled 2155 years before Christ, which is proved by astronomical observations, and their tables of the ancient eclipses of the sun and moon, and the very early notices of other astronomical data.

The Chinese compute by cycles of sixty years: the institution of

these cycles is supposed to have originated with their astronomical tables, and are carried back as far as the reign of Hoam-ti. If, therefore, to 2155 years before Christ we add 1820 years which have elapsed since, we have the space of three thousand nine hundred years and upwards, during which a vast nation has subsisted in that part of the world we call China. Is not this antiquity sufficiently venerable to claim our regard and estimation? Where were the Persians and Arabians when the Chinese observed the course of the stars? The empires of the Egyptians and Chaldeans have past away, while the Chinese, at least as ancient, still subsist.

The astronomical observations formerly made by the Chinese are found in their histories, and preserved in their treatises on astronomy, or in other books of known antiquity. They comprehend twenty-six eclipses of the sun, which have been calculated in Europe and verified. It is well understood, that the Chinese have been great observers of the moon, by which they regulate their feasts and keep their calendar. Their ancient tables were certainly corrected by the Jesuit missionaries, who reformed their calendar; a service which gained them the highest reputation with the emperors. Cassini and Picard, two very able French mathematicians, were the first who examined these tables brought home by Martini and Couplet; and finding them to agree with the tables of Tycho Brahe, the former began to suspect them to be fabricated; this, however, was explained by those missionaries to their satisfaction, when it was understood that the Chinese tables were reformed by the Tyconic tables as being more exact.

Their cycles of sixty years are computed as far back as 2697 years before the christian era, beginning with the reign of Hoam-

ti: others say 2570 years, in the reign of the said sovereign. The difference is small, provided the truth could be established; and it would be important to know whence the introduction of those cycles originated, whether among the ancient Chinese or the moderns; and also, how far the reformation of the Chinese astronomy and calendar was commenced and conducted by European assistance.

The chronology of the Old Testament, as appears from the index to the Oxford Bible, allows for the period elapsed from the flood to the birth of Christ, *two thousand three hundred and forty-eight years*; to which, if we add the supplementary number from the Samaritan computation, or three hundred and fifty years, the whole elapsed time will be two thousand six hundred and ninety-eight years, which period will embrace the entire series of the authenticated division of the Chinese history, and make *Hoam-ti* contemporary with Noah and his three sons, and probably the very same with Ham. *Hoam-ti* was the head of a dynasty of their earliest sovereigns, who were in reality but patriarchs and chiefs of families, similar in rank with those we read of in the genealogical lists of the sons of Noah.

According to this revision of the sacred chronology, we have the advantage of reconciling the histories of Berosus the Chaldean, of Manetho the Egyptian, of Herodotus the Greek, and also the theories and systems of their hitherto inexplicable commentators among the ancients, and are enabled to resolve on consistent principles, several historical difficulties in the post-diluvian period. That this mode of dispelling an arduous difficulty may be thus applied to harmonize the several ancient systems, I shall proceed to illustrate and explain.

The chronology of the Sama-

ritan Pentateuch is divided into two periods, 1st. the antediluvian, or that from the creation to the deluge, comprehending *one thousand three hundred and seven years*, which is short of the Hebrew computation, as I have said, by *three hundred and fifty years*; but, 2d. the post-diluvian period hath an excess above the Hebrew by *six hundred and fifty years*; therefore, if from the latter enlarged account we add to the former *three hundred and fifty years*, the ante-diluvian period will be about equal to the Hebrew, viz. *one thousand six hundred and fifty-seven years*: there will then remain the corrected number for the post-diluvian period, according to this series. Arphaxad, 85 years; Salah, 80; Heber, 84; Peleg, 50; Reu, 82; Serug, 80; Nahar, 79; Terah, 70; to which add two years from the flood to the birth of Arphaxad, and the sum will be 642 years, exactly *three hundred and fifty years* more than the Hebrew, including the 50 years of the Nahor wanting in the Hebrew; for the Hebrew text says that Nahor begat Terah at the age of 29 years; but the Samaritan says 79 years, much more consistent with the general history of that period; so that the post-diluvian interval from the flood to the birth of Terah is corrected at *six hundred and forty-two years*. This revision of the chronological figures allows: for the patriarchal successions in the most just and natural order, and reconciles this hitherto perplexing part of the sacred history. Another great historical difficulty is also hereby obviated, namely, an apparent deficiency in the time assigned for the population of the earth by the descendants of Noah: between the flood and the building of the tower of Babel, which last event must have happened many years after the supposed time, according to the Hebrew chronology. Thus a comparison of ancient accounts

appears to indicate, that there has been a greater measure of time elapsed from the creation to the birth of Christ than our tables shew from the Hebrew chronology by about *three hundred and fifty years*.

The Samaritan chronology closes with the history of the Pentateuch in those copies come to our hands; therefore to know how far their reckoning conforms with the Jews, from Moses to the last destruction of the Temple under Titus, we must have resort to their own tradition. None of our authors, that I know of, have treated expressly on this subject; and it is only from the Samaritan letters published in the works of Job Ludolphus, and others in the collections of the learned, that I have been able to discover what relates to this inquiry. One of these letters is dated, in the year of the creation, *six thousand one hundred and twenty-nine*, which was coeval with A. D. 1680, or thereabouts; therefore the Samaritans compute *four thousand four hundred and*

fifty years from the creation to the first year of the Christian æra; and there is an excess of *four hundred and fifty years* for that elapsed time, a section of which, the post-diluvian period from the flood to Abraham, we have endeavoured to restore to its true measure. In this calculation I have avoided all the minor constituent numbers, and the diversities and conjectures among chronologers about several of them, leaving these things to a particular dissertation.

To conclude, it is my decided opinion, that if the Chinese annals extend so far back as to two thousand six hundred years before the Christian æra, the Samaritan chronology will support this computation, and render it extremely probable that their first sovereigns were the immediate descendants of Noah, who, in process of time, spread themselves and settled in the eastern parts of Asia and China.—Sir, your's respectfully,

T. Y.

London, Dec. 20, 1819.

THE LATE SIR ALEXANDER ANSTRUTHER,

RECORDER OF BOMBAY.

The *Bombay Courier* of Sept. 4, on announcing the death of Sir Alexander Anstruther, Recorder of Bombay, at Mauritius, which the *Asiatic Journal* has already given, vol. viii. p. 615, supplies the following memorial.

Sir Alexander Anstruther was the second son of the late Sir Robert Anstruther, Bart. of Balcaskie, Fifeshire, by Janet, youngest daughter of Alexander Erskine, fifth Earl of Kellie; and brother of the late gallant Brigadier General R. Anstruther, who, in the prime of life, and with the fairest prospects of military renown opening to his view, fell a victim to the fatigue which he endured in the gallant and arduous discharge of

his duties as commander of the rear-guard of General Moore's army, on its retreat to Corunna.

Sir Alexander in early life devoted himself with assiduous attention to the duties of his profession; and in 1792 engaged in the publication of Reports of adjudged Cases in the Court of Exchequer, which he completed in 1797, in three volumes. In 1798 he came out to Madras; and in 1803 was appointed the Company's Advocate General at that presidency. In 1803 he married Sarah, the sister of Guy L. Prendergast, Esq. member of council at this presidency. On the 25th March, 1812, he was appointed to succeed Sir James Mackintosh as recorder,

and on the 10th March 1813, took his seat on the bench in that capacity.

As a private member of society, Sir Alexander exhibited those qualities of heart and mind, which, under the due influence of morality and religion, give a charm and value to all the endearing relations of private life. His manners were gentle and unassuming; his temper mild and cheerful; and his heart kind, affectionate and generous.

In his public capacity his con-

duct displayed the most essential and proper virtues of a judge. His understanding was acute and vigorous; his judgment sound and correct; and his learning extensive. They who had the pleasure of practising under him, and who have now the misfortune to regret his loss, will bear testimony to his eminent patience on the bench, his independence of spirit, his strict impartiality, and his uniform integrity.

His death happened in the fiftieth year of his age.

To the Editor of the Asiatic Journal.

SIR: "It may not be useless," says the Rev. Mr. R., a Missionary in India, who is the chief conductor of the schools at Madras (see his *Journal*, page 287, in the *Proceedings of the Church Missionary Society for 1818-19*), "to mention how native husbands very commonly treat their wives, and that even among professed Christians:" and he tells a story of a man beating his wife for negligence and stupidity. "It was the more surprising to me," says Mr. R., "since I never expected such things of the man, who has made a tolerably consistent profession of Christianity for the last two years, though he has often been dull and negligent in his business." One cannot but sympathize with Mr. R. in his pious ejaculation, "Oh, when will Christianity take proper root in the native Christians, and expel the abominable customs of the heathen from their hearts and families!"

The wretch whose conduct is so justly reprobated by Mr. R., was a schoolmaster under him, and as he appears to have had the advantage of Mr. R.'s tuition for some years, better things indeed might have been expected of him. But, to give the devil his due, is it quite

fair to infer so much from this story as Mr. R. has done? At all events, the man's confession should have been taken altogether: "When my wife was young, and when I was young," said he, "I beat her very much, but now I beat her but little." Here the first fruits of conversion were manifest; and perhaps if the culprit had been examined in a different way from that adopted by Mr. R., the next answer would have been, "when I am old, and she is old, I shall not beat her at all." In the present case, there seems no reason to doubt that the growth of grace was not in its ordinary progress.

But why is a solitary instance to be thus adduced in disparagement of the whole tribe of native husbands, and particularly of that class specifically marked by Mr. R., namely, "professed Christians?" If Mr. R. meant to assert as a fact, which came within his own experience, that among the natives of India, professed Christians of two years standing, with tolerable consistency, commonly treat their wives ill, it is a lamentable result of his zealous labours. To speak plainly, I have a leaning to the Hindoos, and I do not like to see reflexions cast

upon those who have been converted. Why are these interesting people to be stigmatized by wholesale?

In England we have been told at the bar of the House of Commons, by a gentleman of the highest character and experience, who was abroad many years, that the natives of India very commonly treat their wives with great kindness. It is true, that the experience of that distinguished gentleman was of a description of natives different from those known to Mr. R., and probably did not include professed Christians of two years standing in consistency, nor the schoolmasters of the missionary seminaries at Madras.

Some philosophers have maintained that there is a sympathy between the breech and the brain; and doubtless, an association of whipping and learning, which may be deemed natural to the profession, was predominant in the mind of the regenerated Hindoo, who must have benefitted largely by the notable example of his superior. In Mr. R.'s Journal of the 29th of March 1818, there is an interesting account of an occurrence at "the catechising in the third school." Mr. R. told one of the boys of the "mystical union between God and Christ, a matter not to be comprehended but believed." "So," said the boy, "it is with our idol." In the course of the discussion which followed, the boy said, "that when the god was upon him he did not feel pain." The rest of the affair will be best told in the reverend gentleman's own words. "I said, shall we make a trial?" He boldly answered, "yes." The schoolmaster said to him, "if you are beat with a stick will you not have pain?" "No," said he. "Come, then," I replied, "we will see," when I ordered the schoolmaster to give him a blow on his back with a rattan. I asked

the boy "whether it pained him or not?" He said, "No." I told the schoolmaster to give him a second, a third, and a fourth; but, after another stroke or two, he began to cry out, to the amusement of all present. Mr. R. then exhorted him to pray to God for light and mercy. This was certainly an appropriate finale; but as for the affair itself, it was indeed singularly facetious: excellent fun for the reverend gentleman, though perhaps the poor boy and the schoolmaster's wife might not enter into the spirit of the joke. It is consolatory to think that as this reverend person is of course unaccustomed to the abominations of heathenish amusements, he is not without his pastime since he can indulge in these little innocent diversions. Congenial minds will be delighted with the delicacy of Mr. R.'s taste; his relish for simple pleasures. Such is the result of sensibility and humanity, conjoined with true piety, with that wisdom which passes all understanding!

The boy was only a heathen, and under the process of conversion; it might therefore be expedient to observe certain forms in his case, which in others would be thought inapplicable. Perhaps he might have been one of that infernal tribe the Bramins, who must excite the hatred of every good Christian; for, to use Mr. R.'s words, the Bramins excite "holy indignation." It cannot be supposed that the reverend gentleman would crack such jokes with a rattan on the back of any Christian child committed to his care.

It does not appear whether the Christian schoolmaster, who tried to beat stupidity out of his wife, was the same person who tried to beat religious error out of his pupil; whether he was in much active practice under Mr. R., or only a casual observer of the effect produced by that funny way of

demonstrating truth and inculcating the religion of Christ. But the deputy was probably of the same school as the principal; he was only catechising his wife, and it is unreasonable that he should be blamed for adopting that approved method of conversion which was practised with such success in the catechising of the third school, under the immediate personal stimulus of Mr. R. himself.

In the present difficulties of the export trade, and in the dangers of innovation which beset us on every side, let us endeavour to promote the consumption of articles of our own native growth, and discourage deviations from our good old customs. I do not like the rattan

system; and as for birch, a commodity I have dealt in largely, it will be much fitter for the Missionary Society, and better suited to the ends of instruction. Besides, Sir, the rattan really does not answer; Mr. Corrie, who converts in Bengal, and I am confident does not use it, has been five times as successful as Mr. R., for he boasts of five converts having been made by himself and his coadjutors; but Mr. R. and his rattans seem to have made only one. See the nineteenth report of the proceedings of the Church Missionary Society, pages 154 and 163, note, col. 2.—I am, Sir, your humble servant,

TOBIAS TICKLEPITCHER.

METHOD OF MAKING STEEL IN MYSORE.*

Instructions to convert Iron into Steel, as communicated by the Steel Makers of Mysore. By C. V. B. Jan. 6, 1803.

To work the iron.—Take of the ore of iron, called *canaculloo*; put it by baskets into the furnace, made in the manner of the chunnam kilns; cover this with the same quantity of charcoal; in this manner put in three layers of each, ore and charcoal alternately. The furnace is then wrought with a large bellows for six hours, or from 6 till 12; when the stone or ore is found melted into one mass, on opening the side door of the furnace; which should be quickly beat out into bars before it cools, employing four or five men with heavy hammers for this purpose. This is the best sort of iron in this country; and sells on the spot from two to three maunds for a pagoda (Doorgee).

To make steel of this iron.—1. Take the bars of iron, beat them into pieces of eight inches long, and four inches in circumference; cut them into two equal parts—2. Then take plenty of red clay, put it in water; strain it off by a channel, and conduct it into a hollow place when you find the water become clear; drawing off the water, take the pure clay, and an equal proportion of black ashes of paddy husk, and employ two men, one to pound them in a stone mortar in the manner in which paper is beat, and the other to supply the mortar with this mixture; then of this impalpable powder make *mossas* (crucibles) of a span in length and eight inches in circumference, of the size or shape of the plantain-flower or guava-fruit; and dry it gradually by exposure, at first under the shade, and then to the sun, till it is properly dried.—3. Put into each of these *mossas*, when perfectly dry, one of the above-mentioned half pieces of iron; and cover it with a handful of the creeper (with its

* This steel is equal in all respects to cast steel of the best kind, and even superior. It is combined with a small quantity of oxygen; and it is supposed that this article mutes during the act of fusion, and obtained from the plants.

† The bark tangadon chac an (Tall).

Asiatic Journ.—No. 53.

leaves) called in Canara, *voogana-ballee*, or in Tallooga, *tandrateaga*; and fill up the vacancies with paddy husk; cover the whole with some of the purified earth, which dry well by exposing it to the fire. Of these *moosas*, to the number of 54 are put into the furnace.

Instructions to make the furnace.

—Make your furnace one cubit square, and three in height; divide it within with a wall; make a hole from behind through the wall into the furnace, in which two large bellows are to be fixed; spread some grass on the bottom of the furnace; on this lay charcoal, and over it a clay-pipe, in which the mouths of the bellows are inserted; then arrange the 54 *moosas* in the furnace one over another; and lay in plenty of charcoal, as much as is necessary. The bellows are to be well worked

from six to three o'clock, nine hours; when you find from the furnace that the red flames turn white (or it is come to a white heat), you may suppose it is sufficiently done; then sprinkle a little water over the furnace, and take out the *moosas*; cover them with sand, and cool them with water; when they are sufficiently cool, break them with a small hammer, and you will have 20 or 30 prepared steel masses out of the 54. This is the finest and best kind of steel above the Ghaats, used in all works. They are sold on the spot from five star or Doorgee pagodas for a hundred pieces. If you put half-prepared steel again into the furnace in the same manner, you will get them well done. The steel-makers purchase the iron at 100 pieces for a pagoda, being about three maunds in weight.

March 15, 1803.

C. V. B

NAUTICAL NOTICES:

No. I.—*Ellice's Group.*

THE first notice we had of the recent discovery of a group of small islands in the Pacific Ocean, lying in the track between Valparaiso and the East Indies, came to us by the American papers. It bore the shape of an extract of a letter from the discoverer. A passage cited from it follows; of which the words distinguished by italics appear to be inconsistent with the letter addressed by the discoverer to another correspondent in London. The rest of the first notice, relating to positions on the map, agrees with the subsequent account, but is less distinct; we omit it, in order to give the whole of the second literally.

Passage cited from the first account in an American paper.—Extract of a letter from Arend S. de Peyster, on a voyage from Valparaiso to Calcutta:—"On the evening of the 17th May, 1819, one of the people discovered a large fire. We hove-to until daylight, when another small low island appeared about five miles under our lee; we passed it close; it appeared

clothed with cocoa-nut trees, and doubtless inhabited.

Second account published in London.—

By a late arrival from Calcutta, a letter from Capt. de Peyster, who made this interesting discovery, has been received in London, containing his own account, of which a copy is subjoined.

"Ship *Rebecca*, at Sea, May 25, 1819.
Long. 183 W. Lat. 6. 58. S.

"On the 28th of March I took my final departure from Valparaiso, and on the 26th of April anchored in Port Anna Maria, Novahceva, one of the Marquesas. We remained two days to procure a supply of wood and water, and proceeded west. On the morning of the 17th of May, at three o'clock, the *Rebecca's* cruise had nearly terminated; the man at the helm first saw some low bushes, not thrice her own length, a-head; brought her instantly to the wind, and I may say with truth she *scraped* clear of it. I hove-to till day-light, and then stood close in, and at twelve reduced the latitude and longitude of this group (for it apparently consisted of 14 small islands and sand keys) from many lunar observa-

tions, which agreed within three miles of my chronometers, to the following:—Long. of the centre, 180. 54. W.; Lat. 8. 29. S.

“ Being the discoverers, I called them ‘Ellice’s Group;’ the island we first saw and so narrowly escaped, ‘Escape Island;’ the one adjoining, ‘Rebecca Island,’ and the Westernmost, ‘Brown’s Island.’ They did not appear to be inhabited.—At noon we made sail, and at eight in the evening discovered a large fire a-head; hove-to. At daylight another group appeared close on board, apparently consisting of seventeen small islands. I was again fortunate in procuring a lunar, which agreeing with the chronometers, gave longitude of the south point, 181. 43. W., lat. ditto, 8. 5. S. To these my officers did me the honour of giving the name of de Peyster’s Islands. As a further corroboration of the correctness of the longitude, I must tell you, that in making Cape St. George New Ireland, which Horsburgh places in long. 207. 1. W., and the voyage in search of Perouse the same, the mean of my chronometers was 207. W. I became so nervous after these escapes, that for many nights I did not run. It is singular that Commodore Byron should have run down the same parallel of latitude until within a short distance of the first group, and then hauled to the northward, and that Capt. Wallis should have passed as near to the latter. All these islands are so remarkably low, that you cannot discover them from the deck, even in the day-time, until close on board. This route from Chili, I have reason to think, has never before been pursued.

No. II.—*Shoals in the East-Indian Seas.*

A letter received at Calcutta, in August, from an officer on board one of the Hon. Company’s Surveying Vessels to the Eastward, furnishes the following nautical information.

Hechester Shoal.—“ We have ascertained the correct position of the Hechester shoal to be in lat. 0° 27’ S. and bearing south from the east point of Luigin-island. It is about one and half mile long, and the least water on it is one fathom on the rocks. This shoal has been long considered to be in the way of our Indianmen passing towards the straits of Banca, on the report of an American Captain; but we have been about the situation in which he places it, and saw nothing there but fish spawn, which without doubt, deceived him as it did us.

The Geldria Sand.—We also feel certain that the shoal named Dogger Bank does not exist, and that there is no other but the sand discovered by Jurior Verburg, and named Geldria. It is, without doubt, the one on which the Ganges must have grounded, as the bearings of that ship (although confused, and very particular objects not mentioned) agrees with those taken by us near the bank, which is in lat. 0° 48’ N. bearing east from Saddle Island, and S. S. E. from Ragged Island, and distant about two miles from the Boat Rock. It cannot be said to be in the way of our Indianmen, as they have no occasion to pass so very near as two miles to the Boat Rock; the least water we found on the rock was two fathoms.

North Sand and Blenheim Sand.—The north sand is finished; and after the most particular survey of it there appears to be no passage fit for ships to the eastward of Blenheim sand. The whole consists of long narrow sands, on many of which there are small knowls of rocky ground, and between the sands there are good depths; but having no good landmarks to direct ships, it must be considered a service of danger going over it without boats to lead. From the two and half fathoms bank to the N.W. there is a long sand, with seven to five fathoms water on it, which may be crossed, as well as those to the eastward of it, when Palcular Hill is bearing as far south as E. by S. $\frac{1}{4}$ S. or E. by S.”

ACCOUNT OF THE KINGDOM OF HEERUMBA,

INCLUDING THE PROVINCE OF KACHAR.

(From the “*Friend of India.*”)

THE various countries which lie to the east of Bengal, and occupy the space between Sylhet and China, are on many accounts highly interesting. Visited only in a slight degree by the Musulman conquerors of India, some of them, as Munipoor, boast of uninterrupted freedom from foreign conquest, even from time

immemorial; and the account given in one of the earliest volumes of the Asiatic Researches, of an expedition against Assam by the Musulmans, as late as the latter end of the seventeenth century, and of the difficulties they encountered in penetrating the country, plainly evinces, that the conquest of these parts was rather

nominal than real and effective. They are likely, therefore, as far as they are Hindoo, to afford that assistance in future researches relative to the antiquities of India, which can scarcely be expected in other parts completely subjugated by the Musulman power. They are moreover interesting, from their forming precisely the spot where the languages of Hindoostan and China meet, and as far as it is possible, amalgamate with each other; the exact spot where the polysyllabic and monosyllabic systems unite in a manner sufficiently entertaining to those who delight in philological researches. So interesting indeed did these countries appear to one in India a few years ago, who, after every thing said against him, will be ranked by posterity among the benefactors to British India, the late Dr. Claudius Buchanan, that as early as the year 1806, he offered the missionaries at Serampore the sum of five thousand rupees to meet the expenses of the journey, if any suitable person connected with them could engage in a journey from Sylhet to China, for the sake of exploring the intermediate countries. Whatever may be thought of this offer, many reasons unite in rendering even the rude tribes of these mountains in a certain degree interesting. Among these, we lately gave a very brief view of the tribe who are termed Koonkees; and we now proceed to another, to one indeed which claims for itself the name of a nation, and boasts of regal power, the Kachareese.

The kingdom of Kachar, or more properly of Heerumba, lies within that space which in Arrowsmith's map extends from North lat. 24 to North lat. 27, and from East long. 92 to East long. 94. It is therefore about a hundred and forty miles in length from north to south, and about a hundred miles in breadth from east to west. On the north it has for its border the Brumhapoutra, and the kingdom of Assam. Its west border is formed by the territory of Jyuntia, inhabited by the Khashya tribe; its south border by the districts of Sylhet and Tipperah, or more properly Tripoora, while eastward it extends to the small but ancient kingdom of Munipoor, in reality held by the Burman government. The ancient and proper name of the country is Heerumba, although the people are known by the term Kachareese. The word Kachar is probably the same with Kackar, a steep place or a precipice. The people seem to have derived their name, therefore, merely from the circumstance of some of them inhabiting the skirts of the lofty mountains of Heerumba.

This kingdom, small as it is, includes two provinces quite distinct from each other; that generally termed Kachar, which is the most southerly part, and

borders on the British territories; and the province of Dhurmapoor, which lies northward of the main ridge of mountains. From the great difficulty which attends crossing these mountains, the intercourse between the two provinces of Kachar and Dhurmapoor is almost wholly suspended during the rainy season.

The ancient capital of Heerumba was the city of Gooabaree, situated in north lat. 25, 45, about twenty miles north of the present capital, Khaspoor. It was erected on the skirts of the main ridge of mountains, amidst a number of small hills. Although nearly deserted now, it is held in much veneration; and from the prevalence of a singular idea among this nation, it is supposed to be the repository of great riches. The idea is this, that it is unworthy of a king to take possession of and enjoy riches amassed by the labours of his predecessors. Hence it is generally believed among the Kachareese, that the riches of the former sovereigns of the country lie buried among the hills in the vicinity of Gooa-baree.

The present capital of Heerumba is Khaspoor, which is situated upon the banks of the Mudhoora, a small stream just emerging from the mountains, and famous for the clearness of its waters. Under the former sovereign, Raja Krishna-Chundra, this capital flourished greatly, and was ornamented with brick and wood. But upon his death, about the year 1811, his successor, Raja Govinda-Chundra, from the idea of being more safe in proportion as he approached the British territories, removed his court to the city of Dood-patti, (if such a place may be said to deserve the name,) situated on the banks of the Boorak, about twenty miles south of Khaspoor. In consequence of this step, the latter capital was immediately deserted; and the buildings it once boasted, are now nearly level with the ground.

Dhurmapoor was formerly a place highly important. It is situated in a fine extensive valley upon the banks of the river Kupili, to the north of the main range of mountains. It lies about sixty miles north of Khaspoor. It once contained a strong fort, and in extent and population rivalled the capital, forming the chief seat of trade between Jyuntia to the west, Kachar to the south, Assam to the north, and Munipoor eastward. Its importance, however, is greatly lessened with the decay of its trade, through the unsettled state of the country and the incursions of its predatory neighbours, particularly those on the side of Munipoor. It has often revolted through the oppression of its sovereign, the Raja of Khaspoor. The revenues of this province, while it retained its trade, more than equalled those of all the rest of Heerumba taken together.

The principal rivers in this small kingdom are the two already mentioned, the Kupili and the Boorak. They both originate in the mountains to the eastward, and running westward through these provinces, empty themselves into the Bruhmapootra. Previously to this, however, the Kupili takes a northerly direction among certain of these mountains, and falls into the Bruhmapootra a little above Rangmati. The Boorak, after dividing itself into a considerable number of branches, which add in a high degree to the pleasantness and fertility of this little country, disembogues itself into the Bruhmapootra between Sylhet and Dacca.

Besides these two principal rivers, however, this fruitful country is watered by a number of smaller streams, the greater part of which pay their tribute to the Boorak. The principal of those which empty themselves into the Boorak from the north, or rather the north-east, are the Bulishur, the Goomra, the Teluchura, the Mudhoora, the Jhatinga, and the Cheeri. The chief of those on the south side which thus contribute their streams to the Boorak, are the Sonoï, the Rookni, the Gagra, and the Loonghi, which last falls into the Boorak below Bhanga.

That part of this country which lies immediately under the mountains, as it receives their various rills and streams in the rainy season, from its low situation abounds with bogs, and marshes, and large sheets of water. These supply the country with fish in abundance; but they render it almost impossible to travel from one part to another without boats, during the rainy season. The mountains in general are skirted with forests almost impenetrable, or with jungles formed by long grass in some instances, and in others by the bamboo.

The northern parts of the mountains of Kachar are those which appear in the various maps of India under the name of the Garrow mountains. Those in the south, or more properly the south-east part of Kachar, are in reality a continuation of the Tripoora or Tipperah mountains, which after running northward as far as Khaspoor, turn abruptly to the west until they reach the Bruhmapootra. The utmost altitude of any of these mountains is scarcely a thousand feet above the sea; and many of them scarcely exceed six hundred feet in height. Those which run westward, however, though no higher, are so steep that the water-falls formed by the various precipices, render the passage to Dhurmapoor almost impracticable in the rainy season; and add greatly to the difficulty of traversing the country, for the sake of business or of observation.

The range of mountains in this country contains three passes, through which men can travel with safety nearly at all sea-

sons. Two of these intersect the mountains northward, and lead to Dhurmapoor: they are known by the names of the Vickrumpoor and Dhashpoor passes. Of these two the latter is by far the most difficult. The third pass leads to Munipoor. From Khaspoor the road by this pass enters the mountains a few miles to the north of those termed the Bhoovuna mountains. This pass is by no means difficult, and may be easily crossed in the space of two or three days; while that by Dhurmapoor is both circuitous and difficult, generally occupying from ten to fifteen days.

These mountainous passes render forts in this country scarcely at all necessary. In case of necessity they sometimes throw up a kind of mud fort in the vallies, and enclose them with large timbers, elevating them into a kind of bastion at each corner. But in the passes among the mountains they have recourse to a singular method of defence against an approaching enemy. Choosing a spot where the mountain is steep and the pass beneath very narrow, they collect on the sides of the mountain immense heaps of stones for which they form a lodgement on the side of the precipice, by driving stakes into the crevice of the rocks, or by fastening trunks of trees horizontally along the sides of the mountain. These heaps of stones they increase in breadth and length according to the imagined number of the approaching foe. When the enemy has advanced so far into the pass as to render the effect almost certain, the stakes are pulled up, the lodgement removed, and the heaps of stones rushing down with irresistible force, completely overwhelm the hapless foe. Scarcely any thing in war is dreaded by the mountaineers, therefore, equally with this stratagem.

There are, however, a few places in the country which are somewhat fortified. The chief of these in the southern part are Goomra, Vickrumpoor, Telain, and Khaspoor; and in the northern part, Dhurmapoor and Deson. These places are strong by nature, and at a small expense might be rendered nearly impregnable.

About forty miles to the south-east of Khaspoor lie the Bhoovuna mountains, which are remarkable among other things for a famous cave, for generations the resort of a number of religious devotees, who are often a terror both to passengers and to their own neighbours. It is within a few miles to the north of this that the noted pass to Munipoor lies, which, as that country borders on the Burman empire and is now indeed held by them, may be regarded as the key to the country.

The population of the territory of Heerumba is not great: and it is supposed to

be rather decreasing than otherwise.— This however arises wholly from the nature of the government, and the unsettled state of the country, which in itself produces nearly every thing necessary to the support or comfort of life. The number of families throughout the whole of the kingdom is supposed scarcely to exceed eighty thousand, which at six individuals to each family will fall short of half a million. The mountains to the north are very thinly inhabited; a few Kacharese families are said to constitute nearly the whole of the inhabitants there; and their fewness constantly tends to diminish their number, through their being unable to protect each other. The mountains eastward are chiefly inhabited by the Nega and the Koonkee tribes, neither of which are numerous. It is chiefly in the plain country around Dhurmapoor, and in those parts which border on the British territories, that the bulk of the population is to be found, as, in the opinion of the natives, the vicinity of the English affords a certain degree of protection, without any actual interference on their part. The Dhurmapoor province is supposed of itself to contain about thirty thousand families, and those on the borders of Sylhet and Tipperah rather exceed that number. These latter are in general of Benzalee origin.

The revenues of this thinly peopled territory have amounted in some instances to a lac of rupees annually, independently of the expenses of the various officers of government, who like those of their Burman neighbours, receiving no kind of salary, are left to pay themselves, *ad libitum*, by fleecing the people whom they profess to govern and defend. Such however is the fertility of the country, and the numerous advantages it possesses within itself, that its revenues under a wise government, which should administer justice impartially, and encourage trade and agriculture, might be increased to five times that sum, with real advantage to the people. They have however greatly diminished since the death of Raja Krishna-Bhundra, and in the year 1817 they scarcely exceeded thirty thousand rupees, all intercourse with Dhurmapoor having been entirely cut off through the miserably distracted state of the country.

The sovereign of Heerumba is completely absolute within his own dominions, having no law by which to regulate his conduct beyond his own royal will and pleasure. He has however several ministers, among whom may be numbered four whose office bears some resemblance to that of secretary of state in other kingdoms. But as these are appointed by the monarch, and of course removable at his pleasure, they can form no kind of check on his conduct. In its various officers of

state the court of Khaspoor bears a considerable resemblance to that of his Burman Majesty. These serve the sovereign without any salary, simply from their devotion to the person of their sovereign. They have however certain perquisites allowed them by law; and these they increase by demands on the people to any extent they deem safe: and this is attended with little danger of detection, as the complaints of the common people seldom reach the royal ear.

The national flag contains the rude portraiture of a monkey. The reason for preferring this animal to the eagle, &c. we have not been able to learn. His Heerumban Majesty on state occasions has a white umbrella displayed over his person, like the Burman Emperor, whom he also imitates in retaining among his royal insignia, a bottle-box, a sword and shield, and even in the harness of his royal coursers. The styles and titles of his Heerumban Majesty are as follows:

“Shree Shree Shree Shree Joot Govindu Chundra Narayana Bahadoor, chief of the race of the Pandurus descended from the moon, whose actions are glorious as the bright effulgence of the white umbrella, worthy of homage from all the sovereigns in the universe, the mighty King of Heerumba, Lord of Lords.” It is somewhat amusing to observe that this imposing assemblage of titles is attached to an instrument, which gives authority to an agent of the government over a piece of land that yields an annual revenue of twenty kahuns of cowries or four rupees!

The southern country of Heerumba, small as it is, contains ten districts of petty governments; and these again are divided into smaller portions or purgunnahs. Of these the largest district, Boorakpoor, that watered by the Boorak, contains nine; and the smallest, Oodurbund, contains three divisions. As the Khaspoor court issue no salaries, this subdivision of the country into more than fifty purgunnahs, with their attendant officers, costs it nothing, whatever may be its weight on the people.

Among other sources of revenue to the king of Heerumba are the various salt pits in the country, which furnish a sufficient abundance of that valuable article for the consumption of the whole of the kingdom, and a surplus for the purposes of trade with their neighbours to the east, the south, and the west. The number of pits where salt is continually made are about twenty-four. These are in the hands of the receivers of the royal revenue, of which they form a considerable part.

The produce of this country is so abundant as to render it dependant on other countries for scarcely any thing beside beetle-nut, brass ware, and a little fine cloth. These articles are generally ob-

tained from Bengal. The articles of trade which are indigenous to the country are, among others, a coarse kind of silk, termed *moog*, bees' wax, ivory, cotton, timber of various kinds, tame elephants, lime-stone, and a kind of iron ore, capable of producing a considerable quantity of that metal, were the mines properly wrought, and the art of smelting it properly known. As this, however is not the case, they are not very productive.

In this country there are several waterfalls, one of which is particularly remarkable, as it bears the name of Kupili, the celebrated sage. Some say that the height of the waterfall is near 200 feet; but this is far from being certain. To the south, near the independent part of Tripoora, there is a very large tank with a ghaut built of brick. On these bricks are characters so ancient, that no native of the country is able to decypher them, nor to say more respecting these inscriptions, than that they differ from any thing ever seen by any of the natives of the country. In the vicinity are observable buildings, of the origin of which the natives are equally ignorant.

In their persons the inhabitants of Heerumba are in general strong and robust, which characteristic is nearly as applicable to the women as to the men.— Their countenances and features bear a strong resemblance to those of the Chinese. Their complexion is much fairer than that of the natives of Bengal. In their dress the women imitate the Burman women, and like them are extremely fond of the beetle-nut.

The Heerumbians have no alphabet of their own. The court language now in use among them is that of Bengal. Yet they have a language of their own, which seems to have no affinity with any derived from the Sanskrita. It is monosyllabic, like the Chinese; but it differs widely from it in the meaning affixed to these monosyllables. Between the meaning of some of them, however, and that of certain Chinese monosyllables of the same sound, there will be found such a similarity, if due allowance be made for provincial pronunciation (which varies greatly in the different provinces of China itself), as to leave little doubt of this language being a branch sprung from the Chinese monosyllabic stock. As already mentioned the alphabet adopted by them is that of Bengal, with a very few alterations to adapt it to their own pronunciation. These are chiefly of the nasal kind. Such of the inhabitants as read any thing, study the manuscript writings of Bengal; and all state transactions are carried on in that language. They of course have very few books in circulation among them;

and their schools scarcely deserve the name.

Prior to the time of Raja Huri-Chundra, they had not the least vestige of caste among them. The monarch, smitten with the love of Hindooism, determined to become a proselyte thereto. To effect this, he, with such of his servants as were particularly desirous of pleasing him, underwent the ceremony termed *Poonuh-jumrah*, performing to effect it many preparatory acts of worship, which were accompanied by the feeding of a great number of brahmans. It is further reported, that he actually made a cow of gold, through the belly of which he and his most devoted followers passed, that they might render themselves worthy of admission into the Hindoo faith. If such were really the case, there can be no doubt but the golden animal, by that act, became too sacred to pass again into any other hands than those of the brahmanic tribe.

In consequence of this adoption of Hindooism, the Hindoo deities are of course worshipped in Heerumba. The worship of Doorga is said to be celebrated occasionally with human sacrifices. The present king, at his accession, about six years ago, is said to have seized four unhappy victims, and to have sacrificed them to his favourite deity. With animal sacrifices she is continually propitiated in Heerumba. Beside her, they also worship Kallee, or Doorga under another form. They also worship her as the goddess who presides over the small-pox.— Their chief objects of worship, besides, are Krishna and Luksmee.

In addition to these, they still worship certain genii or spirits whom they regard as belonging to their own country, and greatly dread. Among these are *Runchundee*, the tutelar guardian of Heerumba, to whom they occasionally offer sacrifices; *Deshabhooja*, or the ten-armed one, probably *Ravana*; *Myluma*, *Shyama*, and several others.

Such then is the state of this little territory lying within a few leagues of the British dominions to the north-east. Its latest history is merely this. The present sovereign, *Govinda Chundra*, a weak young man, the son of *Huri-Chundra*, succeeded his elder brother about the year 1812. He with great difficulty supported himself on the throne till the beginning of 1818, when the kingdom being invaded by a handful of Burmans from *Munipore*, under the pretence of seeking payment for some horses which the king was said to have received from them, his Heerumban Majesty's troops refusing to fight, he fled to *Sylhet*, and left his kingdom in the hands of the triumphant invaders.

STORM AND FALL OF TALNAIR.

(By an Eye-Witness)

A correspondent of the Calcutta Journal introduces a chapter fit for history, comprising not merely a narrative of the fall of Talnair as a military occurrence, but of the political stipulations which led to it, with the unexpected and lawless opposition which set a treaty at naught, with the following observations :—

“ It is one of the distinguishing characteristics of a public, which is jealous of its national fame, to be feelingly alive to the actions of individuals, even the most distinguished, when those actions seem to tarnish the general fame of our country. It is pleasing at all times to observe this feeling roused when there is a real cause to excite it, and although it frequently happens that actions the most commendable may be misrepresented, and sometimes the motives misunderstood, yet it is better even that such should be liable to investigation than that the public should become torpid and indifferent to the character of events which do not take place immediately under its own eye. This scrutiny appears peculiarly desirable with regard to our colonies and distant possessions, and it will be fortunate, if this spirit continues to watch the proceedings of our politicians and commanders in all quarters. It keeps true principles in their direct channels; and the more numerous these moral checks to the abuse of power are, the less danger is there of their being made subservient to bad purposes, and the longer our power, in India particularly, will continue on its present elevated footing.”

But this spirit of scrutiny can never be exercised to the public advantage, unless those individuals who are the movers of inquiry and the organs of censure, are made in their turn amenable to public opinion for deficiency in judgment or excess in premature complaint. The disposition to indulge in the last, requires a moral check.

The privilege of being at liberty to animadvert on any subject which presents itself, is very liable to be misemployed by persons whom fortune has endowed with independence, while nature has withheld the ennobling distinctions of wisdom and candor. An affectation of justice, without the love of it, often leads an individual ambitious of being known as the bold disseminator of free remarks, to express an unfavourable decision in a positive tone,

when he ought merely to qualify a grateful eulogy by touching some collateral transactions, of which the facts are imperfectly known, with the circumspect forbearance of a suspended judgment. At length better information arrives. The capricious reveller in the delights of independence may now, perhaps, regret that his disposition to premature censure should have involved him in an abortive attempt to wound a distinguished servant of the public in the highest class of acknowledged merit. When the evil spirit which tormented Saul is upon a private egotist, this arbitrary fraction of popular sovereignty may unconsciously play the tyrant, and toss his javelin ready poised for any game that springs at a successful warrior receiving the high reward of his country's applause—without the reproach or the excuse of envy, or any possible competition in greatness—rather to shew his activity, rather than to do mischief.

Had any Spartan, Athenian, Macedonian, or Roman detachment been drawn into the same snare as that prepared for Col. Murray's party, in approaching a fort of which the garrison had sent out to treat for terms, a patriot of the ancient school would have felt some sympathy with his countrymen so treacherously slain, some indignation against the enemy whose deceitful policy was as devious and intricate as the wickets and passages of his fort, his duplicity as palpable as his treble walls of circumvallation. But a philanthropist of the modern school, a man of liberal mind, who follows the march of new ideas, can step over the immolated bodies of his countrymen, Col. Murray, Major Gordon, Capt. M'Gregor, and Lieut. M'Gregor, to drop a tear over the fallen killedar who had caused their destruction, and who in wilfully making the esplanade of a ceded fort the scene of bloodshed, was answerable under the law of nations for every casualty which happened during the siege.

The correspondent of the Calcutta Journal, in some parts of the preface to his narrative, falls into a strain of gentle deprecation, addressed to the irresponsible tilers in the ring of random assault, driving from the circumference to the stake

where baited merit stands; a strain of defence which seems to resemble the holding up a shield of elegant silk against a pike of rough iron :

"In the course of the action of this principle of correction, however, it is to be lamented when it happens to include those who from nature, habit, or constitution, are least likely to come within the limits of its attraction; for surely any one who is personally acquainted with the commander-in-chief at Madras, would never accuse him of having wantonly put to death a human being, or sacrificed an unfortunate garrison. Yet such has been the impression made on the minds of certain individuals in England on the fate of Talnair; and a want of explanation seems to have thrown a partial veil over the unqualified applause which the military achievements of this distinguished personage would otherwise have received."

The writer now comes to the facts of the case, which are stronger than his comments; nor should we have interposed any additional remarks, had we not deemed that the force of the narrative would justify the vindicator in turning upon the assailant with some degree of indignation.

"Happening to be tolerably well informed on the subject, the following simple narrative may be sufficient to remove all doubts from the minds of the most fastidious, and exonerate this exalted character from any blame in the whole of this transaction.

"When the Madras Army, under the personal command of Sir Thomas Hislop, had subverted the predatory host of Holkar, and order was restored, it marched south to join in the war against the Peishwa. It was also intended that his Excellency should occupy Holkar's districts in Candeish, ceded by the treaty of Mundisoor, and the orders for the surrender of those districts were made over by the Durbar to him. An accredited minister also accompanied the army from Mundisoor, and it appeared extremely desirable, as a matter of great political importance, to secure at once these districts, such as Rawere, Ootram, Chundoor, Galna, Nundoorbar, Sooltanpoor, and Talnair, as their possession would enable us to take advantage of every movement of the Peishwa's army in Candeish; and to establish posts in the numerous strong fastnesses in that country, in order to its eventual occupation. Sindwa, Talnair, Galna, and Chundoor, formed a line of formidable fortresses passing through the centre of Candeish, which would serve to keep open our communication with Hindoostan on the one hand, and with any country which

might fall to us between Chundoor and Poona, or the Concan, on the other.

"Of these forts Talnair, Chundoor, and Galna, were very strong, the two latter almost impregnable; they were all in the hands of Ram Doss, the brother of Balaram Sett, the late prime minister at Holkar's court, who had been murdered eighteen months before, by a faction, and his enemies had succeeded him in power. This person had also advanced a considerable sum on account of revenue which was still to be collected by him when the cessions were made, and under all circumstances it seemed not improbable that the object of immediately taking possession of the cessions was likely to be delayed at any rate; to avoid which, applications were made to Holkar's court, to appoint some one on his part to attend the army, and to be present, and negotiate for the immediate delivery of the places in question.

No answers to these applications being made, Sir Thomas Hislop resolved to take the person who was then with him, (who it was understood was to accompany the army at any rate to the frontier), into Candeish. To this proposal this officer made many objections, which were overruled, and he at length consented; but making some frivolous excuse to be absent for two days from the army, he quitted it, and never returned. The future plan of operations for occupying Candeish depended on the immediate possession of the ceded forts; it therefore became a measure of necessity to reduce them if they offered resistance. As they were virtually ours by cession, the killedars' refusing to acknowledge our supremacy, and holding out in them in spite of the orders of their masters, was *bona fide* an act of rebellion; and had every fort held out, the direct object of the campaign would have been defeated. We should have gained little by having reduced to subjection one branch of the Mahratta Confederacy in Malwa, if that portion of its power in the Deccan was still active in support of that confederacy. To prevent this protracted warfare with Holkar's districts in Candeish, it becomes desirable, by making an example of the first killedar who resisted, to deter others; and this happened to occur at Talnair, where the governor was the uncle and the agent of the chief who held Chundoor and Galna.

The fortress of Sindwa at the head of the Ghaut, surrendered to Holkar's order; in four days after which the army reached Currande, where it was prevalently reported that the killedar of Talnair had been constructing new gun-carriages, and repairing the defences of the fort, and that he intended to resist his

master's order for its surrender. This was not believed; but on the following morning, at sun rise, the advanced guard and baggage was fired upon by the guns of the fort, and some of the inhabitants came running out to say the town was ready to surrender, but that the killedar in the fort, in spite of the remonstrances of the people, had resolved to resist.

A letter was now written to the killedar, informing him of the peace with Holkar, of the cession of Talnair among various other places, and warning him of the consequences of his resistance. He was informed that if by noon (it was now seven o'clock) a person on his part did not come out to receive the order of surrender, and to negotiate for the delivery up of the fort, he would be considered and treated as a rebel, and hanged; and that if the place was stormed, the garrison would receive no quarter.

It was anticipated that the killedar would refuse to admit the messenger, or receive the letter; it was therefore twice read over distinctly, and explained to an inhabitant of the place, who was sent with the messenger, and who, by gaining admittance, would ensure the delivery of the message. The messenger with the letter was stripped and robbed within the first and second gates, and only made his escape just before the storm. The other messenger, however, gained admittance. In the meanwhile preparations were made for the attack of the fort: the mud defences of the upper works were soon laid open, and the few guns dismantled by our field pieces. The intricate mazes of the gateway afforded shelter to the garrison for a long time, till by the judicious position of our artillery most of the works of the gateways were so enfiladed, that it was not safe for the garrison to stay there; they retired within the fort, finding they who could not fire without being equally exposed with our riflemen, were lying under the walls.

About four o'clock in the afternoon, they sent out a message to treat for terms. They were told that nothing but an unconditional surrender would be granted, and measures were shortly afterwards taken to force the gateways. The pioneers, supported by the storming party, forced a passage through the first gate; the wicket of the second was either forced or found open, I am not certain which; at the third gate, the killedar finding further resistance of no avail, delivered himself up; the fourth gate was choked with earth, and could not be shut; the fifth and last gate was shut, and a negotiation was commenced by the troops within, demanding, as a preliminary to their surrender of the place, their

lives and their arms, which also included their freedom.

It was generally understood throughout the army, that they were required to surrender unconditionally, and this they were distinctly and repeatedly told, and they were also told they must give up their arms. At length the wicket of the gate was opened: it was a kind of trap-door, about three feet square in the body of the gate, and only admitted one person at a time. Major Gordon, Capt. McGregor, and Lieut. McGregor of the grenadier company of His Majesty's Royal Scots, got through it successively; they were followed by four or five grenadiers. Lieut. Col. McGregor Murray, C.B. next entered, but so little notion had he or any of the party of attacking the garrison which had apparently surrendered, that he had not even drawn his sword; he was followed by Captain McCraith, of the Madras Pioneers, who was in the act of bending to get through the wicket, when the fatal catastrophe took place, which led to the death of some brave officers and men on our part, and the total annihilation of the garrison.

Major Gordon on his first entering, went up to one of the Arabs of the garrison, and demanded his arms, which not being complied with, he proceeded to force his matchlock from him; the man sprung back, and levelling his piece, shot Major Gordon; this was the commencement of an affray; the garrison soon overpowered the six or seven grenadiers and officers who were within, and all of them fell covered with wounds; Colonel Murray fell into Captain McCraith's arms, who had only one leg over the sally port. He fortunately had a broad sword in his hand, and while defending Col. M.'s body, called out to the grenadiers behind him to push their muskets through between him and the gate and fire, this gave a momentary check to the enemy, which enabled some of the storming party to get in, open the gate, and admit the rest. I need hardly go on with the sequel: the garrison, grown desperate, kept up a desultory fire from the ramparts, and houses, and walls, till they were overpowered by our troops.

The execution of the threat held out to the killedar for resistance, alone remained to be carried into effect; the acknowledgement of the killedar himself of his guilt, the fact of his having received the message from the inhabitants of the town in the morning being proved by the assertions of several persons who came out with him, and not denied by him, the circumstance of his having refused to listen to the repeated remonstrances of the zemindars who were within the fort, and who begged of him on their knees to consider the nature of the calamity he

was drawing on himself and the whole garrison, all being fully established, Sir Thomas Hislop ordered him to be hanged. In addition to other arguments for the necessity of this strong measure, was the fact of Ram Deen, one of Holkar's officers, who had fled from Hindoostan in rebellion, being at this time in full march with 2000 infantry, 4000 cavalry, and four guns, towards Chandoor, the seat of Ram Dass's government; and there was every reason then for supposing that he would have formed a junction with that chief, and at once have openly espoused the cause of Bajee Rao.

The result of the fall of Talnair on the 28th of February was, that Galna was evacuated, and in our possession on the 7th of March: on the following day

messengers from Chandoor met Sir Thomas Hislop, on the Boreo River; and on the 14th that place was also in our possession; and these posts were subsequently made the centre of a line of operations, which enabled us to occupy Candeish with a small and otherwise inadequate force. Ram Deen, unsupported by Ram Dass, was now obliged to abandon his guns: he had no means of paying his infantry, which left him in the neighbourhood of Chandoor, and he himself joined Bajee Rao at the same place. He was with him on the occasion of his final defeat on the 17th April, when his bands dispersed, and he has now sunk into insignificance.

AN EYE WITNESS.

Candeish, July 22, 1819.

CURSORY REMARKS ON BOARD THE FRIENDSHIP.

EXTRACT, No. VIII.

(Continued from p. 258.)

As Captain Nicholl was unacquainted with the navigation of these seas, he expressed a wish to keep company with the *Friendship*, until we came to the Cape of Good Hope in New Guinea; with which Captain R. concurred. He generally spent the day on board our ship in fine weather.

We had reason to suppose that the New Britons were cannibals, from the following circumstances. About a week prior to the Walker's falling in with us, while she was off that coast, several of the canoes came from the shore; in one of which was a lad about sixteen, who was fairer than the rest. He seemed anxious to get on board the ship, but was restrained by two savages; at length they were enticed alongside, when this boy sprang up the side in the greatest agitation, and wished to run below. He spoke a language which the Walker's company did not understand; but seeing a chart, which happened to be upon the capstan, he pointed towards Manila and China. This convinced Captain Nicholl that the boy had been once in civilized society, and determined him to retain the youth on board, if to stay were agreeable to himself. Captain Nicholl then pointed to the canoes, which caused the poor boy to tremble all over; he then pointed down the hatchway the boy lost not a moment in descending below, where he remained until the canoes retired to the shore. This boy was brought on board of us one day, when it was discovered that he understood the Malay language. Three people of that country we had on board, to whom he gave the following narrative

of himself. He said he was born on the island Mindanio; that when very little, he was sent on board a small ship with one mast, of which a Chinaman was captain; that they went to many islands, getting things in exchange for cloth, long knives, &c. That the ship one night got on rocks, and was soon full of water; that there were three China men besides the captain; there were about fifteen persons in all on board. They left the wreck and went in the boat, and were many days in want of water; they landed at a place which he did not know, but were quickly set upon by savages. Some of his companions ran into the woods, and were murdered, and afterwards eaten by these people. Two of the savages quarrelled about him; he thought one wanted to save, and the other intended to kill him. They struggled very much, and tore each other on the ground; many of the natives saw this, but did not meddle with them; he did not know whether one killed the other or not, for he was hurried on board a canoe, and taken to another place. After this he had many changes of masters, and did all they required of him. When he was asked how long it was since he fell into their hands, he could not tell; but said, he was so light, putting his hand to his breast; which made us conjecture that his captivity might begin about five years before he was taken on board the Walker. He told many strange and incredible stories, respecting his savage masters. We had no doubt of their being cannibals, for he affirmed they at times had nothing else to

eat but human flesh, of which hunger made him glad to partake; which was served out in very small portions. When the ship was first discovered from the shore, he told his masters that if they would permit him to go on board, he would procure them many fine things, with which he would return. This induced them to comply with his request. In coming off in the canoe, he frequently trembled and shook very much, which was caused by the hope of escaping; they thought it was from fear, and asked him if the people on board would eat him. He said, "No, no; these people never eat man's flesh, and that it was only cold which made him tremble." The above heads of the boy's account were interpreted by our Malay seamen, one of whom was very intelligent, having been brought up with a Europe-born Dutchman at Batavia.

On the 14th June we cleared St. George's Channel, and next day passed, on our right, a large lofty island, named after Lord Sandwich. We had now frequent squalls, with rain, thunder, and lightning; a calm succeeded, which made it very tedious. We saw some large trees floating in the water, with abundance of fish about them. One day, it being nearly calm, when Captain Nicholl was on board with us, a very strange fish was seen from the fore-castle to pass under the ship's bottom; it was afterwards perceived astern, having a number of pilot fish about it, which readily took bait from a small hook. Three of them were caught, and put into a bucket of water, where they soon died: they were the most beautiful little fish I had ever seen at sea, being striped round with red and white, like a zebra: they measured about nine inches in length, and were delicious when cooked. They are said to attend only the shark; but I rather think they hover about any large floating substance, as numbers were seen about the drift wood and trees. The monster gamboling amongst them was termed the Devil Fish, by Captain Nicholls' people; it was not afraid of the ship, and at times came very close. It appeared to me like a very large overgrown skate, being nearly square; I reckoned it might occupy a space about the size of our main hatch-way; they threw the fish-gig at it, which bounded off its back, breaking two of the prongs; it never came so near afterwards, and a breeze springing up, we saw no more of it.

On the morning of the 17th of June, the Admiralty Islands were seen. It was found that the ships had been driven by currents more north than they had expected; in consequence of which, they were, according to first appearances, embayed; but proceeding nearer the large

island, which we named the Sovereign, it was observed that there was a considerable opening between the Sovereign and three smaller islands, which lay to the south of it. This induced our captain to ask Captain Nicholl if he would venture through. He replied, if our ship would take the lead, he would follow. The wind was fair for passing in that direction, and we proceeded accordingly. Coming near, we observed a number of canoes approaching us full of men. Before entering the passage, we let them come alongside; which they did with every confidence, that made us suppose that they had had intercourse with ships before. Their canoes were large, and had a platform in the centre, with a fire upon it, and some bread-fruit and jack-fruit were roasting, which they gave us, exchanging it for any thing we offered them; but iron was their favorite. They thought we wanted eatables most, and banded up fish and cocoa-nuts, with the jack-fruit. They also presented calabashes of water, which made us suppose that some ship had been there in want of provisions and water. If the natives had any arms, they were concealed under the platform, for we saw none. They appeared to be the most civil people we had ever met with in those parts; in consequence of which, the captain called the marine localities, Port Mangles and Friendship's Passage. It was thought there was some very good anchorage in the port, as the ships had from seven to twelve, and thirty fathoms, in passing through, with the land so near on both sides as to give the resemblance of a locked harbour. On the island to the south of us many parts of the territory had the appearance of being under cultivation, with a sort of lattice-work in some places, as if designed to preserve fruit from the winged tribe. Many houses and inhabitants were seen on shore. To distinguish a remarkable hill, sloping gently down to a ravine that was cultivated, the captain, in compliment to the owners of the ship, called the former James' Mount, and the latter John's Valley. A projecting point of land was named Point Thomas; and a white coral bank lying off it, seen very plain under water, Reed's Bank. Another small opening was denominated Eleonor's Cove, and a little elevated spot Barclay's Peak. These names were all given to different parts of that island which is south of the Great Admiralty (or Sovereign) Island. Further, some rocks, about five leagues to the west of this place, were called Muirhead's Reef, after the chief mate. We observed numbers of parrots and paroquets, flying about on the shore, amongst the trees.

As the Walker was about a mile astern of us, we were much surprised to

hear firing of musketry from her, and to see the canoes leaving her in all directions. We did not learn the cause of this until next day, when it was reported that a crow-bar had been taken from one of the ports, with which a canoe made off rapidly towards the shore. It was to bring the plunderers back that several muskets were fired at them; and, I am afraid, from what the surgeon said, that several were wounded, if not killed, in the canoe. We were extremely sorry to learn this, as it might be detrimental to other navigators passing this way. It had been much better to leave good impressions with these friendly islanders, who did not retaliate hostilities upon the Walker's people. Having a favourable breeze during the night, next morning we were out of sight of land.

The captain wished to keep as near the old track as possible, as the least deviation in the night exposed the ships to danger. He also drew the line on Capt. Nicholl's charts, in case of separation; but as the Walker sailed much better than our ship, it was always in their power to keep company if they wished. In our progress to the west, being so near the equator, we suffered much from excessive heat, particularly in the night, when we had little wind: the thermometer sometimes stood at ninety-five and one hundred. We had, however, plenty of water, the casks for the use of the prisoners on the passage out being furnished by the owners, were kept on board, when the other stores were returned at Sydney. We saw islands and land to the south of us every day, from the 19th June until arriving off the New Guinea Cape. On the 24th we had much rain, with heavy squalls, accompanied with thunder and lightning. At day-light next morning, the Walker was not to be seen from our mast-head; it was supposed she had tacked in the night, to avoid a small low island, which our ship passed just at dusk. In this track we passed many large trees and drifts: one tree which appeared very straight, was taken on board; but when the root had been sawed off, it was found very soft and full of worms; besides the smell was so offensive, that it was again thrown overboard. A species of cormorant were commonly perched upon these trees; which, when seen at a distance, made us at first imagine them to be canoes with people. Five or six of these birds were seen together upon one tree; they would fly away as soon as our boat approached; no doubt they were attracted by the fish that hovered about the wood. We had the coast of New Guinea daily in sight on our left, but at too great a distance to make any observations; it appeared in many places very mountainous. On the 29th we passed

the islands named, after their discoverer, Schouting's Islands; they lie off the coast, and have many low, dangerous coral reefs about them, which had been observed, with the advantage of a nearer view, by our captain, when previously in the Cornwallis. On the morning of the 1st July we were again joined by the Walker, who had tacked, as before supposed. Captain Nicholl and his officers now delivered their letters to us, to forward by the first opportunity for England. He intended to separate from us that evening, and proceed to Dory Harbour; the high land of which was in sight; we accordingly parted, with mutual good wishes for the safety and prosperity of each other. Two days after this, having favourable winds, we came in sight of the Cape of Good Hope, the south-western extremity of New Guinea.

As something was amiss with the ship's rudder, which could not be rectified at sea, it was judged proper to put into some place for that purpose, and at the same time to fill the empty casks with fresh water to stiffen the ship, for old sailors say, that casks once filled with salt water never become sweet again. For this object the captain steered to make a port upon the island Gofilo, which was well known to him formerly. In our way thither, we passed Dampier's Straits, having the coast of New Guinea (or Papua) on our left, and the island of Wagjoun on our right; passing several islands whose names were not known. We then came in sight of Gofilo, and in the evening anchored in a harbour called Osso.

The land hereabout was clothed with verdure to the water's edge. We had no communication with the shore that evening, but during the night were serenaded with many different and harmonious notes of the feathered tribe, as well as with the mixed under tones of many humming insects; the ship lying so near the shore, and the night being still, the least noise could be heard amongst the trees. Next morning a proa came alongside, with a chief and six paddlers. When he came on board, he immediately recognized the captain, and was most happy to see him, saying, every thing in his power should be done to assist in getting the ship watered, &c. This person was an Inaam, or Mahometan priest: he might be about forty-five years of age; had a commanding countenance, which with his long white beard gave him a respectable appearance. He ordered some very fine pine-apples and plantains to be brought from the proa, with sago-bread, in the shape of little square cakes. The latter were not much relished, being of a dry nature; but the pine-apples were a great treat, having a most delicious flavour. In the afternoon

two large armed proas were seen coming into the harbour ; but kept at a distance until we shewed English colours, when they directly entered, and came close to our ship. They were from Papua, or New Guinea. The chief men were Malays, but the others resembled the negroes, except that the hair or wool on the head was frizzled out like a large black wig, twice the size of the head ; and a most ferocious look they had. These boats carried swivels, mounted behind a barricade, with loop-holes to fire through. They were trading vessels, but it was said they would plunder if a chance offered. We got some nutmees, mace, and beautiful birds of paradise from them, in exchange for crockery, hatchets, and cloth ; they very much wanted gunpowder, but that demand was not complied with. They had been at first afraid we were Dutch, which made them hesitate entering the harbour, until they saw our colours ; observing, as they told us this, that the Dutch were their greatest enemies. The people on shore were glad when the proas went away, saying, if we had not been there they should have been plundered by them.

I had often heard that the birds of paradise lived in the air, and could not approach the earth without certain death ; that they had no feet, nor any terrestrial habits. However, those we procured from these people had not only feet, but claws like a parrot. The Malays informed us that these animals come to Papua at certain seasons, like birds of passage, and are suared. We had three different kinds, the straw-coloured, the yellow, and the crimson ; the latter are by far the handsomest ; these are called the rajah or king birds : our specimens measured about nine inches in length, the body not thicker than a goldfinch, and the plumage of a most beautiful crimson, scarlet, and green colour. They had two quills projecting about seven inches from the tail ; these quills appeared as if stripped of the feathers, until at the extreme end, which was curled up about the size of a small daisy, tinged with the most delicate colours imaginable. The yellow birds, although beautiful, were very inferior to the rajahs.

The nutmeg is very plentiful here, notwithstanding what is said to the contrary ; the natives brought us the fruit upon branches, in all its stages, from the size of an olive to that of a peach upon the twig. The nut, when bursting the pulp or rind, and shewing the bright red mace over the shell, is exceedingly beautiful. I procured plenty in this state, and had them preserved in clarified syrup of sugar. The captain did not go into the woods this time, but I have heard him say that when here formerly as an officer,

within an hour's walk from the shore he has counted upwards of an hundred trees bearing fruit. There were several large proas, or corra-corras, which arrived from several parts of the same island to trade while we remained ; they had plenty of spices, which they readily exchanged with us for cloth, &c. ; but were particularly fond of some Scotch plaid. If we had had plenty of the same commodity on board, it would have turned to good account ; indeed, the captain bartered all the merchandize he had for spices ; and my small wardrobe of old apparel came in for a share. We found the Malays at this place very honest and fair dealing people. We were supplied with plenty of fruit, fish, and turtle, while we staid. They were afraid to take their trade to Amboyna, on account of pirate proas which infested those seas ; and if any ship were so unfortunate as to get on shore, it was sure to be plundered, and the crew murdered by those vultures. This was the case with a ship under Danish colours, going through Dampier's Straits to China, the year before.

One night we were alarmed by the firing of two muskets from the fore-castle of our ship ; two proas were observed approaching, beating upon an instrument, and singing what was thought to be a war-song ; notwithstanding they were challenged from the ship, they still advanced. Immediately on the muskets being fired, the captain went upon deck, and as he understood the Malays pretty well, soon found they were friends, and invited them alongside ; when three chiefs came on board, and sent the proas away from the ship ; one of these was an old friend of the captain's, named Twan-Allie. His master, Sultan Newkoo, of Tidore, had dispatched him to collect tribute at the different ports of Messa, Weda, and Osso, which was paid in spices. It was very soon understood that he wanted some presents for his master, as also for himself. Captain R. gave him, in the presence of the other chiefs, a handsome pair of pistols, a sword, and a dirk, with four canisters of gunpowder for the Sultan. They wished the ship to go to Tidore, saying, that the Sultan had plenty of cloves and other spices, which he wished to part with. This, however, was out of the question, as we were not prepared for traffic. It very much surprised the mates to find our captain so well known at this apparently wild place. But nothing will remain to excite wonder, when it is known that he assisted in reinstating the Sultan, just mentioned, as Chief of Tidore, an eminence which was his by birthright ; but he had formerly been displaced by the Dutch, and a price put upon his head, in consequence of his having supplied an English ship with pro-

visions, &c. To revert to the origin of that transaction : in 1776, our captain received a lieutenant's commission, signed by Sir John Shore, and the other members of council at Calcutta, to act against the Dutch. The establishment he then belonged to fitted out several armed vessels, as well for trade as war ; and the officers directing this force acted amongst these islands and people near two years, assisted by a number of war-prons well armed : they drove the Dutch from Tidore, and attacked Ternate three successive times, where a number of men were killed and wounded on both sides. The Dutch at this time were almost starved out, and otherwise so harassed, that had any of our king's ships been present, these lords of the eastern seas would most gladly have delivered up the island ; but they thought, and justly too, that the influence of the private ships were not sufficient to keep the hostile Malays in check. Some of the Dutch governors in these settlements exercise great cruelty and tyranny over these people, particularly if the natives be detected in trafficking with the English, the Batavian authorities having the power of life and death vested in themselves without any appeal. But, thank God, this abuse of sovereignty cannot be erected in any of our settlements with impunity.

Twan-Allie stated that the Sultan was very happy now at Tidore, and had not for some time been attacked from Ternate, the Dutch having no disposable force ; but as he was upwards of seventy years of age, it was thought that his youngest brother, Rajah Mooda, from the island of Ceram, would be called to the government of Tidore. Our friend, Twan-Allie, continued on board all the time we remained here ; notwithstanding his apparent strictness in keeping the institutes of the koran, he partook of our wine, and the common fare of the table, ham and pork excepted. He was too high a personage to trade, but made presents in hopes of a double return. This is the custom with the Sultan and all his chief men in these parts. However, I must not say too much on this score, as I came off pretty well. He admired a topaz brooch which I had ; this was presented to him ; in return he gave me three beautiful birds of paradise, two cockatoos, and two handsome luries ; he was pleased with the exchange, and so was I. We also received from this person about two ounces of seed pearls, and some fine tortoise-shell, in the rough state ; for all of which he got more than an equivalent. The Malays had also plenty of the edible bird's-nests, which are so much in demand amongst the Chinese, for making a luxurious soup : but as all our little

merchandise was exhausted, we could purchase no more of their commodities.

The ship's rudder being now put to rights, preparations were made for our departure. The ship at this place was filled with parrots, cockatoos, and luries, belonging to the seamen and lascars ; many of them equal in beauty to our Botany Bay birds, but not so hardy.

On the morning of the 18th July we left Osso, and proceeded on our voyage, passing between an island called Pulo Moor and Point Potanny. Next day we saw the island Oiy Major, and sailed between that and Pulo Gassas ; then were observed the islands of Ceram and Boorros, which we passed upon our left. Amboyna is situated a little to the south of these islands, but being out of our track we did not see it.

On the 25th we saw the island of Bootan ; at which place, when my husband was there in the Cornwallis, and in charge of a watering party, they would have been murdered, had not the treacherous design been discovered by one of the seamen, who understood the Malay language, he overhearing a conference between the Malays, who were all armed, and very numerous. He learnt that their first proposition was to massacre the boat's crew, and then attack the ship. But this was overruled by a chief, who observed, that if they could the next day entice the boat's crew to come again for water, that the ship's company would be more off their guard, and more easily overpowered. A Malay, who spoke a little Dutch, enquired, in pursuit of this scheme, if the ship wanted any more water : it was answered that there was very little on board, and it would take three days to complete the watering. This reply induced them to allow the boat to proceed on board, not suspecting that their evil intentions were known. On the boat's return, the unpleasant discovery was communicated to the captain ; the Malays were then instantly ordered out of the ship ; and no time was lost in leaving a place where so much danger was to be apprehended. There were upwards of twenty war proas counted in the river, mounting from four to six guns, and capable of containing from thirty to forty men in each. Fortunately for the Cornwallis's people, it was low water when she sailed, and most of the proas were aground.

Leaving Bootan on our right, we passed through the Straits of Saylair, and next day saw a most dangerous shoal, called the Brill, upon which part of the wreck of a ship was visible, with three large pirate proas at anchor to leeward of it. The ship's head being turned towards them, they doubtless thought we were

coming to reconnoitre: they instantly got under weigh, set their sails, and made off as fast as possible; after which we altered our course, and stood on, so as to clear the shoal. It being very fine weather, we passed within a few miles of the Brill; it appeared like a large white patch in the midst of the blue water, the white coral shewing the danger under the surface. The *Friendship* did not delay her progress by sending a boat to examine the wreck, as only some of the ribs or timbers were seen above water. At this time the high land of the island Celebes was in sight. From July 27 until August 3, was occupied in passing through the dangerous Java Sea: and during this time we had seen the great island of Borneo on our right, of which the animal nearest in likeness to the human species is a native, namely, the *Oran-Outang*, or man of the woods, according to the Malay language. There are also great quantities of gold dust procured at Borneo; but all ships trading with the inhabitants must be continually on the watch, and well armed, as one chief who barter the gold may employ another to way-lay the European party, and these, if overpowered, are sure to be murdered; too many instances of this have occurred to vessels trading amongst the Malays.

We had now reached the east entrance of Singapore Straits. On the 4th we were gratified by the sight of a ship coming out of them as we were entering; she proved to be the *Lowjee* Family, from Bombay, bound to China, with a cotton cargo. They informed us that many privateers were in the India Seas, and that some had been seen in the Straits; that the *Arniston*, Indiaman, had nearly been taken by one off Bencoolen. This information made our captain prepare for a defence, and put on as formidable an appearance as possible. The ship had but twelve guns mounted, but ports below for twenty-four: the vacant ports were filled with what the sailors called quakers, namely, wooden guns painted, which made her show at a distance as if she had upwards of thirty guns mounted. It was very pleasant sailing through these Straits, having the land very near on both sides of us, covered with wood to the water's edge.

(To be continued.)

ERRATUM.

Page 31, col. line 48, for *he passed*, read *he formerly passed*.

OBSERVATIONS

ON THE

MALDIVE AND LACKADIVE ISLANDS.

OF these two contiguous archipelagos, the scanty notices which are found in geographical works indicate that they have never been completely explored; any additional information respecting them may therefore be acceptable to navigators. The captain of an American vessel, who recently had an occasion to visit them, has published the following observations. He says of the Lackadive Islands: "They are in general safe to approach;" in this he contradicts previous accounts. He also impeaches the accuracy of some of the old charts, with which many of his positions disagree. These are mentioned as subjects for examination by nautical men who have the opportunity.

Maldives.—After the disaster caused by the hurricane of the 27th February, a succession of head winds led me among the

Maldivé Islands. I had occasion to pass twice through the $1\frac{1}{2}$ degree channel, and once through the channel called Collamandons. They are both clear and safe. All the dangers, if any, are near the land, and may be seen in good weather, either day or night. Owing to light northerly winds, I had opportunities of seeing some of the west and all the east parts of these islands, and was often within a mile of the land. They are formed in innumerable circular clusters, enclosing interior smooth shallow seas, and are surrounded by chains of coral reefs, in general level with the water, and extending from half a mile to fifty yards of the land. In some parts of the reefs there are openings sufficient to admit boats; and where bays are formed by projecting parts of the clusters, there is in some places anchorage over a sandy bottom, mixed with shells and coral. Many of the islands furnish fresh water a few feet from the surface of the earth. I fell in with a brig at anchor in a bay,

in lat. 6 deg. 57 min. north, longitude 73 deg. 30 min. east, near the north-east extremity, that had been watering from one of the adjacent islands. The whole are covered with cocoa-nut trees, and a thick growth of underwood. The natives are poor and inoffensive, and in general very shy. I had a boat with ten or twelve men in her brought alongside, and though it did not appear that they had any thing on board to relieve the calls of hunger, yet they refused to partake of our fare, owing, I conceived, to their religious scruples.

Lackadives.—Beating winds continuing the whole way to Bombay, I had occasion to traverse among the Lackadive Islands. They are in general safe to approach and are well inhabited. The natives are inoffensive, but not so shy as their Maldivian neighbours. Should a ship be in want of refreshments in their vicinity, I would recommend the islands Kan Rattea, in latitude 10 deg. 34 min. north, and longitude 72 deg. 56 min. east. It furnishes abundance of poultry, eggs, cocoa-nuts of different and excellent qualities, besides very fine water. The ship may lie off and on within a mile of the landing place.

The natives will bring off any quantity of poultry and cocoa-nuts, at a reasonable rate. If you want water, you must land and make a bargain with the chief, for so much per cask. He understands the value of money. You then send your boat with the empty casks, and the natives, by command of the chief, fill them. The boat harbour is inside the reef, the entrance near the north end of the island; a fine sandy beach, and the water perfectly smooth. The fresh water is brought from artificial stone cisterns, which are supplied from natural springs about one hundred yards from the beach.

I would caution those who navigate those seas, not to place any dependence on old charts: they are erroneous in the extreme. The whole range of the Maldiv Islands is actually nearly on the same meridian; the difference in the charts is very great.

New York,
21st Aug. 1818.

ANDREW SCOTT.

Memorandum by the Editor.—The Hayston was wrecked on a reef near the Maldiv Islands on the 20th of July 1819.—See pages 390 and 397.

THE ANDAMANS:

THE MANNERS OF TWO NATIVES, CAPTIVES AT PENANG.

On the 1st April 1819, were landed on the beach of Penang, two negroes from the Andaman Islands, captured by the crew of a China junk. Their appearance excited much interest and curiosity, as a race of people generally considered as cannibals. The following account was communicated to the editor of the Gazette, by a gentleman residing at that presidency, who humanely took them under his care.

“A Chinese junk, manned partly by Chinese and partly by Burmahs, proceeded to the Andaman Islands, to collect *Becho de Mar*; and lying about two miles from the shore, they observed about eight or ten of the savages approaching the junk, wading through the water. Upon coming within a short distance of the vessel, they discharged several showers of arrows, which severely wounded four of the Chinese. The Burmahs gave immediate pursuit in their boat, and after much difficulty took two of the savages prisoners.

“During the chase, they were frequently observed to dive, and to make their appearance at a considerable distance, to elude their pursuers. Several of the arrows were picked up by the Chinese, which are now in my possession; they are made

of rattans, with a piece of hard wood for a point, and an iron nail of fish-bone fastened to the extremity, in such a manner as to render it difficult to extract, if it enter the body.

“These negroes are extremely diminutive in stature, though apparently well formed, and their limbs and arms are uncommonly small: one of them is four feet six inches, the other four feet seven inches high, and each weighing 76lbs. avoirdupois. They have large panaches, and though so small, are in good condition. One is an elderly man of ferocious aspect, the other a boy about 17, of a good expression of countenance. They appear dull and heavy, extremely averse to speaking; when conversing, which they only do when left alone and imagine they are unobserved, they make a noise resembling much the cackling of turkeys. They are of a jet black colour, and their skin has an extraordinary shining appearance, and their bodies are tattooed all over; they have a most voracious appetite, and crack the bones of fowls with their teeth with the greatest facility. Their manner of ascending a cocoanut-tree is remarkable, running up like a monkey, and descending with astonishing velocity.

“The population of the great Andaman.

man, and all its dependencies, does not exceed 2,000, or 2,500 souls : these are dispersed in small societies along the coast, or on the lesser island within the harbour, never penetrating deeper into the interior than the skirts of the forest. Their sole occupation seems to be that of climbing rocks, or roving along the margin of the sea in quest of a precarious meal of fish, which during the tempestuous season they often seek in vain.

"It is an object of much curiosity to discover the origin of a race of people so widely differing, not only from all the inhabitants of the neighbouring continent, but also from those of the Nicobar Islands; however, the inquiries of travellers have produced no satisfactory conclusion. In stature, the Andamaners seldom exceed five feet; their limbs are disproportionately slender; their bellies protuberant, with high shoulders and large heads; and they appear to be a degenerate race of negroes, with woolly hair, flat noses, and thick lips: their eyes are small and red, their skin of a deep sooty black, while their countenances exhibit the extreme of wretchedness, a horrid mixture of famine and ferocity. They go quite naked, and are insensible to any shame from exposure.

"The few implements they use are of the rudest texture. Their principal weapon is a bow, from four to five feet long; the string made of the fibres of a tree, or a slip of bamboo, with arrows of reed, headed with fish-bone, or wood hardened in the fire. Besides this, they carry a spear of heavy wood sharp pointed, and a shield made of bark. They shoot and spear fish with great dexterity, and are said also to use a small hand net, made of the filaments of bark. Having kindled a fire, they throw the fish on the coals, and devour it half broiled.

"Their habitations display little more ingenuity than the dens of wild beasts. Four sticks fixed in the ground are bound at top, and fastened transversely by others, to which branches of trees are suspended; an opening just large enough to admit of entrance is left on one side, and their bed is composed of leaves. Being much incommoded by insects, their first occupation of a morning is to plaster their bodies with mud, which hardening in the sun, forms an impenetrable armour. Their woolly heads they paint with ochre and water, and when thus completely dressed, a more hideous appearance is not to be found in the human form. Their salutation is performed by lifting up one leg, and smacking with their hand the lower part of the thigh.

"Their canoes are hollowed out of the trunks of trees, by fire and instruments of stone, having no iron in use among them, but such as they accidentally procure from Europeans, or from vessels wrecked on their coast. The men are cunning and revengeful, and have a great hatred to strangers; they have never made an attempt to cultivate the land, but subsist on what they can pick up or kill.

"The language of the Andamaners has not been discovered to possess the slightest affinity to any that is spoken in India or among the islands.

"They appear to express an adoration to the sun, the genii of the woods, waters and mountains. In storms they apprehend the influence of a malignant being, and deprecate his wrath by chanting wild chorusses. Of a future state it is not known they have any idea, which possibly arises from our imperfect means of discovering their opinion."—*Penang, April 1819.*

NAPHTHA FROM PERSIA.

MINERALOGISTS and chemists are aware of the existence of naphtha in Persia, and of the many wonderful stories that have been related of its volatility and combustibility. I have been lately favoured (says the Glasgow Chemical Professor), through the kindness of a gentleman who has spent many years in the neighbourhood of Persia, with a specimen of the naphtha in the purest state in which it occurs. It is colourless as water, has the specific gravity 0.753, and precisely the same smell and taste as the naphtha which is made in this country from the distillation of coal. Indeed our artificial naphtha and the Persian naphtha resemble each other in all their chemical properties as far as I have compared them together. I

have never got any naphtha made in this country from coal quite so light as the Persian. The specific gravity of the lowest which I have met with was 0.817, but probably had it been rectified once or twice more, it would have become as light as the Persian.

The statements respecting the extreme volatility of naphtha have not been confirmed by my experiments. The Persian naphtha boils when heated to 320 deg. If we continue the boiling, the naphtha becomes darker coloured, and the temperature may be made to rise as high as 338 deg., and perhaps even higher. Indeed in a silver vessel I raised its temperature to 352 deg. The same increase of temperature takes place when oil of turpentine

is kept boiling. There are two consequences which may be drawn from these facts, and one or other of them must be the true one. Either naphtha and oil of turpentine are composed of two distinct liquids differing in their volatility, or they are partially decomposed at the boiling temperature. From the increase of colour which takes place when naphtha is boiled, one would be disposed to adopt the second of the two alternatives.

When a grain of Persian naphtha is decomposed in the usual way by means of peroxide of copper, we obtain 1.35 grain of water and 6.5 cubic inches of carbonic acid gas. Now the hydrogen in 1.35 gr. of water is very nearly equal to seven cubic inches. The carbon in $6\frac{1}{2}$ cubic inches of carbonic acid is equivalent to $6\frac{1}{2}$ cubic inches. Hence it follows that naphtha is composed of

$6\frac{1}{2}$ or 13 volumes of carbon
7 or 14 volumes of hydrogen

By substituting atoms for volumes, which may be done in this case without any error, it follows that naphtha is a compound of

13 atoms carbon = 9.75

14 atoms hydrogen = 1.75

11.50

The specific gravity of the vapour of carbon is 0.416, and that of hydrogen gas 0.0694. Therefore,

$6\frac{1}{2}$ cubic inches of carbon
weigh..... 0.822 gr.

7 cubic inches of hydrogen
weigh..... 0.148

0.970

There is, therefore, in this analysis, a deficiency of three per cent. I am disposed to ascribe this to a small portion of azote, which naphtha seems to contain. But I have not been able to satisfy myself experimentally of its existence. My experiments are conducted in copper tubes, subjected to a red heat. This always drives off a quantity of air, varying from 0.5 to 0.7 of a cubic inch, according to the degree of heat to which the tube and the peroxide of copper is subjected, and which it is not possible to raise always to

the same degree of intensity. This air always contains three and one-third per cent. of oxygen, the rest being azote. The reason of this difference between its composition and that of common air is the length of red-hot copper tube through which it is obliged to pass, and which is partially oxidized at the expense of the oxygen of the common air present. Now 0.03 gr. of azotic gas would not amount to one tenth of a cubic inch, which, being less than the variation in the quantity of air driven off by heat when nothing is heated but the tube filled with oxide of copper, I have no means of determining whether so small a quantity of azote is disengaged or not.

I have observed of late, that, in order to ensure accuracy in the quantity of water enveloped, it is necessary to expose the peroxide of copper to a red heat just before making the experiment; for peroxide of copper has the property of imbibing a little water from the atmosphere, which it gives out again when heated to redness.

In order to ensure absolute precision in such experiments, it would be necessary to have the means of raising the fire every time to exactly the same intensity. It is likewise necessary to have always the very same bulk of peroxide of copper, and of muriate of lime, in the tubes. When these precautions are not attended to, the quantity of common air evolved varies so much as to baffle all attempts to determine the quantity of azote given out, unless it be very considerable. These niceties would be of very little consequence if we could decompose quantities of the substances subjected to experiment amounting to 10 grs.; but this I have not hitherto been able to accomplish. I mix the grain of naphtha with a little peroxide of copper, and let it down into the bottom of the tube. By surrounding it with moist clay, I keep it cool till the further extremity of the tube is red-hot. I then remove the clay, and allow the bottom of the tube to become hot enough to volatilize the naphtha completely. Should any ammonia or nitric acid be formed, they would be decomposed while passing through at least 12 inches of red-hot peroxide of copper.—*Annals of Philosophy*, No. 88.

VARIETIES.

The force of attraction in Money.—The following anecdote is doubly curious; first, as eliciting two parallel passages in a British and Hindoo author; and secondly, in preserving a practical illustration of the abstract principle ad-

vanced by both, and a turn of ready wit in an oriental scrivener. The relator is an inhabitant of Calcutta, and dates his note, recalling the occurrence, 27th July 1819.

On my return home the other day from

a visit to the Burrah Bazar, I lay down on my couch, and, according to custom, took up a book to amuse myself. It happened to be Goldsmith's Essays (Essay the Vth.); I read the first paragraph, and on perusing the commencement of the second: "When we reflect on the manner in which mankind generally confer their favours, there appears something so attractive in riches, that the large heap generally collects from the smaller." I was struck very forcibly, for I had just a little before, when in the bazar, witnessed a ludicrous scene, which this remark of the doctor's brought to my memory. It was this:—A Byragee, who had been reading in his Shastra that money draws money, was resolved to put the assertion to the test, and went with a rupee in his hand to a Shroff or money changer, and seeing a large heap of rupees (which it is the practice of the Shroffs always to have piled up before them), he threw his rupee into the heap, and patiently waited to see the result. The Shroff, when it was time to shut up shop, began to put up his money into his coffers. The Byragee witnessed his doing so, and at length, when all was secured, and the Shroff was about to shut the door, the Byragee began to make an uproar, by saying that the Shroff had taken a rupee of his. This brought a concourse of people, and an expostulation was entered into.

The Byragee candidly confessed what he had done, in consequence of the passage he had read. The Shroff was asked, if he had seen the rupee thrown in? "Yes," says he. The cry then was, "Deliver it up, deliver it up."—"No, no," says the Shroff, "that would be wrong!" the Byragee says, "money draws money;" mine has drawn his; had his been more than mine, it would have drawn mine; but as it is, his money has been overpowered, so let it remain friends. Every one agreed, and the crowd dispersed.

Anecdote of Geo. III. and the late Warren Hastings.—The late King's attachment to Warren Hastings, and the favourable interest he took in the long protracted trial of the latter, was well known. The first Lord Dartmouth shewed his Majesty a caricature representing Mr. Hastings wheeling the King and Lord Thurlow in a wheel-barrow for sale, and crying out "what a man buys he may sell." The inference intended was that his Majesty and the Chancellor had used improper influence in procuring a favorable adjudication for Mr. Hastings. The King laughed heartily, and observed to Lord D., "well, my Lord, I have been placed in all sorts of situations and carriages: but this is the first time I have ever been put into a wheel-barrow." We need not add that it was as foreign to the character of Mr. Has-

tings to intrigue to obtain the private interference of his Sovereign, as it was beneath that of George III. to exercise any influence to affect the decision of a question before a public tribunal.

Conflict between a Man and a Tiger.—

A letter from Lieut. Collett, of the Bombay army, received by his sister in England, describes the critical situation into which he fell at a tiger hunt; the casualties which had separated the party, consigned him to a single combat with the ferocious animal, and left him to escape by his own intrepidity and intellectual resource.

EXTRACT FROM THE LETTER.

"In the beginning of May, 1815, our army, from the hot winds and bad weather, became so sickly that we were ordered into quarters.

On the 6th of May we passed through a forest, and encamped on its skirts near a small village, the head man of which entreated us to destroy a large tiger which had killed seven of his men, was in the daily habit of stealing his cattle, and had that morning wounded his son. Another officer and myself agreed to attempt the destruction of this monster. We immediately ordered seven elephants, and went in quest of the animal, which we found sleeping under a bush. The noise of the elephants awoke him, when he made a furious charge on us, and my elephant received him on her shoulder; the other six turned about and ran off, notwithstanding the exertions of their riders, and left me in the above situation. I had seen many tigers, and had been at the killing of them, but never so large a one as this. The elephant shook him off. I then fired two balls, and the tiger fell; but again recovering himself, he made a spring at me. I escaped him, and he seized the elephant by her hind leg; then receiving a kick from her, and another ball from me, he let go his hold, and fell a second time. Thinking he was by this time disabled, I very unfortunately dismounted, intending to put an end to his existence with my pistols; when the monster, who was only crouching to take another spring, made it at that moment, and caught me in his mouth; but it pleased God to give me strength and presence of mind. I immediately fired into his body, and finding that had little effect, used all my force, happily disengaged my arm, and then directing my pistol to his heart, I at length succeeded in destroying him, after receiving twenty-five severe wounds."—Lieut. Collett was so much hurt as to be obliged to retire from the service of the field. This action did not escape the notice of the Marquis of Hastings, who to facilitate his recovery transferred him to a station requiring less exertion.

POETRY.

TRANSLATIONS

OF

THE PERSIAN DISTICH.—P. 341.

Our Correspondent "*Fush*" lies at a distance, and by some accident the proof did not reach the gentleman who undertook to revise it for him. Owing to this, it is necessary to give extracts from both the notes covering the independent versions annexed.

Paraphrase.

To the Editor of the Asiatic Journal.

Sir: The playfulness of the Poet's fancy, and the felicitous boldness of his metaphor, which gives consciousness to a flower, remind us of the rich and luxuriant imagery of our early English poets. As the lines, however, when stripped of that point and brilliancy which they derive from their oriental dress, might appear comparatively spiritless in a literal translation, I have ventured on a paraphrase of the original. I have also to explain that as there appear to be one or two trifling inaccuracies in the lines, as printed in the Journal, I take the liberty to subjoin my reading of the same, in which, if wrong, my classical friend *Fush* will correct me.

London,

SHUKHSEE.

12th April, 1820.

زمانه از ورق گل مثال روی تو ساخت
ولی ز شرم تو در غنچه کرد پنهانش

As thy limbs in the grotto lay stretch'd in
repose,

Nature gaz'd with delight, and attempted to trace

On the soft and the delicate leaf of the
rose

The deep glowing beauties that breath'd
from thy face :

O rivalry vain !—one glance from those
eyes,

Whose witching expression a world
might divide,

Check'd the pride of the flower, and
blushing, it tries,

In the folds of a bud minor sweetness
to hide.

Imitative Translation.

To the Editor of the Asiatic Journal.

"Vix ea nostra voco."

Sir : In your last number, I observed a very beautiful Persian couplet, of which a translation was requested: but with such appalling intimations of disparity in the two languages that I can scarcely presume to cope, in the ruder accents of our mother tongue with the mellifluous strains of Hafiz or Firdousce, for compared with

the dulcet song of a Persian Nightingale mine may be deemed only the harsher notes of an English bulfinch. Your intended copy of the original character has been so completely disfigured in the press, that I could make neither head nor tail of it; and but for the context, the *til, tul, tool, wur, kurne*, &c. of the epigrammatic example would have made it an insolvable enigma. "The delicate compliment," in regard to its "beautiful style," may not prove quite so inimitable as insinuated, even in sterling English, and being somewhat struck with the signature in the *oriental symbols*, could not help thinking the admirer of the *melodious conceit*, rather a *queer fish*, till I examined the dictionary and found that *fushsh* indicates "opening a lock without a key." This *enigmatical* subscription had been fortuitously assisted by a squabble among the letters, which unwittingly converted *gool* to *tul*, *dur* to *wur*, and *kurd* to *kurne*, &c. These blunders made me think of *giro*, and various other readings, to which, from the very nature of *oriental types*, the distich in question is liable, till I hit upon what now follows, in roman letters, that are, when well understood, as unalterable as the laws of the Medes and Persians, which is much more than can be said of the characters, whence the following duplicate is a faithful transcript, on this occasion.

Zamann uz wurqi gool misali roo,e to
sakh,

Wule zu shurmi to dur ghoonchu kurd
pinhaush.

Nature once formed a rose like thy cheek's
lovelier hue,

But keeps it still in bud, with conscious
blush, from view.

Should the above homely copy and version not offend the delicate oriental ears or eyes of the learned *Fushsh*, I shall in future be proud of volunteering my services to him, and your Journal, as the very humble, though useful instruments ycleped

GOOL-TURASH or GOOL-GEER.

P. S. Although Zamann, more properly implies time, fate, destiny or providence, than our imaginary being *nature*, I consider this substitute still more poetical than any of the rest; nay if *Flora* had not been too occidental an idea, for the eastern muse, I would have given the preference to this goddess of flowers and blossoms, in her own department, over nature's self who is supposed to act upon a grander scale, and like Jove may depute inferior deities to preside at the birth and formation of particular beauties either in their germ or full bloom on the human face divine, as they do over its sad emblem, a mature drooping rose, or rose bud nipt by death, before its time.

DEBATE AT THE EAST-INDIA HOUSE.

East-India House, March 22, 1820.

A general quarterly court of proprietors of East-India stock was held at the East-India House, on Wednesday the 22d day of March, which was made special for the purpose of confirming a resolution of the same court of the 22d day of December last, approving a resolution of the court of directors of the 10th day of November preceding, for granting to Sir George Hilario Barlow, K. B., a pension of £1,500 per annum, to commence from the 21st day of May 1818; and further, for the purpose of taking into consideration a resolution of the court of directors on the 22d day of December last, for offering to his Majesty to raise a corps of volunteers, at the expense of the Company, in aid of Government; and to enable the directors, if such resolution be approved, and it should be found necessary, to apply for an act of parliament to carry such resolution into effect.

The minutes of the proceedings of the last court being read,

Mr. Howorth (chairman of the committee of by-laws) rose and said, I have to state to the court that the attention of the committee of by-laws has been called to the consideration of the proceedings of the last general court upon the proposed grant to Sir G. Barlow, as far as those proceedings related to a due observance and execution of the by-laws. The committee entertaining doubts upon this subject, deemed it their duty to refer the questions to legal opinions. The case as stated, and the opinions of the counsel, I have now the honour to report to the court. Upon the part of the committee, as well as upon my own part, I beg leave to assure you, gentlemen, and the hon. directors behind the bar, that we have been actuated by no captious disposition unnecessarily to cavil at the proceedings of the executive body; but that we have been purely influenced by a desire to protect the by-laws, to duly discharge those duties, and faithfully to fulfil those trusts which the proprietors at large have been pleased to confide to us. To the friends of Sir G. Barlow, it will be fair to state that the committee did not entertain an idea of impeding the proposed grant, further than to obtain a legal sanction for the regularity of their proceedings. I have now the honour to report the case and opinions to the court.

He then moved that the case, with the opinions of Mr. Serjeant Lens and Mr. Serjeant Bosanquet be read, which was agreed to unanimously, and after being read, were ordered to be filed on the journals.

CASE FOR THE EAST-INDIA COMPANY.

33 Geo. III, cap. 52, sec. 125.—“ And whereas, for protecting the funds of the said Company, during their further term in the said exclusive trade, from being burthened with any improper charges, it is expedient that the said Company shall be put under reasonable limitations, in respect to the granting of pensions, or increasing the salaries of their officers and servants, or creating new establishments, be it further enacted, that no grant or resolution of the said Company, or their court of directors, to be made after the passing of this act, and during the continuance of their right in the said exclusive trade, whereby the said funds may become chargeable with any new salary or increase of salary, or any new or additional establishment of officers or servants, or any new pension or increase of pension to any one person, exceeding £200 per annum, shall be available in law, unless such grant or resolution shall be approved and confirmed by the board of commissioners for the affairs of India, attested under the hand of the president of the said board.”

53 Geo. III, cap. 155, sec. 88.—“ And whereas, by the said act of the parliament of Great Britain of the 33d year of his present Majesty, it was enacted, that no grant or resolution of the said Company, or their court of directors, to be made after the passing of that act, and during the continuance of their right in the exclusive trade thereby granted, whereby the funds of the said Company might become chargeable with any new salary or increase of salary, or any new or additional establishment of officers or servants, or any new pension or increase of pension to any one person, exceeding £200 per annum, should be available in law, unless such grant or resolution should be approved and confirmed by the board of commissioners for the affairs of India, attested under the hand of the president of the said board; and whereas, for further protecting the funds of the said Company during the continuance of the further term hereby granted to the said Company, it is expedient that the said Company should be put under reasonable limitations in respect to the granting of gratuities, be it therefore further enacted, that from and after the passing of this act, it shall not be lawful for the said court of directors to charge

“ the funds of the said Company with
 “ the payment of any gratuity, to any
 “ officer, civil or military, or other person,
 “ exceeding the sum of £600, unless
 “ the grant or resolution for that pur-
 “ pose shall have been sanctioned by the
 “ court of proprietors, and approved and
 “ confirmed by the board of commission-
 “ ers for the affairs of India, and that
 “ copies or instruments granting any sa-
 “ lary, pension, or gratuity, shall be
 “ submitted to both houses of parlia-
 “ ment, within one month after such
 “ grant, if parliament shall be then sit-
 “ ting, or within one month after their
 “ then next meeting.”

It is observable from the section last quoted, that the act of 1813 materially differs from the act of 1793, inasmuch as that act seemed to give to the directors a voice in grants or pensions, whereas the latter act of 1813 places the power of grants exclusively in the hands of the proprietors and the board of controul.

Since the passing of the last-mentioned act, a by-law (altered from a former by-law, by adding the words in *italics*) has been passed, and now stands in the Company's by-laws as follows :

By-law, cap. 6, sec. 19.—“ Item, it is
 “ ordained, that every resolution of the
 “ court of directors for granting a new
 “ pension, or an increase of pension,
 “ exceeding in the whole £200 per an-
 “ num to any one person, shall be laid
 “ before and approved by two general
 “ courts, specially summoned for that
 “ purpose, before the same shall be sub-
 “ mitted to the board of commissioners
 “ for the affairs of India, *in the form of a*
 “ *report, stating the grounds upon which*
 “ *such grant is recommended ; which*
 “ *resolution and report shall be signed*
 “ *by such directors as approve the same,*
 “ *and that the documents upon which*
 “ *such resolution may have been formed,*
 “ *shall be open to the inspection of the*
 “ *proprietors, from the day on which*
 “ *public notice has been given of the pro-*
 “ *posed grant, and that such allowances,*
 “ *in the nature of superannuations, as*
 “ *the court of directors are empowered*
 “ *to grant to their officers and servants*
 “ *in England, by 53 Geo. III, cap. 155,*
 “ *sec. 98, shall be laid before the next*
 “ *general court.”*

It appears to the committee of by-laws, that under this by-law the directors are precluded from calling on the general court of proprietors to decide upon naked resolutions of their own, unsupported by that evidence under which they came to their resolution.

The court of directors are undoubtedly at liberty to come to resolutions upon their own grounds, but when those resolutions are to recommend grants of public money, the by-law has specifically pro-

vided, that the grounds upon which they form such resolutions should be supported by documents, and until they can do so, neither (as it is supposed) is the by-law complied with, nor are the proprietors enabled fully and faithfully to fulfil those functions in the grants of public money, which the legislature has imposed upon them by the 53d of George III.

The proceedings which have given rise to the foregoing observations, are those adopted by the court of directors in the recommendation of a grant of £1,500 per annum to Sir George Barlow, and are as follows :

On the 21st May 1818, Sir George Hilario Barlow, formerly Governor-general of India, addressed the following letter to the chairman and deputy-chairman of the East-India Company.

“ To the honourable the Chairman and
 “ Deputy-Chairman of the honourable
 “ the Court of Directors of the East-
 “ India Company.

“ Honourable Sirs :—A period of four
 “ years has now elapsed since I returned
 “ to England, after having served the
 “ East-India Company in the civil branch
 “ of their establishments in India for
 “ thirty-four years, without intermission.

“ It would be unnecessary, honourable
 “ Sirs, to trouble you with detailing the
 “ high situations which I have held in
 “ the service of the Company, the im-
 “ portant transactions connected with
 “ their interests, in which I have been
 “ engaged, the resolutions of the court
 “ of directors expressive of their appro-
 “ bation of my conduct on various occa-
 “ sions, of the greatest moment to the
 “ welfare and security of the dominions
 “ of the Company, and the expectations
 “ which have at different times been held
 “ out to me by the honourable court
 “ and his Majesty's government, of the
 “ most distinguished honours and re-
 “ wards. Of all these circumstances the
 “ honourable court are fully apprized.

“ The situation in which I now find
 “ myself, after having devoted my life to
 “ the service of the East-India Company,
 “ and after having been led to entertain
 “ the expectations to which I have al-
 “ luded, is also, I presume, known to the
 “ honourable court, unless it be with
 “ respect to the exact amount of my
 “ fortune, and this I detailed in a letter
 “ to the late chairman at his request.
 “ To enter here into further particulars
 “ regarding it, may therefore be unne-
 “ cessary. I am persuaded, that to bring
 “ the subject thus to the notice of the
 “ court, will be sufficient to ensure to
 “ me that consideration which they have
 “ so liberally bestowed on many of my
 “ predecessors, who have served them in
 “ the important offices which I have had

“ the honour to hold, and whose general
“ conduct has received their approbation.

“ In your hands, honourable Sirs, as
“ the organs of the honourable court,
“ I now place my case, begging that you
“ will bring it under their consideration
“ in such manner as you may think proper.—I have the honour to be, honour-
“ able Sirs, your obedient humble servant,

(Signed) “ G. H. BARLOW.”

“ *Streatham.*

“ 21st May 1818.”

It may here be observed, that the committee of by-laws have been given to understand by the court of directors that the letter to Mr. Bebb (the then late Chairman), referred to in Sir George's foregoing letter, was read by Mr. Bebb to the committee of correspondence, and was afterwards read to the court of directors, and that it was immediately returned to Mr. Bebb, in whose possession it is stated still to remain.

On the 10th of November 1819, the court of directors came to a resolution to recommend that a pension of £1,500 per annum should be granted to Sir George Barlow, which was laid before the general court in the form of the following report, signed by such of the directors as approved the same.

“ To the General Court of the United
“ Company of Merchants of England
“ trading to the East-Indies.

“ The court of directors of the said
“ united Company, in pursuance of the
“ by-law of the said Company, chap. 6,
“ sec. 19, do hereby report, that with
“ reference to the proceedings of the general court of the 22d September last,
“ they have passed a resolution, in the
“ words, or to the effect following, that
“ is to say:—

“ At a court of directors, held on Wednesday, the 10th November 1819.

“ Resolved, That having maturely considered the long and faithful services of
“ Sir George Hilario Barlow, Bart. G.C.B.,
“ the many and important stations (including that of Governor-general) which
“ he has filled, the very moderate fortune possessed by him to support the
“ rank in society in which he has been
“ placed by the honors conferred upon
“ him by his Majesty, he be allowed a
“ pension of £1,500 per annum, the
“ same to commence from the 21st May
“ 1818, the late date of his letter to the
“ court; to be paid out of the territorial
“ revenues of India during the term of
“ the Company's charter, if he shall so
“ long live, subject to the approbation of
“ the general court and of the board of
“ commissioners for the affairs of India.
“ That the grounds upon which the
“ said grant is recommended are the
“ long and faithful services of Sir George

“ Barlow, the many and important stations (including that of governor-general) which he has filled, and the very
“ moderate fortune possessed by him to
“ support the rank in society in which
“ he has been placed by the honors conferred upon him by his Majesty. The
“ existence of these grounds is evidenced
“ and more fully detailed in the collection of papers hereunto annexed, which
“ constitute the documents upon which
“ the foregoing resolution has been formed; all of which is submitted to the
“ consideration of the general court.”

This resolution and report, together with an ample collection of papers extracted from the records of the Company, in support of the resolution, so far as it related to the ground of the long and faithful services of Sir George Barlow, and the many and important stations which he had filled, were open to the inspection of the proprietors, from the day on which public notice was given of the proposed grant; but upon the other ground on which the directors recommended the grant, *viz.* the *very* moderate fortune of Sir George Barlow, no document or evidence is produced; but it will be observed, that in their report it is stated, “ that the existence of these
“ grounds is evidenced and more fully
“ detailed in the collection of papers
“ hereunto annexed, which constitute
“ the documents upon which their resolution was framed.”

At the end, however, of the aforesaid collection of papers was appended the following naked paper:—

“ The court have not thought it necessary, from feelings of delicacy, in
“ which they trust the proprietors at large will share, to add to the foregoing documents any detailed and specific
“ statement of the fortune of Sir George Barlow; but they pledge themselves to the proprietors, from the evidence
“ which they have had before them, that
“ in their opinion, the means possessed
“ by Sir George are very inadequate to support the honors which have been
“ conferred upon him for his public services, and the high offices which he has
“ filled in India.”

On the 22d of December 1819, the whole subject was submitted to the general court of proprietors. Objections were taken to the irregularity of the proceedings, and to the non-compliance with the by-law, and an amendment was moved to the following effect, *viz.*

“ It being enjoined by the by-law, chap. 6, sec. 19, that in all cases of
“ granting pensions exceeding £200 per annum a report shall be laid before the
“ proprietors,” stating the grounds upon which such grant is recommended, and that the documents upon which such re-

solution may have been formed, shall be open to the inspection of the proprietors from the day on which public notice has been given of the proposed grant. And whereas the resolution of the court of directors, now proposed for the adoption of this court, recommending a pension of £1,500 per annum to Sir George Barlow, assigns as one special ground for the same, "the very moderate fortune possessed by Sir George Barlow to support the rank in society in which he has been placed by the honors conferred on him by his Majesty; and adds the following words, *viz.* "The existence of these grounds is evidenced and more fully detailed in the collection of papers hereunto annexed, which constitute the documents upon which the foregoing resolution has been formed." And whereas there is not in the said collection of papers any such documents as are so alleged to be annexed to the said papers, and as are required by the said law, it is therefore expedient that the consideration of the said resolution be now adjourned."

This amendment was negatived by a majority of the proprietors present, and the main question for a pension of £1,500 per annum was carried in the affirmative. The grant has not yet been confirmed by a second general court, but is about to be brought forward for that purpose.

It appears to the committee of by-laws, that if it be once established by precedent that the court of directors can upon any pretence whatsoever, at their pleasure, withhold or suppress information necessary to govern the judgment of the proprietors in the exercise of the power vested in them by the 53d Geo. III., of voting upon grants of public money, the intention of the legislature will be defeated, and the by-law regulation annulled.

Your opinion is requested for the information of the committee of by-laws :

1st. Whether the proceedings of the court of directors have been regulated by a due observance of the by-law, cap. 6, sec. 19, and whether that by-law has been strictly complied with ; and if not, whether the non-compliance with the by-law will affect the legal validity of the proposed pension ? The Company's by-laws having been passed under the authority of parliament.

We are of opinion that the proceedings of the court of directors stated in the above case, have been conformable to the by-law, cap. 6, sec. 19, and that the same has been sufficiently complied with, and give legal validity to the proposed pension, in case it should be sanctioned by the court of proprietors.

2d. Whether the court of proprietors can, referring to the act of the 53d Geo. III. before quoted, legally grant the pro-

posed pension, consistently with the said act, upon papers laid before them, which appear to admit the court of directors to possess information which they forbear to communicate to the court of proprietors, desiring them instead thereof to accept and act upon their assurance and opinion, upon the ground of the inadequacy of Sir George Barlow's fortune ?

We are of opinion, that if the court of proprietors shall, upon reference to the documents laid before them, be satisfied of the propriety of the proposed pension, the grant of such pension will be legal.

JOHN LENS,
J. B. BOSANQUET.

18th March 1820.

The *Chairman* (C. Marjoribanks, Esq.) proceeded to state that the court was made special for confirming the resolution of the special court of proprietors, on the 22d day of December last, sanctioning the resolution of the court of directors on the 10th day of the preceding November, for granting unto

SIR GEORGE HILARO BARLOW, K.B.

a pension of £1,500 per annum, to commence from the 21st day of May 1818, and to be paid to him out of the Company's territorial revenues during the continuance of the Company's present charter, if he should so long live.

The *Chairman* moved that the court now confirm the said resolution, which being seconded by the deputy-chairman (G. A. Robinson, Esq.),

Mr. R. Jackson rose to move an amendment, but at the hon. gentleman's suggestion the clerk was desired to read the report of the court of directors upon the case of Sir G. H. Barlow, and the grounds upon which they recommended the proposed grant, together with the appendix of documents. These papers having been read accordingly, the hon. gentleman proceeded to state the reasons why, in this stage of the business, he rose to submit an amendment to the resolution proposed from the chair. He commenced by observing, that he, for one, felt sincere gratitude to the committee of by-laws, for the course they had taken in this business ; and he trusted that even the warmest friends of Sir George Barlow would not be disposed to question the motives of those who felt it to be their duty to oppose the grant. He (Mr. J.) had thought, from the first moment this case was agitated, that the question bore a double aspect ; first, as between the court of directors and the court of proprietors ; and second, as between the court of proprietors and the public. On a former occasion a very strong opinion prevailed, that the directors had not laid before the proprietors that degree of information

which was required by the laws of the Company, to justify them in sanctioning the resolution proposed. What led perhaps to that opinion was, the directors having in their report admitted that the most important paper, alluded to as the evidence of the amount of Sir G. Barlow's fortune, and mentioned by them as forming the principal ground for their recommending the pension, was not to be found. That paper it was confessed was not forthcoming, and the directors had apologized for its non-production, on the score of delicacy. The learned counsel to whom the question was referred, were not aware, perhaps, of this irregularity, at the time they gave the opinion which had been this day read. They, however, had in distinct terms said, that the by-law had been *sufficiently* complied with, so as to give legal validity to the pension, provided that the proprietors should agree thereto. The principal motive, therefore, of his rising was, to call the attention of the court to this most important part of the question, namely, whether the proprietors had such evidence laid before them as ought to satisfy them in the discharge of that duty which he should presently describe, and which he believed was not fully understood. The history of grants of pensions, as between the Company and its various servants, was an extremely short one. Up to the act of 1793, so much confidence was placed by the legislature in the East-India Company, as to preclude all question as to its right to make grants and give pensions. What was called the regulating act of 1773, though it went very much at large into the various regulations then thought necessary for the government of the Company's affairs, still took no notice of the subject of grants and pensions; and the great act of 1784, though it for the first time created a board of control, giving to that board a check over grants to a certain degree, still omitted to restrain the bestowing of pensions. In the mean time it was known as matter of history, that pensions to a considerable amount had been granted by the East-India Company, and so improvidently as to call for the interposition of the legislature in 1793. The policy of that part of the act of 1793, was, according to its preamble, to protect the funds of the Company from improvident grants on the part of the directors, who had sometimes bestowed large pensions without even consulting the general court. It was true that in some instances pensions were granted by those two authorities in conjunction; and the act of 1793 merely provided, that no grant or resolution of the Company or of the court of directors, whereby the funds of the Company became chargeable with any pension exceeding the sum of £200 per annum,

should be available in law, unless such grant or resolution should be approved by the commissioners for the affairs of India. It was soon perceived that if the directors chose to grant such pensions as exceeded the sum prescribed, and obtained the sanction of the commissioners for the affairs of India, they might pass by the court of proprietors altogether. To remedy this and other evils, a new code of by-laws, suitable to the then constitution of the Company, was framed; and among other enactments it was declared, that the court of directors should not be allowed even to propose to the commissioners for the affairs of India any pension, until it had undergone the consideration, and met with the approval of two general courts. Thus stood the law under the charter of 1793, by which the court of proprietors were rendered perfectly secure against any undue or improvident grant of money in the shape of *pensions*. But it occurred to further experience, that although the directors could not grant a *pension* of more than £200 a-year, yet that under the name of a *gratuity* or a *grant* of a specific sum of money, they might give away as many thousands: this mode of dispensing the Company's funds had, in fact, been acted upon. Without questioning the propriety of the transaction, he must observe a grant for £10,000 had been made to the late Lord Nelson, one of £3,000 to Sir Sydney Smith, and other sums to certain distinguished individuals, as well as to many meritorious officers and servants of the Company. This substitution of a different mode of attaining the same object aroused the committee of by-laws to a sense of the danger of such a practice, who, in the discharge of their protective duty, thought proper to interpose the same degree of caution with regard to *grants*, as they had already provided with respect to *pensions*: accordingly, a law was introduced that no pecuniary grant above £600 should be valid, unless it also had the sanction of two general courts, with due notice, as in the case of pensions. He took it for granted that this regulation must have appeared wise to the legislature, for at the time of passing the late act of 1813, for the renewal of the charter, they took special care to restrain the liberal spirit of the court of directors, by transferring that branch of authority to the court of proprietors, who were this day assembled to discharge the function thus bestowed upon them. The legislature was anxious to curtail the powers of the directors, perhaps from being well aware of the earnest and pressing applications that were hourly made to the feelings of that body. With this conviction, parliament had thought proper to enact, that no grant of money above £600 should be consider-

ed valid and binding, unless sanctioned by the court of proprietors and by the commissioners for the affairs of India. The directors were thus left entirely out of the question, and the proprietors constituted the guardians and trustees of the funds of the Company, as far as respected grants and pensions, in conjunction with the commissioners for the affairs of India, whose consent was necessary to give validity to any grant which the proprietors might confer. Now, if such were the duty cast upon the court by the legislature, he was perfectly warranted in saying that they could not be too cautious how they discharged it. They were trustees for the absent proprietors, for the unqualified proprietors, and for the public, who were deeply interested in the Company's funds; for it should be recollected, that the country at large had a very considerable reversionary interest in their funds; great circumspection, therefore, was required in the administration of so delicate a power. By the 59th section of the late act, it was provided, that if there was any surplus revenue beyond the amount of the twelve millions therein appropriated, that "one sixth part shall from time to time be reserved and retained by the said united Company for their own use and benefit, and the remaining five-sixth shall be deemed and shall be the property of the public, and at the disposal of parliament." It was a standing regulation that all the proceedings of the general court should be laid before the commissioners for the affairs of India, and an account of all grants and pensions before parliament. The short question then was, whether the evidence before the court was such as ought to induce them to part with so considerable a sum of money as that in question, for the purpose proposed. The most important part of the evidence laid before the court of directors was avowedly withheld; in other words, the document which prevailed on the directors to recommend a pension to Sir George Barlow, was kept back from them, the appointed judges of the fitness of the measure! In discussing this preliminary question of form, he wished to avoid all observations upon the merits of Sir George's administration; he did not regard them as yet before the court, they were wholly subordinate to the greater consideration of the privileges of that court. Those persons who properly felt for the character of the East-India Company, it seemed to him, could not consent to the motion before the court without a serious dereliction of duty, and an utter disregard of the obligations imposed upon them by an act of parliament. Such gentlemen as concurred with him in this opinion, could feel no difficulty in supporting the amendment he should pro-

pose; it was wholly distinct from the merits of Sir George Barlow. If a consideration of those merits should be brought forward as a separate question, he should not be found backward in entering upon their discussion; but the proposal for this pension was principally brought forward on a plea of poverty, wholly unsupported by evidence, while the conduct of Sir G. Barlow's friends had been calculated to raise suspicion that the contrary was the fact. He (Mr. J.) had stated the duties imposed upon them by parliament; was it a light matter putting it in the power of their enemies to charge them with a breach of such obligations? It was well known with what unfavourable sentiments they were regarded, and with how much jealousy they were watched by those who were already nibbling at their late charter, and seeking its virtual repeal, under the pretences of political exigency and more enlarged commercial views. Could those enemies wish for a more triumphant fact to quote against them than the giving away £1,500 a-year of the public money, upon no better evidence than that some persons out of court had had a peep at a private letter which delicacy forbid them to reveal the contents of? What must that legislature, to whom they were accountable, think of this sublimated delicacy, which they offered as an apology for a violation of trust and confidence? If parliament had meant that the opinion of the court of directors should be sufficient authority for such a grant, it would have been so provided. With vague opinion on the one hand, and positive legal injunction on the other, could the proprietors hesitate as to what ought to be the line of their conduct? The directors say that, in their opinion, Sir George Barlow's fortune is unequal to the maintenance of his rank, but they withdraw that document upon which they profess to ground this opinion. It would be recollected, that at the last court an hon. proprietor in his place had publicly asserted that at the very moment Sir George Barlow's friends were urging his poverty, Sir George had purchased a residence that could not be maintained with less than three thousand a year. He (Mr. J.) knew nothing of this fact himself, but he knew that an hon. proprietor of great weight among them had in his place declared it, and that it had not been contradicted. (A Proprietor here exclaimed, "that's mere hearsay.")—"Admitting it to be mere hearsay," said Mr. J., "yet not one of Sir George's friends had ventured to contradict it in the course of the three months that had since elapsed; on the contrary, every manœuvre had been practised to keep the state of his fortune out of sight." Let them recollect that the eyes of that legislature were upon them,

in whose breath they lived, and who would perhaps before three months had elapsed, be applied to for the subversion of the Company's charter! Did not common sense tell them how circumspect they ought to be in their conduct at the present crisis? Were they strangers to the intimation thrown out at the last session of parliament, that, by-and-by, in considering of a general reduction of the expenses of the state, their pension list would undergo serious and strict inquiry? Were they sure that this would not be a subject of investigation by those as ministers or members of parliament, who were bound to take care of the public's reversionary interest in the Company's funds as well as the Company itself?

The proprietors and the board of controul were the only persons appointed to adjudge the question. Might he then be allowed to ask, if, when the directors should officially wait on the commissioners for the affairs of India for their sanction to the grant, would they have the courage to say to that body, "We ask your consent, but from motives of delicacy, you must not inquire into the grounds for our recommending this pension; they are contained in a private letter which we have been favoured with a sight of, but which we do not feel at liberty to produce or reveal?" He doubted if they would so far presume even upon the mild and accommodating temper imputed to the president of that board; quite sure he was, that they would not have ventured so to address my Lord Buckinghamshire. The commissioners undoubtedly would, and they ought to demand, satisfactory and convincing evidence of alledged facts. He was not aware of any circumstances, in the rank or condition of Sir George Barlow, which could render such delicacy necessary; persons of, at least, equally high rank with that gentleman, had heretofore made no such objection on a similar subject. He would trouble the court with a short document from their own proceedings, which justified this observation. The learned gentleman then read as follows:

'At a court of directors, held on the 23d of September 1795, the chairman, Sir Stephen Lushington, laid before the court the draft of a letter he had written on the 17th of the same month to Warren Hastings, Esq. desiring him to state in writing, upon his honour, fully, plainly, and unequivocally, an account of his fortune, that the chairman might avail himself of it, if he saw a fit and proper occasion for removing the doubts on the subject, existing in the minds of persons of distinction and honour in the country.'

From this it was evident that there was a period in the history of the Com-

pany, when the chairman was not so spell bound. On that occasion was any embarrassing delicacy expressed by the distinguished person to whom the letter was addressed? What said the document? "The chairman laid before the court, a letter which he had received from Warren Hastings, Esq. in reply to the above, stating the account of his fortune, and requiring that this letter might be laid before the directors and the proprietors." What followed?—"It was resolved that the above-mentioned letter from the chairman, and the letter from Mr. Hastings in reply, should be printed and delivered to the proprietors, with the papers advertised for delivery on the 28th of the same month." Now, surely, if such a man as Warren Hastings felt it no indecency to come forward with a full disclosure of his circumstances, there could be no good reason assigned for an opposite conduct in any other gentleman asking a boon from the Company. Could it be said that Sir George Barlow would be disparaged by laying before the proprietors "a full, plain, and unequivocal disclosure of his circumstances upon honour?" Would the chairman of this Company be disgraced in requesting such a disclosure as would be the means of removing doubts known to be entertained by many of those who were called upon to grant the Company's money? Least of all, would an imitation of the example of the eminent person referred to, degrade Sir G. Barlow? It was, in short, the bounden duty of the general court to require such evidence as, when laid on the table of the House of Commons, would warrant their proceedings; and it was in the absence of such evidence that he felt himself compelled to move an amendment to the resolution. By concurring in that amendment, the court of proprietors would avoid all the disagreeable and dangerous consequences which he had pointed out. Should the members of this court be called before a committee of the House of Commons, as they had been on a former occasion, and examined upon this subject, he lamented to say, that they would be obliged to make a confession of their own misconduct, the most degrading and unworthy to which the members of a public body could be exposed. It seemed to him that the mildest conclusion to which the House could come, must be, that they had been unworthy servants, wanting capacity, firmness, and common honesty, to act up to the high and honourable situation in which they had been placed by the legislature. Would they then unnecessarily and wantonly expose themselves to a situation so humiliating? And yet such might be the consequence if they con-

curred in the proposed grant, upon premises so unworthy of their dignity as a deliberate assembly. He must say one word more upon the subject of delicacy. Indeed he was almost ashamed to repeat a word, which was better suited to the tea-table than to the ears of a great corporate meeting like the present; but still as it had been used, he would beg to remind the directors, that there were circumstances in life in which persons must forego their interests or they must waive their delicacy; for instance, many of either sex were extremely tenacious of disclosing their ages—when that was the case, they must forego the advantage of insuring their lives, however expedient such a step might be. Again, instances had been known of policies being invalidated, because the person whose life was insured, had, from a feeling of delicacy, withheld the fact, that he had at the time of the insurance, some secret infirmity. No doubt there were many diseases incident to the human body, which, on the score of delicacy, would be extremely painful to disclose; but the rules of the insurance office required that such facts should be fairly stated. If persons objected to such disclosures, they must forego the advantages they proposed to themselves from insuring. And he must contend that the directors should have said to Sir George Barlow:—"Sir, we have no curiosity to gratify, we seek from you no painful disclosure, we ask from you nothing that can give you uneasiness, we want not the detail of your fortune; but, unless you submit to this ordeal, you must forego the advantages you promise yourself from this application. We cannot recommend your pension to our constituents without proper evidence; it is for you to choose if you will furnish us with it." One word more upon the subject of the private letter, and he had done. Could there be imagined a more dangerous precedent, than for the general court to grant a large sum of money upon a paper which they only knew of from report, which had no place upon their records, and which it would consequently be impossible for them to produce to the higher authorities in justification of their conduct, should it become necessary? His humble recommendation therefore was, that the court would accept an amendment, which he had drawn up in as short a compass as was consistent with the embodying of those legislative enactments which pointed out to the proprietors the duty they had to discharge as trustees and guardians of the Company's funds, and of the reversionary interest of the public therein, with which they were equally entrusted; the learned gentleman then moved the following amendment:—

"This court, considering itself called upon by the legislature as well as by the laws of the Company, to exercise a sound and legal discretion on behalf of the proprietors and the public, with respect to charging the funds of the East-India Company with grants by way of pension or other obligation, cannot agree to the recommendation of the court of directors to grant 'a pension of £1,500 per annum to Sir G. Hilaro Barlow, Bart. to commence from the 21st May 1818, and to be paid out of the territorial revenues of India during the term of the Company's charter, if he shall so long live,' for the following reasons, viz.

"The act of the 33rd of His late Majesty, cap. 52, grants in sec. 125, that, for protecting the funds of the Company, it is expedient that the said Company should be put under reasonable limitations, as to the granting of pensions, &c. and, therefore, that no grant or resolution of the said Company, or their court of directors, whereby the said funds may become chargeable with any new or increased pension exceeding £200 per annum, shall be available in law, unless such grant or resolution, &c. shall be approved and conferred by the commissioners for the affairs of India, attested under the hand of the president of the said board.

"That, by the act of the 53rd of His late Majesty for the renewal of the Company's charter, it is enacted in sec. 88, that, for further protecting the funds of the said Company, it shall not be lawful for the said court of directors to charge the funds of the said Company with the payment of any gratuity to any officer, civil or military, &c. exceeding the sum of £600, unless the grant or resolution for that purpose shall have been sanctioned by the court of proprietors, and approved and confirmed by the board of commissioners for the affairs of India; and that all warrants, and granting any salary, pension, or gratuity, shall be submitted to both houses of parliament within one month of their sitting.

"That the 59th sec. of the same act provides for the application of the surplus of the territorial revenues and the home profits of the Company; and enacts, that, after the discharge of certain obligations, one-sixth part of the said surplus shall be retained by the said Company for their use and benefit, and the remaining five-sixths shall be deemed and be the property of the public, and at the disposal of parliament.

"That a by-law of this Company, cap. 6, sec. 19, ordains, that every resolution of the court of directors for granting a new pension, or an increase of

“ pension, exceeding in the whole £200
 “ per annum to any one person, shall be
 “ laid before, and be approved by two
 “ general courts, specially summoned for
 “ that purpose, before the same shall be
 “ submitted to the board of commis-
 “ sioners for the affairs of India, in the
 “ form of a report, stating the grounds
 “ upon which such grant is recommend-
 “ ed; which resolution and report shall
 “ be signed by such directors as approve
 “ the same, and that the documents upon
 “ which such resolution may have been
 “ formed, shall be open to the inspection
 “ of the proprietors from the day on
 “ which further notice has been given of
 “ the proposed grant.

“ That another by-law, sec. 20 of the
 “ same chapter, ordains nearly the same
 “ provisions, with respect to the grants
 “ by way of gratuities.

“ That this court regards it as their
 “ bounden duty, in return for the confi-
 “ dence thus reposed in them by parlia-
 “ ment, and the laws of the Company,
 “ thoroughly to investigate the alleged
 “ grounds of all applications to them of
 “ a pecuniary nature; and to ascertain,
 “ by proper and suitable evidence, the
 “ truth and validity before they consent
 “ to the burthening of the funds of the
 “ Company, or the affecting of the rever-
 “ sionary rights and interests of the
 “ public, either by increased salaries,
 “ grants, pensions, retrospective pensions,
 “ as in the present instance, or in any
 “ other form or shape whatever, above
 “ the amount prescribed by law.

“ That the directors, in their report
 “ recommending the grant of a pension
 “ of £1,500 per annum to Sir George
 “ Barlow, state, as one of the principal
 “ grounds of such recommendation, the
 “ very moderate fortune possessed by
 “ him, to support the rank in society in
 “ which he has been placed by the hon-
 “ ours conferred upon him by His Ma-
 “ jesty, adding the following intimation,
 “ *viz.* the existence of these grounds, is
 “ evidenced and more fully, detailed in
 “ the collection of papers hereunto an-
 “ nexed; whereas there is no such de-
 “ tailed evidence annexed to the said
 “ report, but on the contrary, a paper,
 “ without date, signature, title, or de-
 “ scription, is introduced into the said
 “ collections, assigning reasons for the
 “ *non production* of such evidence in the
 “ following terms, *viz.* The court have
 “ not thought it necessary, from feelings
 “ of delicacy, in which they trust the pro-
 “ prietors at large will share, to add to
 “ the foregoing documents any detailed
 “ and specific statement of the fortune
 “ of Sir George Barlow; but they pledge
 “ themselves to the proprietors, from the
 “ evidence which they have had before
 “ them, that, in their opinion, the means

“ possessed by Sir George Barlow are
 “ very inadequate to the support of the
 “ honours which have been conferred
 “ upon him for his public services, and
 “ the high offices which he has filled in
 “ India.

“ That, with all due deference to the
 “ court of directors, this court are of
 “ opinion, that it is their duty to record
 “ all such evidence as may induce them
 “ to so grave a proceeding as the recom-
 “ mending to the proprietors the grant of
 “ large pensions; and this court very
 “ much doubt the propriety of their act-
 “ ing upon such occasions, on any private
 “ letter, unless the same is recorded and
 “ retained among the archives of this
 “ House, as a document capable of being
 “ at all times produced in justification of
 “ the proceedings of this court; and that,
 “ so far from the concealment, suppres-
 “ sion, or abstraction of such evidence
 “ being necessary on the score of delicacy,
 “ they submit that such is not consistent
 “ with the practice of this Company, it
 “ appearing on record, that, in the case
 “ of the late Right Hon. Warren Hast-
 “ ings, in the year 1795, the chairman of
 “ the Company then wrote to that dis-
 “ tinguished person, desiring to have an
 “ account of his fortune, in order to en-
 “ able him, the chairman, to remove
 “ doubts in the minds of persons of
 “ honour and character; that the said
 “ Warren Hastings, in answer thereto,
 “ gave a particular account of his fortune,
 “ desiring that the same might be laid
 “ before the directors and proprietors;
 “ and that such letters were, in fact,
 “ printed and delivered to the proprietors;
 “ that the only other authority to which
 “ parliament has given power to deter-
 “ mine upon such grants or pensions, in
 “ conjunction with the general court, is
 “ the board of commissioners for the
 “ affairs of India; and this court are of
 “ opinion, that the directors are bound
 “ to lay that evidence before the one
 “ which they would not feel justified in
 “ withholding from the other, both being
 “ charged with the same duty, and
 “ equally responsible for its due dis-
 “ charge.

“ That under these circumstances, this
 “ court is of opinion that it cannot con-
 “ sent to the proposed pension of £1,500
 “ per annum to Sir George Hilario Bar-
 “ low, Bart. consistently with the trust
 “ reposed by the legislature in the vigi-
 “ lance and integrity of the court of pro-
 “ prietors; and that it is therefore un-
 “ necessary at present to investigate the
 “ merits of that gentleman, either with
 “ respect to those obligations contained
 “ in the protests of a considerable por-
 “ tion of the directors, or the replies
 “ thereto of other members of that court,
 “ or with respect to the recal of Sir

“ George Barlow from the government of
“ Madras.”

Sir John Sewell seconded the motion ; and in doing so, followed the same line of argument as that pursued by the honourable and learned gentleman who spoke last. He also entered into an historical review of the acts of parliament and the by-laws, under which the power of granting pensions and gratuities was restrained ; contending, that the act of 1793, was, in effect, to be considered as reprimanding the Company for the lavish expenditure of their funds, in granting pensions without due consideration. He considered that the restrictions placed upon the court of directors in granting pensions without the sanction of the court of proprietors, was, in effect, constituting the court of proprietors as a court of appeal, from the decision of the court of directors. Viewing this court in that light, it must be considered as one of the most essential circumstances incident to a court of appeal, that the whole of the evidence given in the court below should be laid before the court above. There were undoubtedly instances where additional evidence might be laid before the court above, but there were none in which the court below could be allowed to withdraw any part of the evidence which they had received from the supervision and examination of the court above. There was, indeed, a species of exception to this rule, which sometimes obtained ; as for instance, where the proceedings of the court below were very voluminous, and where the carrying of the whole of those proceedings to the court above, could be attended with no other effect than that of embarrassing the judgment of the court, beside entailing upon the parties a very considerable expense ; but even then, any abridgment of the proceedings could only take place, with the consent of both parties as to what they should consider essential for the information of the court above. The court of directors was the court from which the appeal was made to the court of proprietors. The former was the tribunal (if such an expression might be used) to which the party seeking for a grant or pension applied, whereas the court of proprietors were the persons out of whose pocket the grant or pension was to be paid, and not only paid out of the pockets of the court of proprietors, but (as has been already observed) out of the pockets of those who could not appear for themselves, either from ordinary causes, or because they had no right to constitute any part of the court of proprietors. Under these circumstances the court of directors could not withdraw from the court any part of the evidence upon which they founded the recommendation of a pension

to Sir George Barlow, because in doing so, it would be calling upon the proprietors to dispense with their most essential privilege, namely, that of judging for themselves of the sufficiency of the evidence to justify the conclusion which the directors had formed. This would, in effect, be requiring the proprietors to take it for granted that the judgment of the directors could not be questioned, and that there was no room to doubt of the wisdom of their decision. But supposing the proprietors were to accede to this proposition, would they not be guilty of a dereliction of their duty in the face of the express and positive provisions of the act of parliament, which constituted them the guardians and trustees of the Company's funds ? It appeared to him, that according to the tenour of the act of parliament, by which the proprietors were bound to exercise their judgment in all matters relating to the granting of pensions, this court was constituted as a court of appeal from the court of directors, called upon to examine with all the caution and by all the rules which governed courts of appeal, the whole of the evidence laid in the first instance before the directors. Indeed, it appeared to him, that however disposed the proprietors might be to concede this point to the directors, it was not in their power to dispense with the imperative provisions of the by-law, which required that the proprietors should examine the testimony laid before the directors. The question then was, whether there had been a sufficient compliance with the requisites of the by-law, by laying all the evidence before the general court ? It stood confessed in the papers lying on the table, that there had been a written communication laid before the directors, touching the amount of Sir George Barlow's private fortune, and the inadequacy of his circumstances to sustain his present rank. It could not be denied that this written communication fell precisely within the definition of a *document*, which was the expression used in the by-laws. How then could it be said, that the proprietors had before them all the evidence upon which the directors founded their recommendation ? Unless it could be shewn that *two out of three* meant *all* the documents, he was at a loss to imagine how it could be said that the requisites of the by-law had been complied with. He certainly could not make up his mind to think that they had, and therefore it appeared to him that it was not in the power of the court of proprietors to comply with the request of the court of directors to act upon their recommendation, without regard to the evidence which had been withheld from motives of

delicacy. On these grounds he felt it to be his duty to second his honourable and learned friend's document.

Mr. *Hebb* rose, and said, that a great deal had been advanced upon the subject of the letter written by Sir George Barlow to himself (Mr. B.), upon which he felt it necessary to offer some explanation. That letter had been written to him at his own particular request; it was read by him to the committee of correspondence, and also to the court of directors, *as part of his speech*; but he begged to observe distinctly, that the letter never was on the records of the court. (*Hear, hear!*) He must state, that he had always felt it to be a harsh and indelicate thing to require any man to come before the public and state the amount of his private property; that feeling was in its full force when he made the application to Sir George Barlow, and he never did expect that his answer was to be produced to the public. (*Hear, hear!*) The motive of his writing was this:—Sir George Barlow had communicated to him in person the state of his private fortune, but apprehensive that his memory might be treacherous in retaining a mere oral communication, he wrote to Sir George Barlow, requesting him to put upon paper that which he had previously stated in conversation, for the purpose of informing the court of directors upon the subject, should such information be required. He (Mr. B.) did communicate orally the contents of the letter to the court of directors, but the letter itself never was on the records. To convince the general court, however, that he had no improper reserve on the subject, if it should be the pleasure of the court, he was now ready to read the letter to them. (*Cries of hear, hear! no, no!*) He should give it to them in the same manner that he gave it to the committee of correspondence, and the court of directors. If then, after that, the court of proprietors should be pleased to have the letter put on the records, he was perfectly in their hands, and was quite disposed to do what they thought right. (*Hear, hear! Cries of no, no!*) For his own part he completely concurred in the addition made to the resolution by the court of directors, with respect to what was said on the subject of delicacy. He (Mr. B.) did feel the delicacy there expressed, and he hoped, notwithstanding the sarcasms which the hon. and learned proprietor was pleased to throw out, that that was a feeling which he should ever preserve to the end of his life. (*Loud applauses.*) He could not help regretting very much that the honourable and learned proprietor had made any allusion to what passed in the year 1795 in the case

of Mr. Warren Hastings. The chairman of that day wrote to Mr. Hastings in order to remove doubts which there might be in the minds of some of the gentlemen who composed the court of that period. He (Mr. B.) was not then in England; he was on service in India, and therefore he knew nothing of the doubts which might be entertained, but certainly strange reports had reached India; what those reports were, it was not necessary to advert to at present, but this he would take upon himself to say, that in all the scenes in which Sir George Barlow had been engaged, it was never in the power of any man, not even his bitterest enemies, if he had any, to say, that he even acquired one shilling of his property by undue means; the voice of calumny had never touched him in that respect.—(*Hear, hear!*)—So honourable had his conduct been, and he (Mr. B.) had seen much of him in India, that during his long services no man had ever ventured to say that he had put into his own pocket a single farthing acquired by undue, underhand, or illicit means. (*Hear, hear!*) The hon. seconder of the motion had said a great deal upon the subject of the law of appeal, and had compared the court to the appellant jurisdiction of a court of law; but surely questions which came before a court of law were totally dissimilar from that under consideration. The questions that came before a court of law were questions of property disputed between individuals; he spoke of civil cases, whether Mr. A. or Mr. B. was entitled to the property in litigation. He admitted that in cases of appeal brought into a court of law, all the evidence relevant to the subject under discussion must be laid before the appellant jurisdiction, but that comparison was wholly inapplicable to the case before the court. He submitted to the proprietors, that it was in their discretion to say whether they would have that sort of scrutinizing evidence laid before them, which might be necessary for courts of justice to require. The rules applicable to the court of appeal were totally different from those upon which a commercial body, like the present, acted upon. He should not detain the court longer than by repeating, that he was in their hands; the letter was now present, and if they should be pleased to hear it read, he was quite willing to read it.—(*Cries of no, no, no!*)

Mr. *Gahagan* said, he did not think on the present occasion it would have been necessary for any member of the court to say a single word on the subject of the present motion. It was perfectly competent for every gentleman, however, to state his sentiments, whatever they might be, in a deliberative assembly;

but he confessed, after all that had been said, he was not a little surprized at the course taken by the honourable and learned gentlemen who had moved and seconded the amendment. Much as he was disinclined to trespass upon the attention of the court, yet he thought it would be extremely improper to allow all the allegations which had been advanced on the other side, to go totally unanswered. Feeling this, he would endeavour to shew to the best of his humble ability, the fallacy of each and both of the hon. gentlemen's arguments. He candidly confessed that when he first came into the court, he did not expect to be under the necessity of rising to address it; he did hope that opposition, if it still remained, would have been tacit, and that from the known general feeling which prevailed in the court, the resolution would have been allowed to pass *sub silentio*, even if two or three hands were against it; but it did astonish him to find it open to more opposition, no less formidable than before, with a marking degree of obstinacy which he had scarcely ever met with. When he said that, he begged that the hon. and learned gentlemen on the other side, would not put an invidious construction upon his words, for he meant to say no more, than that it was opposed with that sort of tenacity which would not yield to any thing that was brought against it. He was not sorry, however, that the proceedings of the day had ended in discussion, because really the ingenuity and the volubility of tongue he had heard, had been interesting and amusing; and he might say, in some degree, instructive, though the instruction was rather out of time and place. He was not sorry, because, with great deference to the body who heard him, it was not every man present who was acquainted with the historical detail of the acts of parliament, by which the court was constituted and the proceedings regulated. Therefore the hon. and learned mover and seconder, had gone through an historical detail, which he hoped had given some instruction, some benefit and some additional knowledge to that already possessed by the court. But he should like to ask either the hon. mover or seconder of the amendment, what the threatened reprimanding of the court by the legislature had to do with the question, whether or not Sir George Barlow was entitled to a pension? It might be that from the year 1793, down to the year 1813, the legislature had had occasion in the difficulties in which the East-India Company was placed, to enact regulating laws, and to vest the board of controul with a superintending vigilance, over the proceedings of the House; but what could the privileges of the Company have to do with the question whether Sir

George Barlow deserved the pension? because it appeared to him that it was only necessary to shew that he did deserve it (as was already shewn by the evidence on the table), in order to satisfy all the requisites of the present motion. They had been told that from the year 1773 down to 1793, the Company had been in the habit of giving away their money without any superintending authority to controul them, but that in the latter year the legislature, in consequence of the profligate expenditure of the Company in shape of pensions, found it necessary to put certain restraints upon their munificent disposition; and then it was stated, that in the year 1813, it became still further necessary to restrain the directors from bestowing gratuities beyond a certain amount, without the sanction and concurrence of the court of proprietors. Upon this state of things the hon. and learned civilian who seconded the motion, contended that because the court of directors could not grant pensions or gratuities without the sanction of the court of proprietors, therefore that would make the latter court an appellant jurisdiction from the court of directors. Founding himself upon this proposition, the hon. and learned civilian went on to contend, that this being an appellant court, it could not come to any adjudication, except upon the same evidence, that had been laid before the court below, except in certain cases, which the hon. and learned gentleman had specified. But did it really follow that because there was a superintending power in the court of proprietors over certain proceedings of the court of directors, that, therefore, the analogy which this bore to the proceedings of a court of law, possessing an appellant jurisdiction, rendered the comparison parallel? Admitting the first proof of the proposition was a mere analogy, sufficient to justify the conclusion, that the resemblance in both was precisely the same; men of a professional education, were too apt to draw general conclusions from particulars, and reason by resemblances and analogies, in consequence of the predominant feelings arising from professional habits. Admitting the hon. and learned gentleman's premises to be true, did it follow that the similitude he had thought proper to resort to, necessarily existed? Certainly not. Who ever heard that the court of proprietors was a court of appeal from the court of directors, and bound from analogy to the practice of the courts of justice, to send up its judgment afterwards to be reviewed as the superior court? Who ever conceived that the court of proprietors were invested with any judicial authority to review the decisions of the court of directors? Surely this never was heard of

before. It was true that the court of directors applied to the court of proprietors to confirm their acts in certain cases, but by no means in a judicial character. The hon. gentleman who had spoken last, had with great good sense, pointed out the fallacy of the comparison which had been resorted to, and had shewn an obvious distinction between this court and an appellate court governed by rules of law. In the latter description of the court, the proper subjects for its consideration, were either questions of life and death, or of property, to be decided by judicial and legal construction. But here it was a mere moral question, and a question of pecuniary expediency; therefore, the analogy did not hold at all. He (Mr. G.) was sure, that if the hon. and learned civilian was disposed to indulge himself in nice shades of distinction, peculiarly the province of legal minds, he must at once acknowledge, that a mere analogy would not bear out a perfect similitude. However let it be supposed that the court of directors were bound in duty to have submitted to this court the evidence, and all the evidence upon which they had come to their conclusion; he was prepared to contend that the court of directors had strictly complied with that requisition. The hon. and learned gentleman had contended that the directors had not laid before the court the evidence upon which they had decided. He (Mr. G.) denied the fact; and in order to justify this assertion, it was necessary to see what was the evidence before the directors. He denied, in point of fact, that the court of directors had not complied with the requisites of the act of parliament, in submitting this resolution for the sanction of the proprietors. It was true that the honourable mover and seconder had inferred this, but their inference was erroneous: they had put an interpretation on the words of the act, which could not be borne out by any fair reasoning. He did not mean to say that they had done so wantonly and wrongfully, but that their professional habits had warped their judgment, in order to support a favourite hypothesis. The question here, after all, had nothing to do with the acts of parliament, with the exception as to whether the grant should be approved by this court. But the difficulty, and the only difficulty that could arise in this case, was to be found in the wording of the bye-law which had most inaccurately provided, "that the grants to be proposed, should be stated in the form of a report, which report should be accompanied by the *documents, documents* / not *evidence*!" That he contended was itself an inaccurate phrase, because a *document* might in its nature be such that it would not be evidence in the true sense of the word. Here he contended

that there was no document before the court of directors as to the limited fortune of Sir George Barlow. There had been none submitted to the directors themselves, nor did they state that any paper had been laid before them on that subject. The directors did not, as had been said, avow that they had any *documents*, and withheld them from motives of delicacy. The hon. director who had just sat down had told the court what the nature of the evidence was before him, supposing it to be evidence at all; but he (Mr. G.) denied it to be evidence, for even by the admission of the hon. director himself, it was a private letter, which he in his courtesy, and at his option, read to the committee of correspondence; at the same time telling the court, that he never let it out of his hands, and consequently that it never was a recorded document, or such evidence as the present court had a right now to demand. Suppose, however, that the directors had received this letter as *evidence*, in the strict sense of the word, he would ask either of the learned gentlemen, did it follow, that because it was received as *evidence*, that therefore it was to be considered as a *document*? What did the bye-law say? The bye-law said "that the *documents* should be laid before the proprietors;" but the court of directors might have abundance of *evidence* before them, without a tittle of it being *documentary*. Therefore, if the hon. and learned gentleman insisted strictly upon the words of the law, *non constat*, that the directors were bound to lay the *evidence* before the court, because the *evidence* being parole was not *documentary*, which was all that the bye-law exacted. He had endeavoured thus to answer the legal part of the argument on the other side. There were, however, one or two other points not of a legal character, upon which he wished to animadvert, because they deserved animadversion. He would beg to ask the hon. and learned gentlemen, not as lawyers, but as moral men, where the grant of a sum of money is proposed to be given to a public man for public services, did not that *à priori* shew, (to use a vulgar phrase) that the man wanted the money because he was a poorer man than he ought to be? Why did parliament give grants of money to the great admirals and generals of the country when titles were given by the crown, but because the means they had, were inadequate to support the title, unless aided by parliamentary provision? Was it not an axiom, that when honours are given, the means of supporting them must go hand in hand? He would ask the learned gentlemen, not as lawyers, but as legislators and statesmen, whether when Lord Exmouth received a pension, as the reward of his services, that pension was not a necessary

concomitant of his promotion to the high rank he had attained? and would any man have thought of calling upon Lord Exmouth to give an account of the prize money he had received when fighting the battles of his country in the Mediterranean? Sir Edward Pellew had made a large fortune upon the Madras station, but was it to be said, that because the gallant officer had acquired the deserved reward of his bravery, yet that when he was advanced by his sovereign to the rank of a Viscount, he was bound to give a statement of every farthing of his private fortune, in order to shew, that he wanted a pension from the crown to support his dignity? He (Mr. G.) therefore, would ask any man, lawyer or not lawyer, whether it must not be admitted as a principle of common sense, that *à priori*, the man asking for the money wanted it. For his own part, he must take it for granted, that those who asked for this money for Sir George Barlow conscientiously knew, and believed, that he could not support his present rank without some additional means to his private fortune. Was it not then a paltry and unbecoming request to require him to inform the court how many guineas he had in his pocket, and whence he got them, before the court could yield to his application? To be sure a sort of comparison had been made between this case, and the proceedings that took place in the case of Warren Hastings. Surely the hon. and learned gentleman who referred to this as a precedent, had completely forgotten the dissimilarity of the circumstances. Surely the hon. gentleman, who seemed to have studied his case very well, could not have forgotten the circumstances under which Warren Hastings was called upon for the explanation alluded to. Surely he must have recollected that the public voice at that time reverberated through every part of the country against Warren Hastings's administration. Surely he must have recollected as matter of historical notoriety, that part of the charge against that eminent person in Westminster-hall was his corruption. And did he not recollect that Mr. Burke vituperated upon this subject, until he had almost broken the tympanum of the public ear? Every man knew that the burden of complaint against Mr. Hastings was his alleged corruption, and hence the letter was written, which had been so triumphantly relied upon as an authority. It was this imputation upon that great man's character, which rendered it necessary for the chairman of that day, to call upon Mr. Hastings to declare how much money he had got; because there were tongues of envy busily employed in vilifying his conduct, and eyes full of fire, eagerly glancing at the con-

duct of the man, who was supposed to have enriched himself by the spoliation of millions of unhappy beings, and the devastation of numerous provinces. But was there a man who dared to put such an imputation on the character of Sir George Barlow? If there was a man, who would upon his honour assert, there was any reason to suppose that Sir George Barlow had enriched himself by the plunder of the native Indians,—had profited by the ravages of war, or had put an ill-gotten purse into his pocket, he (Mr. G.) would be the first to call upon him to disclose the state of his circumstances; but until such an accusation was made, he should be disposed to believe that Sir George really wanted, and richly deserved, the money. He (Mr. G.) had thus very briefly, and concisely answered the arguments of the two honourable and learned gentlemen. The learned gentleman who moved the amendment, certainly did not give the court a very long speech, but he thought it was too long for the subject, and what was remarkable, the amendment itself was longer than the speech. He was convinced, that if this discussion was to go on by amendments, moved from day to day, the unbending opposition of the honourable and learned gentleman, would never suffer the question to be at rest. It was quite obvious, that the whole sense of the court was in favour of the motion upon the merits,—every body seemed to admit the justice and equity of the remuneration,—nay, if he recollected rightly, the honourable and learned gentleman had himself said, on a former occasion, that though he then opposed the motion upon principle, yet still if the court of directors could obtain the opinions of their own legal advisers, sanctioning the measure, upon a due construction of the bye-laws, he should waive all further opposition. The general impression on that occasion seemed to be, that if the court of directors, in the interval of time between the first and second discussion, would consult their legal advisers, and if those advisers would say, that, in their opinion, the grant would not be invalid, all further opposition would be withheld. He might be wrong in his recollection of this, but he believed that to be the general understanding. Certain, however it was, that the directors had in the mean time taken the opinion of two extremely able lawyers, both of whom had declared that the requisitions of the bye law were sufficiently satisfied. The learned mover of the amendment, however had renewed his opposition, and after going through a round of objections, at last emphatically fixed upon the word *sufficient*, and insisted that the question was, whether the bye-law had been *sufficiently* complied with. He (Mr. G.) concurred with the honourable

gentleman in saying, that that was the question; but instead of confining himself to it, the honourable and learned gentleman had launched out into an historical detail of the legislative restrictions placed upon the Company, which had nothing whatever to do with the question at issue. The question then was, were the court of proprietors sufficiently satisfied, that the bye-law had been fulfilled? He insisted that it had, and he now repeated that the honourable and learned gentleman had wholly failed in his argument, in endeavouring to shew that it had not, for in fact he had mistaken the true construction of the law. Then let the court of proprietors ask themselves (aye or no), whether they thought the bye-law had been fully satisfied. If they thought it had not, it was their duty, without further discussion, to decide the question in the negative, and send Sir George Barlow away, without a sixpence; but, on the other hand, if they thought it had, they ought to decide it in the affirmative. Such was the only way of coming to a fair conclusion on the subject, more particularly as this was the second debate upon the same question. This he believed to be the usual course in all deliberative assemblies, and, referring to the best model within his knowledge, namely the House of Commons, he believed it was scarcely ever known, that after the principle of a question had been once debated, a fresh discussion was permitted upon the final question, of agreeing or not agreeing to the resolution. He never heard that upon the final result, whether a motion should be passed or not, a member of that house ever got up again for the purpose of going into a new discussion, and recapitulating his former reasoning, without adding a single new argument. Such, he understood to be the course of parliament, although he did not mean to say, that a member had no right to debate a question, in every stage, yet it was an extremely unusual course. Acting upon this wholesome rule, the question now to be decided by this court was, whether they thought the provisions of the bye-law had been sufficiently satisfied?

Mr. Dixon said, he was not convinced by any thing which had been said by the honourable gentleman who spoke last.—It appeared to him that this case was not to be decided by mere volubility of tongue, or by special pleading ingenuity. The court should recollect that the conduct of Sir George Barlow was wholly out of the case. His honourable and learned friend (Mr. Jackson) had cautiously abstained from introducing the personal merits of that gentleman; not an insinuation nor a word had been uttered respecting Sir George Barlow's conduct in the proposed amendment, and therefore he was a good deal surprised to hear the ho-

nourable gentleman who spoke last treat this as a personal question. The point that weighed heaviest on his (Mr. D's) mind, was the fear of establishing a dangerous precedent; the danger was this—if it were admitted, that there did exist reasons which could be stated why this court ought to grant a pension to Sir George Barlow, but which were not to be laid before the court; or if it was admitted, that there were documents which could be produced, but might be withheld; a door would be opened which would never be shut again. He was very free to say, that he believed in his conscience, Sir George Barlow had deserved by his meritorious conduct, some mark of the high approbation of the court of proprietors and court of directors. But when it was said by the honourable gentleman who spoke last, that there was no document before the court of directors, giving an account of Sir George's private fortune, he differed very materially from that statement, because the directors, in their report, distinctly said that there was a document which had been read to them. He trusted more to common sense for the decision of this point than to the specious ingenuity of a professional man. Whether this was a document, or whether it was evidence, could make no distinction in the minds of those who wished to be guided by plain common sense. Sir George Barlow having applied to the court for some additional means to sustain his rank, could any thing be more reasonable than that some account of his circumstances should be laid before the court of proprietors? because, with all the ingenuity of the worthy gentleman, he ventured to say, that no such account had yet been given to the court. He (Mr. D.) did not mean to undervalue the services of Sir George Barlow, but he believed no man would attempt to say that the services rendered by that gentleman to the Company in India, could be at all compared with the eminent and important services of Warren Hastings. If, then, Warren Hastings felt no backwardness or delicacy in rendering to the directors and to the proprietors an account of his pecuniary circumstances, he could not see why the same disclosure might not with equal propriety be made by Sir George Barlow. He anticipated that he should be in the minority on the question, but that circumstance should not intimidate him from the honest expression of his sentiments. It seemed to him that there had not been any case made out which could justify Sir George Barlow in this application for the pension; for if Sir George Barlow was a rich man he ought not to make the application, and if he was not, it could not be derogatory to his character to comply with the requisition of the court, demand-

ing information as to the real state of his circumstances. The honourable director (Mr. Bebb) had told the court, that the letter received by him from Sir George Barlow was much at their service. He (Mr. D.) certainly would not call for it, but he thought that a copy of the letter, or a copy of such part of it as related to Sir George Barlow's circumstances, ought to be in the possession of the court of directors; because one day or other it might fairly be questioned how this money had been expended; it might be matter of question hereafter, upon what ground the directors had recommended the disposal of so large a sum of money? It was fit, therefore, that they should be provided with some evidence to justify their conduct. Such evidence was certainly not now in their possession, and if it should be asked for hereafter, it would be a very lame excuse to say that they had it not. It appeared to him that the document alluded to by the honourable director was of so much importance that it ought to be filed on the records of the court. That gentleman had very fairly offered to read the letter; he (Mr. D.) would not ask him to read it, but he hoped that the honourable director would furnish the court, of which he was a member, with a copy of it as a document, which might be referred to at a future period. At present he (Mr. D.) was conscious that he should be one of a very small minority, but that should not deter him from doing what he conceived to be right. Considering, therefore, that there was not sufficient evidence before the court to justify the grant, he should vote for the amendment.

Mr. *Pattison* considered, that a great deal of time appeared to have been unnecessarily consumed in the discussion of the question, Whether the resolution of the last meeting of the court should or should not be confirmed? because if it was legal, it appeared to him that it ought immediately to be confirmed; and if not legal, nothing that the court could do, even by the production of the paper itself alluded to, could remove the objection. That paper could not make the proceeding legal if it was already illegal. He therefore thought that the course which the business had that day taken had been quite irregular. It was a mistake to suppose, that the court of directors had expressed any wish to take the opinion of counsel upon the subject. In point of fact that opinion was desired by the committee of bye laws; *at their request* it was taken, and by the committee of bye laws it had been that day laid before the court. That opinion being now upon the table, it appeared to him to be quite conclusive of the question. Two very eminent lawyers, had been consulted, and desired to give their opinion. One

of them was the acknowledged law authority of the Company, by whose advice they were always guided, and the other, was a gentleman of distinguished eminence. Unfortunately, however, the Court had heard the arguments of two other honourable gentlemen of great legal ability, who had questioned the validity of that opinion; which was again supported by another legal gentleman of ability, so that in short, the Court were put into that situation which some poet had described when he said, "Who shall decide when doctors disagree?" He confessed as a man of plain understanding, totally unacquainted with the niceties of legal disquisition, under this difference of opinion, he should take leave of legal advice, and beg leave to apply to a little plain common sense. Well then, how did he find the state of this question? He found that the court had a law opinion which went to this intent, that it was competent for the proprietors to accede to the recommendation of the court of directors though unaccompanied by the document referred to. In his own judgment it was to be regretted that the document was not produced; for it would have saved the court a great deal of talking about *delicacy*, of which so much had been said, as to become extremely *indelicate*; for it had been often observed, that there are none so *indelicate* as the *over delicate*, and he confessed, that the delicacy so much talked of was a sort of pseudo delicacy. There could not be a doubt that this court was competent to decide the case as it was now presented to their consideration. He, for one, bowed most implicitly to the legal opinion of the gentlemen consulted, and he was ready to waive all further consideration on that point; he thought the court ought to proceed without further delay to the simple question, whether Sir George Barlow should or should not have the pension? It had been established by the opinion of the law authority of the Company, in whom they placed so much deserved confidence, that the decision of the last court was a legal decision, and therefore, as one court had approved of the grant, the present court was now called upon to approve of it.—Before he sat down, he would beg leave to notice a few words which had fallen from the chairman of the committee of bye laws, (Mr. Howorth) who was always listened to with great and deserved respect. That honourable gentleman had said, that if the bye-law, as now formed, did not sufficiently guard the proprietors against grants of money, by the court of directors, without their consent, it was high time that the law should be amended. "That it was the intention of the legislature, and of the bye-law, that the directors should not be the guardians of

the Company's money, but that the court of proprietors alone should exercise that authority, and that the directors must look to the sanction of that court in order to confirm their pecuniary grants, was a proposition which had not been disputed. But if there was any doubt upon this point, he hoped the chairman of the committee of bye-laws, would take into his consideration, whether he could so amend that bye-law as to preclude the necessity of discussing a question of this sort, whenever a money grant was brought under consideration. Without troubling the court any farther, he should conclude by saying, that as he knew the circumstances in which Sir George Barlow was placed, with respect to private fortune, he sincerely hoped the decision would be in his favour.

Mr. Jackson rose to explain. He said the honourable and learned gentleman (Mr. Gahagan) had chosen to attribute to him (Mr. J.) a course of argument which he had never urged, because it was totally inconsistent with the view he had taken of the case. The honourable director, who spoke last, had put the question on its fair and true ground. He (Mr. J.) had said, that the legal opinion which had been taken, justified the general court in requiring that degree of information which he had contended for, and he had stated the true question for the proprietors this day to determine to be, whether or no, the evidence laid before them was a sufficient ground for the grant of a very large sum of money from the fund confided by parliament to their honour and discretion; and though the honourable and learned gentleman had made a long speech in praise of brevity, as was generally the case with those who undertook to reprove prolixity in others, yet he had mistaken the whole course of his (Mr. J.'s) argument from the beginning to the end. The honourable and learned gentleman had chosen to reply to Mr. J. as if he had gone into the services of Sir George Barlow, though he had set out with an assurance (and he would put it to the court whether he had not kept his pledge) that he would not say a single word which could occasion the slightest feeling of irritability in the breasts of the warmest of Sir George Barlow's friends. He had studiously taken pains to put it out of the power of those friends, if they were also friends of the Company, not to support his amendment. He put it to the candour of the court, whether he did not rest the whole case upon the legality, the wisdom, and the expediency of assenting to this pension, upon evidence most meagre in fact, and confessed to be both mutilated and deficient; he would also put it to the court, whether he did not suggest, at the same time, that if Sir George Barlow

thought proper to come forward hereafter, upon his merits, although perhaps he, Mr. J., should be found in the minority upon a motion of that nature, he would be ready to meet the question with the most dispassionate discussion and with every disposition to be just and liberal towards Sir George Barlow. His whole argument went to shew, that it was unwise, inexpedient, and dangerous in the highest degree, considering the delicate trust committed to the proprietors, by the high authority of parliament, for them to grant away £1,500 a year, upon evidence acknowledged to be defective, and upon papers for the non-production of which it had been thought necessary to make an apology!

The *Chairman* said, before he put the question, he wished to express a hope, that the explanation given by his honourable colleague (Mr. Bebb) was satisfactory to the court. His honourable friend had afforded a very exact statement of the proceeding, which had been adopted in the committee of correspondence, and in the court of directors; and he begged to state, that both the committee and court were unanimous upon the question for recommending this grant to the adoption of the proprietors. He felt it his duty to observe, that upon all occasions of this nature, the directors were ever most anxious to obtain as much information as possible. It frequently occurred to almost every member of the court of directors to produce evidence, for the information of their colleagues, upon the subject-matter of deliberation. When an occasion required evidence to be produced, the individual director who brought forward a proposition, obtained the information and conveyed it to the court in the manner he thought most suitable to the purpose. Such was the practice of the court of directors, he might almost say their daily practice, and he hoped, under these circumstances, the proprietors would allow, that his honourable friend had nearly proceeded in conformity to what he understood to be the usual practice. He had but one farther observation to make, and that was, in answer to what had fallen from the honourable and learned proprietor (Mr. Jackson), in an insinuation of surprise, that the chairman of the day did not write to Sir George Barlow for some information with respect to his situation and circumstances. He (the chairman) could only say, that from the information he had received upon that subject, his mind was perfectly convinced that Sir George Barlow's fortune was not sufficient to maintain him with becoming propriety in the situation to which his eminent and faithful services had raised him. Satisfied in his own mind of Sir George Barlow's situation requiring

means more adequate to his rank, he thought it his duty upon that principle of liberality on which he hoped he should always act through life, to recommend, in an handsome manner, that provision which Sir George's circumstances demanded. In doing this, he felt that he had only acquitted himself of his duty, and therefore under this impression he begged leave to recommend the resolution for the adoption of the proprietors.

The question was then put, for agreeing to the amendment proposed by Mr. Jackson, and upon the shew of hands, it was negatived by a very large majority.

The question for agreeing to the original resolution was then put:—"Resolved, that this court confirm their resolution of the 22d. December last, approving the grant of a pension of £1,500 per annum to Sir George Hilario Barlow, Bart, G.C.B. to commence from the 21st. May, 1818;" and carried in the affirmative, by a very considerable shew of hands.

VOLUNTEER CORPS.

The *Chairman* then acquainted the proprietors, that the court was further made special, for the purpose of taking into consideration the propriety of offering to his Majesty, to raise and maintain, at the expense of the Company, a volunteer corps, for the purposes mentioned in a resolution of the court of directors agreed to on the 22d. December last, which, with the permission of the court, should be now read.

The *Clerk* read a resolution to that effect.

The *Chairman*, in rising to move the resolution, observed, he was extremely happy that the state of the country was different from what it was when the resolution was adopted by the court of directors. The court must be well aware of the circumstances which gave rise to this proceeding. The state of the public mind at the period alluded to, could not fail of attracting the attention of the court of directors, for the purpose of taking into consideration the expediency of a measure which the circumstances of the country seemed to require. The subject being fully discussed by them, the directors were unanimously of opinion, that a volunteer corps raised by the Company, in the then state of the country, would be of great utility, as far as their extensive commercial concerns were interested, as well as the public peace. Under these circumstances, he begged leave to move the resolution of the court of directors of the 22d. of December.

The *Deputy Chairman* seconded the motion.

Mr. Dixon rose and said, he trusted he should have credit given him, when he asserted that, since he had been a pro-

prietor, he had never said or done any thing, but what he conceived to be calculated for the general good of the Company and the society in which he lived. He concurred with the hon. chairman in thinking that at the time the resolution was agreed to by the directors, a military force was justly considered as necessary for the preservation of the public peace, and the property of the Company; and he now congratulated the court, that the country had something of an appearance highly gratifying to every good man. At the period alluded to by the hon. chairman, undoubtedly there were such disorders prevalent as threatened all parts of the kingdom with anarchy and confusion; there was a general fear and apprehension for the public welfare, and he was not at all surprised that the court of directors were affected in the same manner; and proud he was to learn from the words of the motion, that it was the unanimous opinion of the court of directors that, as far as this Company could, it ought to be ready to provide a military force for the preservation of good order and the maintenance of the public peace. In that respect, he thought the court of directors were entitled to the highest commendation; but he hoped he should be excused in saying, that where such measures were adopted with a spirit and with a zeal highly creditable to the Company, yet some regard should be had to the probable expense of such a measure. Though he still approved of the idea of raising a military force, however the appearance of the times might not justify the continuance of it, yet he could not consent to a proposition which would go the length of saying, that a military force once raised was to be maintained in perpetuity. There were no words in the motion which gave any idea as to the nature and duration of the military force proposed. If it was intended to be a military force in perpetuity, he, for one, would not accede to the motion; and his mind would be much relieved if he was informed that the measure was not intended to go to that extent. He had come without any communication with other persons, and in whatever way he acted he had nothing to guide him but his own share of common sense. If then it was intended that this was to be a perpetual charge upon the Company, he was afraid it was not a wise measure, and not one which this court ought to adopt. There was another circumstance very material to be known, namely, as to the number and strength of the proposed corps; for he believed that the motion proposed was silent upon that subject, and no intimation was given whether it was to consist of an hundred or a thousand men. This was a matter upon which the court could not be indifferent. All

LITERARY AND PHILOSOPHICAL INTELLIGENCE.

EAST INDIA COMPANY'S MUSEUM.

Dr. Horsfield, the celebrated naturalist, is at present engaged by the East India Company in arranging for their museum the splendid collection of natural history from Java, sent home at a great expence, by Sir Stamford Raffles, during his government of that island.

BELZONI.

We have the pleasure to announce that this interesting traveller and successful prosecutor of antiquarian researches has arrived in London after an absence of ten years, five of which he has employed in Egypt and Nubia.

The famous sarcophagus of alabaster, discovered by him in Thebes, is safely deposited in the hands of the British consul in Alexandria, waiting its embarkation for England, along with the obelisk, 22 feet high, taken by Belzoni from Philæ, above the first cataract of the Nile. Mr. Belzoni's journal of his discoveries of antiquities in Egypt and Nubia, of his journey on the coast of the Red Sea, and to the *Oases*, is in the course of publication. The model of the beautiful tomb discovered by him at Thebes is to be erected as soon as a convenient place shall be found for its reception.

LINNEAN SOCIETY.

The *Transactions of the Linnean Society*, vol. xii. part 2, contain two articles which enlarge our acquaintance with the natural history of Asia.

Description of select Indian Plants.—

By Henry Thomas Colebrooke, Esq. F.R.S. and L.S.—The object of this communication, and of others that are promised from the same pen, is to give an account of some Indian plants which have either not been previously described, or have been imperfectly noticed. The author's present remarks apply to *Subia lanceolata*, *Strychnos axillaris*, *Dischidia Bengalensis*, *Tylophora exilis*, *Macrolebium bijugum*, and *Pygeum acuminatum*; each of which is particularly described, and exhibited in the plates.

The generic appellation *Subia* is derived, with scarcely any alteration, from the Indian *Sahja*. It belongs to the class *Pentandria*, order *Monogynia*, and is a native of Silhet, in Bengal, where it flowers in October, and bears ripe seed in May.—*Strychnos axillaris* is nearly allied to the species mentioned by Leschenault, in the 16th volume of the *Annals of the*

Museum, and, like some others of the family, it is supposed to be intensely bitter and poisonous. Both *Dischidia* and *Tylophora* belong to the natural order of the *Asclepiadeæ*, so well illustrated by Brown.—*Macrolebium bijugum* is supposed to correspond to the *Piipa bijuga* of Lamarck; and the acuminate *Pygeum* may either be the *Zeylanicum* of Gærtner, or a species closely connected with it.

Curious Animal of Australasia.—Extract of a letter addressed to the secretary by Sir John Jamison, F.L.S., dated Regentville, New South Wales, Sept. 10, 1816.

"I cannot avoid relating to you an extraordinary peculiarity which I have lately discovered in the *Ornithorynchus paradoxus*.—The male of this wonderful animal is provided with spurs on the hind feet or legs, like a cock. The spur is situated over a cyst of venomous fluid, and has a tube or cannula up its centre, through which the animal can, like a serpent, force the poison when it inflicts its wound. I wounded one with small shot, and on my overseer's taking it out of the water, it stuck its spurs into the palm and back of his right hand with such force, and retained them in with such strength, that they could not be withdrawn until it was killed. The hand instantly swelled to a prodigious bulk, and the inflammation having rapidly extended to his shoulder, he was in a few minutes threatened with a locked jaw, and exhibited all the symptoms of a person bitten by a venomous snake. The pain from the first was insupportable, and cold sweats and sickness of stomach took place so alarmingly, that I found it necessary, besides the external application of oil and vinegar, to administer large quantities of the volatile alkali with opium, which I really think preserved his life. He was obliged to keep his bed for several days, and did not recover the perfect use of his hand for nine weeks. This unexpected and extraordinary occurrence induced me to examine the spur of the animal; and on pressing it down on the leg the fluid squirted through the tube: but for what purpose nature has so armed these animals is as yet unknown to me. The female is oviparous, and lives in burrows in the ground, so that it is seldom seen either on shore or in the water. The males are seen in numbers throughout our winter months only, floating and diving in all our large rivers; but they cannot continue long under water. I had one drowned by hay-

ing been left during the night in a large tub of water. I have found no other substance in their stomachs than small fish and fry. They are very shy, and avoid the shot by diving and afterwards rising at a considerable distance."

The poison-charged spur and apparatus of the male is an addition to the anomalous properties before observed in this paradoxical creature; and the discovery that the young pass through the oviparous state must remove it from the class of mammiferous animals.

ASIATIC SOCIETY.

On the 5th of Sept. was held a meeting of the Asiatic Society, the Marquis of Hastings in the chair. The long interval since the preceding one was occasioned by the set of rooms having been under repair.

Mons. Langles, of Paris, presented to the Society, the thirteenth and fourteenth numbers of the *Monumens Anciens et Modernes de l'Indoustan*, through the medium of Mons. Picard.

A letter was read from H. C. Orsted, Secretary to the Royal Society of Copenhagen, transmitting a volume of their transactions.

A duplicate of the beautiful Medal of Malherbe was received from the Society of Agriculture and Commerce at Caen, together with two volumes of their Memoirs, and several other works published by them. H. H. Wilson, Esq. has been nominated Corresponding Member of that Society.

The first number of the *Revue Encyclopédique, ou Analyse Raisonné*, and an *Esquisse d'un Essai sur la Philosophie des Sciences*, from M. A. Jullien, of Paris. The *Revue* contains several curious articles, some of which we intend to notice on a future occasion.

From M. Rousseau, of the Academy of Sciences at Marseilles, the Society has received two works of his own composition. *A Mémoire sur les trois plus fausses sectes du Mussulmanisme, les H'ahabis, les Nousutris, et les Ismaélis*, and a *Notice Historique sur la Perse, ancienne et moderne*.

Copies of all the different tracts published by the Calcutta School Book Society, were presented by Lieut. T. Irvine, the Secretary to that laudable Institution.

Count Volney, the author of a *Voyage en Syrie* and *Ruines*, presented to the Society a new work, called *L'Alphabet Européen appliqué aux Langues Asiatiques*. In the dedication of this volume to the Asiatic Society, the author describes a singular ordeal passed by his system of orthography. When the French Government was engaged in publishing the sumptuous work, descriptive of Egypt, it was deemed necessary to annex to it a geo-

graphical map, and it was also of importance that the Arabic and French nomenclature should correspond as literally as possible. The Parisian *Arabistes* finding this impracticable, Volney, who had an intimate knowledge of the subject, was consulted. As there were however many Orientalists who opposed his theory, he suggested that a sort of jury might be appointed to sit and decide between the parties in this literary suit. The case was a difficult one, and Volney proposed three eminent men, distinguished for their knowledge of *Mathematics*, to assist at the trial. The government was of opinion that the commission should consist of twelve, and twelve persons of literary distinction were accordingly appointed. The cause was investigated, and Volney's system of European transcription admitted to be the best. It is this system which is described in the volume now transmitted to the Asiatic Society.

Col. Mackenzie presented a specimen of the curious remains of Sculptured Antiquities at Amrisweram in Guntoor. It was taken, with a few others, in the possession of that distinguished antiquarian, from the mound called Deepul Dinna, or Mount of Lights, first described by him in the 9th volume of the *Researches*.

The Secretary presented a copy of the first part of Mr. H. T. Colebrooke's *Treatise on Obligations and Contracts*, in the name of the author.

A letter was read from Mr. W. H. Macnaghten, transmitting ten rupees, taken from a number (204) discovered in an earthen pot, by a poor man while digging on the bank of the Mahanunda, near Maldah. They appear to be of the age of Shah Juan.

A model of a *Kherad*, or Turner's Lathe, used by the native turners at Patna, was presented by a Lady; also some seeds of the Candle-berry Myrtle, with two candles made of the wax produced by that plant. The plant grows at the Cape, and the candles are in general use among the Dutch at that place.

Capt. P. G. Baker has added to the stores of the Museum a box of minerals, the produce of Rajpootana.

A sponge plant from the shores of Singapore, was presented by Mr. Palmer, and the skin of a snake about twelve feet long, by Col. Paton.

A letter was read from Dr. Wallich, transmitting descriptions of several plants, by Dr. Govan, superintendent of the Botanical gardens at Saharunpore, to which additional remarks are appended by Dr. Wallich. In the observation on the *Aconite*, called by the natives *Beckh*, or *Bees*, it is said that the idea of its effluvia affecting the air, so as to produce deleterious effects upon those exposed to it, is very prevalent among the inhabitants of

Bissepore and Gurhwal. Dr. Govan having been himself, as well as all those who accompanied him, repeatedly exposed both during the day and night to its influence, without having ever experienced any inconvenience, he is inclined to attribute this belief to the circumstance of the plants always occurring at very high elevations, where we are informed by the highest authority, great inconveniences, similar to those believed to be produced by it, are often felt, viz. giddiness, fainting, somnolency, and difficult respiration, the latter of which symptoms has been usually ascribed to rarefaction of the air, and said to occur when the body remained perfectly at rest. The plant occupies the highest situation in the forest belt investing the sides of the Himalaya, Dr. Govan never having met with it much below where the barometer stood at 19 inches. With regard to his own personal experience of the effects above mentioned, and that of the people who accompanied him in crossing the Himalaya by the Role or Pannung Pass in Bissepore, where the barometer stood at 17 inches,—after passing the night, at what he conceived the upper limit of perpetual snow, he can assert that no other inconvenience, or difficult respiration was felt, than what was the necessary result of the exertion in ascending, and which ceased whenever the body remained at rest. On one occasion a degree of sickness and giddiness were experienced, with anxiety of respiration, not during the exertion of ascending; and several of the servants would willingly have remained behind to sleep for a short time on the snow, but here the plant was not to be found for many miles, and as the situation was much inferior in elevation to that above mentioned (the barometer having only sunk to 19 inches) Dr. Govan could not help attributing the sensations experienced, to the exertion of walking more than ankle deep among snow for nearly six hours, during which the feet were benumbed, and the head exposed to the very powerful action of the rays of the sun. This was in crossing Maunjee-ke khand, between the Thouse and Tumontri, in the beginning of October 1818. Aconite is imported into the plains, and sold at the rate of one rupee the seer. It is used in chronic rheumatism by the native practitioners.

A collection of Fossils found on one of the Carrybaree cliffs, bordering on the Burhampooter was presented to the society by D. Scott, Esq. commissioner at Cooch Behar, through the medium of Dr. Wallich.

A specimen of a singular confirmation of a human bone, with a description of it, was received from Mr. John Tyler.

A letter was read from the same gentleman, communicating a paper on the Bi-

nomial Theorem, the discovery of which had been attributed to Sir Isaac Newton. It was afterwards ascertained that Newton was not the inventor of it, but the first who applied it to fractions. The paper in question professes to shew that the theorem was known to the Arabians, as it is to be found in two of their arithmetical books, viz. the *Miftel-ul Hisab*, or Key of Arithmetic, composed by Jum-sid ben Musaoud in the reign of Ulug Bed, grandson of Timoor (about 1450), and in the *Ayoum ul Hisab*, or Rules of Arithmetic, composed by Mahommed Banker, in the reign of Shah Abbas the First, about the year 1600. The rule is said to be derived from authors of still more ancient date. Mr. Reuben Barrows, in the seventh volume of the *Researches*, suspects that it was known to the Hindoos.

Lieut. E. Fell transmitted a description of an ancient stone fabric near Bhilau, with drawings of the sculptures found there.

The secretary communicated an account of a human sacrifice, as practised at Puchmurree, from Lieut. R. A. McNaghten. From this account, which contains a peculiar feature of superstition, we gather the following particulars.*

Among the many natural curiosities to be found at Puchmurree is an arched cave, sacred to Mahadeo. It is about 100 feet in length, and 20 in height; and is a natural excavation at the bottom of an immense solid rock. It is situated in a deep narrow dell, and the surrounding rocks are from 150 to 200 feet above the level of the cave. The floor of this cavity is covered with water about knee-deep, but for which it is difficult to account, as the upper surface of the rock is perfectly dry, and as there is no water visible any where near it to supply the perpetual filtering.

At the further end of the cavern is an idol; to which the pilgrims, who annually resort thither in great numbers, pay their devotions, bathing themselves at the same time in the water which drips from the roof. Another rock, which contributes to form the dell above alluded to, is consecrated to Buwanee, there called the wife of Mahadeo. This rock is devoted to a purpose similar to that of

* In the seventh volume of the *Asiatic Researches*, Mr. Colebrook, in his dissertation on the religious ceremonies of the Hindoos, thus alludes to the same subject;—"I must also take this occasion of announcing a very singular practice which prevails among the lowest tribes of the inhabitants of Berar and Gondwana. Suicide is not infrequently vowed, by such persons, in return for boons solicited from deities; and, to fulfil his vow, the successful votary throws himself from a precipice, named Calabhairava, situated in the mountains between the Tapti and Narmada rivers. The annual fair, held near the spot, at the beginning of spring, usually witnesses eight or ten victims of this superstition."

Mount Lencao of old, from which Sappho precipitated herself into the sea. When a woman has been married for several years, and is unblest with offspring, she pays her devotions to Mahadeo to remove her sterility and vows to sacrifice her first-born child to the god, by throwing it from the top of Bhovance's rock, which is about 170 feet high, and nearly perpendicular! Lieut. McNaghten was at Puchmuree in last April, at the time the annual pilgrimage takes place. A woman had arrived there for the purpose of sacrificing herself in conformity with the horrid superstition just described, and Lieut. McNaghten, excited by curiosity, proceeded to the spot to witness the circumstances of this dreadful ceremony. He was accompanied by a Hurkari, named Ram Sing, charged by the gallant colonel Adams to use every effort in his power to dissuade the deluded woman from putting in execution her frantic resolution. When they reached the rock, about four miles south-west of Puchmuree, the voluntary victim was sitting on the ground waiting the arrival of the Brahmin who was to assist at the ceremony. She was of the Rajpoot cast, and seemed to be about 30 years of age. It appeared that her father and mother were both dead; that her mother had formerly vowed to sacrifice her first child to Mahadeo, agreeably to the established custom; but, on the birth of the child a daughter, she neglected to fill her vow. The daughter grew up, and was married; her husband died, and she married again. Her second husband also died; and, being without offspring, this accumulation of misfortunes drove her nearly mad. She would dance and sing all day; and eat any thing from any body, by which she lost her cast, and became entirely neglected. She, at length, felt persuaded that her misfortunes arose from the circumstance of her mother having broken her vow, and, therefore, she determined to immolate herself without loss of time. She had seated herself at the foot of the rock, surrounded by those who had accompanied her from Hurdah, the place of her residence, calmly expecting the arrival of the Raj Goroo, or chief priest. She was perfectly sensible, and had neither ate nor drank any intoxicating or stupefying drug. Indeed her appearance indicated perfect self-possession; and her friends positively asserted, that nothing of the kind had been administered to her. There was a bottle of common bazar spirits near her, which she said was to be given to her, if she asked for it, but not otherwise. She held in her right hand a cocoa-nut, and in the left, a knife and a small looking-glass, into which she continued to look, excepting when she turned her eyes towards heaven, exclaiming "Deo B'hur-

jee," which she did very frequently. It is evident, that her resolution entirely originated in her own breast. When Ram Sing began to dissuade her, she became exceedingly angry, and told him that his interference was both useless and improper. He, however, continued his expostulations; in which, it is worthy of particular remark, he was heartily joined by her own people, who declared that they had previously used all their endeavours to induce her to relinquish her design of destroying herself. One of them, an old Brahmin, seconded Ram Sing so earnestly that she threw the cocoa-nut at his head with such violence as would have been productive of serious consequences, had her aim been sure; but, fortunately, it erred, and the nut was broken to pieces against the stones on which it fell. For three hours Ram Sing continued his expostulations, and she was still immovable. So reluctant was she to attend to him, that she repeatedly and angrily ordered the musicians, who were present, to commence playing, that his voice might not be heard. Lieut. McNaghten, considering it a hopeless case, returned to camp, leaving Ram Sing to do all he could to delay the threatened sacrifice. In a few hours afterwards his servants brought him intelligence, that Ram Sing had succeeded, and was bringing the woman into camp. On ascending the fatal rock, from which she was to precipitate herself, she had fainted away from exhaustion both of body and mind, and continued senseless for nearly two hours. On recovering, she cried bitterly, and appeared to hesitate; every one present seized the favourable opportunity, and implored her to abandon her resolution; and, what was still more effectual, the Raj Goroo told her she had Mahadeo's forgiveness! Soon after her arrival in camp she was sent off to Hurdah, provided by col. Adams with money to defray her expenses on the road, and a letter to the Soubadar of the province, (who had in the first instance laudably endeavoured to dissuade her from her purpose,) to see that she suffered no indignity or wrong, in consequence of having abandoned her resolution.

We are happy to observe that the accounts of the treasurer, ending the 30th of April last, shew a balance in the society's favor, of about 11,500 rupees.

Captain Dockett reported to the society the exertions that had been made by Sir John Malcolm, to establish a library and reading room at Mhow, and suggested, that a copy of the Asiatic Researches should be presented to that institution. The suggestion was immediately complied with.

The application of the principal of the university of Edinburgh, communicated by the most noble the president, to be

favoured with such articles as can be spared from the society's museum, of which there may be duplicates, was favorably received, and an early opportunity will be taken to transmit the collection to Scotland.

C. T. Metcalfe, Esq. and Captain Hodgson, were unanimously elected members of the society.

SITE OF PALIBOTHA—AND JEYN ANTIQUITIES.

Bhaugulpore, May 1, 1819.—Colonel Franklin, in his late tour, re-visited the celebrated mountain of *Mandar*, for the purpose of comparing and collating the ancient inscriptions, copies of which he had brought away in 1815, with the originals on the rock; and he found them, with a very trifling exception of a few words, to have been correctly delineated. Copies of these inscriptions have been tendered to the acceptance of the British Museum.

After halting several days at this interesting hill, to examine its natural productions and to procure specimens of its minerals and fossils, Colonel Franklin proceeded towards the town of Gorruckpore, with the intention of making the circuit of what are generally denominated the Gorruckpore hills.

On reaching the invalid Tannah of Rungpore, in the course of his annual inspection, Col. Franklin extended his researches to the ruins in the vicinity.

To the south west of Sooraj Ghurrah at a distance about nine miles, the site of the ancient city of Jyungghur has been discovered, and in its immediate neighbourhood, Col. Franklin had the good fortune to excavate from the earth a colossal Jeyne statue, which confirms the prevalence of the Jeyne religion throughout this district; at a very remote period.

It may be mentioned as a satisfactory proof both of the accuracy of the Puranas in geographical matters, as well as of the carefulness of Colonel Franklin's examinations, that the distance assigned by these sacred books for the extent of Palibothra Royal, from Puttughotta on the east to Soorajghurrah on the west, accords with the actual distance measured by the perambulator, which is from seventy-six to eighty miles.

Col. Franklin crossed the Kiel river, which divides the districts of *Bhaugulpore* and *Behar*, and approached two small hills running parallel to each other, to the distance of about half a mile in a westerly course. The north side of these hills presented a singular appearance: the top seemed composed of small pyramids, and from the north side serrated. He then examined the valley, said to have been formerly the seat of a rich and populous bazar; after which he ascended

the south side of the hill, where he found the remains of a small square fort, from which he observed on the plain below a great number of tanks, ruins of buildings, and a profusion of broken bricks scattered to a considerable extent. On the bank of one of these tanks, Colonel Franklin dug up a Jeyne figure of very large dimensions, woolly-headed, and a face perfectly Ethiopian.

To the southward are other remarkable remains connected with the history of the former; Colonel Franklin proceeded thither, and found that the ruin was called *Indra Pye*, and was built by Rajah Indra Dumar, who reigned at Jyungghur at a very remote period, and whose family are designated in the Puranas by the name of Sooraj Bun, or children of the sun. The ruins of the rampart of the fort were still visible; it is a square, each face of which is about 350 yards, and its ditch must once have been formidable. The interior is now occupied by a tolerably large village and fields of cultivation. On the western face there appear the ruins of a great number of temples.

At this place the Colonel procured another Jeyne figure, of smaller dimensions; and he has extracted an interesting account of both these places from the Puranas.

Continuing his tour, he proceeded to visit the hot springs at Bheem Bund, the source of the Mun river, which flows by the town of Gorruckpore. The water of these springs issues from several parts of the base of a small hill; it is exceedingly hot, and the bed of the streams apparently calcareous; the water is deliciously clear and pure, though it seemed to possess the property of expelling the coherent substance of quartz, and renders the stone quite friable.

Amongst a considerable collection of fossils and mineral specimens, Colonel Franklin found a sounding stone, about two feet and a half in length by two in breadth, which on being struck with a bamboo or any other substance emitted a clear, shrill, sonorous tone; it did not appear to the Colonel to be what mineralogists term clink-stone, but rather resembled the calcophonos or sounding stone of the ancients, as described by the younger Pliny. The want of apparatus and tests prevented its being immediately analyzed.

By a collateral excursion, the colonel had obtained some memoranda of several of the tribes inhabiting the Jungleterry district, with an account of their religious ceremonies, manners, and customs.

The work which Col. Franklin intends to forward to England, for publication in the course of the present year, is to be designated "The Fourth Part of Palibothra."

The venerable and indefatigable culti-

vator of these kindred branches of research is now engaged in constructing an Essay on the Jeynes, for which he is provided with an abundance of highly curious and interesting materials.

MISCELLANIES.

Animalculæ in Mustard.—Sydney, (New South Wales,) 24th April, 1819.

—The present season has caused insects to abound. At a shop in George-street two square bottles of mustard, which had stood for some days open, were yesterday morning observed by a child to be in a state of motion on the surface. A group of children were soon found gazing at the wonder; and one who seemed to possess a little of the talent of thinking and examining, discovered the cause of this undulating motion to proceed from the briskness of some living thing. The bottles were soon examined with a glass, and the little creatures, which may from their minuteness be classed as a second order of animalculæ, were perceived to be excessive in number, all white, which congregated gave them the appearance of a white dust. They had six legs, and were as transparent as any unvitriified substance could be; each of the longer kind, for there was a difference of size, shewing at the hinder part two prongs as long nearly as their whole body, which they appeared to use in accelerating their motion, which was very quick and agile.—Upon removal of the bottles the little creatures had by the next morning covered a table, climbed into glasses, and were in such multitudes as to cover large spaces, still appearing but as a slight dust, unless by accident that seeming dust should be perceived to be in motion.

Intended Expedition to the Icy Sea.—A letter from St. Petersburg of 22d March says: A new expedition for northern discoveries will be prepared during the approaching summer. The ships will sail from the mouth of the Lena for the Icy Sea, for the purpose of examining the coast of Siberia, and the islands which were discovered in those regions some years since. As it has not yet been ascertained whether these reputed islands do not form part of a continent, and as they have been hitherto visited only in winter, it will be very interesting to ascertain at what point the ice permits an approach to them during the summer, and to determine their extent.

Physical Strength of Men.—We insert the following as a curious subject for experiment and discussion. The specimens from men in a savage state adduced in this partial notice, appear to be too few to decide, that the average disparity of strength

would be thus low, were the contrasted subjects taken from corresponding climates.

M. Peron, the naturalist, has had occasion to observe, that men in a savage state are inferior in strength to men civilized. The following is the result of experiments which he has made on this subject with the Dynamometer of M. Regnier.

Death of Mr. Ritchie.—We regret to find a melancholy report in the foreign Journals confirmed by letters, received at Genoa from Tripoli, dated 24th February. Mr. Ritchie, the enterprising African traveller, died at Fezzan, of an ague fever. His companion was expected to return to Tripoli.

Block of Amethyst from Brazil.—A most singular curiosity was brought from Brazil to Calcutta by a Portuguese vessel, which arrived at that presidency in September. Incredible as it may appear to those who have not studied the wonderful combinations of nature, it seems to be a mass of amethysts, of the enormous dimensions of four feet in circumference, by something less than one foot in height, and weighing ninety-eight pounds. It is in its rough state, and is described rather as an assemblage of more than fifty irregular columns, high, smooth, transparent, purple and white, shooting up like crystallizations from one common bed or source, than as a regularly formed and perfect stone. It was sent from the Brazils as a real amethyst, and such also has it been declared by professional men who have examined it since its arrival in Calcutta. We believe that one essential to the value of an amethyst, and which places it on a rank with the ruby, sapphire, and other precious gems, is hardness. This quality, however, is seldom met with in any, but such as are of a roundish or pebble-like form, many of those which are found in this country and in America, being little harder than common crystal, and of comparatively inferior value to the former.—*Calcutta Paper.*

Brood of Adjutants found in India.—It has generally been supposed, that the species of Crane called Adjutants, are birds of passage, and do not breed in the plains of India. A correspondent however informs us, that during the passage of the European regiment from Calcutta to Dinapore, some of the men discovered a nest on the

top of a large tree at Godagaree, in which, were two young Adjutants. The mother bird opposed the invaders, and fiercely defended her nestlings; one of which during the conflict fell to the earth, and was killed on the spot. The other was safely conveyed on board one of the boats—on the top of which, it lived about a fortnight; apparently quite familiarized to its new protector, and eating voraciously whatever was offered to it. At the time it was taken, it was nearly the size of a hen turkey, and was covered with a profusion of soft down of a light ash colour; the quill-feathers just beginning to appear, which, however, grew rapidly during the short period of the bird's service with the regiment. It was killed by the accidental fall of a bag of rice, greatly to the regret of its boat mates, with whom it was no small favourite. Our correspondent adds, that occasionally a very strong and disagreeable smell proceeded from the mouth of the young adjutant.—*Cate. Monthly Journ. May 1819.*

DISTANT VISIBILITY OF MOUNTAINS.

Mr. Morier, in his Journey through Persia to Constantinople, says, that the mountain Temawhend is visible at the distance of 100 miles. Sir William Jones saw the Himalaya mountains from Baulgapore, a distance of 244 miles. Bruce saw Mount Ararat from Derbhend, a distance of 240 British miles.

Dr. E. D. Clarke informs us, that, when standing on the shore of the Hellespont, at Sigium, in the evening, and looking towards the Archipelago, he plainly discerned Mount Athos, called by the peasants, who were with him, Agionorus, the Holy Mountain; its triple summit appearing so distinctly to the eye, that he was enabled to make a drawing of it. "The distance," says he, "at which I viewed it could not be less than a hundred English miles: according to D'Anville, it is about 30 leagues from shore to shore; and the summit of the mountain is at some distance from the coast."

The greatest distance at which places have been seen within the scope of our own observations, is as follows:—

	Miles.
Pic of Teneriffe, from a ship's deck..	115
Golden Mount, ditto	93
Pulo Pera, from the top of Pinang ..	75
Pulo Pinang, from a ship's deck	53
The Ghaut at the back of Tellichery..	94
Ditto at Cape Comorin	73
Adam's Peak, on Ceylon	95

These, perhaps, are not the greatest distances that these lands can be seen; but it may be useful to state, that all these distances were ascertained by the log, when running for them in a direct line; and that their heights were also pretty nearly found at the same time.—*Ibid.*

NEW LONDON PUBLICATIONS.

Annals of the Reign of King George the Third, from its Commencement in the Year 1760, to the Death of his Majesty in the Year 1820. By John Aikin, M.D. Second Edition. Two vols. 8vo. £1. 8s. boards.

A Journey in Carniola, Italy, and France, in the Years 1817 and 1818, containing Remarks relating to Language, Geography, History, Antiquities, Natural History, Science, Painting, Sculpture, Architecture, Agriculture, the Mechanical Arts and Manufactures. By W. Cadell, Esq., F.R.S. Two vols. 8vo. £1. 16s. boards.

MISSIONARY INTELLIGENCE.

MYSORE.

Extracts from a Journal of Mr. John Hands, Missionary at Bellary, Sept. 30.—Rode out this morning to the celebrated mosque, built by Tippoo, the finest I have seen. It has two minarets, or towers, about 100 feet high, with galleries near the top, surmounted with domes curiously ornamented. I was permitted to enter, and was shown the whole building. From the top of one of the minarets I had a fine view of the fort and surrounding country. Within this mosque I found a Mussulman's school, in which a number of the boys were reading extracts from the koran and other books. As most of them understood Canara, I sat down among them and told them of Jesus Christ, the true and divine Prophet, whom God sent to teach and save mankind; and directed them to look to Him, and believe in Him for salvation.

Received a kind note from the Hon. Mr. Cole, inviting me to the Residency*

* At Mysore, about nine miles from Seringapatam.

to-morrow, to spend the day with l'Abbé Dubois, the venerable and very respectable Roman Catholic Missionary, who is there on a visit; but having engaged to preach to the little congregation here to-morrow evening, I was obliged to decline the invitation. Spent some part of this day in revising my Canara translation of the gospel by Matthew, and in making certain passages, words, &c. on which I wish to receive l'Abbé's opinion, as I hope, before I leave Seringapatam, to be able to submit a part of the translation to his inspection. He has now laboured among the Canarese for upwards of twenty years, and is said to understand the language better than any other European in the country.

In the evening accompanied Capt. M. to the ball baugh; the remains of the walks, avenues, watercourses, fountains, &c. &c. show that these were once noble gardens, but they are now in a state of ruin. The numerous towering cypress trees which remain give them a solemn air. In the midst stands the palace built by Hyder

Ali, which, though composed of contemptible materials, was once a grand and gorgeous edifice. It contains four spacious and lofty courts, one on each side, the roofs of which are supported by a great number of curiously carved pillars. Each of these courts is open in front, and has galleries in the inner side, where Hyder sat to give audience, transact business, and amuse himself with those exhibitions which form so considerable a part of the amusements of Indian princes. Some of the walls, ceilings, and pillars, are painted in a very fanciful style. Of the apartments some still retain a portion of their original beauty, but parts thereof are fallen down, and, probably, a few more years will bring the whole of it to the ground. Not far from the palace is the mausoleum of Hyder, his wife, and Tippoo. Their bodies rest under a spacious dome, which is surrounded by an open *veranda*, the pillars of which are of black granite, beautifully polished. The people in attendance allowed me to walk into the mausoleum. The tombs were covered with rick silks. A number of pots, containing flowers, were placed around them, and from the dome were suspended several large lamps, which are lighted every evening. Whilst I surveyed this gloomy mansion, I was not a little afflicted with a consideration of the transitory nature of all earthly glory. Here, confined in narrow space, lie two persons, whose fame only a few years since spread over almost all the world. From a state of obscurity, Hyder rose to the command of numerous armies, made extensive conquests, and had almost all the wealth of the South of India at his command; and his son succeeded to all his wealth and power. Now, here they slumber in death! their kingdom is departed from them, their palaces are falling into ruins, and their children, in a state of confinement, are tasting of that cup which their fathers caused others to drink to the very dregs. Thus does the righteous Governor of the world "visit the sins of the fathers upon the children." Just at the entrance of the garden stands a handsome cenotaph, lately erected to the memory of Capt. Baillie, who, after an unfortunate defeat by the united forces of Hyder and Tippoo, on the 10th of Sept. 1780, was, with a number of other gallant officers, taken prisoner, and shut up in Seringapatam. After suffering captivity for some time in its most horrid form, he was poisoned by the command of Tippoo. Several of the officers taken with him are supposed to have shared the same fate, or to have died from the cruel usage they experienced in prison.

Sent out Bussaph to bring me an account of the schools, distribute tracts, &c. He returned with several respectable natives, to whom he had given tracts, who

desired to converse with me on the subjects which they had brought to their notice. Some heard with much attention. O, that the truth may affect their hearts!

Oct. 1.—Visited the mosque again this morning, and gave a small present to the man who admitted me yesterday. To the officiating priest I presented a copy of the Rev. Henry Martyn's Persian New Testament, which he read with considerable ease, and said he understood; and to the schoolmaster I gave a Hindoostanee New Testament; both were much gratified by my presents, and requested me to write my name in the Testaments, which I accordingly did, and they promised to keep them in a public part of the mosque, for the perusal of those who may come there. After discoursing some time on the importance of the truths they contain, and beseeching them not to cast them aside, but to read and study them with humility and prayer, I took my leave.

I was informed by the person who had accompanied me to the top of the minaret, that in the time of Tippoo the fort or city was full of houses, and the number computed to be about 8,000. It is supposed that the number is now reduced nearly one-half, and that of the inhabitants to about 15,000. The pettah, distant about half a mile from the fort, called Shagur-Ganjam, is large, and probably contains as many inhabitants as the fort. Oh, what a multitude of precious souls! all, I fear, perishing for lack of knowledge. On my return, I called at one of the Canara schools; a number of people having collected round me, I spoke to them and to the children for some time, and gave them tracts and catechisms. After breakfast, went to see a very large and ancient pagoda in the fort, which, on account of its reputation for peculiar sanctity, and the influence and gifts of the Brahmins, Tippoo had left unmolested. I was not permitted to approach nearer than the gateway, where, entering into conversation with some of the Brahmins in attendance, I soon had around me a large congregation. I endeavoured to impress upon their minds the sin and folly of idolatry, and informed them of the nature and perfections of the true God; read and explained the first and second commandments; afterwards described their state and characters as sinners, and the nature of that redemption which is revealed in the Scriptures, adding, that whosoever believeth shall be saved, but that he that believeth not shall be condemned. Upon the Brahmins little impression appeared to be made, and some even mocked; but of the lower *castes*, many of whom were present, some seemed to feel and expressed their approbation of what they had heard. Several of them afterwards came to me at Capt. M.'s, requesting

further instruction, to whom I gave tracts, &c. Among the number, I was particularly pleased with one, who appeared to me a sincere, and even anxious, inquirer. This man I requested to call upon me again.

Was informed that l'Abbé Dubois was returned from Mysore to his chapel in the Pettah, near Seringapatam, which is his principal residence. Having a great desire to see him, I transmitted a note to him, signifying my intention to pay him a visit in the afternoon if agreeable. I was received by him with much politeness, and he entered with me very freely into conversation on missionary affairs. He is a man of considerable learning, and of superior abilities, and appears to possess much more liberality than is usually found in the church of Rome. He greatly laments his want of success, and the dreadful depravity and extreme insensibility of the Hindoos. He regards the obstacles which oppose the progress of Christianity in his congregation as insuperable, and imagines that the Hindoos are entirely rejected of God. The last twenty-five years of his life he has spent almost exclusively with this people, and consequently knows more of them than, perhaps, any other European in the country; and he observed, that the awful description of the Gentile world, given by St. Paul in the first chapter of his Epistle to the Romans, is, in every respect, applicable to them. He has about 6,000 under his care in various parts of the Mysore country, who are called Christians; but notwithstanding all the pains which he has taken with them, there is scarcely one who has more than the name. He deplored their ignorance, and the difficulty he experiences in endeavouring to make them understand his instructions. I spoke to him of the necessity for schools, and of the sacred Scriptures, in order to inform their minds; he replied, that he had no means of supporting schools, and no leisure for translating the Scriptures. When I related to him what the Lord had done in Bengal, by our Baptist brethren, he was filled with astonishment, but expressed his fears lest those whom they regard as converts should deceive them. He also appeared much gratified by the accounts which I gave him of the spread of Christianity in various parts of the world, and of the exertions of Missionary, Bible, and Tract Societies.

L'Abbé is a venerable looking old man, with a long flowing beard. He has adopted most of the customs of the Hindoos, in respect to dress, diet, &c. &c. For many years he endured the greatest hardships and privations, in consequence of the want of supplies from Europe, which were interrupted by its political agita-

tions; and his health has suffered greatly from this cause. His temporal circumstances are now more comfortable. I was informed that he had been more successful in introducing vaccination among the Hindoos than any other practitioner, and that he receives an allowance from the government for his services in this capacity. His church is a neat looking building, and appears capable of holding about 200 persons; as he preaches to his Canara congregation early on next Sabbath morning, I requested permission to hear him, which he very cheerfully granted. On my return I sent him the last Missionary Register, Baptist Accounts, Bible Reports, &c. for his perusal.

Oct. 2.—Early this morning accompanied my kind host Capt. M. in his chaise to Mysore, where we were kindly received by the Hon. Mr. Cole and the gentlemen who reside with him. The Residency is a noble building, and elegantly furnished, and is situated about half a mile from the fort and palace of the Rajah. Here I was immediately furnished with a most comfortable apartment, and requested to stay as long as my business would allow. In the evening Dr. J——, physician to the Residency, and an eminent botanist, kindly accompanied me to the Rajah's garden, which is very extensive, and contains a number of rare and valuable trees. This gentleman, who for a considerable time past has had the garden under his care, has spared no pains to improve it; and has moreover endeavoured to excite in the Rajah a taste for pursuits of this kind, but in vain. The Rajah, indeed, now rarely visits it; the pleasures of the Zanana seem to be all he aspires after. I was informed that he is a young man apparently of superior abilities, but is surrounded by a multitude of unprincipled and crafty Brahmins, who obtain their ends and advance their own interests by incessantly administering to the gratification of his passions. His revenues are considerable, and he bestows a large proportion thereof on the pagodas and the Brahmins, and on boxers, dancing-girls, &c.

3.—Early this morning walked to a place at a little distance from the Residency, where I was shown a great number of sculptured stones, probably not much less than a hundred, standing near to each other, without any regular order, one end being deeply fixed in the ground like a grave-stone. They were of various elevations, from two to six or seven feet. On most of them the sculpture was divided into three compartments; the lower compartment seemed intended to represent a number of warriors engaged in battle; the middle one, the same persons in a supplicating posture; and the upper one, as having obtained the victory, and in the

act of being presented to the gods. "The sculpture is very rude, and on many of the stones almost obliterated. They are supposed to have been placed there to commemorate a famous battle fought near the spot, and the heroes who fell on the occasion. Nearly all the natives I met with this morning were Musselmien seapoys, to whom I was unable to open my commission. In the evening I rode into the fort, and alighted opposite the palace, to look at two royal tigers confined near the spot. The people perceiving I could converse in the Canara language, a crowd soon collected around me, to whom I gave tracts, spoke to them of the salvation by our Lord Jesus Christ for some time, and then returned to the Residency. It was my intention to have presented the Rajah with copies of the Persian and Hindoostanee New Testament, but I was grieved to find that he did not read either of these languages.

CHUNAR.

Extracts from the Journal of Mr. Bowley.

April 9, 1818.—Went with a good load of books, chiefly in the Persian character, to the great fair, held annually at the famous mosque about a mile and a half distant.

I visited the chief priest. About a dozen of his disciples were sitting below him; who, as they approached, bowed down, clasped his knees and kissed them, and then took their seats. He was very complaisant to me. On speaking to him of the Gospel, he said it appears to be the words of men. I told him that Christ had proposed to give his disciples the Holy Spirit, who would bring his sayings to their remembrance, which was accordingly done. On reading that Christ called God Father, in the 14th chapter of St. John, a controversy ensued on the divinity of our Lord. I read to him the narrative of his conception, from the 1st chapter of St. Luke; but nothing that did not agree with the Koran would do; however, as a proof of our Scriptures being the word of God, I read a catechism of the evidences of it, which also contained a refutation of Mahomedanism. From this he inferred that we do not deem Mahomet a true prophet, nor the Koran the word of God. They did not appear offended at this. On treating of Christ's two-fold nature, he said that, in this respect, Mahomet might be called God; and so might the other prophets, who were endued with the Spirit; but he was too busy to attend diligently to any thing that was said. I left him, after about two hours' conversation and reading.

Then, accompanied by my moonshee, I went to a learned Mahomedan fakcer. He appeared to have drunk deep of the

doctrines of the heathen philosophers, and would fain prove that there was no God. He said that the soul, as separate from the body, could not suffer. In reply, I shewed him that man suffered grief and anguish without the body being affected. He listened to me while reading the parable of the Rich Man and Lazarus, and the 1st chapter to the Romans, and while speaking on the insufficiency of worldly wisdom to comprehend many things. After about two hours I left him, and went to the fair again.

Here was every thing in a great bustle, like Bunyan's "Vanity Fair." It was grievous to see so many thousands hastening to destruction. We came across some Hindoos from villages. I read and spoke to them from a tract. A crowd soon gathered, and the Mahomedans shewed great enmity to Christianity. One said that I was doing this to get people's caste; another asked whether government would allow him a subsistence if he became a Christian? "No! not a pice; you must get your bread by honest labour."

April 16.—Went to the fair, as on this day week; came across the fakcer then mentioned: he went on, as usual, on speculative points; read the 3d chapter of Exodus, of God's appearing to Moses: left him after two hours; walked about the fair; came across a commissioner from a village, five coss distant: after some conversation, read to him of Abraham's offering up Isaac. Here a long dispute ensued, as being contrary to the Koran. Respecting a future state, read to him of the Rich Man and Lazarus; but being prejudiced, all seemed to have little effect, as he would not hearken to reason. One Mussulman begged for a copy of the Gospel, which was given him. The crowd was too great here to be numbered; came across the khazee (judge) of the town: several learned men were sitting about him; they gladly heard of the fall, the promise of the Messiah, and several portions from the Gospels; had long disputes here, and elsewhere, enough to fill up sheets of paper.

MADRAS.

Extracts from the Journal of Rev. C. T. E. Rhenius.

Regulations proposed by the Mission respecting Caste, Feb. 13, 1818 (at Chittoor).—I brought forward among our Christian friends here the question of caste. We laid together our different experiences and judgments on this important subject. From these we drew the following inferences:—1. That the distinction of caste among the Hindoos is not merely religious, nor merely political; but mixed of both. 2. That, in a Christian congregation, caste will not be retained by such Christians as have arrived

to a proper maturity in the experience of Christianity; yet that it may be tolerated in the younger Christians, until they arrive at that maturity. 3. That caste cannot be formally allowed in a native Christian congregation; and that it ought to be continually warned against, as a thing worthy of abolition. 4. That though at Church, particularly at the Lord's Supper, the Minister cannot conscientiously give any sanction to the observance of caste, yet the congregation may be left to act for themselves, in arranging their seats and places, without reference to the Minister.

I am satisfied of the justness of these regulations; on which we have, indeed, hitherto already acted in part, but which we shall now adopt more fully.

CEYLON.

Extracts from the Journal of the Rev. Robert Mayor, dated Galle, Oct. 19, 1818.

Account of the Indian River.—The Gindra River empties itself into the sea, at a distance of four miles from Galle, on the Columbo Road; but it has a communication with Galle, by means of a canal, along which boats can always pass.

In this climate, the constitution of an European would very soon be destroyed, by walking to any considerable distance, for a continuance; especially if he exposed himself to the rays of a nearly vertical sun. An active Missionary will probably occupy a sphere of thirty or more miles in extent, which would require him to be travelling about, at least two-thirds of his time. By extending our Mission along a river, we should be at much less expence in our mode of travelling; should be less likely to interfere with the plans and labours of other Missionaries; and should be instructing a part of the natives, who have very little intercourse with Europeans, and no means at present whatever of becoming acquainted with the gospel of our Lord Jesus Christ.

The Wesleyan Missionaries occupy all the most populous villages between Galle and Columbo, and have schools established in each of them. The main-road lies along the coast; and is the only one which can be travelled either in a bandy or palanken. We have, therefore, no access to the natives residing in the interior, but by passing along the rivers.—The most populous villages are situated on their banks.

The villages might more properly be called parishes. The island is divided into districts. At the head of each district is a provincial judge or collector.—The districts are subdivided. At the head of each subdivision there is a Modliar, who is a native, and is appointed by the governor. Each of these subdivisions

contains a certain number of villages: over each village there is a headman.—The houses of the same village are not adjacent, but so far distant from one another, that seldom more than three or four can be seen at the same time.

Oct. 20, Tuesday.—This morning I set forward. An interpreter and two others accompanied me. Our vessel was formed of three canoes fastened together by some planks placed across; with an arched covering overhead, of cocoa-nut leaves, supported by pillars.

The first village at which we stopped is called Watteraka, about three miles from Galle.

At a short distance from the river, we found the remains of one of their ceremonies, called devil's dance. These meetings take place at night. The devil's priest attends, dressed in a red cloak, accompanied by several tom-tom beaters. While these men are beating the tom-tom, the priest dances before the people, repeats certain incantations, and receives offerings of money or provisions which the surrounding throng make to the devil. The money, he is supposed to carry to a certain spot in the Kandyan country, where the devil is said to reside. Persons who are sick attend these meetings, in hopes of being cured: if their sickness is so severe that they cannot be carried from home, the dance is celebrated at the sick man's bouse.

At the distance of six miles from Galle, there is a government school, situated at a village called Telleegodda. The school-master, with about twelve of his scholars, came out to meet us. The village of Telleegodda contains about 500 inhabitants. There were forty-two boys present in the school.

Before I left the place, I preached to about 100 persons, besides the children.

Unconverted Natives applying for Baptism.

An elderly man applied to me to baptize his child. I examined him respecting his knowledge of Jesus Christ, and of his own heart, and found him entirely ignorant. The Dutch have done much injury to the cause of Christianity in this island, by disqualifying all persons from inheriting property, who have not been baptized. In consequence of this law, every one, whether he worship Budhu or the Devil, is eager to be admitted into the Church of Christ by baptism. You will be shocked when I tell you, that there is scarcely one of the devil's priests who has not been baptized! scarcely one of those who offer sacrifices to the Devil, or prostrate themselves before the image of Budhu, who has not his name enrolled among the disciples of Jesus Christ!

Badoogam.—The next place which I

visited, is called Badoogam. It is about thirteen miles from Galle. The boys of the government school, as well as the masters, came about two miles to meet us.

The situation of Badoogam appears to be exceedingly convenient for the residence of a missionary. The numerous, and in many instances populous villages, situated on the banks of the Gindra, would afford a very extensive field for the labours of a missionary, among a people now destitute of religious instruction, and really Budhists, though nominally Christians. It is sufficiently near to Galle for the purpose of superintending any schools which might be established in its vicinity; as well as for preaching once a fortnight, or even once a week, if it should seem desirable. The Gindra has a near connection with another river; by which means the labours of a missionary stationed at Badoogam might be exercised over a country of very wide extent.

The Modliar is very desirous that I should reside in this village; and offers to raise a subscription for the erection of a church and a school. I intend to consult with my brethren on the subject. The Archdeacon would, I believe, very much approve of my residing among the natives.

The next day, the Modliar set out early with me in his boat for Maplegam, which is thirty miles distant from Galle.

Conversation with a Native.

In the boat I met with an intelligent and interesting native, with whom I had much conversation. I endeavoured to prove to him the existence of a Supreme Being, and his power, wisdom, and goodness. He acknowledged that he knew good from evil. I told him, that this knowledge God had given to him and to all men. He complained of having no one to instruct him; and that the Budhist priests told him that there was no God, and made many objections against Christianity which he could not answer. I asked him whether he would believe me, if I should tell him that my coat had been taken out of the earth in its present state, and that it had been formed by chance? He said no: he could not think that. I told him that I supposed he could not believe this, because he conceived that it had been contrived for the very purpose to which he saw it applied. He answered, "yes." "If I should tell you that my hand came by chance, would you believe me?" "No." "If I should say that it had been contrived and formed by man, would you be persuaded to think so?" "No." "Then since it came not by chance, nor by the will and ingenuity of man, it must be the workmanship of some superior intelligent Being. This Being we acknow-

ledge as God. Were your eyes formed by chance?" "No." "Is it a good thing to see?" "Yes." "Can man make the light?" "No." "Would our eyes be of any service to us without the light?" "No, not of any." "Then He, that formed the light, formed also the eye; for they are suited to each other. The heavens and the earth have one creator, that is God; and since our sight is of great advantage to us, in preserving us from many dangers and affording us much pleasure, the Being who formed the eye must have some regard for man, and take some interest in his welfare." Respecting his ignorance and want of instruction, I told him, that, *if he had done the will of God, so far as he had already known it, God would have sent some one to give him further instruction.* He inquired how there can be but one God, and yet three: I asked him, if he had not a body and a soul; and were not these two one man? "Can you understand how this is?" "No, I cannot." The Modliar observed, "If the Father, Son, and Spirit are one, they have one mind; they think and wish the same." I told the man that there were many things which we could not comprehend. "You cannot tell me how it is, that, at your will, you can raise your hand, and move your fingers?" "No, I cannot tell." "If you would not believe me, if I should assert that my coat was formed by chance, you ought not to believe the Budhist priests, when they deny that God made all things. For, if the wisdom of man is necessary for the contrivance and formation of a coat, the wisdom of God is surely more necessary for the creation of the world." He asked me why Christians killed animals: "The priest says that you have a commandment which forbids murder." I replied, "Murder is taking away the life of a man, not of an animal: after the flood, God gave Noah express permission to eat animals as food." He inquired how it could be, that the body should be raised from the dead. I told him that its resurrection from the dead would not be so wonderful as its original creation; but that, with God, all things are possible. He then asked whether animals would live in a future state? I told him that man knows nothing of futurity but what God has revealed unto him; and since God had not revealed this matter, I could not tell him what would be the condition of animals after death. "Our knowledge," I said, "is very limited. Many things which are past, and of which we had some time knowledge, are now forgotten by us; how then can we tell what is to come, except some one teaches us?"

This man had received some instruction from the Wesleyan missionaries, and was better informed than any native in an

inferior situation that I had then conversed with; but he seemed to fear the questions of the priests. I told him, that if a man who had been born blind should tell him that sight was merely a delusion, and that there was no such thing as colour or beauty in the objects which surrounded him, he would pay no regard to what he said; neither, then, should he believe any one who told him that which common sense contradicts. He said he was much dissatisfied with the religion of Budhu, and much wished that some one would instruct him in the Christian religion.

The river is here broad and deep; and, at high water, the stream is very strong. We walked the last four miles to Maplegam.

The country was very beautiful and picturesque. We passed along a very fine vale, in which there were many buffaloes and oxen, feeding beside the still waters, and lying down in green pastures.

Maplegam.—We arrived at Maplegam about six o'clock in the evening. Many persons were assembled to welcome us. The population of this village is about 800. Out of this number there are only 10 who have not been baptized! Mr. Armour preached a sermon here about eight years ago, and Mr. Erskine has preached once. They do not remember that more than these two sermons have ever been preached among them.

As we were passing up the river to this place, a headman of one of the villages stopped us, and requested that a school might be established in his neighbourhood. I promised to make inquiries respecting the place; and said that, if it appeared to be an eligible situation, I should be willing to comply with his wishes.

The following morning I visited the government school, and preached to a large number of persons. I endeavoured to explain to them the creation of the world; the nature and consequences of sin; the general resurrection; the future state of the wicked, and of the righteous; the person, incarnation, sufferings, resurrection, and ascension of our Saviour Jesus Christ; the method of salvation by him; the gift of the Holy Spirit, his office, and the use of prayer. The people heard me with attention, and apparently with interest. We began and ended our service by reading a part of the Church Liturgy, which has been translated into Cingalese.

In returning to Badoogam, when we came near to the village of Nanroddie, and were looking out for a suitable place to erect a school, we were surprised at seeing, on the bank of the river, the headman who had applied to me before. He had been hearing me preach at Maplegam, and had returned to his village and collected 23 boys, whose names were to be entered

on the school-list immediately. They were drawn up in a line, and made their "salam" to us as we passed. We got out of the boat, and fixed on the spot for erecting the school-room, which the headman promises to complete in six days. They will build it with cocoa-nut leaves, and at no expense to us.

At Badoogam I preached to about 100 persons, besides upward of 50 children. During the remainder of the day, until a late hour, I was constantly engaged in conversation with some of the natives; and on the following morning, when I was about to read and pray with my interpreter and two others, I found so many persons assembled round the door of the house, that I called them in, and preached to them on our Lord's miraculously feeding the five thousand.

During this excursion I obtained all the information that I could, while in the boat, from those who were engaged in rowing us, respecting the villages contiguous to the river; and was enabled, by inquiries from them, and from a very intelligent Modliar whom I afterwards met, to form a tolerable map of this part of the district of Galle, and to mark down the population, extent, and situation of the numerous villages on the Gindra River. I have also been taught much by this visit of the customs and manners of the people, and had an opportunity of investigating the real state of religion among them.

On our return home, we fixed on two other places for the establishment of schools. In the course of a fortnight, I shall open six schools along this river, and three or four in other places in the country.

LONDON.

According to a late Report of the British and Foreign Bible Society, it has been at length discovered that the paper on which the books delivered from their repository have been printed on paper which is subject to speedy decay. But they happily announce both the mischief and the remedy at the same time.

Arrangements have been made with the Universities, and H. M.'s printers, for the adoption of paper of a more durable texture than that which has been used for many years past.

There is far more importance to be attached to the information given in this short paragraph, than our readers will be likely, without some further information, to apprehend.

The truth is, that no other subject in which the committee can engage has so important a bearing on the efficiency of the Society's funds. The printing-papers of the last twenty years have been ma-

manufactured from such perishable materials, and by such a destructive process, that while books have been produced to please the eye, they have crumbled to pieces between the fingers when much used.

Bibles, testaments, prayer-books, school-books, and tracts, have not done a fifth, and in many cases not a tenth, of the service which was rendered by similar books of the last age.

A church bible or prayer-book, for instance, will now with difficulty last for a few years; and instances are continually multiplying where the bibles and prayer-books of the last century, after having been used in the church for a hundred years, and thrown by as past service, are brought out again to replace their short-lived successors, and carefully repaired and rebound, as more valuable than any copies which the press will now afford.

This deterioration of printing paper has most seriously affected all societies concerned in the circulation of books. The funds expended in this way have been unavoidably expended on worthless materials. One-fourth or one-fifth part of the sums actually laid out from year to year, in the purchase of books, would have gone as far, if the durability of the books be taken into the account, because it would have purchased books which would have lasted four or five times as long. In the fifteen years of the Bible Society's labours, it has had to replace hundreds of thousands of copies, and that perhaps several times over, which would have remained good copies to this hour if they had been printed on the durable paper of the last age. It must be obvious that no measure of economy could press more seriously on the attention of the committee.

It will be easily understood, however, that any reform of a system which had so long and so universally prevailed, would

have great difficulties to contend with. The perishable material of cotton was more abundant and cheap than the old and durable one of linen. The chemical process which rendered a perishable material still more perishable, had, nevertheless, given to paper such a factitious beauty, that the public taste became corrupted, and rejected the native and durable colour of our older books. The interests of a large body of persons had become opposed to the remedying of this evil: rag-merchants, paper-makers, stationers, type-founders, printers, and book-sellers, are all greatly benefitted by this quick succession of the short-lived generations of such books as are in perpetual use; and it is not often that men are found willing to sacrifice their own interest for the public good.

The committee have taken this work in hand, and are labouring with perseverance therein. Aided by the zealous co-operation of the assistant-secretary, they have already succeeded in effecting a great change for the better in the paper now in general use by the Society; and the business is in the hands of members of the committee, who hold it to be their sacred duty to the Society to relax in no degree their exertions, till they have provided a regular supply of the most durable paper that can be at present manufactured.

We have said the more on this subject, because we thought it right that the members of the Society, who have made frequent complaints of the wretched state of the bibles and testaments sent to them—should know the real cause and extent of the evil; and because we hope hereby to induce sensible and reflecting persons to co-operate with the committee in their patriotic exertions, by discountenancing that fastidiousness of taste, which would sacrifice the important interests of the Society and its members to the mere pleasing of the eye.

ASIATIC INTELLIGENCE.

OUR last number contained an announcement of the successful attack made on the principal seat of the Arab pirates in the Persian Gulph, received overland. Under "Bombay" will be found a few additional particulars, dispatched hither as soon as the troops accompanying the expedition had captured Ras al Khyma, which was the first stroke in the plan of operations. The intelligence comes by a private channel.

INDIA—BRITISH TERRITORY.

Political—Official.

SIX PER CENT LOAN.

No. I.

Abstract Government Notice.

Fort William, 1 Oct.

1. A general loan for the three presidencies is opened, to which the local sub-treasurers, residents, and collectors of land revenue are authorized to receive subscriptions. Any sum, in even hundreds, amounting to not less than a thou-

sand sicca rupees (£125) will be received at an interest of six per cent.

2. Subscriptions will be received in cash at par.

3. The following paper securities will be required as cash, viz. treasury notes to the amount of the principal, with interest on them. Accepted bills on the government, deducting 6 per cent. interest for the period they have to run. Bills for arrears of salary, and authorized public demands at par.

4. Drafts from the paymasters of the army, transferring demands on them to this loan, to be received as cash.

5. Furruckabad, Lucknow, and Benares rupees will be received, as equal to Calcutta sicca rupees; Madras rupees, at the rate of 350 for 335. 172 Calcutta siccas. Bombay rupees at 108 for 100 Calcutta siccas.

6. The acknowledgments granted for Madras and Bombay to be expressed in Calcutta siccas.

7. The loan to close on the 30th June 1820.

8. The interest due on acknowledgments on 30th June 1820, to be paid to the holder, or added to the principal, at his option, so as he receive or pay the fractional part of 100 rupees in cash, in order that the ultimate acknowledgment be for a sum in even hundreds.

9. The acknowledgments, after the interest shall have been so received or subscribed, to be transmitted to the dep. accountant-gen. at Calcutta, to be exchanged for a promissory note or notes, to bear date on 30th June 1820, and be entered at Calcutta on the registered debt of his presidency.

10. The proprietor to express on each acknowledgment the No. and amount of promissory notes, each not less than 1,000 rupees, which he wishes to receive in exchange. The accountant-gen. at Madras or Bombay to transmit the acknowledgments free of expense.

11. The notes not to be paid off until a notice of sixty days be given in the government gazette. Such notice to be equivalent to a tender of payment at the period appointed, at the expiration of which all interest to cease.

12. When the notes are declared in course of payment, the principal to be discharged, at the option of the proprietor, either in cash at Calcutta, or bills drawn on the Court of Directors at the exchange of 2s. 6d. per sicca rupee, payable 18 months after date, with liberty for the hon. court to postpone the payment for one, two, or three years, allowing interest at five per cent. payable half-yearly.

13. The notes to be advertised for payment according to the order of priority in date and number.

14. Purchases by the commissioners of the sinking fund, and transfers of the notes of the present loan into any future loan in the manner hitherto used, not to be considered as infringing the preceding clause.

15. Proprietors of notes residing at Madras or Bombay may have the original note issued by the Bengal government, exchanged for a new note, or subdivided into smaller, not less than 1,000 Calcutta sicca rupees, on paying the established fees.

16. The interest on the promissory notes to be payable half-yearly, on 31st Dec. and 30th June. Proprietors shall have the option to receive such interest either in cash at Calcutta, Madras, or Bombay, or by bills on the Court of Directors at 12 months, provided, if bills be required, that the interest amount to £45. sterling, *min.*

17. Proprietors requiring the interest to be paid at Madras, to receive it there in cash at 335, 172 Calcutta siccas, for 350 Madras rupees; or if desirous of receiving it in Bengal, to have a draft at sight in C. siccas on the Calcutta treasury.

18. Proprietors at Bombay to have a similar liberty, substituting for the first alternative, 108 Bombay rupees per cent.

19. Cites Regulations by the authority of the Court of Directors, published in the Calcutta Gazette extraordinary of 31st Dec. 1810, authorizing the accountant-gen. and sub-treasurer at each presidency to act in managing the loan.

20. Form of certificate acknowledging receipt of subscription.

21. Form of promissory note to be granted at Calcutta in exchange for certificate.

No. II.

Abstract Government Notice.—Fort William, Oct. 1.—Public officers receiving subscriptions to the six per cent. loan this day opened, to transmit a weekly register of acknowledgments to the accountant-general.

COURTS' MARTIAL.

The following are minutes of trials of native soldiers for desertion. How far any improvement or declension in the fidelity and subordination of the native troops is to be observed, since the attempts that have been made to effect a revolution in their religious and moral principles, is an important subject for consideration. It will be difficult to make the estimate impartially, because the proportion in which cases of delinquency have occurred at different periods, ought to be accurately known, in order that the totals may be compared.

Gen. Orders by the Commander-in-chief.

No. I.—*Head-quarters, Calcutta, Aug. 16, 1819.*—At a native general court martial assembled at Cawnpore, on Monday the 19th day of July 1819, Hussayn Ally, serang of the late 45th company of gun lascars, was arraigned on the following charge, viz. — “Hussayn Ally, serang (or jemadar) in the 45th (now 31st) company of gun lascars, confined by order of Major.gen. Sir Dyson Marshall, K.C.B., commanding in the field, for having deserted from his corps and company on or about the 17th of October 1818.” Upon which charge the court came to the following decision: — “The court having maturely weighed and considered the charge preferred against the prisoner, and to which he has pleaded guilty, are of opinion that he is guilty of the same, which being in breach of the articles of war, they do sentence him, the said Hussayn Ally, to be dismissed the service.”

Approved and confirmed.

(Signed) HASTINGS.

No. II.—*Head-quarters, Calcutta, 30th Aug. 1819.*—At a native general court martial assembled at Cawnpore on the 9th of July 1819, Jeeah Lall, havildar in the 6th battalion company 1st bat. 22d reg. N.I. was arraigned on the following charge: — “For having deserted from his corps and company on or about the 16th of May, 1818, when on the march from Jubbulpore towards Nagpore.” Upon which charge the court came to the following decision.

“The Court having maturely weighed and considered the charge preferred against the prisoner, and to which he has pleaded guilty, are of opinion that he is guilty of the same, which being in breach of the articles of war, they do sentence him, the said Jeeah Lall, havildar, to be reduced to the ranks, to receive 900 lashes on his bare back in the usual manner, and afterwards to be dismissed the service.” Approved and confirmed. (Signed) HASTINGS.

The above sentence to be carried into execution at such time and place and in such proportion as the officer commanding at Cawnpore shall think fit.

RELATIONS WITH THE NATIVE POWERS.

NEW KING OF OUDE.

The coronation of the late Nuwab Wuzzeer, now King of Oude, took place on the 9th of October, 1819, at Lucknow, under the auspices of the British Government, an event of great importance in the eyes of all the natives of India, who are in the habit of attaching to regal dignity a veneration approaching almost to superstition. This measure is therefore one of

the most decisive ever yet adopted by the British government in India.—*Asiatic Mirror.*

OUTRAGE BY A CHIEFTAIN AT KURMILLAH.

A native chieftain lately perpetrated an atrocious piece of cruelty on some discharged sepoys of the Russell brigade. Three of them in their way home halted near Kurmillah, the residence of the chieftain, who sent for them into his fort, and when they stated who and what they were, he said they were spies from the English, and ordered them to be put to death. One was accordingly killed on the spot; the two others were cut down, but one of them escaped, and reached a British post with the mournful tale.—*Asiatic Mirror, Oct. 27.*

MAHRATTA PRIZE MONEY.

Published in G. O. by the Gov. Gen. for the information of the armies of the three Presidencies.

A list of European commissioned officers, whose claims to share in the property captured during the Mahratta war, in the years 1803, 4, and 5, have not been submitted for adjustment to the Presidency Prize Committee.

8th lt. drag. Lieuts. J. Wyatt, J. R. Willard, J. Young, and J. A. Morley.

27th, now the 24th drag.—J. Cauldfield, and assist. surg. T. Lewis.

29th, now the 25th drag.—Capt. J. Sloane, Lieuts. M. Davis, T. Keighly, and T. Martin.

22d reg.—Lieuts. W. Wilson, G. Manserg, S. Swetnam, and Assist. Surg. P. Graham.

75th reg.—Lieut.col. J. Maitland, Capts. C. J. Milnes, S. Engel, G. Durand, A. M. Lauchlin, Lieuts. A. Stewart, J. Atkins, J. Williams, T. Grant, A. Brugh, C. Gray, W. Leech, E. Byne, D. M. Lauchlin, R. H. S. Malone, J. C. Durnass, Ensig. T. Hatfield, Lieut. and Adj. P. Mathewson, Qr.mast. M. Murray, Assist.surgs. C. Young and J. Cumming.

76th reg.—Capt. R. Cameron, Lieuts. T. Booth, W. S. St. Aubin, Ens. J. L. Lucan, and W. Bright.

2d bat.art.—Capts. R. Best, J. Robinson, Europ. reg. H. Blankenhagen, S. Kelly, Lieuts. E. Morris, A. Maxtone, A. Hamilton, and Ens. G. Bolton.

1st reg. N.C.—Lieut. A. W. Bureau and Cor. J. F. Erskine.

2d reg. N.C.—Cor. J. Kyan.

3d reg. N.C.—Cor. C. Eamer.

4th reg. N.C.—Capt. R. Armstrong, Cor. H. Smith, and W. Baillie.

6th reg. N.C.—Capt. J. Smith, Cors. E. S. Arnold, H. Smith, and Surg. G. Tusshach.

2d reg. N.I.—Capts. C. C. Wilson, C. Christie, Lieuts. J. Forbes, J. Murray,

J. P. Livesey, J. P. Aubery, H. Arbuthnot, Thos. Parr, C. W. Lewis, now Major Bird, Ens. J. R. de Beauregard, and H. P. Stacey.

4th reg. N. I.—Capts. J. Malcolm, G. Fanlis, Lieuts. R. S. Harrison, T. Goodall, and L. Parker.

8th reg. N. I.—Capt. R. Duff, Lieuts. W. Williams, G. Line, J. L. Purvis, G. B. Martin, and A. Abernathy.

2d bat. 9th reg. N. I.—En. H. F. Plumtree.

12th reg. N. I.—Capt. J. Kellie, Lieuts. G. Bridge, G. Randall, J. Bowring, J. Aylmer, Ens. F. Dalton, T. Taylor, W. Bowyer, W. Rattray, and R. Waterhouse.

14th reg. N. I.—Capt. W. Sneyd, Lieuts. Harrington, W. Hiatt, C. Rawning, W. Ball, and Thomas Evens.

15th reg. N. I.—Capt. T. Evans, Lieuts. J. Faithful, H. Addison, G. E. Hartley, and En. A. Lambert.

2d bat. 16th reg. N. I.—Capt. W. Sturrock, Lieuts. G. Warden, J. Hay, and En. L. Grant.

21st reg. N. I.—Capt. J. M. Stewart.

2d bat. 22d reg. N. I.—Lieut. J. Ticher.

2d bat. 23d reg. N. I.—Lieut. S. Moody.

It having been brought under the notice of government that several of the parties entitled to Mahratta prize money, or their executors, also the agents and trustees to the estates of deceased and absent claimants, are at present in India, his Lordship in Council is pleased to allow a period of 6 months from this date for the final adjustment in India, of all claims to the prize money in question.

CALCUTTA.

CIVIL APPOINTMENTS.

Sept. 3.—Mr. T. Pakenham, collector of Cuttack.

17.—Mr. John Kinloch, collector of government customs and town duties at Furruckabad.—Mr. C. Phillips, assist. to the salt agent of the eastern division of the 24-pergunnahs.—Mr. W. N. Garrett, assistant to the collector of Burdwan.—Mr. H. A. Williams to be commercial resident at Jungypore.—Mr. E. Marjoribanks to be commercial resident at Malda.—Mr. T. A. Shaw, assist. to the super. of police in the lower provinces.

GENERAL MILITARY REGULATIONS.

July 24.—Referring to the General Order of 8th June, it is directed, that the pay and allowances of all ranks of officers of the horse artillery brigade, shall be the same as those established for corresponding ranks in the light cavalry, to commence from the date of the general order appointing them.

Officers of the brigade of horse artil-

lery, when absent on furlough in Europe, or when appointed by government to permanent staff situations or commands, are not entitled to horse artillery pay in the one case, or pay and allowances in the other; but temporary staff employ or detached duty, is not to deprive them of the pay and allowances of the horse artillery, while they remain on the strength of that corps.

The regulations regarding the pay and allowances of medical officers doing duty with the corps of light cav., to be in all respects applicable to the brigade of horse artillery.

An officer when removed from the horse artillery brigade, is not to be required to refund for the broken period of the month the difference between foot and horse artillery pay, which he may have drawn in advance for the whole month, in which the removal takes place.

MILITARY APPOINTMENTS AND PROMOTIONS.

Aug. 29.—Assist.surg. Finlayson, 8th L.G. to proceed to Berhampore, in medical charge of the detail of his Majesty's 59th reg., commanded by Capt. Graham; after the junction with the head-quarters of that corps, Assist.surg. Finlayson will proceed by water to Gurmucteesur Ghaut, with all convenient expedition.

30.—Ens. Walter and Thomson, of engineers, to the corps of sappers and miners, and to join it at Alahabad.—Local Lieut. Felix Dubois, to be adj. of the 2d Rampoorah bat., vice Lawrence, appointed interpreter and quar. master to the 2d bat. 19th N. I.

Sept. 4.—Cadets admitted: H. Macdowall, J. Walker, J. Ouseley, W. Payne, F. E. Manning, C. Farmer, W. Beckett, M. Dormer, F. C. Smith, W. Whitaker, W. Hickey, T. Sewell.

Assist. Surgeons admitted: J. Stewart, and E. Hickman.

Assist.surg. Allan is attached as a temporary appointment to the mission in Bhopaul, vice Gerard, deceased.

Sept. 8.—Assist.surgs. Stewart and Hickman, lately arrived, are appointed to do duty at the presidency general hospital.

9.—Apothecary Jones, lately appointed to the artillery at Kyrnaul, is posted to H.M.'s 14th foot, vice Templeton deceased.—Lieut. Hervey is removed from the 2d to the 1st bat. 4th reg.

11.—Assist.surg. A. Wardrop to perform the medical duties at the civil station of Nuddea, vice J. Barker, removed to Purneah.—Assist.surg. J. R. Martin to act as second permanent assist. at the presidency general hospital, until further orders.

The undermentioned officers have been permitted by the hon. the Court of Directors to return to their duty on this es-

establishment, without prejudice to their rank :

Capt. R. C. Andree, 4th N.I.—Capt. E. Day, 26th do.—Lieut. John Lucas Earle, 28th do.

13.—Cadets promoted: those of artillery to the rank of second lieutenant, and those of infantry to that of ensign.

Artillery.—Messrs. J. Watson Wakefield, A. Campbell, C. McMorine, Arch. Wilson, Proby T. Cautley, and W. J. Macritchie.

Infantry.—Messrs. W. Hamilton Halford, G. Griffiths, J. Stevens, R. W. Halford, J. White, Brown Jackson Fleming, Stuart Corbett, W. Dalzell, T. Roberts, and E. Morshoad.

Assist. Surgeons admitted: Messrs. M. Macleod, C. W. Welchman, and J. Griffiths.

Hospital Apprentice S. H. Ewart, attached to the 3d bat. of the reg. of artillery, having been reported duly qualified, is promoted to the rank of assist. apothecary at Dum Dum.

FURLOUGHS.

Aug. 26.—Ens. Nagel, H.M.'s 17th, for four months, with permission to visit Ma-ulipatam.

30.—Lieut. Weston, adj. and qr. master to the corps of European Invalids, has leave to be absent from his station for three months, from the 20th inst., for the purpose of finishing his map of the survey taken by him of the Sikkim Rajah's territory and the Ceded Districts in the Morung.

Sept. 11.—Lieut. E. Marshall, 1st N.I. to Europe.—Capt. Starling, 16th N.I. to Europe.—Lieut. and Adj. Henderson, 9th N.I., to sea for six months.—Lieut. Humphreys, 18th N.I., sub-assist.com.gen., to sea for ten months.—Ens. A. D. Gordon, doing duty with 1st N.I., to Bombay for six months.

LOCAL OCCURRENCES.

Monument to Major Goreham.—A very handsome monument has been lately erected at Chandah, on the site of the breaching battery, to the memory of the late Maj. Goreham, by the joint subscription of the officers of the Bengal and Madras artillery, who served under his command at the siege of that fortress in May 1818.

It will be remembered, that the distinguished officer to whom this public testimony of esteem has been offered, died from excessive fatigue a few hours only after he had witnessed the successful result of his labours, in effecting a breach that admitted easy entrance at the same moment to the heads of two assaulting columns, composed of Madras and Bengal sepoy, led on by the hero of Seta-bajda.

Consistory Court.—The Lord Bishop of Calcutta, in conformity to the powers with which he is vested, has by public advertisement, dated Sept. 8, given notice that a court is constituted for the exercise of spiritual and ecclesiastical jurisdiction within the archdeaconry of Calcutta, which, conformably to the tenor and effect of the letters patent, will be styled, "The Consistory Court within and for the Archdeaconry of Calcutta, in the diocese of Calcutta." The first sitting of the court will take place on Friday, the 15th October, and others will be held four times in the course of every year.

The Consistorial Court at Calcutta was opened for the first time on the 15th October by the bishop in person, who pronounced on the occasion a speech replete with sound and judicious remarks on the nature of ecclesiastical jurisdiction under the English law.

Breach of Trust.—Instances of breach of trust among Hindoos holding confidential employments are much more frequent in occurrence than they formerly were; and they seem to aspire in the magnitude of the plunder contemplated and aimed at, to rival some of the renegades that pass from Europe to America.

On the 9th Oct. a notice was circulated in Calcutta, apprising the public that payment had been stopped at the bank of Bengal of certain bank-notes, amounting in all to 100,000, and supposed to have been either lost or stolen. Another notice states the restriction to have been since taken off, the whole of the bank-notes having been recovered. We understand that two years had been sent to the bank of Bengal to receive that sum for one of the agency houses of Calcutta. It seems that, besides the sum above-mentioned in bank-notes, a thousand rupees was received in specie. The principal of these two sircars told his comrade to wait at the bank till he should come back with a banian to examine the specie, and immediately made off with the notes. He applied at Serampore for protection, but did not obtain it, and was finally caught at Hoogly.

Horrible Assault.—Letters from the force under Col. Ludlow, dated Neemutch, August 18, relate a very striking and horrible fact, showing the most depraved and vindictive spirit in a miscreant, who met the fate he deserved, and great fidelity and soldier-like conduct in those by whose hands his fate was decided.

Major Bunce, of the 1st L. C., was presiding or commanding at the punishment of a villain of his own corps, who was sentenced by a court martial to receive 200 lashes for a theft he had committed. The detail of the crime and the

sentence of the court being read to the prisoner, he was ordered to strip, and was proceeding to do so, when perceiving a moment in which Maj. Bunce was not looking towards him, he rushed forward, and having seized the major and thrown him on the ground, made three stabs at him with a dagger, evidently with a view to murder him; and this would have been effected, but for his haste in the first stabs, and the last or most determined one falling against the scales of the shokose, and being defeated. Before he could aim another blow, however, the native officers and men rushed forward, and literally cut the assassin to pieces; a fate, says our correspondent, almost too honourable for such a wretch; but which will, no doubt, make a striking example to all turbulent and vindictive spirits, and therefore, in that respect at least, be productive of good effects.

The Weather, and the Crops.—*The alarm of Famine subsided.*—Letters from Nagpore, dated 23d August, state that all is quiet in the hills, and the rains now abundant. General scarcity still prevails, however, and parents still continued to expose their children to sale, in order to provide for their subsistence: their appearance is described to be that of walking skeletons, and their visages full of misery and wretchedness. The earthquake of the 16th June, which extended apparently over the whole of India, was felt also here about the same time. On the 17th July a very dreadful storm of thunder and rain was experienced at Narsingpore. Several people were killed by it, and a flash of lightning struck the bungalow of Lieut. Hayes, of the 2d batt. 27th N.I., and totally consumed it, killing a havildar who was sitting in its rear. It is described to have been a scene altogether as grand in terror as any war of the elements could be imagined to form.

In a former number, we noticed the distress occasioned by the famine that prevailed at Nagpore, and in the adjoining provinces.—The relief afforded to the laborious poor in the city and its vicinity, has been the means of drawing many of the indigent and starving inhabitants from the surrounding districts to the capital.—At the present moment, not fewer than 20,000 men, women and children, are employed by the circar, in the construction of roads, and in opening communications towards the country.—Sixteen hundred of the oldest, poorest, and most helpless of the population, are besides daily fed at the expense of the European community, aided by the subscriptions of many of the wealthiest inhabitants of the city.—It is thus, that even nations the most hostile are reconciled to our supremacy; by the humane influence of Bri-

tish authority exerted in the cause of humanity.

A letter from Chunar, dated 4th of September, from which station we received some unfavourable communications some time since, offers us this agreeable counter statement:—Having sounded the alarm of drought, famine, and pestilence, I deem it proper to inform you of our prospects having brightened.—Since the 17th ult. we have had daily rain, and at times very heavy, the quantity altogether so great, that the natives (never satisfied) pray for a respite. The crops look beautiful, and the whole country assumes a cheering appearance, very different from what met our view in the early part of August. Grain, I am sorry to say, has not yet fallen in price, and still sells at 3-8 and 4 per maund.

The Epidemic.—The prevailing epidemic attacked H.M. 14th reg. about the middle of September, and in the course of a week they lost about forty men. It had ceased in some degree when the regiments were marched out to the race course, about three miles from cantonments, where they got quite rid of it, and returned on the 20th, having been encamped about a week.—H.M. 8th drag. had a few cases only, one or two of which proved fatal, and the horse brig. entirely escaped.

ORIGINAL CORRESPONDENCE.

Extract private Letter from Calcutta, dated 17 Nov. 1820.—Peace now reigns triumphant, and we have nothing of public interest to amuse us. At this moment, the talk at Calcutta is of nothing but *vestry disputes*, which indeed engrosses all our attention, and you are daily asked if you are of the vestry or the popular side of the question. I shall not take up your time with detailing the particulars of the dispute, but we begin to be like you in London, we must have a nine days wonder, or we make one. The hon. gent. has taken off the old restrictions on the press, and the editors are already shewing how unworthy they are of the indulgence, not in open attacks on the government or the authority of the Company generally, but by infusing a spirit of discontent and peevishness: thus, if a suttee occurs, we are told, that India is the only country in the world in which it would be allowed; if an entertainment is given, the papers are full of tirades against the extravagant habits of the times; the *gigantic* power of the Company is treated, not so much as a subject of exultation, but as an unnatural wonder, and the native ear is tickled with the comparative numbers of the governors and the governed. It is to be hoped that the ill effects of the indulgence will be seen and averted before the consequences

shall prove more extensively mischievous. It is thought generally in Calcutta that the authorities at home will put on the restrictions again, certainly every real friend to the British nation will rejoice to hear it.

The late rains have prevented all fears of scarcity; the indigo crops look well.

The crops of rice are most abundant, and the manufacture of sugar and of salt-petre is wonderfully increased; the demand and price is above all moderate standard for those bulky staples of production, owing to the ruinous depressed state of freights through the rage of scud- ding ships to India.

Appah Sahib is still a wanderer among the hills, in great distress; the Dervisher comfort him with the assurance that though he shall wander seven years, yet he will certainly regain his kingdom and the power of the British be overthrown.

COMMERCIAL.

Abstract Government Notification, dated Aug. 5.—His Exc. the Governor-gen. in council having deemed it right to relieve the merchants from the payment of town duty on goods brought into Calcutta for exportation by sea, has directed the following rules to be observed from this date. 1. Upon any dispatch of such goods being imported by way of the river Hooghly, the boats on which the same shall be laden, shall, on their arrival at Balookhal to the north, or Muggah Thanuah to the south, bring to, until the proprietor shall have made application at the custom house, for permission to pass the goods free of town duty. Such application shall be accompanied by the Rowannah, covering the goods, and shall specify the quantity, quality, and value of the article, as entered in the Rowannah. The collector shall then grant a pass, under which the goods shall be conducted in charge of a Peon to the custom house wharf to be weighed. No goods shall in any case be entitled to exemption from town duty, except under such pass; and articles attempted to be landed at any other place than that indicated in the pass, or without such pass, shall still, as heretofore, be chargeable with the payment of the established town duty. 2. Should the goods be imported by the route of the Sunderbunds, the boats on which they shall be laden, shall bring to at the custom house chokey, at Gurreah ghaut, and there await the receipt of the pass to be granted by the collector under the above rule. Should any goods be brought within the boundary chokeys above described, without such pass from the collector, or be found within those limits at any time previously to having been weighed at the custom house, otherwise than in their actual transit, under such pass to

the custom house, they shall be chargeable as heretofore with town duty. 4. If a merchant be desirous of storing goods, imported and actually weighed off at the custom house, under either of the three preceding rules, he shall be at liberty to do so, on entering into a bond, bearing interest at the rate of 12 per cent. for the discharge of the full amount of town duties due upon the goods, in case they shall not be exported by sea within the period of one year, from the date thereof. No bond shall be taken, where the amount of duty on the goods shall be less than one hundred rupees, nor shall it contain any restriction as to the place to which the goods shall be exported; but in all other respects it shall be similar to those executed by individuals on receiving Indigo for exportation. 5. The collector to have the said bond cancelled on the exportation of the goods, or to realize the amount of the same, if not cancelled within the appointed time:—Provided however, that it shall be competent to the owner of such goods, to transfer by sale, or otherwise, the whole or any portion of them under the immunity derived from the said bond, so long as it may last; but the bond shall not be cancelled until the collector shall have satisfied himself that the whole of the articles embraced in it have been cleared out for exportation by sea. 6. A fee of 2½ per cent. on the amount of the bond, shall be levied upon its execution, for the benefit of the collector, his deputies, and head assistant. 7. It shall be discretionary with the collector to refuse the above indulgence in any case, wherein he may have good reason for doubting the sufficiency or respectability of parties tendering the bond, and to require, in cases where he may deem fit, a deposit of Company's paper, or the actual payment of the town duties, in the first instance;—an appeal will lie to the board of customs, should any individual conceive himself aggrieved by the award of the collector. The Governor gen. in council having been pleased to adopt the above rules, solely from the consideration of the present confirmed state of the custom house wharf, it is to be understood, that they are to be in force only until the warehouses now constructing at the custom house are completed, when the provisions of clause 2nd, section XXX, regulation X, of 1810, will again be strictly adhered to.

SHIPPING INTELLIGENCE.

Arrivals.—Sept. 16, Albion, Stewart, from Liverpool 22d May, and Madeira, 6th June. Passengers: Mr. Geo. Potts, free merchant, Mr. James Mortimer, free merchant, Mr. James Stewart, free mariner, and Mr. J. S. Pitts, cadet. H. C. ship Hoogly, Lamb, from London, 26th May. Passengers: Mr. Alex. Russell,

surgeon, Mr. J. M. A. Todd, assist.-surg., Mr. Jas. Prinsep, dep.-assist. paymaster, Mr. W. Doveton, cadet, Mr. Thos. Prinsep, engineer cadet, Mr. Rich. Horsford, artillery ditto, Mr. William Grant, ditto, and 43d Company's recruits, three women and two children belonging to recruits....23, Kent, Farquharson, from China and Penang, 1st Sept....28, H. C. chartered ship, Almorah, Winter, from London, 27th May.—Passengers from England: Mr. T. P. M'Gregor, forty recruits, and three women.—From Madras: Mrs. Beaufort and child, Mr. Beaufort.—Ship, Abberton, Percival, from London 28th May.—Passengers: Mrs. Heude, and infant daughter, Lieut. Heude, 15th Madras N.I., Mr. Williams, cadet.—Ship, Mary, B. Orman, from New South Wales 24th July.—Passengers from Port Jackson: Mrs. Milson, Mrs. Mary M'Carthy, Miss Elizabeth M'Kay, Capt. M'Kay, 30th reg, Bengal N.I., Capt. J. Rollo, Mr. John Watts, master pilot, Mr. Henry O'Brien.—Dick, Harrison, from London, 18th Dec.—Passengers from Colombo: Mrs. Fuller and child, Mrs. T. Brown, Major F. Fuller, H. M. 59th reg., Capt. G. Mathers, Lieut. W. T. Mayne, ditto, L. Carmichael, ditto, C. Hogan, ditto, H. W. Sampson, ditto, Ensign J. Howe, Assist. surg. W. Thompson, ditto, Acting apothecary H. Jenking, do.—From Trincomalee: Mr. Hutchison.—From London: Mr. F. Forbes, Mr. W. Billingsley.—From Madras: Sir W. Rumbold, Bt. Sir J. Gordon, Bt. Mr. Gabriel; six native merchants, from Buzshire....30, Kingsmill, M'Dowall, from Liverpool, 18th Jan. and Bombay, 11th Sept.—*Departures*.—Sept. 14, Blenheim, Shirley, for London, via Madras.

Correct list of passengers, who have proceeded to Europe, the Cape of Good Hope, China, Prince of Wales Island, and Fort St. George, on board the private ships Heroine, Isabella, Triumph, Calcutta, Isabella, Aurora, and Cambridge.

By the Heroine, Capt. J. L. Carrick.—To Europe: Mr. E. P. Dennis; Master R. T. Parke Roche; Master J. C. Basch Roche; Miss Charlotte Boscawen; Miss H. M. Boscawen.

By the Isabella, Capt. Geo. Mitchell.—To Prince of Wales Island: R. Murchison, Esq. a civil servant on that establishment.

By the Triumph, Capt. T. G. Street.—To Europe: Mrs. Crutenden; Mr. R. Crutenden; Master H. Bishop; Miss Louisa Clementia Hunter; Miss Jane Emma Bishop; Miss P. C. Bishop.

By the Calcutta, Capt. J. R. Stroyan.—To Europe: Mrs. Brown and her three children; Master Henry Ottara.

By the Isabella, Capt. J. Wallis.—To the Cape of Good Hope: Mr. J. Sturmer; Mr. W. A. Chalmer.—To Fort St. George: Mr. T. Lewin; Mr. G. Grant.

By the Aurora, Capt. Earl.—To Europe: Mr. J. E. Dawes; Master J. C. Innes; Miss Maria Christiana Innes.

By the Cambridge, Capt. J. R. J. Tous-saint.—To China: Mr. C. Manigault.

BIRTHS.

Aug. 10, at Futtighur, the lady of Major C. S. Fagan, of a daughter.... At the same place, same day, the lady of Robert Steward, of a daughter.... 15, at Calcutta, the wife of Mr. J. Brooders, junr. of a daughter.... 23, at Muttra, Mrs. A. Murphy, of a daughter.... 24, at Bareilly, the lady of M. T. Whish, Esq. of the civil service, of twins, a girl and boy.... Sept. 4, the lady of Major R. Hamilton, of a still-born son.... 7, at Sylhet, the lady of Capt. H. Davidson, 15th N. I. of a daughter.... 9, at Purnea, the lady of Capt. J. L. Gale, com. the provincial batt. of a daughter.... 10, at Azimur, the lady of J. V. Biscoe, Esq. C. S. of a daughter.... Same day, at Jessore, the lady of W. Wollon, Esq. of a son.... 11, Mrs. C. Jones, widow of the late Mr. J. M. Jones, of a daughter.... 14, at Chowringhee, the lady of G. P. Thompson, Esq. C. S. of a daughter.... Same day, the lady of Capt. Lockett, of a son.... Same day, at Allahabad, the lady of W. J. Sands, Esq. of the civil service, of a son.... Same day, the lady of N. Hudson, Esq. attorney at law, of a son.... Same day, Mrs. R. Austin, of a daughter.... 16, at Meerut, the lady of Capt. W. P. Cooke, D. Judge Adv. Gen. of a son.... 17, Mrs. Briant, of a daughter.... 18, the lady of Capt. B. Roberts, S. A. com. gen. of a daughter.... Same day, the lady of Mr. N. Baillie, of a son and heir.... 19, at Chowringhee, the lady of J. L. Heatly, Esq. of a son and heir.... Same day, at Dinapore, the lady of Capt. J. Simson, 2d B. 14th N. I. of a son.... 20, Mrs. Convers, of a daughter.... 24, at Chowringhee, Mrs. F. Bean, of a daughter.... 25, the lady of J. Watts, Esq. of a son.... 27, Mrs. J. Vallente, of a daughter.... Same day, at the mission house, Serampore, the lady of H. A. Williams, Esq. civil service, of a daughter.... 28, Mrs. J. Scratchlay, of a son.... 30, at Sulken, Mrs. Mills, of a daughter.... Same day, Mrs. W. Vaut Hart, of a son.

MARRIAGES.

Aug. 23, at St. John's cathedral Henry Manning, Esq. H. C. civil service, to Sarah Caroline, daughter of lieut. gen. Russell, Bengal establishment.... Sept. 6, at Dacca, lieut. Cosmo M'Donald, of the 1st batt. 16th N. I. to Miss Lucy Gibbs.... 8, at St. John's cathedral, C. Cardew, Esq. of the civil service, to Miss Martha Masters.... 14, at Dacca, Capt. Edward Fitzgerald, 2d batt. 30th N. I. to Miss Harriet Blenkinsop, fifth daughter of the

Lindsted, deputy register, military department, to Miss Mary Anne Matilda Turnbull....17, David Dale, Esq. C. S. to Miss Anne Eliza Douglas....23, at St. John's cathedral, Mr. Harding to Miss Moss.....
Oct. 1, Mr. C. M. Hollingberry to Miss Welsh.

DEATHS.

Aug. 6, at Calcutta, Master Conrad M'Carthy Laine, aged 9 years and 2 months....8, at Calcutta, Miss Emily Medlicott, aged 11 months....12, at Chinsurah, C. M. Ferron, youngest daughter of the late Mr. John Ferrao,....14, at Calcutta, Mr. John Nunn, aged 32 years....15, at Calcutta, Mr. John M'Leod.... Same day, Capt. Henry Williams, of the ship Maria....17, at Purneah, J. Davidson, Esq. Civil Surgeon of that station, aged 28....19, at Calcutta, Mr. John Reynolds...23, Capt. Andrew Allan, Sub-Assistant Commissary.... Sept. 14, at Purneah, Capt. William M'Pherson....19, drowned, off Smith's Ghant, Mr. Richard Todd, of the Hon. Company's Powder Works at Ishapore, aged 28 years—and Mr. George Barnes, junior officer of the ship Northumbrian, aged 17 years....21, at Meerut, of the cholera morbus, Mr. Charles Smith Templeton, apothecary....24, at Allipore, Mr. Thomas Seymour Conway Delany, of Ireland, aged 56 years and 9 months....26, at her son's residence, Mrs. Elizabeth Jones, aged 55 years....27, Mr. John Steers, of the Assessment Department, Police Office, aged 40 years.... Same day, at Berhampore, Mrs. Anne Mollis, wife of Mr. James Mollis, of that place, aged 19 years.... Oct. 9, at Chinsurah, near Calcutta, Mr. George Johnston, late coach-builder, Calcutta....10, at Calcutta, George Williams, Esq. Chief Officer of the Hon. Company's ship Thomas Grenville.... At Darch, Skinner, Lieutenant 1st Grenadier Regt.; and off Canton, Nathaniel, Midshipman of the Hon. Company's ship Waterloo; both sons of Michael Turner, Esq. of Plumstead-common.... At Calcutta, soon after his landing from England, Capt. G. L. Brown, lately appointed by the Court of Directors, an Assistant in the Master Attendant's Office.... Lately, at Calcutta, in the flower of life, Major Peter Lewis Grant, of the 12th regt. Bengal Native Infantry, officiating Town Major at Fort William. Ambitious of glory in early life, the spirit of heroism displayed by this admirable officer, on the works of Bhurtpoor, in the column of the gallant Don, may bring an agreeable recollection of the name of Grant to the memory of many of his distinguished companions in arms of this

Presidency, who fought under the banners of the immortal Lake.

MADRAS.

GENERAL MILITARY REGULATIONS.

By order of the most noble the Governor-gen. dated Calcutta, Aug. 26, a corps of native militia is to be raised in the territory under Madras.

The Madras N. Mil. will be completed by recruiting at the presidency; the men recruited not to be under 5 feet 2 inches in height, nor under 16 or more than 30 years of age.

The native commissioned and non-commissioned staff of the corps will be furnished from the line.

MILITARY APPOINTMENTS AND PROMOTIONS.

By the order of the gen. government above cited:—Lient. Col. C. Hodgson, of the 22d N. Regt. to command the Madras N. Mil.

Capt. N. H. Hatherly, to be second in command.

Mr. Surg. T. Sergeant, to be surgeon to the corps.

RELATIONS WITH THE FRENCH.

On Tuesday, Sept. 28, Monsieur Le Baron de Bassayn de Richemont, comptroller general of the French establishments in India, paid his first visit to the right hon. the Governor, on which occasion he was received under the salute and honours due to his rank.

LOCAL OCCURRENCES.

The Weather.—Sept. 20. The weather at the presidency, and its vicinity, lately, cannot be considered as seasonable; it had been less sultry with more rain than usual; there has also been a good deal of lightning, which has done some mischief. At a place about 30 miles off, we have heard of a building having been struck and thrown down; and at the presidency, on Monday night, the electric fluid fell near a house on the Mount-Road, and in such quantity as instantly to set a palmira tree which it struck in a blaze; the thunder which followed was extremely loud and awful; the fluid was also attracted by some of the ships in the roads, but we have not heard that any mischief was done, or that any lives have been lost.

Earthquake.—A smart shock of an earthquake was felt at Wallajahbad between 10 and 11 o'clock at night, on the 2d Oct.

Confession of Murder.—A private soldier of H. M.'s 46th regt. at Madras, has

made confession, on oath, that he was a principal in the murder of the Mars family with Williamson in 1811. The confession is, however, suspected to be a fabrication, in order to get his discharge from the regt. The man's name is Joseph Spurs.

SHIPPING INTELLIGENCE.

Arrival.—Oct. 3.—Albion, Weller, from London, 3d June.

Departures.—Sept. 30.—Isabella, Wallis, for London.... Oct. 2.—Aurora, Earl, for England.

BIRTHS.

Sept 19.—At Secunderabad, the lady of Lieut. and Adjut. Spicer, of a daughter.... 22, At Cannanore, the lady of C. J. R. Ellis, Esq. of a daughter.... Oct. 3, At Bangalore, the lady of Lieut. W. Peyton, 19th regt. N. I. of a daughter.... 9, At Black-town, Mary Euphemia, the wife of G. D. McCarthy, of a son.... 12, At St. Thomé, Mrs. E. Barrett, of a daughter.... 13, the lady of John Dent, Esq. of the civil service, of a daughter.

MARRIAGES.

Sept. 28.—G. Mather, Esq. of the medical estab. to Marianne, eldest daughter of the late C. Chambers, of Middlesex, Esq.

DEATHS.

Aug. 14.—At Madras, Jane, the wife of Mr. E. Ranken.... Sept. 14. At Tellicherry, J. Oakes, Esq., master attendant.... Same day, at Madras, Lieut. G. M. Smith, of the 5th regt. N. Cav. third son of the late G. Smith, formerly of Canton.

BOMBAY.

EXPEDITION TO THE PERSIAN GULF.

Private, received in England.

The following extract of a letter from an officer on board H. M.'s ship Liverpool, Capt. F. A. Collier, C. B. has been published in the *Hampshire Telegraph*. It is in complete accordance with the announcement in the last number of the *Asiatic Journal*, and contains some interesting particulars.

“*Rys al Khyma, Gulf of Persia, Dec. 15, 1819.*—By an overland dispatch from Bussora, we send an account of the fall of this place, the first and strongest the pirates have in the Gulf. When the public dispatch was written, the loss of the enemy was not ascertained. The pirates had 62 pieces of cannon mounted on their works: they left 300 killed and 700 wounded. Our loss was only one major killed, two officers wounded, and about sixty privates killed and wounded. Our

force consisted of 2,300 troops, and of the Liverpool, Eden, Captain Loch, and Curlew, Captain W. Walpole. Captain Collier had a narrow escape, three musket balls having struck him at the same time: two went through his coat, and one grazed his leg.”

Private, published in India.

The following is of a previous date, and relates to the two expeditions which have sailed in succession to combine in reducing the Arab corsairs.

On the 20th the expedition sailed for the gulf of Persia; on the 19th the whole force was embarked, but the surf was so great it was impossible for them to get out of harbour: however, they sailed on the 20th, under the most favourable circumstances. They were embarked in the following order, and as they went off, the whole of the different bands played *God save the King*:—One regiment of European Artillery and Lancers, complete; his Majesty's 47th regt.; his Majesty's 65th regt.; 1st battalion of the 2d regt. of Native Infantry; 1st battalion of the 3d regt. of Native Infantry; four companies of Pioneers; and a quantity of ordnance complete.

The command of the entire expedition was conferred on Sir Wm. Grant Keir.—The following officers are appointed to the staff:—Major E. G. Staunus, Assistant Adjutant General; Capt. D. Wilson, Assistant Quarter-master General; Capt. G. F. Sadlier, of the 47th regt., to be Interpreter. Previous to the sailing of this imposing force, the Governor General received a communication from the piratical Generals, offering to give up their chief men as hostages, but it appears no notice was taken of the application, more than leaving at Bombay one regiment, which but for that communication, would have gone.—(See *Asiatic Journal*, p. 395.)—The ships (all sloops of war) were provisioned for eight months. It was very handsome to see the beach on the day of the sailing of the fleet, the people cheering and waving their hats, while a thousand prayers were offered for their safe return, —(*Bombay Gazette*.)

Bombay, Nov. 6.—The first section of troops destined for this service, consisting of the artillery and H. M.'s 47th and 65th regts., embarked on board their respective ships early on Saturday morning, the 30th Oct., displaying on their embarkation the most perfect good order and regularity. The embarkation of native troops took place on Sunday morning, and the ships proceeded to join the first division, near whom they anchored.

Monday and Tuesday were occupied in making some arrangements for taking up another ship or two, as store and hospital

ships, as it was found, that in case of sickness, the ships were rather crowded.

They were in consequence delayed for a day to permit the transferring of some men to the new transport; but it is supposed the expedition will sail in the course of this day, leaving a small squadron to follow as soon as they can be got ready; the fleet now about to sail, will consist of the following ships:—H.M.'s ships Liverpool and Curlew, and Hon. Company's cruiser Aurora. Transports, Hannah, Ann, F.T., Jessy, Orpheus F.T., Jemima F.T., Glenelg, Bombay Castle, Pascoa, Diana, Ernaad, Faizemann, Angelica, Carron, and Cornwall, in all 7,068 tons, with about 4,000 troops and followers.

Major-General Sir W. G. Keir, K.M.T., in command of the force for service in the Persian Gulf, embarked on board H.M.'s ship Liverpool, on Wednesday morning last, the 3d Nov. The signal to get under weigh was made immediately after, and the frigate, with the ships under her convoy, proceeded to sea that afternoon. The ships, consisting of the Francis Warden, Conde de Rio Pardo, Orient, and Upton Castle, will follow in about eight or ten days.

On the 31st of October, another expedition, consisting of the Ann, Thatcher; Jamaica, Danby; Hannah, Heathorn; and the Orpheus, Milnes, sailed with troops destined for the Gulf of Persia.—(*Bombay Courier*.)

Kutch.—Letters from Booj, mention the actual appearance of the Joassmees on that coast, and entertain apprehensions of their supplies being cast off by them. We apprehend the letter alluded to was written before the Antelope, and her two little attendants, had reached their destination; for we consider the apprehended danger at an end, and that their cheese, beer, and hams, will reach them in safety. A subsequent letter mentions that the pirate fleet consists of 64 vessels with a crew of 7,000 men.—*Bombay Gazette*, Oct. 27.

OPERATIONS OF THE PIRATICAL STATES.

Letters received here by a dhow from Muscat, mention that about thirty-five sail of Joassmee vessels have proceeded on a cruise off the coasts of Meckran and Scind, and that one of the chiefs of Ras-el Khyma, who had been placed in authority at that port by the Wahabbee Shaik, had repaired to Bushire to sue for peace. Whilst at that place, however, the Joassmees having taken a Bushire vessel, Mr. Bruce has detained the Shaik as a prisoner.—*Bombay Courier*, Oct. 23.

The depredations committed by the pirates in the Persian Gulf are of the most daring description; they respect no flag: but they have received a check which will make them more cautious in future. His

Majesty's brig Curlew arrived here a few days ago, after having had a brush with those marauders. On coming through the Gulph she was attacked by no less than 15 large armed boats, having on board about 160 men each. They hoisted the bloody flag, and commenced the engagement in the most determined manner. The captain of the brig gave them a taste of grape, and it was hard fighting for five hours, when they began to sheer off; however, he succeeded in capturing seven; three were sunk, and the rest escaped. One expedition has sailed from hence against them, and another is now fitting out.—*Bombay*, Nov. 10.—*Letter received in London*.

Political.—Official.

NEW ARRANGEMENT OF THE SOUTHERN CANCAN.

Oct. 27.—The right hon. the Governor in council is pleased to abolish the station of Malwan as a separate government command, and to form the whole of the country bounded on the north by the Aptar river, and on the south by the Carlee or Malwan river, and lying between the ghauts of the Syadree mountains and the sea, and called the Southern Cancan, into one command.

The situation of line adj. at Severndroog is abolished, and a brig.maj. allowed to the Southern Cancan.

Lieut.col. Kennedy is appointed to the command of the Southern Cancan.

Military.—Official.

RELIEF OF SIR J. MALCOLM'S BRIGADE.

Bombay, Oct. 21.—His Exc. the Governor-gen. in council, having directed immediate arrangements to be adopted for relieving the Bombay troops under the command of Brig.gen. Sir J. Malcolm, K.C.B. and K.L.S. by a detachment from the army of Bengal, the right hon. the Governor in council is pleased to direct that the brigade, under the command of Lieut.col. Corsellis, shall march to Baroda as soon as relieved by the Bengal troops, and that all staff establishments and appointments with the brigade shall cease from the date of its arrival at Baroda.

MILITARY APPOINTMENTS AND PROMOTIONS.

Oct. 16.—Cavalry Cadet H. Grant, to be cornet.—Infantry Cadets A. Troward, F. Stewart, D. G. Duff, C. R. U. Jones, C. Hagard, J. H. Hall, to be ensigns.—Assist.surg. C. Kane, and W. Taylor, M.D. admitted.

18.—Maj. Colebrook, of the royal art., and supernumerary aid-de-camp to his Exc. the Gov.gen. to be dep.qr.mast.gen.

to the force proceeding on the impending service.

Capt. D. Wilson, who had been nominated to the situation of assist. qr. mast. gen. to the force, to be mil. sec. to Sir W. G. Keir, K.M.T.

22.—Lieut. G. B. Brucks to be assist. to the agent for transports on the impending service.—Brevet Lieut. Col. Hunter Blair, H. M.'s 87th foot, is nominated to the personal staff of his Exc. the Commander in-chief, as mil. sec. and aid-de-camp; and Brevet Maj. Jackson, of the 6th dragoon guards, as aid-de-camp.

23.—Infantry cadets F. Jones, W. N. T. Smce, J. Wilkinson, H. Hancock, to be ensigns.—Assist. surgeons W. Gray and R. Green admitted.—Lieut. Roe, 1st bat. 8th regt. N. I. to act as Bazar master with the Bombay brig. in Malwa, during the absence of Lieut. Riddell.

FURLOUGHES.

Oct. 18.—Ensign S. Hemming, corps of engineers, to the Cape and England.

19.—Cornet H. M. Buchanan, 2d Madras L. L. to the Cape and England, for three years.

25.—Capt. E. Towsey, 3d N. I. to England, for three years.

LOCAL OCCURRENCES.

Leading Miscellanies.—On the evening of Wednesday, Oct. 27, the Hon. Mountstuart Elphinstone arrived at this presidency from Poonah.

The European society of this island has experienced a mournful privation in the death of Hugh George Macklin, Esq., late Advocate General at this presidency, on the 29th Nov. in the 46th year of his age.

With regret we have also to announce the death of Robt. Gregory Morris, of the Bombay Civil Service, and son of John Morris, Esq. of the Direction. This melancholy event took place at Calcutta, on the 19th of October, at the early age of twenty-five.

Captain William Reynolds, of the ship Orient, has been presented with a piece of plate by his passengers.

Anniversary of Trafalgar.—On the 21st of October, Captains Collier and Walpole, of H.M.'s ships Liverpool and Curlew, in return for the hospitality they have experienced at this place, and at the same time to honour the anniversary of the battle of 'Trafalgar, gave a ball and supper at the Admiralty House. The terrace was illuminated with great taste and splendour, and the entire entertainment which wit and urbanity, beauty and fashion contributed to enliven, had that air of participated pleasure which becomes a national festival.

Six per Cent. Loan.—Oct. 27.—During the three days that the treasury was open

for bills on Bengal, at the exchange of 107 for 100 sicca rupees, we are informed that no less than 30 lacs of rupees were received.

Parting Dinner to the Governor.—On the evening of Thursday, Oct. 28, at Lowjee Castle, at the entertainment given to the Rt. Hon. Sir Evan Nepean, upwards of 150 gentlemen sat down to an excellent and well-arranged dinner. H. E. Sir C. Colville, G. C. B. in the chair.

Nautch.—Oct. 27.—A few days ago Mahomed Ali Khan gave a grand *nautch* to his Exc. Sir Evan Nepean, and also another to Sir W. G. Keir. We are aware that those kind of entertainments are not very gratifying to our countrymen in general, yet, on the present occasions, the hearty welcome and *tout ensemble* went far to disperse any *ennui*. Coffee, tea, and hookahs of many descriptions, were handed about; and attar and rose-water were dispensed with an unsparing hand; whilst the syrens, to the utter discomfort of many a grave Mullah, commenced their strains. The ghazels of Hafiz and Sadi, were succeeded by geets and tappas of a more modern date, and were kept up till a late hour.

Scarcity of Wheat.—Oct. 27.—A great scarcity of wheat prevails at present in this island, and we have heard of some having been purchased by the bakers for their immediate wants at the enormous price of 120 rupees per candy. The scarcity is attributed to large exports of wheat to the Isle of France some months ago, and to the non-arrival of any subsequent supply from the northward, where we understand there is still a considerable stock on hand, but that owing to the state of the roads immediately after the rains, it had not been practicable to convey any quantity down to the sea coast for shipment.

Plague in Kattawar.—We regret to learn that letters from Kattawar, of the 17th Sept., states that a disease, resembling the plague in its symptoms and fatal effects, which we mentioned in our paper of the 29th May, as having appeared at Phœdra—(See *Asiatic Journ. Vol. VIII. p. 499*)—has broken out with increased virulence at Limree and Dundooka. The number of fatal cases had been very considerable, and so great an alarm had been caused by this awful visitation, that the inhabitants were quitting the country, leaving these two pergunnahs in a state of comparative depopulation. The progress of the disease, it is said, can be distinctly traced as gradually proceeding eastward.

PRICES CURRENT, Oct. 27.

Exchange on Calcutta, Bombay Rs. 109	
per 100 sicca, on Madras.	

Cotton still keeps up, but as the loading of the Company's ships for the Eastern passage to China will soon commence, we expect the holders will make some abatement.

With respect to European articles of general consumption an absolute famine prevails.

Wheat has again risen to an enormous price, and it is fortunate for us that it is not the staple food of the inhabitants.

SHIPPING INTELLIGENCE.

Arrivals.—Oct. 9. Ship Barossa, Capt. H. Hutchinson, from England the 6th May, Lizard the 13th, touched at the Cape the 12th August, sailed the 19th for Bombay.—Passengers: Sir C. Colville, G.C.B., K.T.S. Lady Colville, Mrs. Lamy, Mrs. Kane, Miss Frankland, Miss Camp-

bell, Miss Cooke, and Miss Muir; Lieut. col. Blair; Maj. Jackson; Capt. Lamy, Bombay army; Lient Banfoy, H.M. 47th regt.; Mr. Surg. Cane, Mr. Surg. Taylor, Mr. Grant, Mr. Pratt, Mr. Stewart, Mr. Jones, Mr. Hagart, Mr. Troward, Mr. Duff, and Mr. Hall, cadets; Mr. Warry; Mr. Pinching, Bombay marine; Mr. Ennis, free mariner; 3 native servants, 5 women and 4 children; 50 recruits for 47th regt.; left Carmarthen and Sarah at Cape for Bombay....16, the Orient, Reynolds, from London 18th June, touched at Madeira and the Mauritius.—Passengers: Lieut.col. and Mrs. Mackonochie, Capt. and Mrs. Campbell, 2 Miss Sheriffs, Miss Moore, Miss Brown, Capt. Crozier, Capt. Cocke, Capt. Hackness, Capt. Newman; Messrs. Green and Grey, assist.surgs.; Messrs. Jones, Wilkinson, Smece, Harrocks, and Hackness, cadets; Mr. Brown, free mariner.

BIRTHS.

Sept. 17.—Mrs. Kempt, of a daughter.
.... Oct. 12, at Surat, the lady of Capt. C. Whitehill, 5th regt. N.I. of a son....
14, at Chintz Pogley, the lady of Capt. De Lamotte, commandant of pioneers, of a daughter.... 24, the lady of S. Babington, Esq. of a son.

MARRIAGE.

Oct. 12.—A. Nesbit Riddle, Esq. lieut. military service, to Miss M. A. Edwards, youngest daughter of Lieut.col. Edwards, H.M. 73d regt.

DEATHS.

Hempson, infant son of Mr. Conductor Hempson, of Ahmednagur, aged four years and a half.... 20, Lieut. Hunter, H.M. 67th regt.... 22, Cornet H.M. Buchanan, Mad. estab.... 27, Qr. mast. Johnson, H.M. 65th regt.... 28, Capt. Hutchinson, H.M. 17th Lt.drag.... 28, at Mazagon, Mrs. R. Fernandes, youngest daughter of the late Sir M. de Lima e Souza.

PROVISIONAL GOVERNMENT IN THE DECKAN.

POONA.

Farewell Entertainments to Mr. Elphinstone.—On the 12th of October, a splendid entertainment was given to the hon. Mr. Elphinstone, sole commissioner for conducting the provisional government, by the civil and military gentlemen who have served under him in the Deckan.—The entertainment consisted of a dinner, ball and supper.—The ball room was splendidly fitted up in the part of the palace formerly the Gunnesh Mahal.

Between 50 and 60,000 rupees had been subscribed by the gentlemen of the society in the city of Poona and the territories conquered from the late Peishwa, for the purchase of a service of plate, with the design of presenting it to the hon. the commissioner on his quitting the province to assume the government of Bombay. This was handsomely alluded to by Brig. gen. Smith, in proposing Mr. Elphinstone's health, as well as the circumstance which had checked their resolution. Speaking for himself and the other stewards, he said: "The recent decision, however, of the Gov. gen., in his reply to the inhabitants of Madras upon a nearly similar case, though known to us subsequently to the adoption of our intended compliments to Mr. Elphinstone, prevented our proceeding further in that object. It has been suspended, gentlemen, that we might save both parties the pain of his refusal: for with a similar noble and delicate mind, and in deference to such high authority, no doubt seemed to remain, that the commissioner must have decided as the Gov. gen. had resolved before him. I knew you all too well, gentlemen, to believe that you could wish to proffer an unmeaning compliment."

On the 16th of October, a parting dinner was given by the Poona Turf Club to their president, Mr. Elphinstone, in the same ancient palace of the head of the Mahratta confederacy of sovereigns. The members of the club, dressed in the turf uniform, received their distinguished guest at the principal entrance, and conducted him to the Gannesh Mahal, where the tables were laid. The chair was filled by Capt. Tovey, who had the honor to be supported by the gallant Maj. Staunton.

NATIVE POWERS.

RELATIONS OF BOMBAY WITH THE GUICAWAR.

Unofficial.

Baroda.—On the 17th of October the installation vacant musnud of Syjee Row, younger brother of the late Anund Row Guicawar, took place. A royal salute was fired from the British residency on the occasion.

Thus, through the commanding influence of a protecting power, has Syjee Row taken undisturbed possession of the throne of his ancestors, without which there is reason to think great opposition would have been made by some adverse partisans, who have whispered insinuations against the legitimacy of his birth. It is to be regretted, that no officers from cantonments were invited to attend the above-mentioned interesting ceremony, as it is but natural to infer the young sovereign would have been highly flattered, by the presence of the few officers

present with the B. S. F.—The late Rajah has left very considerable personal property, amounting it is said to the value of more than two crores of rupees, in money and jewels; the distribution of which has been the theme of anxious discussion among the female branches of the Guicawar's family, but which will, no doubt, be consigned to the Rajah's treasury, as a reinforcement to the sinews of the state; an appropriation that may not exactly meet the wishes of these sable dames.

CEYLON.

MILITARY NOTICES.

Aug. 23.—A detachment of his Majesty's 5th reg. sailed from Colombo for Trincomalee and Bengal, under the command of Major Fuller.

Sept. 22.—The 45th and 83d regs. are quartered at Colombo, and the 19th at Point-de-Galle. The 73d reg. is quartered at Trincomalee, where Lieut. col. O'Connell, of that corps, commands the garrison.—The 1st Ceylon reg. is to be stationed at Kandy, and the 2d do. at Colombo.

LOCAL OCCURRENCES.

Variola.—*Sept. 22.*—The small-pox is now raging in a most dreadful manner in the island of Ceylon, and the natives and people of colour are suffering greatly.

Hail-storm.—On the 27th of July there was a fall of hailstones at Alipoot in Lower Ouva. The following extract of a letter gives a good account of this phenomenon, unusual, but not unknown in Ceylon, for there fell not long ago a shower of hailstones at Kornegalle in the Seven Korles:—

Alipoot, July 28.—"We yesterday had a singular occurrence, or rather a phenomenon in this part of the world, viz. a fall of hailstones larger considerably than the common size of a pea.—The former part of the day was particularly close and sultry, with a hazy sky; about one o'clock claps of distant thunder, no uncommon thing, were heard to the N.E. and showers of rain fell among the mountains; about half past one or towards two o'clock, the sky became overspread with dense black clouds, with loud peals of thunder very nearly preceded by vivid lightning; from the N.W., where the clouds seemed to concentrate, a hurricane of wind and rain approached us with a noise which was heard at a great distance; our houses were partly unroofed by the first gust, and a cloud of dust from the square of the fort, with tallipot leaves (the materials which formed the covering of our houses) was flying before the storm; the rain fell in torrents; the wind veered in a short time towards the north, when hailstones

were observed rebounding from the ground, and were picked up in number considerably larger than peas.

SUPREME COURT.

The Hon. Henry Byrne, Puisne Judge, president.—The criminal session of the supreme court at Ceylon commenced at Colombo on the 17th Nov. James Farrel, Esq. collector of the district of Fongalla, was tried for the murder of a native, and most fully and clearly acquitted.

COURT MARTIAL.

General Orders, dated Head Quarters, Colombo, 15th Jan. 1819.—The commander of the forces publishes for the information of the army, the opinion of the court of inquiry of which Brig. Shulldham was president, assembled to investigate the causes of an unfortunate affray which took place between the soldiers of H. M.'s 1st Ceylon reg. cantoned on Slave Island, and the division of the H. C.'s 2d batt. of the 20th Bengal sepoy, quartered near to that cantonment; and the Lieut. Gen. desires to express his thanks to the Brig. and the court for this patient and attentive investigation of the subject referred to them—which commenced on the 2d and continued by adjournments to the 8th inst.

Opinion.—"The court having given a patient hearing to such witnesses as have been brought forward from the respective corps, in addition to those summoned by themselves, whose testimony might tend to elucidate the origin and circumstances of the affray, and enable them to carry into effect the instructions of H. E. the Commander of the Forces, as communicated in the Dep. Adj. Gen.'s letter, are of opinion as to the primary cause, that it originated in a quarrel in the vicinity of the North Esplanade, between some serjeants of his H. M.'s 1st Ceylon reg. and one or more privates of the H. C.'s 3d Ceylon vol. batt.—the precise nature of which, or the degree of culpability attaching to the individuals concerned in that affray, it is almost impracticable to determine, from the contradictory statements of those who were present; although they are of opinion that the Malay serjeants were aggrieved on this occasion. But it is sufficiently obvious to the court that the irritation excited by this circumstance, very soon extended to Slave Island, previous to the arrival of the serjeants, and produced the affray which ensued; wherein it does appear to the court that the Malays were the aggressors in the assault committed in the Bazar on the sepoy of the 20th Bengal N. I.

The consequences of this affray have been the death of two sepoy; the number of men wounded in the two corps, and the nature of the wounds, are denoted by the return of the medical officers

in charge, which are annexed to the proceedings.

The court conceive it a duty incumbent on them to express their opinion that every exertion was made by Lieut.-col. Moffatt, Lieut.-col. Weston, and the officers of the different reg., to allay the irritation which had been excited, and restore tranquillity; that after the appearance of their officers a commendable spirit of discipline and subordination was speedily manifested by the return of both parties to order, and that the unguarded assertion to the contrary, which proceeded from Lieut. Crooke, respecting his H. M.'s 1st Ceylon reg., is not borne out by any concurring testimony.

At the same time the court are willing to admit that Lieut. Crooke may have been led into this error at the period of the alarm of fire having been given in the Malay lines, as stated in Capt. De Bussche's evidence.

With reference to the accusations contained against Lieut. Crooke in the course of yesterday's examination, the court in justice to that officer, observe that the charge has been positively denied by him; but the embarkation of Lieut. Crooke and the evidence whom he had intended to have adduced in contradiction to that statement, has prevented his appearing before the court for that purpose.

The commander of the forces has to express his deep concern that an occurrence so directly contrary to military discipline, and so fatal in its consequences, should have taken place between the two corps, who had prior to this event lived in that harmony which ought always to mark the conduct of troops belonging to the same power, however differently composed.

To that previous harmony, however, and the general habits of good order, and to the great attention of the officers of both services, the lieut.-general confidently trusts, to prevent any future altercations or misunderstandings between the auxiliary troops of the hon. the East-India Company, and the native corps of this establishment.

Where so much confusion has prevailed, and where the provocations which led to the affray are so difficult to be traced to their origin,—the commander of the forces does not think it in any degree useful or advisable to direct any further proceedings than have already taken place, in the instance of the sepoy of the 3d volunteer battalion, accused of attacking the Malay serjeant by order of Brig. Shulldham, and in so far as any of the 1st Ceylon reg. are charged with being concerned in occasioning the death of two sepoy of the H. C. 20th reg. which charges will stand for investigation before the regular civil tribunal.

The men of the 1st Ceylon reg. have

been too long under the Lieut.gen.'s command, and too well trained by their officers, not to know how much any irregularity or excess, besides casting discredit on the corps, must afflict and displease him.—He has only therefore to appeal to their own feelings as gallant and faithful soldiers, to make them sensible of the impropriety of what has occurred, and he is equally satisfied that as the same notions of discipline, and the bad consequences of any breach of good order must be strongly impressed on the soldiers of the Bengal army, it is unnecessary for him to enlarge further on a subject so painful; but to exhort the troops of the different nations serving his Majesty in Ceylon, to consider each other as brother soldiers, and live together in that state of cordial friendship, which is so necessary to their mutual comfort, and which will be so creditable to them in their military character.

This order to be translated into the different languages spoken by the native troops, and to be read at the first parade, each corps being under arms, and all the officers present.

SHIPPING INTELLIGENCE.

Arrivals.—Sept. 23.—At Colombo, the ship Pilot, from London. Among the passengers are: Lieut.col. Hamilton, aid-de-camp to Sir Edw. Barnes; Capt. Campbell, 83d reg.; Lieut. Yule, royal engineers; Mr. Crawford, staff-surg.

In Nov. the ship Maisters, Capt. Berryman, had arrived at Point-de-Galle, from Calcutta, with the loss of her foremast, and is repairing, in order to receive on board part of H.M. 19th reg. for England.

BIRTH.

Sept. 19, at Kandy, the lady of Lieut. col. Kelly, commanding the Kandian provinces, of a son.

MARRIAGES.

Sept. 20, at Colombo, Mr. L. Schokmau, to Miss G. E. C. De Voss.

DEATH.

On board the Pilot, on her passage from England, soon after leaving the Cape, Lieut. Hunt, of the royal engineers.

PENANG.

CIVIL APPOINTMENTS.

Aug. 11.—Mr. W. A. Clubley, to be collector.—Mr. K. Murchison, to act as sec. to government.—Mr. W. S. Cracroft, to act as dep. sec. to government.—Mr. W. M. Williams, to act as dep. accountant and auditor.—Mr. A. D. Maingy, to continue as sub-treasurer.

MILITARY APPOINTMENTS.

Aug. 11.—Major J. M. Coombs, to continue as fort and town major.—Lieut. H.

Burney, to act as aid-de-camp to the governor, and to be acting mil. sec.—Lieut. J. Low, to take charge of the local corps.

LOCAL OCCURRENCES.

Parochial Economy.—It is a curious fact, though not less true, that every one who goes to church is obliged to pay two dollars each month for his seat; the consequence is, that where we would otherwise have a congregation of upwards of one hundred persons, we do not see above fifteen or sixteen at the utmost; this you will readily say is not encouraging christianity in a settlement whose infancy requires every fostering care. Singing in the church is now abolished, because it involves the monthly expense of thirty rupees, paid to a very laudable and zealous character, who has been and still is at considerable pains to teach the charity boys.

Renegade Seamen.—A quart. mast. with twelve European seamen and seven Chinamen, contrived in the night-watch to make their escape from the Hon. Company's ship Warren Hastings, lying at Penang. They took with them all the muskets and ammunition that were in the cuddy, and an ample supply of provisions and water. It was supposed that they intended to turn pirates, or, after getting possession of some small vessel, to proceed to South America.

SINGAPORE.

Gold Mine.—Sept. 23.—The Shah Alum brings a report from Penang, that a gold mine has been discovered at Singapore. This is probable enough, but no accounts have yet been given of the productiveness of the ore.—(*Calcutta Government Gazette*.)

SUMATRA.

PALEMBANG.

Repulse of the Expedition from Batavia.—Letters from Batavia, dated November 14, received in London, communicate the details of the unsuccessful attack on Palembang by the Dutch, which has been mentioned in general terms in the last advices from Holland.

The expedition, consisting of a man of war, a frigate, and several transports, with about 1,500 troops on board, cast anchor in the entrance of Palembang river on the 7th of October. They proceeded up the river on the 9th, and on their approach to Palembang, found the works well manned, and in a most formidable state of defence. Piles had been driven all across the river, and at the principal landing places, which rendered it impossible for the ships to advance, or the boats to make

the shore, and the batteries had been constructed in such a manner as to enable the guns to bear wherever the vessels might be placed. An attempt was first made to land some troops near the entrance of the river, and march them to the scene of attack, but the country was found to be a perfect morass, with a great deal of thick wood, in which the troops would have to march up to their middle, and the design was therefore abandoned. The 64-gun ship, it was found, would not pass the bar, and the Admiral hoisted his flag on board the *Wilhelmina* frigate. The attack was made on a battery situated on an island in the middle of the river, but the frigate received so much injury in the course of an hour, that she was compelled to give up the object, and retire with all the ships of the expedition, and with a loss of 250 men and 6 officers killed and wounded. During this engagement the batteries on shore were extremely well served, very numerous manned, and the fire cool and steady. This precision of discipline, so uncommon among the native troops, is attributed to the instruction and superintendence of two deserters from the Dutch army, who had formerly served as officers of engineers under Buonaparte, but who were reduced to the ranks for their crimes, and had been sent to the climate of Batavia as a punishment. The failure of the expedition is also ascribed to the want of agreement between the commanders of the land and sea forces. This event is a subject of great anxiety with the authorities at Batavia, as tending to weaken their tenure on the numerous dependencies of Java, at a time when reinforcements of troops from Europe had become extremely scanty, and when the ranks of those on the island were thinning by sickness and other disasters. The cost of the expedition against Palembang was estimated at 800,000 dollars. Colonel Bischoff, the commander of the troops, returned to Batavia, on the 13th of November, in one of the transports. The Admiral, with the rest of the vessels, remained off the mouth of Palembang river, waiting for further instructions.

The Dutch account alluded to in the introduction to the preceding, is in these obscure terms, viz.—*Batavia*, Oct. 15.—By the latest accounts from the island of Borneo, the corps of our troops, which was sent against the district of Banca Kolla, was quite ready to make itself master by assault, and without considerable loss, of the fortress made there, by the rebels, of beams and other materials, which was in a very strong position. Contrary winds, and the low water thereby occasioned on the bank of Soenfang, on the Palembang river, hindered the largest ships from passing over, it at the new

moon. The whole expedition was in good condition; the smaller vessels were in the mouth of the river, and the larger were to attempt to pass the bank at full moon.

PADANG.

Order rescinding Prohibition against American Vessels.—The Netherlands general government in India, have published an order, dated Batavia, Nov. 27, of which an abstract follows.

“When the settlement of Padang on the west coast of Sumatra was received back from the British government, regulations were found to be in force which forbid American vessels access to the harbour. We consider the continuation of this prohibition as injudicious, and have therefore ordered that it shall henceforth be null; and that on the contrary, all ships and vessels belonging to princes and people who are on terms of friendship with the government of the Netherlands, shall, from this time, have free admission to this port, under such regulations and restrictions as are now in force, or may in future be established, &c. &c.”

BIRTH.

At Padang, on the 21th Aug. 1819, the lady of the resident, James Du Puy, Esq. of a son.

JAVA.

BATAVIA.

Rumoured Plots among the Javaneese.—The agitations stated to exist in page 407, are at length alluded to in the Dutch papers.

Private accounts from Batavia, of Sept. 22, 1819, say:—“M. Moynard is placed here as commissioner of the marine. There is a report of discontent prevailing here, but respecting which I cannot say any thing particular or positive. It is certain that several natives here, in the neighbourhood, have been arrested, and conveyed on board of the Nassau guardship, where they are confined.”

Commercial.—The port charges at Batavia are exorbitantly high, viz. $\frac{1}{2}$ rupee per ton register, and exacted even if the ship only requires refreshment.—*Bombay Gaz.* Oct. 27.

CELEBES.

DUTCH SETTLEMENT AT MACASSAR.

News reached Batavia on the 10th September, of a late insurrection at Macassar, in which the Batavian government allow they have lost 4 officers and 7 men in one affray with the Malays.—(*Asiatic Journal*, p. 409.)—But it was supposed their loss had been more considerable, and that they would have been driven from the set-

tlement had not a Malay chief held out for the Dutch government.—*Bombay Gaz.* Oct. 27.

ST. HELENA.

BIRTH.

Feb. 11.—The lady of Lieut.gen. Sir Hudson Lowe, K.C.B. of a son.

MARRIAGE.

Jan. 15.—Guy Rotton, Esq. Captain 20th reg. foot, to Maria, youngest daughter of Lieut.col. South, of the same regiment.

RHIO.

Accounts from Rhio, dated the 29th June, state that the Indiana, with the Hon. Sir Stamford Raffles on board, grounded in going into that place on her way to Bencoolen, and was obliged to start her water. The Dutch resident furnished her with a fresh supply, and she continued her voyage on the next day, all well.

The Dutch have hoisted their flag on the Rajah Mooda's fort at Rhio, and almost all the inhabitants have in consequence left it to reside under Major Farquhar at Singapore:—the Rajah Mooda himself has retired to Lingin.

The Dutch frigate *Wilhelmina* was at Rhio when H. M. S. *Topaze* passed. The *Eclipse* (Netherland sloop of war, was lately at Lingin with 40 soldiers) which she would have landed, but the Rajah, it is said, would not receive them.

NEW SOUTH WALES.

INFORMATION TO EMIGRANTS.

On the Wool grown in the Colony.—The congenial character of the climate and pasturage has afforded such success to the exertions of the ship-owners, that they already contribute in a greater proportion than could have been anticipated to the staple manufacture of the mother country. Some specimens of fine wool sent home from the colony, and sold by auction at Garraway's last January, averaged a higher price than some parcels of Spanish at the same sale, and more than double that of some specimens of German growth, also sold on Friday at Garraway's. Some excellent judges of the article, who were present at the sale, declared their opinion, that had the wool been more carefully sorted, and the finer portions of it effectually separated from the coarser, considerably higher prices would have been given. The farmers of the colony have succeeded perfectly in producing fleeces of a fine quality, and have only to learn the farther art of assorting it properly for the British market. The wool from New South Wales pays no duty: the whole amount, therefore, is divided between the grower and importer.

Of 205 bales which by a subsequent arrival reached the London market, a great part was found to vie with the Saxon in quality. One gentleman who lately left Scotland to identify the future fortunes of a large family with the colonists, has, from his flock alone, sent home two tons of fleeces, estimated to be worth 600*l.*, although only in the early stage of improvement.

The Dairy.—The colonist from North Britain just mentioned, also finds that his cattle make him highly profitable returns. He makes "a ton of cheese annually, not inferior to the Cheshire, exclusive of largely supplying Sydney market with fresh butter."

Introduction of the Bee.—An Englishman interested in the welfare of the territory, has succeeded in forwarding the bee to it. Two hives were sent by the Harriet last year, the inhabitants of one of which were suffocated by the melting of the wax in crossing the equator, but a sufficient number of the others were landed alive to encourage the hope that honey may be added to the production of the colony.

Extract of Tannior.—Some ingenious individuals in the settlement, aware that practical chemistry is the parent of useful discovery, have lately turned their attention to the making an extract of the tanning matter of the valuable barks of their timber, and a quantity has been sent to this country in the *Surrey* for trial. It is made in the same manner as the drug, improperly called *Terra Japonica*, which is an inspissation of the bark of a species of *Mimosa*.

Intercourse with the Pacific Islands.—It is already common for natives of Otaheite and New Zealand, to be engaged as sailors in colonial vessels, and to advertise their intended departure from Port Jackson in that capacity in the local Gazette.

Summary.—The progress of the settlements in New South Wales and Van Dieman's Land has been so rapid, that they now possess, of their own growth, all the necessaries of life, and are even enabled to export a surplus produce. They have lately sent horses to Batavia, cattle and salted meat to the Isle of France, and flour to the Cape of Good Hope, to assist in meeting the distresses the inhabitants of that territory have lately experienced for the want of grain. Nor do these colonies less contribute to the wants of the mother country, which they supply with sperm, black oil, seal-skins of a superior description, and wools.

MAURITIUS.

CIVIL APPOINTMENTS.

Nov. 25.—Hart Davis, Esq. to be Venu-master to government in the room of C. Teesdale, Esq.

Dec. 6.—Col. Lindsay, Dep. adj. gen., to act provisionally as a chief commissary of police, during the indisposition of John Warren, Esq.; and J. R. Pye, Esq. to be secretary to the police, and chief of the marronnage office, in the room of Mr. Brown, deceased.

SLAVE TRADE.

The following are abstracts of successive proclamations, by Maj. gen. Darling to suppress the slave trade, which many of the inhabitants pertinaciously continue to carry on, by a clandestine perversion of facilities and indulgences, which had been allowed them to encourage foreign commerce and the local fishery:—

“ Port Louis, July 16.—New negroes, in considerable numbers, have lately been smuggled into the island through the means of the fishermen. These men, on the Major General's arrival, implored the Government to remove the restrictions which had been imposed on the exercise of their occupation. Relying that an indulgence thus anxiously solicited would not be abused, the Major General complied with their wishes, and restored to them the unrestrained exercise of their employment. This indulgence has been abused to the worst purposes.

“ Every one of these men, who, through the indulgence of the Government has been permitted to establish himself on the ‘*Pas Géométriques*,’ shall be removed, as that situation affords facilities to the slave trade which their cupidity cannot withstand.

“ There are others in the enjoyment of still more extensive indulgences, who lend themselves to this traffic. The Major General announces his intention of increasing the military detachments on the coast, and of establishing posts on every point where a landing of slaves shall in future be permitted. The neighbouring proprietors can prevent it.

“ The Major General would be glad if this warning should have the effect of awakening the deluded to a sense of their situation; the example of Philibert, Tregosse, and Clerensac, who were sent to England last year, and have been sentenced to three years confinement and hard labour, should be sufficient to deter even the most determined. Those who still persevere cannot long escape its justice, as Government will never relax in its exertions, until they have been brought to that punishment which the law has attached to their crimes, and which will be ensured by the transmission of every culprit to England.

“ The proclamation of the 25th February 1819, is repealed; and the procla-

mation of the 1st May 1818, is declared to be again in full force.

July 31.—It appearing that the fishermen on the coast have assisted the slave dealers in landing new negroes, the general order of the 22d February, 1819, is therefore cancelled.

The fishing is not to be carried on during the night, and the masts, sails, rudders, oars, and other tackle, belonging to the boats, are to be lodged every evening at sun-set at the nearest military post as directed by the proclamation of the 1st and general order of the 25th May, 1818; and officers commanding detachments will mention as formerly in their weekly states, the number of boats or canoes brought to their posts, sending at the same time a declaration signed by the commandant or civil commissary of the district, of the names of any proprietors who may have failed to comply.

CONTAGIOUS DISEASE.

Official—published in England—Copies of Letters.

No. 1.—*Maj.-gen. Darling to Earl Bathurst.*

Government House, Mauritius, Dec. 21, 1819.—(Abstract.)—My Lord, I have written your lordship very fully by this opportunity—the *Bainbridge*—which is proceeding directly to Liverpool; reporting, for your lordship's information, the particulars of a disease which made its appearance here on the 19th of last month, and has carried off a great number of the coloured population and some of the white inhabitants. I have now deemed it advisable to require of the Capt. of the *Bainbridge* to enter into a bond not to have any communication with the shore after the arrival of the ship, further than may be necessary to the delivery of a letter to the collector of the customs, until the collector shall have signified his assent. The crew of the *Bainbridge* has suffered very much, and three of her men have unfortunately died; and though a voyage to Europe at this season of the year appears to afford the best means of re-establishing the health of the crew, and will, I trust, remove any apprehension of the disorder being contagious, still I have thought it advisable to restrain the communication of the *Bainbridge* with the shore, until the proper authorities shall have had an opportunity of satisfying themselves that no danger can be apprehended.

No. 2.—*Mr. H. Goulburn, Clerk of the Council, to Lord Chetwynd.*

Downing-street, March 25.

(Abstract.)—Encloses copy of the above, for the consideration of the Lords of the Council.

No. 3.—*Lord Chetwynn to the Secretary of the Commissioners of Customs.*

Council Office, Whitehall, March 27.

(Abstract.) I am to desire that the said commissioners will instruct their officers to pay particular attention to the examination of all vessels coming from, or having touched at, the Mauritius, on their arrival at any of the ports of this kingdom; and in the event of the appearance of any infectious disease on board any vessels, or if any circumstances should occur, that a report thereof be transmitted to the Lords of the Council for their information.

Unofficial—published in Mauritius.

It appears from *Mauritius Gazette* to the middle of last December, that the island has been visited by an alarming disease among the slave population. It was at first thought to be contagious; but the government, very properly, ordered a committee of the faculty, both French and English, under the presidency of Dr. Burke, to make inquiries on the subject, and report their result to him. They accordingly drew up several reports, in which they unanimously stated, that they did not consider the disease contagious. From the circumstance of its "pervading classes who have nothing in common but the air they breathe," it was believed the cause might exist in the atmosphere. No doubt was entertained that it might be quickly and certainly cured, by the timely use of the proper remedies. These remedies are fully pointed out in other parts of the report. It appears, however, so much alarm was felt at the prevalence of this distemper, that the inhabitants had dispersed themselves in all directions, in the hope of escaping its ravages. In consequence of this, the council de commune of Port Louis, the administrators of the bank, and the principal merchants, had represented to Major-General Darling, the governor, the expediency of declaring that the "payment of all bonds, notes of hand, and other negotiable securities, coming due during the ensuing six months, should be postponed for one month after the period at which the same have been made payable." A proclamation was accordingly issued, bearing date the 8th December, 1819, decreeing, that from the 1st of that month to the 1st of June, 1820, "no prosecution shall take place, nor no sentence nor judgment be pronounced, for the payment of any bonds, notes of hand, and other negotiable securities of which the term may be already expired, or may expire hereafter, within the above period, until one month after the date at which such bonds, notes of hand, and other negotiable securities are, according to their present tenor, payable; and no judicial formalities, protests, or

other measures taken by creditors or bearers of such bonds, notes of hand, and other negotiable securities, shall be necessary to preserve all their rights and privileges, both towards the drawers and those who are bound with them, and towards all debtors on bond, securities, and endorsers."

Private—received in England.

Extract of a letter from Captain Surfen, of the *Alexander*, dated Port Louis, Nov. 28:—I arrived at this place on the 15th, where my stay has been protracted on account of a fever which broke out the day I finished delivering, amongst the negroes, said to have arisen from the importation of some fish in a bad condition. The French inhabitants are so alarmed, that they have fled up the country with the whole of their negroes, the consequence of which has been a complete stop put to all business, and the town is quite deserted. Not one white has suffered."

DEATH.

Dec. 20, at Port Louis, T. G. Breton, son of the late Peter Breton.

CAPE OF GOOD HOPE.

PACIFICATION WITH THE CAFFRES.

Unofficial.

The following is an account of a conference that took place on the 12th of October on the termination of hostilities, between his excellency Lord Charles Henry Somerset, the governor, accompanied by his principal officers, and the leading chiefs of the Caffre tribes for the settlement of boundaries, and for making arrangements to secure the colonists against the future inroads of these troublesome neighbours.

Detail of the intelligence received from the camp on the Gwanga, 40 miles in advance from Graham's Town, dated the 15th Oct., 1819:—The Governor, accompanied by Lieut.col. Bird, Maj. Holloway, Capt. Trappes, and Capt. Somerset, left Graham's Town on the 12th Oct. and having been joined by Lieut.col. Willshire on the Commettes Hill, proceeded to inspect the forests of the Fish river, and the banks of the Chumie and Kieskamma, and arrived at the camp on the Gwanga on the 14th inst. H. Exc. lost no time in inviting Gaika and the Caffre chiefs, who had been some time in expectation of his coming, to a conference, for the purpose of discussing and adjusting the future state of the relations of the Caffre people with the colony. Gaika, attended by his son Goma, and by the subordinate chiefs, Botman and Enno,

hastened to obey the summons; he was also accompanied by Gunge, Habana, and Garetta, who had on delivering themselves up to the officer commanding on the frontier, declared their sorrow for the part they had taken against the Colony, and against Gaika, and had requested to be received into the favor of that chief.

After the usual friendly salutation, the conference commenced, Hermanas and Platje being Gaika's interpreters. His Exc. called Gaika's attention to the circumstances which brought his Lordship to the frontiers: Gaika had solicited the aid of the colony against 'TSambie, who had driven him from his possessions, and had carried off his finest herds. His Exc. had, in consequence, assembled the colonial force from its most distant parts; he had entered Caffre-land under the most unfavourable circumstances, from the dreadful severity of the weather, and from the state of the rivers; that, notwithstanding these obstacles, he had driven 'TSambie and his adherents out of the country; he had pursued him to Hinza's territories; had on its borders dispersed his force; had compelled him to abandon Caffre-land altogether, and to save his life by becoming an exile and outcast in countries unknown.

By these operations H. E. had not only replaced Gaika in all the country of which he had been deprived, but, by showing 'TSambie's adherents that the fastnesses of the forest into which they had retired, no longer afforded the security which they formerly experienced, had induced the Chiefs then present to submit to Gaika's authority, excepting which no other would hereafter be recognized between the colonial border and the Buffalo river. H. E. had moreover induced Hinza to renounce permanent friendship to Gaika, and thus had completely fulfilled his intention of affording to Gaika efficient succour, and of replacing him in a far better situation than he had ever yet been. Gaika acknowledged in the most impressive manner his obligations to H. E. whose efforts, by the favour of God, had been crowned with the most complete success, and he prayed that heaven might be equally propitious to H. E.'s endeavours for the prosperity of the colony; he said that the chiefs Congo, Habana, and Garetta, had heard H. E.'s sentiments, and would speak for themselves on the subject. They were then separately asked to make their declarations, upon which Congo said, he had always been by right subordinate to Gaika, but residing near 'TSambie, who was more powerful, he had submitted to circumstances, and joined him; that henceforward, however, he should consider himself solely subject to Gaika, and would most solemnly promise to maintain the

strictest allegiance to him. Habana and Garetta made similar declarations, and stated that they had remained in the forests, as considering Gaika's arrival in camp the fittest time of tendering their submission to him. They were, in reply, informed, that it was to their having so acted, that they were indebted for their reconciliation with H. E., as it had been intended, in the event of their hesitation on this point, to have sent them to join Lynx, at a small rocky island near the Cape.

H. E. further explained to Gaika, that it appeared impracticable to secure the repose of the colony, so long as the Caffres could have access to the forests near the Fish river, and that, consequently, it would be necessary that the Fish river should no longer be considered the limits. It was, therefore, finally arranged, that the Chumie waters should be the division henceforward; that is, that the left bank of the Chumie, to where it joins the Keiskamma, shall be the boundary which the Caffres shall not pass; and the Keiskamma from thence to the sea, and the ridge of the Kat river hills to where they join the chain of the Winterbergen, shall be the line of demarcation from the spot at which that ridge touches the Chumie, so that the waters that fall from that ridge into the Chumie shall belong to Gaika, and those which fall into the Kat river shall appertain to the colony.

It was agreed, that the females of Congo's Kraals should have liberty for one month to fetch away the caffre corn which is deposited in the kraals of that chief, or in those of Lynx, Habana, and Garetta, or for a longer period, if the officer commanding should find that they employ themselves diligently for that object; and it was further settled, that Gaika's people should move from the Kakaberg, beyond the new line of demarcation, on the next full moon (Nov 2). After that date, it is intended that the force under Lieut. col. Willshire shall scour the country between the old line of the Fish River, and the new line, and destroy every vestige of kraal. It has been further determined, that strong military posts shall be established between the Keiskamma and the Fish River, to prevent the future occupation of the ceded territory by any petty chieftain.

Gaika expressed a wish that a successor to the late Mr. Williams should be sent to him as soon as possible, and that a person capable of maintaining a correspondence on his part with the colonial government should likewise be placed with him. Thus, it is now to be hoped that the boundary being completely freed from Caffres, repose and security will be the results of the late military operations, results which

will best reward the noble and patriotic exertions of our brave comrades.

His Exc., on the 13th, assembled the several commandants at his head-quarters on the Gwanga; and after thanking them in appropriate terms for their respective exertions, under circumstances of the severest difficulty, he notified to them his intention of dismissing gradually the commanders, retaining only 12 men in every 100, until such time as Gaika should be settled behind the Chumie and Kieskamma. In the mean time, the officer commanding on the frontier, to whose indefatigable attention H. Exc. has not failed to give its due meed of praise, has been directed to establish two strong permanent posts, at positions fixed by H. Exc. between the spot where the Chumie joins the Kieskamma and the Gwanga, for the purpose of finally compelling such Caffres as might attempt to repass the Fish River forests to confine themselves to the limits which their chiefs have agreed to consider as the future boundary of their territory.—*Cape Town Gazette*, 30th Oct.

Abstract—Official.

The tranquillity of the colony being completely restored by the defeat and dispersion of the Caffre hordes, a proclamation was issued by the governor on the 26th Nov., to rescind the order of the 3d March, for calling out the militia of the invaded districts, and for the establishment of martial law.

FAIR INSTITUTED.

The friendly intercourse with the tribes, mentioned in the following extract, was not interrupted by the hostilities with the Caffres, to the middle of which we go back to record this remarkable occurrence.

Mr. Anderson, the missionary at Griqua Town, has by H. Exc. the governor's desire, communicated with the tribes of Briquas and Beshuanas, and with the numerous Bassards in his own vicinity, on the subject of establishing a fair at the Kockontem, in the Beaufort district, in conformity to the proclamation of 27th Nov. last, and the tribes have expressed their great satisfaction at the proposal. The months of April and Sept. are considered the best for this purpose; but they have particularly requested, that Wednesday the 4th of August next may be the day fixed for their repairing to the Kook: the Launddroat of Graaf Reynet has very properly notified to them his acquiescence in this request, and the 4th of August next is therefore the day fixed for the first fair on the borders* of this colony.—*Cape Town Gazette*, June 26.

INFORMATION TO EMIGRANTS.

Notices of Ships that have sailed.—On the 28th of December, departed from Ramsgate Harbour, by a passage vessel from London, several families about to proceed from the river to the Cape of Good Hope. The moment of parting formed an exceedingly interesting and most affecting spectacle, both the pier heads being crowded with the friends of the emigrants, anxious to express their wishes, and their final separating adieu. Upwards of a thousand persons were assembled on the occasion, who, to the cheers of the party emigrating, returned a hearty three times three, and tarried on the pier-heads until the waving of the handkerchiefs of the voyagers was no longer visible.

The East-India transport, the vessel assigned for the conveyance of Mr. Parker's body of Irish settlers from Cork and its vicinity, dropped down the river from Deptford on the 27th Dec. She is nearly a new ship, of about 520 tons burden. The East India transport arrived at Cork, on the 22d Jan.

Other vessels, among the earliest fitted for the same destination, are named in vol. viii. p. 617.

Jan. 1.—The Ocean and Northampton transports sailed from Portsmouth to Liverpool, to take on board settlers there.

Jan. 7.—H.M. store-ship Weymouth, Mr. Richard Turner (master), commander, sailed from Portsmouth for the Cape, with 470 settlers (men, women, and children) on board, for that colony. Duncan Campbell, Esq. (on the reduced list of captains of the royal marine forces), a gentleman of an intelligent and enterprising mind, is gone out by this conveyance, with a party of artisans and agriculturists. Several parishes in Wiltshire have conveyed men out in this ship.

Late in April, four vessels, containing above 600 souls, sailed from Liverpool, bound to the Cape, three of them under the command and direction of a naval officer, and one under private superintendence. The public agent was instructed to provide every accommodation which could minister to the health or comfort of the families who were to embark.

News of Ships at Sea.—Intelligence a few days since was received in London of the Chapman, transport, which sailed from London in December last, with the first party of emigrants destined to form a new settlement at the Cape of Good Hope, under agreement with Mr. John Baillie. The communication from this gentleman is dated under the Line, Feb. 1, 1820, 7 o'clock, P.M., and announces that the ship made Madeira on the 29th Dec. and the Canaries on the 31st, 1819. On the 12th Jan. 1820, they entered Port Praya, in St. Jago, one of the Cape de

Verd islands, on which they landed and encamped. Here they recruited the mess-stock with fresh meat, poultry, fruit, wine, and some flour, and continued the voyage. The only death which had occurred was that of an infant child of Mr. Chase, on Christmas-day.

A letter has been received from Mr. Jonathan Wainwright, late of Little Woodhouse, who left England in January with a party of settlers.—(Extract).—"John transport, Funchal Roads, Feb. 6, 1820.—We came to an anchor here on the 3d, at 12 o'clock at night, after a rough passage of nearly three weeks. We sailed from Liverpool on the 12th Jan. and had very fine weather for two or three days. When we approached the Bay of Biscay, however, it began to be very rough, and we experienced, during six days, some very heavy gales of wind. The sea run, as it is termed, mountains high. Most of the passengers were sick; our family extremely so. It was with great difficulty we got out of the Bay, and I think most of us will remember it as long as we live. We sailed in company with the *Stentor*; each vessel contains about 200 passengers; we are under the command of Lieut. Church, and ours is the flag ship. It is well for us that Mr. Church sailed on board the *John*, as his attention to the comfort, the health, and the happiness of every soul on board is beyond example. He is almost idolized by every man, woman, and child on board, and I am sure he will never be forgotten by us."

ARABIA.

MISSION TO IBRAHIM PACHA.

We copy the following paragraph from a Bengal paper:—"Captain Sadlier is fortunately a man of strong constitution and a man of keen observation; but the necessity of his travelling as an European officer, and being unacquainted with the language of the country, will necessarily confine his sources of information, though it is impossible even to pass over such an unexplored tract of country and to return in safety, without the most unqualified and unobservant traveller, having much to communicate that would be both new and useful."

Though the former part pays Captain Sadlier some oblique compliments, and it would seem as if the writer had some personal acquaintance with him; yet the latter part not only tends to reflect on the Captain himself, but also on the government that appointed him to the mission; which we have no doubt he will execute to the satisfaction of his employers. We therefore take this opportunity of stating that Captain Sadlier of his majesty's 47th regiment now on an embassy to Ibrahim Pacha, is

a gentleman every way qualified by his knowledge of both the Arabic and Persian languages, for this service.

The policy of assuming any foreign dress is doubtful, more especially with persons in any public situation; not even a mustachio should be sported; and our young friends may rest assured that any dereliction from our national dress and from our national habits, far from calling down any additional respect, has the contrary effect.

Since writing the above we find that Captain Sadlier had joined Ibrahim Pacha, and proceeded with him on the pilgrimage to Mecca, from whence he proceeds to Judda, to embark for India.

His reception by Ibrahim is stated to have been every thing that could be wished.—*Bombay Courier*.

Oct. 27. — We have been favoured with a letter from Bushire, of the 26th of December, 1818, coming by the way of Bombay, which furnishes us with some particulars of the state of affairs in Arabia, and in the ports of the Persian gulph.

Ibrahim Pacha, the eldest son of Mohammed Ali, the vice-roy of Egypt, who has been conducting the campaign against the Wahabees, has totally destroyed the town and fortifications of Deryiah, and cut down all the plantations of date trees in the neighbourhood. The captive inhabitants are to be led to Lahsab, which will in future form the seat of the government, so that the pacha of Egypt will be rewarded for his enterprise in the Wahabee campaign, by possessing ports on both sides of the Arabian peninsula, and commanding in a great degree the navigation of the Red Sea and the Persian gulph.—*Calcutta Journal*.

TURKEY IN ASIA.

BAGDAD.

Intense Heat of the Summer.—Advices from Bagdad, dated the 25th Aug. furnish distressing details of the sufferings which had been experienced in consequence of the most tremendous summer ever known even in that parched country. "The thermometers," says the account, "placed in the coolest part of the house, rose to 120°, and at midnight were sometimes at 108 in the open air. There had had been, in the commencement of Aug. a storm accompanied by heavy rain, an occurrence said to be totally unprecedented in that climate, at that season; and the effect on the burning soil, already overheated by the fierce simoom, was similar to that of the hottest steam bath. Multitudes of people, both in the country and in the streets of the city, dropt down dead from the intense heat. One small caravan

lost 22 persons in this manner in the last three days of its journey towards Bagdad: and every hour brought accounts of some fearful accident of this nature. The river rose, in one night, two yards and a half above its ordinary level, and became of a turbid red colour; the waters were so offensive that it was impossible to drink

of them. The people exclaimed, that the day of judgment was at hand, deprecatory hymns were chanted from the minarets, and the utmost dismay and consternation prevailed. The extreme heat had subsided at the date of the account, but the thermometer remained then at 105."

IMPERIAL PARLIAMENT.

OPENING OF THE FIRST PARLIAMENT OF GEORGE IV.

April 27.—This day his Majesty proceeded in state to the House of Lords, for the purpose of opening the new Parliament. So great was the anxiety to gain admission into the House of Lords, that many of the Peers' carriages arrived before ten o'clock, but positive orders had been given not to open any of the doors till twelve o'clock, not even to the Peers themselves. This order was strictly enforced; and when the doors were opened, none but Peers' orders were admitted. Besides Palace-yard being filled with carriages, a line of them reached to the end of Parliament-street by eleven o'clock.

His Majesty entered the House about two o'clock. Being seated on the throne, the Commons were summoned to attend at the bar as usual, when the King delivered a most gracious speech, of which the following is a copy:—

"My Lords and Gentlemen,

"I have taken the earliest occasion of assembling you here, after having recurred to the sense of my people.

"In meeting you personally for the first time since the death of my beloved father, I am anxious to assure you that I shall always continue to imitate his great example, in unceasing attention to the public interests, and in paternal solicitude for the welfare and happiness of all classes of my subjects.

"I have received from Foreign Powers, renewed assurances of their friendly disposition, and of their earnest desire to cultivate with me, the relations of peace and amity.

"Gentlemen of the House of Commons,

"The estimates for the present year will be laid before you; they have been framed upon principles of strict economy. But it is to me matter of the deepest regret, that the state of the country has not allowed me to dispense with those additions to our military force which I announced at the commencement of the last Sessions of Parliament.

"The first object to which your attention will be directed is the provision to

be made for the support of the civil government, and of the honour and dignity of the crown.

"I leave entirely at your disposal my interest in the hereditary revenues, and I cannot deny myself the gratification of declaring, that so far from desiring any arrangement which might lead to the imposition of new burdens upon my people, or even might diminish, on my account, the amount of the reductions incident to my accession to the throne; I can have no wish, under circumstances like the present, that any addition whatever should be made to the settlement adopted by Parliament in the year 1816.

"My Lords and Gentlemen,

"Deeply as I regret that the machinations and designs of the disaffected should have led, in some parts of the country, to acts of open violence and insurrection, I cannot but express my satisfaction at the promptitude with which those attempts have been suppressed, by the vigilance and activity of the Magistrates, and by the zealous co-operation of all those of my subjects, whose exertions have been called forth to support the authority of the laws.

"The wisdom and firmness manifested by the late Parliament, and the due execution of the laws, have greatly contributed to restore confidence throughout the kingdom; and to discountenance those principles of sedition and irreligion, which had been disseminated with such malignant perseverance, and had poisoned the minds of the ignorant and unwary.

"I rely upon the continued support of Parliament in my determination to maintain, by all the means entrusted to my hands, the public safety and tranquillity.

"Deploring, as we all must, the distress which still unhappily prevails among many of the labouring classes of the community, and anxiously looking forward to its removal or mitigation, it is, in the mean time, our common duty effectually to protect the loyal, the peaceable, and the industrious, against those practices of turbulence and intimidation by which the period of relief can only be deferred, and by which the pressure of the distress has

been incalculably aggravated. I trust that an awakened sense of the dangers which they have incurred, and of the arts which have been employed to seduce them, will bring back by far the greater part of those who have been unhappily led astray, and will revive in them that spirit of loyalty, that due submission to the laws, and that attachment to the Constitution which subsist unabated in the hearts of the great body of the people, and which, under the blessing of Divine Providence, have secured to the British Nation the enjoyment

of a larger share of practical freedom, as well as of prosperity and happiness, than have fallen to the lot of any nation in the world."

His Majesty delivered his Speech with clearness, dignity, and grace.

We have omitted the routine of forms, began and completed on the two previous days, for swearing in the members, choosing a Speaker, &c. as details into which our limits will not permit us to go.

HOME INTELLIGENCE.

THE KING'S COURT.

His Majesty held a court at Carlton Palace on the 26th April, when Sir Evan Nepean, Bart. was introduced and sworn in a privy councillor, and took his seat at the Board accordingly.

EAST INDIA HOUSE.

April 5.—The dispatches by the ship Woodford, for Madras and Bengal, were closed and delivered to the master.

11.—A Court of Directors was held, when the following commanders took leave of the court, previous to departing for their respective destinations, viz.—of the Orwell, Capt. T. Sanders; Scaleby Castle, Capt. J. B. Sotheby; Princess Amelia, Capt. N. Turner; Marchioness of Ely, Capt. B. Kay; General Hewitt, Capt. J. Pearson; and Lady Campbell, Capt. T. Marquis, all for China direct.

12.—A Court of Directors was held at the East India House, when the thanks of the Court were voted unanimously to Campbell Marjoribanks and Geo. Abercrombie Robinson, Esqrs. Chairman and Dep. Chairman, for their zeal and attention to the Company's interest during the last year.

12.—A ballot was held for the election of six Directors in the room of

The Hon. W. F. Elphinstone,

John Inglis, Esq.

John Bebb, Esq.

James Pattison, Esq.

James Daniell, Esq.

John Bladon Taylor, Esq.

who go out by rotation. At six o'clock the glasses were closed and delivered to the scrutineers who reported the numbers, and that the election had fallen on

Jacob Bosanquet, Esq. 454

Joseph Cotton, Esq. 455

Edward Parry, Esq. 455

Thomas Reid, Esq. 455

William Wigram, Esq. 453

William Taylor Money, Esq. 454

Asiatic Journ.—No. 53.

The new Directors took the oaths and their seats, and the following gentlemen were chosen Chairman and Deputy Chairman for the year ensuing:

Geo. Abercrombie Robinson, Esq.

Chairman,

Thomas Reid, Esq. Dep. Chairman.

14.—The dispatches for Madras and Bengal, by the ship Moira, were closed at the East India House, and delivered to the master of that ship.

17.—The dispatches for Madras and Bengal, by the ship Coromandel, were closed and delivered to the master of that ship.

20.—The dispatches were closed and delivered to the Pursers of the following ships, viz. Princess Amelia, Capt. N. Turner; Marchioness of Ely, Capt. B. Kay; General Hewitt, Capt. J. Pearson; Lady Campbell, Capt. T. Marquis; for China direct.

24.—The dispatches were closed at the East India House, and delivered to the Pursers of the following ships, viz. The Orwell, Capt. T. Sanders; and the Scaleby Castle, Capt. J. B. Sotheby, for China direct.

DEPARTURE OF THE PERSIAN AMBASSADOR.

On the 2d April the Persian Ambassador and suite left his house in Charles Street, Berkley Square, for Dover, where a frigate was in readiness to receive him by order of government. His Exc. carries with him, in a high degree, the respect and affection of the British nation. He arrived at Wright's Hotel, Dover, the same day.—On the 3d, Maj. Willock left town to join the Persian Ambassador, whom he will accompany to Persia. His Exc. intends to pass three weeks at Paris, and then to proceed to Vienna and Berlin, and afterwards to St. Petersburg.—And the day after, at two in the afternoon, his Exc. accompanied by Mr. Morier and suite, embarked on board the Pioneer schooner, Lieut. Oldrey, under a salute

from the guns at the heights. There were vast numbers of persons on the pier heads to witness his Exc.'s departure, and he was attended by a guard of honour and the band of the 84th regt. to the place of embarkation; when the schooner reached the roads, she returned the salute.

Addenda to the list of Members of the New Parliament, connected with East India Affairs. (See our last number, p. 420.)

Fazakerley, J. N. Tavistock.

Hume, Jos. Aberdeen.

Lindsay, Hon. H. Perth.

Prendegast, M. G. Saltash.

R. Grant, Esq. who was stated in our last number as not opposed for the Bamf district, has since declined to offer himself for that place.

LEADING MISCELLANIES.

Sir Evan Nepean, the late Governor of Bombay, arrived by the Albinia, and immediately proceeded to London, to Thompson's New Hotel, Cavendish Square, where he was joined by his son, Mr. Evan Nepean from Cambridge. On Friday the 20th he dined with the Court of Directors.

Gen. Sir Lowry Cole is appointed to the government of Ceylon. Lord Combermere's health prevented him from accepting it.

William David Evans, Esq. barrister at law, many years resident at Liverpool and lately vice chancellor of the county of Chester, is to be the new Recorder of Bombay, vice Sir John Anstruther deceased.

The late advices from the Mauritius reached Governor Farquhar at the moment he was embarking on the Buckinghamshire, going out to resume his government. Their tenor induced him to order his baggage to be relanded. His Exc. has, however, since proceeded on his voyage; more favourable accounts, as it is understood, of the health of the island having been received.

Maj-gen. Mudge, was a native of Plymouth, and combined in himself all the splendid talents that shone so eminently in his father, Dr. Mudge, and his grandfather, the Rev. Zachariah Mudge. The philosophical transactions of the Royal Society, the trigonometrical survey of the kingdom, with the correct and beautiful maps already published, exhibit some of the labours of his life that have been most beneficial to the public, whilst the advantages derived by the cadets of the royal military academy at Woolwich, and by those of the East-India Company's establishment at Addiscombe, entitle his memory to the gratitude of his country. The Academic distinctions which he acquired are noticed in the Obituary. The

public honours which he merited cannot be comprised in so small a space. The King of Denmark lately presented him with a magnificent chronometer.

MAGNIFICENT DIAMOND.

A diamond said to be worth £20,000 sterling, and consequently one of the largest stones of this description in the known world, has lately been received by the ship York, and is now deposited (for the purpose of being sold) in the Company's Treasury. This precious gem forms a part of the spoil taken from the late Peishwa, and the proceeds of the sale will be divided amongst our victorious army.

EAST-INDIA DEPÔT.

The East-India depôt is immediately to be removed again to the Isle of Wight, and the regular East-India ships will in future call at Portsmouth for their passengers and final dispatches. This alteration takes place in consequence of the inconvenience and insecurity of the anchorage in the Downs.

REGALIA OF CANDY.

On the 29th March was opened at the Bank of England a chest recently brought from India, containing the regalia and other articles taken in 1815 from the palace of the deposed king of Candy. Among the curious and costly articles disclosed to view, were a regal crown of pure gold, an entire suit of golden armour, together with a number of tiaras, bracelets, amulets, and other ornaments, for the most part studded with precious stones, and many of them suspended by massive gold chains of ingenious workmanship. The whole collection, which is of considerable value, has been given up by his Majesty for the benefit of the captors, and will shortly, it is understood, be offered for sale.

INSURANCE CAUSE.

COURT OF KING'S BENCH, *Guildhall*, Jan. 13.—*Robertson v. Caruthers*.—This was an action against the underwriters on the ship *Lady Castlereagh*, from her port of discharge in New South Wales to any of the East-India Islands or Persia, and back to England, for loss by perils of the seas. The captain of the vessel proved that she arrived at Madras on the 13th September 1818. The captain there entered into a charter-party with the government to carry troops, and also a cargo of saltpetre and cotton. On the 24th October, when the ship was loaded and the troops on board, he was ashore. At night a heavy gale came on, and the ship was compelled to leave the roads for fear of being driven on shore. There were several others in the roads; as many as could left the roads; they were fired on from

the fort to compel them to do so. It was during the monsoon. On the 29th the witness received information that the vessel was in the Sadras roads. He went thither, and found the ship nearly a wreck; all her masts were gone but her foremast. Several of the men had been drowned; many of them were then drunk. The cargo was spoiled by the sea-water; it was impossible to get her back to Madras. He dropped her down to Cuddalore, and applied to the government at Pondicherry to send persons to survey the ship. He thought the expense of repairing her would be £20,000, nearly the price of a new ship. She could only have been repaired at Bombay or Bengal. He thinks it impossible to have got there. It was again the monsoon wind; it would not change till April. There was not a king's store at Madras. He applied at Madras for anchors, but got none; he sold the ship; she lay at Cuddalore two months; she was in danger all that time; she could have got to Trincomalee. The bad state of the ship was corroborated by Russel, one of the crew. Several captains who were at Madras, and afterwards saw the ship at Cuddalore, corroborated the captain's testimony; and several ships' husbands and others, conversant in the expenses of ship-building, gave it as their opinion, that to repair the ship for such a voyage would cost in England £22,000, and fifty per cent. more in India.—The Solicitor-general for the defendant addressed the jury, and contended the captain had not used his best endeavours by waiting for moderate weather, and endeavouring to reach Trincomalee or Calcutta to obtain repairs. That he had not acted as he was bound, impartially for the equal interest of all the parties concerned; but merely with a view to the interest of his owner, in abandoning the ship, and throwing the loss upon the under-writers. And in all events, the action should not be for a total loss, but for an average, for the India Company, who had chartered the ship home, and had their cargo on board, should bear their proportion of the loss.—The learned Judge, however, in charging the jury, said, it was proved the captain could know nothing of the ship's insurance; he, therefore, acted for the best towards the property of his owner. It was proved that the repairs, if practicable, would nearly double the value of the ship; and he therefore acted to the best of his own and other competent persons' judgment for the plaintiff.—The jury found for the plaintiff.—Another action between the same parties, on a policy of insurance for the freight, was tried, and the verdict went in the same manner.

CONTINENTAL NOTICE.

On the 9th April the Persian Ambas-

sador, who has just taken leave of the British court, arrived at Paris, at the hotel de Rivoli.

NAVAL AND MILITARY NOTICE.

On the 14th April the 21st drag., commanded by Lieut.col. Bates, disembarked at Gravesend from India, where they have been stationed for some years, and arrived at Chatham; they will be disbanded on the 24th inst.

Since the East-India depot has been removed, as mentioned above, the depots of the following regiments (which are stationed at St. Helena, the Cape, and in India) arrived at Portsmouth, and embarked for Albany barracks, at Newport, Isle of Wight, viz. 7th, 11th, 16th, 20th, 24th, 30th, 32nd, 45th, 46th, 47th, 48th, 53d, 54th, 56th, 59th, 65th, 66th, 67th, 69th, 82d, 83d, 87th, 89th. There are now 60 regiments' depots stationed at Albany.

The Sappho, Capt. Plumrige, returned from the Cape of Good Hope station, is to proceed on coast service.

We are sorry to hear that the Leander, 58, bearing the flag of Rear-Admiral Sir Henry Blackwood, K.C.B. for the East-Indies, has been in very imminent danger at Madeira. She had a very quick run of only five days to that island, and was preparing to leave it, when, in getting under weigh, the capstern upset; two other anchors were let go, but they did not take hold, when the cables were instantly cut in just sufficient time to prevent her driving on shore.

The Leven frigate, Capt. Bartholomew, C.B. is fitting for the Cape of Good Hope.

A new ship, to carry 28 guns, to be called the Alligator, is ordered to be built in the East-Indies.

On the 30th March Rear-Admiral Lambert sailed from Portsmouth for St. Helena, in the Vigo, 74, Capt. Thos. Brown, to relieve Rear-Admiral Plampin. A number of smugglers were put on board, to serve abroad five years, according to the statute.

The Earl St. Vincent, Simpson, for New South Wales, has taken 160 convicts on board from the hulks at Portsmouth, for that settlement. They are guarded by a detachment of the 48th reg. on passage thither.

PASSENGERS TO INDIA.

By the Charles Mills, Capt. Jackson, to Madras and Calcutta:—Col. and Mrs. Elliott, and the two Misses Elliott, Mrs. Col. Welsh, Miss Welsh, Miss Armstrong, Miss Hawkins, Major and Mrs. Balmain, Mrs. Bertram, Mrs. Whitehead, Major Simpson, Mr. and Miss Morell, Mr. Assey, Mr. Sandham, Messrs. Newton, Freeman, Huish, Waddle, Stinton, Campbell, Mugrove, and W. Jackson, Miss Donahoe, and two natives of India.

A
OF THE
LIST OF THE DIRECTORS
OF THE
UNITED COMPANY OF MERCHANTS OF ENGLAND,
TRADING TO THE EAST-INDIES,
FOR THE YEAR 1820.

GEORGE ABERCROMBIE ROBINSON, Esq. (Chairman) 80, Pall Mall.
THOMAS REID, Esq. (Deputy) 8, Broad Street Buildings.
Jacob Bosanquet, Esq. Broxbournebury, Herts.
Charles Grant, Esq. 40, Russell Square.
Joseph Cotton, Esq. Leyton, Essex.
George Smith, Esq. M.P. 1, Upper Harley Street.
Sweny Toone, Esq. 44, Mortimer Street.
Edward Parry, Esq. 25, Gower Street.
William Astell, Esq. M.P. 4, Portland Place.
Richard Chicheley Plowden, Esq. 8, Devonshire Place.
John Hudleston, Esq. 54, Margaret Street.
Campbell Marjoribanks, Esq. 3, Upper Wimpole Street.
Sir John Jackson, Bart. M.P. 9, New Broad Street.
William Wigram, Esq. M.P. 31, Upper Harley Street.
Hon. Hugh Lindsay, M.P. Platow Lodge, Brouley, Kent.
John Morris, Esq. 21, Baker Street, Portman Square.
Sir David Scott, Bart. Baker Street, Portman Square.
Sir Alexander Allan, Bart. 26, Baker Street, Portman Square.
William Stanley Clarke, Esq. Elm Bank, Leatherhead.
John Thornhill, Esq. 33, Bloomsbury Square.
George Raikes, Esq. 8, Park Place, St. James's.
Robert Campbell, Esq. 36, Argyll Street.
John Goldborough Ravenshaw, Esq. 9, Lower Berkeley Street.
William Taylor Money, Esq. M.P. 13, Cadogan Place.

BIRTHS, MARRIAGES, AND DEATHS. HOME LIST.

BIRTHS.

At the rectory, Chelmarsh, near Salisbury, the lady of the Hon. and Rev. A. Harris, of a son.
April 15. At Chatham, the lady of Lieut. Col. W. Pauley, of the Royal Engineers, of a daughter.

MARRIAGES.

March 22. At Devizes, H. F. Bowness, Esq. Lieutenant in the Hon. East India Company's Service, on the Madras Establishment, and eldest son of Major General Bowness, to Miss Arabella, youngest daughter of Dr. Hill, of that town.
25. John Worthy, Esq. of the Bombay Marine Establishment, to Jane Rebecca, eldest daughter of Mr. Hume, Lone-acre.
27. Major Thomas Wren, of the Madras Army, to Miss Barton, daughter of Admiral Barton, of Exeter and Borough House, Devon.
April 5. Capt. James Clemons, Esq. of the Hon. Company's Madras Establishment, to Eliza, youngest daughter of J. Watlen, Esq. of Leicester-fields.

6. At St. Pancras, Henry Francis Houghton, Esq., of the Hon. Company's Service, to Eliza, Paton Bruce, daughter of the late Lieut. Gen. Robert Bruce, of Eistree, Herts.
10. W. Simons, jun. Esq. of the Terrace, Hackney, to Henrietta Amelia, eldest daughter of the late J. Parmenter, Esq. of Bevington House, Essex.
15. At All Saints' Church, Colchester, Thomas Joseph Turner, Esq. of Great Yarmouth, Captain in the Hon. East India Company's Military Service, to Jane, daughter of J. Bawtree, Esq.
16. At St. Pancras church, Peter Dixon, jun. Esq. of Carlisle, to Sarah Rebecca, eldest daughter of Major-General Clarke, of the East India Company's Service, and of Upper Charlotte-street, Fitzroy-square.

Lately, George Grote, jun. Esq. to Harriet, second daughter of Thomas Lewin, Esq., of the Hollies, Kent.

DEATHS.

March 15. At Bromley, Mr. Jacob Chaille, aged 84, of the Hon. East India Company's Home Service, and formerly of Plymouth.
21. In Upper Grosvenor-street, Patrick Crawford Bruce, Esq.
26. In Berkeley-square, Lucy, eldest daughter of Sam. Smith, Esq.
28. At his residence, Kingston, Surrey, in the 79th year of his age, Lieut. Gen. Gabriel Johnston, of the Hon. East India Company's Service.
31. At Gloucester-lodge, in the 19th year of his age, George Charles, eldest son of the Right Hon. George Canning.
Same day, at Chester, in the 75th year of his age, John Lloyd, Esq. late of the Bengal Civil Service.
April 2. Eliza, wife of Richard Chase, Esq. of Kensington-square.
Same day, at Henley-on-Thames, Mrs. Anna Harper, widow of Col. Gabriel Harper, formerly of the Bengal Army.
6. At Paris, Lieut. Col. Richard Howley, of the Madras Artillery. The public career of that excellent officer has long enjoyed so high a place in the estimation of his gallant comrades in the army of Hindoostan, and his private life was so uniformly conspicuous for goodness, that his loss is truly to be lamented.
8. At his son's house, Kennington, Surrey, aged 79, George Unwin, Esq., formerly a Purser in the Navy and East India Service. Among the pursuits of this gentleman's long and active life are to be recorded his persevering and successful exertions, in reviving, in the year 1790, the trade to China and Bristol, in tin, and which has long given a new impulse to a once stagnant trade.
11. At Totteridge House, Herts, aged 78, Edward Garrow, Esq. for upwards of 28 years a Civilian in the Hon. Company's Service, First Deputy Lieut. of the county of Herts, and brother to the Hon. Mr. Baron Garrow, of the Exchequer.
16. Major-General Wm. Mudge, of the Royal Artillery, Lieut. Governor of the Royal Military Academy at Woolwich, Director of the Ordnance Survey of Great Britain, Examiner at the Hon. Company's Military Seminary at Addiscombe, a Commissioner of the Board of Longitude, a Fellow of the Royal Antiquarian and Geological Societies, and a Member of the Institute of Paris.

Same day, in Conduit-street, Hanover-square, Capt. Wm. Macnamara, late in the Hon. Company's Military Service.

At her father's house, at Clifton, a few weeks after the death of her sister, Helena, daughter of John Hadleston, Esq.

17. In Upper Norton-street, in the 97th year of his age, Claud Russell, Esq.

23. In his 60th year, at Wenslade House, near Exeter, Josias Du Pré Porcher, Esq., nephew of Josias Du Pré, Esq., formerly Governor of Madras. Mr. Porcher was several years in the East India Company's Civil Service at Madras, and at the head of a House of Agency there, in which he honourably acquired a handsome fortune. On his return to England he became a Member of Parliament, which he quitted on account of his declining health; he was a liberal benefactor to many public charities and institutions, and died much lamented by a numerous circle of friends and acquaintance.

INDIA SHIPPING INTELLIGENCE.

Arrivals.

Mar. 29 Deal, April 2 Gravesend, Layton, Morgan, from Bengal 2 Nov., and the Cape 14 Jan.
30 Gravesend, Tottenham, Davy, from Bengal, Madras, and the Cape of Good Hope.
31 Bristol, Bristol, Bircham, from Bengal 15 Nov., and the Cape 24 Jan.
April 2 Liverpool, Bounty Hall, Roberts, from Bengal.
3 Lymington, 9 Gravesend, Lord Sidmouth, Gunner, from New South Wales, Bengal, and the Cape of Good Hope.
5 Liverpool, Bengal, Woodward, from Bengal.
6 Off Portsmouth, 8 Gravesend, Prince Regent, Clifford, from Bombay.
— Off Portsmouth, 8 Gravesend, Globe, Blyth, from Bengal.
— Off Portsmouth, 10 Deal, 15 Gravesend, Commodore Hayes, Ardley, from Bengal and the Cape of Good Hope.
— Off Portsmouth, 8 Gravesend, Cornwall, Wilson, from China 25 Nov., and St. Helena 11 Feb.
8 Gravesend, Bombay Merchant, Clarkson, from Bombay.
— Gravesend, Matilda, Hamilton, from China.
— Gravesend, Apollo, Tennant, from China.
9 Deal, 11 Gravesend, Lowther Castle, Mortlock, from China.
— Deal, 11 Gravesend, Lord Castlereagh, Young-husband, from China.
10 Deal, 11 Gravesend, Elizabeth, Ostler, from Bengal, Madras and Vigo.
— Clyde, Prince Regent, Richmond, from Bengal, Madras 10 Oct., and the Cape 8 Jan.
11 Deal, Friendship, Meek, from China and America.
12 Gravesend, Albania, Lynn, from Bombay 31 Oct., and St. Helena 8 Feb.
— Off Liverpool, Albion, Stewart, from Bengal 29 Nov.

Departures.

Mar. 30 Deal, April 4 Portsmouth, 9 Torbay Buckinghamshire, Adams, for the Mauritius and China.
April 2 Gravesend, 4 Deal, 12 Plymouth, Robert Edwards, Sherburne, for China.
3 Gravesend, 8 Deal, 15 Portsmouth, Partridge, Betham, for Madras and Bengal.
4 Portsmouth, 11 Falmouth, Charles Mills, Jackson, for Madras and Bengal.
7 Gravesend, 11 Deal, Woodford, Chapman, for Bengal.
12 Gravesend, 15 Deal, Fanny, Thomson, for Madras and Bengal.
15 Gravesend, 17 Deal, 22 Portsmouth, David Scott, Warrington, for Madras and Bengal.
17 Gravesend, 20 Deal, Moira, Hornblow, for Madras and Bengal.
20 Gravesend, 23 Deal, Coromandel, Hunter, for Madras and Bengal.
— Gravesend, General Hewitt, Pearson, for China.
— Gravesend, Princess Amelia, Turner, for China.
— Gravesend, Marchioness of Ely, Kay, for China.
23 Gravesend, Scaleby Castle, Sotheby, for China.
— Gravesend, Lady Campbell, Marquis, for China.

LONDON MARKETS.

Friday, April 28, 1820.

Coffee.—The considerable public sales of Coffee this week have gone off with some briskness, and it may be stated, there is a general and increasing demand; the prices obtained are fully 1s. higher than the previous rates by private contract, and every appearance of a revival of trade.

Sugar.—The market is nearly cleared of good and fine Sugars, the prices obtained are higher, in consequence of the inadequate supplies. The Refined market has been without briskness, but the quantity of goods does not accumulate as had been anticipated; the holders in consequence are firm, and will not submit to lower prices to facilitate sales; the advance of Raw Sugars will also tend to keep up the prices of Refined.

Cotton.—The demand for Cotton has considerably revived; and the accounts from Manchester and Liverpool continue favourable.

Daily Prices of Stocks, from the 26th of March to the 25th of April, 1820.

JUNE 1820.

ORIGINAL COMMUNICATIONS.

MEMOIR
OF A
PATRIOT KING.

(Continued from p. 432.)

Rank.—RESUMING the classed series of select anecdotes, we have to insert one which proves that his Majesty was superior to any little pride of rank, when put in competition with the strict discharge of duty, even by an humble individual. It is recorded under the date of August 16, 1787.

A very particular circumstance occurred on Wednesday, which has occasioned much conversation in Windsor. His Majesty, after parading the terrace with the Duke of York, rested his arm on the sun-dial which is near the end of the walk; the Duke did the same, and continued in conversation with some gentlemen, with whom they had for some time before been walking. During this parley, a sentinel upon duty there, walked up to the King, and “desired his Majesty to remove from the dial, as it was under his particular charge.” His Majesty removed accordingly, observing at the same time, that the man’s

rigid adherence to his orders was highly commendable; and, a few hours afterwards, he was graciously pleased to recommend him to the colonel of the regiment, as an object worthy of promotion, and one who ought to be provided for in as eligible a manner as the nature of the service would possibly admit.

Fortitude.—The following is a specimen of invincible courage, blended with piety and magnanimity. Two of the preceding heads might, therefore, support a joint claim to the characteristics displayed in this example.

A STATEMENT BY THE EARL OF
ONslow, OCT. 29, 1795, TWELVE
AT NIGHT.

Before I sleep, let me bless God for the miraculous escape which my King, my country, and myself, have had this day. Soon after two o’clock, his Majesty, attended by the Earl of Westmor-

land and myself, set out from St. James's in his state coach, to open the session of parliament. The multitude of people in the park was prodigious. A sullen silence, I observed to myself, prevailed through the whole, very few individuals excepted. No hats, or at least very few, pulled off; little or no huzzaing, and frequently a cry of "Give us bread;" "No war;" and once or twice, "No King," with hissing and groaning. My grandson Cranléy, who was upon the King's guard, had told me, just before we set out from St. James's, that the park was full of people, who seemed discontented and tumultuous, and that he apprehended insult would be offered to the King. Nothing material, however, happened till we got down to the narrowest part of the street, called St. Margaret's, between the two palace-yards, when, the moment we had passed the office of ordnance, and were just opposite the parlour window of the house adjoining it, a small ball, either of lead or marble, passed through the window-glass on the King's right-hand, and perforated it, leaving a small hole, the bigness of the top of my little finger (which I instantly put through it to mark the size), and passed through the coach out of the other door, the glass of which was down. We all instantly exclaimed, "This is a shot!" The King showed, and I am persuaded felt, no alarm; much less did he fear, to which indeed he is insensible. We proceeded to the House of Lords, when, on getting out of the coach, I first, and the King immediately after said to the Lord Chancellor, who was waiting at the bottom of the stairs to receive the King, "My Lord, we have been shot at." The King ascended the stairs, robed, and then, perfectly free from the smallest agitation, read his speech with peculiar correctness, and even less hesitation than usual. At his unrobing after-

wards, when the event had got more known (I having told it to the Duke of York's ear as I passed him under the throne, and to others who stood near us), it was, as might be supposed, the only topic of conversation, in which the King joined with much less agitation than any body else; and afterwards, in getting into the coach, the first words he said were, "Well, my Lords, one person is *proposing* this, and another is *supposing* that, forgetting that there is One above us all who *disposes* of every thing, and on whom alone we depend." The magnanimity, piety, and good sense of this, struck me most forcibly, and I shall never forget the words.

On our return home to St. James's, the mob was increased in Parliament Street and Whitehall; and when we came into the park, it was still greater. It was said that not less than 100,000 people were there, all of the worst and lowest sort. The scene opened, and the insulting abuse offered to his Majesty was what I can never think of but with horror, or ever forget what I felt when they proceeded to throw stones into the coach, several of which hit the King, which he bore with signal patience, but not without sensible marks of indignation and resentment at the indignities offered to his person and office. The glasses were all broken to pieces, and in this situation we were during our passage through the park. The King took one of the stones out of the cuff of his coat, where it had lodged, and gave it to me, saying, "I make you a present of this, as a mark of the civilities we have met with on our journey to-day."

At a trying crisis of the late war, such was the distracting repugnance between the apparent tendency of public feeling and the real direction of the public mind. And to describe these lameheaded

anomalies, such is the imperfection of language, that we are compelled to say, without any wish to utter a paradox, that, when our late excellent King was most unpopular, he was supported by his people with all their heart and mind, and soul and strength. It is time, however, that some other word than "popular" should be invented, to indicate that flattering distinction which is built on the lowest stratification of the plebeian favour. It is still more important, that the negation of this diffusive and shallow honour should not be expressed by the too comprehensive term "unpopularity;" a preposterous negligence of phrase, which confounds the distressing and preternatural enlargement of the spleen with the affectionate and healthful expansion of the heart. It conveys a double reproach, alike undeserved by the people of a whole country, and by the revered object of a local mob's fury.

If such facts as above stated must remain an opprobrium to a part of the metropolitan populace, there is not an equal necessity for historical narratives of these things to remain an opprobrium to the language. To supply a graduated epithet somewhat more discriminating, perhaps some compound might be formed from *plebs*, which is never applied like *populus* to the whole people; and if *plebs* should be thought to include too many of the middling and respectable classes of society, the word *imo*, in composition with *plebilar*, will guide our ideas to the bottom of the pyramid: thus, instead of the "popular demagogue," we may say the "imoblebilar demagogue." But the misfortune of those who do not share the plaudits generously bestowed on demagogues is not merely a negation, not merely to be obstructed in the use of common privileges, by vociferous claimants for enlarged freedom; but there is a

mutual repulsion, a contrariety of principle and habit, thought and action; the misfortune of not being "imoblebilar" is mostly identical with an elevation of aim, which may be termed "antimoblebilar." But, to do justice to both parties, the term ought to comprise a farther modification, referring to the local obliquity which separates the prejudice of a confined district from the sense of an enlightened empire. The undesigning cultivators of mischief to the nation are not to be condemned because their lot is to be stationed on an inferior tier in the tower of order, but as far as their principles have been broken up, which is the worst kind of corruption, by the bad offices to which depraved understandings pervert the multiplied messengers of published thought, their applause or censure is alike destitute of value. The industrious peasantry of a poor hamlet often preserve unimpaired that native good sense, which is frequently extinguished in the working classes of a pampered town by idle converse with the half-read. Finally, a leading disturber worshipped in a populous city, and despised all over the country, including most other cities, is, if the extent of his delusive ascendancy be strictly measured, only "locimoblebilar."

Beneficence.—In the severe winter of 1784-5, his Majesty, regardless of the weather, was taking a solitary walk on foot, when he was met by two boys, the eldest not eight years of age, who, although ignorant that it was the King, fell upon their knees before him, and wringing their little hands, prayed for relief. "The smallest relief," they cried, "for we are hungry, very hungry, and have nothing to eat." More they would have said, but a torrent of tears, which gushed down their innocent cheeks, checked their utterance. The father of his people raised the weeping supplicants,

and encouraged them to proceed with their story. They did so, and related that their mother had been dead three days, and still lay unburied; that their father, whom they were also afraid of losing, was stretched by her side upon a bed of straw, in a sick and hopeless condition; and that they had neither money, food, nor firing at home. This artless tale was more than sufficient to excite sympathy in the Royal bosom. His Majesty, therefore, ordered the boys to proceed homeward, and followed them until they reached a wretched hovel. There he found the mother dead, apparently through the want of common necessities; the father ready to perish also, but still encircling with his feeble arm the deceased partner of his woes, as if unwilling to survive her. The sensibility of the Monarch betrayed itself in the tears which started from his eyes; and leaving all the cash he had with him, he hastened back to Windsor, related to the Queen what he had witnessed, sent an immediate supply of provisions, clothes, coals, and every thing necessary for the comfort of the helpless family. Revived by the bounty of his Sovereign, the old man soon recovered; and the King, to finish the good work he had so gloriously begun, educated and provided for the children.—
(*Percy Anecdotes.*)

When a sheriff of London, some years since, announced a fund for the relief of the wives and children of prisoners, his Majesty called him aside at the levee, and, after stating that he felt himself obliged by the sheriff's attention to his duty in instituting such a fund, presented him with a fifty-pound bank-note, desiring that it might be appropriated to the purposes of the fund, but requesting that his name as the donor might not be allowed to transpire.

Of the following anecdote two versions have been given; but the difference between them relates

only to the circumstances of the lady whose retirement was made happy by the good acts recorded. The first account originated in a journal of February 1786.

"A gentlewoman of the name of Delany, said to have been an intimate acquaintance of Dr. Swift, lived for several years with the Duchess of Portland as a companion. On the decease of her Grace, Mrs. Delany was, at the age of eighty-four, left almost entirely destitute, the only legacy bequeathed her being a few curiosities. The Princesses having frequently seen Mrs. Delany in their visits to the Duchess, and knowing her circumstances, took an opportunity of mentioning her case before the Queen, who, with that goodness of heart for which she has always been distinguished, immediately laid the matter before the King, when his Majesty readily consented to give her a small house in Windsor Park; and on its being represented by Lady Harcourt that something more was requisite, to enable the old gentlewoman to pass the evening of her days in comfort, not only furnished the house with every necessary article, but after taking the trouble to inspect the premises, that nothing might be wanting, settled upon her a handsome pension for life."

The second representation, published last February, denies none of the principal facts, but as far as the former version of the anecdote had reduced Mrs. Delany to a precarious dependence on distant relations, when the friendship of Lady Harcourt recommended her to the definite provision spontaneously offered by royal sympathy, states it to be incorrect.

"Mrs. Delany was the intimate friend, not the humble companion, of the Duchess of Portland, and had been so from her youth. She was widow of G. W. Pendarves, Esq. of Cornwall, and of the Dean of Down, from both of whom she

had jointures, which with her own property were sufficient to give her all the comforts of life, and the death of the Duchess made no alteration whatever in her circumstances. She was also niece to the Earl of Bath and Lord Lansdown, and very nearly allied to the noble families of Stafford, Weymouth, Carteret, and Foley. She enjoyed, in a very favoured degree, the intimate friendship of all the Royal Family, and particularly of their late Majesties, who seldom allowed a day to pass, during her residence at Windsor, without either calling on her or requiring her company at the Castle; and the house and pension were given as a token of the sincere friendship of both their Majesties for her."

The King, when on a hunting party, was separated from his attendants, and obliged to take shelter in a cottage, to avoid a sudden fall of rain. The inmates of the cottage were preparing their dinner, by roasting a joint of meat hung by a string from the roof, as a substitute for a jack. Being unknown, he asked them what had become of their jack.—"We have not money to buy one," was the reply. The King said nothing; but, on his departure, two guineas were found on the chimney-piece, wrapt up in a paper, on which was written with a pencil, "To buy a jack."

During the King's illness in 1789, a Committee was appointed to examine the state of the Privy Purse; when, out of an income of £60,000 per annum, it was found that his Majesty never gave away less than £14,000 a year in charity!

Munificence.—The princely deeds falling under this head, are sometimes confounded with those belonging to the preceding; nor indeed, as George III. fulfilled the common duties of humanity in the simple walk of beneficence, is it easy to separate them.

The improvements made in Sa-

lisbury Cathedral, by Mr. James Wyatt, were commenced in 1789, and completed in 1792. During their progress, his Majesty was one day inquiring in private of Bishop Barrington, the projector of the intended improvements, what they were to be, and by what means the expense was to be defrayed. The Bishop stated the several alterations, and that a new organ was much wanted, though he feared it would greatly exceed the means, which depended solely on the voluntary contributions of the gentlemen in the counties of Berks and Wilts, of which the diocese consists. The King immediately replied, "I desire that you will accept of a new organ for your cathedral, being my contribution as a Berkshire gentleman." The organ at Salisbury, of which the terms of the royal present were without limitation, was built by Green, and cost near £1,500.

The fine organ in St. Martin's Church, Westminster, was also given by the King. Many inscriptions in other public buildings acknowledge similar acts:—local witnesses of splendid liberality which we have not room to enumerate.

The King's patronage of the arts and sciences originated in the union of taste with magnificence. Again, the bountiful disposition which dictated an allowance to the late Cardinal York, is allied with magnanimity.

Taste in the Fine Arts; and Patronage of Science.—The nurture of the Fine Arts in this country was an early object of the King's solicitude; before the second year of his reign was completed, the design of collecting from foreign schools the elements of masterly skill was in full operation. A letter from a celebrated virtuoso and antiquary, noticing some of the first acquisitions of delegated taste, closes with a favourable augury which it is curious to review.

"Rome, Oct. 16, 1762.—Nothing gives me more satisfaction than to

find so many fine things purchased for the King of Great Britain. He is now master of the best collection of drawings in the world, having purchased two or three capital collections in this city; the last, belonging to Cardinal Albanis, for fourteen thousand crowns, consists of three thousand large volumes, one-third of which are original drawings of the best masters, the others collections of the most capital engravings. And lately there has been purchased, for his Majesty, all the museum of Mr. Smith, at Venice, consisting of his library, prints, drawings, designs, &c. I think it is highly probable that the arts and sciences will flourish in Great Britain, under the protection and encouragement of a monarch, who is himself an excellent judge of merit in the Fine Arts."

The patronage of George III. confirmed these anticipations; it was more decisive and enlarged than that of his predecessors. They patronized individual artists; he founded the English school. And such have been the results of his steady pursuit of the twofold object of instructing the young and rewarding the skilful, that English works in painting and sculpture are now sought at high prices to adorn foreign collections.

Anxious for the prosperity of the Royal Academy, the King heard with regret of any occurrence which disturbed the harmony of the professors. He had sanctioned the claim to genius of that eccentric man Barry, who painted the great room of the Adelphi Society; and he had a high respect for the abilities of Sir William Chambers, who was his first architect. When Barry had incurred the censure of his brother academicians, by censuring in a public lecture the main design of the buildings of Somerset House, the affair greatly vexed his Majesty, for it involved many seeds of possible mischief to a rising establish-

ment. The King used to devote several hours to his annual view of the exhibition; and as the proofs of native talents multiplied in eminence and splendor, he freely expressed the satisfaction which it gave his patriotic feelings, Sir Joshua Reynolds received many tokens that the King held the artist in high consideration; Mr. West succeeded him in the presidentship, and from the more decided direction of his genius to historical design, his pencil was oftener employed by the King. With this eminent artist he allowed his kingly dignity to lose itself in long and familiar chit-chat; but, as in all such cases, he could resume it at once if occasion seemed to require it. In his retirement from the world, the name and merits of this distinguished painter were among the objects that had not faded from his recollection. About the beginning of the year 1819, the King asked General Taylor whether Mr. West was living? and upon being informed that he was, "I wish," said his Majesty, "that you would see him, and tell him, that I inquired after his health." Some weeks afterwards the King asked the General whether he had seen Mr. West as he requested. The General implored his Majesty's pardon for letting the circumstance escape his recollection, adding that he would make it his business to go to town and deliver the message the next day. "I wish you would," said the King, "for that man's works have given me great pleasure and delight. Pray tell him, that I kindly inquired after him, and that I wish him health." The General the next day made the communication.

The King's orders and purchases gave encouragement to many other first-rate painters; he had several pieces by Northcote, Zoffani, Gainsborough, and Romney.

Altogether there is a fine Royal collection at Windsor, Buckingham House, and Hampton Court; some good portraits at Kensing-

ton; but there are only the head of an old Venetian Doge, and some other trifles, in the Council Chamber at St. James's.

The beautiful art of staining glass windows was revived under the King's patronage, and by the improvements of Jervis, and others, has reached a high degree of excellence.

The King found Windsor and Hampton Court much in the same state as they had been in since the reign of Queen Anne. St. James's, respectable only for its convenience, had been enlarged without elegance. His predecessor chiefly resided at Kensington, or rode to the old Lodge at Richmond, since pulled down. Kensington Palace, though irregular and ungraceful, contains apartments well suited to purposes of state; but the late Sovereign did not like its vicinity to the metropolis.

A natural and just taste in landscape gardening caused him to dislike the stately unvaried flatness of Hampton Court. He offered, indeed, to submit its artificial gardens to the mercy of the famous Capability Brown; but the latter declined doing anything with them except letting the trees grow more in their natural way, expended considerable sums in converting a most uninviting and unfavourable spot into a beautiful pleasure-garden, and made a paradise bloom in what was before a wild: studing its plantations all around, under the direction of Sir W. Chambers, comprising all sorts of forms, Roman, Greek, Moresque, and Chinese. But the Palace was made merely white and decent. The old house, where the present King was educated, was left standing, and remains as it was. His Majesty then metamorphosed Richmond-gardens, a favourite occasional retreat of many of our Kings and Queens, and formed an embanked terrace towards the river, where the scene is mild and pleasing, but not striking. But in

that part of the ground which lies to the west of the Ha! ha! his Majesty designed to erect a palace not unworthy of his occasional residence. The ground was marked out for this edifice, and dug for the foundations. Here, however, the work stopped. Yet, so intent was he on erecting a suitable mansion, that he had two large models of designs for it executed under Chambers; one of a more solid, and the other of a lighter character of style. They are both to be seen in the Cartoon gallery at Hampton-court. But the elegant Observatory was constructed, and properly furnished with astronomical apparatus.

At Buckingham-house (taken in exchange for Somerset-house, which had been settled on the Queen) some meretricious ornaments were lopped away, two new wings were built, and the premises greatly extended, without regard to external appearance. Here, however, his Majesty formed that spacious library, and collection of maps and views, &c. which have been increasing during his whole reign, and far eclipse any individual possession of the kind in this country. The books are well arranged, of every class, from pious folios down even to the offensive pamphlets of the passing day.

The King's habitual love of domestic comfort, and the rapid increase of his family, rendering Windsor-castle incommodious, he erected there the building called the Lodge. The King pursued his architectural fancy no further for years, though he often amused himself with designs by eminent artists, till about 1803, when the decaying state of Windsor Castle claimed his attention. Then he resolved to remove the vicious alterations of Charles II. and to give to that ancient seat of monarchy more of the character which its style, its antiquity, and all its grand associations demanded. He restored the battlements and the

windows of a considerable part to their appropriate forms, built a new porch, and constructed a gothic staircase of great beauty and magnificence. St. George's Chapel is the seat of the collegiate church of Windsor. The King repaired and completed this venerable pile on the principle of faithfully restoring the decayed parts, and shaping the additions to correspond with the same beautiful style. He directed the architect to imitate in all the new work the ancient models extant in the original parts of the building. Amongst the additions were a new altar, which consists of a screen, elaborately carved and adorned with the arms of Edward III., Edward the Black Prince, and all the first Knights of the Garter; the arms of George III., &c. In the centre is a fine picture, by West, of the last supper. At the end of this chapel was the unfinished vault called Wolsey's Tomb House, which the King formed into a royal mausoleum. In the progress of improvement, he dismantled the old painted St. George's-hall, and intended to substitute for it a gothic hall worthy of the proudest periods of the chivalry and pomp of the Plantagenets and Tudors. But while the increasing cares of government occasionally called for all his attention, the work flagged, and his lamented illness stopt it.

The retirement of Dr. Johnson was cheered by a handsome pension flowing from the liberality of the King, and given to honour useful literature.

We cannot name all the ingenious artisans and practical cultivators of mechanical science whom his munificence assisted in completing great undertakings. But Mr. Bolton, of Soho, Birmingham, was one. It would be making royal patronage useless, to deny that without it many of the great men whom it elevated might not have been eminent; but it is a striking attestation of the acumen

with which he judged of merit, that those whom his favour placed in the first line of their profession might now appear to be placed there by general opinion.

George III. became the father of the Royal Society, being the oldest member belonging to it. An active and not a nominal patron, during the whole course of his long reign, he shewed a marked attention to that learned body, by placing at their disposal considerable sums of money towards the promotion of science, particularly in 1760 and 1769, for observing the transit of Venus in various parts of the globe. His splendid patronage of Dr. Herschel was the stimulus to many new discoveries; the immense apparatus at Windsor attested his zeal for astronomy. In another observatory which, as mentioned above, he built at Richmond, the King took great delight; his calls there on his journies between Windsor and London, or during a sojourn at Kew, were very frequent, and here he interested himself deeply, both in scientific and mechanical studies. A Scotchman named Gray, who was employed at this observatory several years, used to say that his Majesty tried his skill more by his various questions and experiments, than all he had ever met with put together.

The King had a taste for gardening, and supported great establishments for improving it. With personal assiduity, he attended to his botanical garden at Kew, which he highly prized, as it contains a collection of exotics to be found no where else. A space at Kensington was devoted to horticulture, which he often visited with his gardener, Forsyth, displaying much acquaintance with the principles on which this art is best conducted.

The King's attachment to the pure recreation of music has been noticed. When he patronised the commemoration of Handel, he fix-

ed upon Westminster Abbey as the scene of the sacred concert, where every local association tended to elevate the mind. We had almost forgot to mention the voyages of discovery which a desire to enlarge the empire of knowledge and commerce led George III. to commence, to pursue, and to connect, until the tracts described by the Byrons and the Cookes formed a luminous system.

Powers of Memory.—It was ever his custom to pay an early visit to his Mews, to look at and pat his favourite horses. One morning, on entering, the grooms were disputing one with the other very loudly, so that the King for a short time was unnoticed. "I don't care what you say, Robert," said one, "but every one else agrees that the man at the Three Tuns makes the best purl in Windsor."—"Purl! purl!" said the King, quickly; "Robert, what's purl?" This was explained to be warm beer with a glass of gin, &c. His Majesty listened attentively; and then turning round said, loud enough to be heard by all, in the way of admonishing, "I dare say very good drink, but, grooms, too strong for the morning; never drink in a morning."—Eight or nine years after this, his Majesty happened to enter the stables much earlier than usual, and found only a young lad, who had recently been engaged, and to whom the King was unknown. "Boy, boy," said he, "where are the grooms?" "I don't know, Sir; but they will soon be back, because they expect the King." "Ah, ah," said he "then run, boy, and say the King expects them; run, boy, to the Three Tuns; they are sure to be there, for the landlord makes the best purl in Windsor."

The King's memory was tenacious to minute exactness. He knew everybody whom he had once seen, and more or less about them.

General Acquaintance with Persons and Things.—It has been said *Asiatic Journ.*—No. 51.

that the King was not a great reader: it should rather have been said, that he was not an insatiable and indiscriminate reader. But the offices of a supreme governor impose too many active duties to allow of eternal reading. A king need not read from idleness, merely to pass his time. But that he did read books of specific value is evinced by the knowledge of their contents which he displayed, in conversations related in this and the next article. It has been said, too, that the King scarcely ever took up a book; the following anecdote will shew that he did sometimes, and that it embarrassed those who were previously unaware how inquisitive a reader he could be. In one of his morning strolls through the streets of Windsor, in 1792, he turned into the shop of a bookseller, who was still in bed. He amused himself in looking round the shop, while the boy stole up stairs to call his master. In the meantime the King had stumbled on some copies of Paine's Rights of Man; and seating himself on the counter, was employed in reading it, when the bookseller bustled into the shop. Seeing the obnoxious work which the King was perusing, he considered himself lost; and as the King kept the book close to his face, and was intently engaged in reading, he found it impossible to disturb him, though he coughed loud, knocked the bundles about, and changed the places of all the chairs and tables. At length, arriving at a period in the argument, the King looked up, and seeing the bookseller, entered into familiar chat, and laying the book open on the counter, presently retired in his usual good-humour. The bookseller was nevertheless uneasy; but he never afterwards observed any difference in the conduct of the King towards him, though on turning up the pamphlet at the place where the royal reader had paused, there was found

in that page the famous passage in which Paine unceremoniously asserted that the King had not sufficient capacity to make a parish constable. The King, however, in general, was not inclined to wade through new books, merely to discover that they were not worth reading; he therefore employed persons of ability to read books which were untried candidates for attention, and report to him their substance. He gained so much by this summary process, both by reading and by not reading, that he seemed to have a peculiar tact in acquiring information.

A writer, describing some of the modes in which he filled up his time in the early part of his reign, says: "Topography is one of the King's favourite studies; he copies every capital chart, takes the models of all the celebrated fortifications, knows the soundings of the chief harbours in Europe, and the strong and weak sides of most fortified towns. He can name every ship in his navy, and their commanders."

Perhaps the King was never more at home than in conversing on matters which united the mechanical with the scientific. The projection and accuracy of a map, the construction and goodness of a time-piece, the principle and power of a telescope, and other optical or mathematical instruments, or of pieces of clever machinery, down even to those of mere convenience, interested him greatly. He was occasionally philosophical. Inventions and discoveries were sure to attract his notice. In relieving his mind from matters of importance or mere routine, by light mechanical occupations, he had the authority and recommendation of Locke. Old folks remember well what talk there was once about the King's having turned in a lathe a set of ivory buttons.

It might be expected that the King's persevering attachment to agricultural pursuits was rewarded

with some proficiency; but it has not till lately been disclosed that his Majesty was the *Ralph Robinson*, from whose pen some very sensible and well-informed letters appeared, several years ago, in Mr. Arthur Young's *Annals of Agriculture*. Mr. Young himself has recorded this fact in a subsequent part of his work.

The world in general did not give his late Majesty credit for having any acquaintance with Acts of Parliament beyond their mere titles. Throw any random stone into the pool of vulgar rumour, and one large air-bubble will spread into many circles of propagated ignorance. And few can have the positive knowledge on which a confident negative to sneering traduction can be founded.

Some years since, Mr. Slack, an eminent sugar-baker in London, purchased an estate near Maidenhead. Hearing that the King was out with his harriers, Mr. Slack had his gates thrown open, for his Majesty and suite to have free access over the grounds, and placed himself at one of the principal openings. The King soon passed through; and drawing up his horse, said, in his familiar way on such occasions; "Slack, I am glad to see you; and thank you for your attention. You are making great improvements here, which I am always pleased to see; but you will never make your estate perfect, unless you take in those fields, (pointing them out); and I am told that they must inevitably come to the hammer." Mr. S. thanked his Majesty for the kind suggestion; but said there would still be one obstacle to completing a ring fence, which, perhaps, he was not aware of: "There are fields between my property and those of Mr. P. which belong to the corporation of Reading; and bodies corporate have not the power to sell or alienate any part of their estates." "Don't tell me of that," replied the King, hastily; look into the late Act of Parliament

for the Redemption of the Land Tax; there you will find a clause, enabling corporate bodies to sell or exchange for that express purpose. Get some friend belonging to the hall who can talk a little, and the business will be easily brought about. Good morning to you; look at the Act, and you'll find I am right."

Several learned men, who were eminent writers and profound thinkers, were favoured with private interviews by his late Majesty; and they each found in the King's part of the dialogue a mixture of dignity and freedom, knowledge and sagacity, good sense and promptness, an ability to use acquisitions, which impressed them highly. We refer to the testimony of Dr. Johnson, among others. The interview with Mr. Hardinge has been given, p. 327.

"At a levee, soon after the experiment on gunpowder had been made, I happened (says Bishop Watson) to be standing next to the Duke of Richmond, then master-general of the ordnance; and the Duke informed his Majesty that they were indebted to me for a great improvement in its fabrication. On my saying that I ought to be ashamed of myself, inasmuch as it was a scandal in a Christian bishop to instruct men in the mode of destroying mankind, the King answered, 'Let not that afflict your conscience; for, the quicker the conflict the less the slaughter:' or in words to that effect. I mention this, to do justice to the King, whose understanding it was the fashion to decry. In all the conversations I had with him, he appeared to me not to be at all deficient in quickness or intelligence."

The diary and letters of Dr. Beattie, published in Forbes's Life of that popular writer, contain the following account.

"Tuesday, the 24th of August, 1773, set out for Dr. Majendie's, at Kew-green. The Doctor told

me that he had not seen the King yesterday, but had left a note in writing to intimate that I was at his house to-day; and that one of the King's pages had come to him this morning to say, 'that his Majesty would see me a little after twelve.'

"At twelve the doctor and I went to the King's house, at Kew. We had been only a few minutes in the hall, when the King and Queen came in from an airing; and as they passed through the hall, the King called to me by name, and asked how long it was since I came from town. I answered about an hour. 'I shall see you,' said he, 'in a little.' The Doctor and I waited a considerable time (for the King was busy), and then we were called into a large room furnished as a library, where the King was walking about, and the Queen sitting in a chair. We were received in the most gracious manner possible by both their Majesties. I had the honour of a conversation with them (nobody else being present but Dr. Majendie) for upwards of an hour, on a great variety of topics, in which both the King and Queen joined, with a degree of cheerfulness, affability, and ease, that was to me surprising, and soon dissipated the embarrassment which I felt at the beginning of the conference. They both complimented me in the highest terms on my essay, which they said was a book they always kept by them: and the King said he had one copy of it at Kew, and another in town, and immediately went and took it down from a shelf. I found it was the 2d edition. 'I never stole a book but one,' said his Majesty, 'and that was your's (speaking to me); I stole it from the Queen, to give it to Lord Hertford to read.' He had heard that the sale of 'Hume's Essays' had failed since my book was published; and I told him what Mr. Strahan had told me in regard to that matter,

He asked, whether I did not think the English language on the decline at present? I answered in the affirmative; and the King agreed, and named the 'Spectator' as one of the best standards of the language. When I told him that the Scots clergy sometimes prayed a quarter, or even half an hour at a time, he asked whether that did not lead them into repetitions? I said it often did. 'That,' said he, 'I don't like in prayers; and, excellent as our liturgy is, I think it somewhat faulty in that respect. 'Your Majesty knows,' said I, 'that three services are joined in one, in the ordinary church service, which is one cause of those repetitions.' 'True,' he replied; 'and that circumstance also makes the service too long.' From this, he took occasion to speak of the composition of the church Liturgy; on which he justly bestowed the highest commendations. 'Observe,' his Majesty said, 'how flat those occasional prayers are that are now composed, in comparison with the old ones.' When I mentioned the smallness of the church livings in Scotland, he said, 'he wondered how men of liberal education would choose to become clergymen there,' and asked, 'whether in the remote parts of the country, the clergy, in general, were not very ignorant?' I answered, 'No, for that education was very cheap in Scotland, and that the clergy, in general, were men of good sense and competent learning.' We discussed a great many other topics; for the conversation, as before observed, lasted for upwards of an hour, without any intermission. The Queen bore a large share in it. Both the King and her Majesty showed a great deal of good sense, acuteness, and knowledge, as well as of good-nature and affability. At last the King took out his watch, for it was now almost three o'clock, his hour of dinner, which Dr. Majendie and I took as a signal to

withdraw. We accordingly bowed to their Majesties; and I addressed the King in these words: 'I hope, Sir, your Majesty will pardon me, if I take this opportunity to return you my humble and most grateful acknowledgments, for the honour you have been pleased to confer upon me.' He immediately answered, 'I think I could do no less for a man who has done so much service to the cause of christianity. I shall always be glad of an opportunity to show the good opinion I have of you.'"

His Talents for Government.—The present age has not done justice to the King's abilities. His conversation in public was sometimes light and superficial; but he often had a purpose in such dialogue, and as often entered into it to relieve himself from the weight of superior thoughts. The King taking exercise and amusing himself with those about him, and the King in the cabinet, were two different men.

In the discussion of public affairs the King was astonishingly fluent and acute; and his habits of business enabled him to refer with ease to the history and bearings of every subject. His successive ministers have each borne testimony to the dignity of his manners, as well as the quickness of his address, when he put on the character of the sovereign. Nothing which was submitted to him was passed over with indifference or haste. Every paper which came under his eye contained marks of his observation; and the notes, which he almost invariably inserted in the margin, were remarkable for their strong sense and pithiness.

For the first forty years of his reign he read all his papers alone, and went through the personal labour of writing answers to expressions, and signatures to executive documents. But after his sight began to fail he was assisted by Col. Taylor, a gentleman re-

commended to this onerous situation by the Duke of York. In his correspondence with his ministers, his decisions and instructions generally exhibited complete information, and accurate discrimination on every subject.

Nothing could be more courteous, pleasant, and familiar, than the King's address at a levee. He often repeated the same things, and used the same words, to successions of state-officers; but he pleased all, by his apparent personal devotion to each while addressing him. With those whom he had seen often, he entered into long stories, and always had some appropriate joke.

Difference in politics did not diminish the King's esteem when he saw among those who opposed his measures a patriotic disposition in a trying emergency. Thus the manful and public-spirited part taken in parliament by Mr. Sheridan, during the naval mutiny in 1797, drew from his Majesty his repeated approbation in public and private circles.

George III. could admire eloquence when this talent was applied to exhibit a luminous view to the understanding, or impress a just and noble resolve on the heart. But he condemned that abuse of oratory which seeks to perplex the subject to be discussed, to obstruct the agents of the public service, to mislead the vulgar, and to scatter through the country the seeds of discord.

His Majesty observed one day to a gentleman of high literary character, and of distinguished political reputation, that oratory in this country was carried to a height far beyond its real use; and that the desire of excelling in this accomplishment, made many young men of genius neglect the more solid branches of knowledge. "I am sure," said his Majesty, that the rage for public speaking, and the extravagant length to which some of our most popular orators carry their harangues

in Parliament, is very detrimental to the national business, and I wish that in the end it may not prove injurious to the public peace." In unison with this opinion of the King is a canon of Aristotle, who says, "Nothing so effectually contributes to the ruin of popular governments, as the petulance of their orators."—(*Polit. lib. 5.*)

No man ever better understood the difference between incidental acts and fundamental laws. Thus, he would give up his own opinion to an administration on a point of temporary policy; but he would never allow any minister to disturb, to retouch, to improve, and by degrees to subvert the charter of liberties laid up in the ark of the constitution.

When the first Lord Melville had planned the expedition to Egypt, the King expressed great doubts of its ultimate success, and would have opposed a decided negative to the military branch of the undertaking, could he have done so without breaking up the cabinet; he therefore allowed the planner of it, who was sanguine as to the practicability of expelling the French, to proceed in the design on his own responsibility. When the victory of Aboukir had been succeeded by the military triumphs which transferred Alexandria and Cairo to the possession of the British, the King had the magnanimity to give the following toast: "To the health of the man who persevered in the expedition to Egypt against my own opinion."

Numerous attempts were made during his late Majesty's reign, to obtain what is called the Emancipation of the Catholics, by removing the disabilities under which they are excluded from seats in parliament, and from the supreme direction of the army and navy; and, although the enlightened and liberal spirit of toleration, by which our revered King was actuated, prompted him to grant them several concessions, yet

his conscientious regard to the solemnity of an oath effectually deterred him from yielding to any further demand, as he considered them pregnant with danger to the Protestant Establishment, which he was bound to maintain unimpaired. Of this magnanimous adherence to his engagements, the following declaration of his Majesty affords a striking and meritorious example :—

“ MY LORD : I am one of those who respect an oath. I have firmness sufficient to quit my throne, and retire to a cottage, or place my neck on a block or a scaffold, if my people require it ; but I have not resolution to break that oath which I took in the most solemn manner at my coronation.”

Wit and Humour.—At the conclusion of a review of the 2d regiment of the Life Guards, in June 1798, two privates went through the sword-exercise before the King ; after which Lord Cathcart inquired if his Majesty would be pleased to see two of the youngest officers display their science in the use of the sword ? He assented, and was much gratified with their execution. His Majesty then turned to the General, and inquired who were the oldest officers present ; and on being answered that Lord Cathcart and Major Barton were, he desired to see them perform, laughing heartily, and telling his Lordship that he had brought the exhibition on himself. They accordingly turned out, to the great amusement of those present ; and though the Major’s system savoured a little of the old school, they acquitted themselves very respectably.

In the latter end of March 1781, Lord Bateman waited upon the King, and begged to know what time his Majesty would choose to have the stag-hounds turned out ? “ My Lord,” replied his Majesty, with a very grave face, “ I cannot exactly answer that, but I can inform you that your Lordship was

turned out about an hour ago !” Lord B. was succeeded by the Marquis of Carmarthen.

In one of the late King’s excursions, during the hay harvest, in the neighbourhood of Weymouth, he passed a field where only one woman was at work. His Majesty asked her where her companions were ? The woman answered, they were gone to see the King. “ And why did not you go with them ?” rejoined his Majesty. “ I would not give a pin to see him !” replied the woman ; “ besides, the fools that are gone to town will lose a day’s work by it, and that is more than I can afford to do ; I have five children to work for,” &c. “ Well, then,” said his Majesty, putting some money into her hands, “ you may tell your companions who are gone to see the King, that *the King came to see you.*”

The King, when on a hunting party, was separated from his attendants, and obliged to take shelter in a cottage, to avoid a sudden fall of rain. The inmates of the cottage were preparing their dinner, by roasting a joint of meat, hung by a string from the roof, as a substitute for a jack. His Majesty, who was unknown, asked them what had become of their jack ? “ We have not money to buy one,” was the reply. The King said nothing ; but, on his departure, two guineas were found on the chimney-piece, wrapt up in a paper, on which was written with a pencil, “ To buy a jack.”

“ The King is better. There are intervals of returning recollection, and freedom from fever.” A Captain Manners was mentioned. His Majesty said, “ Let him come in ; he is not only Manners, but *Good Manners.*” A looking-glass, in a pier between two windows had been covered with green cloth, to prevent the King’s seeing how greatly he was emaciated. The King asked the reason of the green cloth being put there ? The an-

swer was, "To prevent the reflection of too much light." His Majesty said, "How can that be, when it is from the light?"—*Extract of Wilkes's Letters*, Nov. 25, 1788.

When the King was walking out early one morning at Windsor, he thus addressed a boy at the stable-door: "Well, boy, what do you do: what do they pay you?" "I help in the stable; but I have nothing but victuals and clothes." "Be content," said the monarch; "I have no more."

Having purchased a horse, the dealer put into his hands a large sheet of paper completely written over. "What's this?" said the King. "The pedigree of the horse which your Majesty has just bought," was the answer. "Take it back, take it back," said the King, laughing, "it will do just as well for the next horse you sell."

The following anecdote is told in the *Memoir* of Richard Lovell Edgeworth, Esq. "I have mentioned that Ramsden, the celebrated optician, was of our society. Besides his great mechanical genius, he had a species of invention not quite so creditable—the invention of excuses. He never kept an engagement of any sort, never finished any work punctually, or ever failed to promise what he always failed to perform. The King (George III.) had bespoken an instrument, which he was peculiarly desirous to obtain. He had allowed Ramsden to name his own time; but, as usual, the work was scarcely begun at the period appointed for delivery. However, when at last it was finished, he took it down to Kew in a post-chaise in a prodigious hurry; and, driving up to the palace-gate, he asked if his Majesty was at home. The pages and attendants in waiting expressed their surprise at such a visit; he, however, pertinaciously insisted upon being admitted, assuring the page that if he told the King that Ramsden

was at the gate, his Majesty would soon shew that he would be glad to see him. He was right; he was let in, and was graciously received. His Majesty, after examining the instrument carefully, of which he was really a judge, expressed his satisfaction, and, turning gravely to Ramsden, paid him some compliment upon his punctuality. "I have been told, Mr. Ramsden," said the King, "that you are considered to be the least punctual of any man in England; you have brought home this instrument on the very day that was appointed,—you have only mistaken the year!"

Intangible by libellous attacks.—The King's integrity of motive inspired him with a serene indifference to the coarse and impudent distortion of his manners and character, which were successively sketched and coloured with the freest independence of fidelity to truth by the mercenary practitioners in caricature. The buffoon poet is as much a caricaturist as the jester with the pencil. •Perverted talent sometimes descends to caricature for the shower of affluence in sordid counters and dishonest fame, which a corrupted taste is ready to bestow; but it is oftener the resource of professional imbecility for a mere livelihood. If a few deliberately do worse, in their incorrect and overcharged pictures, than becomes a master of style, many can do no better than draw figures out of shape, and spread blotches of colour which any incapable scholar might emulate. The caricaturist in rhyme, Dr. Wolcot, who wrote under the assumed name of Peter Pindar, may be assigned to the first class, as a concession, to avoid dispute about the degree of talent which suffices for concocting such light and irregular pieces of ribaldry as his burlesque odes. But when we reflect that this man never meditated satire, that he never aimed to ridicule folly, nor to scourge

vice; that he selected only the good and amiable for his random pasquinades, what a profligate in principle does this embellisher of scandal appear. He had not the grace of the comedian Shuter, who refused to take a part written by Foote, in which the peculiarities of a benevolent physician were made the butt of personal ridicule. His object was not to divert care, but to dishonour worth. The King read the pasquinades of Peter Pindar as a statesman, because it behoved him to know what writings were levelled against the head or members of the government; but we may consistently infer, that, if the same ribaldry had been directed against one of his subjects, he would not have sought diversion in it. He laughed at the impotence of these attacks, from a feeling of superiority; while some of his counsellors declared that passages strongly charged with envenomed scurrility and bold falsehood were fit subjects for a prosecution, the King had the magnanimity to overlook the offence. No monarch was ever more insulted by what is usually understood by caricature, that is to say, outlines of scandal coloured to catch the eye, exhibited even in shop-windows within sight of his palace; but prints and pasquinades were alike treated with indifference. One instance of this has been related, p. 460.

Tokens of public regard.—The universal popularity which attended the accession of George III., with some of the causes of it, were noticed pp. 216 and 321. Too soon after the sceptre had devolved to his hands, the excess of qualified candidates for the highest offices in the state began to perplex the choice of the Sovereign, and to divide public opinion.

What heart-burnings, vexations, and commotions were occasioned by this superfluity of talent! The severe disappointment of not being able to keep the country great

and prosperous, if it ever were so, or to save it in a season of distress, drove into a nominal union the excluded leaders of different parties, who had little agreement in principle beyond the object of embarrassing the obnoxious minister of the day. The result was a fierce and ill-regulated opposition. A few members of this loose body made barbarous-mannered attacks upon the principles and motives of the Sovereign, which the polished leaders could not control. As early as 1762, Wilkes began to execute one of the devices of an inferior faction; which was to obscure, by a cloud of misrepresentation, the personal virtues which adorned the highest authority in the state. The arrows of calumny were so incessant as to darken the air of public opinion. Many that feared to launch a daring libel, would yet assist to keep it afloat. The narrow policy of sullen resentment led a large party to suppress much of the admiration that was due to the King's character, lest the effect of repeated tributes to its excellence, strongly expressed in public and in private, should be serviceable to their competitors whom his discernment favoured. Thus a set of political hypocrites were generated, who would speak with a formal diffidence of praise while they felt a decisive admiration. The little effect of these insidious artifices to undermine the King's popularity might never have been known, had not an extraordinary incident in his life elicited a full display of the force of that affection with which his conduct had inspired the people. In the spring of 1789, the intense expression of public joy, on the King's first recovery, extended through all ranks, and shewed that affectionate attachment in all, which amounts to complete popularity. The King's visit to Cheltenham before his illness, and to Worcester after it, had afforded him many

gratifying proofs that high and low, rich and poor, in the rural districts to which his journeys and walks extended, were animated by the same spirit. But this is the less remarkable, as the minds of the country population were at that time unsophisticated. The fiftieth anniversary of his Majesty's accession, besides the passing festivities of the jubilee, produced in many places the lasting memorials of pillars, obelisks, triumphant arches and ornamental temples.

The character of George III., as it might be further illustrated by a

classified collection of similar facts, is an inexhaustible fountain of excellence. But our scanty limits compel us to close this note of references to his personal history. There remains, however, still unperformed our promise to glance at some of the principal events in the annals of the nation during his memorable reign; and the leading object of the *Asiatic Journal* assigns, however small be the scale of review, a prominent place to transactions in the East.

(To be continued.)

PAPERS LAID BEFORE PARLIAMENT RESPECTING THE AFFAIR
AT TALNEIR.

It will be recollected that the guarded vote of thanks to Sir Thomas Hislop, at the time the victories of the late splendid campaign in India tried the power of eloquence in the two houses of Parliament, to emulate their striking splendor, was passed with an express understanding that ministers should apply to the proper authorities in India, for a further explanation of the grounds on which the Killadar of Talneir was executed. For a report of the debate in the Lords touching this subject, see *Asiatic Journal*, vol. viii, p. 414, and for that of the Commons, p. 423.

Amidst many shades of difference observable in the opinions then expressed by the different speakers, the perspicuity of those minds who assented to the qualifying course then pursued, merely in deference to the punctilios felt by others, while they avowed a confident expectation, that the answer to the enquiry would be a complete vindication, appears now to great advantage in the review.

In the interval between March 1819 and this time, the requisite documents have been procured

from India. They are too voluminous for insertion at length; but a brief abstract of them will enable the reader to judge whether the tenor of them is satisfactory.

The first of these documents is the copy of a minute by the Marquis of Hastings himself, dated July 7th 1819, in which he announces that he had written to Sir C. Hislop for a minute statement relative to the execution of the killadar, but till that explanation arrived he wished to represent what was his own impression from the particulars that had come before him. This impression is fully expressed in the following sentences:—"It appeared to me that the killadar was thoroughly apprized of his situation; 1st, by the promulgation of the article of treaty assigning the territory to the Hon. Company; and 2dly, by the special order of Holkar for the surrender of the fortress; notwithstanding which, he forced Sir T. Hislop to the risk of carrying the place by storm. It was undeniable that the fortress was taken by assault, the defenders of the outer works having been driven from the rampart by our fire, and entrance being gained through a breach made by our cannonade against the jambs of the gate. The killadar then advancing to supplicate mercy, after having resisted till the place was actually carried, and opposition was no longer practicable, could not take him out

of the fatal predicament in which he had willfully and knowingly placed himself. The application of the penalty lay with Sir T. Hislop, and the humanity of his Excellency's character claimed for him credit that nothing but what he deemed a most serious exigency could urge him to the infliction. The forfeiture of pretension to quarter when troops stand an assault has been established by the laws of war, to prevent garrisons from wantonly subjecting besiegers to the heavy loss likely to be suffered by troops exposed in advancing to breach—a slaughter in which a garrison would, from false points of honour, always be tempted to indulge, if impunity could be obtained by throwing down their arms when defence proved ineffectual.

Another document of primary importance, containing all the information which was sought, is a dispatch from Sir Thomas Hislop himself, addressed to the Governor-general, and dated Sept. 10, 1819. In this dispatch, his Excellency enters into a minute detail of all the circumstances that preceded and accompanied the capture of the fort of Talneir, and most satisfactorily exculpates himself from the imputation of cruelty, in ordering the execution of the killedar. He does not, however, rest his case upon his own statement; he encloses the reports of four distinguished officers, who were present on the occasion, and who knew the whole of the transaction. These are, Lieut.col. Blacker, quarter-master-general of the army; Capt. Briggs, the political agent of the Governor-general, at the head-quarters of Sir T. Hislop in Candeish; Lieut.col. Conway, the adjutant-general of the army; and Lieut.col. M'Gregor Murray, the deputy-adjutant-general, who accompanied the storming party, and nearly lost his life, from the infamous treachery of the garrison.

These documents contain a mass of information, which clearly shews that "the killedar did not surrender himself to Col. Conway, as was inadvertently stated, and that he never made any condition of surrendering the fort whatever; that a fair time was allowed him to discontinue his unlawful hostilities; that he did not avail himself of it, but carried on the utmost resistance in his power to the last, to the serious injury of our troops, and ultimately reduced Sir T. Hislop to the necessity of taking his fort by storm; that in the heat

of that operation he fell into our possession, when he was fully aware his life had been forfeited, and when no expectation whatever was held out to him that it would be spared."

Sir T. Hislop, in his own dispatch, distinctly proves that the killedar was answerable, with his own life, for the lives which he had caused to be destroyed among the British troops. He was, in fact, "in a state of rebellion to his sovereign, because Holkar was at peace with us, and had commanded him to obey it. He had committed hostilities without any commission from his sovereign, and was a public marauder; and the consequences he entailed upon himself thereby were similar to those to which a pirate would be exposed." "The killedar was acting altogether independently of Holkar, whom he would not recognize, and was pursuing his own schemes."—"He had entered the fort for that express purpose only fifteen days before it was taken, with all the artificers he could collect, at a time when it was generally known in the town of Talneir that Holkar had made peace with the British, and had, by treaty, ceded that fort; and I will submit, that as the inhabitants acted on this information, it cannot be supposed that the killedar was ignorant of it.

Although the deluded man had so completely forfeited his life, and justice to the manes of my brave officers and men, who had fallen victims to his lawless hostility, called for some atonement, still my anxious desire was to save him from execution, for it is ever the most painful part of an officer's duty to be driven to an act of severity. Impelled with these feelings of mercy to a reduced being in my possession, a struggle supported them for a time: but they were overpowered by considerations of humanity due to others, which it must have been deemed unpardonable in me to have neglected." "I had no alternative, but to make a painful sacrifice of my private feelings to the cause of humanity and my country; and the necessity of example being the concurrent opinion of officers with whom I consulted, the execution was reluctantly ordered."

"The good effect the example produced in the cause of humanity, and to the public interests, became as it were instantly apparent. The confederacy of opposition to our lawful possession of Candeish was dissolved; the several killedars, till now in resistance, yielded to Holkar's order, and in obedience to it delivered up the formidable posts in their possession; the Peishwa betook himself to flight; Ram Deen disappeared, and *not another life was lost*, in the assumption of the cessions of Holkar; whereas, had not an example been made at the critical juncture it was, incalculable bloodshed would inevitably have ensued."

To the Editor of the Asiatic Journal.

Sir:—Allow me to request a place for the following extract of a letter from Mr. Fred. Garland (since deceased), dated Saloomah, 22d March 1819, to his friends in England. This paper relates to a Tour in Sumatra, and details some interesting particulars respecting the late intercourse with the Sultan of Palambang; on a mission to whom Mr. Fred. Garland was appointed by Sir Thos. S. Raffles, to act jointly with Capt. Salmond; and I have great satisfaction in the belief that my nephew's conduct on the occasion was such as must have obtained him the approbation of the honourable Company.

I am, Sir, your humble servant,

(Signed) D. B.

Upper Fitzroy Street, 19th May, 1820.

TOUR IN SUMATRA.

In a former letter I mentioned the arrival of Sir Stamford Raffles; he came out armed with more extensive power than our former governors possessed, and has made several new arrangements, waiting the confirmation of the Supreme Government in India. He sailed for Bengal in September last; whence he is gone on a mission to Acheen, to make, I believe, some territorial arrangements with the king, but is daily expected back. I much doubt whether this country will not ultimately be under our control, which would be for its advantage, as the present government has been very weak for some years past, and many of the great dividing the force of the country by aiming at independent power, as in the feudal times with us. Amongst the changes which have taken place here, the Residencies have been abolished, and are put into the hands of native Malay Officers. Since the 1st of Sept. I have been agent for the southern district, which comprizes Saloomah, Manna, and Cawoor, an extent of coast about one hundred miles in length, and separated from Crooe by hills. My duty is entirely of a commercial nature,

consisting in collecting and paying for the pepper grown in these districts. In a pecuniary point of view my present situation is much the same as before, but I have much more moving about; and as a buggy cannot be made use of either in Manna or Cawoor, I have sometimes very hot rides on horseback in the sun, for I am not partial to the night dews, nor desirous of meeting with tigers or elephants, who are rather more lively and active in the cool of the night than the heat of the day.

I think it not improbable I may be removed from my present situation upon Sir Stamford's return: this circumstance, however, occasions me little concern, as I stand very well in his good opinion, which a subsequent letter will prove.

To the variety of duties which have from time to time fallen to my share, and of which I have informed you, I may now add one of a diplomatic mission. Near the latter end of June I received a letter from the governor, directing me to hasten up to Fort Marlbro' to proceed on a mission, but to what place I was bound, or whether by land or sea, I was not informed. I immediately prepared and set off for Fort Malbro', and on my arrival proceeded to the government house, when Sir Stamford informed me that Capt. Salmond (of the Bombay marines, and master attendant of this port) was to proceed as his representative to the court of Palambang, on the opposite side of the island. My public letter will shew you the nature of my appointment; it was as follows:—"Confiding in your judgment and discretion, I am desirous of availing myself of your service on the mission to Palambang. Capt. Salmond will be my representative at that court, but he will require your counsel and advice; and in the

" event of any accident, by illness
 " or otherwise, preventing his per-
 " forming the duty entrusted to
 " him, you are to succeed to the
 " charge of the mission ; full in-
 " structions have been given to
 " Capt S." To unravel the ob-
 ject of our mission, it is necessary
 I should enter into some detail, to
 make it at all comprehensible. The
 circumstances are as follows : A
 short period subsequent to the
 conquest of Java by our troops,
 the then reigning Sultan of Palam-
 bang considered that circumstance
 as affording a fair opportunity of
 ridding himself of the Dutch, who
 had a small fort and establishment
 at Palambang, and the whole of
 their servants and military were
 murdered by his orders. Upon
 the late Gen. Gillespie proceeding
 from Java to Palambang with a
 body of troops, the Sultan placed
 various obstructions in the river to
 prevent ships passing ; he then pro-
 ceeded a considerable way up,
 took his property with him, and
 could not be prevailed upon to meet
 the general, being fearful of un-
 dergoing such punishment as his
 late atrocities justly merited. When
 General Gillespie had surmounted
 these military obstacles, the Sul-
 tan's brother was appointed to suc-
 ceed him, and was raised to the
 throne, and the oath of allegiance
 was administered to those who
 held situations under government.
 The new Sultan, out of gratitude
 to the British, made them a present
 of the island of Banca, which
 abounds with tin, and is situated at
 the mouth of the river, or, more pro-
 perly, opposite the estuary, about
 twenty miles distant. The new
 Sultan was considered as an inde-
 pendent prince in alliance with the
 British. When the general peace
 took place, and the Netherlands
 commissioners arrived at Java, the
 island of Banca was to be given
 over to them as an equivalent for
 Cochin ; they were informed by
 our commissioners of the terms
 upon which we had received Ban-

ca, and an explicit answer was ex-
 pected from them as to their inten-
 tion of not violating the engage-
 ments under which we had received
 the island, to the injury of the then
 reigning Sultan : but as the Ne-
 therlanders refused to make any
 promises on this head, a protest
 was made by our commissioners
 against any innovations, disturbing
 the treaty under which the Eng-
 lish acquired the right to cede
 Banca. But, upon their departure,
 the Dutch government at Java
 sent a commissioner with an armed
 force, and accepted from the ex-
 Sultan the sum of two hundred
 thousand dollars, to be reinstated
 in his authority.*

Shortly after our governor had
 arrived here, he received a letter
 from the young Sultan, informing
 him of these circumstances, and
 requesting assistance, as he con-
 sidered his life in danger from his
 eldest brother ; in consequence of
 this application, a body of one
 hundred sepoy, with a commis-
 sioned officer, were directed to be
 in readiness to proceed thither,
 and Capt. Salmond and myself
 were ordered to travel as expedi-
 tiously as possible to Palambang,
 and inform the young Sultan that
 a party were coming to his protec-
 tion. The morning after my ar-
 rival at Fort Marlbro', Capt. Sal-
 mond and myself set off on our
 mission ; and as the governor was
 going to a hill situated a few miles
 in the interior, and which he is
 clearing with the view of building
 a house there, he invited us to
 accompany him and the secretary
 to that place ; he had a temporary
 bungalow there, and could there-
 fore accommodate us for the night.
 The next morning after breakfast
 we took our leave, and set out on
 our journey on foot, and in the
 evening arrived at the house of the
 principal native chief of Bencoo-
 len, where the ambassadors from

* It is to be recollected, that the Sultan whom
 the Dutch were so pertinacious in restoring, had
 massacred their own people in the security of
 peace.

the Sultan of Palambang were waiting to accompany us. This day's journey was the longest walk I had yet taken in India; and from the unevenness of the ground, and the heat of the sun, I was much fatigued, and was glad when we put up. I had, however, a good appetite for my dinner, which, joined to a sound sleep at night, prepared me for the next day's march; when we set out, in company about eighty people, including a small military escort, coolies with our baggage, and armed men belonging to the Sultan. The second day after taking leave we ascended the range of mountains which separates the Company's districts from the Moor-rer country; and upon our descent crossed over the Moor-rer river, which, although so close to its source amongst the mountains, was broad and rapid, over a floating bridge constructed of bamboos. Our fifth day's journey was extremely heavy. On leaving the Doosoon, a village where we halted the preceding night, we entered first into a small cultivated spot of ground, and then penetrated a wood, through the whole length of which we met neither house nor human being, and had a very troublesome footpath, in many places excessively muddy, in others broken up by the feet of elephants, and crossed in some parts by the trunks of trees which had from time to time fallen down. We passed three beautiful cascades of water in this day's march; the last a double one, at which we sat down and refreshed ourselves. Having fortunately brought some cold kid and biscuit, we regaled upon this and the fine pure water which was running close by us, and then pursued our journey. When we arrived at the place where we expected to sleep, we found it impossible for the party to be accommodated; and, though much fatigued, were under the necessity of going on a march of two hours

farther: but were then well compensated for our trouble by finding one of the Sultan's servants waiting there to see that we had every accommodation the place would admit of, both for food and lodging. We were all so much fatigued by this day's march, that the next day we made a very short trip, to recover ourselves from the stiffness it had occasioned.

The seventh day brought us to a place where bamboo rafts were in readiness to take Capt. S., myself, and the ambassadors down the river, leaving our party to proceed by land. The river, although broad and in many places deep, has a number of rapids, in which the water glides with great velocity through the narrow channels, and is much agitated by running over a shallow bed of large pebbles, with which every rapid abounds. The rafts darted through them with great velocity; and were it not for the skillfulness of the two men who manage them with bamboo paddles, one forward and one abaft, they would undoubtedly be dashed to pieces against the bank of the river, as it frequently occurred that at the end of a rapid the next reach would in some instances form a right angle. An accident took place with Capt. S's raft: the steersman who was forward, on passing the last rapid, was cheering, and being negligent at the moment, the raft touched the bank, threw it so much under, that the commissioner with his portfolio of dispatches, and one of the Sultan's ambassadors, were carried into the river. As it was however close by the place where we were to put up for the night, they were immediately laid in the sun to dry; but as I had duplicates of them in my writing desk, which went by land, the loss of the dispatches would not have proved any detriment. On the 8th day we arrived at a place where the panchallangs of the Sultan were waiting to receive us. These boats are made

out of the trunk of a single tree, and vary in size, having from ten to twenty paddles in general, but there are some which from their size require more. I saw one at Palambang about 80 English feet in length, and broad in proportion, constructed out of a single tree : of course it had been converted into a boat in the woods where it was cut, and most probably felled near the water. We now proceeded down the river day and night, merely putting up at the villages on its banks when we required change of men or a fresh supply of provisions, and eat, drank, and slept on board. Cooped up as we were, you will readily believe we were not sorry when we discovered the point of the Palambang reach, which happened early on Saturday morning.

July 4th, we put up to breakfast, and dressed ourselves in readiness for our audience with the Sultan. Knowing that a Dutch man-of-war and several of their vessels were near the fort, and that orders had been issued by the Dutch commissioners for all boats to be taken to the Logie, a place occupied by them on the opposite side of the river, we erected two flag-staffs in our panchallang, a British pendant on the foremost, and a British ensign on the after, both of silk, so we looked very gay. This had the desired effect, for the Netherlanders had too much prudence to offer any insult to our colours by stopping the boat, and in fact must have been much astonished on discovering our colours. Upon landing near the fort we were conducted to the young Sultan, who received us in the most polite and affable manner. Having in the interim between the receipt of his letter at Fort Malbro' and our arrival been compelled by the Dutch to give up the principal part of the fort to his brother, whom they had reinstated, and who entered it under the protection of the guns of the man-of-

war, he had no room to receive us in a public manner ; giving, therefore, his right hand to Captain Salmond, and left to myself, he conducted us to the palace lately occupied by the ex-Sultan, and in which all the officers of the court and numbers of the populace were assembled.

After presenting our credentials, answering complimentary enquiries, and partaking of coffee and sweetmeats, we proceeded to business. The first thing done was a treaty of alliance signed by the Sultan. It consisted of two short articles : the first stating that he was desirous of entering into an alliance with the British nation, and the second that he would defray all charges for such assistance as might be furnished him for protection. Until this was done, it was not considered proper for our troops to come down ; for if the Sultan wished to be in alliance with the Dutch it was at his option : however, he gladly signed our treaty, and was anxious for the Dutch to quit his territories.

The Sultan stated that a previous treaty had been left with him by the Dutch, which his next brother through fear had been compelled to sign : but that he protested against it as no deed of his, and requested our advice how to act. We acquainted him that a signature extorted through fear was not valid, and particularly so in the present instance, where his seal and signature had been surreptitiously applied : in fact, the latter rendered it a forgery. We also recommended his forwarding a copy to our governor, for his advice. As I am acquainted with Malay writing, upon comparing the Sultan's signature upon the treaty of alliance which he had just signed with us, and the signature on the Dutch treaty, I observed an evident difference ; and upon enquiring of the Sultan's brother, he informed me that he had signed and sealed it under his brother's signature and seal, without his know-

ledge or consent. This corroboration perfectly satisfied us that the Sultan's assertion was correct. As the Sultan considered we were fatigued, and should be glad of repose, he retired, after acquainting us that the palace in which we then were was to be our residence. On his return home, he hoisted on the flag-staff within his fort a small silk British Jack, which the governor had sent him. This sadly annoyed the jealous Netherlander, as it was a mark of his alliance. We had brought with us a letter from the governor to the Dutch commissioner, in which he protested against the innovations made in the government as established by the British, and guaranteed by them, and desired him to remove his force from the river. This letter was delivered immediately on our arrival, and the Dutch commissioner returned an answer by the bearer, in which he stated that he would meet us either on board the man-of-war, or at the Dutch factory. We, however, replied, that our business did not lay with him but with the Sultan. This was actually the case, for we were not commissioned to have any thing to do with him in a political way, but to see whether he would quit Palambang. In the afternoon the captain of the man-of-war, accompanied by a captain of engineers, brought a letter from the Dutch commissioner, and to which he requested an immediate reply. As, however, it commenced with some political points which required consideration, we refused to return at once a written answer, for fear of committing ourselves, though strongly pressed so to do, and to the proposals which closed the letter we sent a verbal negative.

He required us to strike the British colours which were hoisted in the fort: to this proposal he must have well known no attention would be paid, and he did not dare to strike them. A little before sun-set we were informed that an

armed party, consisting of Dutch and Malays, were stationed at the outer gate of the palace we inhabited, who obstructed our ingress and egress to and from the same. Upon enquiring into this singular circumstance, we learnt that the Dutch commissioner, taking advantage of the paucity of our escort, had cooped us up, which the situation of the grounds of the palace, being enclosed with a brick wall, gave him an opportunity of doing. A correspondence now took place, which continued by messengers backwards and forwards, until 2 o'clock in the morning, when an armed force of Europeans was sent into the palace to make prisoners of us. They took us over to the Logie, a Dutch quarter on the opposite side of the river, and we were detained there until the following Wednesday, when a brig being ready to take us to Java, we proceeded on board, stopped a few days at the island of Banca, and arrived in Batavia Roads on the evening of Saturday, 1st Aug. We remained at Batavia nearly three weeks; and another vessel having been hired for our reception, we were sent round to Fort Marlbro', where we arrived the latter end of the month. Upon forwarding government our report, I was honoured with a separate public letter from the governor, of which the following is a copy:

" Captain Salmond having delivered in his detailed report, I have now the satisfaction to convey to you my acknowledgments for the readiness with which you met my views, the personal sacrifices you have made, and the zeal, activity, and ability displayed in discharge of the duty with which you have been entrusted. The whole of Captain Salmond's proceedings have been unreservedly approved; and as he was assisted throughout by your advice and exertions, you must consider yourself entitled to a due share

“ of the praise which has been bestowed. I shall be happy to convey this testimony to the superior authorities, who on more occasions than one have already had to applaud your zeal and attention. It is impossible for me to forget the important service rendered by you at Siak, while I officiated as secretary to the government of Prince of Wales Island, or not to do justice to the enterprize and ability so successfully employed at Engano, under the orders of my predecessor at this place. These services, as well as that on which you have been recently engaged, were hazardous, and attended with much personal privation, entirely out of the line of your regular duties, which circumstance enhances the zeal with which you undertook them.”

The poor Sultan was very much alarmed at the time the palace was surrounded, and sent people to say he wished to be with us ; but, as we knew the Dutch were desirous of getting him out of his fort, we recommended him to remain where he was as a place of greater safety. I regret we had not an opportunity of meeting him again, but he was confined by the Dutch under a guard after our capture. He, however, managed to forward some letters to the governor in spite of their vigilance : I understand, since our departure he has been sent to Java. He is a respectable looking man, about 45 years of age, but unfortunately had not the commanding abilities of his brother the ex-Sultan ; the former stands in need of constant advice and support, the latter is a prince capable of conducting the affairs of his kingdom without either. It is a pity the possessor of such abilities should be branded with cruelty, but in his conduct he was too much of a Caligula, and I have no doubt would have been happy to make Captain S. and

myself feel his resentment, could he have taken us. He was so alarmed at our presence, that, when we were prisoners on board the brig, he sent a person on board to proceed down with us, and who was to return and report to him when we had departed from the mouth of the river.

With regard to our treatment during our stay with the Dutch after our capture, it was very hospitable. They gave us up the best house, which was the residence of the commissioners and commandant ; and we were constant guests at their table during the time we remained with them. The commissioner, whose name was Muntinghe, had been a member of council and a colleague with Sir Stamford Raffles when he was governor of Java, consequently they were well known to each other ; but in political views the peace had now separated their national interests and attachments. Mr. M. is a shrewd clever man, understands our language well, and can indite a good letter in it ; and having been brought up to the law, is in no want of argument to support his cause. When in company with him, we were in politics English and Dutch ; but, as the individuals of two states in amity with each other, were good friends. In taking leave I thanked him for his hospitality as a private individual, but told him that he must expect to hear of my making a heavy protest against his public proceedings ; he smiled, and said he was prepared for that. On our arrival at Banca we remained there six days, and were treated by the resident, Mr. Smesaret, in the most friendly and liberal manner. He likewise provided us with a house, and we were his constant guests during our stay ; and upon our departure furnished us with an addition to our arms and ammunition, that in case we fell in with pirates, with which the straits abound, we might run no hazard.

To the Editor of the Asiatic Journal.

SIR:—As it appears by your valuable journal that the fatal Cholera still prevails in India, and that the remedies applied by the faculty are in many cases ineffectual, allow me to state one, which as far as it has been assayed was never known to fail. It may be carried about by any person; requires no skill in the administration; nor will it be easy by a mistake in the dose to do mischief with it.

I was informed of its efficacy by a most skilful medical gentleman of the Madras establishment; and upon one occasion had myself an opportunity of witnessing its beneficial and powerful effects.

Being on a party where this gentleman made one of the number, a young lady about twelve years of age was seized, about ten o'clock in the evening, with a most violent attack of the cholera morbus, and, from the distressing symptoms, it was considered by those who saw her, that before morning she must have fallen a victim to its rapid effects, had not a specific remedy been at hand.

The substance administered was ipecacuana. The medicator first gave about ten grains, and every half hour after its first operation small doses of half that quantity, until the violent symptoms of the disease had abated, by a cessation of the vomiting, &c., which is the grand characteristic of the malady. After this he administered weak Madeira and water, until the patient fell asleep, which she did in about four hours from the commencement of the attack. When she awoke in the morning no symptoms of the complaint were experienced, save excessive debility, which was entirely subdued by giving her occasionally weak Madeira and water as a beverage.

The doctor, who readily communicated the beneficent power
Asiatic Journ.—No. 54.

which his acquaintance with this simple resource gave him, informed me the next day that this medicine he had found, on a variety of occasions, to be an absolute specific; that he had cured with it both Europeans and natives, and that he always carried it with him, as a provision against sudden emergencies.

The cholera is a disease which from time immemorial has recurred in India; but, as far as I am acquainted it, has never at any previous period been so general, that is to say, spread at one time over so large a portion of the country, as our recent experience has found it to be. I had before, in the course of a long residence in India, heard of its attacks, and its local prevalence might be sometimes alarming; but its occurrence was comparatively rare, and its ravages not so widely destructive.

The medical gentleman alluded to, administered to the natives without any other inducement than the dictates of humanity, or any other reward than the pleasure of giving seasonable aid. His name was Thompson; he has been thanked by the government of the Madras presidency for his superior skill in a case at the general hospital, and for saving the men who were attacked with a destructive disease in the cavalry cantonment at Arcot, and which had baffled all other efforts of medical skill.

I have made this communication with the hope, through the medium of your Journal, that this remedy may become generally known in the east, and be the means of snatching from dissolution many valuable members of society, of whom all the European constituents must be either the friends or relations of some of us on this side of the water.

HUMANITAS.

London, 9th May, 1820.

VOL. IX. 4 B

DESCRIPTION OF AJMEEER.

THE following extract of a letter, dated 1819, May 7, from an officer cantoned in the vicinity of this decayed seat of empire, was published in the Bengal Hurkaru of May 28. It affords a gratifying testimony of the blessings wrought among the natives in Rajpootana, by the introduction of the British government over innumerable tracts of territory, formerly subject to despotic rule, and now enjoying a social freedom and security of property. The stormy irruptions of independent freebooters had succeeded to the calm despotism into which the expiring dominion of the Moguls subsided. The march of the Governor-general over these conquered provinces has relieved the inhabitants from the ruinous ascendancy of native marauders who were independent of restraint, the local chieftains acknowledging no imperial head that might curb them into order. Such was the acute distress generated by irregular oppression, that many of the inhabitants had abandoned their ancient seats to seek an asylum in other parts of India, while a remnant had sunk into hopeless misery. The Marquis of Hastings has instituted a protecting system of justice and order in Rajpootana. His name will be lisped by infants yet unborn, as that of the deliverer and benefactor of their country.

I am now in the black palace of the great Acbar, and my reflections are strangely regulated by the circumstance. To attempt a history of this place would fill more room than I can spare; however I shall give you a small outline.

Ajmeer city, according to the maps, is in lat. 26 deg. 35 min. N. and long. 74 deg. 48 min. E.; I make its position however to be, lat. 26 deg. 27 min. N., and long. 74 deg. 46 min. 30 sec. E. It is very ancient, and was once a very flourishing place, especially when it held the courts of the emperors Acbar and Shaw Jehan. In the palace of the former I now write. That of Shaw Jehan was erected on the banks of the great lake, to the north or N. W. of the city. It was built of marble, and its ruins shew that it was a costly and beautiful edifice. Several fine pillars and domes of white marble are yet standing, together with the range of the ladies' apartments, all likewise of marble, which are washed by the little waves of the lake. The monarch's marble throne also remains, and is viewed with peculiar in-

terest by the reflecting traveller, who finds a new incitement to contemplation, as he seats himself on the emblem of former sovereignty.

The city is built at the foot of a high hill, over which is a fort, or rather the whole summit of the hill is one continued chain of fortifications. The road up to these erections from the town is steep and tiresome, but after the top is reached, the fatigue and trouble of ascending are richly repaid by the beauties of the prospect. The city and valley lie spread beneath, having a charming appearance, while the hills rear their heads around the valley, surrounding it completely, except to the southward, where a break in the chain exposes the open country beyond to the view. These hills are not of any great height: the highest I should only estimate at six or seven hundred feet perpendicular. There are three hills which overhang the city, connected with each other, and over which the fortifications above-mentioned spread in one uninterrupted chain.

To the east of the city is another lake, but much smaller than the northernmost, which, in the rains, is at least six or seven miles in circumference. At present it is not more than two and a half or three miles round. There is plenty of good fish in both, and in the greater are also alligators. It is said to be, during the rains, from five to eight fathoms deep; at present the depth is not more than sixteen feet. This sheet of water is green like sea-water in the vicinity of land, and lying exactly between some high hills at their foot, it makes a very romantic appearance.

In the city, on the south side, stands the tomb of Khaja Moyeen ud Deen, one of the greatest Mohammedan prophets that ever flourished in Hindoostan. He was buried about 616 years ago; and the resort of pilgrims to his tomb, which is of white marble, is numerous beyond all description. They approach it from all parts of India, particularly at the annual great fair, which is held at this season. That of the present year lasted for nine days, and terminated five days ago. It exhibited a very curious intermixture of the most opposite and usually separated classes, in which were seen princes, coblers, tinkers, and tailors, all assembled without order or distinction, except that the prince came on his elephant, surrounded by his trained bands of ragga-muffin soldiers, the whole of which force 12 of our sepoy would have put to flight.

At this fair almost every thing that India produces, even in its remotest parts, is to be purchased; but is famous for no-

thing more than the Nagore bullocks, which sell when full grown for 3 or 400 rupees per pair, and young ones for 200 and 250.

The city, when it first bursts on the sight of a stranger approaching from the N.E. has a very cheering, and even grand appearance; but after entering the gates, and riding through, the charm is broken; all beauty vanishes, and the sight of nothing but ruin and desolation changes all feelings of pleasure into melancholy. On every side the eye rests on the ruins of houses that appear to have been crushed upon each other, or the standing walls of others, where the marks of their former elegance are still to be distinguished. I understand that the misfortunes of this once flourishing city are principally to be attributed to the oppressions of one of Scindeah's family, who governed it, and shewed himself a cruel and avaricious tyrant.

There are several tombs of Mohammedan and Hindoo saints scattered about the hills and city, but none of any particular note except the one above-mentioned. To the N.N.W. of the city there is a small out-village, and a Mahomedan burying ground, with some neat tombs; and around it for a few hundred yards the ground is laid out in fields, which are well cultivated. The rest of the plain or valley exhibits only a barren waste of sand, rocks, and stones, with a few stunted trees growing here and there, and tombs of Mohammedans scattered about, all of which are finely chunamed over,

and make rather an extraordinary appearance, when contrasted with the burnt and barren ground about them.

The palace in which I now am, is not in very great repair, but there are a number of very excellent rooms remaining entire. The Resident had his abode here a short time ago, but finding it both too hot and inconvenient, he is now building a fine house out of a large tomb, outside of the city to the S.E. I have no doubt that in a short time, under our government, the face of things will become entirely altered in Ajmeer and the surrounding country. The people are returning fast, and in numbers, to the dwelling place of their ancestors; and I trust that we shall soon see a new city emerging from the ruins of the old one, and vying with it in convenience and splendour. It is really astonishing to see what confidence all ranks of people here seem to repose in our government. It has every appearance of being sincere and strong, and I trust that futurity will convince them of its being rightly placed, nor ever afford any cause to make them alter their present opinions. Our cantonments are about 15 miles S.S.E. of the city, and are nearly finished. We have subscribed to the amount already of 3,500 rupees, for the erection of a theatre and ball-room, so that you may perceive we have not lost our gaiety in the midst of desolation. The materials for building are, however, very dear, and very difficult to be procured even at any price.

METHODS OF DESTROYING INSECTS AND VERMIN;

WITH

REMEDIES AGAINST THE BITES OF VENOMOUS REPTILES.

THE following collection of stratagems and antidotes was presented to the public in India, through the medium of a Madras paper. As far as some of the animated weapons of annoyance and danger are common to both countries, the practical utility of diffusing approved methods of counteracting them will have a corresponding extent in the two hemispheres; and our friends in India may not be unwilling to receive back a memorandum of what concerns them exclusively in a less fugitive shape. The intelligent writer has also, by interspersing original observations on the habits of some of the species incidentally named, added to the stores of natural history.

PART I.—STRATAGEMS.

The Enemy of the White Ants.—On opening a deal chest a few days ago, containing medicines, I found the interior completely filled with white ants, making dreadful havoc on the packages within. I lost no time in getting the chest removed into a verandah, where I had it cleared and freed from the numerous insects it contained. In a short time I saw numbers of red ants approaching the spot, which I perceived went and eagerly seized on the white ants, killed them, and carried them off to their holes. Thinking this an useful hint, I determined on an experiment, for which I soon had an opportunity. In one of the bed-rooms of my house white ants had begun to make their appearance; I immediately thought of my experiment, and getting a quantity of sugar, I sprink-

led it over their nests, and retiring a few paces, I soon perceived the red ants come in numbers to the spot, every one regularly running to a white ant, and after a little battling (for the latter have stings also), carry every one of them off triumphantly to their dens, where I have no doubt they had a plentiful feast on the bodies of their vanquished foes. It was curious to observe, that the red ants never touched the sugar, but rather preferred the white ants to it. By this experiment I think, Sir, a very useful discovery may have been made; and that merely by sprinkling a little sugar over the haunts of these ravaging and destructive insects, they may easily be got rid of.

Hostilities against Red and Black Ants.

—To prevent these animals getting into sugar and other sweets, the long known practice of immersing the vessel in which they are contained in water is among the best; or, anointing the feet or bottom of the vessel with tar or lamp oil, near which the ant will not approach. But, if required to be destroyed *in toto*, a little corrosive sublimate intimately mixed with sugar, and laid out for them to eat, proves a mortal poison to them, and is a most effectual way.

The Cock-Roach. — This insidious plague makes great havoc among papers, corks of bottles, and many other articles. The best method of getting rid of these insects, is, by spreading a large dish very completely and pretty thick over with bird-lime, and then sprinkling it with sugar and some sweet-smelling perfume, as essence of rose, of which they are particularly fond, and will be attracted to it. On their getting on the bird-lime to regale on the sugar, they will be unable to extricate themselves from it; and thus, in a few days, any place may be quite cleared of these disagreeable animals.

Bugs and Worms. — An eminent physician has discovered that, by rubbing wood with a solution of vitriol, insects and bugs are prevented from harbouring therein. When the strength of this remedy is required to be increased, there need only be boiled some *coloquintida* apples in water, in which is to be vitriol dissolved. The bedstead, with the wood about their haunts, and the wainscoting being anointed with the liquor, will be ever after clear of worms or bugs. The wall may be likewise rubbed with the composition, and some of it may be dropped into the holes where these insects are suspected to be harboured. As to the walls, they require only to be washed over with the vitriol water.

It would not be amiss to make an experiment, to ascertain how far wood rubbed with corrosive sublimate, blue vitriol, and other mineral poisons, would withstand the attacks of the white ant.

Another method recommended for destroying bugs is:—to take of the highest rectified spirits of wine half a pint, new distilled oil or spirits of turpentine half a pint, and mix them together, and break into it, in small bits, half an ounce of camphor, which will dissolve it in a few minutes. Shake them well together, and with a sponge or a brush dipt in some of it, wet very well the bed or furniture wherein these vermin harbour and breed, and it will infallibly kill and destroy both them and their nits, although they swarm ever so much. But then the bed or furniture must be well and thoroughly wetted with it, the dust upon them being first brushed and shook off, by which precaution it will neither stain, soil, nor in the least hurt the finest silk or damask bed. The bed or furniture should previously be washed with boiling water.

Flies. — From an old receipt book. Most of the fly waters, and other preparations commonly sold for the destruction of flies, are variously disguised poisons, dangerous and even fatal to the human species, such as solutions of mercury, arsenic, &c. mixed with honey or syrup. The following preparation, without endangering the lives of children, or other incautious persons, is not less fatal to flies than even a solution of arsenic. Dissolve two drachms of the extract of quassia in half a pint of boiling water, and adding a little sugar or syrup, pour the mixture on plates.

Rats and Mice. — A good method would be to feed them regularly two or three weeks in any apartment which they infest, the hole by which they enter being first fitted with a sliding door, to which a long string may be added; any apartment might thus be turned into a large rat-trap.

Another method of getting rid of rats is to lay bird-lime in their haunts, for though they are dirty enough in other respects, yet being very anxious as to their fur, if it is but daubed with this stuff, it is so troublesome to them, that they will even scratch their skins from off their own backs to get it off, and will never abide in the place where they have suffered in this manner.

A few years ago the corn mill at Glossop, in England, was very much infested with rats. A quantity of barley, which lay on the chamber floor, was hourly visited by some of them. The miller one day going to drive them away, as usual, happened to catch one of them under his hat, which he killed; he then singed all the hair off its body, &c. until its skin, tail, and legs became stiff by the operation. In this condition he set it upon its feet, by the side of a heap of barley, where it stood with pricked-up ears and tail for some time. After this no rat dared to come near it, and in a short space of time the mill was

cleared of those depredators, and has continued so ever since.

SECT. II.—ANTIDOTES.

Snakes and Scorpions.—The former of those reptiles of all the class are by far the most to be dreaded by men; and as we are acquainted with no means of getting entirely rid of them, we must avoid them in the best manner we can; however, much may be done by keeping grounds clear of woods and long grass, clearing away the bottom of hedges, removing nests of white ants, to which snakes are very partial, removing or not allowing collections of timber near a house, encouraging the abode of the mungoose about the premises, &c.

Scorpions commonly harbour about and under boxes, old papers and books, mud walls, and old timber; all of which should be occasionally examined and cleared of their nests and young. Green lizards attack scorpions eagerly. As we are not acquainted with any radical means of getting rid of these reptiles, we must endeavour to obviate the fatal tendency of their attack as much as lies in our power. Perhaps it may be matter of surprise that no specific has yet been discovered for curing the bite of a snake, as we know that nature in her bounty has provided an antidote for every evil; and it is well known that the mungoose, the natural enemy of the snake, attacks these animals with impunity, by having recourse to a certain antidote of vegetable production, which is to be found every where, and is always at hand for their use. It may be matter of uncertainty whether the same vegetable production, taken by an human subject, would produce the same effect, of counteracting the baneful effects of snake poison as it does in the mungoose, as we are in possession of many substances that produce very different effects on animals of different constitutions, exemplifying the saying that what is meat to one is poison to another. Whatever may be our ignorance concerning the real specific for snake poison, I shall endeavour to give such information regarding the preventing the deleterious effects of the bites of these dangerous animals, as we are at present acquainted with.

The chemical analysis of the poisons of snakes and other venomous animals has discovered them to be of an acid nature; and from this knowledge remedies of an alkaline description have been recommended, to correct and obviate by decomposition their virulent effects. Fontana, an Italian chemist, who sacrificed many hundred vipers to his experiments, found the poison of a viper to be of a gummy nature, and to resemble in a great measure a solution of gum arabic, to be of a yellow colour, to have no

taste, and when applied to the tongue to produce a numbness.

In the event of a person being bit by a snake, no time should be lost in applying the proper remedies. The indications of cure should be three. 1st. In preventing the poison entering into the constitution of the body; 2d. the withdrawing or destroying the poison in the wound; 3d. the counteracting its baneful effects when it has entered the system. The first of these is to be effected by tying a very tight ligature, or garter twisted with a stick, above the wound about five or six inches, or over the first joint of the limbs; by these means the poisonous liquid may be prevented entering the circulation.

The second indication is that of applying topical remedies to the wound, either by the application of one's own mouth, or that of an assistant, for the purpose of withdrawing by strong suction as much of the poison from the wound as can be effected, and which will do no injury, either to the mouth or stomach of the person, if swallowed; after which can de luce, nitric or sulphuric acid, water of ammonia, or sal volatile should be dropped into the wound as freely as possible, and the recess washed as completely out with it as can be accomplished.

The practical and beneficial effects of the application of ligatures and suction, is amply exemplified in the case of a soldier bit by a snake at Sydney, in New South Wales, which has appeared since writing the above in the papers of India, and which is here extracted to illustrate the subject:—

“Sydney, March 22.—From a person in whose veracity we place the greatest reliance, we learn that a month ago a private of the Royal Veteran Company was bit by a snake in a pasturage adjoining Liverpool, where he was quartered. Struck with instant horror, and the certainty of a speedy dissolution, the sufferer fell instantly into a state of hopelessness and almost stupor; his body began to swell in a few minutes, and the first of his comrades who visited him, gave him over as lost. In the barrack there happened at the time to be an old native man, who immediately repaired to his assistance. From a bark he stripped a few shreds, and combining them into a strong ligature, applied it a little above the affected part, the bite being a little above the ankle.—He applied the ligature with such excessive strictness, that the patient supposed his leg had been taken off. This done, the native proceeded in rubbing the leg downwards with no less violence for some minutes, and then taking away with a knife only as much of the skin as the punctures were apparent on, he applied his lips to the wounded

part, and took away by suction a quantity of coagulated matter, then pronounced the cure, desiring the regenerated patient to go to his barrack, and keep himself quiet.—It proved effectual, for the man now lives: and, in gratitude to his black physician, gave him all he was possessed of, being to the value of about £5 sterling.

The third indication is to be effected by exhibiting internally a tea-spoonful of eau de luce, water of ammonia, or sal volatile, in half a glass of cold water, every five minutes, to create a strong and artificial stimulus, and thus to remove the languor and lethargy that immediately succeeds the bite; farther by rubbing hartshorn on the temples and nostrils, by employing bleeding and electricity, and occasionally brandy, both externally and internally, with frictions of salt, an increased temperature of heat, and blankets; all those exciting means should be employed until the patient recovers or until no further hopes are entertained of his recovery. The great object of these applications is to support the *vis vitæ* or power of life, until the constitution, either by its own energy has overcome the virulent effects of the virulence of the imbibed poison, or the remedies exhibited, by mingling with it in the puncture, or meeting it in the circulation, may render it by decomposition inert or harmless. In discontinuing the remedies that have been recommended, a course of gradual diminution should be pursued, as they are apt to occasion by their effects a considerable degree of debility.

The following is a cure given by an intelligent gentleman of this presidency with success for scorpion stings, but I should think it equally applicable to snake bites.

Take a pinch of salt of hartshorn and put it on the bite, then drop on a few drops of nitre acid, which may be renewed in a few minutes if it does not succeed in relieving pain.

The application of a certain species of stone to the bites of scorpions and other venomous insects has been long in use among natives of the country, and with much effect, although Dr. John Davy, in a letter describing an analysis of some specimens procured in Ceylon,* seems to deny any virtues to them. This species of stone appears to be of a woody and spongy nature, and when applied to the liquor of animal poison absorbs and imbibes it with avidity from the wound, and which

again is easily separated from the stone by immersion in water, in the state of greenish thick fluid, mixt with a portion of blood. It is not to be denied that this chemico-mechanical property of these stones effects very remarkable and instantaneous cures; and is a remedy not at all to be despised, but should be in every one's possession, either for their own use or for the relief of their domestics, and is to be preferred to their having recourse to the incantations and ceremonies of an old and wily moortman, or some superannuated sepooy, performed with an old slipper, and whose frequent failures never deter them from having implicit faith in so useless a remedy, not always without danger, as scorpion bites are sometimes said to have been fatal, especially if they proceed from the large black kind to be met with in the jungles.

Musquitoes, although the last, are not the least of the plagues of India. These insects are, as we all have found, particularly troublesome to new comers. Whether it is that their blood is sweeter, and contains less of the salt than those long resident in the country, is hard to say; but it is known that their bites, if numerous, produce on the former a fever sometimes as severe as that of the measles; and it is in this manner, we are told, that former kings of India used to put to death their nobles. Long as the world has been infested with these pests, it is a matter of surprise that there is not a popular remedy for curing or assuaging the effect of their bites. The best method, however, we are acquainted with is, the anointing the parts with almond oil or cold cream; or even cooling them frequently with a wet towel often procures great alleviation of the intolerable pain. If there should be much swelling or inflammation, bathing the place with goulard water is the best remedy, and if sores or excoriations should appear, some cooling saturnine ointment should be employed, and the part gently anointed with it.

To remove these troublesome animals from an apartment, perhaps the best method would be to employ that which is practised for catching flies in England: namely, a piece of straw or wicker work, hung in the middle of a room from the ceiling, anointed with bird-lime, having a piece of woollen cloth suspended over it to attract the mosquitoes—the cloth itself might also be daubed over with the lime; this will prove an effectual way of destroying numbers of them.

* See Asiatic Journal, vol. vi. p. 475.

ACCOUNT OF THE CORNELIAN MINES NEAR BAROACH;

(From the Transactions of the Literary Society of Bombay)

By JOHN COPLAND, Esq. of the Bombay Medical Establishment.

ACCOMPANIED by one or two others actuated by the same curiosity, I left Baroach (the Bargasa of the ancients, Bhreggo Klsheto of the Hindoos) on the third of December 1814, about five o'clock P. M. and committed myself to the celebrated and sacred stream Rewa, commonly called Nurbudda, at the turn of the tide. About midnight we arrived at the island of Kubeer Bur, twelve miles N.E. of Baroach. At day-break we landed opposite the village of Neemoodra, which is three miles distant from the river, and south of Kubeer Bur, where we found our horses waiting; the mines lie about twelve miles to the eastward of this village. About five miles beyond Neemoodra we came to a rivulet named Kaweeree, and although of no importance during the dry season, it becomes a most formidable river in the rains. Its bed consists chiefly of quartz and agate pebbles; among the latter were many varieties: the most uncommon I remarked were of a dark blue colour with white veins. A striated rock, varying from fifty to a hundred feet in height, overhangs the river on the western side for several miles. Its dip towards the south-east might have been 45°. On ascending from the bed of the river, we passed in our left the little village of Rutunpoor, in which resides a thanadar on the part of the Rajpillee state (whose jurisdiction is only in matters of police, and confined to the district dependent on this village), and proceeded onward by a narrow footpath through a jungle, having rising ground almost the whole way to the mines. The diversity of scenery,—hills and valleys, pebbly beds of rivers, precipitous rocks, and extensive plains covered with jungle,—was sufficiently romantic. On account of the tigers with which the country abounds, no human habitations were found nearer the mines than Rutunpoor, which is seven miles off.

The miners reside at Neemoodra, where alone the stones are burnt. The mines are in the wildest parts of the jungle, and are very numerous; they are shafts working perpendicularly downward about four feet wide; the deepest we saw was fifty feet: some extend in an horizontal direction at the bottom, but in consequence of the earliness of the season few had reached a depth sufficient to render this turn necessary, and in those that had it was

not carried many feet. In using the term "earliness of season" it is proper to mention, that the nature of the pits is such as to prevent their being worked a second year on account of the heavy rains, which cause the banks to fall in, so that new ones are opened at the commencement of every fair season. We arrived at the mines about seven o'clock A. M., when none of the workmen had come except one, who accompanied us as a guide from Neemoodra. We were informed that the fire-damp was not uncommon in the mines, and that the miners did not descend till the sun had risen sufficiently to dispel the vapours. We went to the bottom of one pit, about 30 feet deep, without any assistance from ropes or ladders, by means of small niches for the feet and hands on opposite sides of the pit, but understood that the miners always made use of a rope to hold by, of which we could not avail ourselves, as the workmen at the close of their labour carry to their homes the simple instruments of their vocation, together with the stones which the day's labour has acquired. The soil is gravelly, consisting chiefly of quartz sand reddened by iron, and a little clay.

The nodules may weigh from a few ounces to two or three pounds, and lie very close to each other: but for the most part distinct, not in strata, but scattered through the mass, and in the greatest abundance. I saw none of a red colour at the mines; some were blackish olive, like common dark flints, others somewhat lighter; and others lighter still, with a slight milky tinge. The first, our guide informed us, would be black when burnt; the second, red; and the third, white. In this he may have been correct; but I doubt the fact as to the first, which we found in a proportion inconsistent with the well-known rarity of a black cornelian. I confess myself of opinion that there can be no precise rules drawn from the appearance of the stones before, for that which they will assume after burning, because it depends partly on the degree of heat they undergo. A red cornelian by an intense heat will become white; but, as far as my observations go, no stone of the former colour is found so in the mines (excepting jaspers), although a large proportion of them assume it at Neemoodra. Many also after having been burnt show

both colours, sometimes distinct and sometimes mixed, and of a pinky hue; while the colour was uniform, or very nearly so, in all which I remarked at the mines. The lightest-coloured stones come out of the fire of a much more delicate and transparent white than before, and often surrounded by a cortex of red, but without any distinct line separating the colours. We were unfortunate in the time of visiting Neemoodra, for all the good stones had been removed, and only a few heaps of refuse left. I saw none imbedded in rock, as flints are in chalk; some nodules on being broken showed a mixture of quartz and auate, and others, in a crust of quartz minutely crystallized on the inner surface, contained a black oxide of iron of a powdery appearance, many pieces of which we found by itself in the gravel. Hematites, chiefly of the brown and green (with red spots) varieties, mocha stones, and jaspers of various colours, are very common here; indeed the last was found in almost every part of the province we visited on our route. Each stone is chipped in the mine to discover its quality, and those which are approved separated from the refuse, heaps of which lay at the mouth of every pit which had been worked.

I shall now attempt to give an account of the mode in which the cornelians undergo the action of fire, as derived from the testimony of a respectable native attached to the audlut at Baroach, who was formerly in the cornelian trade, and had himself superintended the process at Neemoodra; his account is corroborated by our personal observation, and by what we learned on the spot. The stones are brought to this village every evening, spread on the ground, exposed to the sun to prepare them for the further process, and turned every fifteenth day till the time of burning, which is only once a year, one month before the commencement of the monsoon. They are then put into round earthen pots about fourteen inches in diameter, the bottoms of which having

been taken out, and the pots inverted, mouth downwards, the pieces taken from the bottoms are put inside, and placed over the mouths to prevent the stones falling out: in this state the pots are placed side by side in a trench of indefinite length, but of which the depth and breadth are about two feet, having a layer of five or six inches of dry goat's dung below, and the same above the pots. This is set on fire about 8 o'clock in the evening; all the fuel is consumed before day-break, when the pots are removed from the trench to the open air for the stones to cool, which requires about three hours; after this they are taken out of the pots, piled into heaps, and again chipped for the same purpose as when taken from the mines, and are finally thrown into a pit where they remain till called for (more to be out of the way of thieves, than as constituting any part of the operation). From Neemoodra the cornelians are carried to Canbay by the merchants who come from thence, where they are cut and formed into the beautiful and much sought after ornaments peculiar to the place.

I ought to have mentioned, that the miners do not forsake a pit on meeting with a spring, but merely change the direction; the water never rising to any great height.*

The Rajpillee country has long been celebrated among the natives who live in its neighbourhood for the variety of its earths and mineral productions, and is certainly a rich field for the mineralogist and geologist. The native above-mentioned informed me, that about twenty-five years ago slight shocks of earthquakes were felt in the province, but that they were far from being frequent occurrences.†

* This proves the high situation of the bed, and might lead to some interesting conclusions in geology.

† For provincial notices of the awful earthquake and inferior vibrations which have been felt over this territory since the publication of the paper, see *Asiatic Journal*, v. l. viii. p. 611, and current volume, pp. 85 and 307.—Editor.

DESCRIPTION OF THE KUBEER-BUR.

THIS and the following are from the same authority as the preceding. We have merely detached them to keep the subjects distinct.

"Having arrived at Baroach with the European part of the expedition, on our route from Bombay to Baroda, I took advantage of the few days the troops remained there, to visit the famous tree denominated *Kubeer-bur*, and the cor-

relian mines in the territories of the Rajah of Rajpillee."

The tree stands on the island of the same name described in the preceding extract.

"The moon, while it enabled us to form a tolerably accurate idea of the tree, left darkness enough in its shades greatly to increase the solemn grandeur of the scene. The lofty arches and colonnades, the immense festoons of roots, the ex-

tent of ground it covered, and its enormous trunks, proclaimed its great antiquity, and struck me with an awe similar to what is inspired by a fine gothic cathedral; while the fresh green of its thick foliage showed it still in the vigour of life. I should guess it to cover from three to four acres. Its branches rise so high, that many miles off it is a conspicuous object, bearing a resemblance to a hill on the extremity of the island. The tree is washed on its eastern base by the river, having to the west and south a ridge of sand, which is covered by the spring tides, and on the north the island extends for three miles, exhibiting a plain most fruitful in whatever requires a light sandy soil. The river here altering its course from north and south, runs east and west. At the time of the high swells at the latter end of the rains the island is overflowed, and the few inhabitants, like so many of the monkey tribe (with whom they mingle), are compelled to take refuge in the lofty branches of the tree, and re-

main there for several days until the water subsides, the current being too rapid for a boat to render them relief. The popular tradition among the Hindoos concerning the tree is, that a man of great sanctity, named Kubeer, having cleaned his teeth, as practised in India, with a piece of stick, stuck it into the ground, that it took root and became what it now is. He was afterwards canonized, and his image we saw sitting in a temple near one of the oldest looking trunks (his metamorphosed tooth-brush). To this temple people from far and near come to pay their devotions; the ceremonies are performed by the religious mendicants called *Byragees*, under the superintendence of a head man, who is stationary; the rest (with the exception of the pupils, who begin in the neighbouring main-land) being wanderers from all parts of India. We intended to pass the night under the protection of this saint; but our cots not having come up, we were obliged to return to the barge, and sleep in boat-cloaks instead of a temple."

VISIT TO THE TOMB OF BABA GHOR.

"ON our return from the mines to Neemoodra (described p. 559), we took a circuitous route, which brought us to a hill of considerable height, which we ascended, and enjoyed a most extensive prospect. It appears to be composed of vitrified rock, and I think there can scarcely be a doubt entertained of its volcanic origin. On the summit stands the tomb (in good repair) of the tutelar saint of the country, Baba Ghor, to whom adoration is paid more as a deity than a saint, under whose particular protection are the cornelian mines, and to whom the miners recommend themselves before descending into the pit. A little below the tomb is a hollow (answering to the crater) containing a tank of water, about a hundred feet in length and fifty in breadth, well built of hewn stone, having steps on its four sides descending in the most regular manner to the bottom. Viewing these works of human art in a spot now so sequestered, at a distance from all human habitation, the country covered with jungle as far as the eye can reach, giving shelter to wild beasts, ever at enmity with man, we cannot but admire the political as well as physical changes that are constantly taking place in the world, while we learn that this desert was once the site of many flourishing towns and villages. At the shrine of this saint the people of the neighbouring countries offer up their prayers on the 12th of the Mahomedan month of Rujub; thousands then flocking to the sacred spot to perform the vows

they have made. This assemblage (in common with other Mahomedan festivals) is denominated a *meela* (holy fair). To ascertain whether their vows will be accepted, the pilgrims throw twelve coconuts into the tank: if the saint be propitious, thirteen rise to the surface; but if otherwise, only the number thrown in. Baba Ghor was a prince of the dynasty of Ghuoree, a race which furnished some of the first emperors after the invasion of Hindostan by the Mahomedans. He was sent by his father the reigning emperor (he himself being heir to the throne) with so large an army, that his personal attendants, says the tradition, amounted to thirty thousand men, for the purpose of prosecuting the war against the infidels (Hindoos). The huge army was completely routed near these hills, and the prince with all his attendants fell. The tomb has been erected no doubt by the followers of Mahomed, subsequently to retaining their power in this quarter, to perpetuate the name of a martyr to the great cause.

"We descended at the opposite side of the hill by a path paved with the fragments of temples despoiled by Mahomedan bigotry, to the extent of nearly a mile."

The party proceeded onwards to Neemoodra, whence they crossed in the barge to Shookulteruth, landed to take a breakfast there, and returned by water to Baroach.

NIMMOK SAR :

NEW CASES IN BENARES, REQUIRING SOME SPECIAL LAW.

THE following letter, derived from a Bengal paper, relates to the conversion of old arable land into new salt grounds ; a case for which the law locally in force is said by the author of the communication not to have provided :—

“ To the Editor of the Calcutta Journal.

“ Sir :—In the province of Benares a considerable quantity of salt is made, by scattering saline earths, which are found in many places, over the surface of the soil, and afterwards throwing water drawn from wells, also slightly impregnated with salt, over the whole, which is repeatedly dug up. From this a lixivium is formed, and exposed on terraced troughs about an inch deep, during the nights from December to June, which crystallizes into very fine salt.

“ Many landholders, whose estates, from the abundance of the saline earth, afford scanty crops of grain, finding an increasing demand for salt in the market, have converted land which was formerly arable, into salt grounds or *Nimmok Sar* ; and the revenue officers of government

have in several instances attempted to turn them out of these lands, and made them over on lease to other people, without allowing the zemindar any deduction of land tax or *malgoozaree* ; and this under a pretext of such lands being old and neglected salt works, not in use at the time of the settlement.

“ Now there is no regulation prohibiting any zemindar from converting the whole of his estate, should he think proper, into *Nimmok Sar*, or salt works, much less a small portion of it. I should be obliged to any of your correspondents who are conversant with revenue and judicial matters, and will take the trouble to state the grounds on which these new settlements are made, and the zemindars dispossessed.

“ It is to be hoped that the zillah courts will interpose in every case of the kind, and protect the property thus attacked, until some enactment for the express purpose justify the encroachment.

“ J. G. M. S.

“ *Juanpore, Aug. 10, 1819.*”

SINENSIANA.

(From the *Indo-Chinese Gleaner*, No. VIII).

JOURNAL OF OCCURRENCES.

News from Peking, Szeh-chuen, and Keang-nan, June, 1818.—It appears that, connected with the late hurricane at Peking, there was an inundation from the sea on the coast of Shan-tung. One hundred and forty villages were laid under water, the crops destroyed, and many of the houses thrown down. As is usual in such cases, the Emperor has ordered one month's provisions to be given to the poor sufferers.

In the same province a man, actuated by malice, accused another of being connected with certain treasonable banditti, and that his father, now deceased, was also concerned in the same ; and that as a collateral proof of his having practised demoniacal arts, they would find interred with him the silver image of a man.

The accused person and various individuals of his kindred were taken up on the alleged crime of treason ; and the remains of his father were dug from the grave.

After a series of examinations the charge was found to be false, and that the image of a man interred with the dead

person, was nothing different from the usage of the place :* the malignant accuser has therefore met the fate which he designed for the objects of his hatred—he immediately suffered capital punishment by decollation.

Two persons have been apprehended under a charge of being Christians of the Romish communion, and who had twice before recanted. The images found in their possession were thought to belie their professed recantation. The decision on their case has not yet appeared.

On the western frontier of the Szeh-chuen province, some trouble has been experienced from the barbarous tribes adjacent. The governor of that province recommends it to the Emperor to confer upon the best disposed chief an imperial commission and a seal of office, that he may take part with the Chinese against the other chieftains.

* It was the custom in the time of Confucius to inter the image of an attendant in the grave of a deceased relative. Some were made to move by machinery, that they might be as like a living person as possible.

The maritime ports of Keang-nan are ordered to build twelve sail of war vessels for the coast of Shan-tung. The governor of Keang-nan states, that he finds it difficult to procure within his jurisdiction a sufficient quantity of timber fit for the purpose.

REGULATION OF THE PRESS IN CHINA.

From the great number of persons in China devoted to letters, as the road to preferment and honors in the state, the press, since its invention in the 10th century, may be said to have been fertile. The number of books printed and reprinted, being all in the native language, are perhaps as numerous as in any country of the world. But China has always been subject to an absolute monarchy. The press has not been free. And not only in politics has it been restricted, but on some occasions also respecting the philosophy to be promulgated. The authority does not appear to have been at any time in the hands of monks, or religionists of any description, but man is the same under every variety of external profession.

The histories of China have generally been edited by the governments; and all their histories have emanated from themselves, from which it is natural to expect great partiality.

The late Emperor Kien-lung put several persons to death for some things which they published;* and the Peking gazette of May, 1818, contains a notification of his majesty's displeasure against the compilers of the history of the last dynasty. They were writing in obedience to the imperial order, and had ventured to insert, at the close of the Ming dynasty, something complimentary to the reigning family.

The emperor is vexed to see any thing respecting his own family blended with accounts of the fallen fortunes of the house of Ming, and he has sentenced to banishment those who presumed, without asking his advice, to insert their flatteries in such an inauspicious place.

A correspondent of the *Gleaner* asserts, that modern books in China indicate no effort of the human intellect to enlarge the sphere of knowledge: they are mostly voluminous compilations made in obedience to the commands of the sovereign, or the collectanea of industrious individuals; they are productions of the hand, rather than of the mind. The authors have little more merit than that of being laborious transcribers.

* A Keu-jin graduate suffered for some expression contained in his prize essay. It is said of him that he wrote verses on his way to the place of execution.

Topography tediously minute; commentaries on the ancient books, and which have been a thousand times repeated; prize essays of the successful candidates at the triennial examinations; scraps of poetry, and occasional novels of a very inferior description, with corrupting ballads similar to those common in Europe, are the chief of their productions. In science and natural history the Chinese press seems at a stand.

LEWDNESS AND MURDER.

Yin-kin-shah; i. e. "*Lewdness is allied to murder.*"

Peking, March 30, 1818.—The truth of this is often clearly proved; lewdness is allied to disease, to beggary, to disgrace, and to murder. It is (says the Chinese proverb) "the chief of all vices." The conjugal relation and a virtuous family constitutes the fairest scene on earth; but the first of human blessings, when perverted by a weak or wicked creature, becomes the greatest curse.

The following case has been reported by one of the ministers to the emperor, in the gazette of this day.

A native of the province of Hoo-pih has repaired to the capital, and laid before our board the following very heinous case, which if true requires the severest punishment.

Téen-chaou, a priest of the buddha sect, had for some time maintained an adulterous intercourse with Lin, the wife of another man. Subsequently Meaou-léen, a pupil of the above-mentioned priest, entered on a similar intercourse with the same woman, which induced a contest between the said two persons for the preference. This contest occasioned the expulsion of the younger man from the neighbourhood, and he in revenge, meeting with the elder one, murdered him. An appeal was made to the local magistrate, who for some clandestine reason did not apprehend the young priest, but, under pretence of doing something in the case, took into custody several of the neighbours as witnesses, and kept them so long under such harsh treatment, as caused the death of seven of them.

The complainant, finding it impossible to obtain redress in the province of Hoo-pin, has taken a long and fatiguing journey to the capital to seek justice there.

See the miserable consequences of unrestrained passionate and self-imposed celibacy!

INSTANCES OF LONGEVITY.

The Peking gazette mentions, that Fang, the viceroy of Chih-le, has reported to the emperor that in Ting-chow there lives an old man, named Wang-tug-ke, who has

personally waited on his father, his grandfather, and his great grandfather; he is now 83 years of age; has five sons, eight grandsons, five great grandsons, and one great great grandson: having thus witnessed eight generations, five of whom are now living with him. He also reported, that in the district of T'een-tsin there is a scholar named Chin-wang-chow, who is about to obtain the ninth rank; he is now 92 years of age, has two sons, eight grandsons, nine great grandsons, and one great great grandson: also that in the district of T'een-guan there is a man named Wang-yu-tsang, who is 78 years of age, has three sons, two grandsons, eight great grandsons, and one great great grandson: these have all five generations living with them. All these circumstances have been clearly investigated in their proper districts, and proofs of them collected. The gentleman who reports these instances of longevity to the emperor, in the close of his report attributes it to the benevolence, goodness, and justice exercised by his majesty, and the universal tranquillity which now prevails.

Chin, the Foo-yuen of Shan-tung, has also reported to his majesty, that at Show-wang, in the district of Tsing-sau, there is an old person, named Le-kin-ching, who was born in the 57th year of Kang-he (A. D. 1718), that he is now 100 years of age, and is surrounded by his grandsons and great grandsons, of which sufficient proof has been given by his relations and neighbours, to which is added the testimony of the governor of the district where he resides. The Foo-yuen adds, that he has himself examined this aged person, and finds him to be a quiet and peaceable subject, inculcating the duties of filial piety and friendship on his family, cultivating the fields, and digging wells: he has lived under the benevolent auspices of four successive monarchs; he supports himself in walking with a stick, and delights in feeding his great grandson, who is yet a babe. This report likewise concludes with congratulations addressed to his majesty, and wishes that his reign of tranquillity, in which persons arrive to so great an age, may long continue.

CURSORY REMARKS ON BOARD THE FRIENDSHIP.

EXTRACT, No. IX.

(Continued from p. 456.)

On the 6th of August, in the evening, we came to a place called Saint John's Island, where we anchored for the night. On the next morning a Malay boat came alongside, with three fine turtles, and a quantity of fish fresh caught, as well as some which had been dried in the sun. The captain purchased all they had with dollars, for the persons in the boat would take nothing else in regular barter. The turtle might weigh about two hundred to two hundred and fifty pounds each, and the three cost only five dollars and some spirits, the latter of which they seemed to prize highly.

We now left the straits of Singapore and entered the straits of Malacca, having the great Island of Sumatra on the left, and the very southernmost extremity of the continent of Asia, called the Peninsula of Malacca, on our right. Our only interruption, on passing these straits in the day, arose from very hard squalls, with much rain, thunder and lightning. These squalls generally lasted about an hour. We always anchored and furled the sails when the squall was seen approaching, and enjoyed a most agreeable change after it had ceased, as the thermometer would fall from ninety to eighty and seventy-five degrees. I may here remark, that notwithstanding the difference

of climate we had hitherto experienced, our seamen were all healthy, a circumstance perhaps which may be chiefly attributed to the large supply of fine pigs we got at Norfolk Island. This enabled them to have a fresh meat three times per week, and they were constantly at full allowance of water.

In the afternoon of the 9th, we had again the satisfaction of holding a place where civilized inhabitants of our country lived; this was the town of Malacca, which, with the city, had a very fine appearance as the ship entered the roads. We found lying here the ship Commerce, Capt. Lane, who with his purser, Mr. Edward Brightman, a young man of colour, came on board as soon as the ship anchored; he made many inquiries as to where we had procured the spices, &c. These questions our captain did not think proper to answer; but the purser, Mr. Brightman, who understood the language of our lascars, was more successful, as they told him all they knew, and his ship was employed in the Malay trade.

The next morning the captain went on shore, to wait upon Col. Aldwell Taylor, the commandant at this place, who no sooner understood that I was on board, than he came off to invite me on shore. He would take no denial, and informed

me that Mrs. Taylor had apartments at the castle quite at my service. There was here no alternative; I soon packed up a few necessaries, and accompanied my husband and the colonel on shore. On landing I could make no immediate observations, being hurried into a palanquin, and shut up to avoid the heat of the sun. This mode of conveyance was indeed a great novelty to me, being the first of the kind I had seen; however, I was not so closely shut up as to preclude me from observing the shops and houses as we passed. They mostly appeared built of wood, having three, and some four stories, and reminded me of the Dutch houses at the Cape, the windows and doors being painted green, and having a similar external appearance. In the shops were plenty of sugar-canes, and all kinds of tropical fruits. We soon approached, however, and entered the castle-gates, where I was received by Mrs. Taylor in the most polite and friendly way; her pleasing manners, affability, and ease, very soon convinced me I was welcome. There was another lady with her, a Mrs. Butler, a distant relation, whose husband was a merchant, and formerly commanded a ship in the country trade. There was a small party engaged to dine at the castle that evening, where for the first time I saw and wondered at the eastern manners and style of living. The suite of apartments were lofty and spacious, and the table was covered with a profusion of delicate viands; after which, the finest fruits were served, the different names and properties of which were pointed out by our kind entertainer. Amongst these the mangosteen is, I think, without exception, the most delicious and finest flavoured fruit I ever tasted; it is about the size of an apple; the part to be eaten is enclosed in a thick dark brown rind, and when opened, it shews five or six white jelly-like fibres, resembling the small quarters of an orange. The pine-apples were very large, and well flavoured; we had also mangoes and guavers, with the custard-apple; the latter, about the size of a large orange, with a rough grey coat outside; when ripe it appears to burst the skin, and exhibits a thick cream-coloured substance. It is eaten with a tea-spoon, and the hard black seeds, which it is mixed with, rejected. Many persons are extremely partial to this fruit, but I must confess it was no favourite of mine; we also had several kinds of oranges and lichees, originally transplanted from China. The latter is a very delicious fruit, a kind of pulp covered over a hard kernel, and a rough coat formed an exterior covering to the whole, about the size of a walnut. We had also the pumblenose, or, as they are called in the West-Indies, chaddock;

they are a fine cooling fruit, about the size of a cocoa-nut, and resemble the orange in colour: a still greater variety of others, the names of which I have forgotten. After dinner the gentlemen joined the ladies at tea in the drawing-room; cards were then introduced, and the evening passed away most pleasantly. My long absence from female society acted as a charm upon my spirits, and made me meet it with a double relish. I was informed at parting with Mrs. T. that a horse would be ready for my husband at daylight next morning, and that the colonel would drive me out in his curriole, to see the place before the sun rose too high, as it was only early in the morning that this could be accomplished. I thanked my polite hostess for her information, and next morning was ready to attend. We had a most delightful drive round the environs of the town. Passing the Chinese burial ground, and through the street where those people reside, I was surprised to observe a long chest, finely carved and ornamented, at each door of the Chinese houses. These the colonel told me were their coffins, and that as soon as a China-man saved money enough he then procured a coffin for himself, and generally slept upon the lid. He also informed me that a poor fellow had been lately murdered, while thus asleep upon his coffin, by a mad Malay, who had ran a-muck, or, in other words, had lost all his money and other property by gambling, and then given himself up to despair. The Malays on such occasions often indulge in an intoxicating drug called bang, mixed with opium, and the operation of which causes raging madness. In this state they determine to stab, with their kresse or dagger (a weapon no Malay is without) every living creature that falls in their way, after first having sacrificed, if possible, the person who had gained their property. The old invented story, however, about the upas-tree being possessed of a gum of a deadly poisonous nature, is nothing else than a scare-crow to keep European nations from smelling out the Dutch spices. It is well known that no grass will grow under the clove-tree, but the Malay kresse may be poisoned in various ways. Independently of this fictitious gum, the colonel told me that such scenes frequently occurred in the interior of the country; and when known to take place, a high price was offered to the first man who could dispatch the demon, for in this light they certainly deserve to be viewed; but we cannot marvel much at such atrocities taking place amongst these savage people, when, alas! but too many such instances occur amongst our own countrymen, after bad fortune at the gambling-table. There is but little difference (in my humble opi-

alou) between him who shoots his friend in a duel, and afterwards destroys himself, and the mad Malay who runs amuck, and always ends in self-destruction, if not overtaken.

Before we returned to the castle, the sun became so very warm as to render the shade not a little grateful. We breakfasted at a pleasant retreat on a hill within the boundary of the fort, and from whence we had a fine extensive view of the surrounding country; we commanded also a view of the shipping in the roads, and the lofty mountains on the island of Sumatra. Notwithstanding its proximity to the equator, being in lat. about two deg. north, the verdure and foliage are ever green. Near the mount is an old church, which was built by the Portuguese upwards of two centuries ago, and might still be preserved at a small expense. Perhaps, however, the settlement may be given back to our Dutch friends, should a peace take place; in which case they should advance the needful for this purpose, but at present there is really danger, in walking across the slab floor, of the vaults underneath giving way. On these stones are many memorials of Europeans, formerly resident, and whose remains are interred here. After breakfast we again descended to the castle, but on the way were detained to look at a reservoir of water, which contained many gold and silver fish, which eat from the hand. I felt much indebted to Mrs. T. who took great pains to let me see every thing worth notice within the fort. It will be matter of regret should they ever demolish the strong walls of this secure retreat; it was frequently, however, the subject of conversation, that orders were expected from home to blow up the works.

The commandant accompanied my husband off to the ship this afternoon; and amongst other things, very much admired a fine bull-dog we had on board, the very sight of which struck terror into the Malays; but he was docile and harmless, unless very much provoked. I cannot help travelling back to Ireland for a short account of this faithful creature's adventures. He had belonged to an industrious blacksmith, who used to do jobs for the ship at the passage of Waterford; the owner had a garden that was not too well defended against depredators, in consequence of which a neighbour's cow entered, and was feasting away upon the cabbages. The blacksmith's son, a boy about fourteen years of age, seeing this, called the dog, who instantly seized her by the nose, and pinned the poor cow down, bellowing out so loud as to arouse all the neighbours, and amongst the rest his master. The dog was soon loosened from his hold, but left the blood stream-

ing from the cow's mouth, the owner of which said the dog should not live; but the blacksmith, well knowing the threat would be put in execution, begged my husband (who happened to be present) to take the dog on board the ship, and save his life. This was complied with, and a guinea given to his master, who shed tears, as well as his son, at parting with the animal: the dog, however, very soon became attached to the captain, who called him *Friends*, and was the same he now presented to Col. Taylor. The latter, highly pleased with the gift, declared that he need fear no mad Malay whilst *Friends* should be with him. The poor animal had been so long on ship board, that when he landed he seemed beside himself; he could not pass a bush without running round and about it several times; rolling on the grass was a great luxury to him: but on the way from the boat to the castle no Malay approached near; they all kept at a respectful distance, some even running into their houses and shutting the doors. These people have a most disgusting custom of chewing the beetle-nut with the chunam, which is a kind of paste prepared like lime from shells; and the better sort keep a slave in constant attendance, with a box, for this purpose. Their teeth are as black as jet, and their mouths and lips as if dyed with a deep red, in consequence of this filthy propensity. They are idle, and very treacherous in their dealings. The Chinese are the only industrious people here; a China-man is, indeed, generally a jack of all trades, and the colonel has several of them in his service as domestics, who act as cooks, gardeners, painters, shoe-makers, and carpenters, all in turn. I was shewn a book of drawings, in which most of the fruits and shrubs of this place were coloured in the most correct and beautiful manner, by a China-man who was then at work in the garden. I think no person of the least observation could mistake a Malay for a China-man, let them dress as they will; and although they appear to have originally sprung from the same stock, they have the same flat cast of countenance, and the larger lineaments are closely similar, the Chinese having at the same time fairer complexions and smaller eyes than the Malays. Some of the gentlemen riding out one morning, attended by the dog "*Friends*," were in a dangerous predicament, passing a large pool or tank of stagnated water, where several buffaloes were cooling themselves, with their heads just above the surface. At sight of the dog, they instantly rose, and pursued the party, leaving poor *Friends* to bring up the rear, who reluctantly was obliged to obey his master, and retreat also. These creatures are

just like swine in the mire, their backs being covered with wet mud, from rolling in the dirty water, which is gratifying to them whenever they can indulge in such a luxury, but no doubt serves also to keep the stinging flies from biting them. They have no hair, only a few bristles on their skins, like those of a pig, but more thinly scattered over the surface of the body; they have a twisted rattan passed through the nostrils, in the shape of a ring, by which they are led when at work. When in a wild state, it is said that no animal, not even the tiger, will attack the buffalo, or if he do, is sure to give up the encounter first. There are numbers of tigers as well as crocodiles at this place, together with very large and venomous snakes, of which many stories were related by the inhabitants.

After spending five most pleasant days with our very kind and hospitable friends, we prepared to go on board, and parted with regret on both sides from several Dutch families, who visited at the castle while we were there, from Col. Taylor and his amiable partner, of whom all agreed in speaking in terms of the highest commendation.

On the 15th of August we sailed from Malacca with a fine breeze; no person on board had to regret touching here. The officers, seamen, and lascars, who were tired of the feathered tribe, sold their birds very well at this place; some fetched as high as ten and twelve dollars each, particularly the luries from Gillolo. The lascars were then rich in money, as well as in many little comforts which the place so plentifully afforded. In the evening we reached Cape Richardo, where we were obliged to anchor and furl all the sails, in consequence of one of those storms of thunder, lightning, and rain, to which I before alluded as prevalent in these latitudes. There we remained all night and next day; passed through that dangerous channel which extends on both sides from the mount called Parcellar, on the Malay side, and some small rocky islands on the Sumatra side, called the Arrowes. Before dark we were reckoned clear of all danger, and the following day saw upon our right the islands called the Sambelongs. We were still, however, annoyed with heavy squalls, but were not, as before, under the necessity of anchoring, having, as the sailors expressed it, more sea room.

On the 17th we saw five sail of ships a-head; this number gave us more confidence than the sight of a single one would have done, and we therefore stood on towards them. One of these proved to be the *Arniston*, Capt. Majoribanks, bound to China: our captain went on board, and learnt from Mr. Jamieson the particulars of the attack made on it by a

privateer at Beencoolen. It appeared that the *Arniston* had just anchored, and the seamen were aloft furling sails; they had no suspicion of the strange ship that was approaching with American colours hoisted; but the privateer no sooner got within gun-shot than she fired her broadside into the Indianman. Not a moment was lost on the other side in getting the people down; when they slipped the cable and followed her; this was of little use, there was no equality between the sailing of the ships, and the privateer made off, no doubt finding herself mistaken in the superior force of the enemy, and the latter concluded that the privateer had taken them for a country ship, manned with lascars. Capt. Majoribanks said that he had landed a detachment of seapoys at Penang, and advised our putting in there, having no doubt but they would be sent to Calcutta with us, and besides a protection, they being all armed, the business would pay the owners of the ships very well. In consequence of this information, it was determined upon to call at the above-mentioned place, it being also reported that the Bay of Bengal was infested with several privateers. The next day we came in sight of Prince of Wales' Island, or Penang, and anchored in the harbour on the 20th of August, saluting Fort Cornwallis with nine guns, which number was returned. The ship had but just anchored, and the sails been secured with all possible expedition, when one of the Sumatra storms came on, with the most tremendous peals of thunder, lightning, and rain; but we were now so accustomed to these visitations, after a passage of thirteen weeks, and running upwards of eighty degrees of longitude within a short distance of the equator, that they had become little alarming to any on board. After this, the captain landed, and repaired to the master attendant's office, whence he was accompanied by Mr. Baird to the government-house, and was introduced to Sir George Leith, the commandant. The offer of the ship to take on the troops to Calcutta was accepted, provided the ship could stay four or five days, to enable them to prepare provisions, water, &c. It was mentioned that there was water enough on board for double the number of men to be conveyed to Calcutta; however, they thought proper to detain us, saying, that as the troops were Hindoos they must fill their own water. Mr. Baird, the master attendant, came on board, and very politely offered us apartments at his house during our stay, which were accepted, and I landed next morning, determined to make good use of my time while we remained. I was anxious to see all that was worth notice at this second Botany Bay, as it was termed by our host, Mr.

B., who had much satire in his disposition and conversation, although in every respect a worthy and honourable character, and had commanded an Indian in the service of the Company many years previous to his appointment to this island. We set off early next morning in gigs to view the waterfall; during our ride we passed for several miles between an avenue of the cocoa-nut and beetle-nut-trees, and many huts or sheds occupied by that industrious race the Chinese, who have charge of the pepper plantations. The supported twig of the pepper plant appeared to me not unlike our hop plants, supported by poles; the pepper hangs in bunches like our currants when green. We were highly regaled with the delightful fragrance of the aromatic shrubs, as we passed to the place under the hill, where we were obliged to dismount and follow our guide along a narrow winding path. In this spot the sun could not be observed at noon-day, so completely were its rays intercepted by the thick foliage of the lofty trees on each side. In many parts it was a thick impenetrable jungle, which had never been entered by man. We heard the noise of the descending waters some time before we came near, a circumstance that roused the imagination, and prepared us for something magnificent. I had provided a pair of thick shoes, understanding that the walk was wet and heavy, particularly near the fall. Notwithstanding our fatigue, however, we were well repaid when we arrived at a certain point near the rocky basin, or natural reservoir, where this grand cascade descends with a roaring noise that entirely drowns the sound of the voice, and obliged us to reserve our admiration and opinions. After we left the spot there was a haze all round the place, caused by the vapour of the falling stream, at the same time so cool as made it unsafe to sit long after our fatiguing walk. As we looked up through the open branch of the trees to the highest source of the dashing element, it had a grand effect upon our minds. It was an imposing spectacle to behold the crystal stream impetuously tumbling over the rocky steep—

“Defying power of man its passage to stem,

“Till with Ocean, the mother, it met.”

The fall is said to be upwards of a hundred feet above where we stood. One of the party had brought a small mirror, which by turning one's back, and looking into the glass in a certain position, presented the alarming appearance of the waters falling upon our heads. Having then rested, and feasted our eyes sufficiently, we thought of satisfying our appetite, which was acknowledged by all to

be pretty keen. We only waited the arrival of the captain, who, to our surprise, was still absent. We knew he could not miss the way, as there was no other path; however he soon joined us, and explained the cause of his delay. Having staid behind to alter the stirrups of his saddle, and left the horse with the man who had charge of the gigs, he advanced alone up the path a considerable way, when he observed a snake coiled, and partly lying in the pathway. This induced him to retreat and make a noise, to frighten it out of his way, but the reptile kept its station; having, however, determined to make a bold push to pass it, if possible, and procured a large branch of a tree, he prepared to strike it while it lay shooting out its forked tongue at every respiration, and coming pretty nigh, he with all his force aimed a blow, which struck it near the head, and repeating the strokes, he made it quite defenceless, and passed on to us. After our refreshment we returned, much gratified with the sight and scenery altogether. As we descended, we saw the snake writhing in agonies, being covered with ants, who were fastened upon it. One of the party soon put it out of its misery, and carried it on to town; we there found that it measured three feet nine inches, and was reckoned of the poisonous kind. There were a sort of leaches amongst the grass, which bit several of the gentlemen on the ankle above the shoe, and made the blood flow; but the bite was so small as not to be perceptible until the blood flowed from it. We returned to George Town about four o'clock next morning; I was honoured by a visit from Lady Leith, with an invitation to dinner on the following day. She appeared about the age of twenty-five, with handsome features, but of a sickly appearance; she said that the settlement was scarcely tolerable, for want of society, and after chatting some time took her leave. In the afternoon, Mr. Baird remarked that there were two of the greatest beauties brought for sale from the Queda shore that ever were seen, and that if I would accompany him after the sun was low he would be happy to shew them, as they were at present placed within his grounds at the water-side. No duty as yet, he added, had been fixed upon for their importation. Accordingly we went towards the jetty, where two of the most horrid monsters that ever met the eye were seen, covered with mud. They were, in fact, two young alligators, with their mouths tied up, and rattans twisted round their legs: one was about ten or eleven feet long, and the other about nine, but so disfigured with mud that we could see nothing of the colour of their bodies; thick scales appeared

near their tails, but we had no opportunity of examining them a second time, as they regained their liberty: it was supposed by some that they had rolled down, as their feet were so secured they could not use them. The next day we waited upon Sir G. and Lady L. at dinner, accompanied by our host, who was also invited. I was rather surprised at not meeting any other ladies at the government house, but was afterwards informed that Lady L. had but recently arrived, and had not formed much intimacy as yet with the ladies of the settlement. To me it was on this account less a relief to be entertained on shore, and less a disappointment that the company soon broke up.

On the 24th, the ship being ready, and the troops embarked, under the command of Lieut. L., of the Company's Bengal army, we prepared for sailing. There were only eighty seapoys, besides followers; but certainly they were the

finest-looking native soldiers I had seen, the lowest in stature exceeded five feet nine inches. Another passenger joined us here, a Mr. F., purser in the navy. Next morning the land-breeze enabled us to leave Penang; we sailed pleasantly for some distance along the shore of Queda, which is covered with wood and verdure, from the water's edge to the summit of the mountains. There were sent on board a number of boxes of a plant called Gamutta, intended for the botanic garden at Calcutta. This tree throws out black fibres from the large leaves near the top, like horse-hair, which is twisted and made into very strong ropes and cables; it is a species of the palm-tree. We had also a pair of large cassawaries, a present from Sir George Leith to Lord Mornington at Calcutta. I purchased a pair of beautiful crown pigeons, which I intended for my friends in England.

(To be continued.)

ON RAISING OPIUM IN GREAT BRITAIN.

AMONG the new resources open to the country is that of raising in England all the foreign productions possible. O Sagacity! time was when thou couldst be content to employ thy powers on seven planets, seven metals, and seven liberal arts and sciences; then thou didst condescend to sit down with the learned, guiding them to the proper application of knowledge, their best instructress. Have the names of our new sciences, and the endless progeny of experiments, frightened thee from the earth? Or hast thou gone to bring back the fugitive *Astrea*? Whether love for mankind, or the fear of being overwhelmed by their treatises on art has caused thy absence, may it be short, Divine Mother of useful invention, as thou art the severe discourager of unprofitable ingenuity.

The attempt to raise opium in England is in many points of view a fertile subject for reflection. If it succeed, we see one of the causes why Commerce should decline after attaining its acme. If every country could raise within itself both its necessities and its luxuries, commerce would expire without any weight to oppress its energies, save the calm air of universal improvement.

It is one of the benefits of importing
Asiatic Journ.—No. 54.

exotic productions, that a high duty can be paid on them as capital sinews of the public revenue, without being sensibly felt by the consumer. The subjects for comparison are, first, the cost of the foreign commodity, including the duty; and secondly, the cost without the duty, balanced against the cost of the same production, sown, gathered and manufactured at home. Suppose, first, the manufactured exotic, after the return to the importer and the duty to government are paid, can be retailed to the consumer cheaper than the same article could be afforded, if raised at home and exempted from duty. In this case the advantages of the foreign country, in the superior fitness of the climate, and in the comparative cheapness of labour, are at the highest degree; and ingenious folly would hardly look for any benefit in cultivating the article at home. Secondly, suppose the commodity can be imported at a price much below the cost of growth and manufacture at home, but that with the augmentation of duty on the imported article, the ultimate price at which the merchant can deliver it in the home market exceeds that at which the home grower could sell with a profit to satisfy him. Here is room for fallacy, in estimating the points and bearings of social

economy, to deceive itself and others. If faith is to be kept with the public creditor, and the respectable attitude of the country among the states of the earth manfully and consistently supported, the revenue must be guarded from defalcation; but to let a part of it be sacrificed as a premium for cultivating an article of commerce, for which nature has given other countries decisive advantages over this, is indirectly to shift the burthen of taxation to some other class of articles, less able to bear it.

Again, if the land to be occupied by poppy plants is to be subtracted from corn fields or esculent gardens, what will be gained by it but a rise in the price of articles of the first necessity? A poor family do not feel the duty paid on a few drops of laudanum: but the slightest rise in the cost of a quatern loaf, or a peck of peas, aggravates the difficulty of the labourer to procure a comfortable maintenance. It would therefore be social policy to lay the same duty on British-grown as on foreign opium.

We insert the following, partly because it contains some valuable notices respecting the natural history of the poppy plant, and the culture of opium in Asia; and partly because it may perhaps contain some useful hints to the growers of opium in Persia and India. But we have already dropped a few of the considerations, which dispose us to think, that it cannot be beneficial to the country to cultivate a plant which requires so much artificial management, and that an equal aid to the revenue should prevent attenuations of the social strength and welfare from being profitable to individuals.

We had almost forgot to mention, that there is an article on the same subject in the *Quarterly Journal of Science and the Arts*, No. XVII., by the Rev. G. Swayne. From the remarks made on the double-bladed instrument proposed by Mr. Young, and on a former essay of Mr. Young in the *Edinburgh Philosophical Journal*, No. II., this paper has the air of very zealous emulation in the project of manufacturing British opium. The double-bladed instrument is thus disposed of. Mr. Swayne has found that *three* incisions in the capsules, to obtain the bleeding juice from the head of the poppy-plant, is generally the number sufficient. "But with

"a double-bladed instrument," says he, "the operator must make either *two* or *four*. Now it happens most unfortunately for the offspring of misapplied ingenuity, that *three* is the number most usually required. *Two* do not divide the fluid sufficiently; *four* divide it too much." One more quotation from Mr. Swayne's paper will shew that he brings a profound degree of science to the subject for experiment, which is conveyed in a dignified style. "The incisions are to be made in any part of the capsule where there is a vacancy, *always horizontally*. For if they were to be made in a vertical direction, or any other approaching to that, the attraction of gravitation, together with that of cohesion, would immediately bring all the fluid to the bottom of the incisions."—How philosophical!

*New Method of cultivating in Great Britain the Papaver Somniferum, and of preparing Opium from it. By John Young, Esq. Fellow of the Royal College of Surgeons, Edinburgh.**

Edinburgh, April 22, 1818.

DEAR SIR :—"The preparing of opium from poppies grown in Britain having engaged the attention of the Society for the Encouragement of Arts, Manufactures, and Commerce, I request you will do me the favour to present to the Society the enclosed account of a new method of collecting opium in this country, and a proposal for improving the present mode of gathering it in the East Indies. The box contains a specimen of the opium, the instruments used for collecting it, and one of the capsules from which I gathered it. I have affixed to the account two certificates respecting the efficacy of the opium.

I am, Sir, &c. JOHN YOUNG.
A. Aiken, Esq. Secretary, &c.

The natural history of opium, and the manner of collecting and preparing it in the East Indies and in Persia, have been fully detailed by Dr. Samuel Crump, in his Inquiry into the Nature and Properties of Opium. He examined the different accounts related by authors, from Dioscorides, Pliny, Kæmper, and many others, till the year 1792, when his very interesting work was completed.

* From the *Transactions of the Society for the Encouragement of Arts, Manufactures, and Commerce*, for 1819. The Gold Isis medal of the Society was conferred on Mr. Young for these communications, and specimens of the instruments are preserved in the Society's Repository.

The preparation of opium in Britain has long been a desideratum. Premiums have been offered by the Society of Arts, and more recently by the Caledonian Horticultural Society. Specimens of British opium have been produced, and proved to be in no degree inferior to the best foreign opium; but it has not yet been ascertained that this valuable drug can be cultivated in Britain with profit to the grower.

The few experiments which have been made were conducted according to the eastern mode. But the temperature, winds, and rain of this climate have hitherto been justly considered as insuperable obstacles. Of these the temperature may be held as the least objectionable, for the large white poppy (*papaver somniferum* of Linnæus) from which foreign opium is obtained, comes to maturity in this climate. But it is further objected, that the high winds beat down the plants, and the rains wash off the opium, before it can be collected, when the eastern mode of gathering it is practised. It has therefore been proposed to cultivate the garden poppy of this country, because it is not so liable to be damaged by wind as the large white poppy.

It is the object of this communication to describe a method by which these obstacles have been completely removed, and to demonstrate from the result of experiment, that opium, superior in quality to the best Turkey opium, can be procured in Britain, in sufficient quantity, not only for home consumption but also for exportation. It is proposed to cultivate the poppy, not only for its opium but also for its oil; and it will appear that a crop of early potatoes may be raised upon the same space of ground with the opium and oil by the same culture, and that such a crop will, in a good season, yield a clear profit of from 50l. to 80l. per acre, allowing 60l. for expenses.

The monopoly of the opium, produced from the culture of the poppy, is the third principal branch of the East-India Company's territorial revenue in India.*

In 1773 the contract of exclusive privilege for providing opium was granted to Meer Munkeer, in preference (as was stated by government) to any one else, because, being the person employed by the gentlemen of Patna in that business, he was the best acquainted with the proper mode of managing it, and would account for any outstanding balances. He was to deliver the Bahar opium at 320 rupees, and the Oude at 350 rupees per maund.

Since that time, the East-India Company's annual revenue upon that article alone has risen from eight to upwards of eighty lacs of rupees, or more than a mil-

lion sterling. By a report, dated East-India House, 29th February 1816, which was at that time laid before parliament, the sale of opium in Bengal for the year 1813-14, amounted to 96,40,729 current rupees, the advances and charges upon which only amounted to 10,77,638 current rupees.

But the opium used in Britain is principally supplied from Turkey. The gross amount of duty upon opium imported into Great Britain in the year 1816, was only £2,651 13s., while the average quantity consumed in Britain is 14,400lbs., which is chargeable with a duty of 8s. 6d. per pound. There are, besides, from 250 to 300 chests of opium imported from Turkey, and lodged in bond warehouses for exportation, each chest containing from 150lbs. to 200lbs. of opium. This statement is from a member of the Turkey Company in London.

As the method of gathering opium, about to be proposed, differs materially from any other hitherto in use, it may be proper to observe, that Mr. Ball, who obtained a premium of fifty guineas from the Society of Arts, collected his opium according to the Bengal method, which is accurately described by Mr. Kerr,† who was an ocular witness, and by A. W. Davis,‡ whose accounts agree with that given by Kämpfer† respecting the mode of collecting opium in Persia. The seeds, according to Mr. Kerr, are sown in quadrangular areas, the intervals of which are formed into aqueducts, for conveying water into each area. The plants are allowed to grow six or eight inches from each other, and are plentifully supplied with water till they are six or eight inches high, when a nutrient compost of dung, ashes, and nitrous earth is laid over the areas. A little before the flowers appear, they are again well watered, till the capsules are half grown, when the watering is stopped, and they begin to collect the opium. This they effect by making, at sunset, two longitudinal incisions from below upwards, without penetrating the cavity, with an instrument that has two points as fine and sharp as a lancet. The incisions are repeated every evening, until each capsule has received six or eight wounds, and they are then allowed to ripen their seeds. The juice which exudes is collected in the morning, and being inspissated to a proper consistence, by working it in an earthen pot in the sun's heat, it is formed into cakes for sale.

In this manner Mr. Ball collected four ounces of opium from one fall and twenty-

* Medical Observations and Inquiries, vol. v. art. 38.

† Transactions of Society of Arts, vol. xvi. p. 273.

‡ *Amanities Exotica*, fasc. 3. obs. 15.

eight square yards of ground, which is at the rate of 22lbs. 8 oz. per acre. But, in another place, he observes, that by a calculation which he made, supposing one poppy growing in one square foot of earth, and producing one grain of opium, more than 50lbs. will be collected from one statute acre of land. But if I take his proposition, and calculate by the rule used by land-measurers, the produce in that case would only be 5lbs. 11 oz. and 1 dr. per acre. If Mr. Ball's assertions with respect to the probable produce had been correct, there can be no doubt that opium would have been prepared in this country to a considerable extent.

It is probable that Mr. Thomas Jones, who was a candidate for the premium offered by the Society of Arts, was misled by the speculations of Mr. Ball. Mr. Jones only collected 21 lbs. 7 oz. of opium from five acres and upwards of poppies, and obtained the premium of 50 guineas for the largest specimen. He collected his opium according to the Bengal method; but some of his poppies, he says, became stunted, and others were entirely destroyed by remarkably dry weather, which continued six weeks from the beginning of May. This may be considered as the reason why he obtained so little from five acres. In another place, he says, the largest quantity which his man, seven children, and himself, were able to procure in one morning, from 5 to 9 o'clock, was one pound and a half. This happened when the dew was remarkably great, and succeeded one of the warmest days of the summer. And as he admits, in another place, that the opium (which appeared upon the heads in a soft ash-coloured substance), when first collected, is, from its union with the dew, much too soft to be formed into a proper consistence; making a proper allowance for the evaporation of its watery part, I conclude that he gathered only in one morning, after a warm day, in the same ratio that they gather opium in the East Indies. They have no rain in India during the season of gathering opium, and Mr. Kerr says, that there one acre of poppies yields 60 lbs. of opium.

These observations, collected from Mr. Jones's paper to the Society of Arts, should be kept in view, as they may help to illustrate one of the objects of this essay, and confirm the superiority of my method of collecting opium in Britain.

Dr. Howison, who was for some time inspector of opium in Bengal, is the only other person, so far as I know, who has given an account of the result of his experiments for making opium in this country. Although he was not the first who collected the milky juice of the poppy in a fluid state, it is supposed he is the first who, in this country, has given the

preference to that mode. Dr. Alston collected the milky juice in the fluid state according to Dioscorides,* and also in the Persian way described by Kæmpfer, from several varieties of the poppy. He also collected the true tear, as he calls it, by cutting off the star from several of the heads, bending them down, and suffering the milk to drop into a tea-cup: yet he says that he collected more by the Persian way than by that described by Dioscorides.

The instrument used by Dr. Howison for wounding the poppy heads, consists of a brass ring, made to fit the middle finger of the operator, in which is fixed a wheel set with lancets, which, when put in motion by drawing the hand along the poppy head, makes with great expedition whatever number of perforations are wanted, each giving out its distinct drop of milk, by which a great surface is afforded both for support and evaporation, and the flowing milk is prevented from running upon the ground, *the unavoidable consequence of the method formerly in use*. And for gathering the opium, he employs a tin flask, flattened at the mouth about half an inch, with which he scrapes off the opium. By means of these instruments Dr. Howison obtained a cake of opium that weighed 8½ oz. and which was collected from a field of poppies measuring about five fells, which is at the rate of 17 lbs. weight of opium per acre.

Dr. Howison's puncturing instrument and collecting flask may certainly be considered as a material improvement upon the Hindoo instruments and he found that they answered his purpose to a certain extent in gathering opium from the garden poppy. But when the unevenness upon the surface of the capsules of the white poppy is considered, it will be found impossible to adapt the mouth of the flask so as to collect the whole of the juice without materially injuring the capsule, and much of the juice would still remain in the interstices of the ridges, which are for the most part found upon the capsules of the white poppy. Besides, the juice very soon acquires a ropiness, and adheres to the mouth of the flask, which must interrupt the gathering, and there is a chance of the juice being spilt by having the flask suspended to the body of the gatherer.

Dr. Howison has stated several objections to the cultivation of the large white poppy in this country, and has given the preference to the double red garden poppy, and its varieties. He says that the white poppy, from its large head and very considerable height, is of all others the most liable to be hurt by winds; and unless they be cultivated in a sheltered situation, few will be found standing when the sea-

* De Papavere sativo et sylvestri, lib. iv. cap. 65, p. 427.

son for gathering the opium arrives. But independent of this, he says, that it never arrives at such perfection in this climate as to yield milk of proper consistence for making good opium, and that the few that do come to afford milk, continue in that state only for a day, and any attempt to bleed them a little sooner or later would be without success.

Mr. Kerr,* however, informs us, that the large white poppy grows in Britain, without care, to be a much stately plant than it does in India with the utmost art; and Dr. Alston,† after commenting upon the controversy, whether opium is got from the white poppy or from the black, concludes that, as a medicine, it is of no consequence whether it be taken from the one or from the other. Dr. Crump also observes that the white variety is to be preferred, as affording opium in greater quantity than any of the rest, and there can be no doubt that this poppy yields the largest and most juicy heads.

Dr. Howison has stated that 200,000lbs. of opium are made annually in Bengal; and notwithstanding all the care that is taken in collecting it, one-third of the crop is lost; but there is reason to believe that the waste is much greater than he supposes. For in whatever way the incisions are made, the milky juice instantly flows in a wasteful stream, and by running upon the ground or upon the leaves, one-third of the crop at least must be lost before the gathering commences in the morning. In this climate, he remarks, where the serene day is often followed by a night of deluging rain, the adoption of the Bengal method would be worse than trusting our fortune to the chance of a lottery.

Although Dr. Howison was convinced that the juice of the poppy undergoes no change in its properties by exposure to the air, further than acquiring a greater consistence from the evaporation of its watery part, he states in another place, that in Bengal, where there is no rain during the opium-gathering season, the custom of allowing the milk to thicken, by remaining for some time on the capsule, is highly judicious. While, in another part of his account, he admitted that that custom is the only reason why they lose one-third of their crop.

Supposing that 200,000lbs. of opium give the East India Company £100,000 sterling annually, by Dr. Howison's account they lose more than £30,000. But were the loss only to amount to half that sum, sufficient importance, it is to be supposed, would be attached to the means by which such a saving could be effected.

Mr. Kerr states, that there are about

600,000lbs. of opium annually exported from the Ganges, independent of what is consumed in the interior. He also states, that it is frequently mixed with cow-dung, with the extract obtained by boiling the plants, and with other additions which are kept secret. It is, indeed, frequently so much adulterated, that considerable quantities are burnt at Calcutta by order of the government.

In the summer of 1817, I cultivated a small field of poppies, containing about 20,000 plants of the *Papaver somniferum* of Linnæus, out of which I selected two beds, measuring one fall and fourteen square yards, for the purpose of ascertaining what quantity of opium it would produce. I collected the opium from that part selected for the experiment myself, while the rest of the crop was gathered by the people I employed. I collected as much of the milky juice as was equal to one drachm of solid opium in the space of an hour; but as my professional avocations prevented me from regularly superintending the people at work, they did not gather so much as I expected. I ascertained, however, that they could gather at the rate of one drachm in the hour.

I had my poppies sown in three different ways. The first broad-cast upon beds three feet wide with an alley between, and thinned out to the distance of four and five inches, when the plants were about two inches high above the ground. The second on beds three feet wide, in rows, six rows to a bed, and six inches between the plants. The third on the spaces between rows of asparagus, two rows of poppies on each space, eight inches between each row, and six inches between the plants; two feet four inches between each double row of poppies being occupied by the asparagus.

The first produced only one capsule, the second two, and the third three capsules per plant.

Having ascertained that the white poppy, when cultivated upon the wide drill plan that I have adopted, not only yields more capsules, but much larger ones than when cultivated in the broad-cast way, or in close rows; it is evident there must be a great saving of labour, for it will take as much time to gather the juice from a small head, as it would do to collect three times the quantity of juice from a large head.

The plants between the asparagus rows having more room to grow, had not only more capsules, but they were much larger than those sown broad-cast, or in beds in close rows; and as early potatoes, cultivated in a piece of ground adjoining my crop, were sold for a high price before my plants began to flower, I proposed the following year to have, by this mode of

* Edin. Med. Essays, vol. v. p. 103.

† Lond. Med. Observ. vol. v. p. 321.

culture, the same quantity of opium with a crop of early potatoes, as I obtained from an equal measurement of ground where there was nothing but poppies.

Accordingly, in 1818, I selected a piece of ground in the highest state of cultivation, well manured with horse-dung, in which I planted early potatoes, in rows four feet wide. Furrows were first drawn; in these furrows the dung was laid; then the sets were dropped on the dung, about nine inches asunder, and covered by the hoe. The potatoes were planted the first week of February; and the poppies were sown about the middle of April, on the middle space between the potatoe rows, two rows of poppies on each space, and twelve inches between the rows. When the poppy plants were about two inches above the ground, they were at first thinned out by the hoe, and afterwards by the fingers, to the distance of eight inches between the plants.

In this manner I raised a crop of early potatoes equal to thirty-six bolls per acre. Although the potatoes will be ready for immediate use before the gathering of opium commences, the whole crop will not be entirely ripe for lifting till after the opium is collected. The early potatoe gives out but a small stem; but where the soil is rich, some of them may spread in the areas; yet they can be easily pushed over to one side, so as to allow the opium gatherers to walk along the areas without trampling upon them.

The distance between the poppy plants being wider than last year, upon an average they produced four full grown capsules each, and some of them produced seven or eight capsules; and I gathered this season at the rate of two drachms of solid opium in one hour, while by the same method of gathering I could not collect more than one drachm in the same time last year.

Supposing one acre had been cultivated in the same manner as that piece of ground on which my experiment was made, the produce in that case would have been equal to 57 lb. 9 oz. 4 dr. and 48 gr. of solid opium, which is just twice as much as I collected the year before. But the season of 1818 being so much more favourable than the preceding year, will in a great measure account for the success of this experiment. Therefore the quantity of opium that may be collected depends greatly upon the season; yet the comparative view of the result of the experiment made in 1817, although the season was extremely unfavourable, is sufficient to prove that my method of extracting and gathering opium has a decided advantage over any other that has been recommended.

As my poppies were sown about the

middle of April, they were ready for bleeding about the middle of July.

The instrument which I used for making the incisions consisted of two convex-edged scalpels, the blades of which were covered with sealing-wax, except about one-sixteenth part of an inch of the edge, and being wound round the handles with waxed thread, the two were fastened together with other thread twisted round them, and thus held at the distance of about half an inch between each blade. It is obvious that the blades are covered with sealing wax for the purpose of preventing the knife from penetrating the cavity of the capsules; and it can be easily removed and applied again, when the knives require to be sharpened; or the blades may be mounted with a metal sheath or guard for this purpose.

With this instrument I make one or more double incisions, according to the size of the head, at first longitudinally, and afterwards obliquely upwards from the stalk.

When the capsule is sufficiently scarified in the manner described, I then cut off, with a sharp scalpel, the capitellum or star, with a thin slice of the external rind round it; and by this last incision I obtain more juice than from a scarification upon the side of the head.

It is my method of gathering the milky juice of the poppy in the fluid state, that differs materially from any other that has been used, and it is on that account that I have been more successful than any other that has tried the experiment.

In my communication to Dr. Duncan relative to *Lactucarium*, or lettuce-opium, published in the second edition of his *Observations on Pulmonary Consumption*, I proposed to gather the opium by means of a sponge. But when I began to collect opium in that way, I soon found that it would not do; for although the sponge removes the juice more effectually than the flask proposed by Dr. Howison, it cannot be again entirely expressed, because the sponge decomposes or separates the component principles of the milky juice, and the resinous part adheres to the sponge, and soon clogs its pores. I therefore adopted the use of a small common hair brush used by painters, and known to the trade by the name of sash-tool, which answers the purpose most completely, and with which I gathered the milky juice, even though some of the plants were laid by wind and rain, as well as if they had been standing erect. I used a camel-hair brush, but found the same objection to it as to the sponge. The common sash-tool, rounded a little at the point, without being ground, is that which I prefer.

For the sake of experiment, I exposed

myself one morning to a shower of rain for half an hour, while making the incisions and gathering the opium, and succeeded as well as when there was no rain, without any other inconvenience than being wet, and having an additional quantity of water with the opium.

When the brush is sufficiently charged with juice, I scrape it off upon the slip of tin, fixed in the mouth of a tin flask, fastened to the breast of the gatherer by straps, and capable of holding more than a day's gathering.

The gatherers follow the bleeders immediately. One bleeder will occupy two gatherers, and if he be very expert at using the knife, he may keep three gatherers constantly employed. When I performed both operations myself, I held the knife between the thumb, fore, and middle fingers, and the brush between the ring and little fingers of the right hand, while I held the poppy by the stalk with the left hand.

The juice is afterwards formed into cakes or balls by spontaneous evaporation in shallow earthen dishes, placed in a close room, stirring it occasionally during the evaporation of its watery part, to be afterwards kept in bladders.

The operation for gathering cannot be repeated with advantage oftener than three times a-week, upon the same capsules, for no more juice will flow from one wound than what may be collected immediately, and a certain time must elapse before the plant forms more juice. But it is evident a number of hands may be kept constantly employed upon a large field, till the plants cease to give out juice.

One acre will keep twelve gatherers and six cutters constantly employed for thirty days. That number can only gather a third part of an acre in one day, and by the time they have gone through the crop, the capsules at that place where they began to gather will be ready for the operation being repeated. So that when the milky juice ceases to flow, five operations, as already described, will have been made upon each capsule.

Supposing twelve gatherers to work ten hours in the day, and that each gathers two ounces and a half, or as much of the juice as will make that quantity of solid opium; in thirty days they will gather fifty-six pounds of opium from one acre.

One acre of poppies, cultivated according to my method, will yield 1000lb. of seed, and this quantity of seed will give by expression 375 lb. of oil.

Although the produce of such a crop has not yet been clearly ascertained upon a large scale, the following may be taken as the estimate of one acre, from what has actually been produced in my experiment.

Estimated value of the produce of 1 acre.

	£.	s.	d.
56 lb. opium, at 36s. ..	100	16	0
36 bolls early potatoes, at 24s. ..	43	4	0
250 lb. of oil, cold drawn, at 1s. 6d.	18	15	0
125 lb. ditto, warm, at 6d. ..	3	2	6
500 oil cakes, at 18s. per 100 ..	4	10	0

	170	7	6
Expenses	60	0	0

Total of profit ..	110	7	6
--------------------	-----	---	---

Or it may be taken this way:

56 lb. opium, at 17s. 6d. ..	49	0	0
36 bolls of potatoes, at 24s. ..	43	4	0
250 lb. of oil, cold drawn, at 1s. 6d.	18	15	0
125 lb. ditto, warm, at 6d. ..	3	2	6
500 oil cakes, at 18s. per 100 ..	4	10	0

	118	11	6
Expenses	60	0	0

Profit	58	11	6
--------------	----	----	---

Opium costs the wholesale druggist in London at this time (May 1819) 17s. 6d. per pound, which with a duty of 8s. 8d. per pound, makes it 14. 6s. 6d., and they charge the apothecaries 36s. per pound, which is the present London price of the article. The London price of opium varies so much, that about twelve years ago it was as high as 84s. per pound, and it seldom falls so low as 24s.

If the crop can be got off the ground by the middle of August, it is proposed to have a second crop of potatoes or turnips, which will give, it is supposed, about 30%. more.

Comparative View of the Experiments of Messrs. Ball, Howison, and Young, for ascertaining what Quantity of Opium might be prepared in Britain.

	lb.	oz.	dr.	gr.
Mr. Ball, from 576 square feet, or one fall and 28 sq. yds., obtained about	0	4	0	0
Dr. Howison from about five falls obtained	0	8	4	0
In 1817, from one fall and 14 sq. yds. containing 1800 plants, I obtained ..	0	4	0	0
According to Mr. Ball's method, one fall produced 2 oz. 2 dr. or per acre	22	8	0	0
According to Dr. Howison's method, one fall produced 1 oz. 5 dr. and 36 gr. or per acre	17	0	0	0
By my method, one fall produced 2 oz. 7 dr. 2 gr. and two-fifths, or per acre	28	12	6	24
In 1818, from one fall I obtained 5 oz. 6 dr. 4 gr. or per acre	57	9	4	48

CERTIFICATES.

Edinburgh, Dec. 22, 1817.

Dear Sir:—During the course of last summer I repeatedly visited your plantation of poppies, for the manufacture of opium, in the neighbourhood of Edinburgh.

I admired very much the method that was followed for collecting the opium from the plants; for, by your plan, the very great inconvenience, which arises from the unsteadiness of our climate, if the Bengal method of collection, recommended by Dr. Howison in the Memoirs of the Caledonian Horticultural Society, be adopted, is completely obviated.

I have lately prescribed your opium to many different patients, both in private and hospital practice, with the best effects. I have particularly prescribed what you put into my hands to several patients in the clinical wards of the Royal Infirmary, and, as I was inclined to infer from its appearance, I have found it remarkably

efficacious, in no degree inferior to the best Turkey opium. I have, therefore, no doubt in considering your plan as an improvement in the arts, which may be adopted with great advantage in Britain.

I am, Sir, &c.

ANDREW DUNCAN, Sen. M.D.P.

Physician, Edin.

John Young, Esq. Surg. Edin.

Royal Infirmary, Edinburgh,

April 20, 1818.

Dear Sir:—During the last year I have frequently administered the opium made by you to patients in the Royal Infirmary, and it gives me much pleasure to report to you, that I have found it produce the same effects as the best foreign preparation of the medicine, and I think that a smaller quantity is necessary than of the foreign opium. I am, Sir, &c.

A. GILLESPIE.

A SUBSCRIBER.

London, 21st April 1820.

DISCOVERY OF A NEW ISLAND OFF CAPE HORN.

Buenos Ayres, Jan. 7.

A NEW island has been discovered off Cape Horn, in lat. 61 deg. long. 55 deg., by the ship William, on a voyage from Monte Video for Valparaiso. The same ship having been dispatched by Capt. Sheriff, of the *Andromache* frigate, to

survey the coast, had explored it for 200 miles. The captain went ashore, found it covered with snow, and uninhabited. Abundance of seals and whales were found in its neighbourhood. He has named the island *New Shetland*.

NAUTICAL NOTICES.

A LETTER from Lieut. John Lamb, R.N., commander of the ship *Baring*, addressed to Capt. Portbury, secretary to the marine board, Calcutta, and published in the Government Gazette of that presidency, under date 27 Oct. 1819, communicates the notices numbered I. and II. which follow.

No. I.

Shoals in the track between Port Jackson and Calcutta.—Sir: I deem it proper to make public, through the medium of the marine board, the existence of a mass of reefs and shoals, betwixt the latitudes 20 deg. 40 min. and 21 deg. 50 min. S., and longitudes 158 deg. 15 min. and 159 deg. 30 min. E., by which the *Baring* was embarrassed for three days in her recent passage from Port Jackson. In one part is a sandy island and chain of rocks, some feet above the water: the island is in lat. 21 deg. 24½ min. S., long. 158 deg. 30 min. E., by mean of four chronometers. The reef stretched from it as far as the eye could reach in an E. by E. direction. We continued for the three days in soundings from 18 to 45 fathoms, but breakers were frequently seen; also an immense number of whales. This bank, I imagine, connects "Booly" and "Bampton" shoals; but the dangers in this part of the sea are much more numerous than the Admiralty charts, or any others in my possession, point out.

I have formed a plan of the ship's track amongst the first mentioned shoals,

for transmission to the hydrographer of the Admiralty; should the marine board think it of consequence to the trade betwixt this country and New South Wales, it is at their service to have a copy taken.

No. II.

Another, near Dampier's Strait.—When entering Dampier's Strait, we passed over the tail of a shoal, on which we had our east 5½ fathoms, next no ground at 25 fathoms; there was evidently less water on other parts of the shoal, but circumstances did not permit an examination. After we ran S. by W. 2½ miles, Point Pigot bore S. 71 W., south extreme of an islet near it S. 65 W. at E., part of Waygorree at 41½ W. Distance from that Island about 12 miles. This shoal is not laid down in the Admiralty charts, but is noticed in the Appendix to Horsburgh's work. It is very dangerous, from being in the direct route of ships entering Dampier's Strait from the N. E.

No. III.

Reef between Otaheite and Tongataboo.—The Sydney Gazette of the 31st July contains the following nautical information.

Capt. Beveridge, in his last voyage in the *King George*, discovered a reef on the 13th of March last, at six A.M., between Otaheite and Tongataboo, of which he gives the following account. The reef is of an oval form, extending to the southward 12 miles, in latitude 19 deg. 56 min. S., and longitude 167 deg. 30 min. W.

HOSPITALITY OF THE SULTAN OF THE MALDIVES.

Two brief accounts of the shipwreck of the *Hayston* have already appeared in the *Asiatic Journal*; the first, p. 390, under the head "Calcutta," communicated by the captain to his agents there; and the other, p. 397, under "Ceylon," from the circumstance of the surviving passengers and crew having been carried to Galle in that island. The shipwreck took place on the 20th July, not the 28th, as the first notice represents by an error of the press. A third narrative of the same disaster has been published in the *Madras Gazette* of Oct. 16, containing, with the nautical minutes, some highly interesting particulars respecting the inhabitants of the Maldives. In order to avoid repetition, and to retain the latter, disengaged from the former, we commence our extracts after the occurrence of the shipwreck. This account was drawn out by Captain Schultz (well known in the country service), who was acting as chief officer of the *Hayston*.

On the 21st, at 4 A. M., some of the people called out that they saw land, and I immediately went on the poop to ascertain whether this cheering news was correct. I waited there with anxiety until the day dawned, but my sensations may be perhaps imagined, although they cannot be described, when I found that what the lascars thought to be land, was only an immense ridge of rocks, extending to the northward and southward, as far as the eye could reach, and just even at that time with the water's edge. On this ridge we had struck, and afterwards found that the tide flowed seven feet above the highest part of it.

When the day-light disclosed our situation, we all looked at one another in horrid silence, and I could read in most of the countenances round me that all hopes of deliverance were entirely extinguished. As the sun rose, a lascar bawled from the main top, with the voice of a Stentor, that he saw an island. We directed our telescopes in the way that he pointed, and discerned from the poop a small island, appearing like a long boat, about 15 miles distant, and bearing N. N. E. This we named the Island of Hope. At noon I found the latitude by observation to be 6. 11. N. Nothing was done this day. as every one was exhaust-

ed by the fatigues of the preceding night. On the 22d we had boisterous weather, and an immense surf, washing every thing from the fore-castle aft to the poop. Three men were extremely desirous of quitting the wreck, and of trying to reach the Island of Hope. A small catamaran was accordingly made for them, and about 10 A. M. they took their departure. At noon they were out of sight, but I am sorry to say, that up to the day of quitting the King's Island, which was nearly a month after, we had no intelligence of their having reached any of the islands, and I fear that they have met with a watery grave.

On the 23d the weather was still squally, and prevented all thoughts of endeavouring to quit the vessel. Employed in getting some fresh water out of the hold.

On the 24th the weather had moderated a little, and all hands were employed in sending spars to the reef for the construction of a large raft, sufficient to carry every one. The work went on prosperously, and when the raft was nearly ready, the gunner was sent as a trusty man to guard it, for we suspected that the lascars upon it would otherwise prove treacherous. At this time the water on the reef had risen to about four feet. The gunner had to wade a long way before he could reach the raft, and when he was within twenty yards of it, the lascars cut the painter, and left the poor fellow standing in the water up to his neck. He called to them to return, but to no purpose, they shewing him an axe, and making signs that they would cut him down if he attempted to reach them. When we had thrown our coir cables overboard, they floated towards the rocks, and got entangled on the top of the reef, thus making a place where some footing could be obtained at high water. There the large raft was made, and the gunner contrived to reach it and remain until the evening, when the water fell. He then came down to the surf, and having sent him a rope, we hauled him on board, after he had been about nine hours in the water.

On the 25th, finding that there was not the smallest dependence to be placed on the lascars, and our principal spars being gone, I thought of preparing the smallest jolly-boat (of only 12 feet keel) in such a manner as to get through the surf without being knocked to pieces. Accordingly I had a tarpaulin nailed over her, and then took a coil of

2½ inch rope, with which I lashed her all round fore and aft, to defend her against injury from edges of the rocks in the surf.

On the 25th I had her lowered into the surf, myself and three other persons being on the tarpaulin, but she had no sooner got into the water than the surf upset her, and turned her round like a ball. The people on board looked anxiously to see what had become of us. First of all the boat re-appeared, keel up, and soon after we all rose like as many ducks to the surface, and got hold of the boat. We were then hurried rapidly by the surf towards the rocks, and when we could get a footing, we began to haul our boat to the reef with all our strength. There we examined her carefully, and were happy to find all tight and staunch. While employed in baling her out, the people on board were employed in getting the long-boat out, which was launched into the surf about ten o'clock. She came towards the reef without upsetting, but an immense surf forced her violently upon it, and stove her bottom in. The pinnace was shortly after launched, but was soon upset and bilged.

By this time we had got our little jolly-boat to the other side of the reef, and were waiting anxiously for the long-boat and pinnace, in order to proceed in company in quest of relief. At length we observed a raft coming towards us, on which were Captain Sartorius, a female passenger, young Miss Byrne, the serang, and his brother. We immediately pulled towards them, and learned that both the boats had been stove. As these dreadful tidings were communicated, we observed a Maldivian boat under sail, apparently standing towards us. The serang and his brother were immediately dispatched on the raft to the reef with the cheering news, and taking the others into the jolly-boat, we pulled with all our might towards the stranger; but, alas, what was our grief to find, after having pulled for several hours, that another large reef still separated us from the fishing boat. We had thus been pulling hard all the afternoon, as it were after a phantom, and the night coming on, we resolved to return to the reef, there to await the day-light.

In the meantime the long-boat, full of water, had got adrift, with a woman (the ayah of little Miss Byrne) and her two daughters, girls of ten or twelve years old, together with three men. As nothing had been heard of these people when we left the Maldives, it is to be apprehended that they perished at sea.

Besides these unfortunate people, there were on the reef Mr. Meyer, Master Wu. Byrne, and seven lascars. Young Mr. Byrne had been in the long-boat, but when it got adrift he left it and regained the reef. Mr. Meyer, in the evening,

when the water fell, wishing to get again on board the ship, where there still remained nine persons, had got hold of a rope stretched towards the shore, but his strength failing him, he was dashed against the rocks, and expired, in sight of all, without their being able to render him any assistance. The lascars and young Byrne took the opportunity at low water of collecting a heap of coral, which they piled on the highest part of the reef, and were thus enabled to keep themselves above water during the night.

At dawn of day on the 26th we set off in the jolly-boat towards the island of Hope. At 1 P. M. we had only got within four miles of it, but were then fortunate in desiring three boats under sail standing towards us. About an hour after one of them came alongside, and having boarded her, we found that she was a fishing boat, belonging to a small island called Macundoo, about twenty miles distant. In a short time the other two boats came up, and after having made a number of inquiries, they engaged to proceed towards the wreck, taking our jolly-boat with them, in order to rescue those who were left behind from their perilous situation. We proceeded in the first-mentioned boat to Macundoo, where we arrived at sun-set, oppressed with the fatigue of thirty-six hours' exertion, and extremely anxious for the safety of our fellow-sufferers.

Early on the morning of the 27th Master Byrne and the seven lascars arrived, having been picked up by one of the fishing boats on the preceding evening; and during the forenoon the other boat returned, but to our great grief did not bring a single person, as night having come on, her crew were afraid of remaining any longer near the reef. Every inducement was now held out to the islanders to make them proceed again and rescue the nine persons remaining on board, but nothing could prevail with them, as they alleged that the weather was too boisterous.

When they had taken the persons off the reef, they had contrived to make the small jolly-boat fast to some part of it; it was fortunate that they had done so, as Capt. Birsar with the eight persons remaining, having safely quitted the reef on the morning of the 27th, got on board of her, and finally quitted the scene of our distresses. Not aware that they had done so, we were preparing to leave Macundoo, on the morning of the 28th, for another island, about a day's sail off, where a chief resided, from whom we meant to solicit assistance to relieve our shipmates. As we were stepping into a Maldivian boat, with this intention, about ten A.M. we saw a boat very much like our jolly boat coming round a point of

land, full of people, and we had soon the joyful certainty of finding that they were Capt. Birsay and his companions.

Being thus joined by our shipmates, the most disagreeable of our anxieties ceased, and we took them into the boat with ourselves, leaving the jolly-boat and such presents as we could muster with the friendly inhabitants of Macundoo, who had been so instrumental in our preservation. We then made sail for the next island, the boat's crew catching fish all the way, and at sunset landed on Narre Warre Far, where we were very hospitably received by Ali-Sahed, the governor. There we remained until the 2d of August, when a boat was given us to proceed to the island of Mall, where the Sultan resides.

We started in the morning, and after a considerable run we came to an anchor under the lee of a small island in the evening, as it was dangerous to sail during the night. On the 3d we again set sail at day-light, and went on through a number of islands until sun-set, when we again anchored under a small uninhabited island. This day we spoke another boat, and were informed that two of our people had arrived on some other island on a raft.

On the 4th, in the morning, we continued our passage, and in the afternoon reached Mall, the island where the Sultan resides and holds his court. After having been duly announced, we received permission to land, and were conducted to the house of the collector of his majesty's revenues. There we were entertained with tea and sweetmeats, after which we were conducted to the house of the commander-in-chief, where we again had tea and sweetmeats. The house in which this officer received us had been purposely built for occasions of ceremony, and for the entertainment of visitors. It was very neat and comfortable, containing however only one room, fitted up something in the European style. The family house was large, and situated behind the former. On looking towards it, we always perceived the door a-jar, and a number of female heads pressed near the opening, with their eyes slyly directed towards our group, for the purpose of gratifying the curiosity so natural to the sex in every quarter. From the house of the commander-in-chief we were conducted to that of the Shaw Bundar, where tea and sweetmeats again appeared before us, rather to our annoyance, as we had been sufficiently feasted already. During our progress in this manner, to visit the great officers of government, large crowds surrounded us, and seemed never to be satisfied with gazing at our strange figures. We were indeed well attended during our whole stay on the island, particularly

by the boys, who were however not impertinent, but retired when we wished it, although the novelty of our appearance brought them back again almost immediately.

By the time that we had shared in the hospitality of the Shaw Bundar, a house was prepared for our reception, and at sun-set we took possession. The collector having been ordered by the Sultan to provide us with whatever the place afforded, sent us rice, ghee, tea, sugar, pots and pans, &c. Next morning (August 5th) I took a walk over the town, and inspected the fortifications all round the island. As we remained a fortnight at this place, I had daily the opportunity of making myself acquainted with the inhabitants, and of collecting information respecting the state of society in a quarter so little known.

On the 10th the serang and his brother arrived, and gave us the following statement of their adventures since the 25th July, when we sent them to inform those on the reef of our having seen a Maldivian boat, and pulled for it. They had endeavoured in vain to reach the reef on the raft, as the current was too strong to be stemmed, and they were accordingly swept before it to the south-east. They saw the long-boat adrift, but she was to windward of them, and they could not manage to reach her. They were three nights and four days on the water, and had passed eleven islands before they were able to effect a landing on one. This was uninhabited, and had only two cocoa-nut trees upon it. The serang, although extremely weak, contrived to cut down a cocoa-nut, the water of which he poured into the mouth of his brother, who was nearly senseless. This revived the poor fellow, and he began to eat some of the nut. During the day a fishing-boat passed, and her crew perceiving them, took them on board and conveyed them to their own island. They were well treated there, and afterwards sent at their own request to Mall, where they arrived as above stated.

On the 14th six lascars arrived in a Maldivian boat from another island, and proved to be the treacherous scoundrels who on the 24th July had run away with the large raft. They of course resorted to falsehood to excuse their infamous conduct, pretending that the raft had broken adrift, and carried them away with the current. They were provided for by the Sultan's order, and were to leave Mall in one of the trading boats for Chittagoug, a few days after our departure.

On the 18th we were informed by the collector, that the boat which had been selected to convey us to Point de Galle was ready, and that he had been ordered

by the sultan to send on board a stock of provisions for our voyage. Captain Sartorius begged to know if his majesty would accept of a draft on his agents at Calcutta, for the expenses we had incurred, but the collector replied, that the sultan of the Maldives never suffers shipwrecked persons to be at any expense while they are within his dominions. At the same time he brought a large book, and signified his wish that we would insert that we were ready to embark, in order to let it appear that our departure was according to our own request. We accordingly wrote down that we were perfectly ready to embark, that we begged to return our best thanks both to his majesty and all the principal officers of government, and that we should not fail, on our arrival in Calcutta, to acknowledge publicly our obligation, for the kind attention and hospitality that we had experienced during our stay on the Island of Mall.

At five o'clock in the evening we embarked, having been accompanied to the water-side by all the principal officers of government, who took an affectionate leave of us, and expressed their best wishes for our prosperity. Thus did these good Mussulmen, who had welcomed us so hospitably, continue their attention and kindness to the very last moment, and Bunder Monack, the principal merchant there, came on board to see us under sail.

On the morning of the 19th we took our departure, and on having cleared the island the sails were lowered down, the boat smoked and besprinkled with rose-water, and afterwards the whole crew (amounting to 40) commenced praying

that God would in his goodness grant us a safe and prosperous voyage. They then sat down to a hearty meal, and after that was finished sail was made on the boat, and a course steered for Point de Galle, where we arrived on the evening of the 25th.

On the 26th we landed, and were received in the most hospitable and kind manner by Captain Dickson, the master attendant, who gave us a general invitation to breakfast and dinner during our stay. Mr. Read also, of the firm of Gibson and Read, shewed us the kindest attention; and I should be very ungrateful were I not to mention the handsome conduct of Colonel D. Macdonald, of his Majesty's 19th regiment, particularly shewn to Master Byrne.

To these gentlemen our sincerest thanks are due, for they felt for our misfortunes, and had hearts desirous of relieving them; but I cannot say so much for those on whom our claims might have been considered greater: they shewed the curiosity of the women of Mall, without at all displaying the warm humanity of their husbands. Generous islanders! With you to know and to relieve misfortune was the same thing; and Christians may blush to think, that while they profess a religion which teaches principles of the tenderest benevolence, you have proved to us, at least, that you excel them in the practice of virtue and humanity.

On the 3d of September I left Point de Galle, in the Prince of Orange, Captain Silk, who had handsomely offered me a passage and every assistance that I required, and on the 18th we safely reached the Hooghly.

STATISTICAL VIEW OF THE MALDIVES.

THE following more extended view of the geography and history of these islands, the religion and manners, government and condition of the inhabitants, accompanied the preceding narrative.

Mall, in latitude 4. 20. N., though small in extent, appears to have been selected by the sovereigns of the Maldives for the seat of government on account of its local advantages, being defended by nature on most sides, and capable of having its defences much increased by art. The island is nearly circular and about three miles in circumference, being surrounded naturally by a reef on all sides except the western, and there an artificial reef has been thrown up, connecting the extremities of the great reef, and leaving only two narrow entrances, through which boats can pass, which are shut up by booms when-

ever danger is apprehended from the people of the Laccadives, the ancient foes of the Maldivians. On this surrounding reef the surf is generally high, and all hostile approach is consequently dangerous; but between the reef and the island the water is as smooth as a mill-pond, and generally about an hundred yards broad. Here lay all the trading vessels and fishing boats belonging to the place: the former amounting to seven, and performing voyages at the proper season to Ceylon, the coast, Calcutta, and Chittagong, the fishing boats amounting, perhaps, to fifty or sixty. The tides are irregular, being greatly influenced by the strength of the wind, but rising generally about seven feet.

The island itself is fortified all round except on the eastern side, which is the strongest by nature; and of the different

sides and bastions; ten in number, I counted one hundred pieces of artillery, some of them brass guns, the largest being 12-pounders, and mostly, if not all, Dutch pieces. They are not, however, well mounted or in good order, and the fortifications on which they stand are also going to decay.

The town extends over the whole island, and is remarkably neat and clean, the streets being wide, crossing each other at right angles, and always swept every morning. The entrance into it from boats is by several small gates on the western side, where the sultan also resides in a sort of citadel, having high walls full of loop-holes, and a wet ditch surrounding it about fourteen feet wide. The sultan's house within this place is built of stone, and two stories high, but has a mean appearance, which is not diminished by the chopper roof that covers it. The houses of the town, which are very numerous, are very commodious, with spacious compounds neatly fenced round. They are built generally of wood and mats, some of them entirely of wood.

Two mosques are the buildings most calculated to attract the eye of a stranger, being of considerable size, and having a very respectable appearance. To one of these the sultan always repairs on Friday, for the purposes of devotion, when he is in good health; but while we were there he was mostly unwell, and scarcely quitted his palace. From this cause I was also deprived of the opportunity of examining the citadel, although I had been promised an introduction to his majesty when he found himself able to receive visitors.

All the houses of the town are provided with wells containing excellent water, and several public tanks, puckah built, serve the inhabitants for their ablutions. Various burying-grounds are to be perceived scattered about, in which are many tomb-stones, placed upright, with inscriptions in the language peculiar to the natives, cut in Arabic characters, which they use in writing it.

The government appears to be despotic and hereditary in the family of the sultan, who has all the members of the blood royal living with him in the citadel, in which also his regular troops are quartered, amounting to 150 men. In the exercise of the supreme authority, I was uniformly informed that the rule of the sultans was rather patriarchal than despotic, and the conduct of the present sovereign fully answers the description. Those who are poor are fed and clothed from the royal bounty, and crimes appear to be so rare, and of such trifling magnitude, that punishments are never severe. When an individual is found by his conduct to disturb the general tranquillity, it is reckoned

sufficient to hustle him along the street, and throw sand and water on him, the disgrace attending which serves to check those who are ill-tempered. Where any one may be particularly violent and refractory, a day or two in the stocks is considered adequate to recal him to a proper sense of his duty; and it is said that this severest punishment does not occur above once or twice in ten years. Indeed the inhabitants of Mall, amounting to about 2,000 souls, appear to live exempted from many of the evils to which societies of more refinement and less industry are generally subjected.

The sultan, called Mahomed Aynock Dawn, has a ministry composed of eight chiefs, styled viziers, four of them being of the first or highest class, and the other four inferior in rank. The general or commander-in-chief, Mahomed Dhus Maina, the collector of revenues, Darra Mancufan, and Ahmet Vellane, the shahbander, were three of the first class. With the fourth, who was sick, I was unacquainted, neither did I learn what particular department was under his charge. The other viziers are subordinate to these, and act under their directions as deputies. The vizier, as well as the governors of rank on the most valuable islands, draw no direct emoluments from the treasury, but have islands assigned them for their support while in office. The royal revenues are drawn from all the islands to Mall in cocoa-nuts, tortoise-shell, cowries, &c., and those that are nearest supply the town with fowls, eggs, limes, bread, fruit, plantains, &c. &c. The total number of islands under the sultan is estimated at twelve hundred, which appears certainly very great; however, I should conceive it to be near the truth, as I have found generally what seemed at a little distance to be only one island, to be actually ten or a dozen distinct islets.* I could gather no precise intelligence, to enable me to compute the whole number of inhabitants on the different islands; and it was something curious, when I mentioned to the commander-in-chief that returns of population might be usefully required and obtained from all the governors, to hear him reprobate the idea as one that would be very dangerous, and draw down calamities on the Maldives, such as overtook God's chosen people when David numbered them.

The regular troops of the sultan are, as I have already mentioned, about 150, dressed with red cloth round their bodies, and exercised with muskets and tulwars. They receive each 15 seers of rice per month, besides betel-nut and pawu, and two cloths with two handkerchiefs annually. They don't appear in the present

* See an ancient description of these islands, Asiatic Journ. vol. viii. p. 540.—Ed.

day to have any employment, but live at their ease in the citadel. Formerly, however, it is said that national animosities stirred up as violent and long wars between the inhabitants of the Maldives and Laccadives as ever existed between the English and French: but since the queen of Cannanore, the sovereign of the Laccadives, has been under the British control, these wars have ceased to display their ravages. In time of war I was informed that levies of troops were drawn from all the islands to the scene of action, and mustered in considerable numbers.

The Mahomedan religion is the only one professed among them; and to judge from their words and actions, on commencing any undertaking, they seem to be impressed with a deep sense of piety towards the Almighty. They have no newspapers there, and don't appear to know any thing about the blessings of a free press or the tyranny of a censorship; however, books written in their own language are not uncommon, and they seem to pay great attention to their schools, where the children are taught to read and write. According to their traditions, their ancestors arrived from the Malabar coast some centuries ago. Their language appears peculiar to themselves: at least it has no affinity to any of the Indian languages with which the people of our crew were acquainted. Yet, in consequence of their intercourse with India, many of them speak Hindoostanee, and in that language the conversations in which I engaged were carried on.

On the subject of matrimony their ideas are not shackled by any rigid system of restraint. A plurality of wives is allowed, but no concubines are to be retained by any. This last regulation seems to have arisen from the management of their priests, who have their fees for marrying, generally a rupee from those in affluent circumstances, half a rupee from people of the middle class, and about four annas from others. If this be simony it does not appear to be of deadly weight. Nothing can be done without marriage: but then divorces may be resorted to as easily, and I never could learn that in such cases the husband was considered under an obligation to support his rejected rib. Conscious, however, of being liable to such treatment, the young ladies take care during the season of courtship to extort as many presents as possible from

their ardent lovers. Yet, with customs so free, it did not appear to me that they were often taken advantage of. Divorces were said to be rare, and the men generally contented themselves with two wives at most. Seafaring men, indeed, were frequently known to have wives on more than one island that they were in the habit of visiting, but this was naturally to be expected in conformity to their customs.

The rare occurrence of divorces, and the general enjoyment of conjugal happiness which appeared to distinguish their families, may perhaps be attributed to the exemplary conduct of the women after marriage. They are extremely industrious, and hardly ever to be seen idle, being either employed in spinning or dying cloth, twisting coir, picking cowries, or in the management of their domestic affairs. None seem to consider themselves entitled to indulge in idleness, or to abstain from any work that can forward the interests of their families. They dress very modestly, in garments of cotton and sometimes silk, brought close round the neck with long sleeves, and flowing to the ancles. These gowns they ornament, occasionally, with gold lace round the collar, having ear-rings and necklaces of gold to correspond.

Adultery and fornication are hardly ever known, but when they do occur they are punished in a singular manner. My friend, the chief Vizier, informed me, that a long time ago, five women, convicted of illicit intercourse with the crews of some Arab vessels, were sent each to an uninhabited island, and obliged to remain there for a certain time, left to shift for themselves, and no one was allowed to visit them. When the term of banishment was expired, only one was found alive, and she died a few days after she was brought back. This example had such an effect that no other instance has since been heard of which could demand a similar punishment. The mode of treatment thus specified, although revolting in the last degree to the feelings of people living in refined society, seems much better calculated to check the progress of immorality than even the heaviest damages of an Irish court of justice; and the mild Maldivians, in this single instance, seem to have considered that desperate evils require desperate remedies, while their experience proves that they have not calculated without judgment.

COLLEGE OF FORT ST. GEORGE.

SECOND EXAMINATION FOR 1819.

To the Rt. Hon. Hugh Elliot, Governor in Council, &c. &c. &c.

Rt. hon. Sir:—Para. 1. We have the honor to submit the following classifica-

tions of the students attached to the college of Fort St. George, as the result of the second examination for the year 1819.

RELATIVE MEDALS IN TELOOGOO.

1st Class : Messrs. Gosling and Fullerton.—2d Class : Messrs. Clarke, Hudleston, Horsley, Fetherstone, Browne, McLeane, and Lewin.—3d Class : Messrs. Bruce, Grant, Eden, Stevenson, Dallas, Cheape, and Clementson.

TAMIL.

1st Class ; Messrs. Hudleston.—2d Class : Messrs. Lewin, Gordon, Clementson, Bushby, and Bruce.

PERSIAN.

Messrs. Fullerton, Gordon, Dallas, and Horsley.

HINDOOSTANEE.

Mr. Stevenson.

CARNATAKA.

Messrs. Fetherstone and Eden.

MAHARATA.

Messrs. Gosling, Browne, and Wroughton.

MALAYALEM.

Mr. Clarke.

SANSKRIT.

Mr. McLeane.

GENERAL MERIT.

When attached to the College.

1st Class.	Mr. Hudleston...	10 July	1817
	Goslin	21 April	1819
	Fullerton...	25 Feb.	1818
2d Class,	Mr. Clarke...	23 Sep.	1818
	McLeane ...	24 June	do.
	Lewin.....	26 Jan.	1819
	Gordon	25 Feb.	1818
	Fetherstone..	5 Aug.	do.
	Horsley....	15 April	do.
	Browne	13 Aug.	1817
3d Class.	Mr. Eden.....	23 June	1819
	Stevenson...	5 Aug.	do.
	Dallas.....	23 June	do.
	Bruce.....	15 April	1818
	Clementson..	22 July	1817
	Cheape....	22 Sep.	1819
	Bushby.....	9 July	1818
	Grant	22 do.	do.
	Wroughton..	23 June	1891

2. Mr. Hudleston's acquirements in Tamil are of the best and most valuable kind. He translates into and from Tamil with accuracy and fidelity, and his version into that language is in the pure style and correct idiom of a scholar; he has a more thorough acquaintance with the grammar than is generally attained, and has studied the works of classical authors. Though he does not exhibit great fluency in the colloquial use of the language, this will readily follow, from more frequent intercourse with the people, and greater confidence in his own powers. In Teloo-goo, his name stands below that of three other students; but his progress has been highly satisfactory. His knowledge of that

language is well grounded, and his proficiency in it is quite sufficient for the transaction of public business; we are therefore of opinion that Mr. Hudleston has qualified himself for employment in the public service, and it is most gratifying to us to be enabled to add, that, in leaving the institution, he has established his claim to the honorary reward of 1,000 pagodas, which we accordingly recommend may be conferred upon him.

3. The knowledge which Mr. Gosling and Mr. Fullerton have acquired of Teloo-goo is of the first order. They translate both from and into that language, with facility, propriety, and correctness; they speak it with great ease and accuracy; and though Mr. Fullerton has not of late paid attention to the more abstruse rules of grammar, the attainments of both in Teloo-goo are so eminent, that we should have no hesitation in extending to them the recommendation which we have submitted in favour of Mr. Hudleston, were they qualified to transact public business in a second language.

4. Mr. Gosling in Maharata, and Mr. Fullerton in Persian, stand at the head of their respective classes. Their progress in these languages has been considerable and satisfactory; but is not yet sufficient to justify our recommending their employment in the public service.

5. In bringing these two gentlemen to the notice of the rt. hon. the Governor in Council, as eminently deserving public approbation, it is due to Mr. Gosling to notice, in special terms of commendation, the zeal and rapidity which have marked his studies. Until he joined the institution, both of the languages which he has studied were totally unknown to him; and in the short period of eight months he has acquired a knowledge of one scarcely to be surpassed, while his attainments in the other are most respectable. In recommending that the government may grant to him the increased allowance of 100 pagodas per mensem, we do him but justice in declaring that few have ever so successfully established their claim to that reward.

6. The steady perseverance and success with which Mr. Clarke has pursued his studies in Teloo-goo, and the very considerable advancement he has made in the acquisition of the Malayalem language, merit our highest praise; and we have great pleasure in stating that, by a competent knowledge of two languages, he has entitled himself to our recommendation for the increased allowance of Pagodas 100 per mensem.

7. Mr. McLeane possesses a good knowledge both of Teloo-goo and Sanscrit; his progress, however, during the late term, has not in either been so great as his previous advancement led us to anticipate.

8. Mr. Lewin's progress in Tamil since the last examination has been very considerable. He understands the general meaning of papers of ordinary difficulty, and translates intelligibly into that language. In Teloofoo, the present is his first examination, and we have the satisfaction to state that he has already acquired so considerable a knowledge of that language, that it only requires a closer application to the study of Tamil grammar, to entitle him to our recommendation for an increase of allowance. Further attention to that branch of study can alone enable him to acquire the requisite precision in apprehending Tamil sentences, and translating with accuracy into that language.

9. Mr. Gordon was examined in Tamil and Persian, Mr. Fetherstone in Teloofoo and Carnataca, and Mr. Horsley in Teloofoo and Persian. In the first of the two languages which these gentlemen have respectively studied, the result of their examination was most creditable; their advancement in the study of the second language, which each has commenced, has also been very respectable; and a continuance of their present exertions cannot fail to ensure to them hereafter a substantial mark of public approbation.

10. Although Mr. Browne possesses a considerable knowledge of the Teloofoo language, it is not well grounded; his exercises shew that the meaning of many words has been gathered from the context; and in conversation he evinces an habitual disregard of grammar and precision, though he succeeds in conveying his general meaning. In Maharata he has made a tolerably fair progress, considering the short period of his studying that language.

11. Mr. Eden on the 15th September, Mr. Dallas on the 22d September, and Mr. Stevenson on the 14th October last, respectively made good their claims to the first increase of allowance for proficiency in the Teloofoo language. Mr. Eden and Mr. Stevenson continue to make rapid progress in that language, and the advancement of Mr. Dallas is sufficiently satisfactory. Mr. Dallas has selected Persian as a second language, and his progress in it is respectable. Mr. Eden has commenced the study of the Carnataca, and Mr. Stevenson that of Hindoostance.

12. Mr. Bruce has been attached to the college considerably longer than any of the three gentlemen before mentioned; his knowledge of Teloofoo is consequently superior to theirs, and his progress has been fair during the late term, though not so great as might have been expected from assiduous attention to study. In Tamil he has made some progress since he was last examined.

13. Mr. Clementson was absent from the *Asiatic Journ.*—No. 54.

former examination in consequence of illness, and his progress is stated to have been since impeded, by frequent returns of indisposition. We have, however, the pleasure to state, that he has improved in Tamil since he was last before us. His knowledge of Teloofoo is very limited.

14. Mr. Cheape has studied Teloofoo little more than two months. His knowledge of the grammar is very superior, and he is able already to translate easy sentences from that language; we therefore submit that, as an encouragement to further exertion, the allowance of Pagodas 75 per mensem be granted to that gentleman.

15. It affords us great pleasure to report to government that, since the last examination, Mr. Bushby has applied to study with diligence; he can translate easy papers, can make himself understood on many common subjects, and has paid attention to the construction of the Tamil language. In bringing the favourable result of his examination to the notice of government, we perform a pleasing duty in recommending that the increased allowance of Pagodas 75 per mensem be restored to him.

16. Mr. R. Grant's name in Teloofoo stands above that of many other gentlemen before noticed, but he has been much longer attached to the institution than they have been. We are glad to be now able to state, that the knowledge which Mr. Grant has acquired of this language justifies our recommendation, that the increased allowance of Pagodas 75 per mensem may be granted to him.

17. Mr. Wroughton has not enabled us to report that he has made any progress in the Maharata language, which he selected for his first study; we hope to make more favourable mention of him in our next report.

18. We have formerly remarked on the want of facilities to the study of the regulations, which still continues to be felt; but we have satisfaction in reporting that Mr. Hudleston, Mr. Fullerton, Mr. Browne, Mr. Bruce, Mr. Clarke, and Mr. Fetherstone, were examined, and displayed a creditable knowledge of the judicial code.

19. In conclusion, we have, with much regret, to report, that our inquiries respecting the debts of the junior civil servants have terminated in a result less favorable than on almost any other occasion. The instances in which debt has been incurred are more numerous, and the amount of debt greater than has generally come under our observation. Several of the junior civil servants continue free from debt; but we have found ourselves called upon to require the special attention of others to the reduction of theirs, and to

apprize them, that any further increase of the amount must necessarily become the subject of representation to the rt.hon. the Governor in Council.

20. We enclose a medical certificate of Mr. Davison's indisposition, which prevented his attending the examination. Mr. Blair and Mr. Graham Sterling are absent from the presidency on leave.

We have the honour to be,
Right Honourable Sir,
Your most obedient humble servants,
E. C. GREENWELL,
W. OLIVER,
R. CLARKE,
J. M'KERRELL,
A. D. CAMPBELL,
H. VIVEASH.

College,
27th Dec. 1819.

LITERARY AND PHILOSOPHICAL INTELLIGENCE.

ASIATIC SOCIETY.

On Saturday evening, the 13th Nov. a meeting of the *Asiatic Society* was held at the Society's apartments in Chouringhee, the Marquis of Hastings in the chair.

The committee elected for the present year consists of the Bishop of Calcutta, Sir E. H. East, Colonel Hardwicke, W. B. Bayley, Esq., Vice-presidents. Messrs. G. Swinton, H. Mackenzie, J. Bentley, J. Atkinson, G. J. Gordon, Rev. J. Parson, Rev. Dr. Carey, Dr. Wallich, and Capt. Roebuck, Committee of Papers: Capt. Lockett officiates as secretary during the absence of Mr. Wilson from the presidency.

A letter was read from Dr. M'Culloch, of Baltimore, who some time ago presented to the Society his ingenious Essay on the Aborigines of America. He has been induced to make some enquiries, interesting in the history of the human family, and of especial use in the particular investigation he has long been employed upon, which he has addressed to the members of the Asiatic Society. He conceives it highly desirable to obtain further descriptions, and, if possible, drawings of the *Morias* (Hindce, *murê*) and other monuments to be found in various islands of the Pacific Ocean, particularly those of the Friendly, Society, Sandwich, and Eastern Islands. The island of Tinian, one of the *Marianne Islands* (see *La Perouse*, and subsequent navigators), contains some singular monuments which Dr. M'Culloch says are entirely unknown to him, except from the very brief description given of them by Lord Anson in his voyages.*

The deities worshipped in the islands of the Pacific he recommends as deserving of investigation, no particular account of them having hitherto appeared.

Dr. M'Culloch observes, that General Valancy has stated, in the 27th page of his Irish grammar (Dublin 1781), that the

Persians, instead of intercalating, as is customary, one day every four years, to adjust their years with the course of the sun, they regarded no hours until they amounted to 30 days, which does not take place in less than 120 years. These thirty days were then added to the year (making a year of 13 months), which year was called *Bihreck*. This mode of intercalation is said by Dr. M'Culloch to bear a singular resemblance to the method of the Mexicans, and he is therefore anxious to ascertain, through the medium of the society, whether there are any other parts of an astronomical system to be found among the Persians to which such a mode of intercalation would seem properly to belong.

At the last meeting, Mr. Palmer presented to the society a marine production, called the *Soonge plant*, obtained on the coast of the newly acquired island of Singapore. Colonel Hardwicke, one of the most distinguished naturalists of this country, has favoured the Society with a description of it. He observes, that in the *systema naturæ* of Linnæus, it belongs to the natural class *vermes*, and to the genus *spongia*. In its form it resembles that kind of drinking-cup called a goblet, with a well defined base or root, a cylindrical stem, and a capacious bowl or cup. Its texture is non-elastic, composed of numerous tubes or anastomosing cells; the external surface or epidermis not thicker than the coats of the tubes, and covered with innumerable stellated pores, which under a lens appear to be the mouths of as many vessels, and ramifications of the internal structure. The root is formed of several irregular perpendicular shoots, in their origin apparently cellular, but enlarged by an accumulation of earthy, sandy particles and broken in shells, and of rather a fragile texture. The bowl is circular or sub-conical, with several nodes or protuberances, and covered both within and without with circular pores of various diameter, the mouths of which are closed with fine cottony fibres, radiating from

* The Jesuit Gobien has published a particular history of the Ladrone, or Marian Islands. See also the supplement of *De Brosse*, II, 492, for an ample account of the Ladrone.

the circumference to the centre; and the same fibrous substance extends over the surface of the bowl, giving to it, when viewed under a lens of common powers, a tormentous appearance. The stem is cylindrical, of proportional height and thickness, and of the same cellular substance as the bowl.

The foregoing description is taken from a specimen something larger than the one in the Society's museum, the dimensions being as follow: the greatest diameter of the bowl is, at its brim, 17 inches; the smallest at the bottom $7\frac{1}{2}$, in the middle $12\frac{1}{2}$; the circumference of the stem 17, but near the root is a tumescence increasing it to a larger dimension. The cavity is capable of containing 36 quarts.

Colonel Hardwicke further observes, that in an essay on British sponges by George Montague, Esq., published in the 2d volume of the Transactions of the Wernerian Society, is described a sponge, under this specific denomination of *scypha*, and this sponge in its characters has affinity to the subject here mentioned. The Indian species, however, is gigantic in all its parts, compared with *spongia scypha*, and a more appropriate specific distinction may perhaps be given to this, in denominating it *spongia patera*, the goblet sponge.

Several articles have been selected as presents for the Edinburgh college museum, in conformity with the resolution passed at the last meeting. They will be forwarded by the Marquis of Hastings.*

Some beautiful models in ebony, of the instruments used by the natives of India in manufactures and husbandry were laid before the Society.

Colonel Fitzclarence presented, through the medium of the most noble the President, his Travels through India and Egypt to England.

A copy of *Recherches sur la Découverte de l'Essence de Rose*, par M. Langles, was also received.

The narrative of a journey from Soobat'hoo to Shinké in Chinese Tartary, by Lieut. A. Gerard, of the Bengal infantry, was presented by Mr. Metcalfe, at the desire of Sir David Ochterlony. The journey occupies a period from the 22d of September to the 22d of November, 1818.

* The collection of natural curiosities at the college museum is on the increase, and ere long promises to be one of the most scientific and beautiful in Europe. The classical Zoological cabinet of Dufrenoy of Paris has been purchased for a great sum by the college, and is now on its way to Edinburgh. The sale of Bullock's museum in London was attended by a gentleman on the part of the University, and he is understood to have made purchases to a considerable amount. Every month collections and specimens are pouring into the museum from different parts of the world, as donations by those who feel an interest in the advancement of natural history, and in the Edinburgh museum.

Soobat'hoo lies in lat. $30^{\circ} 58'$ and $77^{\circ} 2'$ and is 4,200 feet above the level of the sea. On the 26th of Sept. Lieut. Gerard reached Gujynde, in Nawar, a small district of Busehur, famous for its numerous iron mines. It contains but few spots fit for cultivation, and the inhabitants, who are miners, live chiefly by their trade in iron. They work the mines only about three months in the year, and commence digging them in March, after the snow has sufficiently melted.

On the 2d of Oct. he pitched his tent on the crest of the Brooang Pass, 15,095 feet above the level of the sea. It is situated in lat. $31^{\circ} 23'$ and long. $78^{\circ} 12'$. The country is secluded, rugged, and barren, and the villages very thinly scattered, not more than one or two occurring in a stage. The inhabitants wear a frock of white blanket, often two fold, reaching down to the knees, and having sleeves, a pair of trowsers and girdle of the same, a cap of black blanket like a bonnet, and shoes, of which the upper part is woollen, and the sole alone leather. The people are very dark and extremely dirty; the villages are generally large, and the houses spacious, and even elegant. They are built of stone or wood, and either slated or flat roofed; the last is most common. The temples of the Deotas (Delties) are magnificent, and adorned with a profusion of ornaments. In Koonawur the crops are extremely poor, and in time of scarcity small pears and horse chestnuts, after being steeped in water to take away their bitterness, are dried and ground into flour. Bears are very numerous, and the dogs are of a large ferocious breed, covered with wool, and generally chained during the day, otherwise it would be dangerous to approach a village. The language differs much from the Hinddee, most of the substantives ending in *ing* and *ung*, and the verbs in *mig* and *nig*.

At Rispé he first saw Lamas, and near that place he passed several tumuli, from 10 to 40 feet in length, 2 broad, and about 4 high. They are constructed of loose stones without cement, and upon their tops are numerous pieces of slate of all shapes and sizes, carved with strange characters. They are called Mané, and are erected over the graves of the Lamas. There are invariably roads on each side of them, and the natives, from some superstitious custom, always leave them on the right hand, and will rather make a circuit of half a mile than pass them on the wrong side.

The course from Brooang to Shipké had been about N. E. Lieut. Gerard arrived at the latter place on the 12th of Oct.

Shipké is a large village in the district of Rongzhoong, under the Deba or governor of Chubrung, a town, or rather

collection of tents, on the left bank of the Sutluj, eight marches to the eastward. The houses are very much scattered, and are built of stone with flat roofs. There are gardens before each, hedged with gooseberries, which give them a neat appearance. Lieut. Gerard and his brother were the first Europeans the inhabitants had ever seen. The Tartars pleased them much; they have none of that ferocity of character so commonly ascribed to them; they have something of the Chinese features, their eyes are small; they go bareheaded even in the coldest weather, and have their hair plaited in a number of folds, ending in a tail two or three feet long. Their dress consists of a garment of blanket, trowsers of striped woollen stuff, resembling tartan, and stockings or boots of red blanket, to which are sewed leather shoes. Most of them wear necklaces, upon which are strung pieces of quartz or bone. They have also knives in brass or silver cases, and all carry iron pipes of the same shape as those used by the labourers at home. The women, whose dress resembles that of the men, literally groan under a load of ornaments, which are mostly of iron or brass, inlaid with silver or tin, and beads round their necks, wrists and ankles, and affixed to almost every part of their clothes. While at Shinkè the Chinese officers, of whom there are several to regulate the affairs of the country, brought to Lieut. Gerard and his brother 16 seers of flour, as a present. A short time afterwards the principal officer showed them a long piece of parchment, written in a character supposed to be Chinese, and said that it was an express order from the Garpan of Garoo, under whose authority the *debas* are, prohibiting strangers from entering the country. He at the same time observed, that Lieut. Gerard had so many people with him (nearly 100) that he could not oppose his progress, but it would cost him his head if he afforded him the means of going on, and therefore he would not supply him with provisions.

The latitude of Shinkè is $31^{\circ} 48'$, the long. $78^{\circ} 48'$. The people are affable and good-natured. Lieut. Gerard exchanged a gold button for a goat, which he took with him to Soobat'hoo. The wool was extremely fine, and almost equal to what is used for the manufacture of shawls. He was informed that the best was procured further to the eastward near Garoo, or Gartop, which is the famous mart for wool, but its fineness seems to depend almost entirely on the elevation and coldness of the climate. At Soobat'hoo, 4,200 feet above the sea, the wool is little better than in the plains of Hindoostan, but it gradually grows finer as you ascend, and in Koonawur, where the villages are more than 8,000 feet

high, it is fit for making coarse shawls. Gartop is said to be 11 marches from Shinkè.

The traders who cross Guntung pass put on so many clothes to defend themselves from the excessive cold, that they can scarcely walk. They wear a long garment with sleeves made of sheep skin with the woolly side inwards, trowsers and stockings of the same material, a kind of rude gloves of very thick woollen stuffs, and caps and shoes of blanket. They likewise occasionally wrap three or four blankets round them, and thus accoutred set out on their perilous journey. No herbage is to be met with for two days. Leh or Leo is the capital of Ladak, and about midway between Cashmeer and Garoo.

The Wangtoo J'hoola, a rope bridge over the Sutluj, consists of 5 or 6 cables close together, upon which is laid half a hollow fir tree, about two feet long, with pegs driven through it to prevent its coming off. From this hangs a loop of 3 or 4 ropes, in which the passenger takes his seat. It is pulled across by two pieces of rotten twine, that from constantly breaking occasions this to be a tedious mode of transporting baggage. The conveyance is a pretty safe one, but greatly alarming to a novice, for the J'hoola is elevated 20 feet above the stream, which runs with great rapidity and a deafening noise.

The Sutluj has a variety of names, being called Sutlooj, Sutroodra, Sumudrung, Sampoo, Langa hing, Kampa, Muksung, and Zung Tee, in different parts of its course. Sutroodra is the most commonly used, by which name it is known from its source to the plains. By the accounts of many people who have travelled along its banks to its source, it issues from lake Rawunrud, called also Rawathud and Lanka, which was confidently said by every body Lieut. Gerard saw that had been there to communicate with Mansurwar, although Mr. Moorcroft could not discover the outlet of the latter lake. The circuit of Rawanrud is represented as seven days' journey, but it is most likely both lakes were included.

But we must abstain from further notice of this interesting and valuable paper, as it will probably be included in the 14th volume of the *Researches* now in the press.

Mr. Wilson presented a copy of his Sanscrit and English Dictionary to the Society.

Several sculptured antiquities were received from Dr. R. Tytler, and amongst them a curious black stone, with three female figures upon it, presented by Major Thomas, of the Bengal Infantry.

A letter was also read from the secretary to the Bombay Literary Society, communicating a resolution, that any member

of the Asiatic Society of Calcutta, who may be occasionally at Bombay, shall have free access to the library.

Dr. Wallich was appointed to act as superintendent to the museum.

The most noble the president proposed Baron de Richemont as an honorary member.

The following gentlemen proposed at the last meeting were unanimously elected members of the Society. Messrs. George Money, David Scott, William Eaton, William Linton, and Capt. Lachlan.

DESCRIPTION OF PASSES IN THE HIMMALYA.

The extract No. 1 is part of a letter from Capt. J. A. H., 10th regt. Calcutta infantry, enclosing No. 2, which was a communication to himself from Lieut. J. D. H. Both relate to the subject of papers which had been read at the Asiatic Society. They were sent for publication to the India Gazette.

No. I.

Extract of a Letter from Capt. J. A. H.

"I have the pleasure of sending you an extract from a letter I have just received from Lieut. H. of the 8th. regt., my companion in the surveys of the Ganges and Jumna within the Himmalya mountains, giving an account of his passage over the great snowy range, between the Jumna and Suttluj rivers, by a pass hitherto unknown to Europeans, at the head of the Roopin river, which is one of the three branches of the Tounse, which you know is a very large river flowing from the south-western face of the Himmalya mountains, and which joins the Jumna near Umbarry in the Doon valley, and loses its name in that of the Jumna, though it is three times the size of the latter stream, which rises at Jumnaoutri, also on the hither face of those mountains, as described in the paper tendered by me to the most noble the Governor General, and presented by him to the Asiatic Society.

Mr. H.'s is a brief, and I am sure a faithful description of the formidable barrier he crossed; if you think it would be acceptable to any of the editors of the journals, it is at their service. You know I was the first European who ever crossed that part of the snowy range which lies between the Baghretti (or Ganges river) and the Suttluj; I did so in June 1816. Having penetrated up the bed of the Suttluj in the rugged province of Kumawr, I found myself to the north of the range, and ascending it, crossed over the crest to the Bassahar district of Swarra or Chohara, descending by the bed of the Andreitic, one of the branches of the Pabur; Mr. H., on the contrary,

went up the bed of the Roopin or Roop Gunga, ascending on the S. W. or hither side, to cross to the Suttluj. The heights and general features of the two passes are nearly the same, except that the scenery in the route Mr. H. took must be grander, as the Roopin is a much larger body of water than the Andreitic; and the general difficulties, particularly that of passing through the snow, are more in October than in June; but, even in the end of that month, the snow fell heavily as I crossed the crest, at 40 minutes past 11 A. M. The passes, you know, always lead over the lowest parts of the snowy range; they are in general about 16,000 feet high, though there is one visited by Capt. Webb, I believe 17,000 feet; those I have seen are always flanked by peaks, which rise 3 or 4,000 feet higher; in some places they may be more or less, but it is not in the vicinity of the passes where the most lofty pinnacles are found.

It may be said that the method of determining altitudes by boiling water is only approximative: that is true; but it is nevertheless capable of some degree of accuracy, indeed a very desirable degree in many cases, as in hollows where no peak of a known altitude is visible, and where barometers are not at hand; and it is very difficult in the rugged paths in the great mountains to keep them in order. With a thermometer of a foot in length, the fourth part of a degree may be easily read off by a magnifying glass; but those of Dr. Woolaston's construction will, I think, completely supersede the use of barometers, as they are capable of great accuracy, and cost little, are easily carried, and little liable to injury. An account of these instruments has appeared in the Philosophical Transactions. I first used this method (but with common thermometers only) in the snowy pass before mentioned, on the 24th June 1816, and before I knew of Dr. Woolaston's improved instrument. I did not then know of its having been resorted to before, but I since found that Saussure had used it on Mont Blanc. Lieut. Herbert and I have frequently compared the differences of altitudes given by the thermometer in this way with those known and determined by geometrical operations, and found the results very satisfactory, within certain limits. Of course geometrical methods are always preferable, where they can be used, and by them Mr. H.'s estimation of the height of the pass will be corrected, by means of the observed angles of elevation, and known heights and distances of the two peaks he mentions. Their altitudes, as well as of a great number of the lofty summits of the Himmalya, are determined trigonometrically, with good instruments, and on just principles, as will be detailed hereafter.

Much has been said and written on the subject of the uncertainty of terrestrial refraction, with very little reason, and apparently with a view to throw discredit on the observations of the altitudes of the Himmalya, and of their comparative heights when compared with those of the Andes and other lofty ranges; as if the same objections, be they well or ill founded, did not apply to all operations of the same kind. But I think that much less uncertainty prevails from the effects of such refraction, than some critics are pleased to suppose. On a mean (and of course generally at comparatively low elevations) Roy, Mudge, Lambton, Maskelyne, Delambre and Mechain, and Le Gendre and others, have found that it is generally from one-tenth to one-twenty-fourth, but nearest to one-twelfth of the subtended arc; and this quantity determined by reciprocal angles of elevation and depression, we have also found, when the visual ray passed through a moist and dense medium, as is the atmosphere of the plains, though the object be high and distant, if the angles are small compared with the arc; but within the mountains, where the air is clear, light, and very dry, one-eighteenth to one-twentieth of the arc is all that can be allowed; and though there the elevations and depressions can seldom or ever be taken at the same instant of time, yet they were taken under circumstances of season and climate not much different, and the arcs were short, compared with the apparent angles' elevation. Thus, by means of small arcs and large angles of elevation, a series of progressive differences of the heights of the stations to within a few miles of the feet of the snowy peaks is obtained, which added together must give the whole height, subject only to the small quantity of error which may arise from the inability of the observer to ascend the sharp and steep pinnacles of the Himmalya, to take the depression of his nearest station; but if it is only 10 or 12 miles, or even double that distance, and the apparent angle of its elevation at the nearest station be 4, 6, or 8 degrees, it matters but little whether the refraction be assumed one-fifteenth or one-twenty-fifth. The heights given by the whole arcs from the station at Seharunpore of the peaks seen at low elevations, and so great distances as from 98 to 154 miles, are of course less satisfactory than those given by the sum of the short arcs, but they have been observed, and will be given compared with the latter. The writer in the *Quarterly Review*, on Capt. Webb's measurements, seems (if I understand him) to consider that the air at the Himmalya is as it were congealed, and consequently a dense medium, occasioning much refraction. I can assure

him, that though it is cold, it is very thin, light and dry; qualities just the reverse of those which have hitherto been supposed to occasion that uncertainty: besides were it so, the same effects would take place on the Andes and the Alps. The instance which the reviewer gives, of an extraordinary refraction observed by the captain of a trading ship, which, he says, caused the apparent rising of the sun, as seen over the level ice in a high northern latitude, to be very erroneous, is by no means applicable to the lofty Himmalya peaks. Even supposing the captain to have been quite correct, it seems strange that our scientific navigators, Cook, Lord Mulgrave, and others, do not, to the best of my remembrance, mention any thing of the kind, at least to so great an amount. The thinness and lightness of the air within the snowy mountains is proved by the barometers; its dryness, from the rapidity with which fluids are evaporated; and its purity and transparency, by the deep blue colour of the sky, and the astonishing lustre of the stars, which does not appear augmented after they suddenly and like flashes rise from behind the white peaks, nor diminish when disappearing instantaneously. This would not be the case if the medium were dense, and the refraction considerable, as we know from experience. I should take up too much were I to give at length my opinion of most part of the paper in the *Quarterly Review* on Capt. Webb's works; both those which profess to be merely approximative, and those later operations where circumstances allowed him to make use of exact methods. The reviewer dwells much on the former; I mean the results only intended and professing to be approximative, founded on route measures in the plains, though taken and with care, they were sufficient in my opinion, for showing the comparative great height of the Himmalya, and they meant no more. On some possible uncertainties in this part of the operation, the reviewer dwells much. Of the later and certain observations of Capt. W. within the mountains, the reviewer only states the results, and takes little notice of the means of obtaining them. If he knew them, this was unfair. But Capt. W. is fully able to take his own part, which I trust he will do, and by a full exposition of his modes of proceeding, to show himself worthy, as he is, of a more enlightened and candid critic.

J. A. H.

Camp, Herapoor, Nov. 9, 1819.

No. II.

Extract of a Letter, dated Wodar, or Cavo, in lat. $31^{\circ} 2'$, on the northern face of the Snowy Range, 1st October, 1819.

"Here we are across the pass, and a

formidable pass it is. Certainly I think nothing more arduous has yet been attempted, and we are the first white faces that have ever been seen on it, I imagine. Water boils at this our cave and bivouac, at 191° $1'$, thermometer 48° $2'$ at 2 P.M.

"I wrote to you from Poojalie, often called Koonara. From thence we went up the Roopin* to Jako, latterly choosing the right branch, which is the lesser, but keeps the name. From Jako we marched to the usual sort of valley (which you know we find at the head of all these Himmalya rivers) surrounded by snowy peaks, and having only a few stunted birch trees for fire-wood. The river expanding in a level bed, smooth as a mill-pond, and most pleasing to look at. From this valley, where water boils at 193° $7'$ (at Whartoot† it boils at 194°) We set out on the 30th September, at 9 h. 46 m. to attempt the arduous task of crossing this snow-bound range. A mile or two brought us to the real head of the river, being one of the most noble cataracts I think I ever beheld. It consists of two falls, each not less than 150 feet, but such bodies of water! At the foot of the upper fall is a snow bed as hard as a rock, a rift in which I measured and found it to be 41 feet deep. It had a little fresh snow on it, which was fast melting. From hence to the ascent of the ridge is steep, and over fresh snow knee deep. On gaining the ridge you go along it for about four miles, the snow varying from knee to middle deep, and in more than one place we found it breast deep. It was too soft, so that I sunk very often up to the middle, which fatigued me much; and had it not been for some refreshments, I think I should not have reached the summit. After this travel I have described, we discovered the wall of the pass rising to the height of 800 feet, and at an acclivity of 35° . It was a tremendous sight certainly. However in the course of an hour or so I got up, and P. with me, and there we stood upon the crest of the Himmalya, at 20 minutes past four, P.M. with a most sublime spectacle. On one side of the fine towering peaks, and distant ranges, and snowy plains, and sky tinged deep blue, by the table-land of Tartary; and on the other a most dreary sight, namely the Bojhies‡ at the bottom of the pass with heavy loads and despairing countenances. The sun fast sinking, the temperature perceptibly falling, a long and dreary three

miles of snow a-head, and, worst of all, time flying, and no exertions making. A pretty picture you will say! a most distressing one to me, for it left me no power to admire or observe the wondrous scenes before me, concerning which all I can say is, that they were most wondrous. It was now half past six, and the fly of the Behoba tent still at the foot of the pass, with other things less worthy of mention. To complete, I was informed that one of the tent lascars was taken ill, and could not proceed. What was to be done? I determined to abandon the baggage, in order to have the invalid brought on, and thus at length all the people were fairly across by sun-set. Fortunately it was a moonlight night, which enabled us to see our way tolerably well, and the decreasing temperature rendered the snow hard and good to walk on, and the declivity was tolerably easy; so that we got through, and arrived here at 7 h. 36 m. P.M., having been 16 hours on our legs, and travelled 12 miles, of which seven was ascent and six snow. Only four of the Bojhies and one sepoy remained behind, exhausted with fatigue; they could not proceed, and were found the next morning by a havildar sent back for them, all in a lump on a rock in the middle of the snow. When they saw him, he says they set up a howl like a pack of dogs. To conclude, we are all safe and sound, not having lost so much as a toe or a finger, which is wonderful, though partly attributable to the care I took in having all the people provided with blanket stockings.

"I am extremely happy in having chosen this new pass, in preference to that above the Pabur, which you first went over in June 1816, and others the following years, for I have got new lights on the subject of the range and the course of the Sutluj and other rivers; also this appears to be the direct road to Shipkee. We have here below us a stream which we brought from the pass, and which, strange to say, runs about E.N.E. or rather E. Is not this odd, and such as you could not have looked for? Notwithstanding the quantity of snow we found, this pass does not appear, I think, above 15,500 feet. Water boils at 187° $3'$ by the long thermometer, and by which all my boilings are made; it, you know, boiled at Saharaungapore at 212° .

3 P.M. The baggage is all up; I promised a rupee for each load, and the people went back and brought them. We have just had a light fall of snow, and altogether it is cold; thermometer 48° . We propose going back to the pass to-morrow morning to look about us, and you shall have a line, giving the result. We are within a march of Singluo, which

* One of the branches of the Tounse river, which, though much larger than the Jumana, loses its name in that of the latter river, which joins it in the Doon valley.

† A mountain fort and trigonometrical station in Coonsaun.

‡ Mountain coolies, who carry loads on their back.

is on the Buspa, and 2 miles from Kamroo.

2d October, same place. Yesterday we halted, as I said, to allow the baggage to come up. We arrived so late on the pass that nothing could be done, and we were distressed on account of our people, which fully occupied our attention. This being the case, we determined to revisit it, and look about us at our leisure, for which purpose we set out last night, with our bed-clothes, intending to sleep at the foot of the snow, and to set out at day break, hoping to arrive before clouds should collect. A storm of snow made us return, as we were averse to go on without having some more opportunity of looking about us. We set out this morning at 5h. 15m., and arrived on the crest of the pass at 2h. 2m. having had a very pleasant travel, the latter part of which was over snow quite hard, and the ascent not too steep. We found all the streams frozen, and the thermometer before the sun rose was at 27°.

We spent four hours on the ridge, looking at the wondrous scene before us, which, however, to the southward was a little cloudy. To the north it was beautifully clear, and we had a grand view of the Peaks, Trans-Suttluj, and saw the valley of the Buspa, with other things. I made some angles sufficient to fix the pass, and we looked at the thermometer which mounted to 70° in the sun, though it was most commonly 58° (and 36° in the shade), i. e. at 11 A.M. And we boiled again very unexceptionally and at our ease, and found it to be 137° 6'; thermometer in the air being 36° 6'. That is to say, on a part of the ridge about 150 feet higher than the pass itself, where we had boiled before. And we eat our breakfast, consisting of cold tea and chupatties, thus forming the first breakfast party that probably had ever taken place on the parent ridge of the Himmalya mountains.

"On calculating the pass, I find it to be 15,000 feet, or more. Particulars you shall have, as I have the altitudes of two known peaks from it, 3h. 48m. each. There will not be much doubt. The ridge runs E. 30° S., and W. 30° N., and to look down from the pass, you see spurs running out, forming a kind of amphitheatre, the bottom of which seems a level plain of snow; it was along this our path lay. On the northern face you see a stream running E. joined by another about eight miles off from the S.E., the united stream joining the Buspa, which seems to run W.N.W. No forest is visible (though there is plenty I understand at the proper level), *nothing* but bare black rock crowned with snow. We left the pass at 11h. 48m., and arrived here at 1h. 48m.; and here we are

now sitting in the Bechoha, at three P.M. with heavy snow falling around us, and the ground quite white. I will write again from Pooaree, at the junction of the Buspa and Suttluj.

[Original Communication by an officer in the army, attached to the corps stationed at Nagpoor, a frequent and valuable correspondent.]

The following differs about ten seconds from the mean result of the first column in the table given p. 356, which we attribute to Seetabuldee being without the town, though our correspondent does not distinctly state the cause of this slight discrepancy.

*Astronomical Observation made to determine the Longitude of Nagpoor,
Latitude 21° 8' 27" N.*

On the 23d of October 1819, at 8 h. 5 m. 35 sec. P. M. per watch, observed an emersion of the first satellite of Jupiter. The belts distinct, and the night clear and calm.

Time of emersion per watch.....	h. m. sec.	h. m. sec.	h. m. sec.
Watch fast for mean time, at 8 34 9 A.M.....	0 18 40		8 5 35 P.M.

Watch gained in	11 31 30	0 0 15
-----------------------	----------	--------

Watch fast for mean time.....	0 18 55	0 18 55
-------------------------------	---------	---------

Time of emersion....	7 46 40
----------------------	---------

Time of emersion at Greenwich.....	2 29 45
------------------------------------	---------

Longitude in time. The Seetabuldee Hill	5 16 55
---	---------

The eclipse was observed with a telescope magnifying about 75 times; and the time of the watch ascertained by double altitudes of the sun in the morning.

(Original Communication by the same esteemed Correspondent.)

VARIETIES FROM THE CALCUTTA PAPERS.

Block of Amethyst.—The following refers to the first account, in p. 487.

Sept. 28, 1819. We are glad to observe that the editor of the Mirror has supplied some of the deficiencies occurring in our description of the group of amethysts lately brought from Brazil. We found this production of nature altogether so unparalleled to our best knowledge, and consequently so valuable, that we have paid two visits more to it, and had on the last occasion, the benefit of the company of a gentleman just arrived in the country, and perfectly competent to judge of the nature and value of such objects. We have heard it asserted, by persons, conversant indeed in mineralogy, that the mass of stone now in question could not be amethyst. The misunderstanding (for we apprehend it is nothing else) proceeds from the vulgar custom of giving the same name to different substances; in consequence of which we incline to assert, that the stone here adverted to is really of the kind classed under the generic name of amethysts, from their similar purple colour. The various stones of that name exhibiting a very different degree of hardness, lapidaries have indeed been under the necessity of subdividing them into oriental and occidental; but we should prefer the bolder method of modern mineralogists, like Haüy, who have separated them altogether, calling *amethyst*, as has been very well observed by our cotemporary, a quartz or rock crystal, which has been coloured by some cause or other, and re-attaching the oriental harder kind to the general family of real gems, under the special name of *corindon*. The latter is of the same nature as the saphir and the rubis, of both which it unites the colours. To the former of course belongs the present importation from Brazil; which we imagine the lapidary, by cut-

ting, would turn to little account, but which in its total is such a *unique* as government alone or rich amateurs could afford to purchase for enriching scientific collections. The amethyst and corindon may easily be distinguished at first sight by this circumstance: that the former affects the irregular hexangular form; the latter, the regular octangular.

A thin piece of a stony substance, which covered in part some of these crystals of amethyst, has been submitted by us to the action of the sulphuric acid. Whether the acid we had at hand was not sufficiently concentrated or strong, or the stone was not really calcareous, no effervescence was the result of this trial.—*Cal. Times*.

Provisions for a Voyage.—A correspondent of the Government Gazette communicates these hints:—

1. In Bickaneer, the water melon, the kukree, and other vegetables of a similar nature, after the soft internal part has been taken out, are sliced, dried in the sun, and stored for future use. They are also, in this state, exported to the neighbouring countries. So prepared, these vegetables might be useful as a sea stock.

2. In the Rungpore district, a tree grows, called by the natives Tycul, or Tycoor (*Garcinia pedunculata*) which during the hot season is said to ripen its fruit, which is acid, and used in curries, and to acidulate water. If sliced and dried, it is stated to preserve its qualities for a very long period, and might be useful on board a ship.

Spirit from the Sweet Potatoe.—Extract from Warden's statistical account of America.—From the sweet potatoe (*convolvulus batatas*) a spirituous liquor is distilled, equal in quality to that produced from rye. It affords another more useful product, known by the name of *sago*, procured from the most tender and farinaceous parts, by maceration and

washing. This nutritive substance resembles that obtained from the medullary part of a *palm-tree* of the East-Indies, and on this account it has received the same name."

Hindoo College.—On Monday, the 3d of January, an examination of the pupils belonging to the Hindoo College took place, before Sir Edward Hyde East, and several others interested in the cause of general education, the results of which appears to have afforded satisfaction to those who were present.—*Asiatic Mirror.*

Calcutta Schools.—On the same day we attended an examination of the 1st or S. Molunga division of the Calcutta schools, which was held at the house of a respectable native, to whom the superintendence of this portion of a very considerable establishment for the education of native children has been intrusted by the Calcutta School Society. On this occasion the gooroo or masters of nineteen schools attended, each bringing with him three of the pupils whom he considered to have made the greatest proficiency. These were respectively examined by the superintendent and his assistant pundits, in reading, writing, repeating by heart, spelling, explanation of words, and general geography, in the Bengalee language, and prizes allotted, not only to the pupils of each school who were considered to have profited most by the lessons of their instructors, but also to the masters themselves. The former consisted of books in the Bengalee language, published, we believe, by the Calcutta School Book Society, and the latter of pecuniary remunerations of from three to six rupees each.

Being unacquainted with the language in which the examinations were held, we cannot speak positively with respect to the acquirements of our young native friends. They appear however to have been satisfactory to some respectable characters who were present, and whose acquirements in oriental literature must have enabled them to form a correct judgment. Of the general character of the institution we can safely speak, and without hesitation pronounce it to be strongly marked with the traits of genuine benevolence, its principal object appearing to be the union of those whose customs, climate and colour have hitherto separated, by the gradual introduction of congenial pursuits, and ultimately congenial sentiments. The obscene legends of Hindoo mythology will now cease to be the only subjects obtruded upon the attention of the rising generation; and with the knowledge of their native language, they will now imbibe sound principles of morality, and a general acquaintance with the customs, manners, and ideas of other

nations. The geographical instruction which they receive, has been judiciously blended with useful hints respecting the formation and preservation of the globe which we inhabit. The examination of the second division took place yesterday; that of the third will be holden to-day, and of the fourth or last to-morrow. The whole of these, we believe, include about 120 schools, containing not less than 2,500 children.

The editor of the *Mirror* proceeds to express his satisfaction, both at the good effects which he understood appeared to others, and with his own auspicious but obscure predictions. He concludes with saying, their acquired knowledge may be "productive hereafter of benefits to which we shall at present forbear to allude." What does this portend?

Shigram Po.—We copy the following from the Calcutta Government Gazette. The subject is humorous, but the design is grave; the author is seriously disposed to be merry.

Proposals for publishing the *Life and Adventures of Shigram Po*, cadet in the service of the Hon. East-India Company on the Bengal establishment: A Hudibrastic poem, dedicated to "Nobody." In which are minutely described the various remarkable incidents attending his progress, from the first dawning of his military mania to his ultimate retirement from the service on the half-pay of a brevet captain!!

How little dreamt he, it appears,
To be a sub for fifteen years;
And then, perhaps, to his dismay,
A brevet captain, on sub's pay!
Or that the major's envied station
Would come with superannuation.
For thirty years in Hindoostan
Would almost do for any man;
Unless it happened to be one
With head impervious to the sun,
Whose skin's as tough and thick beside
As the Rhinoceros's hide!

The profits (should there be any from this publication, of which the author feels considerable doubt from the present reduced value of poetry), will be given to one of the Calcutta Charities.—Thus should the work afford no entertainment, the subscribers will at least find some consolation in the assurance, that whatever surplus may remain, will be given to their indigent fellow creatures.—Subscriptions, at eight rupees each, will be received by A. G. Balfour, at this office.

MADRAS LITERARY SOCIETY.

On the 9th Oct. a meeting of the Madras Literary Society took place at the

College Hall, when the following gentlemen were balloted for, and elected members of the Society:—F. Fauquier, Esq., Capt. Elliot, Capt. J. W. Wood, R. Eden, Esq., E. Uthoff, Esq., J. F. Lane, Esq., J. F. Thomas, Esq., W. Mackenzie, Esq., R. Andrews, Esq., G. W. Saunders, Esq., E. Woodcock, Esq. Major Jones, J. B. Pybus, Esq., R. Stuart, Esq., T. Higginson, Esq., Dr. Mitchell, and Dr. Irving.

Some valuable additions have been made to the library of the Society, and the funds are considered to be in a flourishing state. A letter was read from the secretary to the Bombay Literary Society, conveying the following resolution:—“That any member of the Literary Society of Madras who may occasionally be at Bombay, shall have free access to the library.”

John de Fries, Esq. presented the Society with a valuable copy of the “*Antiquités D’Herculeaneum*,” in 12 volumes.

J. H. Heath, Esq. has presented to the Society a considerable number of minerals, collected in the southern parts of the Peninsula. Dr. Vaysey, attached to Col. Lambton’s survey, has also sent some minerals found in the country between Nellore and Hyderabad.

A bequest was made to the Society of a manuscript Tamil grammar from the late Lieut. C. C. Nattes, of the engineers; transmitted by the executor, the hon. Arthur Cole.

R. A. Maitland, Esq. was chosen a member of the managing committee, in the room of the late Rev. Archdeacon Mousley.

BOMBAY LITERARY SOCIETY.

On Monday the 27th November, the anniversary meeting of the Bombay Literary Society was attended by the following members:—Mr. Woodhouse, president; Archdeacon Barnes, Captain Kennedy, vice-presidents; Mr. Erskine, Rev. Mr. Wade, Mr. Babington, Mr. Wedderburn, Mr. T. Forbes, Mr. Newham, Mr. Noton, Mr. Farish, Lieut. Miller, Lieut. Nixon, Mr. Milburn, Mr. Irwin, Mr. Hamilton, Mr. R. Woodhouse; Dr. Taylor, secretary.

Lieut. Col. Hunter Blair and Mr. Buchanan were balloted for, and duly elected members.

His Exc. Lieut. gen. the hon. Sir Charles Colville, Dr. Coats, Capt. Sykes, and Mr. Kane were proposed as members.

The Society then proceeded to the election of office bearers for the ensuing year, when Mr. Woodhouse in a short speech begged leave to resign the situation of president, and to propose that the hon. Mountstuart Elphinstone might be elected to succeed him. Mr. Elphinstone was, in consequence, unanimously elected.

Mr. Woodhouse and Archdeacon Barnes were elected vice-presidents; and Dr. Taylor having begged leave to resign the situation of secretary, Captain Kennedy was elected to succeed him.

The thanks of the Society were voted to the late President, and to the late Secretary.

It was then resolved, that the thanks of the Society be communicated to the late President, for his assiduous attention to the interest of the Society; to the late secretary, for the satisfactory manner in which he has discharged the duties of that office; and to Capt. Kennedy, for his exertions in re-arranging the library, and preparing a new catalogue.

The Society then adjourned.

The deputation above-mentioned accordingly waited on Mr. Elphinstone on Wednesday morning, and communicated to him the resolution of the Society, when Mr. Elphinstone was pleased to do the Society the honour of becoming their President.

It is gratifying to observe, that the Society is not only increasing in the number of its members, but also in the number of communications with which it is favoured; papers to compose a second volume of their transactions having been forwarded to London for publication in last May, and the following papers having been since received.

From Capt. Kennedy: On the state of Persia, from the battle of Arbela until the rise of Ardashir Babegan.

From Capt. Sykes: two papers; one on the remains of the city of Berjapoor; and the other on the living deity at Chinchoor.

From Mr. Milburn: On the shipping, merchandize, &c. of Bombay, from 1802 to 1815-16.

From Brig. gen. Sir John Malcolm: On the institution and ceremonies of the Dusserah.

The library also is in a rapid state of improvement, consisting at present of upwards of two thousand works on every branch of science and literature; and whatever deficiencies there may now exist in it will be soon supplied, as the society is enabled to dedicate to so desirable an object a sum of nearly £400 annually.

MILITARY LIBRARY AT MHOW.

On the 1st of November, the subscribers to the Mhow Military Library held a general meeting at the quarters of Gen. Sir. John Malcolm. The Brig. gen. opened the business of the day in a perspicuous address. “Circumstances, he said, had caused a general relief of the troops stationed at Mhow, by corps of the Bengal army. This change had not been anticipated when the library and reading

room were proposed, and he therefore had requested this meeting to ascertain the general sentiments, as to the plans proper to be pursued regarding the interests of the rising institution. The plan was only in its infancy, but every thing that could be desired for the accomplishment of its primary objects had been put in progress, and the feelings and principles which had led to its formation had been justly appreciated in every part of India. The College of Fort William and the Asiatic Society had both given, by presents of books, substantial proofs of their wish for its success, and there is every prospect of that being complete. The business, as matters now stand, could only be settled in two ways: one by a restitution to the subscribers of the funds subscribed (which were nearly two thousand rupees), but this he read in the countenances of those around him would be an unnecessary if not an offensive proposition; he would not therefore make it, but content himself with suggesting that the meeting should adopt the means the members thought best calculated to perpetuate an establishment, of which it

must ever be a satisfaction to have been the founders."

The sentiments of the meeting were unanimous as to the principles upon which they were to act; and after some discussions on the mode in which they could best reconcile their measures to the feelings of the officers by whom they were to be relieved, five resolutions were agreed to, of which we insert the principal. First. That the institution be considered in progress according to the regulations on which it was established, and that all funds, property and accounts shall be made over by the secretary to Captain Dangerfield, who remains with the head quarters of Brig.gen. Sir John Malcolm's division. Secondly. That Brig.gen. Sir John Malcolm be requested to explain to the officers of the corps, who formed the relief for the troops at Mhow, the motives, plan, and rules of this institution, and to invite them to the adoption and participation of its objects and benefits. Thirdly. Resolved, that Sir John Malcolm be requested to accept of the situation of patron to the institution.

METEOROLOGY OF CEYLON.

Monthly Report of the Thermometer and Rain-Gauge, from the 1st of January to the 31st December 1818, at Kandy, Island of Ceylon.

Months.	Medium Temperature Morning.	Medium Temperature Mid-day.	Medium Temperature Night.	Highest Temperature.	Lowest Temperature.	Greatest Variation in 24 hours.	Mean Monthly Temperature.	Rain. Inches and Tenths.

PERIODICAL LITERATURE IN NEW SOUTH WALES.

In the Sidney gazettes a quarterly magazine is advertised to be published on the 1st of October. This is the first undertaking of the kind in New South Wales. It is to contain agricultural and commercial reports, original essays, domestic occurrences of the day, including philosophical, moral, and poetical essays, with an appendix of arrivals and departures. Each number to be embellished with an appropriate engraving. The price a dollar.

NATURAL HISTORY.

Specimen from the Cape.—A living animal of the antelope species, called a Nlu, having the head of a cow, the mane of a horse, and the hind part resembling that of a mule, was brought to England in the *Barossa*, from the Cape of Good Hope. These animals are inhabitants of Southern Africa, but very rarely to be met with. The one now brought home belongs to Lord Charles Somerset.

ATTEMPTS TO PENETRATE AFRICA.

Travels of M. Mollien.—The failure of

almost every late attempt to explore the interior of the African continent, and the melancholy termination of the efforts of Horneiman, Park, Tuckey, Burchhardt and Campbell, together with the recent death of Ritchie, on whom our last hopes for the accomplishment of this object were placed, render the return of any traveller with an accession to our stock of information respecting these dangerous regions, a subject at once of surprise and congratulation. This comparatively successful adventurer on this vast field for intrepid enterprize, is the nephew of Count Mollien, who has held various high civil appointments in France. M. Mollien was scarcely twenty years of age when his enterprising spirit first led him to explore all the countries watered by the Gambia and Rio Grande. He traced the sources of those rivers, and entered the country of the southern Foulahs, proceeding as far as Timbo, the capital of Fouta Diallan, situated, according to Major Rennel, on the Rio Grande, in the tenth degree of longitude and the same of latitude. Afterwards, turning north, he discovered what he conceives to be the true sources of the Senegal, more to the south than by the common reckoning. His guides refusing to go further, through nations at war with each other, he again descended the Rio Grande, and returned by the isles Bisagos to Senegal, after an absence of twelve months, during which he experienced the severest privations.

Unpublished Travels of the Marquis d'Etourville.—The Marquis d'Etourville, who is at present in Africa on private business, intends, on his return to France, to publish some interesting notices relative to natural history, a science wherein he has made numberless discoveries. He has recently forwarded certain memoranda which he made during his long captivity, of which the following is a brief analysis.

M. d'Etourville emigrated from France to Spain in 1790; he there commenced a course of medical studies, and afterwards resided some time in Lisbon, taking lessons in that science. From Lisbon he repaired to the Isle of St. Thomas, situated under the Equator, at the extremity of the gulph of Guinea. He remained some years in this island, whence occasionally he made excursions into the western regions of Africa. In one of these he fortunately cured some dangerous wound under which the Manicongo, a prince of the country, was suffering. Having thereby gained the favour of the prince, he attended him in an expedition or journey more than four hundred leagues in the interior of the continent.

In the course of this peregrination, M. d'Etourville traced on a map the western

lines of the lake Aqualinda, respecting which, till then, no certain information had been obtained. He likewise ascertained with precision the geographical route of the Zaire, with its sources, and the lakes it forms in its progress.

In a journey which he undertook in 1800, M. d'Etourville was taken prisoner by a wandering tribe of Gijas, who are cannibals. Whatever common fame has reported of their ferocity, is no exaggeration. They make war to devour their prisoners; and it is certain, as Doppe relates, that human flesh is sold in their markets. The blood which they draw from the veins of their living victims is to them a delicious beverage. M. d'Etourville remained fifteen months among these barbarians. All his companions were devoured; and he must have shared the same fate, had he not been so fortunate as to cure a broken arm of the favourite mistress of the chief of the horde.

Compelled to be in the train of this troop of Gijas, he ranged through an extent of continent from the country of the Auriscans to Hulla, when he escaped from their hands. He then proceeded to a province south of the western Mountains of the Moon, at a small distance from what he considers as the real sources of the Nile. Hereabout he fixes the empire of Drogloodo, unknown at present, but far more civilized than the circumjacent regions. The politics of the government, according to M. d'Etourville, bear a strong resemblance to the Chinese, and the civilization of the Drogloodians must be traced to a very remote source. The merchants of Drogloodo go, once a year, authorized by their government, to meet the Abyssinian merchants in a narrow passage of the mountain Narcar. They convey thither gold-dust, musk, pearls, precious stones, ivory, gums, and Ethiopian slaves, in exchange for which they receive shawls, Indian stuffs, Turkey carpets, and salt.

In this country M. d'Etourville remained about ten years; and though in a state of slavery, he had many opportunities of noticing the manners of the people and their antiquities. His different observations have led him to conclude that the Abyssinians, the Nubians, and the ancient Egyptians, who built the pyramids, were all originally from Drogloodo, which he conceives to have been the country inhabited in ancient times by the Troglodites.

M. d'Etourville returned to France about the time of the re-establishment of the Bourbons; but set out again, in 1814, to realize and secure some goods and property in Africa, whence he is expected shortly to return, and when the full account of his travels may be expected in the journal of new voyages and travels.

Conflicting Opinions respecting the Nile and the Niger.—Extract from a circular letter sent to this, among other Journals, by Professor Jackson, late British Consul in South Barbary.

In the 25th number of the Quarterly Review (article Park's Travels), the hypothesis there laid down, as almost indisputable, is the non-continuity of the two Niles of Africa, or (according to the European phraseology of the day) of the Niger and the Nile.

This hypothesis, founded on the theory of Major Rennel, carries with it no evidence whatever, but the speculative geography of that learned geographer. The identity or connection of the two Niles and the consequent water communication between* Cairo and Timbuctoo receives, as our intelligence respecting Africa increases, additional confirmation; and even the Quarterly reviewer, who denominated the opinion recorded by me, "the gossiping stories of negroes," (vide Quarterly Review, No. 25, p. 140) now favours this opinion!

The Quarterly reviewer appreciates highly Buckhardt's information on this subject, and depreciates mine, although both are derived from the same sources of intelligence, and confirm one another. The reviewer says, "Mr. Buckhardt has revived a question of older date, viz. that the Niger of Sudan and the Nile of Egypt are one and the same river: this general testimony to a physical fact can be shaken only by direct proof to the contrary."

This is all very well; I do not object to the Quarterly reviewer giving up an opinion which he finds no longer tenable; but when I see in the same Review (No. 44, p. 481) the following words, "We give no credit whatever to the report received by Mr. Jackson, of a person (several negroes it should be) having performed a voyage by water from Timbuctoo to Cairo." I cannot but observe with astonishment, that the reviewer believes Buckhardt's report that they are the same river, when, at the same time, he does not believe mine.

The reviewer further says, "The objection to the identity of the Niger and the Nile is grounded on the incongruity of their periodical inundations, or on the rise and fall of the former river not corresponding with that of the latter." I do not comprehend whence the Quarterly reviewer has derived this information; I have always understood the direct contrary, which I have declared in the last editions of my account of Morocco (p. 304), which has been confirmed by a most intelligent African traveller, Ali Bey, (for which see his Travels, p. 220.)

I may be allowed to observe, that although the Quarterly reviewer has changed his opinion on this matter, I have invariably maintained mine, founded, as it is, on the concurrent testimony of the best informed and most intelligent native African travellers; and I still assert, on the same foundation, the identity of the two Niles, and their continuity of waters.

I have further to remark, what will most probably, ere long, prove correct, viz. that the *Bahar Abiad*,† that is to say, the river that passes through the country of Negroes, between Senaar and Douga, is an erroneous appellation, originating in the general ignorance among European travellers of the African Arabic, and that the proper name of this river is *Bahar Abeed*, which is another term for the river called the *Nile el Abeed*, which passes south of Timbuctoo towards the East (called by Europeans the Niger.)

It therefore appears to me, and I really think it must appear to every unbiased investigator of African geography, that every iota of African discovery made successively by Hornemann, Buckhardt, and others, tends to confirm my water communication between Timbuctoo and Cairo; and the theorists and speculators in African geography, who have heaped hypothesis upon hypothesis, error upon error, who have raised splendid fabrics upon pillars of ice, will ere long close their book, and be compelled by the force of truth and experience to admit the fact stated about twelve years ago by me in my account of Morocco, &c. viz. that the Nile of Sudan and the Nile of Egypt are identified by a continuity of waters, and that a water communication is provided by these two great rivers from Timbuctoo to Cairo; and, moreover, that the general African opinion, that the Nile El Abeed, (Niger) discharges itself in the Salt Sea (El Balsar Maleh), signifies neither more nor less than that it discharges itself at the Delta in Egypt into the Mediterranean Sea.

JAMES GREY JACKSON.

London, April 7, 1820.

DISCOVERIES IN EGYPT.

Emerald Mines.—M. Caillaud is preparing to publish at Paris an account of his researches in Egypt. Some time ago he discovered near Mount Zaharah, the famous emerald mines which were previously known only by the writings of the ancient authors, and the stories of the Arabs. They had been almost forgotten for a long lapse of time, and were totally unproductive to the government of the country. They were discovered by M,

* Vide Jackson's Account of Morocco, &c. chap. xiii.

† *Bahar Abiad* signifies White River. *Bahar Abeed* signifies River of Negroes.

Caillaud nearly in the same state in which they had been left by the engineers of the Ptolemies. He penetrated into a vast number of excavations and subterraneous canals, some of which are so deep that 400 men may work in them at once. In the mines were found cords, levers, tools of various kinds, vases, and lamps; and the arrangement of the works afforded every facility for studying the ancient process of mining. M. Caillaud himself set about working the mines, and he has presented six pounds of emeralds to Mahommed Ali Pasha. In the vicinity of the mines the ruins of a little town have been discovered, which in ancient times was probably inhabited by the miners: among the ruins are the remains of several Græco-Egyptian temples with inscriptions. M. Caillaud has twice visited Zabarah; during his second journey he was accompanied by a considerable number of armed men, miners and workmen, whom the Pasha had placed under his directions. On his way to the emerald mines, the French traveller crossed one of the ancient routes for the trade of India, by the way of Egypt. He observed stations, enclosures for the union and protection of caravans, cisterns, &c. M. Caillaud learnt from the Arabs of the tribes of Ababdeh and Bycharyn, that this road led to the ruins of a very extensive town on the banks of the Red Sea, situated about the 24th degree of latitude, near the mountain of Elbé. This town has since been visited by MM. Belzoni and *Bitcher*,* and will probably be better described by them than by M. Caillaud. On the banks of the Red Sea, the traveller discovered a mountain of sulphur on which some diggings had been made; in the neighbourhood of this mountain, traces of volcanic eruptions were observable, and a quantity of puzzolane and other igneous substances were found. M. Caillaud carefully observed the mountains which separate the Nile from the Arabian Gulf, as well as the calcareous tracts of ground and chains of mountains between the Nile and the Oasis, which all belong to the primitive soil. Here he examined several ancient Egyptian structures, and others of more modern date; he discovered several very ancient vaults, thermal springs, &c. Among the Greek and Latin inscriptions which he met with in his excursions, was one containing 70 lines, and about 9,000 letters; it is more copious by at least one-fifth than the Greek inscription on the Rosetta stone. By dint of vast patience and labour, M. Caillaud succeeded in copying this inscription in three days. Though it is of recent date compared with the Rosetta monument, since it belongs

to the age of the Emperor Galba, it presents some new and curious facts relative to the internal administration of Egypt. M. Caillaud returned last year to Paris, bringing along with him a vast number of drawings, notes, and antiques, found principally in the hypogæa of Thebes, &c. These treasures have been purchased by the French government. The antiques are deposited in the cabinet of medals and antiques of the king's library, and the drawings will be engraved and published with descriptions in two vols. folio. M. Caillaud has again set out for Egypt. In November last he was at Bony-Souey, 25 leagues from Cairo. He was about to depart for the Fayoum, and to proceed towards the Oasis of Siwah. He must ere this have made many new and interesting observations. At a quarter of a league from one of the pyramids of Sakkarah, he descended into a hypogæum sacred to the deity Apis, where he found, in a kind of labyrinth, several bulls embalmed and preserved like mummies.

As a slight correction of the above, (which is a French account), that M. Belzoni had performed the same journey not long before, and perhaps had discovered this same sepulchre of Apis, in company with Mr. Beechey (son of Sir William, the painter), M. Belzoni did not follow, but precede M. Caillaud.

ROYAL SOCIETY OF LONDON.

The Constituents of Tabasheer.—The transactions of the Royal Society for 1819 contain a paper on the optical and physical properties of Tabasheer, by David Brewster, LL.D. F.R.S. We extract so much as relates to the origin of this substance, with the author's description of it.

The substance called Tabasheer has been long used as a medicine in Turkey, Syria, Arabia, and Hindostan. It was first made generally known in Europe by Dr. Patrick Russell, who published in the Philosophical Transactions, for 1790, a very interesting account of its natural history, and of the process by which it seems to be formed. From his inquiries it appears that this substance is found in the cavities of the bamboo, the *Arundo bambos* of Linnaeus, and that it exists originally in the state of a transparent fluid, which acquires by degrees the consistency of a mucilage resembling honey, and is afterwards converted by gradual induration into a white solid, called Tabasheer. From the analysis of Mr. Macie (now Mr. Smithson), it appeared to be "perfectly identical with common siliceous earth."

The celebrated traveller, M. Humboldt, discovered the same substance in the bamboos which grow to the west of

* Beechey, disguised by French orthography.

Pinchincha, in South America, and a portion of what he brought to Europe in 1804 was analyzed by Fourcroy and Vauquelin, who found it to consist of 70 parts of silex, and 30 of potash and lime.

The Dugong.—At the adjourned meeting after Easter, resumed April 13, was read a paper composed by Sir E. Home on the milk teeth, and organs of hearing of the dugong. The skull from which the following description was taken, and which is the only perfect one in Europe, was sent from Sumatra by Sir Stamford Raffles. The milk tusks of this animal resemble those of the narwhale and elephant, being like them deficient in external smoothness, when compared with the permanent tusks. But they are peculiar in having a shallow cup attached to their base, apparently for the purpose of receiving the point of the permanent tusks as soon as formed, and for directing them forward in the same course as that of the milk tusks, and which is different from that in which the permanent tusks were originally directed. The milk tusks of the dugong have hitherto been mistaken for its permanent tusks; but as no full grown individual has been yet examined, the form, &c. of the permanent tusks are unknown.

The grinding teeth of this animal differ from those of all others. They consist of a double cone, the external crust of which is not enamel. This crust covers an internal harder coat, and the bulk of the tooth consists of soft ivory; hence in wearing down they will assume a concave form.

The organs of hearing also in this animal are quite peculiar. The malleus and incus are fastened to the sides of the tympanum by a bony substance extending across the intervening space. The stapes is opposed to, but not connected with, the foramen ovale, nor is it ankylosed with the ramus of the incus. The handle of the malleus projects in the centre of the circle over which the membrum tympani had been spread; and hence, in the recent animal, is probably attached to the centre of that membrane. As the habits of the dugong resemble those of the hippopotamus, Sir Everard was induced to examine the organs of hearing in the latter animal to see if they were similar to those of the dugong. He found them, however, very different, the ossicula auditus being detached from the skull, and readily dropping out at the external orifice. In the dugong, the semi-circular canals and cochlea are very small. Sir Everard was induced to conclude from the above remarkable construction of the organs of hearing, that this animal, perhaps more than any other, hears by means of vibrations conveyed through the bones of the skull to the canals and cochlea.

ACADEMY OF SCIENCES AT PARIS.

Analysis of Cochineal.—The following article is comprised in a report of the proceedings during the year 1818.

Cochineal, that singular insect, which, on account of the colouring matter it yields, is become such an important article in commerce, not having been studied as yet by the chemists with that attention which it deserved, MM. Pelletier and Caventou have made it the object of their experiments. They have found that the very remarkable colouring matter which composes the principal part of it, is mixed with a peculiar animal matter, a fat like common fat, and with different sorts of salts. The fat having been separated by ether, and the residuum treated with boiling alcohol, they either allowed the colour to cool, or gently evaporated it, and by this means they obtained the colouring matter, but still mixed with a little fat and animal matter; these were separated from it by again dissolving it in cold alcohol, which left the animal matter untouched, and by mixing the solution with ether, and thus precipitating the colouring matter in a state of great purity. It is well known that this colouring is of the most beautiful red colour, and the chemists of whom we are speaking give it the name of *carmine* (carminum). It melts at 50 deg. (122 deg. Fahr.) becomes puffy, and is decomposed, but does not yield ammonia. It is very soluble in water, slightly in alcohol, and not at all in ether, unless by the intermediation of fat. Acids change it from crimson, first to bright red, and then to yellow: alkalis, and generally speaking all protoxides, turn it violet; alumine takes it from water.

These experiments explain many of the processes in the art of dyeing and colour making, and particularly they explain what happens in dyeing scarlet, and in the manufacture of carmine and lake.

Lake is composed of carminium and alumine: it has the proper colour of carminium; that is to say, crimson. Carmine itself is a triple compound of an animated matter, carminium, and an acid which enlivens the colour; the action of muriatic acid in changing the crimson colour of cochineal into a fine scarlet is similar.

LAWS OF METEOROLOGY.

The most apparent causes of atmospheric phenomena, such as the density of the air, its moisture, its heat, and its electricity, appear to depend principally upon the action of the sun: nevertheless the irregularity of their effects in our climates are sufficient to show that there exists influences of a different kind, and

that they are complicated with causes still unknown: it is this complication which renders meteorology, even at present, the branch of the physical sciences which has made the smallest approach to that degree of certainty which is necessary to its being considered as a real science.

M. Humboldt remarks, that, if any hope exists that the laws of meteorology can ever be discovered, it must be by studying it in those climates where the phenomena are of the most simple and the most regular nature; and the torrid zone must, on these grounds, attract the principal notice of the observers.

It is only between the tropics that it has been possible to determine the laws which regulate the small hourly variation of the barometer; it is in the torrid zone that dry and wet seasons, and that the direction of the winds peculiar to each season are submitted to invariable laws.

M. Humboldt has paid much attention to the relation between the declination of the sun, and the commencement of the rainy season in the north part of the torrid zone. In proportion as the sun approaches the parallel of any place, the northern breezes are changed for calms, or south-easterly winds. The transparency of the air is diminished, the unequal refrangibility of its strata causes those stars to twinkle which are 20 deg. above the horizon. The vapours soon collect in clouds; positive electricity is no longer constantly to be found in the lower part of the atmosphere; thunder is heard during the day, heavy rains succeed, the calm of night is only interrupted by gales from the south-east.

M. Humboldt explains these appearances by the greater or less inequality between this part of the torrid zone and the neighbouring part of the temperate zone. When the sun is to the south of the equator, it is winter in the northern hemisphere. The air of the temperate zone is then as different as it can be from that of the torrid zone. There flows into the latter a constant, cool, and uniform breeze, which carries the heated and moist air into the higher regions, from whence it flows back towards the same temperate zone, re-establishing the equilibrium, and deposits its moisture there; so that the mean heat is always five or six degrees less in the dry season than in the rainy; but the south-east winds do not act like those of the north, because they come from an hemisphere which contains much more water, and in which the upper current of air is not dispersed in the same manner as in the northern hemisphere.

Antidote for Vegetable Poisons.—The invaluable properties of the plant *fewillea cordifolia* have been brought to light
Asiatic Journ.—No. 54.

by a continental chemist, claims particular notice. Mr. Drapiez has ascertained by numerous experiments that the fruit of the *fewillea cordifolia* is a powerful antidote against vegetable poisons. This opinion has been long maintained by naturalists, but I am not aware that it was ever before verified by experiments made on purpose in any part of Europe. M. Drapiez poisoned dogs with the rhus toxicodendron, hemlock, and nux vomica. All those that were left to the effects of the poison, died; but those to whom the fruit of the *fewillea cordifolia* was administered, recovered completely, after a short illness. To see whether this antidote would act in the same way, when applied externally to wounds into which vegetable poisons had been introduced, he took two arrows which had been dipped in the juice of manchenille, and slightly wounded with them two young cats. To the one of these he applied a poultice, composed of the fruit of the *fewillea cordifolia*, while the other was left without any application. The former suffered no other inconvenience, except from the wound, which speedily healed; while the other, in a short time, fell into convulsions and died.

It would appear from these experiments, that the opinion entertained of the virtues of this fruit in the countries where it is produced is well founded. It would deserve, in consequence, to be introduced into our pharmacopœias as an important medicine; but it is necessary to know, that it loses its virtues if kept longer than two years after it has been gathered.

Prize for a Treatise on Eastern Languages.—Count Volucy has bequeathed in his will a sum amounting to a perpetual rent of 1,200 francs (£50 sterling) as a prize to be adjudged by the institute to the author of the best treatise on Eastern languages, and especially on the simplification of their characters.

EXPEDITION TO THE FROZEN OCEAN.

Advices from St. Petersburg, dated March 22, state that a new voyage of discovery will be undertaken this summer in the north. This expedition will sail from the mouth of the Lena for the Frozen Ocean, in order to examine the coast of Siberia, and the islands which were discovered to the north of it some years ago. As it is not yet ascertained whether these supposed islands may in reality be one main land or not, and as hitherto they have only been visited in winter, it will be interesting to know how far the ice will permit vessels to advance during summer, and to determine its extent.

NEW LONDON PUBLICATIONS.

Memoirs of the late R. L. Edgeworth, Esq. begun by himself, and finished by his daughter, Maria Edgeworth. With Portraits and Plates. 2 vols. 8vo. £1. 10s. boards.

Anastasius, or Memoirs of a Greek, written at the close of the Eighteenth Century. Second Edition. 3 vols. 8vo. £1. 11s. 6d. boards.

Historical Documents and Reflections on the Government of Holland. By Louis Bonaparte, ex-King of Holland. 3 vols. 8vo. £1. 16s. boards.

. The same work in French, printed verbatim from the original MS. in 3 vols. Price £1. 16s. boards.

A View of the Agriculture, Manufactures, Statistics, and State of Society of Germany, and parts of Holland and France. By W. Jacob, Esq. F.R.S. 4to. £1. 15s. boards.

The Huntingdon Peerage; comprising a detailed Account of the Evidence and Proceedings connected with the recent Restoration of the Earldom, together with the Report of the Attorney-General on that occasion. To which is prefixed, a Genealogical and Biographical History of the Illustrious House of Hastings, including a Memoir of the present Earl and his family. By H. N. Bell, Esq. With Portraits of the Earl and Countess of Huntingdon. 4to. £2. 2s. boards.

Winter Evening Tales, collected among the Cottagers in the South of Scotland. By James Hogg. 2 vols. 12mo. 14s. boards.

The Domestic Minister's Assistant, or Prayers for the use of Families. By the Rev. William Jay. 8vo. 9s. boards.

Practical Observations on the Symptoms, Discrimination, and Treatment of some of the most common Diseases of the Lower Intestines and Anus, &c. &c. Illustrated by Cases. By John Howship. 8vo. 5s. 6d. boards.

The Life and Adventures of Antar, now first translated from the original Arabic. By Terrick Hamilton, Esq. A new Edition. 4 vols. crown 8vo. £1. 16s. boards.

. Vols. II. III. and IV. (never before published), sold separately, £1. 7s.

Tales of the Hall. By the Rev. George Crabbe. Third Edition. 3 vols. foolscap 8vo. 18s. boards.

Narrative of the Political and Military Transactions of British India, under the Administration of the Marquess of Hastings, 1813 to 1818. By H. T. Prinsep, of the Hon. East-India Company's Civil Service, Bengal. 4to. £2. 10s. boards.

The Poetical Decameron, or Ten Conversations on English Poets and Poetry, particularly of the reigns of Elizabeth and

James I. By J. P. Collier. 2 vols. 8vo. £1. 1s. boards.

Public and Domestic Life of His late Majesty, George the Third. By Edward Holt, Esq. Embellished with Portraits of distinguished Characters. 2 vols. 8vo. £1. 11s. 6d. boards.

Peter Faultless, and other Poems. 12mo. 6s. boards.

MISSIONARY INTELLIGENCE.

CALCUTTA AND NORTH INDIA.

Native School at Calcutta.—On Monday, 20th Dec. 1819, was held in the Lol Bazar, an examination of the children instructed in the two schools there, belonging to the Benevolent Institution, when about a hundred and fifty boys and about seventy girls were examined by the secretary, in the presence of a respectable assembly of ladies and gentlemen, relative to their progress in the various branches of knowledge in which they are instructed; after which both the girls and the boys united in singing a hymn, and the Rev. H. Townley offered up a prayer for the children instructed, and those who support and encourage the institution. This school has now existed ten complete years. The advantage of thus bringing under instruction children who were formerly wandering the streets, a prey to ignorance and vice, and of making them acquainted, through the perusal of the Sacred Scriptures, with the path to eternal life, seemed never to impress the mind more strongly than at this examination.

—*Cal. Gov. Gazette.*

Mission at Chunar.—From the Journal of Missionary Bowley:—

June 4, 1818.—Early this morning I went to the Pilgrims' Resort; saw four devotees; had arguments with their gooroo, or spiritual guide, who was an intelligent and free-spoken man. He would not admit that all mankind are sinners. I drew out a Hindoo Catechism, and he and his disciples seated themselves about me. On coming to the declaration, that the whole sinful race of Adam were, for their transgression, cast out of God's presence, the tears dropped very freely from the gooroo's eyes; and he acknowledged that this actually was the state of all mankind. He promised to come to my house to hear more of these things, and thankfully accepted of the tract.

In the afternoon, I accompanied Bukhtawin and several others to a stranger's, a pundit. He was so conceited of his Shaster knowledge, that nothing but Shaster quotations would satisfy him, nor would he allow Bukhtawin to speak; saying, that though what he said was right in itself, yet he was not to be regarded, because he did not speak in the very words of the Shasters.

8.—This forenoon a moonshee from Delhi, who is a candidate for baptism, with the Rev. Mr. Corrie, and my pundit, Ram Narain, came and read the sixth and seventh chapters to the Hebrews. They both seemed to feel what they read and heard. Ram Narain said that his mother

was much in tears to-day, on account of the salvation of her soul; she wished to be admitted into the Christian church: he himself would join her.

11.—Ram Narain continues regularly to attend our Hindostanee worship. To-day he apprehended his mother's death near at hand, and begged me to admit her into the Christian church without any further delay. In the heat of the day I went over with a Christian friend to see her, and found her apparently but a few hours for this world. On questioning her whether she thought on Jesus Christ, she replied, "Yes, I continually think upon the Son of God;" and entreated me to bring her away from among her heathen neighbours. She was accordingly brought to the evening Hindostanee worship, by four men, on a bedstead. On questioning her respecting her faith, she replied, with great freedom, "It is on Jesus Christ alone, ever since I heard of Him from my son. I formerly was a worshipper of Krishna and of Ram, and of the Gunga (Ganges) and of others; but I never attained to my object: and now I believe that Christ alone can save me."—"Do you wish to be admitted into Christ's church by baptism, according to his command?"—"I do." The woman then sang a hymn, and I prayed. She was again asked, in the presence of the native Christians, whether she believed in the Holy Trinity; Father, Son, and Holy Ghost? She answered, "I do."—"Have you no confidence in the gods whom you worshipped all your days?"—"I have none whatever; nevertheless, if the Lord spares me, I intend to wash in the Gunga."—"Do you think there is any virtue in the water of the Gunga?"—"No, I do not. I only mean to bathe in it, as in any other water!"—"Do you seriously wish to be initiated into the Christian church?"—"I do."

Her son spoke to her of being buried after death: she said, "Ram Narain, you should have told me of this before; nevertheless, I am resigned, if it be the Christian custom."

Thus she went on, in the presence of the native Christians, and four or five Hindoos; speaking quite freely, though she was mere skin and bone, and apparently not likely to survive the night. After hearing her answers, and fearing lest death should overtake her before Mr. Corrie came thither again, I deemed it my duty to baptize her, according to his request that I would, if I should find it indispensably necessary.

She was then taken home to a Christian friend's. On requesting some water,

the Christian woman brought her some. At first she hesitated to receive it from them; but on their telling her that there was no distinction among Christians, she took and drank it. She then told her son to remember, when we travelled together, we put up at inns: so this world was an inn, wherein we must not seek for rest; "therefore," said she, "come out from among the Hindoos, and stay not with them any longer." He smiling said, "Look! now she is become my teacher." Thus was this Brahminess the first heathen admitted into the Christian church at this place.

12.—One Hindoo observed to-day that it must have been great grace that has prevailed on the Brahminess to renounce all the gods of her forefathers at such a crisis as this, seeing that she would leave a disgrace on her friends after her death; and that worldly motives could not be the cause of it, seeing that she was not apparently likely to live many hours.

This morning the Christians who attend upon the Brahminess convert were much pleased to find her so fearful of sin; for when food was brought her, she inquired particularly whether it would not be wrong to receive it; but after a few words of explanation, she submitted and received it.

18.—Ram Narain's mother told him to-day that she had more experience of the world than he had, and that he knew she had been devout according to the Hindoo religion; but acknowledged that she never found peace before, and that the Christian was the only true religion; and advised him to separate himself from the Hindoos as soon as possible, and afterward to write to his father at Benares.

19.—This afternoon, just as I was going to the bazar, six Hindoos, who came to a wedding from Mirzapore, came to my house, saying that they had heard that I went and taught the people in the bazar; for that purpose they came to see and hear me. They all sat down; when I read and spoke to them from the Hindee catechism, and of Adam's creation and fall, contrasting them with Hindoo accounts. They liked it very well; and said that, if I would but go to Mirzapore, I should find many hundreds glad to receive such truths. One said that he was a doctor, and gave medicines gratis to hundreds daily; and that if I would go over, he would get numbers to hear me, and he made sure that they would hardly quit me again.

25.—After Hindoostanee worship, I had much conversation with the Lolla, or Hindee teacher of our school. He said that he was ready for baptism when Mr. Corrie should arrive, and that his wife and mother also were ready. I told him not to press them; but to let it be their

own request, as they had not heard enough yet. He said that he read and spoke to them daily. Ram Narain said, "Take heed that you do not persuade them; but let them come forward themselves."

29.—The Lolla said, that he had heard of a Sunday for about two years, without feeling the power of it, till some months ago, when he took to teaching the people the Hindee catechism. Then, and ever since, he has felt anxiety for the salvation of his soul; and says, he thinks it impossible that any person can read the catechism without feeling its power.

July 1, 1818.—This evening the Rev. Mr. Corrie came, bringing with him the Delhi moonshee, to receive baptism with the Brahmin Ram Narain.

2.—At ten all the native Christians assembled, with a crowd of Hindoos and Mussulmans, it being understood that two natives were to be baptized. Numbers stood without, for want of room. After the regular service, and an address by me from Isaiah lii. 14, 15, Ram Narain and the moonshee came forward.

The Brahmin thus addressed the hearers:—"Behold! I declare before all, and let Hindoos and Mussulmans pay attention to my words, I have been on pilgrimage to Jagger-nauth, to Dwarka-nauth, to Budee-nauth, and to the different teraths (or pilgrimages); but in all my travels I found not the true way of salvation, till I came to this place and heard the gospel, which, by God's grace, has convinced me that this is the only way to happiness; and I truly believe and declare, before Hindoos and Mussulmans, that if they do not embrace the Gospel, the wrath of God will abide upon them, and they shall be cast into hell." On saying this he drew out his Brahminical thread, and broke it asunder before the people, saying, "Behold here the sign of my delusion!" and then delivered it to Mr. Corrie.

After him Moonee Ulee, the moonshee, thus addressed the people:—"Attend, brethren, and hearken unto me. I was a Mussulman, and had spent much of my time in the company of learned men of the same profession. I have studied the meaning of the koran, and I have paid adoration at the tombs of Peers (saints, or spiritual guides). In those days, whenever I saw a Christian, my spirit was stirred up within me to slay him; but, on hearing the holy gospels, light has sprung up in my mind, which has increased; and I have been more confirmed in this faith since I saw the Pentateuch and psalms. To receive Christian baptism I have come from Delhi. My mind has, moreover, been strengthened and established by the instructions which I have received from the Rev. Mr. Corrie; and

now, before all my brethren present, I embrace this true way of salvation.

After this, Mr. Corrie addressed the people from Matt. xxviii. 19, and then baptized the two candidates; the Brahmin by the name of Keroul Messee, "Only Christ;" and the Mussulman by that of Moonef Messee, "Eminent Christ."

11.—A Mahratta Brahmin, on beholding Keroul Messee, knowing that he had become a Christian, expressed much grief; alledging that he was the very image of the gods, and how could he think of abandoning himself as he had done? He replied, "You may say as you please, yet without Christ there is no salvation."

22.—Several people died to-day of the cholera morbus. I was informed of one who had been ill nearly twenty hours. By the instructions obtained from the surgeon here, I gave the man 60 drops of laudanum, 30 of peppermint, and 30 of eau-de-luce, which were the means of his sound recovery. This is the first person whom I have yet seen recover of this disease.

24.—A poor woman was also cured of the cholera morbus by a similar draft.

25.—Several Hindoos came. After some conversation, my Pundit read the first epistle of St. John; and acknowledged that he could not pay the same reverence to the Hindoo deities as heretofore.

28.—Late last night I received a petition from a native doctor at Mirzapore. He is one of those who were mentioned, some time last month, as having come from that place to hear the word. He reminded me of my intention to visit Mirzapore; and said that he had prepared the minds of people to hear me.

29.—At four this morning, my Pundit, the Lolla, and my Hindoe copyist, set out with me for Mirzapore. In consequence of the heavy rains, and every one being wet, we did not enter the city, but put up in a garden, about a mile off. The rains did not give over, till about nine the next morning.

30.—The native doctor having hired a house for me, we took possession of it. At three in the afternoon he and several others led us to a shop, where four roads met. The people encircled us. Here we sat and read from the Hindostanee catechism and gospels, and conversed till six o'clock.

One man, in particular, distinguished himself as our chief opposer; and did all that he could to raise the brute creatures to an equality with man. This man took up most of our time; while hundreds attended diligently to what passed, with astonishment. He found several opposers among his own people.

One man, with his hands clasped toge-

ther, begged to know whether I was a Brahmin, a Pundit, or a Sahib.

The Pundit also was engaged, in favour of christianity. My antagonist perceiving that he did not speak so decisively as he should, said to the people, that he was "half a partridge, and half a quail."

31.—Early this morning, on going toward the river, we met a Pundit preparing to read and expound the Shasters. I put a catechism into his hand; which he read, and, objecting to something, my Pundit entered into dispute with him in the Sanscrit language. On the other trying to bind him down to the Vedas and Shasters, he said they were no criterion to judge by, when one instantly cried out that he was an atheist. My Pundit replied, that sound reasoning was preferable to the Shasters: this fired them. Having thus spent about an hour, we left them. My Pundit telling the other that he must not expect salvation from reading and expounding the Shasters, the other Pundit said, in Sanscrit, "Do you follow the Muletsch?" (one who makes no distinction in company, and in meats and drinks, alluding to me). This is a term by which they call Christians. All who passed this way stood to hear us.

After this we went to the river-side, and thence to the bazar. Meeting one with the Shaster in his hand, we stood in the street, and read and argued with him for about an hour. A great crowd gathered round, and seemed to like it well. One man reproved this Pundit for not asking me to sit, telling him they never spoke such words to the people. Feeling abashed, he requested me to sit down.

A Hindoo returning from bathing, seeing the great assemblage of people, and learning what it meant, put his fingers in his ears, and ran past us with all his might, saying, "These words are not to be heard." The Lolla cried out, "Why do you run away from the words of salvation?"

At noon we all went to the appointed place. Several devotees, my antagonist of yesterday, and the police officer, together with great crowds, soon gathered round. We spent three hours with them, in reading from the catechisms, the gospels, and the epistle to the Romans; and in answering objections started against Christianity. They did not like to hear that neither Hindoos nor Mussulmans can be saved in their present faith. This excited some to oppose, and others to attend more earnestly.

The conduct of my chief opposer of yesterday was truly astonishing to-day. He had not a word to say in favour of his system; but, contrarywise, seemed to side with me in every thing, and gladly accepted of a tract, and a copy of an

Oerdoo gospel, being a Persian scholar. He earnestly entreated me, as did many others, for my manuscript Hindee gospel; which, of course, I could not part with, but I told them that they should be supplied when it was printed.

My Pundit and the Lolla had also sufficient employment. The people would gladly have run off with the Hindee gospel, but that the Lolla secured it well.

My coming here began to be rumoured about the city, though I did not see the tenth part of the place. The people seemed willing that I should remain here for a week or a fortnight. Several came to our quarters, and argued, read, and took away books.

Aug. 1, 1818.—Returned from my visit to Mirzapore. This is a most extensive field for missionary labour, and one where the seed of the gospel has not yet been sown; though missionaries are stationed hundreds of miles further up. There I found crowds of hearers of all descriptions, at any hour of the day when I chose to go among them.

4.—Early this morning, the Rev. Mr. Corrie saw the foundation of the new church laid. [*This church was built by subscription.—See vol. VIII. p. 74.*]

7.—Early this morning my Pundit came, saying that a blacksmith had made his appearance under a banian tree, pretending that he was inspired by the goddess Dabee. I accompanied the Pundit and several others to the spot; and found a great crowd round the man, with a Brahmin laying incense before him. On my speaking a few words, the Brahmin and others began to speak highly in his praise. I told them that several of them seemed to have combined together; and to have contrived this scheme to deceive the people, in order to extort money from them: and that if the pretender was found out in it he would be put into the stocks. Oh hearing this, the man ceased from shaking his hands and moving his head. The officiating Brahmin tried to keep up his spirits, but without effect. He said, aloud, that the goddess was departed. This caused a laugh among the crowd, and they acknowledged that it was no more than what I had said.

Within the last month several people of this description have pretended to be inspired by this goddess, and have drawn hundreds and thousands to worship and make oblations to them: and, what is more strange, is that the pretenders have been of the meanest castes. The most notorious of all is a cotton carder, about eighteen miles from this place, in the hills, who has ten or a dozen officiating Brahmins. Many hundreds, especially women, go daily from Chunar, with offerings.

11.—I went to the fair in the hills. A great crowd assembled to hear the word.

An old man, of a hardened mind, came with five or six attendants, saying, that he had heard of and sought after me, for the last 12 months; that I had been deceiving the people, but that he should take heed that I should not deceive him; and that thousands of Moses and Jesuses have appeared on the stage of the world. He thus went on, roaring and jesting, and would not hearken to what was read, though several desired him to stop, and hear what the Christian's book said. Though he pretended to be a great disputer, he took good care not to reason on any point calmly.

20.—Hired a boat to visit a few villages, and set out in company with my Pundit. At four in the afternoon we came to a village, containing about 500 souls, and but one Brahmin that could read. We sat down with him, while many others gathered round, and read the catechism with remarks. None said a word against it, but all admired it. The Brahmin was for shewing some further kindness to me: I told him I was greatly pleased that he had heard me patiently; and the only favour which I should further request was, that he would keep the tract, assemble the people of an evening, and read it to them; which he promised to do.

21.—At nine o'clock we went to a large village, and sat down at the police guard. A Brahmin being sent for, came, and read a portion of the tract, which he seemed to think little of; and returned it, recommending that a certain "learned man" should be sent for. On his coming, a great crowd followed, which increased till 12 o'clock. I read to him the tract, making remarks as I proceeded. He highly approved the doctrine, and accepted of tracts, two of which he said he would send to worthy people in a large town about four miles off. He also accepted of a Sanscrit Pentateuch. On seeing him take the tracts, the Brahmin and others begged for copies.

22.—Arrived at Chunar, through the mercy of God, at ten o'clock.

Sept. 3.—This morning, my Pundit was compelled to quit his parents' house, and to hire one for himself and his wife, because his mother was ever scolding him, for not adhering as strictly as before to the Hindoo ceremonies. About this time last year they had a great falling-out; because he, being childless, would not consent to marry another, according to the Shasters; having told his mother our Lord's words on the subject. This she has made a handle of, in exposing him to the people ever since; saying he had learnt this from the Padre: and now, finding him deviating from many of the Hindoo customs, she said he had ruined himself, and was corrupting the rest of

the family. Last night, having a feast for three Brahmins, her visitors, she would not eat herself; and on his going about to purchase food for the guests, she put a curse upon them; that, "If they eat any thing, it was the same as eating so much cow's flesh." They instantly returned the food, and went without their meal. This morning, not having been permitted to come into the house last night, on his attempting to enter, she cast herself half over the parapet of the house, threatening that, if he returned, she would throw herself down.

6. (Sunday).—My copyist said, that, on his way home yesterday, he was met by a devotee, who, on observing him pass without paying the customary honour on such occasions, accosted him thus: "Pray don't you know who I am?" "Yes; Muha Raj (great Prince, or Sir), I know you are such an one." "Pray," said the other, "don't you see my badge?" "Yes, Sir; I see you have ropes," meaning his jetted hair, "about your head; and blacking," meaning the ashes, "on your face." This fired the devotee, who said, "I shall consume you in an instant; don't you know to whom you are talking?" He said that he should be destroyed during the night; when his disciples prostrated themselves at his feet, entreating him to forbear his wrath, and to compassionate the man!

7.—To-night my Pundit accompanied me in a boat to Benares, where we arrived about sunrise.

11.—I spent this day with the Baptist missionary; and accompanied him about noon to a devotee who has a house on the banks of the Ganges. He proved to be one of those who could act his part well. He kept roaring out aloud, "Huri Ram!" and "Huri Krishna!" We sat down by him under a tree. He was too cunning to answer the questions put to him; he only replied that he had no leisure to converse with us. As the people drew near, they first prostrated themselves at his footstool. I spoke to the people aloud of the danger in which they were, in adhering to him and others without attending to reason.

The people informed us of a Hindoo woman, who, a fortnight ago, had determined to devote herself to the funeral pile of her departed husband; but, on the flame surrounding her, she sprung out. On the Brahmins going to force her in again, the police officers present rescued her. The Hindoos are now preparing to transport her to Juggernaut, there to end her days.

12.—By the good mercy of God, safely reached my station.

15.—To-day a "Mouto," or taciturnity devotee, who had made a vow not to speak, having his left-hand stretched

above his head, came to my house. He made signs in reply to whatever questions were put to him. Seeing him little concerned for his soul, I told him that by such penance he was only tormenting himself before the time; and that he would nevertheless have to answer for his sins, and that by such acts he would be found the greater sinner, as his conduct indicated that God was an austere master, and delighted in the afflictions of his creatures: but the poor man seemed quite unconcerned.

MADRAS AND SOUTH INDIA.

Jews at Cochin and Vicinity.—Extract from the Journal of the Rev. Missionary T. Dawson. Oct. 27, 1817.—I went to Jews' Town; and met there Messrs. Moses Isarphaty, Ezekiel Rabbi, and Jehuda Misrahi, three of the most respectable Jews in these parts. I proposed to them the establishment of a school at Muttoncherry, for the instruction of Jewish children; and on inquiring whether they thought that the people would approve the measure, and send their children, Isarphaty, with his eyes and hands lifted toward heaven, said, in an elevated tone of voice, "The benefit they would derive from having their children taught, at a time when they themselves are in a helpless state, would be so great, that God Almighty only could reward it."

In the synagogue of the white Jews here there are five manuscripts of the Pentateuch, each containing about 100 sheets of parchment. In one of the synagogues of the black Jews are six rolls, and in the other five, all different copies of the Pentateuch.

The black Jews consist, in part, of such natives as, having been slaves to the white Jews, embraced Judaism, and were, with very few exceptions, set at liberty after seven years' service; conformably to Deut. xv. 12. To these are added other proselytes, who live in the same part of the town with those that have been slaves. The black Jews, however, who have been slaves, are never allowed to intermarry even with the other black Jews.

When taking my leave, Mr. Moses Isarphaty begged that I would extend my protection to the "poor Jews;" and assured me that they would always be ready to do all in their power to accomplish my wishes, and to give me every information.

Nov. 3.—Finding it impracticable to obtain adequate knowledge of the state of the Jews without travelling a little into the interior, I left Cochin with Mr. Moses Isarphaty, and arrived at Cranganore.

4.—We visited Chanotta. Here is a synagogue, which was destroyed by Tip-

poo Sultan, together with the town, excepting a Mahomedan mosque. They have four copies of the Pentateuch, and the remainder of the Old Testament, but in very bad condition.

The number of Jews is as follows:—Men, 72; Women, 90; Boys, 41; Girls, 31.—Total, 234.

When we wished to know whether they would send their children, should I establish a school at Cranganore, they replied that they would consider about it. Moses was much grieved that they could not see the importance of embracing such an opportunity for the instruction of their children. He took, therefore, my Hebrew Bible; and wished them, from the oldest to the youngest, excepting the priest, to read a little, which not one of them could do. He reproved them then, for some time; and pointed me to Psalm xlix. 20, as descriptive of their case. They assigned, however the following reasons for their seeming indifference: 'They were first ruined by Tippoo, and since then the robbers about here have often visited and plundered their town, to such a degree that their children must earn their living as early as possible, so that they could not send them to a school at six miles distance; but if I could establish a school among them, they should certainly send their children. So anxious is Moses for their instruction, that on hearing this he immediately expressed his wish that I would allow him to feed the children at his own expense, in order to enable them to come. Two or three accepted his offer; and promised to speak with the others, and then give a final answer. It is the opinion of Moses that a great number of children would soon be collected here, notwithstanding the apparent backwardness of these persons. Much pity is, indeed, due to them. I gave the priest a copy of the gospels in Hebrew, which he received gratefully, and inquired if he might make his remarks in the margin. Of course, I acquiesced. On taking leave, he begged that I would do what I could for his people. He is priest of Malla also, and of Paroor.

5. At Malla. The synagogue here seems, from its ruins, to have been much larger than any that I have yet seen. It was destroyed by Tippoo, two or three years before that at Chanotta. The present synagogue is built within the ruins of the old one, and is in a very bad condition. The oldest and chief Jew in this place told us, that in the year in which Tippoo destroyed the synagogue, upwards of 300 white and 1600 black Jews died of the small-pox, which then raged among them; hence the number of Jews here is very small, there being now only 22: viz. 8 men, 9 women,

2 boys, and 3 girls. They have three rolls of the Pentateuch, and no other parts of the scriptures. I left no copy of the gospels here, there not being any one that could read them.

Having expressed a wish to visit the Rajah of Cranganore, Moses waited on his highness to intimate this wish to him. He replied that he was happy in the opportunity of seeing me; and wished to know who I was, and what were my intentions in coming this way. Moses said that I, as well as some other missionaries, had come from England, to teach the natives of this country the true way of adoring God; that one of the missionaries, at Allepie, was building a church, and had established a school for the instruction of children; that there was another at Cotym, among the Syrians; and that I was about to establish a school at Muttoncherry, for the instruction of the Jews and other natives; and had come up to Cranganore, to see which would be a proper place for establishing a similar school there: and that I had visited Chanotta and Malla, and intended seeing the people at Paroor. The Rajah expressed his satisfaction in the prospect of such a benevolent institution, and desired to know by what means the necessary expenses were to be defrayed. Moses then said that he was not able to give him a full explanation on that subject, but that he had not heard that any thing was required; and that the intention was to instruct the youth for their future welfare, because their parents were not able to give them instruction. The Rajah expressed himself highly gratified, and wished to know whether we would teach him also? when Moses said that he thought we should be very happy to do this, and to procure a proper person to instruct him and his family. The Rajah then said that he would give the necessary ground for the purpose, and desired Moses to learn at what hour we would visit him, that he might be prepared to receive us. This was such a new subject to the Rajah, that he kept Moses in conversation on it until midnight.

6. We went to wait on the Rajah. In our way to the palace we walked through the bazar, near to which is the largest pagoda in Malabar. Near the palace is the pagoda, which the Rajah attends every day. When we came to the palace, his highness, accompanied by a number of Brahmins, was waiting our arrival. A Brahmin accompanied us to the Rajah's apartment, when his highness met me at the door, and directed me to a seat. After being first seated, agreeable to the custom of the natives, I was introduced by name to his highness. He then expressed himself very glad of the opportunity of seeing me. He had not heard any thing respecting

missions before Moses told him last night, and intimated his wish that I should be near him, and that he might learn English himself. I observed, that I could not well reside there, but might establish a colony, and visit it occasionally. He then desired that this might be done, that he might see me and have the opportunity of speaking with me.

[*The Journal then notices the Rajah's wish to learn the English language, and other subjects on which information of a subsequent date has been given, vol. viii. p. 597, and current volume, p. 366.*]

His Highness then considered for some time respecting a situation for a school, and then said, wherever I should, with the Resident, determine to fix a school, he should be happy to give sufficient ground for the purpose. As I was not likely to remain here, he said that he would communicate his thoughts on the subject through the medium of Moses, who has some land in his dominions.

On taking my leave, and returning his Highness thanks for his kindness and attention, he strongly expressed his desire that I would call upon him whenever I should come this way, which I readily agreed to do. He then presented us with wreaths of flowers.

His Highness expected to see Mrs. Dawson, and seemed much disappointed in learning that she had been under the necessity, the preceding day, of returning to Cochin from indisposition. I trust that by this means Mrs. Dawson will have an opportunity of becoming acquainted with the respectable native females.

Cranganore is a very important situation for a school establishment, as it is a central place to a number of populous villages.

The Rajah is about 32 years of age, and is the eldest of seven brothers, one of whom is under 20, and the other five under 14.

7. We left Cranganore for Paroor.

At Paroor there is a synagogue, which was also destroyed by Tippoo, and what is now used as the synagogue is only the porch of the old one, which Moses with great difficulty got covered in a short time ago. The number of Jews here is small; they consist of 15 men, 13 women, 6 boys, and 10 girls: Total 44.

They have two rolls of the Pentateuch. There is money sufficient here to defray the expenses of a school.

After returning to our boat, and taking a little refreshment, we separated, Moses at the same time expressing his good wishes respecting the people; when I said that I hoped he would see them accomplished, through the divine direction, and under his blessing, to which he added his "Amen!" I arrived at Cochin soon after 6 o'clock.

Asiatic Journ.—No. 51.

Aug. 1, 1817.—Mr. Moses Isarphaty brought me the following correct statement of the number of Jews in Jews' Town:—Of white Jews there are 82 men, 84 women, 22 boys, and 35 girls, making a total of 223; of black Jews who have been slaves, there are 204 males and 249 females; and of black Jews, who are proselytes, 133 males and 134 females—amounting in all to 720. At a village on the other side of the water there are 152 males and 134 females: together 286.

It will appear from the above accounts, which I have been very particular in taking, in order to ascertain their number accurately, that the Jews within the Cochin mission amount to 1,529, and the synagogues to seven. They are very little conversant with any sort of literature. Even Hebrew learning is much neglected. Their habits are evil, and they themselves are held in no esteem by the other natives. In all these places they are a distinct people, and live in a street by themselves.

The Resident expressed himself pleased with Mr. Moses Isarphaty having made confidential inquiries respecting him, and believes that he will be found to be the most intelligent person among the Jews here.

The Resident wishes the formation of a school at Cranganore to be kept in view, as it is a most eligible situation, and a place noted in history, but thinks it expedient first to have the school at Muttoncherry well established.

BOMBAY AND WESTERN INDIA.

Voluntary Death by Fasting.—The following letter, inserted in a recent number of the Bombay Courier, is stated by the editor to be of anonymous origin.

An extraordinary instance of infatuation occurred the other day in the town near which I am stationed, and which would have appeared incredible to me had I not been well acquainted with the circumstances.

It is customary for the Jaija Bauias to fast during a period of eight days every year: this is called Pujoosun, and commences Sravunvud 12th. —A Bauia in this town named Dosi Kusla Vena, of the division of the caste called Vohra, and of the Kurwa Mita sect, determined to fast about this period thirty days. He commenced on the 4th Sravun Sood, or the 26th July, and his term expired on the 4th Bhadurwa Sood, or about the 25th August—he then took a small quantity of food daily, until the 9th (four days), but on that day he declared his determination

to abstain entirely from sustenance during the remainder of his life. This kind of voluntary death is considered an excellent mode of expiating sin and attaining eternal happiness among the Jains; and it is most probable his mind was worked on by the delightful visions of future bliss, and the transcendent merit of such a devotion, held out to him by the Yatis, and his friends, who perhaps wanted to get rid of him. From this, therefore, he entirely relinquished nourishment until the 15th Asoo, or the 3d October, when he died: thus having fasted, deducting the four days above mentioned, 66 days; during this time all he allowed himself was a very small quantity of hot water daily. As may be supposed, his form at his death was extremely emaciated, but his senses remained perfect to the last moment of his existence. Being now a saint, his body was followed to

the pile by all the Banias in the town, with a great deal of pomp and ceremony, customary on these occasions.

It is said, however, that other motives besides devotion prompted this act, as a short time previous, from some domestic discontent, his wife had poisoned herself.

A SUBSCRIBER.

Camp Gujarat, Oct. 5th 1819.

MOUNT CAUCASUS.

Distribution of Bibles.—Scheremetjew, the richest private individual in Russia, who has just come of age, has sent 25,000 rubles to the Philanthropic Society of St. Petersburg. The well-intentioned acts of that Society have hitherto been attended with very little success. An article from Warsaw informs us, that the Bibles hitherto distributed among the Circassian and other tribes in Mount Caucasus, in their own language, have been converted by these barbarians into cartridge covers.—*Continental Papers, 24th March.*

ASIATIC INTELLIGENCE.

THE private accounts of the fall of the capital seat of the Joasmee Pirates to the expedition sent by the government of Bombay to the Persian Gulf, which reached this country by a direct course, are confirmed by an official publication at that presidency, of which our present number contains a copy.

On the 3d of December the military force was landed two miles to the southward of Ras yl Khyma. On the 4th the light troops dislodged the enemy from an advanced post, and in the night effected a lodgment within 300 yards of the fort. After many difficulties in getting up the siege artillery, and some incidental skirmishing on the 8th, a severe fire was opened on the fort, which was continued during that day, and till the morning of the 9th, when the breach was reported practicable; on the preparation to storm, the place was evacuated, and the troops entered it without resistance. The loss of the besieging force was, 1 officer and 4 privates killed; 2 officers and 49 privates wounded.

INDIA—BRITISH TERRITORY.

Political—Official.

MODIFIED LIBERTY OF THE PRESS.

Calcutta, Oct. 21.—Respecting the liberty of the press in Calcutta erroneous

notions have been industriously propagated. It is true that the censorship of the press has been taken off, and accordingly it is not now necessary to submit the proofs of a newspaper to the secretary to government, before publication. It was, however, deemed expedient by the Governor-general in council, on the censorship being abolished, to pass the following restrictive rules, which were communicated officially to all the editors in Calcutta. Those who violate them, do so of course at their own peril.

To the Editor of the Government Gazette.—Sir: His Exc. the Governor-general in council having been pleased to revive the existing regulations regarding the control exercised by the government over the newspapers, I am directed to communicate to you, for your information and guidance, the following resolutions passed by his Lordship in council.

The editors of newspapers are prohibited from publishing any matter coming under the following heads:—1st. Animadversions on the measures and proceedings of the Hon. Court of Directors, or other public authorities in England connected with the government of India, or disquisitions on political transactions of the local administration, or offensive remarks levelled at the public conduct of the members of the council, of the judges of the supreme court, or of the Lord Bishop of Calcutta.—2d. Discussions hav-

ing a tendency to create alarm or suspicion among the native population, of any intended interference with their religious opinions or observances.—3d. The republication from English or other newspapers of passages coming under any of the above heads, or otherwise calculated to affect the British power or reputation in India.—4th. Private scandal, and personal remarks on individuals, tending to excite dissension in society.

Relying on the prudence and discretion of the editors for their careful observance of these rules, the Governor-general in council is pleased to dispense with their submitting their papers to an officer of government, previous to publication. The editors will however be held personally accountable for whatever they may publish in contravention of the rules now communicated, or which may be otherwise at variance with the general principles of British law as established in the country, and will be proceeded against in such manner as the Governor-general in council may deem applicable to the nature of the offence, for any deviation from them.

The editors are further required to lodge in the chief secretary's office one copy of every newspaper, periodical or extra, published by them respectively.—I am, Sir, your obedient humble servant
J. ADAM, Chief Sec. to Gov.

Council Chamber, 19th Aug. 1819.

POLITICAL APPOINTMENTS.

Nov. 6.—Capt. Sir John Gordon, Bart. 53d foot, brig.-major to the king's troops, on the Madras Establishment, to proceed to Hyderabad via Fort St. George, and place himself at the disposal of the British Resident at the court of his Highness the Nizam.

THANKS TO THE DIVISION RELIEVED AT MHOW.

Extract G. O. dated Fort William, Nov. 6.—On the occasion of the relief of the corps and detachments belonging to the presidencies of Fort St. George and Bombay respectively, which have hitherto formed the division of the army under the immediate command of Brig.-gen. Sir J. Malcolm, his Exc. the Gov. gen. in council offers to those gallant soldiers, a public token of his approbation and applause.

The conspicuous and important part borne by the troops of this division in the glorious and decisive operations of the last two years; their forbearance and steadiness in the trying circumstances attending the suppression of the mutiny of Bajee Rao's Arabs; their conciliatory demeanour towards the inhabitants of the countries in which they have acted; their undeviating discipline and regularity; their temper, spirit, and zeal; have from time to time been reported and

have excited his lordship's cordial admiration. The governor-general in council gladly avails himself of the opportunity to add, that he considers the Bengal corps, which have formed a part of the force under Sir J. Malcolm's general command, to be also fully entitled to the same unqualified approbation and applause.

A MAJOR'S POWER OVER CAMP EFFECTS OF A DECEASED OFFICER.

Head quarters, Calcutta, Oct. 12.

G. O.—The most noble the Commander-in-chief is pleased to publish, for the information of the regiments composing his Majesty's army in India, the opinion of the law officers of the crown, regarding the construction which has been put upon the 19th section of the articles of war in a recent case, and confirmatory of the course adopted against the major of one of his Majesty's regiments in this country, for having administered to the estate of a deceased officer of the same corps.

A case on this particular subject having been prepared, for the purpose of ascertaining whether the construction above referred to was justifiably put, as to limiting the functions of the major to the regimental effects of a deceased officer, a copy of the Attorney and Solicitor General's opinion thereon is herewith annexed, which appears to coincide in the legality of the proceedings adopted against the regimental major alluded to.

Opinion.—“The article of war, section 19, art. i, does not give the major of the regiment a power to collect the general effects of the officer dying, but only such effects or equipage that he has in camp or quarters: and out of those to pay his regimental debts and quarters, and to pay the surplus of such effects to his legal representative. By the statutes referred to in the case, the registrar of the court is made the legal representative of British subjects dying in India, whether military or civil, under the circumstances therein stated; and we think, that if the power of the major extended to the general effects, still he would be bound to pay the surplus to the registrar, who had letters *ad colligenda* granted to him as the legal representative in India of the deceased. But we are also of opinion, that the articles of war attend only to such specific effects and equipage as are in camp and quarters, namely, camp equipage, or moveables, or money, actually found in camp or in his quarters, and not to effects, debts, or money in the hands of third persons.”

Signed S. SHEPHERD, R. GIFFORD.

Dated at Sergeants' Inn, 22d April 1819.

This order is to be recorded by every regiment of his Majesty in India. By order of the most noble the Commander-in-Chief:—THOS. M'MAHON, Col. A. G.

DISTRIBUTION OF THE ARMY.

G. O. by the Gov. gen. in council, dated Fort William, 25th Sept.—The troops of every army belonging to the presidencies of Madras and Bombay, serving under the command of Brig. gen. Sir John Malcolm, K.C.B. and K.L.S., in the province of Malwah, will be immediately relieved by a detachment from the army of Bengal, agreeably to the instructions furnished to his Excellency the Commander-in-chief. With reference to the reduced number of regular troops stationed in Kumaon, the Governor-gen. in council is pleased to abolish from the 1st of November next, the appointment of brigadier for that province, the general duties of which will be conducted under the orders of the senior officer, by the quartermaster or adjutant at Almorah, agreeably to the provision contained in general orders of the 16th of December 1816.

POLITICAL APPOINTMENTS.

Nov. 26.—Hon. E. Gardner, re-appointed resident at the court of the Raja of Nipaul.

Mr. J. Majoribanks to be agent of the Governor-gen. in Bundelkund, Saugur, and the Nerbudda territories.

OPERATIONS OF THE ARMY.

Unofficial—published in India.

KUNDA RAO, KILLEDAR OF KURMILLA.

Accounts from the westward mention the rebellious conduct of the Killedar of Kurmilla.—*See p. 498.*

We learn by a letter from Ellore, of date the 26th September, that Lieut. col. Doveton, with the Russell cavalry and flank companies of the Russell brigade, marched from Hyderabad on the 18th ultimo against the fort of Kurmilla. The line companies of the brigade, with two 18-pounders and some field pieces, were to follow on the 1st instant, which is the earliest day the guns can be got ready. The whole of the force from Hyderabad was to have marched at the same time on the 1st, but the cavalry and flank companies have been sent in advance, in consequence of information that the killedar was collecting troops and plundering the country. The force from Hyderabad is to be joined by a battalion of infantry and 1,000 reformed horse of the Berar division of the Nizam's troops. Kurmilla is about 230 miles to the west of Hyderabad, on the Pooná frontier of the Nizam's dominions. It is said to be a stone fort, of a circular form, with bastions and ditch, but no glacis. It is spoken of as the general opinion of the natives that no opposition will be offered, but that the killedar, convinced of the folly of resistance, will surrender the fort on the approach of the

troops. The killedar is a son of Rao Rumba. He has been for some years past in rebellion against his father, whom, in conjunction with his mother, he expelled from his lands. His father resides at Hyderabad.—*Calcutta Govt. Gaz.*

Extract of a letter, dated Camp, Kurmilla, 8th October.—We arrived here on the 6th, and Kunda Rao sent a proposal to pay four lacs of rupees if we would withdraw the troops, and that failing this, he was determined to fight to the last, adding that he would fall upon our small party and cut it in pieces. The answer returned to this gasconade was, that the only terms we would accept were an unconditional surrender of himself and fort, and preparations were made to invest it as fully as our small means would admit. This was the only thing we could do till the guns came up, and they were not expected till the end of the month. Next morning, an hour before day-break, however, Kunda Rao fled with about half a dozen companions, and the gates of the fort and a fortified pagoda near it were opened to us, and we took immediate possession. This termination we may account fortunate, for the place is very strong, and if tolerably well defended could only have been gained after a considerable time, and with the loss of many lives. The wall is well built of stone and in good repair, and surrounded by a very wide ditch. Kunda Rao is reported to have taken shelter in a fort belonging to Scindia, where our cavalry is going in pursuit of him.—*Bengal Hurkaru.*

THE BHEELS ON THE SKIRTS OF CANDEISH.

We learn from the Deekan, that a detachment from Aurangabad of a rissallah and a battalion marched under Captain Davies, on the 24th ultimo, against the Bheels, in the Ghauts towards Kandeish; a force from that quarter and a battalion from Koporgaum act in concert. A combined attack was ordered to take place, on the 3d of this month, but on reaching the huts of these vagabonds they were found abandoned. Our hopes now rest on the blockade, and it is expected in a short time the want of food will compel them to surrender.—*Bombay Gaz. Dec. 22.*

Original Correspondence.

The following extracts of recent letters from India relate chiefly to the distribution of detachments in Rajpootana, and in allotments of territory intermingled with the remnant of Scindia's possessions.

THE PINDARRIES.

A report was in circulation at Muttra, towards the end of last month, that large

bodies of Pindarries had again made their appearance in some parts of Guzerat, and that detachments both of Madras and Bengal cavalry had been sent in pursuit of them.—*Bombay Cour. Nov. 6.*

Neemutch, situated in lat. $24^{\circ} 23' 12''$ N. * and long. $74^{\circ} 50'$ E., about 10 miles south of Sawud, has become a regular cantonment for 1 brigade of horse artillery, a regiment of light cavalry, 2 battalions of native infantry, and some irregular horse, under the permanent command of Lieut.-col. Ludlow, C.B. The climate is much cooler than in the provinces, but with greater extremes of heat, cold, and damp, and about the termination of the rains intermitting fevers of a bad description are very prevalent.

Neemutch, Nov. 17. — The relief of troops here has commenced. The left wing of the 1st battalion 5th regiment N. I. marched in here yesterday morning to relieve the 1st battalion 1st regiment N. I., which moves towards Rohilkund to-morrow morning.

The relieving and relieved corps breakfasted and dined with the Lieutenant-Colonel Commandant, who inspected the 1st battalion 1st regiment N. I. previous to its departure, and was pleased to issue the following orders:—

“Detachment Orders by Lieut.col.Ludlow, C.B., commanding the Neemutch force, 16th Nov. 1819:—

“The commanding-officer was well pleased with the soldier-like appearance of the 1st battalion 1st regiment N. I. under arms this morning.

“Lieut.col. Ludlow takes the present occasion of the approaching departure of the 1st battalion 1st regiment N. I. to express his approbation and thanks to Major Bellingham commanding, and to the corps at large, for the good internal discipline and orderly conduct manifested by them, for the period of 18 months that they have been under his command.”

COURT MARTIAL

Head Quarters, Calcutta, 29th Dec. 1819.—General Order.—At a general court martial assembled in the Castle of Surat, under the Presidency of Bombay, on the 15th day of September 1819, and continued by adjournments until the 18th day of October 1819, private David Flannery, of Capt.Byne's troop of his Majesty's 17th Light Dragoons, was arraigned upon the undermentioned charges, viz. :—

1st Charge.—“For mutinous conduct at Kaira, on the night of the 29th of July 1819, in having waylaid troop Sergeant-major Kelly, when proceeding from his

room to the barracks, and striking him several times with a stick or bamboo.”

2d Charge.—For mutiny, on the night of the 29th July 1819, in wantonly presenting and firing a pistol loaded with ball cartridge, and wounding the said troop Sergeant-major Kelly while in the execution of his duty.”

Upon which charges the court came to the following decision:—

“Sentence.—“The Court having maturely weighed and considered what has appeared in support of the prosecution, together with what the prisoner private David Flannery, of H. M. 17th Light Dragoons, has adduced in his defence, is of opinion that he is guilty of the whole of the crime laid to his charge, which being in breach of the articles of war, in such cases made and provided, does sentence him, the said David Flannery, to suffer solitary confinement for the space of twelve months, at such place as his Excellency the Commander-in-chief may be pleased to direct.”

Which sentence was approved and confirmed by his Excellency Lieut.-gen. the Hon. Sir Charles Colville, G.C.B., Commander-in-chief at Bombay.

The most noble the Commander-in-chief directs that the foregoing order be entered in the General Order Book, and read at the head of every regiment in his Majesty's service in India.

RELATIONS WITH THE NATIVE POWERS.

NEW KING OF OUDE.

A private letter from Lucknow details the ceremony which took place when the Vizier of Oude assumed the dignity of King. The notice of the fact, p. 498, was confined to the date.

Reports had been in circulation for several months that it was the intention of the Vizier to assume the title of King, provided the sanction of our Government could be obtained.—*See p. 66.*

“The coronation took place on the 9th. General Marshall with his personal staff reached the Residency on the morning of the 8th, together with some other officers, from Cawnpore, Seetapore, and Secrora.

“At day-break on the 9th, about 60 officers assembled at the Residency. The Resident, with General Marshall and the other officers, being mounted on elephants, proceeded to the Vizier's palace of Furruh Buksh. The British troops at Lucknow were drawn up in a line extending along the new street. His Excellency's troops were drawn up in the interior of

* The latitude above indicated is two minutes wanting one second more than that stated in page 34; but some doubt respecting the accuracy of the former statement, though coming as well from an officer on the spot, was expressed in a note to the printed extract.—*Editor of the Asiatic Journal.*

the palace-ground. On reaching the palace, Mr. Monckton, General Marshall, and a few others, alighted and embraced his Excellency. He then mounted his elephant in company with the minister, who was seated behind him. His Excellency was saluted by all the officers as he passed. The procession to the durgah was grand and magnificent.

The cavalcade returned by the same road, and on reaching the palace-gate the Resident and the officers in his train took leave of his Excellency. An hour afterwards the Resident and the officers proceeded in palankeens to breakfast with his Excellency. After breakfast they proceeded to the Baradurree. His Excellency entered by a door in the rear of the throne. On ascending the first step, the minister delivered to him a *radial* crown studded with diamonds and jewels of great value. He then put it on his head, and was congratulated on the occasion by Mr. Monckton, who saluted him as King of Oude. Jewels and pearls to the value of 30,000 rupees were then scattered over the heads of the spectators. Many were picked up by our fair ladies. Soon after all of us accompanied the young Prince to a small apartment, when valuable presents were distributed to all the officers and ladies invited.

"In the evening a grand entertainment was given at Constantia by Mr. Monckton. The splendid and magnificent apartments of the Residency were under repair.

"There was dancing till a late hour, and every one retired highly gratified with the suavity and hospitality of the British Resident."—*Ind. Gaz.*

The following particulars are derived from the *Calcutta Government Gazette* of Nov. 4. The Persian terms for this Prince's former and present titles are preserved in this second version.

Ghaz-oo-den-Padshah, on rising in the morning, proceeded to the palace, anxious about the preparations. He directed Om-rut Lal to point out the spot where the Company's troops were to be paraded when they arrived. He then conversed with Nuwab Matmud-oo-Doulah, and soon afterwards arrayed himself in splendid robes covered with jewels. Thirty-three gentlemen being announced in waiting at the Lalpuria gate, the Shah requested them to approach. His retinue was then called, and he repaired to the durgah of

Uzrut Abbas Allee, to perform the customary prayer. On his return the Shah distributed large sums in charity. The Resident, General Marshall, and all the ladies and gentlemen of Lucknow, partook of a state breakfast. The Shahzada, Mirza Wulee-ahud, then led the way to the Baradurree. The Shah, having performed a prayer, put on the "kingly crown," and placed himself on the throne. The Resident and Wulee-ahud were seated on his right, and the general on his left, and the other gentlemen stood round. Nuwab Matmud-oo-Doulah and Mohusun-oo-Doulah scattered flowers, composed of pearl and gold, over the king.

The gorgeous East with richest hand
Showers on her kings barbaric pearl and gold.
Milton.

A salute of twenty-one guns was fired, and presents distributed to an immense amount. In the evening a party, consisting of eighty gentlemen, was invited to supper.

COMMERCE WITH CHINA.

The whole quantity of cotton sent to China from different parts of India, from the 1st of January to the 31st of October 1819, is as follows.—

From Bombay, bales of 364lb. net	49,700
Bengal, bales of 300lb.	21,700
Madras ditto	3,000

To which must be added some shipments of India cotton, both from England and America. - 6,000

Total 80,400

This is, however, scarce half the quantity that found its way there the preceding year, so that we may assuredly look forward to an amendment in the markets.—*Bombay Papers.*

CALCUTTA.

CIVIL APPOINTMENTS.

Oct. 1.—Mr. J. W. Templer, assistant to the Magistrate of Mirzapore.

Mr. J. Vendall, chief Judge of the courts of Sudder Dewanny and Nizamut Adawlut.

Nov. 12.—Mr. H. T. Owen, assistant to the Magistrate of the 24 Pergunnahs.

Nov. 26.—Mr. W. Leycester, a puisne Judge of the courts of Sudder Dewanny Adawlut and Nizamut Adawlut.

Mr. A. Ross, second Judge of the Provincial Court of Appeal and Court of Circuit for the division of Bareilly.

Mr. C. Elliott, third Judge of do. do.

Mr. J. O. Oldham, fourth Judge of do. do.

Mr. C. T. Sealy, second Judge of the provincial Court of Appeal and Court of Circuit for the division of Calcutta.

Mr. G. Forbes, third Judge of do. do.

Mr. A. B. Tod, fourth Judge of do. do.

GENERAL MILITARY REGULATIONS.

Soldiers discharged in India inadmissible as Recruits.

Nov. 20.—The Supreme Govt. published the following Extract from a Letter from the hon. the Court of Directors, dated 30th June 1819.

Para. 23. It having been discovered that several men, discharged at their own request from our European corps in India, have upon their arrival in this country offered themselves as recruits for the service, we have judged it expedient to give instructions to our recruiting officers not to enlist any men of this description; and we have come to this resolution with a view of discouraging the numerous applications for discharges which, in expectation of being re-admitted into the service, is calculated to produce, and which also entail a very heavy expense upon the Company, in the payment of the passages and other incidental charges of these men.

24. You will therefore cause this resolution to be notified to all such non-commissioned officers and private soldiers as may apply for their discharge after having served their contracted time, in order to guard them against a misconception of their being eligible for the service on their return to this country.

Fifteen Years' Service to commence on leaving England.—**Dec. 24.** In obedience to instructions from the hon. the Court of Directors, the most noble the Governor-gen. in council is pleased to notify to the army, that the period from which fifteen years' service, entitling a subaltern officer to the brevet rank of captain, shall in future be considered to have commenced, will be calculated from the year in which the cadets may have left England, consequently no brevet will be issued on the 1st proximo.

Exercise and Drill.—Officers in command of H. M. corps in India are enjoined to avail themselves of the present favourable season for exercise and drill.

Commanding officers are further enjoined to encourage, by every means in their power, according to circumstances and situation, all sorts of useful occupations, manly exercises, and diversions amongst their men, and with the same care to repress every species of slothful idleness, and tendency to intemperance.

Commissions resigned on the eve of Death not saleable.—It is found requisite to explain, for the information of the officers of his Majesty's army in India, that when through ill health they find it necessary or convenient to retire from the service, and to dispose of their commission or commissions, they must take care to have the papers transmitted to head-quarters, for the purpose of having their reig-

nations accepted before their state of infirmity be such as to bring their applications within the description of death-bed documents. The latter are in every way so injurious to a corps, that his Royal Highness the Commander-in-chief of all his Majesty's forces has most pointedly forbidden their being accepted in any case.

POLITICAL MISSION HOME.

Dec. 24.—Lieutenant Forbes, of the corps of engineers, to proceed to Europe on the public service.

MILITARY APPOINTMENTS AND PROMOTIONS.

Nov. 3.—Until the pleasure of his Royal Highness the Prince Regent shall be known.

22d Dragoons.—Cornet A. Taylor, to be lieutenant by purchase, vice Dwyer, promoted in the 84th foot.

89th Foot.—Lieut. C. Redmond, to be captain of a company without purchase, vice St. Leger, deceased.—Ensign W. J. King, to be lieutenant without purchase, vice Charles Redmond, promoted.—C. J. King, gent. to be ensign without purchase, vice W. J. King promoted.

Nov. 5.—Lieut. Duke, late of the Coldstream guards, and at present an ensign in his Majesty's 46th regiment, is attached to the office of the military secretary to his Excellency Lieut.-gen. Sir T. Hislop, Bart. and G.C.B. commander-in-chief at Madras, until further orders.

Nov. 6.—Capt. I. D. Carroll, H.M. 69th to be brigade major to the king's troops on the Madras establishment, vice Capt. J. Gordon appointed to a station under the residency at Hyderabad.

Brevet Lieut.col. Blair is announced at Bombay to be military secretary on the staff of his excellency Lieut.-gen. the hon. Sir Charles Colville, G.C.B.

Capt. T. Worsley, 23d regt. N. I. and a brigade major on the establishment, to be assist.adj.gen. to the Nerbuddah field force, vice Henley, promoted to a regimental majority.

Lieut. and Brevet-capt. G. Casement, 21st regt. N.I. to brigade major on the establishment, vice Worsley.

Assist.surg. A. Wood, 1st permanent assistant at the presidency general hospital, to the medical charge of the Calcutta jail, vice Halliday, appointed a presidency surgeon.

Assist.surg. G. O. Gardner, to perform the medical duties at the civil station of Bauliah, vice Ballard, resigned.

Assist.surg. J. Hutchinson, to perform the medical duties at the civil station of Bheerboom, vice Pears, appointed to Banda.

Infantry Cadets.—J. P. Macdougall and Osborne to be ensigns.—Assist.surg. G.G. Macpherson is admitted.

Nov. 13.—Lieut. D. Thomas, 7th N. I. to be fort adjutant at Buxar, vice Griffin, removed.

Assist.surg. J. Henderson, to the medical charge of the civil station of Hurrupaul and Gollagore, vice Wardrop, removed to Nuddeah.

Lieut. Sir R. Colquhoun, Bart., 22d N. I. commanding the Kemaon provincial batt., to be dep. postmaster at Aluorah, vice Capt. Leys.

Lieut. J. A. Schalach, Dep.assist.qr. mast.gen., to conduct the survey of Calcutta under the lottery committee.

Peter La Touche, and not La Fouché, under which latter name he was admitted into the service by general orders of the 19th Sept. 1818, is the correct name of Ensign La Touche, now doing duty with the 18th N. I.

Cornet O'Brien, 1st local cav. is transferred as an ensign to the Ramghur batt. vice Vilette, deceased.

The undermentioned unposted ensigns are promoted to lieutenants, to supply existing vacancies, from the dates specified: R. R. Hughes, 24th April 1819; A. C. Baillie, 21st July 1819; E. Sutherland, 23d July 1819; A. J. Anstruther, 9th Aug. 1819; H. J. White, 24th do.; S. G. Wheeler, 29th do.; G. L. Vanzetti, 13th Sept. 1819; W. Hamilton, 29th do.; H. V. Cary, 22d Oct. 1819.

Cadet of engineers T. Prinsep, to be ensign, to fill a vacancy in that corps.

Artillery cadets R. G. Beddingfield, and G. Maclean, to be second lieuts.

Infantry cadets the hon. W. Stapleton, P. Deare, J. Hewett, and G. H. Edwards, to be ensigns.

18.—Detail of officers to proceed on duty in the Mellish, going to England with expired service men: Capt. Campbell, 17th foot; Lieut. Newton, 21st drag.; Lieut. Suckling, royal Scots; Cornet Forward, 21st drag.; Assist.surg. Menzies, do.

20.—Surgeon J. Law, to be dep. superintending surg. for the force proceeding to Mhow, under the command of Lieut. col. R. Houston, C. B.

Assist.surg. J. M. Todd, to perform the medical duties at the civil station of Banda, vice Pears, who has resigned the service.

Assist.surg. C. B. Francis, to perform the medical duties at the civil station of Calper, vice Todd, removed to Banda.

Artillery cadets D. Ewart and C. Grant, to be second lieutenants. Infantry cadets H. W. Bellew and G. Kinloch, to be ensigns.

Dec. 18.—Lieut.col. M. Macnamara, 2d batt. 17th N. I. is transferred to the invalid pension list from 1st proximo.

Assist.surg. J. R. Martin, to act as senior assist. at the presidency general hospital, and to take the medical charge of the Calcutta jail, vice Maliday, during

the absence of Assist.surg. Wood, who stands nominated to those situations.

1st Reg. of Light Cav.—Cornet F. J. Staniforth, to be lieut. from 24th Nov. 1819, vice Bacon, deceased.

Cornet J. Fraser of the 8th, and W. Veyzie of the 3d L. C. the two senior cornets in the army, to be lieutenants, the former from 27th Sept. and the latter from 1st Oct. 1819, to fill existing vacancies in other regiments.

7th Reg. N. I.—Capt. C. Cunningham to be major, from 3d Dec. 1819, vice Lawry, deceased.

Ensign T. Prinsep, engineers, to conduct the experiments under preparation for removing a shoal formed in the river near Tetaghur; and to superintend the operations now carrying on, for the preservation of the grounds and of the superintendent's house at the botanic gardens.

Dec. 21.—Until the pleasure of his Royal Highness the Prince Regent be known:—

Royal Scots.—Lieut. W. McKenzie, to be adjutant, vice Cameron, deceased.

Ensign W. Thomas, to be lieut. without purchase, vice Lieut. W. McKenzie, appointed adjutant.

N. B. The promotion of Lieut. Sir J. Gordon, bart. 22d drag. to a company in the 53d foot, as announced in the general orders of the 20th of Aug. last, is cancelled.

28.—Until the pleasure of the Regent be known:—11th light drag. Capt. M. White from the half pay of the 24 h drag. to be capt. of a troop, vice J. Moore, who exchanges.

46th Foot.—Ensign N. I. Cumberlege, from the half pay of the 67th foot, to be ensign, vice W. A. Ross, who exchanges.

Ensign C. O'Hara Boorh, from the half pay of the 53d foot, to be ensign, vice A. Geddes, who exchanges.

FURLONGHS.

Nov. 6.—Lieut. and Brev. capt. J. Pearson, 18th N. I. to Europe.—Lieut. and Brev. capt. S. Mercer, 17th N. I. to sea, in extension, for eight months.

13.—Capt. Gordon, H. M. 59th, to Europe for two years.—Brev. capt. E. T. Bradby, 4th N. I. to Europe.—Lieut. R. Chalmers, 2d N. I. to Europe.—Lieut. col. and Brev.col. G. Dick, 9th N. I. to Europe.—Lieut. W. H. L. Frith, artillery, to Europe.—Lieut.col. M. White, 2d N. I. to the Cape, twelve months.—Surg. P. Breton, attached to the Ramghur batt. to sea, ten months.

Nov. 20.—Lieut. col. H. Worsley, C.B. to Europe.—Lieut. Suckling, R. Scots, to Europe, for 18 months.—Lieut. J. Dickson, R. Scots, the same.—Capt. Campbell, 17th foot, the same.—Lieut. P. de Moor, 17th foot, to Ceylon, four

months.—Lieut. T. O'Halloran, 17th foot, to Europe, two years.—Lieut. Mahon, 46th foot, the same.—Assist. surg. G. King, to Europe.—Ensign W. H. Halford, to Europe, one year.—Lieut. H. Ingle, 15th N.I. to sea, ten months.—Capt. J. Arron, barrack-master, Berhampore division, six months. in extension.—Lieut. T. Michael, 11th N.I. to Tanjore, for six months.

Dec. 18.—Brevet Capt. S. Watson, 28th N.I. to sea, ten months.—Lieut. C. Coventry, 1st. Batt. 16th N.I. to Europe.—Capt. J. Peckett, engineer, to Europe.—Lieut. T. Lumsden, horse brigade, to Europe.—Capt. Dnadas, maj. of brigade to Presidency division, now at the Cape, six months in extension.

Dec. 23.—Ensign Donahoo, 24th foot, to Madras, six months.—Capt. Goate, 37th foot, to Europe, eighteen months.

Jan. 1.—Capt. Knolles, 14th foot, to the Cape, six months.—Capt. Davies, 34th foot, to Europe, two years.

INVALID ESTABLISHMENT.

Dec. 18.—Lieut. K. Mason, artillery, is transferred, at his own request, to the invalid establishment.

RETIRED OFFICERS.

Nov. 13.—Assist. surg. C. Pears, M. D. attached to the civil station of Banda, is permitted, at his own request, to resign the service of the Hon. Company.—Surg. W. Ainslie, the same.

LOCAL OCCURRENCES.

Entertainment to the Marchioness of Hastings.—At the Town Hall, on Tuesday, Dec. 7, the society of Calcutta gave a splendid entertainment to the Marchioness of Hastings, consisting of a masqued ball and supper. The arts of design, music, and poetry, vied to pay honour to the Marchioness and her illustrious lord, and to present to the company an elegant festival, made of attractive scenes. The supper tables were so distributed as to allow all the party to see the honoured guests. Mr. Larkins, the president, sat between them, and two of the vice-presidents at the same table in the inside; the two other vice-presidents at the top and bottom of tables; and the stewards scattered at appropriate distances. In front of Lord and Lady Hastings was a small piano-let into the tables, where our best professional and amateur vocal performers, had stationed themselves, and after the health of Lady Hastings had been given, and cheered in the oriental manner, described below, an ode, composed for the occasion, was sung by Mr. and Mrs. Lacy and several other voices. This lyric effusion was afterwards spoken of as a respectable specimen of occasional poetry.—The pre-

sident, Mr. Larkins, having introduced the health of the Marchioness of Hastings, with a short address, while the company were yet standing, and about to cheer, the sounds of the piano-forte and of Mrs. Lacy's exquisite voice was heard, and the deep and mute attention which it caused enabled the musical hurrah, which was substituted for the three cheers, to be heard with full effect. It commenced with female voices for the first cheer, was strengthened by the tenors in the second, and swelled out in full concord in the third, which was repeated until three times three had been sounded in more delicate and perfect harmony than was ever before heard in India. The novelty of this surprize, and its exceedingly appropriate character to a female health, was universally felt and admired.

When her Ladyship had sufficiently recovered from the strong and visible emotions which this scene had occasioned to her delicate and refined sensibility, Lord Hastings returned thanks in the name of his amiable consort. He observed, that if it were possible for Lady Hastings herself to express how deeply she felt the warm and public mark of affection and esteem that had this night been evinced towards her, she would have fulfilled her own anxious wishes; but that being impossible he had risen on her behalf, to assure those by whom he was surrounded that the testimony of their regard which they had this night received could never be erased from her recollection, could never cease to be remembered but with pleasure. His Lordship, after some beautiful observations on the advantage of cultivating this reciprocity of regard, sat down evidently affected under the weight of satisfaction.

The president again rose, and proposed "the health of the Marquis of Hastings, their beloved and venerated guest." The toast was followed by three times three, till the hall rung again. His Lordship returned thanks.

The Marquis and Marchioness of Hastings retired about three in the morning, but a great number of the party continued the festivities till about five. Good humour, hilarity and harmony prevailed.

Festival of the Behra.—On Thursday the 10th, His Highness the Nawaub of Bengal gave the usual entertainments at the palace at Moorsshedabad, to the civil and military gentlemen of the station, on the festival of the Behra.

At 10 P. M. the signal was made by a gun from the palace. It formed a square about eighty fathoms, consisting of a centre building, surrounded by a wall with a door-way in each face, and turrets at the corners, on which men were stationed burning sulphur lights. The in-

intermediate space on each face was filled by mohur-punkees, the whole brilliantly illuminated in variegated colours, chiefly green and yellow, which, with a display of fire-works on both sides the river, had a pleasing effect. Previous to the approach of the Behra, the company were entertained with nautches, and after it had passed the palace, sat down to an elegant supper, at which His Highness the Nawab presided.

Curious Discovery.—On the forenoon of Dec. 23, the workmen employed in pulling down an old building contiguous to the Bankshall, and immediately opposite Mr. Hare, the watch-maker's shop, discovered a large collection of bayonets. They were first seen on breaking down the masonry which filled a door-way on the north side. There was no other entrance to the place in which they were found. It was blocked up by walls on three sides; the fourth wall, to the west, however, was not carried up to the roof, and left a space of about three feet. Through this opening it is supposed that the bayonets must have been thrown, apparently in a hurry, as they were heaped up in a very confused manner. They are of all shapes and sizes, covered with rust, and many of them with the Company's mark still visible. The number thus discovered is said to be upwards of 12,000.

For some time past the rooms on each side of the place where the bayonets were found, has been occupied by boat-office keepers, and the most singular part of the story is, that these weapons, under such circumstances, should have remained so long concealed. Underneath them several cooking utensils, articles of household furniture, and oyster shells were found, and also auction advertisements and tavern bills, dated in 1795. This mysterious circumstance has given rise to conjectures as various as improbable. With hidden weapons, conspiracy and insurrection became of course associated, and accordingly it has been supposed that they were collected by some desperate natives for the purpose of opposing the British power in India. The accumulation of such a large quantity has been accounted for in a different way. It is said to have been customary to throw unserviceable and rejected bayonets, &c. into the river opposite the fort, and with the natives it had been also customary to fish them up in the night! These no doubt found a ready purchaser, who probably collected them to sell to the Arabs, and others from Pegu and the Eastern Islands, who frequent the port at Calcutta.

Isle of Saugur.—We are sorry to find that not only Mr. Plumet, who had lately been appointed superintendent of the workmen employed in clearing the Isle of

Saugur, in the room of Dr. Dunlop, but that also Dr. Saubolle, an European assistant, and several native servants, have been under the necessity of leaving the place, from the extreme unhealthiness which at present prevails there. And yet this is the spot on which, some little time ago, a plan was proposed for erecting a temple to the goddess Hygeia.—*Calcutta, Jan. 8.*

Coroner's Inquest.—On Thursday, 18th Nov. an inquest was holden at the house of Richard Francis, Esq. situate in Mangoe Lane, over the body of *Thomas Temple Blackburn*, late a writer in the civil service of the Hon. East India Company. It appeared in evidence, that the deceased had called upon his friend Mr. Francis twelve days before, to afford him a room in his house, as he was sick and did not like to reside in his own, situate on the circular road, because it was damp. A room was kindly provided for him, and he instantly wrote for Dr. John Macwhirter; who attended him until the fatal catastrophe. The doctor's deposition tended to shew, that the deceased had appeared desponding and anxious throughout his illness, and particularly so on the evening preceding his death. On the afternoon of the same day it had been deemed necessary to apply leeches to his temples: at night the deceased had complained to his kind host that he was unhappy in his mind, was greatly in debt, and that he was very wicked, but had resolved on following a new course. He appeared to Mr. Francis to be delirious before he left him to his repose, which was about half past ten o'clock. Before day-light the following morning a report was heard by Mr. Francis, who being suddenly aroused from his sleep, imagined it was the morning gun, and remained unconscious of harm, until disturbed by a note, thrown into his room through the venetian window by Dr. Macwhirter. The latter had gone early to visit the deceased, and upon feeling the hand cold, and no pulse at the wrist, besides perceiving the bed-clothes besmeared with blood, was alarmed, and he wished to have the presence of a witness. Upon returning to the room, and throwing open the windows, these gentlemen discovered that the throat of the deceased was partially cut with a razor (which was found afterwards lying upon his bed), and it was supposed, having failed in his attempt, he had used a pistol, for not a vestige of face or head remained! There was no direct evidence given to prove these facts; but upon a close investigation by the coroner and his jury, traces of blood-marks were discovered to the adjoining apartment (in a line with that of the deceased), and it was clear to their minds, that he must have gone thither for the purpose of procuring his razors, for

the case had been taken out of his own bedding, which was rolled up on a table, and wherein were the remaining apparatus for shaving; these said articles having remained in that place without being before removed from the first day of his arrival. The case was found upon a chair in his own room, where it is probable he first made the attempt to cut his throat, as before mentioned, and that then he must have returned to the aforesaid room to procure the pistol, with which he shot himself, as that was found burst, sticking at the foot of the bed in the mosquito curtain, where it must have fallen, in the recoil. The pistol ball had passed through the pannel of the door behind the bed of the deceased, leading to the next room, leaving its mark on the furthestmost wall, and was found under a table on the opposite wall, quite flattened. Under the foregoing circumstances, a verdict was returned of *Lunacy*.

New Chapel, Dec. 2.—Government have determined on dedicating another new building in Calcutta to Divine worship according to the English Protestant church. For the equal accommodation of the eastern and western districts, a chapel is to be built on a spot of ground in the Bow-Bazar, commonly called the Gao Khanah, a little to the westward of the Mussulman college. It is to be a plain and simple edifice, with a dome, without galleries, and calculated to contain six hundred persons. The Bishop has sanctioned his chaplain, the Rev. Mr. Hawtayne, to perform the clerical duties. A school-room is to be built near, the expenses of which will be defrayed out of certain funds at the disposal of the Lord Bishop.

Vestry Question.—Calcutta has been some time agitated by a dispute between the gentlemen who, by the votes of a few who have passed office and acquired that privilege from custom, compose the Select Vestry of St. John's cathedral, and a large party among the British inhabitants of Calcutta, who claim to have, as a General Vestry, a right to choose the Select Vestry annually.

This party of antagonists to the Select Vestry have made many attempts to exercise the suffrage thus claimed, and when foiled by the subsisting members of that body, have twice solicited the interposition of government in their favour, without being able to obtain any act or decision adverse to the privileges of the Select Vestry, derived and transmitted by a close election.

In consequence of these unavailing

applications, a meeting was called on the 22d of September, at the town-hall, of all the British inhabitants, at which the subject was stoutly debated. After much argument on both sides, a preponderating majority carried a set of resolutions, of which we subjoin a careful abstract, not having room for the whole; but we have aimed to preserve the force of those passages which unfold the nature of the dispute, and the basis of the claims revived by the present inhabitants. The want of some conditional term equivalent to "It is the opinion of this meeting," at the beginning of such of the resolutions as require it, does not originate with the abstract: owing to this omission, the assembly speak as if by the energy of deliberate volition they had created the acts of which they complain. The sixth, for example, shews what resolute minds may accomplish. The tone of confident dictation in the thirteenth leaves the government at liberty to coincide with the meeting.

The 15th contemplates the raising of a grand imperial hurly-burly about the reclamation of a free *vestry code* for the parish of St. John, Calcutta, in case the Supreme Government should reduce the scale on which the privilege of choosing parochial officers can be exercised. The 13th, 14th, and 15th resolutions, form an epitome of the mischiefs to be apprehended from giving parochial assemblies a disproportionate magnitude and publicity, compared with the objects for which they meet. Thus, an inexhaustible orator lifts himself into a boisterous importance by converting a room for petty business into a theatre for ambitious debate. The contingent appellants jump at once from the vestry office at Calcutta to the Parliament House in Britain. From the decorous address spoken by the chairman in presenting it, we infer that the petition with which the committee went up to the Government House at Calcutta did not contain the mixture of distrust and menace, the professed submission, and the prepared appeal, pervading the 14th and 15th resolutions.

Abstract of the Resolutions proposed and carried at a Meeting in the Town-Hall, Sept. 22, 1819, to which all the British inhabitants of Calcutta were in-

vited, and at which more than 300 attended, on the subject of the dispute with the Select Vestry of St. John's Cathedral.

First.—Resolved: That the Church Constitution, made public in 1787, in the Government Gazette, and emanating from the collective wisdom of Lord Cornwallis and of several chief functionaries of government, joined in a select vestry with the chaplains, appears to this meeting to contain provisions for the administration of the church affairs, and for the management of the revenues and poor funds, in themselves most just, reasonable, and prudent; equally honourable to all parties concerned, whether we regard the liberality of the high authority which conferred the rights and privileges contained in that charter, or the characters of the inhabitants of this city.

Second.—Resolved: That the instrument thus solemnly promulgated under the sanction of the government, as represented by its chief, has never been abrogated or altered in any of its essential provisions, by an act equally authentic; consequently the constitution aforesaid is conceived by this meeting to be still in full force.

Third.—Resolved: That whether from confidence in their delegates, the select vestry, or whether from indolence or constant occupation in business on the part of the inhabitant electors, it has happened that the annual election meetings, though duly summoned every Easter since 1787, have been scantily attended by the inhabitants, and frequently of late years have been attended by none except the actual members of the old select vestry, on whom, in the absence of other constituents, the duty of electing the new vestry has legally devolved on such occasions, and who, in the absence of other candidates, have necessarily re-elected the same individuals to the offices of church-wardens and sidesmen.

Fourth.—Resolved: That within the last few years, the relaxation of vigilance, on the part of the electors, appears to have produced a corresponding laxity in the select vestry, and an indifference to the opinion of the constituent body, manifested in the manner of discharging their functions, and particularly by their having ventured to discontinue the accustomed annual publication of their accounts in the government gazette, without the authority of the general vestry.

Fifth.—Resolved: That from these and other indications, the select vestry made light of their responsibility to the general vestry, and even inclined to question its controlling and constituent authority, certain public-spirited individuals determined, two years ago, to assert the privileges

conferred on the inhabitants in 1787, and were successfully resisted by the select vestry, who denied the elective right of the inhabitants; and, by their representations to government, appear to have persuaded that high and respected authority to abstain from interfering authoritatively in behalf of the electors, under an impression that the select vestry alone possessed the right of election to office.

Sixth.—Resolved: That in the present year the attempt was renewed with better success, the general vestry having, by a considerable majority, re-elected a church-warden on their own behalf, and having chosen two new sidesmen, in virtue of their ancient franchises; which the same majority resolved were nowise impaired by certain paragraphs of a letter to the old vestry, produced as a justification of their right to re-elect themselves, but which, when justly interpreted, were considered by the meeting to be a mere acknowledgment of any vestry *de facto*, for the convenience of carrying on the public business and trusts, waving all interference in the question of right, and suggesting a reference to higher authority.

Seventh.—Resolved: That on the first meeting for the discharge of ordinary business after Easter, the select vestry took upon themselves to revive the discussion of the great question of the general vestry's competency to elect them to the offices which they were then exercising in virtue of that competency, and in failure of which they could not have any legal existence as a select vestry, inasmuch as no election whatever had taken place on the prescribed day, save and except that election by the inhabitants which they affected to question.

Eighth.—Resolved: That the select vestry, on the strength of private and irregular communications with the individual employed by government to write the letter regarding the former year's election, proceeded by a majority of three against two to declare the election of the inhabitants null and void, ejected the two dissentient sidesmen, declared themselves the lawful select vestry, and recalled to their seats the two sidesmen of the year before, who had been rejected by the inhabitants at the general vestry election.

Ninth.—Resolved: That the ejected sidesmen, having in vain solicited the interposition of government, who again, and in more express terms, declined to interfere on the point of right, and having fruitlessly appealed to the persons calling themselves the lawful select vestry, who refused to notice their applications to have a general vestry summoned to decide between them, have called a special meeting of the inhabitants, electors, with the sanction of government, for the avowed

purpose of laying before us the opinion of counsel, and for concerting measures to vindicate the franchises of the inhabitants, thus wrested from us by the usurpation of the select vestry.

Tenth.—Resolved: That this meeting considers the two sidesmen, Mr. R. C. Plowden and Mr. Trevor Plowden, entitled to its fullest approbation and cordial thanks, for their zealous, able, and disinterested exertions in behalf of our common rights and privileges.

Eleventh.—Resolved: That this meeting considers the persons now calling themselves the select vestry, and in forcible possession of the records and powers appertaining to the offices of select vestrymen, to have no good right so to style themselves, or to act in that corporate capacity, and that we will use our strenuous endeavours to oust them from their pretended functions, and to recover the ancient rights of election and control to the general vestry.

Twelfth.—Resolved: That we the inhabitants now present, together with such persons as have been prevented from attending but concur in opinion, do join in a respectful petition to the Supreme Government, which shall be drawn up and presented by our committee and our chairman, and after narrating our past proceedings, and detailing these our resolutions, shall confine itself to the simple object of earnestly entreating that high authority to re-establish by its power the constitution of 1787, precisely as it stands recorded, either as a permanent rule and ordinance, or as a temporary measure pending any reference to authorities in England.

Thirteenth.—Resolved: That this meeting cannot allow itself to question the beneficent and liberal views of the government, nor its readiness to interpose its mediation and authority, in establishing, in the shape of an old charter revived or a new charter granted, the just and salutary principles laid down in that admirable vestry constitution of 1787, beyond the enforcement of which our utmost desires are not extended; and that we are well persuaded the Supreme Government of British India will never hesitate to act on the undeniable maxim, that all men, holding public trusts, and administering revenues or funds for the general good, should be held responsible for their constituents. That we are confident of government's acquiescing in the expediency of enforcing the churchwardens' and sidesmen's oaths; and the former yearly rendering of their accounts on oath; of rendering the prosecution of delinquent officers effectual; of compelling the publication of accounts; and of providing for occasional meetings of the general vestry, on formal requisitions signed by a given number of electors.

Fourteenth.—Resolved: That if the government, for reasons unknown to us, should decline to grant or restore the system of 1787, so much coveted by the inhabitants, we will endeavour to obtain redress from the laws of the land; we will support the sidesmen in endeavours to gain their restoration to office, by such proceedings, at law or in equity, as shall appear advisable to them and their counsel, with the approbation of a committee of our own body; and we will personally contribute, and endeavour to obtain the contributions of every independent inhabitant, towards defraying such law charges.

Fifteenth.—Resolved: That if we should ultimately fail in these moderate views, through the improbable refusal of the government to attend to our solicitations, or the incompetence of the strong arm of the law to afford redress, we will subscribe our names, and invite the signatures of all our fellow citizens to humble petitions, drawn up by our committee, to the King in council, or either or both Houses of Parliament, as the case may be; beseeching either, or all those high authorities to extend relief to us in the matters above set forth; and that, in the event of such humble petition or petitions being determined upon, that to the King in council be transmitted, by our committee, through the Supreme Government and the honourable the Court of Directors, to the President of the Board of Controul, to be by him laid before the King in council; and that any petition to the Lords Spiritual and Temporal, or Commons' House of Parliament, shall be transmitted through such members of those Houses as the committee may think will aid our views.

Sixteenth.—Resolved: That the following gentlemen be a committee, for carrying into effect these resolutions:

Commodore Hayes, *Chairman*: Messrs. Pattle, Palmer, Trower, Trant, Forbes, R. C. Plowden, Wynch, T. Plowden, Buckingham, Dampier, Siddons, Comp-ton, and J. Young.

Seventeenth.—Resolved: That this committee considers it right and just not to close these proceedings without recording this resolution, explicitly disclaiming any intention of imputing corrupt, dishonest, or sordid motives or conduct, to the persons now claiming to be the select vestry of St. John's, whether in their corporate or individual capacities; the objects of this meeting being confined to the assertion and recovery of old and acknowledged rights, which we conceive to have been wrongfully wrested from us, the inhabitants of Calcutta, by our own appointed servants, whose wish to make themselves wholly independent of their constituents, we ascribe to im-

poises that do not necessarily affect our respect for the moral and personal character of those individuals.

Eighteenth.—Resolved: That deeply regretting the injury the poor have sustained, from the present select vestry having lost the confidence of the public, we do, in the event of our projected petition to the government failing of effect, constitute ourselves a society for receiving and distributing alms, in like manner and under similar restrictions and responsibilities as are laid down in the regulations appointed by Lord Cornwallis in June 1787; and that six persons of the committee, by us chosen, shall be elected from time to time by a majority of the said committee, to fulfil the object of this resolution during the interval that may elapse, until we can obtain either the revival of the above-mentioned constitution of 1787, or any other vestry constitution which may be hereafter legally established.

Nineteenth.—That the thanks of this meeting be given to Mr. Buckingham, for the disinterested and laudable public spirit he has invariably manifested during the whole period of the discussion of the vestry question, through that palladium of the liberty of the British Press in India, the *Calcutta Journal*.

Twentieth.—Thanks to Commodore Hayes, for his impartial and able conduct in the chair.

Twenty-first.—Thanks to the high-sheriff and the under-sheriff, for their ready convening of the meeting.

Nov. 13.—The Governor-gen having signified his pleasure to Commodore Hayes, chairman of the meeting and committee, that he would receive their petition this day at 10 o'clock, the committee named in the sixteenth resolution attended at the government house at the time appointed. The commodore had the honour to indicate to his Lordship the object of the meeting in a short address.

My Lord:—Agreeably to the wishes of a numerous meeting of the inhabitants of Calcutta, assembled at the town-hall on the 22d of September last, under the sanction of your Lordship's government, we now take the liberty to present their humble petition, praying for redress against certain grievances, which they hope to acquire from your Lordship's wonted regard for public justice.—We disclaim hostility towards any party, as our sole object is the amelioration of the condition of our more unfortunate and helpless fellow-creatures, which object we hope to attain through your Lordship's impartial consideration.—We take this opportunity of personally expressing our unforgotten respect and attachment for your

Lordship's person and government; and in thus submitting our humble appeal on behalf of the public, we have before us every rational ground of hope, as our dependence is placed upon the just decision of one of the greatest and best men of the age.

After which, the commodore presented the petition to his Lordship, who received it most graciously, and stated that it should be laid before the council for consideration without delay.

Assault Extraordinary. The following transaction, growing out of the "vestry question," shows the fierce animosity which it has caused between some of the opposite partisans in the society of Calcutta. The narrative is in the words of the editor of the *Calcutta Journal*.

On the evening of Thursday, Sept. 30, about the close of twilight, when the course was crowded with carriages, the editor of this journal was taking an airing in his buggy, with a friend. The young person who had distinguished himself at the meeting at the town-hall, by advocating the cause of the select vestry, and whose speech was reported as that of a young gentleman whose name was not then known, happened to pass by on horseback at the time; and though his person was distinctly remembered, nothing peculiar was remarked in his appearance, so as to indicate hostile intentions. Immediately after passing the buggy, which was proceeding at a slow rate, and the persons in it were lounging back in a listless and unguarded posture, without apprehension of an assault, the young man on horseback suddenly wheeled round, exclaiming "Your name is Buckingham, I believe," and coming up behind him, without asking any more questions, struck him with a hand whip. The blow was instantly returned by Mr. Buckingham with several cuts from the buggy whip, laid on with such effect, as to induce the assaulter to drop behind, after which he said "my name is Darwall." A second attack was apparently contemplated by Mr. Darwall, who again advanced from behind in the same manner as he had previously done; but the parties being now more guarded, invited his nearer approach. Mr. Buckingham said, "Do you wish any thing further? If you do, I'll give it to you." He replied, "The sooner the better." Mr. Buckingham rejoined, "off the course, if you please; follow me," pointing with his left hand to the road below, the parties being then close to the bottom of the course. To this Mr. Darwall made no reply. He was again invited, and even a third time soli-

cited to retire from this scene, and follow Mr. B. to a more appropriate one, but still remained silent and did not comply. The parties in the buggy continued the usual drive, repeating the round of the course after this, during all which time Mr. Darwall was not again seen.

From the tenor of the observations annexed to this *ex parte* statement, we gather that Mr. Darwall had taken offence at what he conceived to be a substantial misrepresentation, in the report given in the *Calcutta Journal* of the speech delivered by him at the meeting. Amid much obscure verbosity occurs the strange phrase, "his probationary station in life as an attorney's clerk," applied to Mr. D. with an allusion to his extreme youth, which together may mean that this gentleman is under articles. Many flashes of resentment illuminate the style, from which it is discoverable that in the scales of honour Mr. B. ascends above Mr. D., and that an action is to be brought for the assault.

Shocks of Earthquake.—A slight shock of an earthquake was felt in Calcutta about half-past eight o'clock p. m. on the 10th Nov., and two other shocks of greater violence at about half-past one on the following morning: the direction was from N.W. to S.E.

Four shocks of earthquake were experienced at Chittagong, between the 4th and 20th of October.

Cholera Morbus.—Fifteen mussulmans, among whom three children, assembled in one house to the north of Chandnea Chokey, for the celebration of the Mohurum, were attacked by the cholera morbus on Saturday last. One of the children had already fallen a victim to the disease, when a neighbouring gentleman, having been informed of the dangerous state they were in, saved them all by speedy doses of drogue amere.—*Calcutta Paper.*

This medicine (properly *droga amara*) is described in the *Asiatic Journal*, vol. viii. p. 340.

By letters from Subathoo, at the foot of the Himalaya, dated Oct. 26, we learn that the *cholera morbus* prevailed there: and that throughout the Dhoon it had committed, and was still committing great ravages. Among other instances cited, is the remarkable and melancholy fact, that out of 1,200 men of the Goorkhali corps, 70 were carried off by this disease, in the short space of two days: and on all those who were attacked, no medical treatment had any effect.

The Weather and the Crops.—Letters

from the places specified contain the passages cited.

Muttra, Nov. 25.—Wheat is selling here at 18 seers per rupee, other grain in proportion at a much higher rate than might be expected from the appearance of the crops in the vicinity, owing to the scarcity which prevailed in the lower provinces. The weather during the greater part of the present month has been clear and cold, but the last two days have been cloudy, rather sultry.

Jionpoor, Nov.—In consequence of the rain which fell on the 12th, 13th, and 14th of this month, all the crops have assumed a very flourishing appearance. The poor orders of cultivators had been previously unable to sow their lands, from inability to purchase seed, the small quantity which the frosts of last season had permitted them to reap having been entirely consumed as food, or sold to pay their rents. Those who had been in habits of lending seed, lost so much last season, that they had refused to make further advances. I have been sowing a few oats and some lucerne and yellow clover, by way of experiment, and lands ready ploughed were offered me in every direction, by tenants who were unable to procure seed to sow them after they had prepared the soil; some of which, paying the expenses of ploughing, I accepted.

The rain however has altered the scene completely, and at present I could not procure a beegha if I wished it; for the lenders of grain for seed, seeing a strong probability of their former balances, have opened their stores, and not a patch of arable land will remain unsown. Grain rose in price after the rain, but it was on account of the increased demand for seed; it has again fallen, and is now selling, wheat 11 seers (of 96 rupees weight) for the rupee, barley 13 seers, maize 15 seers, bajra 16 seers, &c. &c., being still treble the price it was four years ago, and nearly eight times the price it was at the time of Cheyt Singh's rebellion.

Bareilly, Nov. 21.—Our crops are promising, and we have a plentiful khurreef harvest, but the demand from the southward prevents grain getting cheap here; wheat 14½ seers, coarse rice 18 seers, bejra 26 seers, chunch 12 seers *surd*, monge 14 seers, mote 19 seers, muka (Indian corn) 28 seers, jewahur 26 seers. The rubbee crops are nearly all sown, and have come up very well. Oil 3½ seers, cotton 2 seers 4 chattacks. Our seer is ponderous, being 105 rupees, Furruckabad Sonat, and cur pusaaree 525 rupees.

The unfortunate Shehan.—The fate of the late Serjeant Major Shehan, of the 7th N.C., formerly of H.M. 22d dragoons, has excited considerable attention at the presidency. On the 13th Nov. he was

found drowned in a small pool in the northward of Royapooram, into which it would appear he had gone for the purpose of bathing. At first some slight suspicions were entertained that he had been brought to his untimely end by violence, but after a minute investigation, both by the coroner and magistrates, there is no doubt of his having been drowned by accident. Though the deceased came to India in the humble capacity of a private in the 22d light dragoons, some papers found in his possession ascertain the fact that he was of a family of rank and opulence in Ireland. By the draft of a letter found in his possession, beginning "My Dear Lord," and written in the manner of one well educated gentleman to another, it would appear that he got engaged in a duel at Cork, and though the fact is not stated, yet as he fled from his country, there is reason to presume that his antagonist must have fallen. He then proceeds to state, that having spent some thousand pounds at that fashionable watering place, Bath, he felt he had no alternative but to embark as a soldier for India. No names are mentioned by which his relations can be discovered; we only know that he had not changed his name, as he speaks of himself to his friend by the name of "*the unfortunate Shehan*."

It is to be feared that the case of the unfortunate Shehan is not singular, and that many fine young men are now expiating in exile, perhaps in degradation, their youthful indiscretions.

Nov. 30. Part of the ancient palace at Agra, consisting of two halls situated in the palace-garden, has been appointed for the purpose of performing divine service.

His lordship, the bishop, is preparing for a visitation to Fort St. George and Prince of Wales' Island. He was expected at the latter place about the end of September.

Miscellanies.—On the evening of 22d Dec. a farewell entertainment was given to the hon. Mr. Dowdeswell, member of the Supreme Council, at the Town-hall, as a mark of the regard, attachment, and respect, of a number of gentlemen who had long been in the habits of private and official intercourse with him.

Looking with regret to the approaching separation from their commander, the officers and staff of the Saugor field force have presented a service of breakfast plate to Brig.-gen. Watson, C.B. Their accompanying address, dated Saugor, Nov. 8, was signed by Lieut.col. Hetzler, and 49 officers. The distinguished general accepted this token of his fellow-warriors' regard and admiration, with interchanged plaudits, expressions of esteem, and wishes for their glory and prosperity.

Article in the *Obituary* questioned.—The death of the Rev. J. P. Nugent having been announced in our Mirror of last week, and scandalous reports having been since circulated tending to impress the public mind with an idea that the death and interment of the above gentleman were a mere deception, contrived for the purpose of concealing his clandestine departure from the country, we consider it our duty thus publicly to invite those who question the fact to state the grounds upon which their suspicions are founded, as also upon those who had ample means of convincing themselves of the reality of this melancholy event, to come forward in vindication of the cause of truth; by which the mind of the public will be set at ease, and the character of an individual relieved from the persecutions of unrelenting malice.—*Calcutta Paper*.

Velocipedes.—Nov. 23.—Garrison Order.—His Excellency the most noble the Governor-gen. is pleased to direct that in future "*Velocipedes*" shall not be permitted to enter the Respondentia walk.

Launch of Pilot Vessels.—Dec.—The Marquis and Marchioness of Hastings honoured with their presence the launch of the Government pilot vessels at Kidderpore, built by the Messrs. Kyds. The vessels when launched were completely rigged. They are called the *Hattras* and *Asseerghur*.

Afflicting Circumstance.—On the 14th of October, a ball was given on board the Liverpool Trader, then lying off Calcutta. The party, including the visitors and the officers of the vessel, consisted of about 50 persons. More than half of these were seized with a virulent fever in a few days afterwards. Not less than ten of the party died in as many days, including the captain and surgeon of the ship. Only one officer survives of those who left England in the ship, and he is just recovering in the hospital. All sorts of conjectures were made, but it turns out that there were 17,000 undressed buffalo horns in the hold, in a complete state of putrefaction. This vessel has sailed for England in this state without a surgeon. Annexed are the names and ages of some of those whom this sudden mortality affected, with the days on which they died:—Nov. 6th, Miss Maria Routledge, aged 20; 7th, Capt. Williams, aged 94; 8th, Mr. James Edo, aged 22; 9th, Mr. William Dale, aged 29; 10th, Miss Eliz. Goodall, aged 27; 13th, Capt. G. Woodward, Commander of the Bengal, aged 49; 13th, Mr. J. Hasselden, aged 20; 17th, Mr. John Hay, Surgeon of the Bengal, aged 23.

COMMERCIAL ABSTRACT.

Dec. 1.—A few quotations from the state of the market.

It appears that the supply of cotton continues very limited. Cutchora was at 17 12 to 18 8, being an advance of about eight annas. Ginger was abundant, and found few purchasers. Saltpetre was lower, and the price quoted for 1st quality was from 7 to 7 6. Sugar had fallen about eight annas; Benares, 1st quality, could be purchased at 10 to 11 4. With regard to freights, it is stated, that notwithstanding the number of free traders in the river was only half of what it was at the same period last year, they continued as low and as difficult to be procured as had been the case for some time past, the market being still completely bare of light goods; the rates of freight to London were from 5l. 10s. to 6l.

Statement of Shipping in the river Hoogly, 1st Dec. 1819.

Same day, at Midnapore, Mrs. Bellew, wife of Lieut. F. J. Bellew, 18th N. I. of a son.... Same day, at Agra, the lady of Capt. H. E. G. Cooper, of a son.... 4, at Howrah, Mrs. Capt. Wise, of a daughter.... 5, at Agra, the lady of Lieut. M'Mahon, 1st batt. 24th N. I. of a son.... 6, Mrs. M. Chalke, widow of the late Mr. J. Chalke, of a daughter.... Same day, at Janjemow, the lady of J. M. Sinclair, Esq. of a son.... 7, at Juapore, the lady of R. Davies, Esq. of a son.... Same day, at Moradabad, the lady of H. Wood, Esq. civil service, of a son.... 8, at Dumdum, the lady of Capt. Pollock, art. of a son.... 9, Mrs. Fabian, wife of Mr. Fabian, pilot service, of a daughter.... 11, at the Presidency, the lady of G. J. Siddons, Esq. civil service, of twins, boys.... Same day, at Sagur, the lady of Capt. Sissmore, dep. field paym. of a son.... 13, at Chinsurah, Mrs. Philip Barber, of a daughter.... 15, Mrs. Eaton, wife of Conductor R. Eaton, of a son.... 16, the lady of Lieut. H. C. Barnard, interp. and quarter mast. 1st batt. 26th regt. N. I. of a daughter.... 17, Mrs. R. Gordon, of a son.... Same day, at Purneah, Mrs. J. Brandt, of a son.... 19, the lady of A. H. Blechynden, Esq. of a son.... 21, at Garden Reach, the lady of R. W. Poe, Esq. of a daughter.... Same day, the lady of E. Thompson, Esq. of a daughter.... 23, in Chowringhee, the lady of F. T. Hall, Esq. of a daughter.... 24, at Baugulpore, the lady of Capt. J. Graham, adj. to the corps of hill rangers, of a son.... 26, the lady of W. Richardson, Esq. of a son.... Same day, Mrs. J. T. C. Adella, of a son.... 28, at the house of her father, Mr. R. Twalling, Mrs. M. Forshaw, wife of Mr. A. C. Forshaw, of the H. C. Bengal marine, of a still-born female child.... 29, at Calcutta, the lady

of Capt. Galloway, agent for gunpowder, of a son.... *Dec.* 1, at Bancoorah, the lady of H. M. Pigou, Esq. civil service, of a daughter.... 3, Mrs. G. Sheppard, of a daughter.... 5, the lady of P. Y. Lindsay, Esq. civil service, of a son.... Same day, the lady of J. B. Inglis, Esq. of a son.... 10, at Purneah, Mrs. M. Shillingford of a son.... 18, at Garden Reach, Mrs. Sandys, of a son.... 28, the lady of A. Mactier, Esq. of a son.... 29, the lady of T. Barlow, Esq. of a son.... 30, the lady of Capt. F. Balston, of a son.... 31, Mrs. C. J. Fox, of a son.... *Jan.* 1, at his residence in Tank-square, the lady of Dr. Macwhirter, of a son.... 2, at Fort William, the lady of Capt. C. Coates, H. M. 89th foot, of a daughter.

MARRIAGES.

Sept. 16, at Agra, Mr. R. M'Clay, to Miss Anne Bavey, eldest daughter of Mr. W. Bavey.... 27, J. C. Brown, Esq. civil service, to Matilda, daughter of G. Chinnery, Esq. of Calcutta.... *Oct.* 5, at Chandernagore, Mons. P. Worlee, only son of Mons. I. X. Worlee, to Mlle. Palmire, only daughter of Mons. Darzac, Capt. French commercial resident at Dacca.... 9, at Patna, Mr. J. Boillard, jun. to Miss A. Boytard.... 11, at Midnapore, at his father's house, Lieut. Vanrenen, art., to Harriet Catherine, eldest daughter of Adm. D. Campbell, R. N.... Same time and place, Lieut. C. Griffiths, 18th N. I. to Anna Grace, second daughter of Lieut. Col. Vanrenen, com. the station.... *Nov.* 1, at Allahabad, Lieut. J. Burney, H. M. 87th regt. to Miss L. Dickson, third daughter of W. Dickson, Esq. of Highbury hill, Middlesex.... Same day, at Masulipatam, Mr. C. Barnett, assist. surveyor, to Miss L. Hudson.... 2, at Dumdum, Lieut. F. N. Price, art. to Ann Helena, daughter of Col. Grace.... Same day, at Benares, Lieut. A. Pope, 8th L. C. to Frances, fourth daughter of W. Crockroft, Esq. Westminster.... 4, at Ghazepore, Capt. R. Brown, H. M. 24th regt. to Anna, eldest daughter of J. Thomson, Esq. of Mid Lothian.... 5, at the cathedral, J. Ross, Esq. of Purneah, to Jane, seventh daughter of W. W. Williams, of Falmouth, Cornwall.... 10, J. M. Todd, Esq. surgeon of the civil station of Calpee, to Catherine, fourth daughter of P. Goulet, Esq. of Exeter, Devon.... Same day, at Berhampore, Capt. M. S. Hogg, acting barrack mast. at that station, to Mrs. Burton.... 13, G. Swinton, Esq. sec. to govt. Persian department, to Anne Elizabeth, daughter of S. Swinton, Esq. a member of the board of customs, salt and opium.... 16, Capt. T. Waterman, country service, to Mrs. G. Henderson.... 29, at St. John's cathedral, Calcutta, Capt. H. A. F. Hervey, 7th Bombay N. I. and barrack mast. N. D. G. to Harriet Ann, youngest daughter of W. Barnfield,

Esq. formerly of Pentonville.... *Jan.* 1, by the Rt. Rev. the Lord Bishop of Calcutta, at the government house, Capt. A. Lindsay, art. to Miss F. L. M'Kenzie.... 3, Mr. J. Payne, jun. marine board office, to Miss C. Barose.

DEATHS.

Sept. 23, at Nursinghpore, Sophia Charlotte, aged nearly one year, youngest daughter of Lieut. J. Horgan, interp. and qr. mast. 2d batt. 27th N. I. Nerbudda field force.... 26, near Rajmah, Sophia, the wife of Maj. Boscawen.... Same day, at Comilla, J. Hume, Esq. assist.-surg. of the civil station of Tipperah.... Same day, at Nusrabad, Capt. C. B. Borlase, 2d L. C.... Same day, Anne Martha, infant daughter of Mr. F. R. Tovey.... 28, at Mooltai, upon command about 27 miles from the camp at Teeharr, in Baitool, Lieut. W. D. Mousell, eldest son of T. Mousell, Esq. of Belleisle in the county of Tipperary, barrister at law, and grandson to the late W. Devaynes, Esq. of Dover street, London, a celebrated director of the Hon. Company.

A paragraph, under "Local Occurrences," derived from the same paper, alludes to the following.

29, at the Presidency, the Rev. J. P. Nugent, one of the chaplains belonging to this establishment, and attached to the military station of Dinapore. He arrived some weeks ago in a state of great mental depression, tormented with the dreadful idea that he had swallowed a slow poison, which was gradually consuming his entrails. From this notion, which could have proceeded only from the morbid state of a system naturally inclined to irritation, and lately overpowered by a series of domestic unhappiness, he could never thoroughly divest himself; and in his frequent assertions that his existence was drawing rapidly to a conclusion, he proved the sad prophet of an event which, however it might startle his friends from its apparent suddenness, had to him for some time been an object of daily expectation.

Oct. 1, on board the Prince Blucher, Mr. J. A. Greebe, late chief officer of the Aurora.... 2, at Mrs. Bean's, Chowringhee, Miss F. Morrell, eldest daughter of Lieut. col. R. Morrell, commanding the Moorsheadabad provincial batt.... Same day, at Fort William, C. Maria, infant daughter of Capt. Hare, H. M. 21st L. D.... 3, Capt. J. Crawley, acting head assistant to the collector and magistrate

of the zillah of Chingleput.—Mr. J. Orr, acting head assistant to the collector and magistrate of Coimbatore.—Mr. W. R. Taylor, assistant to the warehouse-keeper.

HONORARY DISTINCTIONS WON IN THE FIELD.

Sept. 27.—The right hon. the Governor in council is pleased to permit the 1st batt. of artillery, and the 1st batt. 1st, and 1st batt. 20th regiments N. I., to bear in their appointments, or embroidered on their regimental standards, in English and Persian characters, the words "*Sectahuldee, 27th November 1817*," in consideration of the distinguished gallantry and admirable exertions of the two latter corps, and of a detachment of the first of them, on that day, when repelling the attack of the forces of the Rajah of Nagpoor. Further, the undermentioned corps to bear in their appointments, or embroidered on their regimental standards, the words "*Mahidpoor, 21st December 1817*," in commemoration of the splendid victory achieved by these corps, or detachments of them, over the army of Mulhar Rao Holkar, on that day, viz. horse artillery;—3d light cavalry;—4th do.;—8th do.; 2d batt. art.;—Madras European regiment;—rifle corps;—1st batt. 3d regiment light infantry;—1st batt. 16th do.;—2d batt. 6th regiment N. I.; 1st batt. 14th do.;—2d batt. 14th do.; 1st batt. pioneers. A detachment of the 1st batt. of artillery having been engaged in the affair with the late Peishwa's army at the village of Corygaum, that corps to wear in its appointments the words "*Corygaum, 1st January 1818*," in further testimony of its claims to the applause of the government.

The honorary distinctions granted to the several corps named, will be worn in their colours and appointments respectively, in addition to any other badges or devices heretofore granted to them.

LOCAL OCCURRENCES.

Eminent Beneficence.—Letters from Hyderabad state that a great scarcity of grain had rendered the condition of the poorer kind of camp followers truly deplorable. The European officers of the Hyderabad subsidiary force had very generally subscribed considerable sums for the relief of the sufferers, and the part sustained by Gen. Doveton in the work of beneficence has been eminently great. The general not only gave one thousand rupees to the fund, which originated in a system of joint contribution dedicated to the general relief of as many as could be thus fed from the local bazar, but caused extensive purchases of grain to be made, at his own expense, in quarters which, although not very distant from the camp, were

for the time beyond the reach of the common people. The grain thus procured was distributed daily at the rate of half a seer per person, to a number exceeding 12,000; and one of our letters mentions 14,000. The relief which was thus afforded to the famishing camp followers need only to be stated to be appreciated; and the conduct of the general, on this occasion, affords a noble contrast to the acts of others whose names have been recorded, and some of whom contrived to carry to Europe large fortunes, which were realized by the purchase and sale of grain during the pressure of a similar calamity.

Archdeacon Mousley.—The committee for erecting a monument to the late Archdeacon Mousley held a meeting on Saturday, Nov. 20, when it was reported that the subscriptions amounted to 3,115 rupees, and the committee resolved that 500 rupees should be appropriated to the erection of a plain granite tomb stone and pedestal over the grave. It was likewise resolved, that application should be immediately made to John Flaxman, Esq. R. A. his Majesty's sculptor, to furnish the committee with two or three designs of a neat and chaste mural monument to be placed in St. George's church. The funds collected are to be invested in Company's paper till required in payment for the work. The tablet will be graced by a Latin inscription from the pen of the learned Bishop of Calcutta.

BIRTHS.

Sept. 7.—At Trichinopoly, the lady of C. Searle, esq. of the medical service, of a daughter.... *Oct. 2*, at Trichinopoly, the lady of G. Phillips, esq. civil service, of a daughter.... *4*, at Cotym, Travancore, Mrs. Fenn, of a son.... *6*, at Nagpore, Mrs. R. Rhodes, of a son.... *13*, at Pulicat, Mrs. Odbam, of a daughter.... *15*, at Cannanore, the lady of Lieut. F. Bond, 1st batt. artil. of a son.... *18*, at Chittoor, the lady of C. BOMBAY.

Political—Official.

TERRITORIAL ARRANGEMENT.

G. O. by the Governor in Council.—Nov. 3.—His Exc. the most noble the Governor-gen. in council having directed that the territory under the commissioner in the Deekan should be annexed to the government of Bombay, the districts of Candeish, Ahmednuggur, and Poonah, permanently, and the district termed the Southern Mahratta country until further orders, the hon. the Governor in council is pleased to announce the adoption of

that arrangement from and after the 1st of this month.

The military arrangements and details are for the present to be conducted as heretofore, Mr. Chaplin performing the functions of commissioner under the orders of the government.

COMMANDER-IN-CHIEF.

Abstract G. O.—Oct. 9.—Announcement that his Exc. Lieut.gen. the Hon. Sir Charles Colville, Kt. G.C.B. having arrived this day, and been sworn in as second in council, the governor directs the Bombay army to obey him as Commander-in-chief.

POLITICAL APPOINTMENT.

F. Warden, Esq. retiring from council, to resume the situation of chief secretary to government.

MILITARY BOARD.

The Commander-in-chief to take the President's seat.

Oct. 13.—Maj.gen. Baillie having resumed the command of artillery, to take his seat accordingly, Col. J. Griffith retiring.

EXPEDITION TO THE PERSIAN GULF.

Official—published in India.

Gazette Extraordinary.—Bombay, Dec. 28, 1819.—A dispatch has been received by the Hon. the Governor in council from Maj.gen. Sir W. Grant Keir, K.M.T. to the address of the Adj.gen. of the army, dated the 9th of this month, of which the following is a copy:—

Sir: I have the satisfaction to report the town of Ras-ul-Khyma, after a resistance of six days, was taken possession of this morning by the force under my command. Previous to making you acquainted with the circumstances which led to this fortunate result, I shall do myself the honour briefly to detail the events which occurred between the period of my last communication and the commencement of the operations before Ras-ul-Khyma.

On the 18th ult., after completing my arrangements at Muscat, the Liverpool sailed for the rendezvous at Kishme; on the 21st, we fell in with the fleet off the Persian coast, and anchored off the island of Larrack on the 24th Nov.

As it appeared probable that a considerable period would elapse before the junction of the ships which were detained at Bombay, I conceived it would prove highly advantageous to avail myself of that interval in acquiring as accurate a knowledge of the strength and defences of Ras-ul-Khyma as personal observation

could supply, and I gladly embraced the proposal of Capt. Collier that the Liverpool should proceed thither for that purpose. The senior engineer was accordingly taken on board, and having sailed from Barrack on the morning of the 25th, we anchored off Ras-ul-Khyma the 27th. The place was closely and repeatedly reconnoitred; and the weather continuing favourable for our operations, I determined to order down the troops, and commence the attack without waiting for the rear transports, as the season of the north-west winds was rapidly approaching, and Capt. Collier appeared apprehensive that a further delay might prove detrimental to the enterprise. A vessel was therefore dispatched with instructions to Capt. Walpole, who was left in charge of the fleet, and on the 2d instant the transports arrived under convoy of the Curlew.

No time was lost in making the necessary preparations for landing, which was effected the following morning without opposition, at a spot which had been previously selected for that purpose, about two miles to the southward of the town. The troops were formed across the isthmus connecting the peninsula on which the town is situated with the neighbouring country, and the whole of the day was occupied in getting tents on shore to shelter the men from the rain, landing engineers' tools, sand-bags, &c., and making arrangements preparatory to commencing our approaches the next day. On the morning of the 4th, the light troops were ordered in advance, supported by the pickets, to dislodge the enemy from a bank within 900 yards of the outer fort, which was expected to afford good cover for the men, and to serve as a depot for stores previous to the erection of the batteries. The whole of the light companies of the force, under command of Capt. Backhouse, of his Majesty's 47th regt. accordingly moved forward, and drove the Arabs with great gallantry from a date grove, and over the bank above described, close under the walls of the fort, followed by the pickets under Major Molesworth, who took post at the sand bank, whilst the European light troops were skirmishing in front. The enemy kept up a sharp fire of musketry and cannon during these movements; and I regret to add, that Major Molesworth, a gallant and zealous officer, was killed by a cannon shot at the head of the pickets. Lieut. Stepney, of the 65th, was wounded on this occasion. The troops, however, maintained their position during the day, and in the night effected a lodgment within 300 yards of the southernmost tower, and erected a battery for four guns, together with a mortar battery on the right, and a trench of communication for the protection of the covering party.

The weather having become rather unfavourable for the disembarkation of the stores required for the siege, it was with considerable difficulty that this primary object was effected; but every obstacle was surmounted by the zeal and indefatigable exertions of the navy, and on the morning of the 6th we were enabled to open three 18-pounders on the fort; a couple of howitzers and 6-pounders were also placed in the battery on the right, which played on the defences of the towers, and nearly silenced the enemy's fire. The Liverpool, during these operations, warped in as close to the shore as her draught of water would permit, and opened her guns on the town, which must have created considerable alarm in the garrison, but she was unfortunately at too great a distance to produce any decided effect. The enemy, who during the whole of our progress exhibited a considerable degree of resolution in withstanding, and ingenuity in counteracting our attacks, sallied forth at eight o'clock this evening along the whole front of our intrenchments, crept close up to the mortar battery without being perceived, and entered it over the parapet, after spearing the advanced sentries. The party which occupied it was obliged to retire, but being immediately reinforced, charged the assailants, who were driven out of the battery with considerable loss. The attack on the left was repelled instantaneously by the spirited resistance of the covering party under Major Warren, who distinguished himself much on this occasion by his coolness and gallantry. The enemy repeated his attacks towards morning, but was vigorously repulsed. During the 7th every exertion was made to land and bring up the remaining guns and mortars, which was accomplished during the night, after incessant labours, by the sailors, assisted by working parties from the troops, and those of his highness the Imam, who cheerfully volunteered their services. They were immediately placed in battery, together with two 24-pounders, which were landed from the Liverpool, and in the morning the whole of our ordnance opened on the fort, and fired with scarcely any intermission till sun-set, when the breach on the curtain was reported nearly practicable, and the towers almost untenable. Immediate arrangements were made for the assault, and the troops ordered to move down to the trenches at day-break the next morning. The bombardment continued during the night, and the batteries having recommenced their fire before day-light, completed the breaches by eight o'clock. The accompanying orders will explain to his Excellency the dispositions of attack, as well as the measures taken to guard against the possibility of a failure, in the event of the enemy defending himself as desperately as might have been

expected from his previous defence. These precautions, however, were unnecessary; the party moved forward about 8 o'clock, and entered the fort, through the breaches, without firing a shot; and it soon appeared that the enemy had evacuated the place. The town was taken possession of, and found almost entirely deserted, only 18 or 20 men, and a few women, remaining in their houses. Upon the whole, it appears evident, considering the spirited behaviour of the enemy at the commencement of the siege, that their sudden resolution to evacuate the place was occasioned by the overwhelming fire of the artillery, of which they could have formed no previous idea, and which the ample means, placed at my disposal, enabled me to bring against the town.

Our loss, I am happy to say, is much less than could have been expected, from the length of the siege and the obstinacy with which the enemy disputed our approaches. I have had no means of ascertaining theirs, but it must have been severe.

I beg you will assure his Excellency that I feel entirely satisfied with the conduct of the troops; their gallantry has been exceeded only by their patience and cheerfulness under every species of privation and fatigue; and the peculiarity of this service has called forth a full display of these qualities, which are equally creditable to the soldier as the most intrepid acts of bravery. By the orders which I do myself the honour to inclose, his Excellency will be enabled to estimate the services performed by Captain Collier and the naval part of the expedition; and I can only add, that the acknowledgments therein expressed are scarcely adequate to the assistance I have received from them.—I have the honour to be, &c.

(Signed) W. GRANT KEIR, Maj. Gen. Camp Ras-ul-Khyma, 9th Dec. 1819.

Return of casualties during the operations against Ras-ul-Khyma, from the 4th to 8th Dec. 1819, inclusive.

10th Dec. 1819.

Detachment artillery.—Wounded—1 drummer, 2 rank and file; grand total, 3. H. M. 47th.—Killed—1 major, 1 rank and file; grand total, 2.—Wounded—16 rank and file; grand total 16.

To sea for six months.—Capt. J. Arrow, Bengal estab. and barrack-master of Berhampoor.

TESTIMONY OF APPROBATION.

Copy of a Letter to Capt. Ellis, late superintendent of Bazar, Poona division.

Sir: Lieut. Robinson having arrived this day, and being directed to assume charge of the appointment of dep. superintendent of bazar; I have been directed by Brig.gen. L. Smith, C. B. to assure you how sensible he is of the zeal and assiduity, as well as the general satisfaction with which you have, for so long a period, discharged that duty.

The Brig.gen. has had opportunities of witnessing the careful knowledge you had acquired of the natives, and which you so advantageously applied in the numerous disputes referred to your department; and in all which the commanding officer was particularly struck with the industry, and perseverance, and impartiality, with which you guided your judgment.

Brig.gen. Smith has, therefore, contemplated your removal from your late appointment with great regret, and has instructed me to assure you of his most unqualified approbation.—I have the honour, &c.

(Signed) FRANCIS SHARPE, P. M. B. Camp Poona, 16th Oct. 1819.

LOCAL OCCURRENCES.

Accession of the Governor.—On the 1st of Nov. Sir Evan Nepean held a levee at the government house, previous to his embarking on board the *Albion*, for England. It was most numerously attended, and immediately after the hon. Mountstuart Elphinstone took the usual oaths, and was installed in the government. Sir Evan embarked about two p. m. under repeated discharges of cannon from the saluting battery, and H. M. ship *Liverpool*.

Weights and Measures.—Dec. 22.—Government have sanctioned the equalization of the weights and measures, so far as relates to the receipt and issue of their own stores, all of which are in future to be bought and sold by the cwt. Perhaps nothing is so much to be desired in Bombay as this reform; the endless variety of caudies and maunds tend if not to imposition to perplexity in the resident merchant; and to the stranger are a constant source of anxiety and annoyance. We are persuaded that this can be very readily brought about, as the fortunate coincidence of the Bombay maund, with our quarter of a hundred will render the natives less averse to a change.—*Bombay Gazette.*

Asiatic Journ.—No. 54.

The late Mr. R. G. Morris.—A short notice of his regretted death was inserted p. 507. In a number of the *Bombay Gazette*, since received, we find a feeling tribute to his memory from the pen of a friend, of which, without repeating the melancholy announcement, we give the substance.

For a considerable time preceding his death, Mr. Morris had suffered from paroxysms of a painful disorder, but by which his general health was not much affected; of late they had been much less frequent and severe, which induced his medical friends to hope for his permanent recovery. After a short residence at Calcutta, where he went for the benefit of the voyage by sea, a train of new and alarming symptoms appeared, which added to a return of his former disorder, hurried him to the grave in the very prime of life. To great maturity of judgment, a cultivated mind, and very promising talents, were joined in this excellent young man a most amiable disposition, and affable and engaging manners. As a dutiful and affectionate son, a kind and gentle brother, a warm and sincere friend, an agreeable and instructive companion, he shone conspicuous, as well as for every estimable quality that can adorn or elevate human nature. A numerous and respectable circle sincerely lament his loss, and will never cease to remember him with affection.

Limits of the Town.—Jan. 1.—The limits of the town of Bombay have been extended by an order of that government, with the sanction and authority of the hon. the Court of Directors, and the approbation of the board of commissioners for the affairs of India. The following are the new limits: “commencing on the Back-bay side, just without the skirts of Girgaun, and thence running in a north-north-easterly direction, across the Parall road to the south-eastern angle of the late Sir Miguel de Souza’s garden-wall, then taking a circuitous route, including within their bounds the village of Mazagon, but excluding the Company’s dock yard at that place, at the S. E. angle of which they are terminated by the shore of the harbour.”

The Pensioned Widow.—We are credibly informed, that the political agent in Kandeish has lately succeeded in dissuading a Hindoo widow from the long standing and barbarous practice of immolating herself on the funeral pile of her husband; and that government has sanctioned the event with its decided approbation, by pensioning the poor woman for life, and by liberally rewarding the man who was immediately instrumental in producing this happy resolution in the devotee,—*Bombay Gazette.*

Abatement of the Plague.—Accounts from Ahmedabad, dated the 10th Nov. announce, that the violence of the disease which has been raging at Limree, resembling the plague in its symptoms and fatal effects, has considerably abated; and that the remainder of the population have generally returned to their homes. It appears that the Shirawnek Bannians, or Jains, have suffered the most, and this circumstance is attributed to their prejudices against clearing their houses, clothes, or persons.

About one-fifth of the population of Limree are stated to have fallen victims to this fatal disorder; many large and respectable families have become extinct, and others have suffered dreadfully. There are only a few instances of persons who are said to have recovered, and even these are not well authenticated cases.

Some fugitives from Limree carried the infection to Wadwan, at which place the disease raged for a few days, but it has abated again. This disorder has also appeared at the village of Botad, in the Rampore pergunnah, but its effects there have not been so fatal as they were at Limree.

BIRTHS.

Nov. 1, At Malwan, the lady of Lieut. col. Imlack, C.B. of a son....2, At Colaba, the lady of Major Molesworth, H. M. 47th, of a daughter.... Same day, at Bombay, the lady of J. Heysham, Bengal army....22, Daniel McArthur, son of Mr. J. McArthur.

NATIVE POWERS.

BOPAL.

Intelligence has been just received at the presidency, of the death of the young Nabob of Bopal, a man of some promise. He loaded and cocked a pistol to fire at something in amusement, when his attention was taken up by his child, a young daughter, running up to him; in fondling with her, the pistol went off, and shot him dead on the spot. The government remains undisturbed by the event, and looking for the result of the widow's confinement, who is advanced in pregnancy.—*Bombay, Jan. 8.*

HOME INTELLIGENCE.

Extracts from the London Gazette.

On the 10th of May his Majesty conferred the honour of knighthood on William David Evans, Esq. recorder of Bombay. No. 17597, dated May 13.

On the 17th of May, his Majesty conferred the honour of knighthood on Charles Grey, Esq. one of the judges of the supreme court of judicature at Madras. No. 15599, May 20; and on Francis Molineux O'maney, Esq. of Parkshot, near Richmond.

THE KING'S COURT.

May 10.—His Majesty held his first levee since his accession, at which the attendance of the nobility and gentry, to pay their individual respects, and to present addresses of congratulation from corporate bodies, was numerous and brilliant beyond all precedent. Among the presentations were:—

The hon. the Chairman and Deputy Chairman of the East India Company, with an address on his Majesty's accession; Sir A. Allan, on being created a baronet; William David Evans, Esq. recorder of Bombay, upon which occasion he received the honour of knighthood; Lieut. gen. Sir Miles Nightingale, on his appointment to the command of the 49th regt.; Col. J. L. Caldwell, Madras Engineers, on his return from India, and receiving the order of C.B.; Captain Wallington, B.N.M., on his return from the East Indies; Lieut.col. Philpot, late 24th Light Dragoons, on his return from India; Capt. R. M. Grindlay, on his return from India; Capt. Bush, 21st Light Dragoons, on his return from India; Major Sir C. Cuyler, on coming to the baronetage, and joining the 18th regt. at the Cape of Good Hope; Major D. Brown, Madras Artillery, on his return from India; Major Craig, Bengal Army, by the Lord in Waiting; Lieut. Barlow, 8th Dragoons, on his return from India; Brig.gen. P. Coffin, on appointment to the staff, and departure for St. Helena; Capt. Forrest, hon. East India Company's Service, by the Lord in Waiting; Capt. Basil Hall, his Majesty's ship *Couway*, by Viscount Melville; Mr. C. P. Denniss, on his return from India; Sir E. Nepean, on his return from the East Indies; Mr. J. H. Peele, on his return from India; Rear-Admiral Page, to pay his dutiful respects; Capt. R. Melville Grindlay, on his return from India; Sir David Scott, on succeeding to the baronetage.

May 17.—His Majesty held his second levee. Among the presentations were:

Lieut.col. Runnington, on his return from India, by Sir B. Bloomfield; Mr. Charles Grey, on his appointment to be

one of the judges of the Supreme Court of Judicature at Madras, by the Earl Bathurst, on which occasion he received the honour of knighthood; Mr. Houghton, 14th Light Dragoons, on his return from India; Ensign E. Sutherland, 87th regt., on going to India; Major Adams, R.A. on his promotion, and return from Ceylon; Capt. Rainier, R.N. C.B.; Capt. Foster, 14th Light Dragoons, H.P.; Major-general Wilson, East India Service, on promotion; Major-general William Macleod, Madras Army; Major-general Need, on his arrival from India; Rev. Mr. Shepherd, sen., Presidency chaplain Bengal Establishment, on his return from India.

EAST INDIA HOUSE.

May 28.—The dispatches were closed at the East India House, and delivered to the commanders of the following ships, viz.:—Brothers, Captain R. Stamp; Camden, Captain J. Johnson, Bombay direct.

29.—The dispatches for Madras and Bengal, by the ship *Lady Carrington*, were closed at the East India House, and delivered to the commander of that ship.

13.—The dispatches for Madras and Bengal by the ship *Coldstream* were closed at the East India House, and delivered to the commander of that ship.

Passengers per *Coldstream*.—For Madras: Capt. W. Moncrieff, Major and Mrs. Preston, Capt. E. Cadogan.—For Bengal: Mrs. E. Walker, Miss A. H. White, Mr. Binny.

FOREIGN TRADE.

The Committee of the House of Lords, appointed on the 26th of May to enquire into the means of extending our foreign trade, assembled on the following day, notwithstanding the adjournment of the House. On the motion of the Earl of Liverpool, the Marquis of Lansdown took the chair.

Lord Liverpool, who had a box filled with papers brought into the room, then presented a series of documents illustrative of the progress of the revenue, the balances of trade, &c., to which his Lordship referred in the course of the speech of Friday. Most of them are original, and have not yet been printed.

After having sat about an hour, their Lordships adjourned.

We are sorry to announce the death of Sir John Jackson, Bart. of Arlsey, Bedfordshire, one of the directors of the Hon. East-India Company. He died at Bellmore-house, Hampstead Heath, on the 17th of May, after a lingering illness,

which he bore with the greatest christian fortitude, regretted by all who had the happiness of knowing him.

MEMBERS RETURNED TO SERVE IN PARLIAMENT.

Crown Office, May 27.—E. A.

—McNaghten, Esq. for Orford.

Rt. hon. Hugh Fortescue, commonly called Lord Viscount Ebrington.

Thos. Creevey, Esq. for Appleby.

LEADING MISCELLANIES.

The Rev. W. Fraser has been appointed a chaplain on the Bengal establishment.

Sir G. Ouseley, Bart. has been re-chosen one of the council of the Society of Antiquaries at Somerset Place.

The candidates who have offered themselves for the East India direction on the present or future vacancy, are alphabetically arranged as follows: Mr. Alexander, Col. Bailey, Messrs. Curtis, Edmonstone, Prescott, Loch, and Welland.

Sir J. Newbolt has resigned the lord chief justice's seat at Madras, and is to be succeeded by Sir Edmond Stanley, Kt.

R. Marnell, Esq. has been permitted to proceed to practice as a barrister in the Recorder's court at Bombay.

Merchant Seaman's Bible Society.—On the 22d of May the second annual meeting of this institution was held at the city of London Tavern, Admiral Viscount Exmouth in the chair. Among other proceedings at the meeting, the thanks of the Society were voted to the East India Company, for their donation of £200.

Forgery at St. Helena.—On the 19th and 20th of May, a court martial sat on board the Queen Charlotte at Portsmouth, for the trial of Mr. J. Etheridge, clerk of his Majesty's brig Sappho, upon charges of having filled up various bills of exchange, purporting to bear date at St. Helena, and to draw upon the commissioners of the navy for the pay of certain officers of the said brig, which bills were afterwards negotiated and paid, having the signature of the captain and purser either forged or fraudulently obtained to them; and the charges having been proved, the court adjudged him to be mulcted, or to forfeit all the pay or wages due to him for his services done as clerk of the Sappho, and all other advantages to which he is entitled, for his services in the royal navy, to be dismissed from his Majesty's service, and rendered incapable of ever serving again, as totally unworthy of any employment therein, and to be imprisoned in his Majesty's prison called the Marshalsea for the space of two years.

The Ship Bengal.—In consequence of a letter from Calcutta, stating the several instances of sudden death which occurred among persons who had been present at a ball on board the Bengal, Liverpool trader,

while at that port, an order of Privy Council, dated 9th May, directed this ship to be put under quarantine on her arrival at any English port.

Meanwhile the Bengal had arrived home. A private letter, dated Liverpool, May 5, reports:—"The Bengal arrived here April 5th, and has been discharged without any of those dreadful consequences which the medical gentlemen of Calcutta prognosticated. I should rather suppose that the fatal consequences which ensued to those individuals who attended the ball given on board this vessel at Calcutta would be more justly attributed to the exposure to night air.

NAVAL AND MILITARY NOTICES.

Captain Hall is appointed to command the Conway frigate, fitting at Portsmouth for the East Indies. Captain Hall is also to visit Loo-Choo, the natives of which place so hospitably entertained him and his officers when in the Lyra sloop of war, and is to make an extensive survey of that hitherto unknown coast.

Gravesend, May 4.—Detachments of the 56th and 82d regts. were yesterday morning marched from Chatham barracks to embark here for Mauritius, under the command of Capt. Elliott Cairnes, of the 56th reg.

CONTINENTAL EXTRACTS.

A Frenchman who had long inhabited Cochin China, where he had attained to the rank of mandarin, has arrived at Bourdeaux. He obtained the permission of the Cochin China government to revisit his native country.

An article from Stuttgart of the 16th mentions that the little town of Gingen, in Wirtemberg, on the frontiers of Bavaria, in which a dangerous epidemic had broken out, was surrounded by a cordon of troops. Every thing, it is said, coming from that place is fumigated. It affects principally the workmen in the manufactories, who die in great numbers. Public report asserts, that it is the real plague of the East, brought by means of bales of cotton from Smyrna. The persons seized are said to die within 24 hours.

Accounts from Brussels, dated the 24th April, state that the Countess de Montholon, who since her return from St. Helena, has resided in that city, is gone to Paris.

St. Petersburg, April 18.—The English traveller Sir R. Kerr Porter has just arrived here, on his way from Persia. He has had the honour to present to his Majesty the Emperor several remains of antiquity; among them are bricks of the ruins of Babylon, a piece of cement used in the building of that city, and a piece of marble from the ruins of Persepolis. They have been all deposited by his Majesty's command in the Asiatic Museum of the Academy of Sciences.

BIRTHS, MARRIAGES, AND DEATHS.

HOME LIST.

BIRTHS.

May 20. In Upper Montague Street, Montague Square, the lady of Herbert Compton, Esq. barrister at law in the Supreme Court at Calcutta, of a son.
— At Boulogne-sur-Mer, the lady of Capt. John Mayne, late Commander of the H. C. S. Batavia, of a son.
